

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

PRINTED BY J. HADDON, CASTLE STREET, FINSBURY.

# THE LONDON ENCYCLOPÆDIA.

**CUSTOM-HOUSE**, an office established by the authority of the king, in maritime cities, or port-towns, for the receipt and management of the customs and duties of importation and exportation, imposed on merchandise, and regulated by a book of rates. An edifice with considerable pretensions to grandeur, on the score of external decoration, was erected for the purpose of transacting public business, in 1826. Its site was well chosen from its proximity to the Tower; but, unfortunately, the piles on which the building rested, being exposed to the action of the Thames, speedily decayed, and the whole of the interior of the edifice sunk to the ground. It has since been rebuilt.

**CUSTOS BREVIUM**, the principal clerk belonging to the court of common pleas, whose business it is to receive and keep all the writs made returnable in that court, filing every return by itself; and, at the end of each term, to receive prothonotaries of all the records of the nisi prius, called the postea. The postea are first brought in by the clerks of assize, of every circuit, to that prothonotary who entered the issue in the causes, in order to enter judgment; and after the prothonotary has entered the verdict and judgment into the rolls of the court, he delivers them over to the custos brevium, who binds them into a bundle. The custos brevium also makes entries of writs of covenant, and the concord upon every line; he likewise makes out exemplifications and copies of all writs and records in his office, and of all fines levied, which, being engrossed, are divided between him and the chirographer, which last keeps the writ of covenant and the note, and the former the concord and foot of the fine. The custos brevium is appointed by the king's letters patent.

**CUSTOS ROTULORUM**, an officer who has the custody of the rolls and records of the sessions of peace, and also of the commission of the peace itself. He is usually a nobleman, and always a justice of the peace, of the quorum, in the county where he is appointed. This officer is appointed by writing under the king's sign manual, being the lord chancellor's warrant to put them in commission. He may execute his office by a deputy, and is empowered to appoint the clerk of the peace; but he is prohibited from selling his office, under divers penalties.

**CUSTOS SPIRITUALIUM**, he that exercises the spiritual jurisdiction of a diocese, during the vacancy of any see, which, by the canon law, belongs to the dean and chapter; but at present, in England, to the archbishop of the province by prescription.

**CUSTOS TEMPORALIUM**, the person to whom a vacant see or abbey was given by the king as supreme lord. His office was, as steward of the

goods and profits, to give an account to the escheator, who did the like to the exchequer.

**CUSTREL**, *n. s.* *Fr. coustillier*. A buckler-bearer; a vessel for holding wine. The word is sometimes written coistrel.

Every one had an archer, a demi-lance, and a *custrel*.  
*Lord Herbert.*

**CUSTRIN**, a fortified town of Prussia, the capital of the New Mark of Brandenburg, is situated in a plain at the junction of the Wartha and the Oder. The town though small has spacious suburbs, and contains 4500 inhabitants. It is encompassed by extensive morasses, which add to its strength; a fortified dike also commences at one of the suburbs, and is continued for the space of three miles by means of thirty-six bridges, across a succession of marshy ground. In the month of August, 1758, this place was bombarded and laid in ashes by the Russians, but afterwards rebuilt in a style of great regularity. It is forty-eight miles east of Berlin.

<b>CUT</b> , <i>v. a., v. n. &amp; n. s.</i>	<i>Fr. couper, cou- teau; Sans. ku- tan. West Goth. kota, kotru.— Few words have more shades of meaning than to cut, but in all of them division, producing, in some way or other, a solution of continuity, is expressed or implied. To cut is, to penetrate with a sharp instrument; to hew; to sculpture; to form by cutting; to divide by passing through; to pierce with an uneasy sen- sation; to divide packs of cards; to intersect; to castrate; to avoid a person, or pretend not to see or know him; to make way by dividing; to perform the operation of lithotomy. It obtains many additional meanings from its conjunction with down, off, out, short, up, and in. To cut down is, to fell; to level with the earth by a blow from a sharp instrument; to diminish the amount of any demand; to excel; to overpower. To cut off is, to separate by cutting; to extirpate; to bring to an untimely death; to rescind; to take away; to intercept; to put an end to; to obviate; to withhold; to preclude; to interrupt; to abbreviate. To cut out is, to shape; to scheme; to adopt; to debar; to excel. To cut short is, to interrupt; to abridge. To cut up is, to divide an animal, or some article of animal food, into convenient parts; to eradicate. To cut in is a phrase used in card-playing, parti- cularly at whist, when the cut made by the par- ties determines who are to be the players. To cut a caper is to dance. The meanings of the noun are also numerous. It denotes the action of a sharp instrument; the separation made by</i>
<b>CUTTER</b> , <i>n. s.</i>	
<b>CUTTING</b> , <i>n. s.</i>	
<b>CUTTER-OFF</b> , <i>n. s.</i>	
<b>CUT-THROAT</b> , <i>n. s. &amp; adj.</i>	
<b>CUT-PURSE</b> , <i>n. s.</i>	

such an instrument; an incised wound; an artificial channel; a part cut off from the rest; a small particle; a lot made by cutting into unequal portions, a stick, straw, or bit of paper, which portions are held between the finger and thumb, while another draws the lot; a near passage, which saves distance, by cutting off an angle; an impression taken from an engraving on wood or copper; the plate on which the drawing is engraved; the dividing of a pack of cards; anciently, a fool or cully; a gelding. Cut and long tail is a proverbial expression for all kinds of men. The participial adjective, cut, signifies prepared for use, in which case it is joined with *dry*; rather the worse for liquor; hurt in the feeling. Cut and come again is a trivial expression, denoting that there is an abundance. Cutter is the agent that cuts anything; a small swift-going vessel; the incisores, or cutting teeth; an officer in the exchequer; a ruffian. Cutter off means a destroyer. Cutting is, a piece cut off; an incision; a caper, but this is obsolete; division, as of a pack of cards. Cut-purse is a thief; cut-throat a murderer; a butcher of men; the animal which is sometimes misnamed a hero. For CUTLERY, see the article.

And they did beat the gold into thin plates, and cut it into wires. *Exod. xxxix. 3.*

And they caught him, and cut off his thumbs. *Jud. i. 6.*

Thy servants can skill to cut timber in Lebanon. *2 Chron. ii.*

Who cut up mallows by the bushes and juniper-roots for their meat. *Job xxx. 4.*

A bowe in honde and arowis had she,  
Her clothis cuttid were unto the knee.

*Chaucer. The Legende of Dido.*

Right as a sword forcutteth and forkerveth  
An arme atwo, my dere son! right so  
A tonge cutteth friendship all atwo.

*Id. Cant. Tales.*

Now draweth cutte or that ye forther twinne;  
He which that hath the shortest shal beginne.

*Id. Prol. Cant. Tales.*

The cotelere dwellith in this town that made the  
same kuyff,  
And for to prove the throwith he shal be here as  
blyve. *Id. Cant. Tales.*

Either with nimble wings to cut the skies,  
When he them on his messagers doth send,  
Or on his own dred presence to attend.

*Spenser. Hymn on Heavenly Love*

But that same squire to whom she was more dere  
Whenas he saw she should be cut in twaine,  
Did yield she rather should with him remaine  
Alive then to himself be shared dead.

*Id. Faerie Queene.*

Effsoones her shallow ship away did slide  
More swift than swallow sheres the liquid skye,  
Withouten oare or pilot it to guide,  
Or winged canvas with the wind to fly:  
Only she turn'd a pin, and by and by  
It cut away upon the yielding wave. *Id.*

All Spain was first conquered by the Romans, and  
filled with colonies from them, which were still in-  
creased, and the native Spaniards still cut off.

*Id. On Ireland.*

It hath a number of short cuts or shreadings, which  
may be better called wishes than prayers. *Hooker.*

My lady Zelmane and my daughter Mopsa may  
draw cuts, and the shortest cut speak first. *Sidney.*

Why should a man, whose blood is warm within,  
Sit like his grandsire cut in alabaster? *Shakespeare.*

Ah, cut my lace asunder,  
That my great heart may have some scope to bear,  
Or else I swoon with this dead killing news.

*Id. Richard III.*

He that cuts off twenty years of life,  
Cuts off so many years of fearing death.

*Id. Julius Caesar.*

By the pattern of mine own thoughts I cut out the  
purity of his. *Id. Winter's Tale.*

To have an open ear, a quick eye, and a nimble  
hand, is necessary for a cutpurse. *Id.*

Send her money, knight, if thou hast her not in  
the end, call me cut. *Id. Twelfth Night.*

Their clothes are after such a Pagan cut too,  
That, sure, they've worn out Christendom.

*Id. Henry VIII.*

A pauntry ring  
That she did give, whose poesy was  
For all the world like cutler's poetry  
Upon a knife: love me, and leave me not.

*Shakespeare.*

At quintin he,  
In honour of this bridealtee,  
Hath challenged either wide countee:  
Come cut and long tail; for there be  
Six bachelors as bold as he.

*Ben Jonson. Underwood.*

Nor can good Myfon wear on his left hand  
A signet ring of Bristol diamond,  
But he must cut his glove to shew his pride,  
That his trim jewel might be better spyd. *Hall.*

The king of this island, a wise man and a great  
warrior, handled the matter so, as he cut off their  
land forces from their ships. *Bacon.*

It is no grace to a judge to shew quickness of con-  
ceit in cutting off evidence or counsel too short. *Id.*

I, for my part, do not like images cut out in juniper,  
or other garden-stuff: they be for children. *Id.*

The burning of the cuttings of vines, and casting  
them upon land, doth much good. *Id.*

All the timber whereof was cut down in the moun-  
tains of Cilicia. *Knolles.*

This great cut or ditch Sesostris the rich king of  
Egypt, and long after him Ptolemaus Philadelphus,  
purposed to have made a great deal wider and deeper,  
and thereby to have let the Red Sea into the Medi-  
terranean. *Id.*

CUTTING is particularly used in heraldry,  
where the shield is divided into two equal parts,  
from right to left, parallel to the horizon, or in  
the fesse way. The word is also applied to the  
honorable ordinaries, and even to animals and  
moveables, when they are divided equally the  
same way; so however, as that one moiety is  
color, the other metal. The ordinaries are said  
to be cut, couped, when they do not come full  
to the extremities of the shield.

CUTTING, in painting, the laying one strong  
lively color over another, without any shade or  
softening. The cutting of colors has always a  
disagreeable effect.

CUTTING, in surgery, denotes the operation of  
extracting the stone out of the bladder by the  
knife. See LITHOTOMY.

**CUTTING**, in the manege, is when the horse's feet interfere; or when with the shoe of one foot he beats off the skin from the pastern joints of another foot. This is more frequent in the hind feet than the fore: the cause is commonly bad shoeing.

**CUTTING IN WOOD** is a particular kind of sculpture or engraving; the invention of which, as well as that in copper, is ascribed to a goldsmith of Florence: but it is to Albert Durer and Lucas they are both indebted for their perfection. See **ENGRAVING** and **PRINTING**. Hugo da Carpi invented a manner of cutting in wood, by means of which the prints appeared as if painted in clear-obscure.

**CUTTINGS**, or slips, in gardening, the branches or sprigs of trees or plants, cut or slipped off to set again; which is done in any moist fine earth. The best season is from August to April; but care is to be taken, when it is done, that the sap be not too much in the top, lest the cut die before that part in the earth have root enough to support it: nor must it be too dry or scanty; the sap in the branches assisting it to take root. In providing the cuttings, such branches as have joints, knots, or burrs, are to be cut off two or three inches beneath them, and the leaves to be stripped off so far as they are set in the earth. Small top branches, of two or three years' growth, are fittest for this operation.

**CUTCH**, an extensive province of the south-western part of Hindostan, situated principally between the twenty-third and twenty-fourth degrees of north latitude. It is bounded to the north by a sandy desert and the province of Sindy; to the south by the gulf of Cutch; to the east by Gujrat, and to the west by Tatta, from which it is separated by the most eastern branch of the Indes. Its limits northward are not accurately defined, but it may be estimated at 110 miles in length, by seventy the average breadth. The greater part of the province is composed of woods and uncultivated plains; where a number of very fine horses are bred, superior camels, and black cattle. Other parts produce grain and cotton. It is chiefly possessed by various independent chiefs, who are often connected with the pirates of the coast: the inhabitants are principally Mahomedans. The chief towns are Boojeeboojee, Luckput, Bundar, and Mandavie.

**CUTCH GUNDAVA**, a district of Baloochistan, in Persia, situated at the bottom of the mountains south-east of Kelat, and about 150 miles in length, by forty-five in breadth. The soil is black and rich, growing every species of grain, together with cotton, madder, and indigo. The rains are in June, July, August, and in the spring months, during the summer, the simoom, or pestilential wind, is frequent and very destructive. The climate is otherwise good, and the soil excellent, producing a large revenue to the Khan of Kelat. Great quantities of grain are exported to the sea-ports of Corachie and Sonmearny. To the northward of Cutch Gundava lies Anund Divil.

**CUTCHWARA**, a district in the province of Malwah, Hindostan, situated about the twenty-fifth degree of north latitude, and mostly tributary to the Malwah Mahrattas. It is intersected

by the Gillysinde river. The chief towns are Dewagur and Soonel.

**CUTH**, signifies knowledge or skill. So Cuthwin is a knowing conqueror; Cuthred, a knowing counsellor; Cuthbert, famous for skill. Much of the same nature are Sophocles and Sophianus.

**CUTH**, or **CUTHAH**, a province of Assyria, on the Araxes, the same with Cush; but others take it to be the country which the Greeks called Susiana, and which to this day, says Dr. Wells, is by the inhabitants called Chusistan. Calmet is of opinion that Cuthah and Scythia are the same place, and that the Cuthites who were removed into Samaria by Salmaneser (2 Kings xvii. 24), came from Cush or Cuth, mentioned in Gen. ii. 13. They worshipped the idol Nergal, id. ibid. 30. He adds that they came from Cush, or Cutha upon the Araxes; and that their first settlement was in the cities of the Medes, subdued by Salmaneser and the kings of Syria, his predecessors. The Scriptures inform us, that the Cuthites, upon their arrival in this new country, continued to worship the gods formerly adored by them beyond the Euphrates. Esaraddon, king of Assyria, who succeeded Sennacherib, appointed an Israelitish priest to go thither, and instruct them in the religion of the Hebrews. But these people thought they might reconcile their old superstition with the worship of the true God. They therefore framed particular gods for themselves, which they placed in the several cities where they dwelt. But afterwards they gave up idolatry, and adhered solely to the law of Moses. The Samaritans were their descendants.

**CUTICLE**, *n. s.* } Lat. *cuticula*. The out-  
**CUTICULAR**, *adj.* } ward skin of the body; a  
**CUTA'NEOUS**, *adj.* } thin skin formed on the  
surface of any liquor. Belonging or relating to the skin.

This serous, nutritious mass is more readily circulated into the *cutaneous* or remotest parts of the body.  
*Floyer on Hemorrhoids.*

When any saline liquor is evaporated to *cuticle* and let cool, the salt concretes in regular figures, which argues that the particles of the salt, before they concentered, floated in the liquor at equal distances in rank and file.  
*Newton's Opticks.*

Some sorts of *cutaneous* eruptions are occasioned by feeding much on acid unripe fruits and farinaceous substances.  
*Arbuthnot.*

In each of the very fingers there are bones and gristles, and ligaments and membranes, and muscles, and tendons, and nerves and arteries, and veins and skin, and *cuticle* and nail.  
*Bentley's Sermons.*

Where the spontaneous adhesive electric atmospheres are employed to charge plates of air, as in the Galvanic pile, or probably to charge their animal membranes or *cuticles*, as perhaps in the shock given by the torpedo or gymnotus, it seems necessary that the intervening non-conducting plate must be extremely thin.  
*Dorein.*

Those parts of our system which are in health excited into perpetual action, give us pain when they are not excited into action: thus, when the hands are

for a time immersed in snow, an inaction of the *cutaneous* capillaries is induced, as is seen from the paleness of the skin, which is attended with the pain of coldness. *Id.*

CUTICLE. See ANATOMY.

CUTLASS, *n. s.* Fr. *couteas*. This word is written sometimes cutlase, sometimes cuttleax; in Shakspeare, curtleax; and in Pope, cutlash. A broad cutting sword: the word is much in use among the seamen.

Were 't not better  
That I did suit me all points like a man?  
A gallant curtleax upon my thigh,  
A boar spear in my hand?

*Shakspeare. As You Like It.*

Mores, in his curious dissertation on letter founders, calls a *cutlass*, as it seems, a *courtleasse*, among the antique typographic ornaments. *Warton.*

CUTLER (Sir John), bart. and citizen of London, was a great benefactor to the grocers' company, and contributed largely to the rebuilding of the college of physicians in Warwick-lane. After his death, however, in 1699, his executors claimed the sum which he had advanced, with interest, amounting in all to £7000. They finally compromised the claim for £2000. Pope commemorates this circumstance in some well-known verses; describing our baronet as a perfect miser. It appears, however, that he liberally subscribed to many charities, and built at his own charge the north gallery of his parish-church, St. Margaret's, Westminster. He had two daughters, who were respectively married to John, earl of Radnor, and Sir William Portman, bart. His funeral it is said cost the sum of £7666.

CUTLERS, COMPANY OF. This company was incorporated in 1413 by Henry V.; their arms are *gules*, six daggers in three crosses saltire *argent*, handled and hilted or; the crest an elephant with a castle.

CUTLERY, in connection with the mechanical arts, will embrace all kinds of edged and sharp tools, of iron or steel, and the modes of their manufacture.

It might be expected, that in no department of the arts of a country, would the progress of civilisation be more distinctly marked, than in the degree of excellence attained in this manufacture. A knife will purchase half the lands of a village from a barbarous tribe; and Great Britain has well sustained her superiority among civilised nations in the general quality of her cutlery goods.

But in other, and far less civilised countries, a superior steel has been manufactured for ages. It is a little remarkable, that none of our modern discoveries in chemistry have enabled us to imitate, successfully, the sword and sabre blades of Damascus; and that, within a very few years, in 1795, we believe, a new kind of foreign steel, the wootz of India, has been introduced into this country, and been found superior to any thing manufactured here for the blades of pen-knives.

The Damascene blades are supposed, by European cutlers, to be constructed of fine iron and steel-wire welded together in alternate layers;

the wave or water being given to them by sulphate of alumina applied to the final surface. Other accounts state them to be hardened by repeated immersions, when red-hot, in goat's blood. But the real process has never been accurately known in this country; and it is not improbable, that the iron ore of Syria may possess some peculiarity which is the foundation of this excellence in its manufactured steel.

Such a conjecture has been offered by Mr. Stodart, with regard to the ores out of which the wootz of India is formed. For the introduction of it into this country, we are indebted to the late distinguished naturalist, Sir Joseph Banks, who first procured a pen-knife to be made from a cake of it, in the year above-mentioned. The forging was attended with some difficulty, owing to the unequal fusion of the metal, some parts being overcharged with the steely principle, and others being as much deficient in it. But the pen-knife made was excellent. The Indian method of making wootz has been described as follows: forged iron, in pieces, is enclosed in a crucible, and heated in a furnace with wood. Two or three pairs of bellows are employed to augment the heat, until the wood is completely charred, and the iron fused and converted into steel. The chief peculiarity of the process seems to be the use of uncharred wood. A variety of cutting instruments have been manufactured from this steel with great success.

Those articles of cutlery which do not require a fine polish, and are of low price, are made from what is called blistered steel, or that which has not undergone fusion. See our article STEEL. Those which require the edge to possess considerable tenacity, but in which superior hardness is not required, are made from sheer steel. The finer kinds of cutlery are made from steel which has been in a state of fusion, and which is termed cast-steel, no other kinds being susceptible of a fine polish. Table-knives are mostly made of sheer-steel, the tang and shoulder being of iron, and the blade being attached, by giving them a welding heat. The knives, after forging, are hardened, by heating them red-hot, and plunging them into water; they are afterwards heated over the fire, till they become blue, and then ground. Forks are made, almost altogether, by the aid of the stump and appropriate dies. The prongs only are hardened and tempered. Razors are made of cast-steel, the edge of a razor requiring the combined advantages of great hardness and tenacity. After the razor-blade is forged into its proper shape, by the aid of a convex-faced hammer and anvil, it is hardened, by gradually heating it to a bright red heat, and plunging it into cold water. It is tempered by heating it afterwards until a brightened part appears of a straw color. This would be more equally effected by the use of sand, or, what is still better, by hot oil, or a fusible mixture, consisting of eight parts of bismuth, five of lead, and three of tin; a thermometer being placed in the liquid at the time the razors are immersed, for the purpose of indicating the proper temperature, which is about 500° of Fahrenheit. After the razor has been ground into its proper shape, it is finished by polishing.

The glazer, used in polishing, is formed of wood, faced with an alloy of lead and tin; after its face is turned to the proper form and size, it is filled with notches, which are filled up with emery and tallow. This instrument gives the razor a smooth and uniform surface and a fine edge. The polisher consists of a piece of circular wood, running upon an axis, like that of the stone or the glazer. It is coated with leather, having its surface covered with crocus martis. The handles of razors and knives are made of ivory and tortoise-shell, bone, or other materials, decorated by fashion, or the use for which they are designed. The horn of razor-handles is commonly cut into pieces, and placed between two diamonds, having a recess of the shape of the handle. By this process it admits of considerable extension, and is dyed black by means of logwood and green vitriol. The clear horn-handles are sometimes stained, so as to imitate tortoise-shell, by being coated with a composition of three parts of potash, one of minium, ten of quick-lime, and as much water as will reduce the whole into a pulpy mass. Those parts of the handle requiring darker shades are more thickly covered, and the stains are dried in before the fire.

The manufacture of pen-knives is divided into three departments; the first is the forging of the blades, the spring, and the iron scales; the second, the grinding and polishing of the blades; and the third, the handling, which consists in fitting up all the parts, and finishing the knife. The blades are made of the best cast-steel, and hardened and tempered to about the same degree with that of razors. In grinding they are made a little more concave on one side than the other, in other respects they are treated in a similar way to razors. The handles are covered with horn, ivory, and sometimes wood; but the most durable are those of stag-horn. The general fault in pen-knives is that of being too soft. The temper ought to be not higher than a straw color, as it seldom happens that a pen-knife is so hard as to snap on the edge.

The beauty and elegance of polished steel is never displayed to more advantage than in the manufacture of the finer kinds of scissors. The steel employed for this purpose should be of the choicest description; it must possess hardness and uniformity of texture for the sake of securing a fine polish, and great tenacity, when hot, for the purpose of forming the bow or ring of the scissor, which requires to be extended from a solid piece, having a hole previously punched through it. It ought also to be very tenacious when cold, to allow that delicacy of form observed in ladies' scissors. After they are forged to near the same size as the eye of the workman can ascertain, they are paired. The bows and some other parts are filed to their intended form: the blades are also roughly ground, and the two sides properly adjusted to each other, after being bound together with wire, and hardened up to the bows. They are afterwards heated till they become of a purple color, which indicates their proper temper. Almost all the remaining part of the work is performed at the grinding mill, with the stone, the lap, the po-

lisher, and the brush; the last being used to polish those parts which have been filed, and which the lap and the polisher cannot touch. Previous to screwing the scissors finally together, they are rubbed over with the powder of quick-lime, and afterwards cleaned with soft sheep leather. The quick-lime absorbs the moisture from the surface. Scissors are ornamented by bluing and gilding; also with studs of gold or polished steel. Very large scissors are manufactured partly of iron and partly of steel; the shanks and bows being of the former. These, as well as those all of steel, which are not hardened all over, cannot be polished: an inferior sort of lustre, however, is given to them by means of a burnish of hardened polished steel, which is very easily distinguished from the real polish, by the irregularity of the surface. Having entered into these particulars, relating to the manufacture of the usual articles found in cutlers' shops, we shall now enter upon some of the more general principles that are applicable to the finer articles of cutlery.

Cutlers do not use any coating to their work at the hardening heat, as the file-cutters do; indeed, it seems evidently unnecessary when the article is intended to be tempered and ground. The best rule is to harden as little as possible above the state intended to be produced by tempering. Work which has been overheated has a crumbly edge, and will not afford the wire hereafter to be described. The proper heat is a cherry-red, visible by day-light. No advantage is obtained from the use of salt in the water, or cooling that fluid, or from using mercury instead of water; but it may be remarked, that questions respecting the fluid are, properly speaking, applicable only to files, gravers, and such tools as are intended to be left at the extreme of hardness.

While Mr. Stodart does not seem to attach much value to peculiarities in the process of hardening, he mentions it as the observation of one of his best workmen, that the charcoal fire should be made up with shavings of leather: and that he never had a razor crack in the hardening since he had used this method. It appears from a consideration of other facts, that this process is likely to prove advantageous. When brittle substances crack in cooling, it arises from the outside contracting and becoming too small to contain the interior parts. But it is known, that hard steel occupies more space than soft, and it may be easily inferred, that the nearer the steel approaches to the state of iron, the less will be this increase of dimensions. If, then, we suppose a razor, or any other piece of steel, to be heated in an open fire with a current of air passing through it, the external part will, by the loss of carbon, become less steely than before; and when the whole piece comes to be hardened, the inside will be too large for the external part, which will probably crack. But if the piece of steel be wrapped up in the cementing mixture, or if the fire itself contain animal coal, and is put together so as to operate in the manner of that mixture, the external surface, instead of being degraded by this heat, will be more carbonated than the internal part, in consequence of which

It will be so far from splitting or bursting during its cooling, that it will be acted upon in a contrary direction, tending to render it more dense and solid.

One of the greatest difficulties in hardening steel-works of any considerable extent, more especially such articles as are formed of thin plates, or have a variety of parts of different sizes, consists in the apparent impracticability of heating the thicker parts before the slighter are burned away; besides which, even for a piece of uniform figure, it is no easy matter to make up a fire which shall give a speedy heat, and be nearly of the same intensity throughout. 'This difficulty,' says Mr. Nicholson, 'formed a very considerable impediment to my success in a course of delicate steel-work, in which I was engaged about seven years ago; but, after various unsuccessful experiments, I succeeded in removing it by the use of a bath of melted lead, which, for very justifiable reasons, has been kept a secret till now. Pure lead, that is to say, lead containing little or no tin, is ignited to a moderate redness, and then well stirred: into this the piece is plunged for a few seconds; that is to say, until when brought near the surface, that part does not appear less luminous than the rest. The piece is then speedily stirred about in the bath, suddenly drawn out, and plunged into a large mass of water. In this manner, a plate of steel may be hardened so as to be perfectly brittle, and yet continue so sound as to ring like a bell; an effect which I never could produce in any other way. Mr. Stodart has lately made trial of this method, and considers it to be a great acquisition to the art, as, in fact, I found it.'

The letting down, or tempering of hard steel, is considered as absolutely necessary for the production of a fine and durable edge. It has been usual to do this by heating the hardened steel till its bright surface exhibits some known color by oxidation. The first is a very faint straw color, becoming deeper and deeper, by increase of heat, to a fine deep golden-yellow, which changes irregularly to a purple, then to an uniform blue, succeeded by white and several successive faint repetitions of these series. It is well known, that the hardest state of tempered instruments, such as razors and surgeons' instruments, is indicated by this straw color; that a deeper color is required for leather-cutters' knives, and other tools, that require the edge to be turned on one side; that the blue, which indicates a good temper for springs, is almost too soft for any cutting instrument, except saws, and such tools as are sharpened with a file, and that the lower states of hardness are not at all adapted to this use. But it is of considerable importance, that the letting down, or tempering, as well as the hardening, should be effected by heat equally applied, and that the temperatures, especially at the lower heats, where greater hardness is to be left, should be more precisely ascertained than can be done by the different shades of oxidation. Mr. Hurlley first practised the method of immersing hard steel in heated oil, or the fusible compound of lead five parts, tin three, and bismuth eight. The temperature

of either of these fluids may be ascertained in the usual manner, when it does not exceed the point at which mercury boils; and, by this contrivance, the same advantages are obtained in lowering the temperature of a whole instrument, or any number of them at once, as have already been stated in favor of my method of hardening. Oil is preferable to the fusible mixture for several reasons. It is cheaper; it admits of the work being seen during the immersion, by reason of its transparency; and there is no occasion for any contrivance to prevent the work from floating.

Mr. Nicholson requested Mr. Stodart to favor him with an account of the temperatures at which the several colors make their appearance upon hardened steel; in compliance with which he made a series of experiments upon surgeons' needles, hardened, highly polished, and exposed to a gradual heat, while floating at the surface of the fusible mixture. The appearances are as follow: No. 1, taken out at 430° of Fahrenheit. This temperature leaves the steel in the most excellent state for razors and scalpels. The tarnish, or faint yellowish tinge, it produces, is too evanescent to be observed, without comparison with another piece of polished steel. Instruments, in this state, retain their edge much longer than those upon which the actual straw color has been brought, as is the common practice. Mr. S. informs me, says Mr. Nicholson, that 430° is the lowest temperature for letting down, and that the lower degrees will not afford a firm edge. No. 2, at 440°, and 3, at 450°. These needles differ so little in their appearance from No. 1, that it is not easy to arrange them with certainty when misplaced. No. 4 has the evident tinge, which workmen call pale straw color. It was taken out at 460°, and has the usual temper of penknives, razors, and other fine edge-tools. It is much softer than No. 1, as Mr. Stodart assures me, and this difference exhibits a valuable proof of the advantages of this method of tempering. Nos. 2, 6, 7, and 8, exhibit successive deeper shades of color, having been respectively taken out at the temperatures 470°, 480°, 490°, and 500°. The last is of a bright brownish metallic yellow, very slightly inclining to purple. No. 9 obtained an uniform deep blue at the temperature of 580°. The intermediate shades produced on steel, by heats between 500° and 580°, are yellow, brown, red, and purple, which are exhibited irregularly on different parts of the surface. As I had before seen this irregularity, particularly on the surface of a razor of wootz, and had found, in my own experience, that the colors on different kinds of steel do not correspond with like degrees of temper, and probably of temperature in their production, I was desirous that some experiments might be made upon it by the same skilful artist. Four beautifully polished blades were, therefore, exposed to heat on the fusible metal. The first was taken up when it had acquired the fine yellow, or uniform deep straw color. The second remained on the mixture, till the part nearest the stem had become purplish; at which period, a number of small round spots, of a purplish color, appeared in the clear yellow of the blade. The third was left till the thicker parts of the blade were of a deep

reddish purple; but the concave face still continued yellow. This also acquired spots like the other, and a slight cloudiness. These three blades were of cast-steel; the fourth, which was made out of a piece called Styrian steel, was left upon the mixture till the red tinge had pervaded almost the whole of its concave face. Two or three spots appeared upon this blade; but the greater part of its surface was variegated with blue clouds, disposed in such a manner, as to produce those waving lines which, in Damascus steel, are called 'the water.' Two results are more immediately suggested by these facts: first, that the irregular production of a deep color upon the surface of brightened steel, may serve to indicate the want of uniformity in its composition; and, secondly, that the deep color, being observed to come on first at the thickest parts, Mr. Stodart was disposed to think, that its more speedy appearance was owing to those parts not having been hardened. See STEEL.

An ingenious method of hardening delicate steel-work was some time since communicated to Mr. Stodart by Dr. Wollaston. The steel enclosed in a tube is surrounded by the fusible alloy of eight parts lead, two tin, and five bismuth. The tube, with its contents, is then heated in a furnace to redness, and plunged into a cooling fluid. It is afterwards thrown into boiling water, by which the alloy is fused, and the steel is left perfectly hardened and unaltered by twisting or cracking.

Suppose our cutting instrument to be forged, hardened, and let down or tempered; it remains to be ground, polished, and set. The grinding of fine cutlery is performed upon a grind-stone of a fine close grit, called a Bilston grind-stone, and sold at the tool shops in London at a moderate price. The cutlers use water, and do not seem generally to know any thing of the use of talcum. The face of the work is rendered finer by subsequent grinding upon mahogany cylinders, with emery of different fineness, or upon cylinders faced with hard pewter, called laps, which are preferable to those with a wooden face. The last polish is given upon a cylinder faced with buff leather, to which crocus, or the red oxide of iron, is applied with water. This last operation is attended with considerable danger of heating the work, and almost instantly reducing its temper along the thin edge, which at the same time acquires the colors of oxidation.

The setting now remains to be performed, which is a work of much delicacy and skill: so much so, indeed, that Mr. Stodart says, he cannot produce the most exquisite and perfect edge if interrupted by conversation, or even by noises in the street. The tool is first whetted upon a hone with oil, by rubbing it backwards and forwards. In all the processes of grinding or wearing down the edge, but more especially in the setting, the artist appears to prefer that stroke which leads the edge according to the action of cutting, instead of making the back run first along the stone: for if there be any lump or particle of stone or other substance lying upon the face of the grinder, and the back of the tool be first run over it, it will proceed beneath the edge and lift it up, at the same time

producing a notch. But on the other hand, if the edge be made to move foremost and meet such particle, it will slide beneath it, and suffer no injury. Another precaution in whetting is, that the hand should not bear heavy; because it is evident, that the same stone must produce a more uniform edge if the steel be worn away by many, than by few strokes. It is also of essential importance that the hone itself should be of a fine texture, or that its silicious particles should be very minute.

The grind-stone leaves a ragged edge, which it is the first effect of whetting to reduce so thin that it may be bent backwards and forwards. This flexible part is called the wire, and if the whetting were to be continued too long it would break off in pieces without regularity, leaving a finer though still very imperfect edge, and tending to produce accident while lying on the face of the stone. The wire is taken off by raising the face of the knife to an angle of about fifty degrees with the surface of the stone, and giving a light stroke edge foremost, alternately towards each end of the stone. These strokes produce an edge, the faces of which are inclined to each other in an angle of about 100 degrees, and to which the wire is so slightly adherent that it may often be taken away entire, and is easily removed by lightly drawing the edge along the finger nail. The edge thus cleared, is generally very even: but it is too thick, and must again be reduced by whetting. A finer wire is by this means produced, which will require to be again taken off, if, for want of judgment or delicacy of hand, the artist should have carried it too far. But we will suppose the obtuse edge to be very even, and the second wire to be scarcely perceptible. In this case the last edge will be very acute, but neither so even nor so strong as to be durably useful. The finish is given by two or more alternate light strokes with the edge slanting foremost, and the blade of the knife raised, so that its plane forms an angle of about twenty-eight degrees with the face of the stone. This is the angle which by careful observation and measurement Mr. Stodart habitually uses for the finest surgeons' instruments, and which he considers as the best for razors, and other keen cutting tools. The angle of edge is therefore about fifty-six degrees. The excellence and uniformity of a fine edge may be ascertained, by its mode of operation when lightly drawn along the surface of the skin, or leather, or any organised soft substance. Lancets are tried by suffering the point to drop gently through a piece of thin soft leather. If the edge be exquisite, it will not only pass with facility, but there will not be the least noise produced, any more than if it had dropped into water. This kind of edge cannot be produced, but by performing the last two or more strokes on the green hone. The operation of strapping is similar to that of grinding or whetting, and is performed by means of the angular particle of fine crocus, or other material bedded in the face of the strap. It requires less skill than the operation of setting, and is very apt, from the elasticity of the strap, to enlarge the angle of the edge or round it too much. The chief manufactories of cutlery in

England, are at Sheffield and in London. At the former by the local advantages of coal, &c. on the spot, and the greater division of labor, cutlery in general is afforded at much lower prices than in the metropolis, where the finer descriptions of this important manufacture are more attended to, and surgical instruments, in particular, are made with the greatest skill.

**CUTTLET**, *n. s.* [*Fr. cotelette*. A steak; strictly, it means a rib.

So mutton cutlets, prime of meat.

*Swift.*

**CUTTACK**, a considerable district of Orissa, Hindostan, situated between the twentieth and twenty-second degrees of north latitude. It is bounded on the north by Midnapoor and Moorbunge; on the south by the Circars; on the east by the Bay of Bengal; and on the west by several small states of the interior. Its length is about 150 miles, and breadth about sixty, containing a population of 1,200,000 souls. Between Gaintee and Bamori the country is richly productive, and is inhabited by weavers, who manufacture muslins in pieces for turbans. From Arickpoor to Cuttack the land is chiefly arable, but interspersed with bushes, and not thoroughly cultivated. The Mahanuddy River, in passing through this country, often changes its name, according to the vicinity of different towns and villages. It is also watered by other considerable streams. The rents are chiefly paid in cowries.

The holy land of Juggernaut extends about fifteen miles on each side of the temple of Juggernaut, to the north and south. Its occupants have from time immemorial been exempt from the taxes which Hindoos pay for access to the temple, except during the ruth and dole jattries, when they also are liable to a small impost.

The chief towns are Cuttack, Juggernaut, Budduck, and Balasore. This district is mentioned by the Mohammedan historians as early as the year 1212, under the title of Jagapore, or Jehazpore. It was then subject to a Hindoo prince, who resided at Jagapore; it was subdued by and annexed to Bengal in the reign of Solymán Kerang, 1569. Thus it remained till the year 1751, when it was ceded by the nawab Alyverdy Khan to the Nagpore Maharrattas, who, in 1803, were again compelled to resign it to the victorious arms of the British, and it is now managed by a civil establishment of judge, collector, &c.

**CUTTACK**, the capital of the above district, called also Cuttack Benares, formerly Saringgur, was once fortified, and a highly respectable town; but, during the period it was governed by the Maharrattas, it fell to decay. In the year 1592 it withstood the Mogul arms for nearly a month, and is naturally strong, but the climate is unhealthy. It is at present the residence of the gentlemen of the civil establishment, and has a cantonment for a corps of native infantry.

**CUTTER**, a small vessel, commonly navigated in the channel of England. It is furnished with one mast, and rigged as a sloop. Many of these vessels are used in an illicit trade, and others are employed by government to take them; the latter of which are either under the direction of the admiralty, or custom-house.

**CUTTLE**. *Ang.-Sax. cutele*. A fish, which, when pursued, darkens the water with an inky substance; a foul-mouthed fellow; a knife.

Away, you cutpurse rascal; you filthy bung, away! by this wine, I'll thrust my knife in your mouldy chaps, if you play the saucy cuttle with me.

*Shakspeare. Henry IV.*

It is somewhat strange, that the blood of all birds and beasts, and fishes, should be of a red colour, and only the blood of the cuttle should be as black as ink.

*Bacon.*

He that uses many words for the explaining any subject, doth, like the cuttle fish, hide himself for the most part in his own ink.

*Ray on the Creation.*

**CUTTLE-FISH**. See **SEPIA**.

**CUTTS** (John lord), was son of Richard Cutts, esq. of Matching in Essex; where the family were settled about the time of Henry VI., and had a large estate. He entered early into the service of the duke of Monmouth, was aide-de-camp to the duke of Lorraine in Hungary, and signalised himself in a very extraordinary manner at the taking of Buda by the imperialists in 1686; which important place had been for near a century and a half in the hands of the Turks. Returning to England at the Revolution, he obtained a regiment of foot; was created baron Gowran in Ireland, December 6th, 1690; appointed governor of the Isle of Wight, April 14th, 1693; was made a major-general; and, when the assassination project was discovered, 1695-6, was captain of the king's guard. He was colonel of the Coldstream guards in 1701; when Mr. Steele, who was indebted to his interest for a military commission, inscribed to him his first work, *The Christian Hero*. On the accession of queen Anne, he was made a lieutenant-general of the forces in Holland; commander in chief of the forces in Ireland, under the duke of Ormond, March 23d, 1704-5; and afterwards one of the lords justices of that kingdom. He died at Dublin January 26th, 1706-7, and was buried there in the cathedral of Christ Church. He wrote a poem on the death of queen Mary, and published, in 1687, *Poetical Exercises*, written upon several occasions, and dedicated to her royal highness Mary, princess of Orange. One of his songs is quoted by Steele in his *Tatler*; but his *Muse Cavalier* is erroneously ascribed by Walpole to lord Peterborough.

**CUT-WATER**, the sharp part of the head of a ship below the beak, so called because it cuts or divides the water before it comes to the bow, that it may not come too suddenly to the breadth of the ship, which would retard it.

**CUT-WORK**, *n. s.* Embroidered work.

**CUVIER** (George Leopold Christian Frederic Dagobert), baron and peer; born Aug. 25, 1769, at Montbéliard, in the duchy of Würtemberg. His brilliant talents early excited great expectations. His father was an officer. As the son's health did not allow him to become a soldier, he resolved to be a clergyman, and was obliged to pass an examination for the stipend, by the help of which he expected to study at Tübingen. A malicious examiner rejected him. The affair, however, was marked by so much injustice, that prince Frederic, brother of the duke, and governor of the district, thought it his duty to

compensate Cuvier by a place in the Charles Academy at Stuttgart, where he gave up his intention of becoming a clergyman. In Stuttgart he studied law, although fond of natural history, and to this period of his life he is indebted for his accurate knowledge of the German language and literature. The narrow circumstances of his parents compelled him to accept the office of tutor in the family of count D'Hericq, in Normandy, where he devoted his leisure to natural science. Cuvier soon perceived that zoology was far from that perfection to which Linnæus had carried botany, and in which mineralogy had been carried by the united labors of the philosophers of Germany and France. The first desideratum was a careful observation of all the organs of animals, in order to ascertain their mutual dependence, and their influence on animal life; then a confutation of the fanciful systems which had obscured rather than illustrated the study. Examinations of the marine productions, with which the neighbouring ocean abundantly supplied him, served him as a suitable preparation. A natural classification of the numerous classes of *vermes* (Linn.) was his first labour, and the clearness with which he gave an account of his observations and ingenious views, procured him an acquaintance with all the naturalists of Paris. Geoffroy St. Hilaire invited him to Paris, opened to him the collections of natural history, over which he presided, took part with him in the publication of several works on the classification of the *mammalia*, and placed him at the central school in Paris, May, 1795. The institute, being re-established the same year, received him as a member of the first class. For the use of the central school, he wrote his *Tableau élémentaire de l'Histoire Naturelle des Animaux* (1796), by which he laid the foundation of his future fame. From this time he was considered one of the first zoologists of Europe. He soon after displayed his brilliant talents as professor of comparative anatomy. His profound knowledge was not less remarkable than his elevated views, and the elegance with which he illustrated them before a mixed audience. In the lecture-room of the Lycée, where he lectured several years on natural history, was assembled all the accomplished society of Paris, attracted by the magnitude of his classifications, and by his extensive surveys of all the kingdoms of nature. In January, 1800, he justly received the place formerly occupied by D'Aubenton, in the Collège de France. Nor did his merits escape the sagacity of Napoleon. In the department of public instruction, in which, one after another, he filled the most important offices, he exercised much influence by his useful improvements and indefatigable activity. He delivered a report very honorable to Germany, in 1811, when he returned from a journey in Holland and Germany, as superintendent of instruction. He was accompanied in his journey by Noël. In 1813 the emperor appointed him Maître des Requêtes to the council of state, and committed to his care the most important affairs in Mentz. Louis XVIII. confirmed him in his former offices, and raised him to the rank of counsellor. As such, he belonged at first to the committee of legisla-

tion, and afterwards to that of the interior. As a politician, he drew upon himself the reproaches of the liberals. In general, the political course of Cuvier forms a contrast to his scientific one, and is, besides, of little importance. The measures of the abbé Frayssinous, then chancellor of the university of Paris, determined him to resign the office of university-counsellor, in December, 1822. The principal of his works are, *Recherches sur les Ossements Fossiles*, 5 vols., 4to., with plates (the classical introduction to this work is printed separately); *Discours sur les Révolutions de la Surface du Globe, et sur les Changemens qu'elles ont produit dans le Règne animal* (Paris, 1825); also, *Le Règne animal* (1817, 4 vols.); *Leçons d'Anatomie Comparée, recueillies par Duméril et Duvernoy* (1805, 5 vols.); *Recherches anatomiques sur les Reptiles regardés encore comme douteux* (1807, 4to.); *Mémoires pour servir à l'Histoire de l'Anatomie des Mollusques* (1816, 4to.). As perpetual secretary, &c., of the academy, in the class of physical sciences, he pronounced éloges on the deceased members of the institute. The *Recueil d'Eloges Historiques* (Paris, 1819, 2 vols.), contains models worthy of imitation. The French academy received him, in consequence, among their forty members, and almost all the learned societies of the world sent him honorary diplomas. France is indebted to him for the establishment of a cabinet of comparative anatomy, which is the finest osteological collection in Europe. Cuvier may be said to have created the science of natural history, having, by his extraordinary and almost instinctive perception of the organic analogies, as traced in the fossil remains which had previously been considered as the mere ornaments of a cabinet of curiosities, thrown a light on the universal system of creation, of which those formed in previous schools could not have even the remotest idea. In the political changes which France underwent, the estimation in which he was held continued unaffected. King Louis Philippe conferred upon him the rank of peer, his title of baron being merely nominal. Cuvier expired on the 13th of May, 1832, in the 63rd year of his age, leaving no property but his library and cabinet of natural history, both which were purchased by the French government for 72,000 francs. The French king, also, as a testimony of his regard for the learning and abilities of the deceased naturalist, conferred a pension of 6000 francs on his widow, with the enjoyment of the apartments in the Jardin des Plantes, occupied by her late husband.

CUXHAVEN, a sea-port of Germany, in the duchy of Bremen, situated on the left bank of the Elbe, at its embouchure. The harbour, being very large and commodious, is much frequented, and vessels generally take in pilots here, in order to ascend the river to Hamburg. A yacht is stationed out at sea, near the outermost buoy, with pilots ready to conduct any vessel that may demand them. The town and bailiwick belong to the corporation of Hamburg, who have held them ever since the fourteenth century. During the late revolutionary wars Cuxhaven became a place of great importance as an entrepot of

British goods. On the fall of Hamburg in 1806, it came into the possession of the French, and remained under their domination above seven years. When, at the close of the war, the French defended Hamburg, Cuxhaven was the scene of some severe fighting. It is sixty miles north-west of Hamburg, and the light-house is in long.  $8^{\circ} 43' 1''$  E., lat.  $53^{\circ} 52' 21''$  N.

CUYO, or Cuyo, an extensive province of Peru, and a portion of the former vice-royalty of Buenos Ayres, is bounded on the north by Tucuman, on the east by the Pampas deserts, on the south by deserts, and on the west by the Andes.

CYANOMETER, a contrivance, invented by Saussure, to ascertain a comparable specimen of the shade of blue of the sky at different times and in different places.

CYATHUS, *κυαθος*, from *χυω*, to pour out, was a common measure among the Greeks and Romans, both of the liquid and dry kind. It was equal to an ounce, or the twelfth part of a pint, and was made with a handle like our punch-ladle. The Romans frequently drank as many cyathi as there were muses, i. e. nine; or as many as there were letters in their patron's name. The cyathus of the Greeks is said by Galen and others to have weighed ten drachms; elsewhere he says, that a cyathus contains twelve drachms of oil, thirteen drachms and one scruple of wine, water, or vinegar, and eighteen drachms of honey. Among the Veterinarii, the cyathus contained two ounces.

CYAXARES I., son of Phraortes, king of Media and Persia. He bravely defended his kingdom against the Scythians; made war against Alyattes, king of Lydia; and subjected to his power all Asia, beyond the river Halys. He died after a reign of forty years, in the year of Rome 160.

CYAXARES II. is supposed by Dr. Prideaux and others to be the same as Darius the Mede, the son of Astyages, king of Media. He added seven provinces to his father's dominions, and made war against the Assyrians, whom Cyrus favored.

CYBELE, in Pagan mythology, the daughter of Caelus and Terra, wife of Saturn, and mother of Jupiter, Neptune, Pluto, &c. She is also called Rhea, Ops, Vesta, Bona Mater, Magna Mater, Berecynthia, Dindymene, &c., and by some is reckoned the same with Ceres: but most mythologists make these two distinct goddesses. According to Diodorus, she was the daughter of a Lydian prince, and, as soon as she was born, she was exposed on a mountain. She was preserved by sucking some of the wild beasts of the forest, and received the name of Cybele from the mountain where her life had been preserved. When she returned to her father's court, she had an intrigue with Atys, a beautiful youth, whom her father mutilated, &c. Most of the mythologists mention the amours of Atys and Cybele. In Phrygia the festivals of Cybele were observed with the greatest solemnity. Her priests, called Corybantes, Curetes, Galli, &c., it is said were not admitted to the service of the goddess without a previous mutilation. In the celebration of the festivals, they imitated the manners of madmen, and filled the air with shrieks and howlings,

mixed with the confused noise of drums, tabrets, bucklers, and spears. This was in commemoration of the sorrow of Cybele for the loss of her favorite Atys. The goddess was generally represented as a robust woman, far advanced in pregnancy, to imitate the fecundity of the earth. She held keys in her hand, and her head was crowned with rising turrets, or with leaves of oak. She sometimes appears riding in a chariot, drawn by two tame lions: Atys follows by her side, carrying a ball in his hand, and supporting himself upon a fir-tree, which is sacred to the goddess. She is also represented with a sceptre in her hand, and with many breasts, to show that the earth gives aliments to all living creatures; and she generally carries two lions under her arms. From Phrygia the worship of Cybele passed into Greece, and was solemnly established at Eleusis under the name of the Eleusinian mysteries of Ceres. The Romans, by order of the Sibylline books, brought the statue of the goddess from Pessinus into Italy; and when the ship which carried it had run on a shallow bank of the Tiber, the virtue of Claudia was said to have been vindicated, by removing it with her girdle. It is supposed that the mysteries of Cybele were first known about 257 years before the Trojan war, or 1580 years before the Augustan age. The Romans were particularly superstitious in washing, every year on the 6th of the kalends of April, the shrine of this goddess in the waters of the river Almon. Many obscenities prevailed in the observation of the festivals; and the priests themselves were the most eager to use indecent expressions, and to show their unbounded licentiousness.

CYBELICUM MARMOR a name given by the ancients to a species of marble dug in the mountain Cybele. It was of an extremely bright white, with broad veins of bluish-black.

CYCAS, in botany, a genus of plants of the monœcia class, and polygamia order. The fruit is a dry plum, with a bivalved kernel. There is but one species described by Linnæus, viz. the circinalis; but professor Thunberg mentions another, viz. 1. *C. caffra*, broad broom, or broad tree of the Hottentots. This plant, discovered by professor Thunberg, is described in the Nova Acta Reg. Soc. Scient. Ups. vol. ii. p. 283, tab. V. The pith, or medulla, which abounds in the trunk of this little palm, Mr. Sparman informs us, is collected and tied up in dressed calf or sheep skins, and then buried in the earth for the space of several weeks, till it becomes sufficiently mellow and tender to be kneaded up with water into a paste, of which they afterwards make small loaves or cakes, and bake them under the ashes. 2. *C. circinalis*, or sago-tree, which grows spontaneously in the East Indies, and particularly on the coast of Malabar. It runs up with a straight trunk to upwards of forty feet in height, having many circles the whole length, occasioned by the old leaves falling off; for standing in a circular order round the stem, and embracing it with their base, whenever they drop, they leave the marks of their adhesion. The leaves are pinnated, and grow to the length of seven or eight feet. The pinne or lobes are long, narrow entire, of a shining green, all the way of a

breadth, lance-shaped at the point, closely crowded together, and stand at right angles on each side the mid-rib, like the teeth of a comb. The flowers are produced in long bunches at the foot-stalks of the leaves, and are succeeded by red fruit, about the size of large plums, of a red color when ripe, and a sweet flavor. Each contains a hard brown nut, enclosing a white meat which tastes like a chestnut. This is a valuable tree to the inhabitants of India, as it not only furnishes a considerable part of their constant bread, but also supplies them with a large article of trade. See SAGO.

**CYCEON**, from *κυκεων*, to mix, a name given by the ancient poets and physicians to a mixture of meal and water, and sometimes of other ingredients. These constituted the two kinds of *kykeon*: the coarser being of the water and meal alone; the richer and more delicate composed of wine, honey, flour, water, and cheese. Homer, in the 11th Iliad, speaks of *kykeon* made with cheese, and the meal of barley mixed with wine, but without any mention either of honey or water; and Ovid, describing the draught of *kykeon* given by the old woman of Athens to Ceres, mentions only flour and water. Dioscorides understood the word in both these senses; but confined it most in the coarse and simple kind: he says, when prepared with water alone, it refrigerates and nourishes greatly.

**CYCNIS**, a Grecian dance, so called from its supposed inventor, one of the satyrs belonging to Bacchus. It consisted of a combination of grave and gay movements.

**CYCLADES**, in ancient geography, islands so called, as Pliny informs us, from the *Cyclos* or orb in which they lie; beginning from the promontory Geræstium of Eubœa, and lying round the island Delos. Their situation and number is not so generally agreed upon. Strabo says, they were first reckoned twelve, but that many others were added: yet most of them lie to the south of Delos, and but few to the north, so that the middle or centre, ascribed to Delos, is to be taken in a loose, not in a geometrical sense. Strabo recites them, after Artemidorus, as follows: Helena, Ceos, Cynthus, Serphus, Melos, Niphæus, Cimolus, Prepesinthus, Olearus, Naxos, Paros, Syrus, Myconos, Tenos, Andros, Gyarus; but he excludes from the number, Prepesinthus, Olearus, and Gyarus.

**CYCLADES, GREAT.** See HEBRIDES, NEW.

**CYCLAMEN**, sowbread, a genus of the monogynia order, and pentandria class of plants: natural order twenty-first, precise. cor. verticillated, with the tube very short, and the throat prominent: the berry is covered with the capsule. There are but two species, which, however, produce many beautiful varieties. They are low, herbaceous, flowery perennials, of the tuberous rooted kind, with numerous, angular, heart-shaped, spotted, marbled leaves; and many fleshy foot-stalks six inches high, carrying monopetalous, five-parted, reflexed flowers, of various colors.

**CYCLE**, *n. s.*

**CYCLOMETRY**, *n. s.* } A circle; a round of time: a space in which the same revolutions begin again; a method, or account of a method till the same course begins again; imaginary

orbs; a circle in the heavens. Cyclometry is the art of measuring cycles.

How build, unbuild, contrive

To save appearances; how gird the sphere

With centrick, and excentrick, scribbled o'er

Cycle and epicycle, orb in orb! Milton.

We do more commonly use these words, so as to style a lesser space a *cycle*, and a greater by the name of period; and you may not improperly call the beginning of a large period the epocha thereof.

Holder on Time.

We thought we should not attempt an unacceptable work, if here we endeavoured to present our gardeners with a complete *cycle* of what is requisite to be done throughout every month of the year.

Evelyn's Kalendar.

Chained to one centre whirled the kindred spheres,  
And marked with lunar cycles solar years. Darwin.

I must tell you that Sir H. Savile had confuted Joseph Scaliger's *cyclometry*. Wallis.

**CYCLE OF EASTER.** See CHRONOLOGY.

**CYCLE OF THE MOON.** See CHRONOLOGY. It is called also the golden number, and the Metonic cycle, from its inventor Meton the Athenian. At the time of the council of Nice, when the method of finding the time for observing the feast of Easter was established, the numbers of the lunar cycle were inserted in the kalendar, which, upon the account of their use, were set in golden letters, and the year of the cycle called the golden number of that year.

**CYCLE OF THE SUN.** See CHRONOLOGY.

**CYCLISUS**, in surgery, an instrument in the form of a half moon, used in scraping the scull, in cases of fractures of that part.

**CYCLOID**, *n. s.* } *Κυκλοειδης*. A geome-

**CYCLOIDAL**, *adj.* } trical curve, of which the genesis may be conceived by imagining a nail in the circumference of a wheel: the line which the nail describes in the air, while the wheel revolves in a right line, is the cycloid. Relating to a cycloid; as the cycloidal space is the space contained between the cycloid and its substance.

A man may frame to himself the notion of a parabola, or a *cycloid*, from the mathematical definition of those figures. Reid.

**CYCLOID**, or **TROCHOID**, a mechanical or transcendental curve, which is thus generated:—Suppose a circle *FEH* to roll along the straight line *AB*, so that all the parts of its circumference be applied to the straight line in succession; the point *E*, that was in contact with *AB* at *A*, will, by a motion thus compounded of a circular and rectilinear motion, describe a certain curve line *A*, to *EDB*, which is called a cycloid. The straight line *AB* is called the base, and the line *CD* perpendicular to *AB*, bisecting it at *C*, and meeting the curve in *D*, is called the axis of the cycloid. The circle by whose revolution the curve is described is called the generating circle. The following are some of the most remarkable properties of this curve.—1. The base *AB* is equal to the circumference of the generating circle. 2. The axis *CD* is equal to the diameter of the generating circle. These two properties are obvious from the definition of the curve. 3. Let the generating circle *CKD* be described on the axis *CD* as a diameter, and let *GKE* be perpendicular to the axis, meeting the circle in *K*,

**LOPTERUS**, the sucker, in ichthyology, belonging to the order of amphibia.

The head is obtuse, and furnished with teeth: there are four rays in the gills, and the fins are connected together in an orbicular form. There are ten species. The chief are, 1. *C. luparis*, or the sea snail, so called from the soft and unctuous texture of its body, resembling that of the land snail. It is almost permanent, and soon dissolves and melts away. It is found in the sea near the mouths of great rivers, and has been seen full of spawn in January. The length is five inches; the color a pale yellow, sometimes finely streaked with a darker. The throat is a round depression of a color like the impression of a seal, surrounded by twelve small pale yellow tubercles, by which it probably adheres to the stones like the limpets. 2. *C. lumpus*, the lump fish, cock fish, or sea owl, grows to the length of nine inches, and weighs seven pounds. The head of the body is like that of the bream, deep and thick, and it swims edgeways. The dorsal fin is sharp and elevated: the belly flat, of a crimson color. Along the body there run rows of sharp bony tubercles, and the skin is covered with small ones. The pectoral fins are large and broad, almost uniting with the head. Beneath these is the part by which it adheres to the rocks, &c. It consists of a fleshy, muscular, and somewhat soft substance, edged with many broad appendages, which concur as so many fingers. The tail and vent fins are pursued. This fish is sometimes eaten in England, dressed like carp: but is both flabby and

**CYDER**, n. s. A fermented drink, made of apples. See CIDER.

Exposure to these diseases is certainly hereditary; perhaps not the diseases themselves; but the quantity of ale, cyder, wine, or spirit, will increase the gout and dropsy in those constitutions which have been intemperate in the use of them.

*Darwin.*

**CYDER**, in rural economy, is particularly used for liquor expressed and prepared by fermentation from the juice of apples. It has been known in this country from a very early period. Mr. Huntingdon, in describing a quarrel at the court of Edward the Confessor, between the two sons of earl Godwin, represents them as departing in a rage to Hereford, (known for this beverage) where his brother ordered a royal banquet to be prepared. He ordered his brother's attendants, and laid their heads and limbs, he placed the vessels of wine, mead, ale, pigment, and cyder. Henry Hunt., vol. vi. p. 367. The art of preparing it has never been improved with much attention, nor improved by the use of hops, to this day, in the hands of the growers of the fruit. We shall give the reader with the best practical directions have been given to the public on the subject by Messrs. Marshall, Crocker, and

serve the different methods of preparing it. This may be divided into three processes:—I. Preparing the fruit. II. Grinding and expressing the juice from it. III. Fermenting and bottling.

I. In preparing the fruit, care must be taken both as to its peculiar quality, and its stage of ripeness, or the season at which it is gathered. Few apples are ready for gathering before Michaelmas; though they are sometimes manufactured before that time. For sale-cyder, and keeping-drink, they are allowed to remain on the trees till fully ripe; and in general the middle of October is considered a proper time for gathering the store apples. The ripeness of the fruit is judged of by its falling from the tree; and Mr. Marshall, as well as Mr. Crocker, thinks that the forcing it away before that time robs it of some of its most valuable properties. 'The harvesting of fruit,' says the former, 'is widely different in this respect from the harvesting of grain, which has the entire plant to feed it after the separation from the soil; while fruit, after it is severed from the tree, is cut off from all possibility of a further supply of nourishment, and, although it may have reached its wonted size, some of its more essential particles are undoubtedly left behind in the tree. Fruits which are late in ripening, however, will sometimes hang on the tree until spoiled by frost, and particularly the weak watery fruits. The general practice of beating them down with poles is much disapproved of by Mr. Marshall, because the fruit must thus be unequally ripe, the apples on the same tree not ripening all at the same time; and thus part of the richness and flavor of the fruit is entirely lost: besides, if the fermentation is interrupted or rendered complex by a mixture of ripe and unripe fruits, and the liquor is not, at first, sufficiently purged from its feculencies, it will be difficult to clear it afterwards. To avoid these inconveniences, arising from the unequal ripening of the fruit, the trees ought to be gone over first with a hook when the fruit begins to fall naturally, and the trees may be afterwards cleared with the poles when it is all sufficiently ripened, or when the winter is likely to set in. Mr. Marshall observes, that the due degree of maturation of fruit for liquor is a subject about which men differ much in their ideas. The prevailing practice of gathering it into heaps until the ripest begin to rot, is wasting the best of the fruit, and is by no means an accurate criterion. Some shake the fruit, and judge by the rattling of the kernels; others cut through the middle, and judge by their blackness: but none of these appear to be a proper test. It is not the state of the kernels, but of the flesh; not of a few individuals, but of the greater part of the prime fruit, which renders the collective body fit or unfit to be sent to the mill. The most rational test of the ripeness of the fruit is, that of the flesh having acquired such a degree of mellowiness, and its texture such a degree of tenderness, as to yield to moderate pressure; thus, when the knuckle or the end of the thumb can with moderate exertion be forced into the pulp of the fruit, it is deemed in a fit state for grinding.

Mr. Marshall is of opinion that one of the grand secrets of cyder-making is the skilful sepa-

ration of the ripe and unripe fruit, before sending it to the mill; and as by various accidents they may be confounded, the most effectual method of distinguishing them is by the hand. He also seems to think that the practice of mixing fruits for liquor is improper, because the finer liquors are made from select fruits; and observes, that it might be better to mix liquors after they are made, than to put together the crude fruits.

Mr. Crocker recommends making three distinct gatherings of the crop, and keeping each by itself. The prime cyder will then be made from the first, and the latter gathering and wind-falls make a fair common article. According to Mr. Knight, the merit of cyder will always depend much on the proper mixture, or rather on the proper separation of the fruits. Those whose rinds and pulp are tinged with green or red, without any mixture of yellow, as that color will disappear in the first stages of fermentation, should be carefully kept apart from such as are yellow, or yellow intermixed with red. The latter kinds, which should remain on the trees till ripe enough to fall without being much shaken, are, as we have noticed, alone capable of making fine cyder. Each kind should be collected separately, as noticed above, and kept till it becomes perfectly mellow. For this purpose, in the common practice of the country, they are placed in heaps of ten inches or a foot thick, and exposed to the sun and air, and rain; not being overcovered except in very severe frosts. The strength and flavor of the future liquor are, however, he says, increased by keeping the fruit under cover some time before it is ground; but unless a situation can be afforded it, in which it is exposed to a free current of air, and where it can be spread very thin, it is apt to contract an unpleasant smell, which will much affect the cyder produced from it. Few farms are provided with proper buildings for this purpose on a large scale, and the improvement of the liquor will not nearly pay the expense of erecting them. It may reasonably be supposed that much water is absorbed by the fruit in a rainy season; but the quantity of juice yielded by any given quantity of fruit will be found to diminish as it becomes more mellow; even in very wet weather, provided it be ground when thoroughly dry. The advantages, therefore, of covering the fruit, will probably be much less than may at first sight be expected. No criterion appears, the writer says, to be known, by which the most proper point of maturity in the fruit can be ascertained with accuracy; but he has good reason to believe that it improves as long as it continues to acquire a deeper shade of yellow. Each heap should be examined prior to its being ground, and any decayed or green fruit carefully taken away. The expense of this will, he observes, be very small, and will be amply repaid by the excellence of the liquor, and the care with which too great a degree of fermentation may be prevented in the process of making it into cyder. In seasons ordinarily favorable half a hogshead of cyder may be expected from the fruit of each tree of an orchard in full bearing. As the number of trees on the acre varies from ten to forty,

the quantity of cyder must vary in the same proportion, that is, from five to twenty hogsheads. Pear trees, in equally good bearing, yield fully one-third more liquor: therefore, although the liquor extracted from pears sells at a lower price than that produced from apples, yet the value by the acre, when the number of trees is equal, is nearly the same.

11. *Of grinding the fruit, &c.*—The cyder-makers in Herefordshire generally agree in considering it necessary towards the perfection of the cyder, to grind the rinds and seeds of the fruit, as well as the fleshy part, to a pulp; but Mr. Marshall complains, that the mills are often very imperfectly finished, and little indebted to the operation of the square and chisel. As perfectly smooth rollers, however, would not lay hold of the fruit sufficiently to force it through, it might be proper, he suggests, to grind the fruit first in the mill to a certain degree, and afterwards put it between two smoother rollers to finish the operation. A bag, containing four corn bushels, is the usual quantity with which they charge a middle-sized mill; and this should yield an equal quantity when ground. After the fruit is ground, it generally remains some time before pressing, that the rind and seeds may communicate their virtues to the liquor; and for this reason Mr. Marshall reprobates the practice of pressing the pulp of the fruit whenever the grinding is finished. The ordinary cyder mill is exhibited on the right hand of our plate CYDER PRESS, &c., and will be further described at the close of this article.

A difference of opinion exists as to the propriety of pressing the fruit immediately after it is ground. Mr. Knight, an able writer on the apple and pear, contends that it should remain at least twenty-four hours before it is taken to the press. Others recommend two days; but many take it at once from the mill to the press when the grinding is finished. Mr. Crocker thinks both extremes wrong. There is an analogy, he observes between the making of cyder from apples, and wine from grapes; and the method which the wine-maker pursues ought to be followed by the cyder-maker. When the pulp of the grapes has lain some time in the vats, the vintager thrusts his hand into the pulp, and takes some from the middle of the mass; and when he perceives, by the smell, that the luscious sweetness is gone off, and that his nose is affected with a slight piquancy, he immediately carries it to the press, and by a light pressure expresses his prime juice. In like manner, should the cyderist determine the time when his pulp should be carried to the press. If he carry it immediately from the mill to the press, he may lose some small advantage which may be expected from the rind and kernels, and his liquor may be of lower color than he might wish. If he suffer it to remain too long unpressed, he will find to his cost that the acetous fermentation will come on before the vinous is perfected, especially in the early part of the cyder-making season. He will generally find that his pulp is in a fit state for pressing in about twelve or sixteen hours. If he must of necessity keep it in that state longer, he will find a sensible heat therein, which will engender a prema-

ture fermentation; and he must not delay turning it over, thereby to expose the middle of the mass to the influence of the atmosphere.

In order to press the fruit, or pommage as it is now called, it is folded up in pieces of hair-cloth, or placed between layers of clean, sweet straw or reed, and piled up in a square frame or mould: the press is then pulled down and squeezes out the juice, forming the matter into thin and almost dry cakes. Care ought to be taken to keep the straw, reed, or hair-cloths sweet, or the ill effects of their acidity will be communicated to the cyder. The first runnings come off foul and muddy, but the last, particularly in perry, will be as clear and fine as if filtered through paper. The refuse is generally thrown away as useless, or, when dry, used as fuel; if it has not been thoroughly squeezed, the pigs will sometimes eat it; and some people grind it a second time with water, and press it for an inferior liquor for family use. As long as a drop can be drawn, Mr. Marshall recommends to continue the pressure. Even breaking the cakes of the refuse with the hands only, he says, gives the press fresh power over it: regrinding them has a still greater effect; in this state of the materials, the mill gains a degree of power over the more rigid parts of the fruit, which in the first grinding it could not reach. The most eligible management in this stage of the process appears to be this: grind one pressful a-day; press, and regrind the residuum in the evening; infuse the reduced matter all night among part of the first runnings, and in the morning repress while the next pressful is grinding.

**III. Of fermentation and bottling.**—In the fermentation of the liquor, the common practice is to have it put into casks or hogsheads, immediately from the press, and to fill them quite full; when the casks are put into airy sheds, where the warmth differs little from the open atmosphere. They are sometimes even exposed to the open air without any covering but a piece of tile or ear stone, propped up over the bung-hole to carry off the rain. It would seem, from Mr. Marshall's account, that the time with cyder, when the fermentation begins, is quite uncertain, is general varying from one day to a month after it is tunned; though liquor taken immediately from the press, if much agitated, will sometimes pass directly into a state of fermentation. If the commencement of the fermentation is uncertain, its continuance is no less so; liquors that have been agitated will frequently go through it in one day, but otherwise, when allowed to rest, it will last from two to six days. The appearance of the liquor also varies according to the ripeness of the fruit: if the fruit has been properly matured, a thick scum is generally thrown up, resembling that of malt liquor. After the liquor has remained some time in the fermenting vessels it is racked off from the lees, and put into fresh casks. But as a fresh fermentation frequently takes place after racking, when this becomes violent, the liquor must be racked again; and sometimes, before the fermentation is checked, the racking must be repeated five or six times; but when there is only a small degree of fermentation, called fretting, the liquor is suffered to remain in the same cask; this degree,

however, is also very undetermined. The best informed cyder-makers are said to repeat the rackings until the liquor appears quiet or nearly so; and when this cannot be accomplished by the ordinary methods of fermentation, they have recourse to fumigating the casks with sulphur, which is called *stooming* or *stumping*. For this purpose a match made of thick linen cloth, about ten inches long and an inch broad, well coated with brimstone for about three-fourths of its length, is lighted and hung in at the bung-hole of the cask (which has been previously well seasoned, and every other vent stopped), and, while the match burns briskly, the bung is driven in, keeping the uncoated end of the match by its side. The match thus suspended, burns as long as the air contained in the cask will supply the fire; and when it dies the bung is taken out with the remnant of the match, after which the cask is allowed to remain two or three hours, more or less, according to the degree of power the sulphur ought to have, before it is filled with liquor. A smell of the sulphureous acid is thus communicated to the liquor, but it goes off in a short time. Mr. Crocker says, when the fermentation ceases, and the liquor appears tolerably clear to the eye, it has also a piquant vinous sharpness upon the tongue, and if in this state the least hissing noise be heard in the fermenting liquor, the room is too warm, and atmospheric air must be let in at the doors and windows. 'Now,' he continues, 'is the critical moment, which the cyderist must not lose sight of; for if he would have a strong, generous, and pleasant liquor, all further sensible fermentation must be stopped. This is best done by racking off the pure part into open vessels, which must be placed in a more cool situation for a day or two; after which it may again be barrelled, and placed in some moderately cool situation for the winter.'

It is advisable in racking, that the stream from the racking-cock be small, and that the receiving-tub be but a small depth below the cock, lest, by exciting a violent motion of the parts of the liquor, another fermentation be brought up. The feculence of the cyder may be strained through a filtering-bag, and placed among the second-rate cyders, but it must not be returned to the liquor designed for prime cyder.

It is observed by Mr. Knight, that 'after the fermentation has ceased, and the liquor is become clear and bright, it should instantly be drawn off, and not suffered on any account again to mingle with its lees; for these possess much the same properties as yeast, and would inevitably bring on a second fermentation. The best criterion to judge of the proper moment to rack off will be, he says, the brightness of the liquor; and this is always attended with external marks, which serve as guides to the cyder-maker. The discharge of fixed air, which always attends the progress of fermentation, has entirely ceased; and a thick crust, formed of fragments of the reduced pulp raised by the buoyant air it contains, is collected on the surface. The clear liquor being drawn off into another cask, the lees are put, he says, into small bags, similar to those used for jellies, being made, as noticed above; through these, whatever liquor the lees contain gradually

filtrates, becoming perfectly bright; and it is then returned to that in the cask, in which it has the effect, in some measure, of preventing a second fermentation, as already hinted. It appears, he says, to have undergone a considerable change in the process of filtration. The color is remarkably deep, its taste harsh and flat, and it has a strong tendency to become acetous; probably by having given out fixed, and absorbed vital air. Should it become acetous, which it will frequently do in forty-eight hours, it must not on any account, he says, be put into the cask. If however, the cyder, after being racked off, remains bright and quiet, nothing more is to be done to it till the succeeding spring; but if a scum collects on the surface, it must immediately be racked off into another cask; as this would produce bad effects if suffered to sink. If a disposition to ferment with violence again appears, it will be necessary, he thinks, to rack off from one cask to another, as often as a hissing noise is heard. The strength of cyder is much reduced, he says, as noticed above, by being frequently racked off; but this, he supposes, arises only from a large portion of sugar remaining unchanged, which adds to the sweetness, at the expense of the other quality. The juice of the fruits which produce very strong cyders, often remains muddy during the whole winter, and much attention must frequently be paid, to prevent an excess of fermentation.

'The casks into which the liquor is put, whenever racked off, should always have been thoroughly scalded, and dried again; and each should want several gallons of being full, to expose a larger surface to the air of the atmosphere.' 'But,' he adds, 'should the cyder-maker neglect the above precautions, the inevitable consequence will be this: another fermentation will quickly succeed, and convert the fine vinous liquor he was possessed of into a sort of vinegar.' And all the art he is master of will never restore it to its former richness and purity.

He suggests, however, the following correctives:—A bottle of French brandy, half a gallon of spirit extracted from the lees of cyder, or a pail full of old cyder, poured into the hogshead soon after the acetous fermentation is begun; but no wonder, continues he, if all these should fail, if the cyder be still continued in a close warm cellar. To give effect to either, it is necessary that the liquor be as much exposed to a cooler air as conveniently may be, and that for a considerable length of time. By such means it is possible fermentation may, in a great measure, be repressed; and if a cask of prime cyder cannot from thence be obtained, a cask of tolerable second-rate kind may. These remedies are innocent; but if the farmer or cyder-merchant attempt to cover the accident, occasioned by negligence or inattention, by applying any preparation of lead, let him reflect that he is about to commit an absolute and unqualified murder on those whose lot it may be to drink his poisonous draught. Such means should, therefore, on no account be ever had recourse to.

The time of bottling depends greatly on the quality of the liquors themselves. Good cyder can seldom be bottled with propriety until a year old, and sometimes not till two years. It is

stated by the writer just mentioned, that in the month of April the cyder, in general, will be in a fit state for this operation; but that the critical time for this process is, when the liquor has acquired in the cask its highest degree of perfection: then, when the weather is fair, the barometer high, and the wind in some northerly point, let the bottles be filled, setting them by uncorked until the morning; then let the corks be driven very tightly into the necks of the bottles, tied down with small strong twine or wire, and well secured with melted rosin, or other material of the same nature.

Mr. Knight thinks, that cyders which have been made from good fruits, and have been properly manufactured, will retain a considerable portion of sweetness, in the cask, to the end of three or four years; but that the saccharine part, on which alone their sweetness depends, gradually disappears, probably by a decomposition and discharge of fixed air, similar to that which takes place in the earlier stages of their fermentation.

The premises of a cider manufacturer consist of a mill-house, mill, press, vat, and cask, with their appurtenances. The mill-house is generally one end of an out-building; or perhaps a shed, under which straw or small implements are occasionally laid up. The smallest dimensions, to render it any way convenient, are twenty-four feet by twenty; a floor thrown over it, at seven feet high; a door in the middle of the front, and a window opposite; with the mill on one side, the press on the other side of the window; as much room being left in front, towards the door, for fruit and utensils, as the nature of the mill and the press will allow. It consists of two beams supported by uprights with strong braces of wood. The apples being introduced between the pressing surfaces, the juice exudes. To produce this effect the more rapidly, a roller is previously employed, very similar to that used for crushing gypsum, in the manufacture of plaster of Paris; and the cohesive fibre of the fruit is by this means broken down. When a screw-press is substituted for this instrument, a spur wheel should be added, and the whole apparatus may then be erected for about £10. We mention this circumstance the more particularly as, while we are now writing, the whole of the duty has been taken off this valuable and healthy beverage, so that it bids fair to be more generally made than hitherto.

The apple-mill does not differ essentially from that of a common tanner's mill for grinding bark; and consists of a mill-stone from two feet and a half to four and a half in diameter, running on its edge in a circular stone trough, from nine to twelve inches in thickness, and from one to two tons in weight: the bottom of the trough in which the stone runs is somewhat wider than the thickness of the stone itself; the inner side of the groove rises perpendicularly, but the outer is levelled in such a manner as to make the top of the trough six or eight inches wider than the bottom, by which means there is room for the stone to run freely, and likewise for putting in the fruit, and stirring it up while grinding. The bed of a middle sized mill is about nine feet, some ten, and some twelve, the whole being composed of two, three, or four stones, bound

together with cramps of iron, and finished after being cramped in this manner. The best stones are found in the forest of Dean, generally a dark reddish gritstone, not calcareous; for if the stone was of a calcareous quality, the acid juice of the fruit would act upon it and spoil the liquor; a clean-grained grindstone grit is the finest for the purpose. The runner is moved by means of an axle passing through the centre with a long arm reaching without the bed of the mill, for a horse to draw by; on the other side is a shorter arm, passing through the centre of the stone. An iron bolt, with a large head, passes through an eye in the lower part of the swivel, on which the stone turns into the end of the inner arm of the axis; and thus the double motion of it is obtained, and the stone kept perfectly upright. There ought also to be fixed on the inner arm of the axis, about a foot from the runner, a cogged wheel, working in a circle of cogs fixed upon the bed of the mill; these not only prevent the runner from sliding, which it is apt to do, when the mill is full; but likewise make the work more easy for the horse.

The bottom of the press ought to be made entirely of wood or of stone; the practice of covering it with lead being now well known to be pernicious. A few inches within its outer edges a channel is cut to catch the liquor as it is expressed, and convey it to a lip formed by a projection on that side of the bed opposite the mill; having under it a stone trough or wooden vessel, sunk within the ground, when the bed is fixed low to receive it. The press is worked with levers of different lengths, first a short, and then a longer one, both worked by the hand; and afterwards a bar, eight or nine feet in length, worked by a windlass. Mr. Marshall computes the expense of fitting up a mill-house at about £20 or £25, or on a small scale at £10 or £15, but if the stone has to be brought from a distance, the carriage will make a difference.

'Where iron-mills have been tried, this metal has been found to be soluble in the acid of apples, to which it communicates a brown color, and an unpleasant taste. No combination has been ascertained to take place between this acid and lead; but as the oak of this metal readily dissolves in, and communicates an extremely poisonous quality to, the acetous juice of the apple, it should never be suffered to come into contact with the fruit or liquor.' *Knight on the Apple and Pear*,—which may justly be considered as one of the most valuable treatises on this important subject.

There is a cyder-mill in use in the south of France, worked on a circular platform of boards, and, instead of stone, the wheel or conical roller is of cast-iron. The fruit is thinly spread over the platform, and the roller moved round by one man or woman. From the rollers covering more breadth than the narrow wheels in use in England, more fruit is crushed in a short time by this sort of mill.

Another and very convenient cyder-mill sometimes consists, in its simplest form, of two toothed or fluted wooden cylinders of about nine inches in diameter, each being enclosed in the manner of other mills, having a feeder at the top; and

being made so as to be turned by the hand. The cylinders are so arranged as to be capable of being removed to a greater or less distance from each other, and thus the business advances in a regular progressive manner, from the first cutting of the fruit until the cylinders are brought so close together that a kernel cannot pass without being bruised; if a second pair of finer toothed cylinders be made to work under these, the pulp will be brought into a perfect state of fineness. It is with difficulty that the same degree of fineness can be effected by the horse-mill.

A hand-mill, where cyder is only made for private use, sometimes consists of a pair of fluted rollers working into each other. They are of cast-iron, hollow, about nine inches diameter, with flutes or teeth, about an inch wide, and nearly as much deep: two men work them by hand against each other. The fruit passes between them twice; the rollers being first set wide, to break it into fragments, and afterwards closer to reduce the fragments and the seeds.

Cyder-vats are vessels for receiving the pomace, or the cyder before it is racked off into the cask. They should be made of wood, as, where lead is employed, it is liable to be corroded by the acid. (Of the casks we have already spoken.)

Mr. Crocker observes that, in the districts of Hereford and Worcester, the following are considered as the best liquor fruits: the bennet apple, captain Nurse's kernel, Elton's yellow, Normandy apple, and the yellow or forest stire. And that, in the county of Somerset, the Jersey, the white sour, the margill, vallis apple, barn's-door, crab red-streak, Du-ann, Jack Every, cocagee, Clark's primo, Buckland, Pit crab, Slater's pearmain, Slater's No. 19, Slater's No. 20, Slater's No. 21, castle pippin, saw-pit, and the pomme apia, are supposed most valuable. But that in Devonshire, the most esteemed fruits are; the Seaverton red-streak, the sweet broady, the lemon bitter sweet, josey, Orcheton pippin, wine apple, marygold spice-apple, Ludbrook red-streak, green Cornish, the butter-box, red Cornish, broad-nosed pippin, cat's head, brandy-apple, Pine's red-streak, winter red, sweet pomme roi, and the Bickley red-streak. Marshall mentions the stire-apple, hagloe crab, the golden pippin, the old red-streak, and the woodcock, as favorite old cyder fruits, now on the decline. It was during the reign of Charles I. that the plantations of Herefordshire acquired the peculiar eminence which they yet retain, when by the spirited exertions of lord Scudamore, and other gentlemen of the county, Herefordshire 'became, in a manner, one entire orchard.' The principal markets for the fruit liquors of this county, are those of London and Bristol, whence great quantities are sent to Ireland, to the East and West Indies, and to other foreign markets, in bottles. The price of the common cyder is generally fixed once a year by a meeting of the dealers at Hereford fair, on the 20th of October.

CYDER SPIRIT, is a spirituous liquor drawn from cyder by distillation, in the same manner as brandy from wine. Its flavor is not agree-

able, but it may be entirely divested of it, and rendered perfectly pure by rectification. The traders in spirituous liquors are well acquainted with the value of such a spirit as this: they can give it the flavors of some other kinds, and sell it under their names, or mix it in large proportion with foreign brandy, rum, and arrack, in the sale, without danger of detection.

**CYDER WINE**, a kind of wine made from the juice of apples taken from the press and boiled, and which being kept three or four years is said to resemble Rhenish. The method of preparing it according to Dr. Rush of America, where it is much practised, consists in evaporating in a brewing copper the fresh apple juice till half of it be consumed. The remainder is then immediately conveyed into a wooden cooler, and afterwards put into a proper cask with an addition of yeast, and fermented in the ordinary way. The process is evidently borrowed from what has long been practised on the recent juice of the grape, under the term of *vin cuit*, or boiled wine, in Italy, and the islands of the Archipelago. This process has often become an object of imitation in the cyder counties, and particularly in the west of England. Dr. Fothergill made a variety of experiments to ascertain whether or not the liquor acquires any noxious quality from the copper in which it is boiled, and the result seemed to afford a strong presumption that the wine does contain a minute impregnation of copper. It is a curious chemical fact, he observes, that acid liquors, while kept boiling in copper vessels, acquire little or no impregnation from the metal, but presently begin to act upon it when left to stand in the cold.

**CYDIAS**, an ancient Greek painter who made a painting of the Argonauts in the eleventh Olympiad. This celebrated piece was bought by the orator Hortensius for 164 talents.

**CYDNUS**, in ancient geography, a river of Cilicia; rising in Mount Taurus, or rather in Antitaurus, north of Tarsus, through whose middle it ran, in a very clear and cold stream; falling into the sea at a place called Rheuma, a breach, the sea breaking in there, and affording the people of Tarsus a station or port for their ships. The water of the Cydnus is commended by Strabo, as of service in nervous disorders and the gout; it was so cold, however, that bathing in it had almost proved fatal to Alexander.

**CYDONIA**, or **CYDOS**, in ancient geography, one of the three most illustrious cities of Crete, situated in the north-west of the island, with a port walled round. Stephen of Byzantium says, that it was first named Apollonia from Cydon the son of Apollo. Pausanias ascribes the founding of it to Cydon the son of Tegetus, who travelled into Crete. Herodotus affirms, that it was founded by the Samians, and that its temples were erected by them. Alexander, in the first book of the *Critans*, informs us, that it received its name from Cydon the son of Mercury. Cydon was the largest city in the island; and was enabled to hold the balance between her contending neighbours. Phalaeus, general of the Phoenicians, making an expedition into Crete with a fleet and a numerous army, invested Cydon both by sea and land; but, lost his army and his life

before its walls. In succeeding times, when Metellus subdued the island, he assailed Cydon with all his forces; and, after combating an obstinate resistance, subjected it to the power of Rome. Cydon occupied the present situation of Canea; only extending half a league further towards St. Odera.

**CY'GNET**, *n. s.* Lat. from *cygnus*. A young swan.

I am the *cygnet* to this pale faint swan,  
Who chaunts a doleful hymn to his own death.  
*Shakespeare. King John.*

So doth the swan her downy *cygnets* save,  
Keeping them prisoners underneath her wings.  
*Id. Henry VI.*

*Cygnets*, from grey, turn white.  
*Barn's Natural History.*

Young *cygnets* are good meat, if fattened with oats;  
but, fed with weeds, they taste fishy.  
*Mortimer's Husbandry.*

Next the changed god a *cygnet's* form assumes,  
And playful Leda smooths his glossy plumes.  
*Darwin.*

And she bent o'er him, and he lay beneath,  
Hushed as the babe upon its mother's breast,  
Drooped as the willow when no winds can breathe,  
Lulled like the depth of ocean when at rest,  
Fair as the crowning rose of the whole wreath,  
Soft as the callow *cygnet* in its nest.  
*Byron. Don Juan.*

**CYLINDER**, *n. s.* } *Κυλινδρος*. A circular  
**CYLINDRICAL**, *adj.* } body terminated by two  
**CYLINDRICK**, *adj.* } flat surfaces. Partaking  
**CYLINDROID**, *n. s.* } of the nature of a cylinder;  
having the form of a cylinder. A *cylindroid* is a body approaching to the figure of a cylinder.

The square will make you ready for all manner of compartments, bases, pedestals, plots, and buildings; your *cylinder*, for vaulted turrets, and round buildings.  
*Pensham.*

The quantity of water which every revolution does carry, according to any inclination of the *cylinder*, may be easily found.  
*Wilkins.*

Minera ferri stalactitia, when several of the *cylindrical* strix are contiguous, and grow to ether into one sheaf, is called brush iron ore.  
*Woodward's Natural History.*

Obstructions must be most incident to such parts of the body where the circulation and the elastic fibres are both smallest, and those glands, which are the extremities of arteries formed into *cylindrical* canals.  
*Arbuthnot on Aliment.*

Nymphs! your fine hands ethereal floods amass  
From the warm cushion, and the whirling glass;  
Beard the bright *cylinder* with golden wire,  
And circumsure the gravitating fire.  
*Darwin.*

Pent in dark chambers of *cylindric* brass,  
Slumbers in grim repose the sooty mass. *Id.*

This knob or corner of a cloud in being attracted by the earth will become nearly *cylindrical*, as loose wool would do when drawn out into a thread, and will strike the earth with a stream of electricity, perhaps two or ten yards in diameter. *Id.*

**CYLINDER**, in geometry, a solid body, supposed to be generated by the rotation of a rectangle about one of its sides, as the figure CDEF generated by the revolution of the parallelogram ABFE round its side AB, which is the axis of the cylinder. See **GEOMETRY**.

**CYLINDROID**, in geometry, a solid body, approaching to the figure of a cylinder, but differing from it in some respects, as having the bases elliptical, but parallel and equal.

**CYMAR**, *n. s.* Properly written *simar*. A slight covering; a scarf.

Her comely limbs composed with decent care,  
Her body shaded with a slight *cymar*,  
Her bosom to the view was only bare. *Dryden*.

**CYMATIUM**, *n. s.* Lat. from *κυμάτιον*, a little wave. A member of architecture, whereof one half is convex, and the other concave. There are two sorts, of which one is hollow below, as the other is above.

In a cornice, the gola, or *cydatum* of the corona: the coping, the modillions, or dentelli, make a noble show by their graceful projections. *Spectator*.

**CYMBAL**, *n. s.* Lat. *cymbalum*. A musical instrument.

The trumpets, sackbuts, psalteries, and fifes,  
Tabors, and cymbals, and the shouting Romans,  
Make the sun dance. *Shakespeare. Coriolanus*.

If worth should fail, I'll busy her with cares,  
Since her clamorous voice with louder wars;  
Trumpets and drums shall fright her from the throne,  
As sounding cymbals aid the lab'ring moon.

*Dryden's Aurengzebe.*

Ah! tinkling cymbal, and high sounding brass,  
Smitten in vain! such music cannot charm  
The eclipse, that intercepts truth's heavenly beam,  
And chills and darkens a wide-wandering soul.

*Comper.*

A dolphin now his sportive limbs he laves,  
And bears the sportive dance on the waves;  
He strikes the cymbal as he moves along,  
And wondering ocean listens to the song. *Darwin.*

Others their hands applause beat,  
Like cymbals sounding as they meet. *Sheridan.*

Her large black eyes, that flashed through her long hair

As it streamed o'er her; her blue veins that rose  
Among her most transparent brow; her nostril  
Trembled from its symmetry; her lips  
Apart; her voice that clove through all the din,  
As a peal's pierce through the cymbal's clash,  
Jarred but not drowned by the loud bristling.

*Byron. Sardanapalus.*

**CYMBAL**, ANCIENT, Gr. *κymbalon*. The cymbal was much used among the ancients. It was made of brass like our kettle drums, and, as some think, in their form, but smaller, and of different size. Ovid gives cymbals the epithet of *genialia*, because they were used at weddings and other diversions. Cassiodorus and Isidore call this instrument *actabulum*, the name of a cup or cavity of a bone wherein another is articulated; and Xenophon compares it to a horse's hoof;

whence it must have been hollow: which appears, too, from the figure of several other things denominated from it; as a basin, calicon, goblet, cask, and even a shoe, such as those of Empedocles, which were of brass. The ancient cymbals appear to have been very different from our kettle drums, and their use of another kind. To their exterior cavity was fastened a handle, whence Pliny compares them to the upper part of the thigh, and Rabanus to phials. They were struck against one another in cadence, and made a very acute sound. The invention of them was attributed to Cybele: whence their use in feasts and sacrifices; setting aside this occasion, they were seldom used but by dissolute and effeminate people. M. Lampe attributes the invention to the Curetes, who, as well as the Corybantes, were reputed to excel in the music of the cymbal. The Jews had their cymbals, or at least instruments which translators render cymbals; but as to their material and form, critics are not agreed.

**CYMBALS**, MODERN. The modern cymbal has been sometimes defined as a mean instrument, chiefly in use among vagrants, gypsies, &c. It consists of steel wire in a triangular form, whereon are passed rings, which are touched and shifted along the triangle with an iron rod held in the left hand, while it is supported in the right by a ring. Durandus says, that the monks sometimes use the word cymbal for the cloister-bell, which called them to the refectory. It is clear that our translators, at least, 1 Cor. xiii. 1, had this small kind of 'tinkling' instruments in view when they contrast *χαλκος ηχων*, sonorous brass, perhaps the sound of the trumpet, with *κymbalon αλαλζον*, a tinkling cymbal.

But modern times have witnessed the extensive introduction of a very different cymbal amongst the military instruments of Europe. It is an instrument of loud percussion, adopted by us immediately from the east, and resembling the celebrated cymbals of Bacchus, which were evidently struck one against another, and would produce a sharp clamorous sound. They are employed as being useful for the loudness of their music in marking the due time and military step of a march. But the sounds produced are said to be inappreciable to the ear: this however is not the fact.

**CYME**, or **CUMA**, in ancient geography, a city built by Pelops on his return from Greece. Cyme the Amazon gave it name, on expelling the inhabitants, according to Mela. Livy, Mela, Nepos, Pliny, and Tacitus use the Greek name Cyme, in preference to Cuma. It stood in Aolia, between the Myrina and Phocæa, and in Pentinger's map is set down nine miles from Myrina. From this place was the Sybilla Cumæa, called also Erythraa, from Erythraa, a neighbouring place. It was the country of Ephorus. Hesiod was a Cumean originally; his father coming to settle at Asara in Boeotia.

**CYME**, in botany, a name given by the ancient Greeks to a plant with which they used to dye woollen stuffs yellow; and with which the women used also to tinge their hair; yellow being the favorite color in those ages. It is the same plant with the *lutea herba* of the Latins; or what we call dyer's weed.

**CYNÆGIRUS**, an Athenian, celebrated for his extraordinary courage. He was brother to the poet Æschylus. After the battle of Marathon, he pursued the flying Persians to their ships, and seized one of their vessels with his right hand, which was immediately severed by the enemy. Upon this he seized the vessel with his left hand, and when he had lost that also, he still kept his hold with his teeth.

**CYNANCHE**, a species of quinsy, in which the tongue is inflamed and swelled, so that it hangs out beyond the teeth. Dr Cullen distinguishes five species of this disease; viz. 1. cynanche maligna; 2. cynanche parotidea; 3. cynanche pharyngæa; 4. cynanche tonsillaris; and 5. cynanche trachealis. See **MEDICINE**.

**CYNANCHUM**, bastard dogbane, in botany, a genus of the digynia order, and pentandria class of plants; natural order thirtieth, contortæ. The nectarium is cylindrical and quinquevittate. There are six species; of which the following are the most remarkable: viz. 1. *C. acutum*, commonly called Montpellier scammony; and 2. *C. Monseliacum*, the round-leaved Montpellier scammony. They abound with a milky juice like the spurge, which issues out wherever they are broken; and this milky juice when concentered has frequently been sold for scammony. These plants propagate so fast by their creeping roots, that few people care to admit them into their gardens.

**CYNANTHROPY**, *n. s.* *Κυνανθρωπος*, and *ανθρωπος*. A species of madness in which men have the qualities of dogs.

**CYNARA**, the artichoke, in botany, a genus of the polygamia æqualis order, and syngenesia class of plants: *cal.* dilated, imbricated with carnosous squamæ, and emarginated with a sharp point. Of this genus there are eight species; of which only two are cultivated for use: viz. 1. *C. cardunculus*, the cardoon, greatly resembles the artichoke, but is of larger and more regular growth: the leaves being more upright, taller, broader, and more regularly divided: the stalks of the leaves blanched are the only edible parts of the plant. This is a very hardy plant, and prospers in the open quarters of the kitchen garden. It is propagated by seed sown annually in the full ground in March; either in a bed for transplantation, or in the place where they are designed to remain. 2. *C. scolymus*, the garden artichoke, has large, thick, perennial roots, crowned by a considerable cluster of large pennatifid, erect leaves, two or three feet long. In the middle are upright stalks rising a yard high, on the top of which is a large round scaly head, composed of numerous, oval, calycinal scales, enclosing the florets, sitting on a broad fleshy receptacle, which, with the fleshy base of the scales, is the eatable part of the plant. The varieties of this species are, 1. The conical green-headed French artichoke, having the small leaves terminated by spines, a tall stalk, the head somewhat conical, and of a light green color, with the scales pointed at top, opening and turning outward. 2. The globular-headed red Dutch artichoke, having leaves without spines, a strong stalk, the head large, globular, a little compressed at top, and of a reddish green color: broad obtuse scales emarginated at top, growing close,

and turning inward. Of these varieties the last is deservedly the most esteemed, both on account of its superiority in size and the agreeableness of its flavor. Both varieties are perennial in their root; but the leaves and fruit-stem die to the ground in winter; and the roots remaining, send up fresh leaves and stems every summer, producing a supply of artichokes for twenty years if required. The flowers and seed of all the plants of this genus are produced in the centre of the head; the scales of which are the proper calyx of the flower, which consists of numerous small bluish florets, succeeded by downy seeds sitting naked on the receptacle. Both the varieties of the artichoke are propagated by slips or suckers, arising annually from the stool or root of the old plants in spring, which are to be taken from good plants of any present plantation in March or the beginning of April, and planted in the open quarter of the kitchen garden, in rows five feet asunder; and they will produce artichokes the same year in autumn. It should however be remarked, that, though artichokes are of many years duration, the annual produce of their fruit will gradually lessen in the size of the eatable parts after the third or fourth year, so that a fresh plantation should be made every three or four years.

**CYNARCTO'MACHY**. *Κυναρκτος, παχη*. A word coined by Butler, to denote bear-baiting with a dog.

That some occult design doth lie  
In bloody cynarctomachy,  
Is plain enough to him that knows  
How saints lead brothers by the nose.

*Hudibras.*

**CYNEAS**, or **CINEAS**, the friend of Pyrrhus and scholar of Demosthenes, who flourished A. A. C. 275. Pyrrhus and he wrote a treatise of War, quoted by Tully.

**CYNEGETICKS**, *n. s.* *Κυνηγίτικα*. The art of hunting; the art of training and hunting with dogs.

There are extant, in Greek, four books of *cynageticæ*, or venation. *Brucne's Vulgar Errors.*

**CY'NICK**, *n. s. & adj.* } *Κυνικός*. A philo-  
**CY'NICAL**, *adj.* } sopher of the snarling  
or currish sort; a rude man; a snarler; a misanthrope. Having currish qualities; brutal; snarling; satirical.

How vilely doth this cynick rhyme!—  
Get you hence, sirrah; saucy fellow, hence.

*Shakspeare.*

Or heen the manse of that Cynick upright  
Cloathed with some stubborn clay and led to light?  
Or do the relic ashes of his grave  
Revive and rise from their forsaken cave? *Hall*

He doth believe that some new-fangled wit (it is his cynical phrase) will some time or other find out his art. *Willm.*

Without these precautions the man degenerates into a cynick, the woman into a coquette; the man grows sultry and morose, the woman impertinent and fantastical. *Addison.*

The Cynics of old, and some of the Stoics, maintained, that in words there is no indelicacy, that there can be no harm in speaking of any thing that is

natural, and that, if we may speak without blame of sin or crime, or any one part or function of the human body, we may, in like manner, of any other. But this is vile sophistry, tending to the utter debasement of man, and founded in the grossest ignorance of human nature and human language. *Beattie.*

**CYNICS**, a sect of ancient philosophers, who valued themselves upon their contempt of riches and of pomp, of the arts and sciences, and of every thing in short except virtue and morality. The cynic philosophers owe their origin and institution to Antisthenes of Athens, a disciple of Socrates; who being asked of what use his philosophy had been to him, replied, 'It enables me to live with myself.' Diogenes was the most famous of his disciples, in whose character the system of this philosophy appears in its greatest perfection. See **DIOPHES**. These sages are said to have regarded chastity and modesty as weaknesses; and coarseness, even to indelicacy, was certainly one of their characteristics. They argued that what was right to be done, might be done at all times and in all places. Their chief principle, indeed, is common with that of the stoics, was, that we should follow nature. But the stoics clearly included the government of reason, in the rule of nature, which the cynics, for the greater part, rejected.

**CYNIPS**, in zoology, a genus of insects belonging to the hymenoptera order. The mouth is armed with jaws, but has no proboscis: the sting is spiral, and mostly concealed within the body. There are many species. We can only mention two:

1. *C. quercus folii*, or oak-leaf cynips, is of a burnished shining brown color. The antennæ are black; the legs and feet of a chestnut brown; and the wings white, but void of marginal spots. It is in the little smooth, round, hard galls, found under the oak leaves, generally fastened to the fibres, that this insect is produced, a single one in each gall. These latter are ligneous, of a hard compact substance, formed like the rest, by the extravasation of the sap of the leaf, occasioned by the puncture of the gall fly when it deposits its eggs. Sometimes, instead of the cynips, there is seen to proceed from the gall a larger insect, of a brown color, which is an ichneumon. This ichneumon is not the real inmate of the gall, or he that formed it.

2. *C. quercus gemmæ*, or oak bud cynips, is of a very dark green, slightly gilded: its antennæ and feet are of a dun color, rather deep. It deposits its eggs in the oak buds, which produce one of the finest galls, leafed like a rosebud beginning to blow. When the gall is small, that great quantity of leaves is compressed, and they are set one upon another like the tiles of a roof. In the centre of the gall there is a kind of ligneous kernel, in the middle of which is a cavity; and in that is found the little larva, which feeds there, takes its growth, undergoes its metamorphosis, and breaks through the enclosure of that kind of cocoon in order to get out. The whole gall is often over an inch in diameter, sometimes more when dried and displayed; and it holds to a branch by a pedicel.

**CYNHOLINE**, a king of the South Britons, who flourished in the reign of Claudius, and

fought several battles with the Romans under Plautius, the prætor; about A. D. 43-46.

**CYNOGLOSSUM**, hound's tongue, in botany, a genus of the monogynia order, pentandria class of plants; natural order forty-first, asperifoliæ: cor. funnel-shaped, with its throat closed up by little arches formed in it; the seeds depressed, and affixed to the style or receptacle only on their inner side. There are eight species, not remarkable for beauty. *C. officinale*, the common greater hound's tongue, was formerly used in medicine, and its root supposed to possess narcotic virtues; but it is discarded from the present practice. The smell of the whole plant is very disagreeable. Goats eat it: sheep, horses, and swine refuse it.

**CYNOMETRA**, in botany, a genus of the monogynia order and decandria class of plants; cal. tetraphyllous: ænth. bifid at top; the legumen carnosous, crescent-shaped, and monospermous. Species two, Indian trees.

**CYNOMORIUM**, in botany, a genus of the monandria order and monœcia class of plants: natural order fiftieth, amentacæ: cal. imbricated catkin: cor. none: one style; and one roundish seed. Species one only.

**CYNOPHONTIS**, in antiquity, a festival observed in the dog-days at Argos, and so called *απο τας κυνας φονιαν*, i. e. from killing dogs; because it was usual on this day to kill all the dogs they met with.

**CYNOSARGES**, a place in the suburbs of Athens, named from a white or swift dog, who snatched away part of the sacrifice offering to Hercules. It had a gymnasium, in which strangers or those of the half blood performed their exercises; the case of Hercules, to whom the place was consecrated. It had also a court of judicature, to try illegitimacy, and to examine whether persons were Athenians of the whole or half blood.

**CYNOSCEPHALÆ**, in ancient geography, a place in Thessaly, near Scotussa; where the Romans, under Q. Flaminius, gained a great victory over Philip, son of Demetrius king of Macedon. These Cynoscephalæ were small tops of several equal eminences; named from their resemblance to dogs' heads, according to Plutarch.

**CYNOSSEMA**, the tomb of Hecuba, on the promontory Mastusia, over against Sigeum, in the south of the Chersonesus Thracica; named either from the figure of a dog, to which she was fabled to have been changed, or from her sad reverse of fortune.

**CYNOSURA**, in astronomy, a denomination given by the Greeks to *ursa minor*, or the little bear, from *κυνοςουρα*, the dog's tail. This is the constellation next our pole, consisting of seven stars: four of which are disposed like the four wheels of a chariot, and three lengthways representing the beam; whence some give it the name of the chariot, or Charles's wain. See **CYNOSURE**.

**CYNOSURA**, in mythology, a nymph of Ida, in Crete, said to have nursed Jupiter, who changed her into a star.

**CYNOSURA**, **CYNOSURÆ**, or **CYNOSURIS**, in ancient geography, a place in Laconia; but whether maritime or inland, is uncertain. Here Æsculapius was buried.

**CYNOSURE**, *n. s.* From *κύων* cūpa. The star near the north pole, by which sailors steer.

Towers and battlements it sees  
Bosomed high in tufted trees,  
Where perhaps some beauty lies,  
The cynosure of neighbouring eyes. *Milton.*

**CYNOSURUS**, in botany, dog-tail grass; a genus of the digynia order and triandria class of plants; natural order fourth, gramina: *cal.* bivalved and multilobed; the receptacle proper, unilateral, and foliaceous. There are ten species, four of which are natives of Britain, viz. the cristatus, or crested dog-tail grass; the celnatus, or rough dog-tail grass; the caruleus, or blue dog-tail grass; and the panicus or bearded dog-tail grass.

**CYNTHUS**, in ancient geography, a mountain of the island Delos, so high as to overshadow the whole island. On this mountain Latona was fabled to have brought forth Apollo and Diana; hence called Cynthius and Cynthia.

**CYNURIA**, or **CYNURUS AGER**, in ancient geography, a district of Lacedæmon, on the confines of Argolis, that proved a perpetual bone of contention between the Argives and Spartans.

**CYON**. See **CION**.

Gather cyons for garbs before the buds sprout.

*Keelyn.*

**CYPERUS**, in botany, a genus of the monogynia order and triandria class of plants; natural order third, calamagrostis. The glumes are paleaceous, and imbricated towards each side; the corolla is wanting, and there is one naked seed. There are thirty species; the only remarkable are,

1. *C. longus*, the English, Flemish, or long sweet cyperus, grows in the water, and along banks and river sides. Its root is as thick as an olive, full of little knots or specks, of an oblong figure, gray color, sweet and somewhat sharp taste, and almost without smell when it is newly taken out of the ground. It is much used by perfumers and glovers.

2. *C. rotundus*, the round cyperus, is a native of the East Indies, and grows by the sides of rivulets and ditches. The root is knotty, wrapped round with fibrous strings, not easy to break, of a brown color without any gray within; of a pleasant scent, especially when fresh and well dried; the leaves are green, and resemble those of the reed and look. The roots of both species are esteemed cordial, diuretic, cephalic, resisters of poisons, and expellers of wind.

**CYPHER**. See **CIPHER**.

**CYPHERING**, *n. s.* Skill in arithmetic; the art of arithmetick.

Is a fine clerk, and has his cyphering perfect.

*Ben Jonson.*

**CYPHON**, in antiquity, a kind of punishment used by the Athenians. It was a collar made of wood; so called because it constrained the criminal to bow down his head.

**CYPHONISM**, **CYPHONISMS**, from *κύων*, derived from *κύων*, crooked, a kind of torture or punishment in use among the ancients. The learned are at a loss to determine what it was. Some suppose it to be that mentioned by St. Jerome, in his Life of Paul the Hermit, chap. 2,

which consisted in smearing the body over with honey, and thus exposing the person, with his hands tied, to the warm sun, to invite the flies and other vermin to torment him.

**CYPREA**, the gowrie, in zoology, a genus of insects belonging to the order of vermes testacea. It is an animal of the limax or snail kind; the shell is one involuted, subovated, obtuse, smooth valve. The aperture on each side is linear, longitudinal, and toothed. There are forty-four species, distinguished by the form of their shells. This genus is called *cyprea* and *venerea* from its being peculiarly dedicated to Venus; who is fabled to have endowed a shell of this genus with the powers of a remora, so as to impede the course of the ship which was sent by Penander, tyrant of Corinth, with orders to mutilate the young nobility of Coreyra.

**CYPRESS-TREE**, *n. s.* Lat. *Cupressus*. A tree anciently used in funerals; thence, poetically, the emblem of mourning. See **CUPRESSUS**.

He taketh the cypress and the oak, which he strengtheneth for himself among the trees of the forest. *Isaiah xlv. 14.*

The aspine, good for staves, the cypress funeral.

*Spermer. Fœrre Quærens.*

In ivory coffers I have stuffed my crowns;

In cypress chests my arras counterpanes.

*Shakspeare.*

Poison be their drink,

Their sweetest shade a grove of cypress trees.

*Id. Henry VI.*

Bind ye my brows with mourning cyperisse,

And palish twigs of deadlie poplar tree. *Hall.*

Poplars and alders ever-quivering played,

And nodding cypress formed a fragrant shade.

*Pope's Odyssey.*

Long aisles of cypress waved their deepened glooms,  
And quivering spectres grinned amid the tombs.

*Darwin.*

Though no funeral cypress shade thy tomb,

For thee the wreaths of Paradise shall bloom.

*Huddesford.*

Oh, snatched away in beauty's bloom,

On thee shall press no ponderous tomb;

But on thy turf shall roses rear

Their leaves, the earliest of the year;

And the wild cypress wave in tender gloom.

*Byron. Hebrew Melodies.*

**CYPRESS**. See **CUPRESSUS**.

**CYPRIANUS** (Thascius-Cæcilius), a father of the church, born at Carthage, about the end of the second or beginning of the third century. His parents were heathen; and he himself continued such till the last twelve years of his life. Applying early to the study of oratory, he taught rhetoric in Carthage with the highest applause. His conversion is fixed by Pearson, A. D. 246, at Carthage, where, as St. Jerome observes, he had often employed his rhetoric in the defence of paganism. Cyprian, although a married man, as soon as he was converted, resolved upon a state of continence, which was then thought a high degree of piety. He wrote ably in defence of Christianity, and addressed to Donatus his first production *De Gratia Dei*. He next composed a piece *De Idololorum Vanitate*, upon the vanity of idols. Cyprian was now ordained priest, and, when the bishop of Carthage died,

none was judged so proper to succeed him as Cyprian. His first episcopal engagement was to draw up a piece *De Habitu Virginum*, on the dress of young females; in which he inculcates many lessons of modesty and sobriety. In 249 Decius issued very severe edicts against the Christians; and in 250 the heathens, in the circus and amphitheatre of Carthage, insisted upon Cyprian's being thrown to the lions. Upon this he withdrew from Carthage, and wrote, in his retreat, some excellent letters to the Libellatici, or those pusillanimous Christians, who procured certificates of the heathen magistrates, to show that they had complied with the emperor's orders, in sacrificing to idols. At his return to Carthage he held several councils on the repentance of those who had fallen off during this persecution, and other points of discipline; he opposed the schemes of Novatus and Novatianus; and contended for the rebaptising of those who had been baptised by heretics. At last he died a martyr in the persecution under Valerian and Gallienus, in 258. Cyprian wrote eighty-one letters, and several treatises. The best editions of his works are those of Pamelius in 1568; of Rigaltius in 1648; and of Oxford in 1682.

CYPRINUS, in ichthyology, a genus of fishes belonging to the order of abdominales. The mouth is toothless; there are three rays in the gills; the body is smooth and white; and the belly fins have frequently nine rays. There are thirty-one species, principally distinguished by the number of rays in the vent-fin. The most remarkable are 1. *C. alburnus*, the bleak. These fish keep together in large shoals. At certain seasons they seem to be in great agonies: they tumble about near the surface of the water, and are incapable of swimming far from the place; but in about two hours they recover and disappear. Fish thus affected, the Thames fishermen call mad bleaks. They seem to be troubled with a species of Gordius, or hair worm, which torments them so, that they often rise to the surface and die. The bleak seldom exceeds five or six inches in length. Artificial pearls are made of the scales of this fish, and probably also with those of the dace. They are beaten into a fine powder, then diluted with water, and introduced into a thin glass bubble, which is afterwards filled with wax. The French were the inventors of this art. 2. *C. auratus*, the golden fish, a small fish domesticated by the Chinese, and generally kept for ornament in their courts and gardens. They breed them in small ponds made for the purpose, in basins, and even in porcelain vessels. This fish is no larger than our perchard. The male is of a bright red color from the top of the head to the middle of the body: the rest is of a gold color: but it is so bright and splendid, that the finest gilding cannot approach it. The female is white: but its tail and half of its body resemble the lustre of silver. F. du Halde, however, observes, that a red and white color are not always the distinguishing marks of the male and female; but that the females are known by several white spots which are seen round the orifices that serve them as organs of hearing, and the males, by having these spots much brighter. Gold fish are light and lively; they love to sport on the

surface of the water, soon become familiarised, and may even be accustomed to come and receive their food on sounding a small rattle. Great care is necessary to preserve them; for they are extremely delicate, and sensible of the least injuries of the air: a loud noise, such as that of thunder or cannons, a strong smell, a violent shaking of the vessel, or a single touch, will oft-times destroy them. These fish live with little nourishment: those small worms which are engendered in the water, or the earthy particles that are mixed with it, being sufficient for their food. In winter they are removed from the court to a warm chamber, where they are kept, generally shut up in a porcelain vessel. During that season they receive no nourishment; however, in spring, when they are carried back to their former basin, they sport and play with the same strength and liveliness as they did the preceding year. In warm countries these fish multiply fast, provided care be taken to collect their spawn, which floats on the water, and which they almost entirely devour. This spawn is put into a particular vessel exposed to the sun, and preserved there until vivified by the heat: gold-fish, however, seldom multiply when they are kept in close vases, because they are then too much confined. In order to render them fruitful, they must be put into reservoirs of considerable depth, in some places at least, and which are constantly supplied with fresh water. They were first introduced into England about A. D. 1691; but were not generally known till 1728, when a great number were brought over, and presented to Sir Matthew Dekker, and by him circulated round the neighbourhood of London, from whence they have been distributed to most parts of the country. 3. *C. brama*, the bream, is an inhabitant of lakes, or the deep parts of still rivers. It is a fish that is very little esteemed, being extremely insipid. 4. *C. carpio*, the carp. This was introduced into England about 1514, by Leonard Maschal. Russia wants these fish at this day. Sweden has them only in the ponds of people of fashion. They chiefly abound in the rivers and lakes of Polish Prussia, where they are sometimes taken of a vast size. They are there a great article of commerce, and sent in well-boats to Sweden and Russia. The merchants purchase them out of the waters of the noblesse of the country, who draw a good revenue from this article. They grow also to a very great size: some authors speak of carp 200 lbs. in weight, and five feet in length. They are prodigious breeders: the quantity of roe has been sometimes found so great, that when taken out and weighed against the fish itself, the former has been found to preponderate. From the spawn of this fish caviare is made for the Jews, who hold the sturgeon in abhorrence. The carp is extremely cunning, and is sometimes styled the river fox. They will sometimes leap over the nets, and escape that way; at other times they will immerse themselves so deep in the mud, as to let the net pass over them. They are also very shy of taking a bait; yet at the spawning time they are so simple as to suffer themselves to be tickled, handled, and caught by any body that will attempt it. This fish is apt to mix its milt with the roe of other fish; from

which is produced a spurious breed. 5. *C. cephalus*, the chub, is a very coarse fish and full of bones. It frequents the deep holes of rivers; and in summer commonly lies on the surface, beneath the shade of some tree or bush. It is very timid, sinking to the bottom on the least alarm, even at the passing of a shadow, but soon resumes its former situation. It feeds on worms, caterpillars, grasshoppers, and other coleopterous insects that happen to fall into the water; and it will even feed on cray-fish. It will rise to fly. Some of this kind have been known to weigh eight or nine lbs. 6. *C. barbus*, the barbel, a common inhabitant of most fresh waters in Europe, and easily distinguished from the other species of cyprinus, by the upper jaw being advanced far beyond the lower one, and in having the four beards appendant, from which the appropriate name of barbus or harbel is derived. This fish, during the summer, prefers the rapid currents and shallows of rivers, and retires at the approach of winter to the more full and deeper places. They live in societies; lurking in holes along the sides of the water under shelter of the steepest banks, and feed on smaller fish, and worms and flesh of all kinds, for which they dig in the banks like swine. In the day-time they love to lurk occasionally among weeds, and between the stones in retired parts of the river, and wander out at night in search of prey. They spawn in April, and begin to be in season in May and June. The flesh of the barbel was never in great esteem for the table. Mr. Pennant quotes a passage in Ausonius, which, as he observes, is no panegyric on its excellence, for he lets us know it loves deep waters, and that, when it grows old, it is not absolutely bad:

Laxos exercebat barbe natatus  
Tu melior pejore xvo, tibi contigit uni  
Spirantum ex numero non inlaudata senectus.

And he adds himself, that 'they are the worst and coarsest of fresh-water fish, and seldom eaten but by the poorer sort of people, who sometimes boil them with a bit of bacon to give them a relish.' 'The barbel,' says old Walton, 'though he be of a fine shape, and looks big, yet he is not accounted the best fish to eat, neither for his wholesomeness nor his taste; but the male is reputed much better than the female, whose spawn is very hurtful.' 7. *C. gobio*, the gudgeon, is generally found in gentle streams, and is of a small size, the largest not exceeding half a pound weight. They bite eagerly; and are assembled by raking the bed of the river; to this spot they immediately crowd in shoals, in expectation of food. 8. *C. leuciscus*, the dace, is gregarious, haunts deep still waters, is a great breeder, very lively, and during summer is very fond of frolicking near the surface of the water. It never exceeds the weight of a pound and a half; the scales are smaller than those of the roach. 9. *C. rutilus*, the roach, is a common fish found in many of the deep still rivers of this country. They are gregarious, keeping in large shoals. It has never been known to exceed five lbs. in weight. 10. *C. tinca*, the tench, was treated with the same disrespect by the ancients as the barbel;

but is now in much more repute. It has by some been called the physician of the fish; and its slime has been said to be of so healing a nature, that the wounded fishes apply it as a styptic. In this country it is reckoned a wholesome and delicious food; but the Germans are of a different opinion. By way of contempt they call it the shoemaker. Gesner even says that it is insipid and unwholesome. It does not commonly exceed four or five lbs., though some have been known to weigh ten, and even twenty. They love still waters, and are rarely found in rivers; they are easily caught. They are thick in proportion to their length. The color of the back is dusky; the corial and ventral fins of the same color; the head, sides, and belly, of a greenish cast, most beautifully mixed with gold, which is in its greatest splendor when the fish is in highest season.

CYPRIPEDIUM, the lady's slipper, in botany, a genus of the diandria order, and gynandria class of plants: natural order seventh, orchidæ. The nectarium is ventricose, inflated, and hollow. There are three species, of which only one, viz. *C. calceolus*, is a native of Britain. It grows in rough ground in different parts of the island. The other two species are natives of America. None of them are easily propagated in gardens, and therefore must be transplanted from those places where they are natives.

CYPRUS, *n. s.* I suppose from the place where it was made; or corruptly from *cypres*, as being used in mourning, says Dr. Johnson. A thin transparent black stuff.

A cyprus, not a bosom,  
Hides my poor heart ' Shakepeare.  
Lawn as white as driven snow,  
Cyprus black as e'er was crow.  
Id. Winter's Tale.

CYPRUS, or KURIS, as it is called by the Turks, is the most important island of the Levant, and subject to Turkey. It is situated between 33° and 36° E. long., and 30° and 34° N. lat. It is about 150 miles in length by seventy-five broad, and is traversed from east to west by two remarkable mountain ranges, one of which yielded the third Olympus of the ancient mythology. The whole are covered with snow during the winter months, but seem only to render the rest of summer more oppressive. This island was called Macaria, the happy, by the Greeks. Homer celebrates its fertility, calling it by its present name, in Hymn.:

Σεῦρά' ἐπὶ Τροίην, προλιπῆσι ἰνὸνδα Κύπρος.  
It is also known in history by the names of Acamantis, Erosa, Amathus, Cerastis, Colima, Paphia, Salaminia, and Specchia: but its most common name was that which it still bears. The principal towns of ancient Cyprus were Paphos, Citium, Amathus, Salamis, Idalion, Lapathus, Arsinoe, &c. There were three celebrated temples here: two dedicated to Venus, who was said to be born here, and was called the Cyprian queen, and one to Jupiter. The females of the island were proverbially dissipated.

Cyprus, according to Eratosthenes, was first discovered by the Phœnicians two or three gene-

of Iaphet, were the original inhabitants. According to his account, Chittim, his brother Tarshish settled in Cilicia, he built the city of Tarsus, settled with his in this opposite island; and either he or his descendants laid the foundations of Citium, according to Ptolemy, was the most ancient city in the island. As Cyprus was too small to contain the great numbers who attended him, he left here as many as might serve the country, and with the rest passed to Macedon. Cyprus was divided among petty kings till the time of Cyrus. He subdued them all; but left each in possession of his dominion, obliging them only to pay him an annual tribute, and to send supplies of men, and ships, when required. The Cyprian king lived thus subject to the Persians till the death of Darius Hystaspis, when they attempted, without success, to shake off the yoke; their king being entirely defeated, and themselves obliged to submit. They made another unsuccessful attempt about A. A. C. 357; but were again defeated, and submitted, it is probable, to Alexander the Great. After his death, the dominion of Cyprus was divided by Antigonus and Ptolemy. At last Antiochus prevailed, and the whole island submitted about A. A. C. 304. He and his son Antiochus kept possession of it for eleven years, when it was recovered by Ptolemy, and quietly remained by him and his descendants till A. A. C. 96, when it was unjustly seized by the Romans. At the time of Augustus, it began to be ranked among the *proconsular provinces*, and to be governed by magistrates sent thither by the senate. It was conquered by the Saracens; but recovered by the Romans in 957. They held it, however, but for a very short time, and the barbarians kept possession of it till the time of the Crusades. It was then reduced by Richard I. of England, and was given to the Hospitallers of the Order of St. John.

The bay of Salinas, between Cape Greco and Cape Tagista, or Chiti, is pointed out by the highest summit of the island, Mount Cius, or Rusie, being directly over it, whence it bears west. Larnaca, on the east shore of this bay, has a tolerable road even in winter, though exposed to the south-east and south. The town, which is a heap of ruins, is half a mile from the shore, on which is a suburb on the site of the ancient Citium: in the vicinity are many salt marshes, whence the name of the bay, which affords considerable quantities of salt, but render the air unhealthy. Salinas (Salamis) is at the head of the gulf; it has a citadel falling to ruin.

The Bay of Limasole, or Limisso, is sheltered on the west by point Della Gatta: the village at the head of the bay is supposed to stand on the site of Amathonte, and a league east of it are considerable ruins. Piscopia is a village east of the south point of the island, and in the most fertile part of it. On the west coast is Baffa, supposed to be on the site of Paphos: it is a small town with a fort and port for small vessels; the town is on an eminence one mile from the port, and is entirely inhabited by Greeks. Solea (Sola and Epeia) is on the north coast, as are Cerino (Ceronia), a village of 200 inhabitants with a castle in good order, and a small port within two rocks, but open to the north and unsafe in winter, Maceria (Macaria and Aphrodisium), and Artemisia.

The commerce of Cyprus is considerable, exporting of its own produce cotton, which is considered the best of the Levant, 5000 bags of 600 lbs. each, chiefly to Venice, Holland, and England; silk, 25,000 bags of 300 lbs. each; wool, 500 bags of 600 lbs. each; wine chiefly to Venice and Leghorn; coloquintida, 100 quintals, chiefly to Holland and Leghorn; laudanum, madder, chiefly to France; cochineal a small quantity; soda to Marseilles; turpentine to Venice; green earth for painters, and brown earth chiefly to Holland: corn, though pro-

air than that of placing a piece of sheet lead over the bung hole. At the age of forty years this noble beverage is supposed to be in perfection, and its qualities are then truly balsamic. All the valuable kinds are white, the red being merely used as *vin du pays*. The apricots of Cyprus are also delicious. Near Baffa is found an amianthus, or mineral cloth, peculiarly distinguished for its flexibility, whiteness, and delicate structure. Cyprus is likewise noted for the common Turkey manufactures of leather, carpets, and printed cottons. The first is remarkable for its brilliant and lively color. The carpets are of excellent workmanship; and, though barely large enough to cover an English hearth, bring from forty to fifty piastres a-piece. The cottons have the valuable quality of preserving their colors in washing; which, in fact, rather improves them. The principal towns are Nicotia, Famagusta, and Larnica, all situated in the south-east part of the island.

Of the appearance of the females of Cyprus, renowned from an early period of history, Dr. Clarke gives the following account:—The interesting costume presented in the dress of the Cyprian ladies ought not to pass without notice. Their head apparel was precisely modelled after the kind of Calathus represented upon the Phœnician idols of the country, and upon Egyptian statues. This was worn by women of all ranks, from the wives of the consuls to their slaves. Their hair, dyed of a fine brown color, by means of a plant called Henna, hung behind in numerous long straight braids; and, in some ringlets disposed near the face, were fastened blossoms of the jessamine, strung together, upon slips from leaves of the palm-tree, in a very curious and pleasing manner. Next to the Calmuck women, the Grecian are, of all others, best versed in cosmetic arts. They possess the valuable secret of giving a brown color to the whitest locks, and also tinge their eyebrows with the same hue; an art that would be highly prized by the hoary courtizans of London and of Paris. The most splendid colors are displayed in their habits; and these are very becoming to the girls of the island. The upper robe is always of scarlet, crimson, or green silk, embroidered with gold. Like other Greek women, they wear long scarlet pantaloons, fastened round the ankle, and yellow boots, with slippers of the same color. Around the neck, and from the head, were suspended a profusion of gold coins, chains, and other trinkets. About their waists they have a large belt or zone, fastened in front by two large and heavy polished brass plates. They endeavour to make the waist as long as possible, and the legs, consequently, short. Naturally corpulent, they take no pains to diminish the size of their bodies by lacing, but seem rather vain of their bulk, exposing their bosoms, at the same time, in a manner highly unbecoming. Notwithstanding the extraordinary pains they use to disfigure their natural beauty by all sorts of ill-selected ornaments, the women of Cyprus are handsomer than those of any other Grecian island. They have a taller and more stately figure; and the features, particularly of the women of Nicotia, are regular and dignified, ex-

hibiting that elevated cast of countenance so universally admired in the works of Grecian artists. At present this kind of beauty seems peculiar to the women of Cyprus.

The Turkish governor resides at Nicotia; his appointment is renewed annually, and obtained by purchase. So that each succeeding ruler has only the one great point of his personal aggrandisement for a short period in view, and the permanent interests of the island are no topic of consideration with any of its masters. A common type on the medals of this island is the temple of the Paphian goddess, as in the annexed figure; inscription, *ΚΥΠΡΙΟΝ*; sometimes it contains the name of their kings, and sometimes that of the emperors Augustus, Caligula, Claudius, Galba, Vespasian, Titus, Domitian, Trajan, Septimius Severus, Julia, Caracalla, Geta, or Macrinus.

*CYPRUS, KNIGHTS OF*, an order instituted by Guy de Lusignan, titular king of Jerusalem, to whom Richard I. of England, after conquering Cyprus, made over his right.

*CYRENAICA*, an ancient kingdom of Africa, corresponding to the present kingdom and desert of Barca and Tripoli. It was originally inhabited by a number of barbarous nations, differing little from gangs of robbers. Afterwards some colonies from Greece settled in it, and Cyrenaica became so powerful a state, that it waged war with Egypt and Carthage, often with success. In the time of Darius Hystaspis, Arcesilaus, the reigning prince in Cyrenaica, was driven from the throne; on which his mother Pheretima applied for assistance to the king of Cyprus. Her son afterwards returning to Barca, was there assassinated together with his father-in-law. Pheretima, finding herself disappointed by the king of Cyprus, applied to Darius Hystaspis, and by the assistance of the Persians reduced Barca. Here she behaved with the utmost cruelty. Cyrenaica, however, seems to have remained free till the time of Alexander the Great, who conquered it along with Egypt. Soor, after his death, the inhabitants recovered their liberty; but were in a short time reduced by Ptolemy king of Egypt. Under these kings it remained till Ptolemy Physcon made it over to his illegitimate son Apian, who, in the 658th year of Rome, left it by will to the Romans. The senate permitted all the cities to be governed by their own laws; and this immediately filled the country with tyrants, those who were most potent in every city or district endeavouring to assume the sovereignty of it. Thus the kingdom was thrown into great confusion; but Lucullus considerably restored the public tranquillity, during the first Mithridatic war. It was found impossible, however, totally to suppress these disturbances, till the country was reduced to the form of a Roman province, which happened about twenty years after the death of Apion A. A. C. 76. Upon a revolt, the city of Cyrene was ruined by the Romans; but they afterwards rebuilt it. In process of time it fell to the Arabs; and then to the Turks, who still retain it

**CYRENAICS**, a sect of ancient philosophers, so called from their founder Aristippus of Cyrene, a disciple of Socrates. The great principle of their doctrine was, that the supreme good of man in this life is pleasure; whereby they not only meant a privation of pain, and a tranquillity of mind, but an assemblage of all mental and sensual pleasures, particularly the last. Cicero makes frequent mention of Aristippus's school; and speaks of it as yielding debauchees. Three disciples of Aristippus, after his death, divided the sect into three branches, viz. the Hegesiac school, the Annicerian, and the Theodoran; from the names of their authors. Under this division it languished and sunk.

**CYRENE**, in ancient geography, the capital of Cyrenaica, and one of the five cities called Pentapolis, distant from Apollonia, its sea-port, ten miles, situated on a plain of the form of a table, according to Strabo. It is now called Caibon.

**CYRILL (St.)**, bishop of Jerusalem, succeeded Maximus in 350. He was afterwards deposed for selling the treasures of the church, and applying the money to the support of the poor during a great famine. Under Julian he was restored to his see, and firmly established in all his honors under Theodosius; in which he continued unmolested to his death in 386. The remains of this father consist only of twenty-three catecheses, and one letter to the emperor Constantius.

**CYRILL (St.)**, patriarch of Alexandria, succeeded Theophilus, his uncle, in 413. Scarcely was he installed, when he began to exert his authority with great vigor; and drove the Nestorians and Jews from Alexandria, permitting their wealth and synagogue to be taken from them. This proceeding highly displeased Orestes, the governor. Upon which a civil war broke out between them; many tumults were raised and some battles fought in the very streets of Alexandria. St. Cyrill also distinguished himself by his zeal against Nestorius bishop of Constantinople, who, in some of his homilies, had asserted that the Virgin Mary ought not to be called the mother of God. The dispute at first proved unfavorable to Cyrill, whose opinion was not only condemned, but himself deprived of his bishopric and thrown into prison. But he was soon after released, and gained a complete victory over Nestorius, who in 431 was deposed from his see of Constantinople. Cyrill returned to his see at Alexandria, where he died in 444. St. Cyrill also wrote against Theodorus of Mopsuestia, Diodorus of Tarsus, and Julian the Apostate. He composed commentaries on St. John's gospel, and wrote several other books. His works were published in Greek and Latin in 1678, in six volumes folio.

**CYRUS THE GREAT**, the founder of the united empire of the Medes and Persians. The two chief historians, who have written the life of Cyrus, are Herodotus and Xenophon; but their accounts of him are extremely different. The former tells us, that Astyages king of the Medes, dreaming that a vine sprung from the womb of his daughter Mandane, the branches whereof overshadowed all Asia, was told by the sooth-

sayers, that this portended the future power and greatness of a child who should be born of his daughter; and further, that this child should deprive him of his kingdom. Astyages, to prevent the accomplishment of the prediction, married his daughter to Cambyses, a Persian of mean condition, and commanded one of his officers, named Harpagus, to destroy the infant as soon as it came into the world. Harpagus, fearing the resentment of Mandane, put the child into the hands of the king's shepherd. The shepherd's wife, we are told, was so extremely touched with the beauty of Cyrus, that she desired her husband rather to expose her own son, who was born some time before (a story equally unnatural and incredible), and preserve the young prince. Thus Cyrus was brought up among the shepherds of the king, and one day, as the neighbouring children were at play together, being chosen for their prince or chief, he punished one of his comrades with some severity, and the child's parent complained to Astyages. This prince sent therefore for the youthful Cyrus, and observing something noble in his air, together with a great resemblance of his daughter Mandane, he made particular enquiry into his history, and discovered that Cyrus was his grandson. Harpagus, who was the instrument of preserving him, was now punished with the death of his own son; but Astyages, believing that the royalty which the soothsayers had promised to the young prince, was only that which he had lately exercised among the shepherds' children, laid aside his fears. Cyrus being grown up, Harpagus disclosed the secret of his birth to him, with the manner in which he had delivered him from his grandfather's cruelty. He encouraged him to come into Media, and promised to furnish him with forces, in order to make him master of the country, and depose Astyages. Cyrus now, therefore, engaged the Persians to take arms against the Medes, marched at the head of them to meet Astyages, defeated him, and possessed himself of Media. He carried on many other wars; and at length sat down before Babylon, which, after a long siege, he took.

Xenophon's account of the early life of Cyrus is more credible. According to that writer, Astyages king of Media married his daughter Mandane to Cambyses king of Persia, son and successor to Achæmenes. Cyrus was born at his father's court, and was educated with all the care his birth required. When he was about the age of twelve, his grandfather Astyages sent for him to Media, together with his mother Mandane. Some time after, a prince of Assyria having invaded Media, Astyages, with his son Cyaxares and his grandson Cyrus, marched against him. Cyrus distinguished himself in this war, and defeated the Assyrians. Cambyses afterwards recalled him, that he might have him near his own person; and Astyages dying, his son Cyaxares, uncle by his mother's side to Cyrus, succeeded him in the kingdom of Media. Cyrus, at the age of thirty, was, by his father Cambyses, made general of the Persian troops; and sent at the head of 30,000 men to the assistance of his uncle Cyaxares, whom the king of Babylon and his allies, the Cappadocians,

Carians, Phrygians, Cilicians, and Paphlagonians, were preparing to attack. Cyaxares and Cyrus prevented them, by falling upon them and dispersing them. The latter now advanced as far as Babylon, and spread terror throughout the country.

From this expedition he returned to his uncle, towards the frontiers of Armenia and Assyria, and was received by Cyaxares in the tent of the Assyrian king whom he had defeated. After this, Cyrus carried the war into the countries beyond the river Halys, entered Cappadocia, and subdued it entirely. From thence he marched against Cræsus king of Lydia, defeated him in the first battle; then besieged him in Sardis the capital; and after a siege of fourteen days obliged him to surrender. See CRÆSUS. After this Cyrus, having almost reduced all Asia, repassed the Euphrates, and made war upon the Assyrians. He marched directly to Babylon, took it, and there prepared a palace for his uncle Cyaxares. After these expeditions Cyrus returned to his father and mother in Persia, where they were still living; and some time after visiting Cyaxares in Media, he married his cousin the only daughter and heiress of his uncle's dominions, and returned with her to Babylon. He is now stated to have again engaged in several wars, and subdued all the nations which lie between Syria and the Red Sea. He died at the age of seventy years, after a reign of thirty: but authors differ much concerning the manner of his death. Herodotus, Justin, and Valerius Maximus relate, that he died in a war against the Scythians; that falling into an ambush, which their queen Tomyris had laid for him, she ordered his head to be cut off, and cast into a vessel full of blood, saying, 'Thou hast always thirsted after human blood, now glut thyself with it.' Diodorus the Sicilian states, that he was taken in an engagement and hanged. Ctesias assures us, that he died of a wound which he received in his thigh: but by Xenophon's account he died peaceably in his bed, amidst his friends and servants; and certain it is, that in Alexander's time his monument was shown at Pasagarda in Persia. From all this it is obvious, that we are but imperfectly acquainted with the history of this great prince, the founder of the Persian, and destroyer of the Chaldean empire.

Cyrus was monarch of all the east; or as he himself speaks (2 Chr. xxxvi. 22, 23; and Ezra i. 1, 2,) 'of all the earth,' when he permitted the Jews to return into their own country; A.M. 3466, and A.A.C. 538. The enemies of the Hebrews, making use of this prince's affection to his own religion, prevailed with him to countermand his orders for the building of the temple at Jerusalem (Ezra iv. 5). The prophets frequently foretold the coming of Cyrus; and Isa. (xlv. 28) mentions him by name 200 years before he was born. Josephus (Antiq. l. II. c. 2) says, that the Jews of Babylon showed this passage of the prophet to Cyrus, which is extremely probable; and that this prince, in the edict which he granted them for their return, acknowledged that he received the empire of the world from the God of Israel; that the same God had described him by name in the writings of the

prophets; and had foretold that he should build a temple to him at Jerusalem. Cyrus is expressly styled in scripture, 'the Lord's anointed, and the shepherd of Israel;' (Isaiah xlv. 1, and xlv. 28.); and God says of him (Isa. xlv. 5, 'I girded thee, though thou hast not known me.' Daniel is supposed to allude to this prince Chap. viii. v. 3—20, under the figure of the ram. The taking of Babylon by Cyrus was clearly foretold by the prophets. See BABYLONIA and BELSHAZZAR. Archbishop Usher fixes the birth of Cyrus to A. M. 3405; his first year at Babylon to 3466, and his death to 3475.

CYRUS THE YOUNGER, son of Darius Nothus, and brother of Artaxerxes. He was sent by his father at the age of sixteen, to assist the Lacedæmonians against Athens. Artaxerxes succeeded to the throne at the death of Nothus; and Cyrus, mad with ambition, attempted to assassinate him. He was discovered, and would have been punished with death, had not his mother Parysatis saved him by her tears and intreaties. This circumstance did not check the ambition of Cyrus; he was appointed over Lydia and the sea coast, where he secretly fomented rebellion and levied troops under various pretences. At last he took the field with an army of 100,000 barbarians, and 13,000 Greeks, under the command of Clearchus. Artaxerxes met him with 900,000 men near Cunaxa. The battle was long and bloody; and Cyrus might have perhaps obtained the victory, had not his rashness proved his ruin. It is said that the two royal brothers met in person, and their engagement ended in the death of Cyrus, 401 years before the Augustan age; and Artaxerxes, having boasted that his brother had fallen by his hand, put to death two of his subjects for declaring that they had killed him. The Greeks, who were engaged in the expedition, obtained much glory in the battle; and no less by their retreat, which is particularly recorded by Xenophon, one of their leaders. See XENOPHON.

CYST, or	} Kocis. A bag containing morbid matter. Contained in a bag. The art of opening or extirpating encysted tumors.
CYSTIS, n. s.	
CYSTICK, adj.	
CYSTOTOMY, n. s.	

In taking it out, the cystis broke, and shewed itself by its matter to be a meliceris. *Wiseman's Surgery.*

There may be a consumption, with a purulent spitting, when the vomica is contained in a cyst or bag, upon the breaking of which the patient is commonly suffocated. *Arbuthnot.*

The bile is of two sorts: the *cyathic*, or that contained in the gall-bladder, a sort of repository for the gall; or the *hepatic*, or what flows immediately from the liver. *Id.*

CYTHERA, in ancient geography, an island opposite to Malea a promontory, and to Boæ a town of Laconia; sacred to Venus, with a very ancient temple of that goddess, who was exhibited in armour, as in Cyprus. It is now called Cerigo.

CYTHERÆA, in mythology, the surname of Venus, so called from Cythera, her birth-place, where she had a temple, and on the shores of which she was believed to be wafted by the Zephyrs, surrounded by the Cupids, the Graces

ma, and the Nereides, reclining in a languid posture in a sea-shell.

**CUS**, in botany, a genus of the dodecandria, gynandria class of plants; natural order, samentaceæ: *cal.* quadrifid, subcordate; the anthers are sixteen, and the fruit an octolocular polyspermous berry; one, a Cape shrub.

**CUS**, tree trefoil, a genus of the decandria, and diadelphia class of plants; order thirty-second, papilionaceæ: *cal.* with the upper lip bifid; inferior, the legume attenuated at the base. There are eleven species; of which the most remarkable are, 1. *C. Austriacus*, the Austrian, an evergreen cytissus, has a shrubby growing low into many greenish branches, a bushy head three or four feet high, smooth whitish-green leaves, and bright flowers in close umbellate heads at the ends of the branches, having a cluster of leaves at the head. These flowers appear in May. 2. *C. arvensis*, or large deciduous cytissus, has a straight tree-stem, branching into a full head, twenty or thirty feet high, having greenish branches, oblong oval entire growing by threes on long slender foot-stems from the sides of all the branches; yellow flowers collecting into long hanging loosely downward, and appearing

**CYENI**, *CYRICENIANS*, the people of Cyrene, who were noted by the ancients for idleness and effeminacy. Hence the proverb, *proterodotus* and others, *unctura Cyzicæna*, a persons guilty of an indecency through a *scattered Cyziceni, nummi Cyziceni*, coins executed to perfection.

**CYPRUS**, in ancient geography, an island of the eastern coast of Mysia; joined to the continent by two bridges, the first of which was destroyed by Alexander the Great.

**CYPRUS**, or *CYZICUS*, one of the noblest islands of the Hither Asia; situated in the above gulf. It was a colony of the Milesians, and is famous for its siege by Mithridates, which was relieved by Lucullus. The inhabitants were conquered by the Romans, but forfeited their freedom under Tiberius. It was adorned with temples and walls; had a port and marble quarries, and three magazines, one for arms, one for warlike engines, and a third for

*See* } *Schav. czar, tsar*, from Per.  
*tsar*, a crown; *tsar*, a monarch. The emperor of Russia is the feminine. Relating to

competitors, the *czar* of Muscovy's son, of Newburg, and the prince of Lorraine.

*Browne.*

His *czarish* majesty dispatched an express.

*The Tatler.*

The *czarina* was satisfied with introducing them, for she found it impossible to render them polite.

*Goldsmith.*

**CZASLAU**, or *TZASLAU*, a town of Bohemia, the capital of a circle of the same name, on the Crudinka. It is said to possess the highest spire in Bohemia; and within the beautiful church is interred the famous Zisca. The circle of *Czaslau*, or *Csaslau*, is enclosed by Moravia, the circle of *Tabor*, *Caurzim*, *Bitschow* and *Chrudim*. The soil is productive, but the manufactures are not flourishing. It contains eight towns, thirty-three boroughs, and 829 villages.

**CZERNIGOV**, or *TSCHERNIGOV*, a government of European Russia, erected in the year 1781, and lying between those of *Mohilev*, *Smolensko*, *Orel*, *Kursk*, *Pultava*, *Kiev*, and *Minsk*. The soil is very fertile. It has been augmented beyond its original boundaries by the addition of the government of *Novgorod-Sieverskoi*; and now contains, according to official returns, 741,850 inhabitants. *Czernigov*, or *Tchernigow*, the capital, situated on the right bank of the *Desna*, is fortified, and is the see of a Greek archbishop. Population 5000. Seventy-five miles north of *Kiev*, and 344 south-west of *Moscow*.

**CZERNOVICZ**, or *TSCHERNOWITZ*, a town of Austria, the capital of the *Bucharvine*, or, more properly, of a circle in *Galicia*. It is situated at the foot of mountains, on the south bank of the *Pruth*, on the high road from *Lemberg* to *Jassy*, 140 miles south-east of the former, and ninety-five north-west of the latter. It was much enlarged and improved in 1771, and contains 5400 inhabitants. Here is a Greek bishop, a custom-house, a criminal court, a provincial and a charity school. The population of the circle, in 1803, was 195,268.

**CZIRKNITZ ZEE**, a very extraordinary lake of Austria, in *Carniola*, five miles long and three broad, which annually produces both fish and corn: for, being dry in summer, its bottom is cultivated, and it produces corn, grass, &c.; but about the 29th of September the water rushes in from several subterraneous passages, which, with the rains and streams that fall from the mountains, quickly fill it again for the winter season. These subterraneous passages are probably connected with some gulf, the ebbing or flowing of whose waters depend upon periodical winds or currents.

**CZONGRAD**, a market town of Hungary, in a county of the same name, situated at the conflux of the *Korosch* and the *Theyss*.

**CZONGRAD**, a county of Hungary, enclosed by the counties of *Hewesch*, *Bekesch*, *Chonad*, *Batsch*, *Pesth*, and *Little Cumania*. It is thirty miles in length and eighteen in breadth.

## D.

D. The fourth letter of the Hebrew, Syriac, Greek, Latin, and French languages, is traced by Minshew in its shape to the Heb ד dalet, signifying, says he, a gate, which the figure of this letter partly resembles. Hence, with a slight alteration, came the Greek Δ, and by rounding two of the angles of the delta, the Roman D.

D is generally ranked among the lingual letters, having a middle sound between *t* and *th*, formed by a stronger impulse of the tongue to the roof of the mouth than the former letter. In Latin words the *t* and *d* are often changed for one another, as *at* for *ad*, *set* for *sed*, *haud* for *hau*, &c. And in the formation of words from the Latin, *di* frequently assumes the shape of *gi* or *j*, as *journal* for *diurnal*. In English the sound of *d* never varies, nor is it ever mute. D, as a numeral, signifies five hundred; *D*, five thousand.

DAB, v. a. & n.

DA'BBLE, v. a. & n.

DA'BBLER, n. s.

DA'N-CHICK.

Gr. δῆνω, δύνω;  
Chald. *dub*; Ger. *dogg-*  
*wa, dopa*; Sax. *dupan*,  
*dippan*; Scot. *dub*;

Belg. *dabben, dabbelen*; Fr. *douber*. All probably, as Minshew suggests, from the sound of mud, when struck. To dab is to apply something soft or moist, as to a sore; to strike a soft blow. Dab, as a substantive, is a low word for a man expert at something: also a small fish. Mr. Todd thinks it a corruption of adept, adab. To dabble is to move about; to strike, or strike in water or mud; and, by consequence, to smear, daub, or bespatter: metaphorically, to 'meddle without mastery,' as Dr. Johnson well says; and hence a dabbler is 'a superficial meddler.' A dab-chick is a small water-fowl. We first illustrate dab.

A sore should never be wiped by drawing a piece of tow or rag over it, but only by dabbing it with fine lint. Sharp.

Of flat fish there are rays, flouks, dabs, plaice.

Carew.

One writer excels at—a title-page; another works away at the body of the book, and the third is a dab at an index. Goldsmith's *Essays*.

A shadow, like an angel, with bright hair  
Dabbled in blood. Shakespeare. *Richard III.*

The little one complained of her legs, that she could neither swim nor dabble with them.

L'Etrange.

Neither will a spirit, that dwells with stars, dabble  
in this impurer mind. Glanville's *Apol.*

I scarified, and dabbled the wound with oil of turpentine. Wiseman's *Surgery*.

But when he found the boys at play,

And saw them dabbling in their clay,

He stood behind a stall to lurk,

And mark the progress of their work. Swift.

He dares not complain of the tooth-ach, lest our dabblers in politicks should be ready to swear against him for disaffection. Id.

Shakespeare shall be put into your hands, as clean and as fair as it came out of them; though you, I think, have been dabbling here and there with the

text, I have had more reverence for the writer as the printer, and have left every thing standing.

Attorney to Pope

A dab-chick waddles through the copse  
On feet and wings, and wades, and flies, and hops. Pope

DA CAPO, (Ital. from the head), in music, an Italian term signifying that the beginning of the tune is to be repeated to complete the piece.

DACCA JELALPORE, an important and productive district of Bengal, situated for the greater part between the twenty-third and twenty-fourth degrees of northern latitude. It is bounded on the north by Mymensingh, on the east by Tipperah, on the south by Backergunge, and on the west by Ranjeshahy and Jessore. It contains a great number of valuable zemindaries or estates, and is every where intersected by the Ganges and Brahmapootra, and their various branches, so that every town of consequence has its river or canal. These rivers, however, frequently occasion considerable damage by their inundations. In this district it is not uncommon to find fields of rice covered with water, six or eight feet deep. Rice is its principal produce, and has been sold, in cheap years, at the rate of 640 lbs. the rupee. In other productions of consequence are the bet-nut, tobacco, and cotton; but it imports large quantities of the last article, which is manufactured in every town and village. Its muslins are very fine and delicate. A deputy of the nabob, called the naib nazim, was the chief of this district during the Mahomedan government: the last person who held this office was Jessarut Khan, who having been ordered in 1763, by the nabob Cossim Aly Khan, to put all the English at Dacca to death, kindly put them on board boats, and sent them under the protection of a guard to Calcutta; in reward for which he was appointed, after the expulsion of his master, to act in his former office on behalf of the British, and, on his decease, a pension was settled on his family, and the eldest son honored with the title of nabob. The principal towns of this district are Dacca, Narrangunge, Sunergong, and Rajanagur. It contains nearly 1,000,000 inhabitants, most of whom are Mahomedans.

DACCA, a considerable city of Bengal, capital of the foregoing district, and for eighty years the capital of Bengal, when it was called Jehangireanagur. It is the residence of a judge, collector, &c., and is situated on the north bank of the Boor Gunga (Old Ganges), which is some very deep and broad, at the distance of about 100 miles from the sea. The best houses are built of brick, but the bazaars are often thatched, and every vacant spot is filled with trees. The French, Dutch, and English East India Companies had factories here at an early period: those of the two former are gone to decay. The ancient citadel at the west end of the town is in ruins, but the palace or Pooshteh is in good repair. In this city are manufactured beautiful muslins, and shell bracelets much worn by the

Hindoo ladies. The hot winds which pervade almost all other parts of India, are, through the abundant irrigation of the neighbourhood, little felt here. The months of September and October are, however, unhealthy. The neighbourhood abounds with game of all sorts, from the tiger to the quail. Provisions and fish are also here very cheap and abundant. Distant by land from Calcutta, 180 miles.

**DACE**, *n. s.*, called also **DACK** and **DART**, provincially Sax. dagian, from dag to shine as in Lat. *luciscit, luciscus*; a small fish.

Let me live harmlessly, and near the brink  
Of Trent or Avon have a dwelling place;

Where I may see my quill or cork down sink  
Web eaper taste of perch, or bleak, or dace. *Walton.*

**DACE**, in ichthyology, a species of *CYPRINUS*, which see.

**DACIA**, in ancient geography, a country which Trajan, who reduced it to a province, joined to Moesia by an admirable bridge. This country lies extended between the Danube and the Carpathian Mountains, from the river Tibiscus, quite to the north bend of the Danube; so as to extend thence in a direct line to the mouth of the Danube and to the Euxine; being on the north near the Carpathes, terminated by the river Hierasus, now called the Pruth; on the west by the Tibiscus or Teiss; and comprising a part of Upper Hungary, all Transylvania and Walachia, and a part of Moldavia.

**DACIA AURELIANA**, a part of ancient Illyricum, which was divided into the eastern and western; Sirmium being the capital of the latter, and Sardia of the former.

**DACIER** (Andrew), was born at Castres in Upper Languedoc, 1651, and studied at Saumur under Tannegui le Fevre, then engaged in the instruction of his celebrated daughter, who became Madame Dacier. The duke of Montausier, hearing of his merit, engaged him in an edition of Pompeius Festus, which he published in 1681. His edition of Horace printed at Paris in ten volumes, 12mo., and his other works, raised him to great reputation. He was made a member of the Academy of Inscriptions in 1695. When the history of Louis XIV. by medals was finished, he was chosen to present it to his majesty, who settled upon him a pension of 2000 livres, and appointed him keeper of the books of the king's closet. When that post was united to that of library keeper to the king, he was not only continued in the privileges of his place during life, but the survivance was granted to his wife, a favor of which there had been no former instance. The death, however, of Madame Dacier in 1720, rendered this grant, which was so honorable to her, ineffectual. He died September 18th, 1722, of an ulcer in the throat.

**DACIER** (Anne), daughter of Tannegui le Fevre, professor of Greek at Saumur in France, went after her father's death to Paris, whither her fame had already reached: she was then preparing an edition of Callimachus, which she published in 1674. Having shown some sheets of it to M. Huet, preceptor to the dauphin, and to several other men of learning, the work was so highly admired, that the duke of Montausier made a proposal to her of publishing several

Latin authors for the use of the dauphin. She now, therefore, undertook an edition of Florus, published in 1674. Her reputation being soon after spread over Europe, Christina, queen of Sweden, ordered count Konigsmark to compliment her, and offer her a settlement at Stockholm, in return for which Mademoiselle le Fevre sent the queen a Latin letter, with her edition of Florus. In 1683 she married M. Dacier; and soon after declared her design of reconciling herself to the church of Rome. Both she and her husband made their public abjuration in 1685. In 1693 she applied herself to the education of her son and daughter; the former, however, died in 1694, and the daughter, after making great attainments, became a nun in the abbey of Longchamp. Her mother has immortalised her memory in the preface to her translation of the Iliad. Madame Dacier was in a very infirm state of health the last two years of her life; and died, after a painful sickness, August 17th, 1720, aged sixty-nine.

**DACOLITHUS**, in ichthyology, a name given by zoologists to a small fish, supposed to be a species of loache, and called by Ray and some others *cobitis barbatulea aculeata*. It is a very small fish, seldom exceeding two or at most three inches in length. The head is broader and flatter than the body: its back is of a dusky brown color spotted with black, and its belly yellow. It has two beards on each side of the upper jaw; and on the coverings of the gills, on each side, two prickles, or a double-pointed sharp hook, whereby it moves itself among the stones. It delights in shallow waters, with a stony bottom, and spawns in May and June.

**DACTYLE**, *n. s.* } Gr. *δακτυλος*, a finger,  
**DACTILET**, } (from *δευς* to point) be-  
**DACTYLIC**, *adj.* } cause composed of three  
parts, the first longer than either of the others;  
Minshen. A poetical foot, consisting of one  
long syllable and two short, like the joints of a  
finger; as *cāndidūs*. Bishop Hall uses dactilet  
as a diminutive.

The nimble *dactils*, striving to outgo  
The drawing spondees, pacing it below:  
The lingering spondees, labouring to delay  
The breathlesse *dactils*, with a sudden stay.  
Whoever saw a colt, wanton and wilde,  
Yoked with a slow-footed ox on fallow field,  
Can right agree how handsomely beests  
Dull Spoudees with the English *dactilets*.

*Bp. Hall. Satires, l. 6.*

A *dactyl* has the first syllable accented, and the two latter unaccented: as, labourer, possible.  
*Murray. On Prosody.*

The *dactylic* measure being very uncommon, we shall give only one example of one species of it.

From the low pleasures of this fallen nature,  
Rise we to higher, &c.

*Id.*

**DACTYLE**. The dactyle is said to have been the invention of Dionysius or Bacchus, who delivered oracles in this measure at Delphos, before Apollo. The Greeks call it *ποδισκος*. The dactyl and spondee are the most considerable of the poetical feet; as being the measures used in heroic verse, by Homer, Virgil, &c. These two are of equal time, but not equal motion.

**DACTYLETHRA**, or **DACTYLITRA**, digitalis, among the ancient physicians, a medicine used to excite vomiting. It was a sort of topical application, and is described at large by Oribasius.

**DACTYLIC VERSES** are hexameter verses, ending in a dactyle instead of a spondee; as spondaic verses are those which have a spondee in the fifth foot instead of a dactyle. An instance of a dactylic verse occurs in Virgil: *Æn.* i. 33.

*Bis patriz cecidere manus: quin protinus omnia.*

**DACTYLI IDÆI**, q. d. the Fingers of Mount Ida, in pagan mythology, personages very differently described by ancient authors. The Cretans paid divine worship to them, as to those who had nursed and brought up the god Jupiter; whence it appears, that they were the same as the Corybantes and Curetes. Nevertheless Strabo makes them different; and says, that the tradition in Phrygia was, that the 'Curetes and Corybantes were descended from the Dactyli Idæi: that there were originally 100 men in the island, who were called Dactyli Idæi; from whom sprang nine Curetes, and each of these nine produced ten men, as many as the fingers of a man's two hands; and that this gave the name to the ancestors of the Dactyli Idæi.' He relates another opinion, which is, that there were but five Dactyli Idæi; who, according to Sophocles, were the inventors of iron: that these five brothers had five sisters, and that from this number they took the name of fingers of Mount Ida, because they were in number ten; and that they worked at the foot of this mountain. Diodorus Siculus says, 'the first inhabitants of the island of Crete were the Dactyli Idæi, who had their residence on mount Ida: that some said they were 100; others only five, in numbers equal to the fingers of a man's hand, whence they had the name of Dactyli: that they were magicians, and addicted to mystical ceremonies: that Orpheus was their disciple, and carried their mysteries into Greece: that the Dactyli invented the use of iron and fire, and that they had been recompensed with divine honors.' Diomedes the grammarian says, the Dactyli Idæi were priests of the goddess Cybele: called Idæi, because that goddess was chiefly worshipped on Mount Ida in Phrygia; and Dactyli, because that, to prevent Saturn from hearing the cries of infant Jupiter, whom Cybele had committed to their custody, they used to sing certain verses of their own invention, in the Dactylic measure. Strabo gives us the names of four of the Dactyli Idæi: viz. Salaminus, Damnanus, Hercules, and Acmon. See **CORYBANTES**, **CRETE**, and **CURETES**.

**DACTYLIOMANCY**, or **DACTYLIOMANTIA** from *δακτυλιος*, a ring, and *μαντεια*, divination, a sort of divination performed by means of a ring. It consisted in holding a ring, suspended by a fine thread, over a round table, on the edge of which were made divers marks with the letters of the alphabet. The ring in shaking, or vibrating over the table, stopped over certain of the letters, which, being joined together, composed the answer required.

**DACTYLIS**, in botany, cock's foot grass;

a genus of the digynia order, and triandria class of plants; natural order fourth, gramina: cal bivalved and compressed, with the one valve longer than the other, carinated, or having the rachis prominent and sharp. There are two species, both natives of Britain; viz. 1. *D. cynosuroides*, the smooth cock's foot grass, which grows in marshy places; and 2. *D. glomeratus*, the rough cock's foot grass, which is common in meadows and pasture grounds. It is eaten by horses, sheep, and goats; but refused by cows.

**DACTYLONOMIA**, or **DACTYLONOMY**, from *δακτυλος*, and *νομος*, a rule, the art of numbering by the fingers. The rule is this; the left thumb is reckoned one; the index or fore finger two: and so on to the right thumb, which stands for the cypher.

**DACTYLUS**, in zoology, a name given by Pliny to the pholas. In Toulon harbour, and the road, are found solid hard stones, perfectly entire; containing, in different cells, secluded from all communication with the air, several living shell-fish, of an exquisite taste, called dactyli, i. e. dates: to come at these fish the stones are broken with mauls. Along the coast of Ancona, in the Adriatic, are stones usually weighing about fifty pounds, and sometimes even more, the outside rugged and easily broken, but the inside so hard as to require a strong arm and an iron maul to break them; within them, and in separate niches, are found small shell-fish, quite alive and very palatable, called solenes and cappe laughle. These facts are attested by Cassendi, Blondel, Mayol, the learned bishop of Sultrara, and more particularly by Aldrovandi, a physician of Bologna. The two latter speak of it as a common fact, which they themselves saw.

**DADUCHI**, Gr. *δαδυχες*, torch-bearers, in antiquity, priests of Ceres. The goddess having lost her daughter Proserpine, say mythologists, began to make search for her at the beginning of the night. In order to do this in the dark, she lighted a torch, and thus set forth on her travels throughout the world: for which reason she is represented with a lighted torch in her hand. In commemoration of this pretended exploit, it became a custom for the priests, at the feasts and sacrifices of this goddess, to run about in the temple with torches after this manner:—one of them took a lighted torch from off the altar, and, holding it with his hand, ran with it to a certain part of the temple, where he gave it to another, saying to him, *tibi trado*: the second ran after the like manner to another part of the temple, and gave it to the third, and he to another and so on.

**DAD**, *אָד*, Heb. *dodh*, beloved; Gr. *δαδύς*. *אָטא*, Hind. *ata*; Lat. *tata*; Goth. *atta*; Fr. *papa*. One among those familiar words with which, in all languages, children first salute their father; and which are universally compounds of *a* and *t* or *d*; or *a* and *b* or *p*.

I was never so bethump't with words,

Since first I called my brother's father *dad*.

*Sackspere.*

His loving mother left him to my care,

Fine child, as like his *dad* as he could stare.

*Shag.*

**DADE**, *v. a.* *Dut. douden.* To hold up by a leading string.

The little children when they learn to go,  
By painful mothers *daded* to and fro. *Drayton.*

**DADYAI**, *adj.* *Lat. dadalus; Gr. δαίδαλλω;* to variegate skillfully, first applied to needlework. Why Dr. Johnson warns us against using the word with this meaning is difficult to divine. See Ainsworth, and the fine example from Spenser. Various; variegated. Skillful.

But living art may not least part express,  
Nor life resembling pencil it can paynt,  
All over *Zeuxis* or *Praxiteles*;  
His *Dadale* hand would failo and greatly faynt,  
And her perfections with his error taynt.  
*Spenser. Faerie Queene.*

Nor bath  
The *dadal* hand of nature only poured  
Her gifts of outward grace. *Philips.*

**DÆDALA**, two festivals in Bœotia; one of them observed in Alalcomenôs by the Platæans in a large grove, where they exposed in the open air pieces of boiled flesh, and carefully observed whither the crows that came to prey upon them directed their flight. All the trees upon which any of these birds alighted were immediately cut down, and with them statues were made, called *Dædala*, in honor of *Dædalus*. The other festival was of a more solemn kind. It was celebrated every sixty years by all the cities of Bœotia, as a compensation for the intermission of the smaller festivals, for that number of years, during the exile of the Platæans. Fourteen of the statues called *Dædala* were distributed by lot among the Platæans, Lebadæans, Coroneans, Orchomenians, Theophrasti, Thebans, Tanagraeans, and Chæroneans, because they had effected a reconciliation among the Platæans, and caused them to be recalled from exile about the time that Thebes was restored by *Cassander*, the son of *Antipater*. During this festival a woman, in the habit of a bride-maid, accompanied a statue which was dressed in female garments, on the banks of the *Eurotas*. This procession was attended to the top of Mount *Cithæron* by many of the Bœotians, who had places assigned them by lot. Here an altar of square pieces of wood cemented together like stones was erected, and upon it were thrown large quantities of combustible materials. Afterwards a bull was sacrificed to *Jupiter*, and an ox or heifer to *Juno*, by every one of the cities of Bœotia, and by the most opulent that attended. The poorest citizens offered small cattle; and all these oblations, together with *Dædala*, were thrown into the common heap and set on fire, and totally reduced to ashes. They originated in this fable.—When *Juno*, after a quarrel with *Jupiter*, had retired to *Eubœa*, and refused to return to his bed, the god, anxious for her return, went to consult *Cithæron* king of *Platæa*, to find some effectual measure to break her obstinacy. *Cithæron* advised him to dress a statue in woman's apparel, and carry it in a chariot, and publicly to report that it was *Platæa* the daughter of *Asopus*, whom he was going to marry. The advice was followed; and *Juno*, informed of her husband's future marriage, repented in haste to meet the chariot, and was

Vol. VII.

easily united to him when she discovered the artful measures he made use of to effect a reconciliation.

**DÆDALUS**, in fabulous history, the son of *Eupalamus*, descended from *Erectheus* king of Athens. He was the most ingenious artist of his age; and to him we are said to be indebted for the invention of the wedge, with many other mechanical instruments; as well as the sails of ships. He made statues, we are told, which moved of themselves, and seemed to be endowed with life. After the murder of *Talus*, he, with his son *Icarus*, fled from Athens to *Crete*, where *Minos* gave him a cordial reception. *Dædalus* made a famous labyrinth for *Minos*, and assisted *Pasiphae* the queen to gratify her unnatural passion for a bull. For this action *Dædalus* incurred the displeasure of *Minos*, who ordered him to be confined in the labyrinth which he had constructed. Here he made himself wings with feathers and wax, and carefully fitted them to his body and that of his son, who was the companion of his confinement. They took their flight in the air from *Crete*; but the heat of the sun melted the wax on the wings of *Icarus*, whose flight was too high, and he fell into that part of the ocean, which from him has been called the *Icarian Sea*. The father, by a proper management of his wings, alighted at *Cumæ*, where he built a temple to *Apollo*, and thence directed his course to *Sicily*, where he was kindly received by *Cocalus*, who reigned over part of the country. He left many monuments of his ingenuity in *Sicily*, which still existed in the age of *Diodorus Siculus*. He was despatched by *Cocalus*, who was afraid of the power of *Minos*, who had declared war against him because he had given an asylum to *Dædalus*. The flight of *Dædalus* from *Crete*, with wings, is explained by observing that he was the inventor of sails, which in his age might pass at a distance for wings. He lived about A. A. C. 1400.

**DÆMON**, *δαίμων*, a name given by the ancients to certain spirits or genii, which they say appeared to men both to do them service and to injure them. The word is derived, according to *Plato*, in his *Cratylus*, from *δαίμων*, knowing or intelligent; but according to others from *δαίματι*, to distribute. They held a middle rank between the celestial gods and men, and carried on all intercourse between them. It was the opinion of many that the celestial divinities did not themselves interpose in human affairs, but committed the entire administration of the government of this lower world to these subaltern deities. Hence they became the objects of worship. 'If idols are nothing,' says *Celsus* (*Origen* cont. Cels. lib. viii. p. 393), 'what harm can there be to join in the public festivals? If they are demons, then it is certain that they are gods, in whom we are to confide, and to whom we should offer sacrifices and prayers, to render them propitious.' *Plutarch* teaches, *Vit. Romul.* p. 36, ed. Paris, 'that according to a divine nature and justice, the souls of virtuous men are advanced to the rank of demons; and that from demons, if they are properly purified, they are exalted into gods, not by any political institution, but according to right reason.' He

D

says in another place, *de Is. et Osir.* p. 361, 'that Isis and Osiris were, for their virtue, changed from good demons into gods, as were Hercules and Bacchus afterwards, receiving the united honors both of gods and demons.' The word *dæmon* is used indifferently in a good and in a bad sense. In the former sense it is very common among the ancient heathens. Pythagoras held that *dæmons* sent diseases to men and cattle. Diogen. Laert. Vit. Pythag. Zaleucus, in his preface to his Laws, supposes that an evil *dæmon* might be present with a man to influence him to justice. The *dæmons* of Empedocles were evil spirits, and exiles from heaven. And Plutarch in his life of Dion says, 'it was the opinion of the ancients that evil and mischievous *dæmons*, out of envy and hatred to good men, oppose whatever they do.' Scarce did any opinion more generally prevail in ancient times than this, viz. that as the departed souls of good men became good *dæmons*, so the departed souls of bad men became evil *dæmons*. Besides the two forementioned kinds of *dæmons*, the fathers, as well as the ancient philosophers, held a third, viz. such as sprang from the congress of superior beings with the daughters of men. In the theology of the fathers these were the worst kind of *dæmons*. Different orders of *dæmons* had different stations and employments assigned them by the ancients. Good *dæmons* were considered as the authors of good to mankind; evil *dæmons* brought innumerable evils both upon men and beasts. Amongst evil *dæmons* there was a great distinction with respect to the offices assigned them; some compelled men to wickedness, others stimulated them to madness. See *Dæmoniac*. Much has been said concerning the *dæmon* of Socrates; who declared to the world that a friendly spirit, whom he called his *dæmon*, directed him how to act on every important occasion in his life, and restrained him from imprudence of conduct. See *Socrates*.

We have seen above, not only the meaning of the word *dæmon*, but how the ancients worshipped *dæmons*. They were of various orders, and, according to the situation over which they presided, had different names. Hence the Greek and Roman poets talk of satyrs, dryads, nymphs, fauns, &c. &c. See *Mythology*. These different orders of intelligences, which, though worshipped as gods or demigods, were yet believed to partake of human passions and appetites, led the way to the deification of departed heroes, and other eminent benefactors of the human race; and from this latter probably arose the belief of natural and tutelar gods, as well as the practice of worshipping these gods through the medium of statues cut into a human figure. *Dæmons*, however, were not more zealously worshipped among the heathens, than they have been among Christians. Bishop Newton, after establishing the meaning of Paul's prophetic words, 1 Tim. iv. 1, above referred to, as corresponding exactly to the heathen *dæmon* worship, says, 'It appears then that the doctrines of *dæmons*, which prevailed so long in the heathen world, should be revived and established in the Christian church; and is not the worship of saints and angels now in all respects the same that

the worship of *dæmons* was in former times? The name only is different, the thing is identically the same.'

*DÆMONIAC*, a human being, whose volition and other mental faculties are overpowered and restrained, and his body possessed and actuated, by some created spiritual being of superior power. Such seems to be the determinate sense of the word; but it is disputed whether any of mankind ever were in this unfortunate condition.

It is the opinion of some, that neither good nor evil spirits are known to exert such authority at present over the human race: but in the ancient heathen world, and among the Jews, particularly in the days of our Saviour, evil spirits, at least, are thought by many to have possessed more influence than they do now. The Greeks and Romans imagined that their deities, to reveal future events, frequently entered into the prophet or prophetess who was consulted, overpowered their faculties, and uttered responses with their organs of speech. Apollo was believed to enter into the Pythonesse, and to dictate the prophetic answers received by those who consulted her. Other oracles, besides that of Delphi, were supposed to unfold futurity by the same machinery. And in various other cases, either malignant *dæmons* or benevolent deities were thought to enter into, and to actuate, human beings. The *Lymphatici*, the *Cerriti*, the *Larvati*, of the Romans, were all of this description; and the Greeks, by the use of the word *δαμονιοζωμενοι*, show that they referred to this cause the origin of madness. Among the ancient heathens, therefore, it appears to have been a generally received opinion, that superior beings entered occasionally into men, overpowered the faculties of their minds, and actuated their bodily organs. They might imagine that this happened in instances in which the effects were owing to the operation of different causes; but an opinion so generally prevalent had surely some plausible foundation. The Jews, too, both from the sacred writings, and Josephus, appear to have believed in *dæmoniacal* possession. The case of Saul may be recollected as one among many in which superior created beings were believed by the Jews to exert in this manner their influence over human life. The general tenor of their history and language, and their doctrines concerning good and evil spirits, prove the opinion of *dæmoniacal* possession to have been well known and generally received among them.

We shall here subjoin the chief popular arguments on each side of this interesting subject, and add a few remarks. Those who are unwilling to allow that angels or devils have ever intermeddled with the concerns of human life, urge a number of specious arguments. The Greeks and Romans of old, say they, did believe in the reality of *dæmoniacal* possession. They supposed that spiritual beings did at times enter into the sons or daughters of men, and distinguish themselves in that situation by capricious freaks, deeds of wanton mischief, or prophetic emanations. But, in the instances in which they supposed this to happen, it is evident that no such thing took place. Their accounts of the

state and conduct of those persons whom they believed to be possessed in this supernatural manner, show plainly that what they ascribed to the influence of demons were merely the effects of natural diseases. Whatever they relate concerning the *larvati*, the *cerriti*, and the *lymphatici*, shows that these were merely people disordered in mind, in the same unfortunate situation with those madmen and idiots, and melancholy persons, whom we have among ourselves. Festus describes the *larvati* as being *furiosi et mentemoti*. Plato, in his *Timæus*, says, *αἰτίῃ γὰρ ἰσχυρᾷ ἐραπτέται μαντικῇ ἡνθιου, ἀληθοῦς*. Lucian describes *dæmoniacs* as lunatic, and as staring with their eyes, foaming at the mouth, and being speechless. It appears still more evidently, that all the persons spoken of as possessed with devils in the New Testament, were either mad or epileptic, and precisely in the same condition with the madmen and epileptics of modern times. The Jews, among other reproaches which they threw out against our Saviour, said, He hath a devil, and is mad: why hear ye him? The expressions, he hath a devil, and is mad, were certainly used on this occasion as synonymous. With all their virulence they would not surely ascribe to him at once two things that were inconsistent and contradictory. Those who thought more favorably of the character of Jesus, and of his discourses, in reply to his adversaries, These are not the words of him that hath a demon; meaning, no doubt, that he spoke in a more rational manner than a madman could be expected to speak. The Jews appear to have ascribed to the influence of demons, not only that species of madness in which the patient is raging and furious, but also melancholy madness. Of John, who secluded himself from intercourse with the world, and was distinguished for abstinence and acts of mortification, they said, He hath a demon. The youth, whose father applied to Jesus to free him from an evil spirit, describing his unhappy condition in these words, Have mercy on my son for he is lunatic, and sore vexed with a demon; for oftentimes he falleth into the fire, and oft into the water, was plainly epileptic. Every thing, indeed, that is related in the New Testament concerning *dæmoniacs*, proves that they were people affected with such natural diseases as are far from being uncommon among mankind in the present age. When the symptoms of disorders cured by our Saviour and his apostles, as cases of *dæmoniacal* possession, correspond so exactly with those of diseases well known as natural in the present age, it would be absurd to impute them to a supernatural cause. It is much more consistent with common sense and sound philosophy, to suppose, that our Saviour and his apostles wisely, and with that consideration to the weakness and prejudices of those with whom they conversed, which so eminently distinguished the character of the author of our holy religion, and must always be a prominent feature in the character of the true Christian, adopted the vulgar language in speaking of those unfortunate persons who were generally imagined to be possessed with demons, though they well knew the notions which had given rise to such modes of expression

to be ill founded, than to imagine that diseases which arise at present from natural causes, were produced in days of old by the intervention of demons, or that evil spirits still continue to enter into mankind in all cases of madness, melancholy, or epilepsy. Besides, it is by no means a sufficient reason for receiving any doctrine as true, that it has been generally received through the world. Error, like an epidemical disease, is communicated from one to another. In certain circumstances, too, the influence of imagination predominates, and restrains the exertions of reason. Many false opinions have extended their influence through a very wide circle, and maintained it long. On every such occasion as the present, therefore, it becomes us to inquire, not so much how generally any opinion has been received, or how long it has prevailed, as from what cause it has originated, and on what evidence it rests. When we contemplate the frame of nature, we behold a grand and beautiful simplicity prevailing through the whole. Notwithstanding its immense extent, and though it contains such numberless diversities of being, yet the simplest machine constructed by human art does not display greater simplicity, or a happier connexion of parts. We may therefore infer, by analogy, from what is observable of the order of nature in general to the present case, that to permit evil spirits to intermeddle with the concerns of human life, would be to break through that order which the Deity appears to have established through his works; it would be to introduce a degree of confusion unworthy of the wisdom of Divine Providence.

In opposition to these arguments the following are urged by the *Dæmonianists*. In the days of our Saviour, it would appear that *dæmoniacal* possession was very frequent among the Jews and the neighbouring nations. Many were the evil spirits whom Jesus is related in the gospels to have ejected from patients that were brought unto him as possessed and tormented by those malevolent demons. His apostles, too, and the first Christians, who were most active and successful in the propagation of Christianity, appear to have often exerted the miraculous powers with which they were endued on similar occasions. The demons displayed a degree of knowledge and malevolence which sufficiently distinguished them from human beings: and the language in which the *dæmoniacs* are mentioned, and the actions and sentiments ascribed to them in the New Testament, show that our Saviour and his apostles did not consider the idea of *dæmoniacal* possession as being merely a vulgar error concerning the origin of a disease or diseases produced by natural causes. The more enlightened cannot always avoid the use of metaphorical modes of expression; which, though founded upon error, yet have been so established in language by the influence of custom, that they cannot be suddenly dismissed. But in descriptions of characters, in the narration of facts, and in the laying down of systems of doctrine, we require different rules to be observed. Should any person, in compliance with popular opinions, talk in serious language of the existence, dispositions, declarations, and actions of a race of

beings whom he knew to be absolutely fabulous, we surely could not praise him for integrity: we must suppose him to be either exulting in irony over the weak credulity of those around him, or taking advantage of their weakness, with the dishonesty and the selfish views of an impostor. And if he himself should pretend to any connexion with this imaginary system of beings; and should claim, in consequence of his connexion with them, particular honors from his contemporaries; whatever might be the dignity of his character in all other respects, nobody could hesitate to brand him as an impostor. In this light must we regard the conduct of our Saviour and his apostles, if the idea of dæmoniacal possession were to be considered merely as a vulgar error. They talked and acted as if they believed that evil spirits had actually entered into those who were brought to them as possessed with devils, and as if those spirits had been actually expelled by their authority out of the unhappy persons whom they had possessed. They demanded, too, to have their professions and declarations believed, in consequence of their performing such mighty works, and having thus triumphed over the powers of hell. The reality of dæmoniacal possession stands upon the same evidence with the gospel system in general. Nor is there any thing unreasonable in this doctrine. It does not appear to contradict those ideas, which the general appearances of nature and the series of events suggest, concerning the benevolence and wisdom of the Deity, by which he regulates the affairs of the universe. We often fancy ourselves able to comprehend things to which our understanding is wholly inadequate: we persuade ourselves at times that the whole extent of the works of the Deity must be well known to us, and that his designs must always be such as we can fathom. We are then ready whenever any difficulty arises to us, in considering the conduct of Providence, to model things according to our own ideas; to deny that the Deity can possibly be the author of things which we cannot reconcile; and to assert that he must act on every occasion in a manner consistent with our narrow views. This is the pride of reason; and it seems to have suggested the strongest objections that have been at any time urged against the reality of dæmoniacal possession. But the Deity may surely connect one order of his creatures with another. We perceive mutual relations and a beautiful connexion to prevail through all that part of nature which falls within the sphere of our observation. The inferior animals are connected with mankind, and subjected to their authority, not only in instances in which it is exerted for their advantage, but even where it is tyrannically abused to their destruction. Among the evils to which mankind have been subjected, why might not their being liable to dæmoniacal possession be one? While the Supreme Being retains the sovereignty of the universe, he may employ whatever agents he thinks proper in the execution of his purposes: he may either commission an angel or let loose a devil, as well as bend the human will, or communicate any particular impulse to matter. All that revelation makes known, all that human

reason can conjecture, concerning the existence of various orders of spiritual beings, good and bad, is perfectly consistent with, and even favorable to, the doctrine of dæmoniacal possession. It is mentioned in the New Testament in such language, and such narratives are related concerning it, that the gospels cannot well be regarded in any other light than as pieces of imposture, and Jesus Christ must be considered as a man who took advantage of the weakness and ignorance of his contemporaries, if this doctrine be nothing but a vulgar error. It teaches nothing inconsistent with the general conduct of providence. In short, it is not the caution of philosophy, but the pride of reason, that suggests objections against this doctrine.

Such are the leading arguments generally urged on this subject; the reader must of course judge for himself between them; but we cannot dismiss the article without a few additional remarks. It is argued by those who deny the influence of demons or evil spirits, that to permit such an influence on the concerns of human life, would be to break through that order which the Deity appears to have established throughout his works, and to introduce a degree of confusion unworthy of the Divine Providence. This, to say the least of it, is a most gratuitous assertion. For surely those who make it are well aware of the existence of much real evil in the affairs of human life, and yet the Divine government moves on with a regularity and an order that cannot fail to excite the admiration of every well-disposed mind. Now to meet the objection in all its bearings, we would ask those who make it, whether they think that all the evil which they see existing around them, or any part of it, is effected without the medium of any kind of agency? This, we conceive, no rational man would venture to maintain. The question then is simply this,—of what nature is this agency? To this question, as the point at issue rests solely on the authority of Divine Revelation, we reply,—it is of a purely spiritual nature, and has its origin in the spiritual world. The existence of such agency, both of a good and of an evil nature, is as clearly taught as any fact made known by the sacred writings. It is by means of it that the various affections of the human mind are produced; nor would any difficulty be experienced by us on this point were we constantly to keep in mind that man, in his present state, is intimately connected with both worlds; with the invisible by means of his spirit, and with the visible or material world by means of his body. The cases of dæmoniacal possession that occurred during the time of Christ's sojourning on earth were exactly what, from the information of Scripture, might have been expected to take place. The Eternal (according to the opinion of a vast body of Christians) assumed the human nature, that in it He might, in the sight of mankind, effect their deliverance from the infernal influence which threatened their destruction. This was accomplished by His passing through a series of the most unparalleled trials, which terminated in a conflict unutterably awful. The numerous cases of dæmoniacal possession that are introduced to

in the sacred history appear to have many specimens of the ascendancy influence had gained, and the cer- its being removed; for we find, in that the evil spirit was cast out: and it was no obscure allusion that Jesus has when in the immediate prospect of great conflict with the invisible powers, and in reference to the grand effect triumph over them in the spiritual state. 'Now is the judgment of this world: if the prince of this world be cast out.' This very declaration seem to allude to the loss of such possessions being less since that time? We say less frequent, we think there can be no doubt but that cases of extraordinary evil agency are, for purposes, still permitted to appear in; although certainly, in no case, to the extent as before our Lord's subjugation of evil. We do not deny that superstition augmented the number of these; yet be easy to specify some cases that have claims on the most rational and en- belief.

PLACE, in church history, a sect whose chief tenet was said to be, that the devils lived at the end of the world.

(v. a. & n. s.) Goth. *doef*; Fr. *dofira*, n. s. } to stupify. But Dr. John- our word duff, or dast, is a corruption of, or throw aside, and the examples appear seem to justify him. To cast out. A person treated contemptuously; forward.

When this jape is told another day,  
It be baiden a daffe or a cokenay.  
Arise and aunter it by my fay:  
Only is unclay, thus men say.

Chaucer. *Cont. Tales*.

Aumble-footed mad-cap prince of Wales,  
Promrades, that dast the world aside,  
Shakespeare. *Henry IV*.

She had bestowed this dotage on me: I  
Dast all other respects, and made her half  
Id.

OR DAGGE, n. s. Because the Dacians,  
Greece, first used it. A pistol or hand gun.  
Pope says, 'the name is peculiar to Great

call this gun a dag?

Beaumont and Fletcher.

DAG, or  
DAGGE, n. s.  
DAGGER.

Old Fr. *dagge*; Ital. }  
dagga; Span. *daga*; }  
Wel. and Arm. *dagr*; }  
DAGGER-DRAWING. } from Heb. דָּגֵר, to }  
pierce; Minsheu. A cutting and stabbing wea- }  
pon, principally the latter.

Upon his arme he bare a gaie bracer,  
And by his side a sword and a bokeler,  
And on that other side a gaie daggers,  
Harnessed wel, and sharpe as point of spere.

Chaucer. *Prol. to Cont. Tales*.

She ran to her son's dagger, and struck herself a  
mortal wound. Sidney.

This sword a dagger had his page,  
And was but little for his age,  
And therefore waited on him so  
As dwarfs upon knights-errant do. Hudibras.

They always are at daggersdrawing,  
And one another clapperclawing. Id.

I have heard of a quarrel in a tavern, where all  
were at daggersdrawing, till one desired to know the  
subject of the quarrel. Swift.

He strikes himself with his dagger, but being inter-  
rupted by one of his friends, he stabs him, and breaks  
the dagger on one his ribs. Addison.

The Roman, when his burning heart  
Was slaked with blood of Rome,  
Threw down the dagger, dared depart  
In savage grandeur home, Byron.

DAG, v. a. & n. s. } Sax. *dag*, to sprinkle,  
DAG'GLE, v. a. & n. s. } and *dag*, dew. To be-  
DAG'TAILED. } mire; let fall into water;  
DAG'GLETAIL. } besprinkle. Dagtailed, or  
daggletailed, is bemired, bespattered, or muddy.

Would it not vex thee, where thy ayres did keepe,  
To see the dunged foldes of dag-tayld sheepe?  
And ruined house, where holy things were said,  
Whose free-stone wals, the thatched roofe upraid?

Bp. Hall.

Now in contiguous drops the flood comes down,  
Threatening with deluge this devoted town:  
To shops in crowds the daggled females fly,  
Pretend to cheapen goods, but nothing buy. Swift.

The gentlemen of wit and pleasure are apt to be  
choaked at the sight of so many daggletailed parsons,  
that happen to fall in their way. Id.

Nor like a puppy daggled through the town,  
To fetch and carry sing-song up and down.

Pope.

DAGELET, an island on the coast of Corea,  
about three leagues in circumference, covered  
with fine trees, and surrounded with steep rocks,  
except a few sandy creeks, which form convenient  
landing places. It was discovered by La Pey-  
rouse in 1787, who found some boats of a Chi-  
nese construction upon the stocks. The men  
employed upon them, were supposed to be  
Corean carpenters, but as the ships approached  
they fled to the woods. The French navigator  
supposed that the island was uninhabited; except  
during summer by people from Corea, for build-  
ing boats. Long. 131° 22' E., lat. 37° 25' N.

DAGHESTAN, a country of Asia, west of the  
Caspian Sea, between the efflux of the Koisin  
and the Rubas. It is about 134 miles in length  
by between thirty and forty in breadth. It is  
almost wholly mountainous; but the soil is pro-  
ductive, and fine crops of grain are raised. The

Russians claim the sovereignty of Daghestan, which is divided into four districts; but their authority is not universally acknowledged. Many of the inhabitants subsist by plunder; but it has recently been the scene of contest between the Persians and Russians. The chief towns are Tarki, Derbend, Baschli, and Ottermisch.

DAGO, or DACHO, an island in the Baltic Sea, on the coast of Livonia, between the gulf of Finland and Riga. It is of a triangular figure, and may be about twenty miles in circumference. It has nothing considerable but two castles called Daggerwort and Paden. Long.  $22^{\circ} 50'$  E., lat.  $58^{\circ} 44'$  N.

DAGOE, DAGHO, or DAGEN, an island of the Baltic, at the entrance of the gulf of Finland, near the coast of Esthonia, and separated from the island of Oesel by a narrow channel. It is about forty miles long, and from twenty-six to thirty-six broad, and is well peopled. At Dagerort there is a lighthouse.

DAGON, the idol of Ashdod or Azotus. He is commonly represented as a monster, half man and half fish; whence most learned men derive the name from the Hebrew *dag*, which signifies a fish. Those who make him to have been the inventor of bread corn, derive his name from the Hebrew, דגן, Dagon, signifying corn; whence Philo-Biblus calls him Ζεύς Ἀπαργεῖος, Jupiter Antrius. This deity continued to have a temple at Ashdod to the time of the Maccabees: for the author of the first book of Maccabees tells us, that 'Jonathan, one of the Maccabees, having beaten the army of Apollonius, Demetrius's general, they fled to Azotus, and entered into Bethdagon (the temple of their idol); but Jonathan set fire to Azotus, and burnt the temple of Dagon and all those who were fled into it.' Dagon, according to some, was the same with Jupiter, according to others Saturn or Venus; but according to most Neptune.

DAHALAK, DALAKA, or DALACCA, an island in the Red Sea, near the coast of Abyssinia, about twenty-five miles in length, and twelve in breadth, anciently celebrated for its pearl fishery. It is low and flat, with a sandy soil, and in summer destitute of every kind of herbage, except a small quantity of bent grass, which is barely sufficient to feed a few antelopes and goats. From the end of March to the beginning of October, they have no rain in Dahalak; but in the intermediate months they have heavy showers, when the water is collected into artificial cisterns, to supply the inhabitants during the ensuing summer. Of these cisterns, which are supposed to be either the work of the Persians or of the first Ptolemies, upwards of 300 remained at a recent period, cut out of the solid rock. Its principal port is Dahalece-el-Kebar, but it will only admit small vessels; and its trade is with Masuah. It was formerly much more populous than at present. This as well as the neighbouring islands is dependent upon Masuah; and the governor is furnished monthly with a goat from each of the twelve villages; besides which every vessel putting in here for Masuah, pays him a pound of coffee, and every one from Arabia, a dollar. From these his revenue chiefly arises. Long.  $39^{\circ} 7'$  E., lat.  $15^{\circ} 10'$  N.

DAHL, or DAL, a large river of Sweden, which runs through the provinces of Dalecarlia and Gesticria, and falls into the gulf of Bothnia, four leagues E. S. E. of Gefle. Near Elfkärlaby it forms a celebrated cataract, scarcely inferior to the fall of the Rhine at Lauffen.

DAHLIA, in botany, a genus of plants belonging to the syngenesia class and polygamia order, thus named by Cavanilles in honor of Dr. Andrew Dahl, a Swedish botanist. The stems die every winter, but the root is perennial and tuberous. The known species are but four. 1. *D. pinnata*, figured by Cavanilles, and in Andrew's Botanical Repository: it has bipinnate leaves of a deep purple color. 2. *D. rosea*, a rose-colored variety figured by Cavanilles in his Icones. 3. *D. coccinea*, a scarlet variety; and, 4. *D. crocata*, a saffron-colored species. These beautiful plants are now becoming so general in British gardens, that a lengthened description would be superfluous: it is sufficient to say, that they elevate the stem like the holly-hock, and bear fine showy axillary and terminal flowers late in the autumn.

DAHOMEY, or DAUMA, a kingdom of Africa, on the coast of Guinea, situated about sixty or seventy miles from the Atlantic, to the east of Ashantee. This kingdom, which is correctly placed in various old maps, particularly that of Mercator, who names its ancient capital Dauma, was erased from the maps of Africa in 1700, and the existence of the nation of Dauma denied; but it emerged from obscurity in 1727, by the fame of its conquests of the maritime states of Whidah and Ardra. Dahomey, as known at present, is supposed to reach from the sea coast 150 miles inland, but no European has yet penetrated to that distance from the coast. The soil is a deep rich clay, of a reddish color, with a little sand on the surface, except about Calmina, where it is more light and gravelly; but there is not to be found a stone so large as an egg in the whole country, so far as it has been visited by Europeans. Of farinaceous vegetables, the country yields a plentiful supply, in proportion to the culture. The Dahomese likewise cultivate yams, potatoes, the cassada or manioka, the plantain, and the banana. Pine-apples, melons, oranges, limes, guavas, and other tropical fruits, also abound in this fertile country. Nor is it destitute of productions adapted for commerce and manufacture; such as indigo, cotton, the sugar-cane, tobacco, palm-oil, with a variety of spices, particularly a species of pepper, very singular in flavor, and indeed scarcely distinguishable from the black pepper of the East Indies. The Dahomese, like the other inhabitants of tropical climates, plant twice a-year, viz., at the vernal and autumnal equinoxes; after which the periodical rains prevail. The harmattan, or dry wind, blows here strongly from the north-east; but Mr. Norris does not ascribe to it those pestilential qualities which have often been supposed, for while it parches up the ground, and injures every species of vegetable, it does not induce any fatal diseases. It is even said to cure cutaneous eruptions, and stop the progress of small pox, fluxes, and remittent fevers. The greatest bane of the climate is the periodical rains; which are attended with terri-

nie tornadoes. The language is that which the Portuguese call *Lingua Geral*, and is spoken not only in Dahomey Proper, but in Whidah, and the other dependent states. The Dahoman religion is vague and uncertain in its principles, and rather consists in the performance of some traditional ceremonies, than of any fixed system of belief, or moral conduct. According to Mr. Norris, human sacrifices are not unfrequent among the Dahomese. Their kings, he says, water the graves of their ancestors every year with the blood of human victims. The same traveller mentions that the people in general take a peculiar pleasure in contemplating human skulls. The king said to a traveller, 'Some heads I place at my door: others I throw into the market-place. This gives a grandeur to my customs; this makes my enemies fear me; and this pleases my ancestors to whom I send them.' The king is even said to sleep in a room paved with the skulls of prisoners of distinction taken in war; and frequently to exclaim, 'Thus I can trample on the skulls of my enemies whenever I please.' It appears to be customary with the Dahomese to cut off the ears of the prisoners they take in war, and to send them as a present to the Grand Seigneur: upwards of 300 pairs of ears have been sent to him at one time. They believe more firmly in their amulets and fetiches, than in the deity; their national fetiche is the tiger; and their houses or huts are decorated with images, tinged with blood, stuck with feathers, besmeared with palm oil, and bedaubed with eggs. The government is perhaps the most perfect despotism upon earth, and seems to admit of no intermediate degree of subordination between the king and slave. Norris having asked a soldier if he did not think the enemy numerous in a war in which he found the Dahomese engaged: the latter replied, 'I think of my king, and then I dare engage five of the enemy myself.' He added, 'it is not material, my head belongs to the king, not to myself; if he pleases to send for it, I am ready to resign it; for if it is shot through in battle, it is no difference to me, I am satisfied.' A minister of state crawls towards the apartment of audience on his hands and knees, till he arrives in the royal presence, where he lays himself flat on his belly, rubbing his head in the dust, and uttering the most humiliating expressions. Being desired to advance, he receives the king's commands, or communicates any particular business, still continuing in a recumbent posture; for no person is permitted to sit, even on the floor, in the royal presence, except the women; and even they must kiss the earth when they receive or deliver the king's message. The king of Dahomey maintains a considerable standing army, commanded by an *agaw* or general, with several other subordinate military officers; the payment of these troops chiefly depends on the success of the expeditions in which they are engaged. Sometimes the king takes the field at the head of his troops; and on very great emergencies at the head of his women. For within the walls of the different royal palaces in Dahomey, are immured not less than 5000 women; several hundreds of whom are trained to arms under a female general, and subordinate officers appointed by the king.

These Amazons are regularly exercised, and go through their evolutions with much expertness; their accoutrements being precisely similar to those of the male troops. The dress of the men in Dahomey consists of a pair of striped or white cotton drawers, of the manufacture of the country, over which they wear a large square cloth of the same, or of European manufacture. This cloth is about the size of a common counterpane for the middling class, but much larger for the *grandees*. It is wrapped about the loins, and tied on the left side by two of the corners, the others hanging down, and sometimes trailing on the ground. A piece of silk or velvet, of sixteen or eighteen yards, makes a cloth for a *grandee*. The head is usually covered with a beaver or felt hat, according to the quality of the wearer. The king, as well as some of his ministers, often wears a gold or silver laced hat and feather. The arms and upper part of the body remain naked, unless when the party travels, or performs laborious work, when the large cloth is laid aside, and the body is covered with a sort of frock or tunic without sleeves. The feet are always bare, none but the sovereign having a right to wear sandals. The dress of the women, though simple, consists of a greater number of articles than that of the men. They use several cloths or handkerchiefs; the neck, arms, and ancles, are adorned with beads and cowries; and rings of silver, or baser metal, encircle the fingers. The ears are so pierced as to admit the little finger, and a coral bead of that size, red sealing wax, or a piece of oyster-shell, stuck into each. Girls, before the age of puberty, wear nothing but a string of beads or shells round the loins, and young women usually expose the breasts. The general character of the Dahomese is marked by a strange mixture of ferocity and politeness. The former appears in the treatment of their enemies; the latter they possess far above most of the African nations with whom we have hitherto had any intercourse. Abomey, the capital, lies between long. 3° and 4° E., and in lat. 7° 50' N.

**DAILLE** (John), a protestant minister of the seventeenth century, the most esteemed by the Catholics of all the controversial writers among the Protestants. He was tutor to two of the grandsons of the illustrious M. du Plessis Mornai. Mr. Daille having lived fourteen years in this family, travelled into Italy with his two pupils; one of them died abroad; with the other he visited Italy, Switzerland, Germany, Flanders, Holland, and England, and returned in 1621. He was received minister in 1623, and became chaplain to the family of M. Mornai. In 1625 he was appointed minister of the church of Saumur, and in 1626 removed to Paris, where he spent the rest of his life, and composed several works. His first work, *Of the Use of the Fathers*, was his masterpiece; printed in 1631. He died in 1670, aged seventy-seven.

**DAILY**. See **DAY**.

**DAINT**, *adj.*

**DAINTIOUS**, *adj.*

**DAINTY**, *n. s. & adj.*

**DAINTILY**, *adv.*

**DAINTINESS**, *n. s.*

Fr. *dain*, delicate. From Lat. *dens*, a tooth, because pleasing to the palate, as Minshew says: delicious, exquis-

site, or of agreeable taste; elegant. The adverb and substantives follow the meanings of the adjective.

Be not desirous of his *dainties*; for they are deceitful meat. *Proverbs xxiii. 3.*

Both halle and chambres, eche in his degree,  
Houses of office stuffed with plentie;  
Ther mayst thou see of *deintious* vitaille  
That may be found as far as lasteth itaille.

*Chaucer. Cant. Tales.*

Ther may men fest and realtes beholde,  
And *dainties* mo than I can you devise,  
But all to dere they bought it or they rise. *Id.*

No poets witt, that passeth painter farre  
In picturing the parts of Beauty daynt,  
So hard a workmanship adventure darre.

*Spenser. Faerie Queena.*

Higher concoction is required for sweetness, or pleasure of taste, and therefore all your *dainty* plumbs are a little dry. *Bacon.*

Truth is a naked and open day-light, that doth not show the masks and mummeries and triumphs of the world, half so stately and *daintily* as candlelight. *Id.*

My house, within the city,  
Is richly furnished with plate and gold,  
Basons and ewers to lave her *dainty* hands.  
*Shakespeare.*

Which of you all  
Will now deny to dance? She that makes *dainty*,  
I'll swear hath corns. *Id. Romeo and Juliet.*

Therefore to horse;  
And let us not be *dainty* of leave-taking,  
But shift away. *Id. Macbeth.*

Why, that's my *dainty*; I shall miss thee;  
But yet thou shalt have freedom. *Id. Tempest.*

What should yet thy palate please?  
*Daintiness* and softer ease,  
Sleeked limbs and finest blood? *Ben Jonson.*

The duke exceeded in the *daintiness* of his leg and foot, and the earl in the fine shape of his hands. *Wotton.*

It was more notorious for the *daintiness* of the provision which he served in it, than for the rasciness of the dish. *Hakewill on Providence.*

Why should ye be so cruel to yourself,  
And to those *dainty* limbs, which nature lent  
For gentle usage and soft delicacy? *Milton.*

She then produced her dairy store,  
And unbought *dainties* of the poor. *Dryden.*

Your *dainty* speakers have the curse,  
To plead bad causes down to worse. *Prior.*

The shepherd swains, with sure abundance blest,  
On the fat flock and rural *dainties* feast. *Pope.*

DAIRY, *n. s.* } From *dey*, says Lye, an  
DAIRY-MAID. } Old word for milk. The  
milk-house, or place where it is managed. A  
dairy-maid and milk-maid, are nearly synony-  
mous. In Gloucestershire, the dairy is still called  
a *dey-house*. Yet we supply a very early use of  
'dairies.'

Cities and burghes, castles high and towres,  
Thorpes and barnes, shepenes and dairies,  
Thus maketh that thir ben no *Faeries*.

*Chaucer. Cant. Tales.*

Dairies being well housewived, are exceeding com-  
modious. *Bacon.*

Children, in *dairy* countries, do war more tall than  
where they feed more upon bread and flesh. *Id.*

You have no more worth  
Than the coarse and country fairy.  
That doth haunt the hearth or dairy. *Ben Jonson.*

She in pens his flocks will fold,  
And then produce her *dairy* store. *Dryden.*

The poorest of the sex have still an itch,  
To know their fortunes, equal to the rich;  
The *dairy*maid enquires if she shall take  
The trusty taylor, and the cook forsake. *Id.*

Come up quickly, or we shall conclude that thou  
art in love with one of Sir Roger's *dairy*-maids. *Addum.*

DAIRY. The operations of the dairy are connected with the domestic comforts of almost every English family. Man is here seen taking that useful and honorable direction of the works of nature for which he was designed, and his original companion, when a good housewife, is almost more than 'a help meet' for him. She is generally, and for the great benefit of both parties, entrusted with the practical management of this department, even of extensive farming establishments; and so large a portion of 'skill, frugality, cleanliness, and industry,' is required, as a modern author well observes, in hardly any other of the duties of a farmer's wife.

In our articles AGRICULTURE and BOS we have entered pretty largely into the natural history and peculiarities of the only animal whose milk is extensively used in this country; we shall, in this paper, principally advert,—1. To the selection and general management of cows kept for the dairy, and by cow-keepers, as they are termed. 2. To the operations of the regular dairy in our cheese and butter counties, particularly the former: for in our article BUTTER will be found many useful directions with regard to that important manufacture. 3. We shall offer a few remarks on the structure of the dairy-house and its furniture.

i. *Of the selection and management of cows.*—In and about London the Holderness cows, a variety of the short-horned breed, are preferred. They have large carcasses and yield a great quantity of milk. They take their name from a district in Yorkshire, where, as well as in the county of Durham, they are extensively bred; but most English counties have cultivated the breed in some degree. The Edinburgh dairy-men select the short-horned cow of Roxburghshire for similar reasons. Ayrshire has also a celebrated breed. In Lancashire (and in the neighbourhood of Liverpool this topic has been well canvassed) a native long-horned cow is said to have a general preference. The Guernsey breed is also highly valuable for its rich and abundant milk. At Caton, in Lancashire, in Mr. Hodgson's dairy establishment, a long-horned cow yielded eight quarts of milk a day and four pounds of butter per week on an average of twelve months, during which period one of the short-horned breed gave nine quarts per day and four pounds and a half of butter per week, both having what they chose to take of exactly the same kind of food. But the quantity each consumed was not noted. Dr. Anderson's strong recommendation of the Alderney cows, as affording 'the richest milk hitherto known; though there are many

## D A I R Y.

als of different kinds which afford much milk than others,' as he says, seems long kept up the public preference for them in districts.

Known to afford milk and butter of the highest quality, will of course be selected; but the same or breed seems to be a uniform one. Respectable cow-keepers rarely breed so that actual experience of the animal is the final test; and the quantity of milk seems to be, in this case, the sole ground of selection. Those who supply the metropolis generally purchase their cows at from four years old, and in calf, at Islington, or Smithfield. Some of them own several hundred.

The number scattered in and about London is calculated at about 9000. Ten bulls are generally allowed to a stock of 300 cows, and are sent to Smithfield market at one, three, or five days old. The quantity of milk is, on an average, by each cow, is said to be about a quart a day, or 3285 quarts per annum. The expense of their food is estimated in the Middlesex Report at 10s. 3d., and the average about £5. 7s. per annum.

Cows are often confined in the cow-yard of the premises adjoining, during the time of their being devoted to the purchase of the cow-keeper; but respectable establishments turn them out to grass in the spring. Eight or ten are turned into their stalls, and about three in the morning with half a bushel of grain. From four to half-past ten they are milked for the retail dealers; they receive a bushel each of green food or hay, and soon after at the rate of a truss or two of hay to ten cows. They are now turned into the cow-yard, from eight to twelve in the morning, and about half-past one to three are again fed as in the morning. This regular plan from September to May at Islington, during the turnip season. At other times of the year cabriages and tares diversify the food until they are turned out to grass (but chance of food is supplied to them), and they remain in the field all night; but are partly fed with grains to increase their milk at this period.

Cow-feeders of Edinburgh, according to the statement of the Encyclopædia Britannica, and it for their interest to keep their cows for more than one year, or even so long, if they can do so. Their object is to have as much quantity of milk as possible in the first year, and when the cows fall off in milking, they almost always do from between four and five years after calving, to prepare them for the butcher. Most of the cows continue to give a good deal of milk while they are fattened, even until they are sent to the shambles. They should sell to the butcher at a price paid by the cow-keeper. Their food is brewers' and distillers' grains and small shavings or small bran, grass and hay, and in winter the same grains, dreg and turnips and potatoes, and hay instead of straw.

When grains are scarce, cut or chopped straw is used with them. Some of them are sent to the fields near the city, for about two

months, during the best of the grass season; but even then a certain number must be kept in the house, for consuming the grains, which are purchased by contract for a whole year.

With regard to management, the cow-keepers begin with grains, dreg, and bran, mixed together, at five o'clock in the morning; feed a second time at one o'clock in the afternoon; and a third from seven to eight in the evening. Grass in summer, and turnips or potatoes in winter, are given at both intervals. A small quantity of straw is laid below the grass, which absorbs its moisture, and is eaten after the grass; and, in winter, straw or hay is given after the turnips. Part of the turnips or potatoes are boiled, particularly when there is a scarcity of grains, and intermixed with them. The expense in summer is said to be 2s. 10d., and in winter 3s. 7d. per day, for each cow. The cows are seldom milked more than twice a-day: for about a month after being bought, it is sometimes necessary to milk them three times. The common periods of milking are six o'clock in the morning, from three to four in the afternoon, and, when milked a third time, nine in the evening. Their produce in milk, when fed as already stated, may average about seven Scotch pints, or nearly twelve quarts and a half daily, per cow. When the cows are smaller, and not so well fed, five pints, or about nine quarts, are said to be the average. The price of milk in Edinburgh used to be 6d. per pint, but of late it has been sometimes lower in summer. This is said to be very little more than the price of the food. For interest of money, risk, expenses of management, and profit, there is the dung, worth £3. 10s. for each cow; some savings on the cows while at grass, which costs only 1s. 8d. per day; and, probably, a small advance of price may be commonly got from the butcher, when the cows are skilfully selected and well managed. There have been instances of cow-feeders contracting with others to retail their milk; but the practice is not common. The cow-keepers generally retail it themselves. In one instance a guinea a-week for the milk of each cow was paid by retailers to a farmer in the vicinity of Edinburgh.

'Comparing the London and Edinburgh dairies,' continues the above writer, 'there seems to be a difference in favor of the best of the latter of no less than three quarts and a half per day. If this be the fact, perhaps it is owing to the whole of the Edinburgh cows being always in milk; none of them being kept for years, and bred from, as in the London dairies.'

Dr. Anderson's general aphorisms on the subject of the qualities of milk cannot be too well impressed on all dairy and cow-keepers. He says, 1. Of the milk drawn from a cow at any time, that which comes first is always thinnest, and continues to increase in thickness to the last drop. This is proved by experiment; and so great is the importance of attending to it, that the person who, by bad milking of his cows, loses but half a pint of his milk, loses, in fact, as much cream as would be afforded by six or eight pints at the beginning, and loses besides that part of the cream which alone can give richness and high flavor to his butter. 2. When milk throws up

cream to the surface, that portion which rises first will be thicker, and of better quality, as well as in greater quantity, than that which rises in a second equal portion of time. 3. Thick milk throws up a smaller quantity of cream to the surface than such as is thinner; but that cream is of a richer quality. If water be added to that thick milk, it will afford a considerably greater quantity of cream than before, but its quality is at the same time greatly debased. 4. Milk when carried in vessels to any distance, so as to suffer considerable agitation, never throws up cream so rich, nor in such quantity, as if the same had been put into the milk-pans without any agitation. From these aphorisms, the following corollaries are deducible. 1. The cows ought always to be milked as near the dairy as possible. 2. The milk of different cows should be kept by themselves, that the good cows may be distinguished from the bad. 3. For butter of a very fine quality, the first-drawn milk ought always to be kept separate from the last.

The Farmers' Magazine, vol. xv. supplies the following directions on the subject of feeding stalled cows, as those which are practically given by a very intelligent dairy-man, to his cow-feeder and milkers, at Farnham, in Surrey:—

1. *To the feeder.* 'Go to the cow-stall at six o'clock in the morning, winter and summer; give each cow half a bushel of the field-beet, carrots, turnips, or potatoes cut; at seven o'clock, the hour the dairy-maid comes to milk them, give each some hay, and let them feed till they are all milked. If any cow refuse hay, give her something she will eat, such as grains, carrots, &c., during the time she is milking, as it is absolutely necessary the cow should feed whilst milking. As soon as the woman has finished milking in the morning, turn the cows into the airing ground, and let there be plenty of fresh water in the troughs; at nine o'clock give each cow three gallons of a mixture composed of eight gallons of grains and four gallons of bran or pollard; when they have eaten that, put some hay into the cribs; at twelve o'clock give each three gallons of the mixture as before; if any cow looks for more, give her another gallon; on the contrary, if she will not eat what you give her, take it out of the manger, never at one time letting a cow have more than she will eat up clean. Mind and keep your mangers clean, that they do not get sour. At two o'clock give each cow half a bushel of carrots, field-beet, or turnips; look the turnips, &c., over well before you give them to the cows, as one rotten turnip, &c., will give a bad taste to the milk, and most likely spoil a whole dairy of butter. At four o'clock put the cows into the stall to be milked; feed them on hay as you did at milking time in the morning, ever keeping in mind that the cow whilst milking must feed on something. At six o'clock give each cow three gallons of the mixture as before. Rack them up at eight o'clock. Twice in a week put into each cow's feed, at noon, a quart of malt dust.'

2. *To the dairy-maid.* 'Go to the cow-stall at seven o'clock; take with you cold water and a sponge, and wash each cow's udder clean before milking; cleanse the udder well with cold water, winter and summer, as it braces, and repels heats.

Keep your hands and arms clean. Milk each cow as dry as you can, morning and evening, and when you have milked each cow, as you suppose, dry, begin again with the cow you first milked, and drip them each; for the principal reason of cows failing in their milk is from negligence in not milking each cow dry, particularly at the time the calf is taken from the cow. Suffer no one to milk a cow but yourself, and have no gossiping in the stall. Every Saturday night give in an exact account of the quantity of milk each cow has given in the week.'

'Where butter is the principal object,' says Mr. Loudon, 'such cows should always be chosen as are known to afford the best and largest quantity of milk and cream, of whatever breed they may be. But the quantity of butter to be made from a given number of cows must always depend on a variety of contingent circumstances; such as the size and goodness of the beasts, the kind and quantity of the food, and the distance of time from calving. As to the first, it need scarcely be mentioned that a large cow will give greater store of milk than one of a smaller size; though cows of equal size differ as to the quantity of cream produced from the milk of each: it is, therefore, on those cows whose milk is not only in large abundance, but which, from a peculiar inherent richness, yields a thick cream, that the butter dairy-man is to place his chief dependence; and where a cow is deficient in either of these, she should be parted with, and her place supplied by one more proper for this use. As to the second particular, namely, the kind and quality of the food, those who would wish to profit by a dairy, ought to provide for their cows hay of a superior goodness, to be given them in the depth of winter, and this in an unlimited degree, that they may always feed till they are perfectly satisfied. And, when the weather will permit, the cows should be indulged with an outlet to marshes or low meadow-grounds, where they may feed on such green vegetables as are present; which is far preferable to the practice of confining them the whole day on dry meat, will enable them to yield greater plenty of milk, and will give a fine yellow color to the butter even in the winter season.'

ii. *The operations of the regular dairies* of the cheese and butter counties have been justly stated to be very little improved by the application of modern science to farming. Dr. Anderson and Mr. Marshall are the only scientific writers whose attention seems to have been turned to the subject. The latter, in his *Rural Economy of Gloucestershire*, has registered a number of observations on the heat of the dairy-room, and of the milk when the rennet was applied in cheese-making; on the time required for coagulation; and the heat of the whey after: but the chemistry of these arts and productions has been wholly neglected at present. We cannot therefore do better than present the reader with the following popular account of the cheeses best known in this country.

*Cheshire* cheese is prepared in the following manner:—The evening's milk is not touched till the next morning, when the cream is taken off, and put to warm in a metal pan heated with boiling water. The cows being milked early in

the morning, the new milk, and that of the preceding night, thus prepared, are poured into a large tub, together with the cream. A piece of rennet, kept in luke-warm water from the preceding evening, is put into the tub in order to coagulate the milk; with which, if the cheese is intended to be colored, a small quantity of annatto (or of an infusion of marigolds, or carrots,) is rubbed fine and mixed; the whole is then stirred together, and, being covered up warm, it is allowed to stand about half an hour, when it is turned over with a bowl, to separate the whey from the curds, and broken soon after into very small particles; the whey being separated, by standing some time, is taken from the curd, which sinks to the bottom, and is then collected into a part of the tub provided with a slip, or loose board, to cross the diameter of the bottom, for the sole purpose of effecting this separation; on which a board is placed, weighing from sixty to 120 pounds in order to press out the whey. As soon as it acquires a greater degree of solidity it is cut into slices, and turned over several times, to extract all the whey, and again pressed with weights. See *Coagulum*, in CHEMISTRY.

These operations may consume about an hour and a half. It is then taken from the tub and broken very small by the hand, salted, and put into a cheese-vat, the depth of which is enlarged by a tin hoop fitted to the top. The side is then strongly pressed, both by hand and with a board at top, well weighted; and wooden skewers are placed round the cheese, at the centre, which are frequently drawn out. It is then shifted out of the vat, a cloth being previously put on the top of it, and reversed on the cloth into another vat, or again into the same, if well acidified before the cheese be returned to it. The top, or upper part, is next broken by the hand down to the middle, salted, pressed, weighted, and answered as before, till all the whey is extracted. This being done, the cheese is again reversed into another vat, likewise warmed with a cloth under it, and a tin hoop, or binder, put round the upper edge of the cheese and within the sides of the vat; the former being previously enclosed in a cloth, and its edges put within the vessel. These various operations are performed from about seven o'clock in the morning till one at noon. The pressing of the cheese requires about eight hours more, as it must be twice turned in the vat, round which thin wire skewers are passed and shifted occasionally. The next morning it ought to be turned and pressed again, as likewise at night, and on the succeeding day, about the middle of which it is removed to the salting-room, where the outside is salted and a cloth binder used round it. After this process the cheese is turned twice daily, for six or seven days; then left two or three weeks to dry, during which time it is turned and cleaned every day; and at length deposited in the common cheese-room, on a boarded floor covered with straw, where it is turned daily till it acquires a sufficient degree of hardness. The room should be of a moderate warmth, but no wind, or current of air, must be permitted to enter, as this generally cracks the cheese. Their outside, or rinds, are sometimes rubbed with butter or oil to give them a coat.

'A dairy farm of 100 acres,' says an intelligent writer on the agriculture of Cheshire, 'is generally divided into the following proportions: from ten to fourteen acres of oats, from six to eight acres of fallow wheat, and the like quantity of summer fallow; the remainder consists of meadow and pasture, the former occupying about twelve acres. The good dairy farmer attends more to the size, form, and produce of the udder of his cow than to any fancied beauty of shape. This consideration induces him to be particular in the breeding and rearing his calves, and in the management of his cows during the winter and summer seasons. The annual quantity of cheese made from each cow varies from 50 to 500 lbs. and upwards, the produce depending on the goodness of the land, the quality of the pasture, the seasons, and the manner in which the stock are wintered. On the whole, the average produce may be estimated at 300 lbs. from each animal. The quantity of milk yielded daily by each cow, according to this estimate, will be about eight quarts, which it is calculated will produce one pound of cheese.'

'On the dairy farms one woman-servant is generally kept to every ten-cows, who is employed in winter in spinning, and other household business, but in milking is assisted by all the other servants of the farm. The cheese is chiefly sold in London, being exported from Chester, Frodsham-bridge, and Warrington. A large quantity goes to Liverpool and Bristol, some more is disposed of to the Yorkshire dealers, and some goes into Scotland. The proper season for calving is reckoned to be from the beginning of March to the beginning of May; and during these months there is more veal fed in Cheshire than in any other county in the kingdom, though generally killed to spare the milk.'

Gloucester cheese is made of milk immediately from the cow; but which, in summer, is thought too hot, and is therefore lowered to the requisite degree of heat, before the rennet is added, by pouring in skim-milk, or, if that will not answer, by the addition of water. As soon as the curd 'is come,' it is broken with a double cheese-knife, and also with the hand, in order to clear it from the whey, which is ladled off. The curd, being thus freed from the principal part of the whey, is put into vats, which are set in the press for ten or fifteen minutes, in order to extract all the remaining liquid. It is then turned out of the vats into the cheese-tubs again; broken small and scalded with a pail-full of water, lowered with whey, about three parts water to one of whey; and the whole is briskly agitated, the curd and water being equally mixed together. After having stood a few minutes, to let the curd subside, the liquor is poured off; and the former collected into a vat, the surface of which is, when about half full, sprinkled with a little salt, that is worked in among the curd. The vat is then filled up, and the whole mass turned two or three times in it, the edges being pared and the middle rounded up at each turning. At length the curd is put into a cloth and placed in the press, whence it is carried to the shelves, and turned, generally, once a day till it has acquired a sufficient degree

of compactness to enable it to undergo the operation of washing.

*Parmesan* cheese has long been famous for its richness and flavor; the following mode of manufacture is described in the *Annales de Chemie*. The size of these cheeses varies from sixty to 180 pounds, according to the number of cows in each dairy. During the heat of summer cheese is made every day, but in the cooler months milk will keep longer, and the cheese is made every other day. The summer cheese, which is the best, is made of the evening milk, after having been skimmed in the morning and at noon. Both kinds of milk are poured together into a caldron capable of holding about 130 gallons, of the shape of an inverted bell, and suspended on the arm of a lever so as to be moved off and on the fire at pleasure. In this caldron the milk is gradually heated to the temperature of about 120°; it is now removed from the fire, and kept quiet for five or six minutes. When all internal motion has ceased, the rennet is added; this substance is composed of the stomach of a calf, fermented together with wheaten meal and salt; and the method of using it is to tie a piece, of the size of a hazel nut, in a piece of linen cloth, and steep it in the milk, squeezing it from time to time; a sufficiency of rennet soon passes through the cloth into the milk, which is now to be well stirred, and afterwards left to rest that it may coagulate. In about an hour the coagulation is complete, and then the milk is again put over the fire, and raised to a temperature of about 145 degrees.

During the time it is heating the mass is briskly agitated, till the curd separates in small lumps; part of the whey is then taken out, and a small portion of saffron is added to the remainder in order to color it. When the curd is thus broken sufficiently small, nearly the whole of the whey is taken out and two pailfuls of cold water is poured in; the temperature is thus lowered so as to enable the dairyman to collect the curd, by passing a cloth underneath it and gathering it up at the corners; the curd is now pressed into a frame of wood like a bushel without a bottom, placed on a solid table and covered by a round piece of wood, having a great stone or weight on the top. In the course of the night it cools, assumes a firm consistence, and parts with the whey; the next day one side is rubbed with salt, and the succeeding day the cheese is turned and the other side is rubbed with salt in the same manner as before. This alternate salting of each side is practised for about forty days; after this period the outer crust of the cheese is pared off, and the fresh surface is coated with linseed oil. The convex sides are then colored red with annatto, and the cheese is fit for sale.

The *Stilton* cheeses, called the *Parmesan* of England, are usually made in cylindrical vats, and weigh from six to twelve pounds each. Immediately after they are made they should be put into boxes made exactly to fit them, as they are so extremely rich, that, without this precaution, they would be apt to bulge out and break asunder. In these boxes they should be daily turned, and kept two years; they are then fit for sale. Some make them in a net like a cabbage-net, so that

they appear when made like an acorn; but these are never so good as the others, having a thicker coat, and wanting the rich flavor and mellowness of the others. The manufacture of these cheeses is not confined to Stilton and its neighbourhood, as many other persons in Huntingdonshire, and also Rutland and Northampton shires, make a similar sort, sell them for the same price, and give them the name of Stilton cheeses. It is observed by Mr. Hazard, that, though the farmers about Stilton are remarkable for the cleanliness of their dairies, they take very little pains with the rennet; for if they did they would not have so many faulty and unsound cheeses. The inhabitants of other countries might make as good cheese as that of Stilton if they would adhere to the same plan, which is this:—They make a cheese every morning, and to this meal of new milk they add the cream taken from that which was milked the night before. This, and the age of their cheeses, it is said, are the only reasons why they are preferred to others, their land not being in any respect superior to that of other countries.

In the Bath Papers, Mr. Hazard gives the following receipt for making *rennet*. 'When the maw-skin is well prepared and fit for the purpose, three pints or two quarts of soft water, clean and sweet, should be mixed with salt, wherein should be put sweet-brier, rose-leaves and flowers, cinnamon, cloves, mace, and, in short, almost every sort of spice and aromatic that can be procured; and if these are put into two quarts of water, they must boil gently till the liquor is reduced to three pints, and care should be taken that this liquid is not smoked; it should be strained clear from the spices, &c., and, when not warmer than milk from the cow, it should be poured upon the vell or maw; a lemon may then be sliced into it, when it may remain a day or two; after which it should be strained again and put into a bottle, where, if well corked, it will keep good for twelve months, or more: it will smell like a perfume, and a small quantity of it will turn the milk, and give the cheese a pleasing flavor.'

The method of making *green cheese* we should not, perhaps, omit. In a cheese of this sort, of about ten or twelve pounds weight, an infusion is made by steeping about two handfuls of sage, and one of marigold leaves, with a little parsley, after being bruised, one night in a proper quantity of milk. In the morning the greened milk is strained off, and mixed with about one-third of the whole quantity to be run. The green and the white milks are then run separately, keeping the two curds distinct, until they are ready for vatting. The mixing of them depends on the fancy of the maker. In some cases the two are connected together, blending them in an even and intimate manner; in others, the green curd is broken down into irregular fragments, or cut out in irregular figures by means of proper tins. In the operation of vatting, the fragments or figures are placed on the outsides. The bottom of the vat is first set with them, crumbling the white or yellow curd among them. As the vat fills, others are placed at the edges, and the remainder buried flush with the top. In the management

wards, the same plan is pursued as those we have already described for common

*Dairy House* should have a northern aspect, stable, and good ventilation. The regulation of temperature may be accomplished on the plan suggested by Dr. Anderson, of having double land roofs; or by means of hollow walls; for common purposes by the walls having a cavity left, of eight or ten inches in width, between the lath and plaster. According to the nature of the business to be carried on in them, the buildings will be of course regulated, both as to their size and the number of their divisions: as whether they are used for butter-dairy, or milk; the number of cows which kept, &c. In the Gloucester dairy houses twenty feet by sixteen are the usual dimensions for cows; and thirty feet by forty for 100

A *butter dairy* should consist of three rooms, or departments: namely, a milk room, a churning room with necessary apparatus, and a room for different utensils, and the cleaning and airing of them in, when it may be requisite. The *milk dairy* should, in the same manner, be divided into three rooms; one for the reception of milk; another for the scalding and pressing of the cheese; and a third for the purpose of stowing it in. In addition, there ought to be a loft made over the dairy. It is frequently at a distance, which is inconvenient and troublesome.

A *milk dairy* only requires two good rooms, one for the reception of the milk, and another for the purpose of serving it out in, and that of cleaning, and airing the different uten-

The *utensils of a cheese dairy* are, the cheese press, in which the curd is broken, and prepared; the cheese-knife, commonly a thin spatula of wood or iron, for the purpose of cutting or breaking down the curd; the cheese-cloth, a piece of coarse, in which the cheese is placed in the press; a circular cheese-board; a strong wooden frame and cheese-press.

The *last article* is generally constructed with a strong wooden screw, though sometimes a weight is used. The diagram represents a

very commodious one. Churns are almost endless in their variety of shapes, and supposed recommendations. Our article *CHURN* exhibits an improved mode of working this important utensil. We may add, in conclusion, that Mr. Dicus of Liverpool has lately invented a lactometer 'for ascertaining the richness of milk from its specific gravity, and its degree of warmth taken by a thermometer, on comparing its specific gravity with its warmth.'

It is a glass tube a foot long, with a funnel at top; the upper two inches being marked in small divisions, just under the funnel; when the instrument is filled to the height of one foot with milk, the depth of cream it yields is noted by the gradations on the upper part.

An invention of a similar kind has been noticed by the Highland Society of Scotland, in their Report for 1816: Mrs. Lovi's aerometric beads, by which the specific gravity of the milk is tried first when new milked, and again when the cream is removed.—'When milk is tried as soon as it cools,' observes this Report, 'say to 60°, and again, after it has been thoroughly skimmed, it will be found that the skimmed milk is of considerably greater gravity; and as this increase depends upon the separation of the lighter cream, the amount of the increase, or the difference between the specific gravity of the fresh and skimmed milk, will bear proportion to, and may be employed as a measure of, the relative quantities of the oily matter or butter contained in different milks.'—The specific gravity of skimmed milk depends both on the quantity of the saccharo-saline matters, and of the curd. To estimate the relative quantities of curd, and by that determine the value of milk for the purpose of yielding cheese, it is only required to curdle the skim milk, and ascertain the specific gravity of the whey. The whey will, of course, be found of lower specific gravity than the skimmed milk, and the number of degrees of difference affords a measure of the relative quantities of the curd. According to this hypothesis, the aerometric beads may be employed to ascertain the qualities of milk, relatively both to the manufacture of butter and cheese.' But neither of these inventions, though in themselves ingenious, have been extensively used.

The *fixtures of a respectable dairy* are, a copper boiler in the scalding-room; benches and shelves in this room and the cheese-room; a bench or table about two feet wide round the milk-room; and a pump in the centre of the latter.

The *utensils of a butter dairy* are, pails; sieves of hair cloth, or silver-wire cloth for straining the milk; milk dishes or coolers; an ivory or bone cream-knife, and skimming dishes of willow or ivory; bowls; barrel, or other milk churns; butter-makers; and a portable rack for drying dishes in the air; tube, &c.

**DAIS**, in botany, a genus of the monogynia order, and decandria class of plants; natural order, thirty-first, vepreculæ: involucre tetraphyllous: cor. quadrid, or quinqued: *SAUR* monospermous berry Species three, natives of South Sea Isles.

**DAISY**, *n. s.*  $\delta$  Sax. *dægerege day's-eye*; **DAISIED**, *adj.*  $\delta$ or, as Mr. Thomson conjectures, *dah's*, i. e. *does-eye*. Minsheu says, from *daicw*, to divide, because of the divisions of the leaves; but this etymology seems too profound for the name of a common flower.

**DAISY**. See **BELLIS PERENNIS**.

**DALE**, *n. s.* Teut. *thal*; Ang.-Saxon, Spanish, Belgic, and Irish, *dal*, from *dalen*, *descendere*, to descend. A valley or low place.

**DALE** (Richard), an American naval commander, was born in Virginia, Nov. 6, 1756. At twelve years of age he was sent to sea, and, in 1775, he took the command of a merchant vessel. In 1776 he entered, as a midshipman, on board of the American brig of war *Lexington*, commanded by captain John Barry. In her he cruised on the British coast the following year, and was taken by a British cutter. After a confinement of more than a year in Mill prison, he effected his escape into France, where he joined, in the character of master's mate, the celebrated Paul Jones, then commanding the American ship *Bon Homme Richard*. Jones soon raised Dale to the rank of his first lieutenant, in which character he signalized himself in the sanguinary and desperate engagement between the *Bon Homme Richard* and the English frigate *Serapis*. He was the first man who reached the deck of the latter when she was boarded and taken. In 1781 he returned to America, and, in June of that year, was appointed to the *Trumbull* frigate, commanded by captain James Nicholson, and soon afterwards captured. From 1790 to 1794 he served as captain in the East India trade. At the end of this period the government of the United States made him a captain in the navy. In 1801 he took the command of the American squadron of observation, which sailed, in June of that year, from Hampton roads to the Mediterranean. His broad pendant was hoisted on board the frigate *President*. Efficient protection was given by Dale to the American trade and other interests in the Mediterranean. In April, 1802, he reached Hampton roads again. He passed the remainder of his life in Philadelphia, in the enjoyment of a competent estate, and of the esteem of all his fellow-citizens. He died February 24, 1826. Captain Dale was a thorough, brave and intelligent seaman. He was several times severely wounded in battle. The adventures of his early years were of the most romantic and perilous cast. No man could lay claim to a more honorable and honest character.

**DALEA**, in botany, a genus of plants of the diadelphia class and decandria order. Stamina five or ten, with the wings growing to their column, and united without separate filaments: leguminous: seed one. Species fourteen, natives of North and South America.

**DALECARLIA**, or *Stora-Korparberg*, as it has been recently named, is an extensive province of Sweden, bounded on the west by Norway, on the north by Herjedal, on the east by Helgeland, and on the south by Westmannland. It contains nearly 1300 English square miles, and about 125,000 inhabitants. Though its general aspect is hilly, the mountains are of

little elevation, except in the neighbourhood of Norway; the greater part of the province is finely diversified with hills, dales, and lakes. It contains also two large rivers, the Dal and the Ljusne. In the south fine rye and barley flourish meet the eye; and the potatoe is cultivated with some success; but the perpetual changes of the property and badness of the roads have been formidable obstacles to improvement. Limestrees, elms, and maples, are found growing here nearly under the sixty-second degree of latitude. Dalecarlia has its chief riches, however, in its copper and iron mines, the chief of which (of copper) are at Fahlun and Avestad. At the beginning of the present century the iron mines employed seventy-two smelting-furnaces, and fifty-six forges; the total annual produce being about 113,000 cwt. Sulphur is likewise found; and at Elfsedal are quarries of porphyry. The chief towns are Fahlun, Hedemora, and Säter. The Dalecarlians are of noble make and appearance, and have long been celebrated for their love of liberty. During the struggles of Gustavus Vasa for the crown, they obtained their chief privileges, and have since distinguished themselves on similar occasions. They seem to have imbibed from these circumstances much of the spirit of faction; and they have great contempt for the other Swedes.

**DALECHAMPIA**, in botany, a genus of the monadelphia order, and monomia class of plants, natural order thirty-eighth, *tricoceæ*. Male involucre, common and quadripartite: cat. hemaphyllous; cor. none; nectarium laminated or scaly; the stamina monadelphous or coadunated at the base, and polyandrous or numerous. Female involucre, common and triphyllous; style one: caps. tricoceous. Species two, viz. 1. *D. scandens*, a native of Jamaica, and a climbing plant which rises to a considerable height, and is remarkable for nothing but having its leaves armed with bristly hairs, which sting the hands of those who unwarily touch them. 2. *D. Gorolata*, a native of New Granada.

**DALGARN** (George), a learned Scottish writer of the seventeenth century, was born at Aberdeen, and projected a plan for a universal language, in a work entitled *Art Signorum, Vulgo Character Universalis et Lingua Philosophica*, London 1661, 8vo. This exhibits a classification, as the author and his admirers state, of all possible ideas, and a selection of characters adapted to them. He admits only seventeen classes of ideas, and uses the letters of the Latin alphabet, with two Greek characters. His plan resembles that of bishop Wilkins. He was the author also of *Didascalophus*, or the Deaf and Dumb Man's Tutor. Oxford, 1680, 8vo.

**DALIN** (Olof Von), a Swedish historian and poet, born at Winberg in Holland in 1708, was designed for the medical profession, which he abandoned. In 1735 he published a weekly paper, called *The Swedish Argus*, which gave great satisfaction to the diet, and he was rewarded with the situation of librarian at Stockholm. He has been termed the father of Swedish poetry. His two chief poems are, *The Liberty of Sweden*; and *Brundhilda*, a tragedy. In 1744 he was an

reged by the diet to write The History of Sweden, and successively raised himself to be preceptor to prince Gustavus, counsellor in ordinary at the chancery, knight of the northern star, and chancellor of the court. He died in 1763. He was the author of a Translation of Montesquieu's *Causés de la Grandeur et de la Décadence des Romains*; and several poems, fables, &c., printed in 6 vols. 1767.

**DALKEITH** (Gael. i. e. a plain between two rivers), a parish of Scotland, in Mid Lothian, situated between the south and north Esk, and not exceeding two miles in length or breadth. The soil is partly light and sandy, partly deep clay.

**DALKEITH**, a considerable town in the above parish, is six miles south-east of Edinburgh, seated on the north Esk. It contains several good streets, and has a weekly market on Thursday, reckoned one of the best in Scotland for grain, which is all sold for ready money, and supplies the west country about Glasgow, Paisley, Carron, &c., as well as Edinburgh in part. It has also markets on Monday and Tuesday for meal and cattle, in winter; and a fair the third Tuesday in October. The seat of the Duke of Buccleuch is the principal ornament of the place, and the plantations which surround it are laid out with great taste. The house was built in the beginning of the eighteenth century on the site of Dalkeith castle. Long. 2° 20' W., lat. 55° 50' N.

**DALKEITH CASTLE** formerly stood at the east end of the town of Dalkeith. It was built on a perpendicular rock of great height, and inaccessible on all sides, except the east where it was defended by a fosse, through which the river is said to have run. On the defeat of the Scots at the battle of Pinkie, in 1547, James earl of Morton, Sir David Wedderburn, and many others, fled to this castle; where they were besieged for some time by the English, but were obliged to surrender at last for want of provisions. Here, in 1660, it being the head quartermaster Monk, the restoration of monarchy, by calling home Charles II. was planned.

**DALLA**, an important island and district of the Delta of the Irrawaddy River, Hindostan. It is covered generally with wood, which shelters numerous wild beasts, but contains also fine pastures, and produces rice and salt in considerable quantities. During the contest between the Burmans and Peguers, in the middle of the last century, this district was often overrun by both armies. The principal towns are Dalla, Kowack, and Gnapee Ghewen.

**DALLY**, v. o. & n. } Ancient Belg. *dollen*;  
**DALLANCE**, n. s. } Goth. *duella*; Saxon,  
**DALLIER**, n. s. } *dwolian*. To talk foolishly or idly. Hence both to delay, and to trifle in discourse or otherwise.

They that would not be reformed by that correction, when he dallied with them, shall feel a judgment worthy of God. Wisdom vii. 26.

A Friar that was a wanton and a merry.

A humour, a full colempne man:

In all these cases there is none that can

be made of dalliance and layre language.

Chaucer. *Proul. to Cant. Tales.*

With faire disport, and courting *dalliances*  
 She intertaine her lover all the way;  
 But when she saw the knight his speare advance,  
 Shre soone left off her mirth and wanton play,  
 And bad her knight addresse him to the fray.  
*Spenser. Fierie Queene.*

The daily *dalliers*, with pleasant words, with smiling countenances, and with wagers purposed to be lost, before they were purposed to be made. *Ascham.*

Not dallying with a brace of courtezans,  
 But meditating with two deep divines. *Shakespeare.*

She her airie buildeth in the cedar's top,  
 And dallies with the wind, and scorns the sun. *Id.*

— Good lord, you use this *dalliance* to excuse  
 Your breach of promise. *Id.*

Nor gentle purpose, nor endearing smiles,  
 Wanted; nor youthful *dalliance*, as he seems,  
 Pair couple linked in happy nuptial league,  
 Alone as they.

He left his cur, and laying bold  
 Upon his arms, with courage bold  
 Cried out, 'tis now no time to dally,  
 The enemy begin to rally. *Hudibras.*

I'll head my people;  
 Then think of *dalliance* when the danger's o'er:  
 My warlike spirits work now another way,  
 And my soul's tuned to trumpets. *Dryden.*

One hundred thousand pounds must be raised, for  
 there is no dallying with hunger. *Swift.*

**DALMANUTHA**, in ancient geography, a city of Judea, on the east side of the sea of Tiberias; either the same with Magdala, or situated near it. Hence Mark says, viii. 10, that our Saviour and his disciples landed in the parts of Dalmanutha; while Matthew, recording the same fact, says that they came into the coast of Magdala.

**DALMATIA**, a country of Europe, in a former maritime division of Austria, was bounded on the north by Bosnia and Croatia, on the east by Servia, and on the south and west by the Adriatic. The country is, as it were, strewed with mountains and hills, which are not altogether unfruitful; olives, vines, myrtles, and a great variety of palatable and wholesome vegetables growing amongst them. It has also many fertile plains; and feeds considerable numbers of horned cattle and sheep. The rivers of Dalmatia have no long course, but are mostly navigable. The principal are the Cherka and the Narenta. The air is temperate and pure. The Dalmatians use the Sclavonian language and customs, and profess the Roman Catholic religion.

Dalmatia was distinguished as follows:—1. Hungarian Dalmatia, lying on the upper part of the Adriatic Sea, containing part of ancient Liburnia, and which is more generally called Morlachia. 2. Venetian Dalmatia, or that part which was possessed by the Venetians, lying to the south-east of Hungarian Dalmatia, and abounds in ancient castles and fortresses. The inhabitants are estimated at 25,000, and are distinguished by different names, as well as diversity of manners. See MORLACHS, and UHLANS. They are warlike, intrepid soldiers, and excellent seamen. The nobility and people were well attached to the republic; mildness made them faithful subjects to Venice; their privileges were

respected, and it was dangerous to offend them. The chief towns are Spalatro, the capital, Amissa, Narenta, Sebenico, Trau, and Zara. Besides what the Venetians possessed on the continent, several islands in the Adriatic belong to them, which are considered as part of Dalmatia. This portion belonging to Austria, is strictly the only part to which the name Dalmatia now applies. 3. Turkish Dalmatia, lying east of Venetian Dalmatia. The principal towns are, Herzegovina, the capital, Clinova, and Scardova. 4. The late republic of Ragusa formed another part of Dalmatia.

**DALMATIA, ISLANDS OF.** Besides the islands included in the above province, Dr. Oppenheim mentions other seven islands of the late maritime division of Austria, as forming two distinct provinces; viz. the Four islands of Quarnero, and the Three Dalmatian islands, peculiarly so called, viz. Brazza, Lesina, and Curtola.

**DALMATIA, LOWER, or ALBANIA,** a province of the late maritime division of Austria, divided from the ci-devant Venetian Dalmatia, by the late republic of Ragusa, and a part of Turkish Dalmatia. It comprehended the canal, town, &c., of Cattaro, the mountains and valleys of Buda, and the bailiwick of Pastrovich. It is mountainous, but produces some corn, much oil, and fine fruits. The inhabitants have also considerable trade in the Levant.

The name of Dalmatia is said to be derived from the ancient capital Delmum, or Delminium. In the latter ages of the Roman empire this country suffered frequently from the incursions of barbarians, and was finally incorporated with Hungary in the twelfth century. When the Venetians, however, had occupied the sea-coast, they succeeded in the fifteenth century in conquering the interior, which long remained in their possession. By the treaty of Campo Formio, in 1797, the whole was ceded to Austria; but after the campaign of 1805 Buonaparte claimed it as king of Italy, and afterwards united it with the Illyrian provinces. Cattaro, and the southern part, were in 1806 seized by the Russians; but delivered up to the French at the peace of Tilsit. In the final arrangements of 1814 the whole was again transferred to Austria.

**DALRYMPLE (Sir David),** an eminent and learned judge of Scotland, born at Edinburgh, Oct. 28th, 1726. He was educated at Eton, and from thence went to Utrecht, where he remained till after the rebellion in 1746. He was admitted a member of the Faculty of Advocates, Feb. 23rd 1748. In March, he 1766, was appointed a lord of Session, and in May, 1770, one of the lords of Justiciary. During this time he wrote several occasional papers, in *The World*, the *Gentleman's Magazine*, &c. In 1773 he published his *Remarks on the History of Scotland*, which first displayed his talent for minute and accurate enquiry into doubtful points of history. This prepared the public mind for his *Annals of Scotland*, of which the first appeared in 1776, and the second in 1779, and fully answered the hopes he had excited. In 1786 lord Hailes evinced his unshaken attachment to religious truth, by publishing a 4to. volume, entitled, *An Enquiry into the Secondary Causes*, which Mr.

Gibbon has assigned for the rapid progress of Christianity. This was the last work he published; but he attended his duty on the bench till within three days of his death, which happened Nov. 29th, 1792, in the sixty-sixth year of his age. Lord Hailes was twice married; first to the daughter of the late lord Coalston, and afterward to the daughter of lord Kilkerran, by each of whom he had one daughter. As he left no male issue, his nephew succeeded to his title. His knowledge of the laws was accurate and profound; and he applied it in judgment with the most scrupulous integrity. Affectionate to his family and relations, simple and mild in his manners, pure and conscientious in his morals, enlightened and entertaining in his conversation, he left society only to regret that, devoted as he was to more important employments, he had so little time to spare for intercourse with them. His labors in illustration of the history of his country, and many other works of profound erudition, remain as monuments of his accurate and faithful researches for materials, and his sound judgment in the selection of them. Besides the works above enumerated, lord Hailes published the following: 1. *Memorials and Letters relating to the History of Great Britain, in the reign of James I.* 8vo. 1765. 2. *The Secret Correspondence between Sir Robert Cecil and James VI.* 12mo. 1766. 3. *Accounts of the Persecution of Charles II. after the Battle of Worcester.* 8vo. 1766. 4. *Memorials and Letters relating to the History of Great Britain, in the reign of Charles I.* 8vo. 1767. 5. *Canons of the Church of Scotland, drawn up in the provincial Synod held at Perth, 1242.* 4to. 1769. 6. *Historical Memorials concerning the Provincial Councils of the Scottish Clergy.* 4to. 7. *Ancient Scottish Poems, from a MS. of George Bannatyne.* 12mo. 1770. All in 4to. in 1787. Lord Hailes has also left many valuable MSS.

**DALTON (John), D.D.** an eminent divine and poet, was the son of the Rev. John Dalton, rector of Dean in Cumberland, where he was born in 1709. He was educated at Queen's College, Oxford; and became tutor to lord Beauchamp, only son of the earl of Hertford; during which time he adapted Milton's mask of *Comus* to the stage, by a judicious insertion of several songs and different passages selected from other of Milton's works, as well as of several songs and other elegant additions of his own, suited to the characters and to the manners of the original author. During the run of this piece he industriously sought out a grand-daughter of Milton's, oppressed both by age and poverty, and procured her a benefit from it, the profits of which amounted to a considerable sum. He was promoted by the king to a prebend of Worcester; where he died on the 2nd of July 1763. Besides the above, he wrote a descriptive poem, addressed to two ladies at their return from viewing the coal-mines near Whitehaven; and *Remarks on twelve historical designs of Raphael, and the Museum Græcum et Egyptiacum.*

**DALTON,** a market town of Lancashire. It is seated on the spring-head of a river in a charming country, not far from the sea; and the ancient castle is made use of to keep the records,

and prisoners for debt, in the liberty of Furness. The church is an ancient, neat building, and has an organ. This town, being in an excellent morning country, is much resorted to during the season. The port here is large and commodious; and a light-house has been erected at the south end of the Isle of Walney. A canal has been cut from the sea up to this town, one mile and a half in length, capable of navigating ships of great burden, which is of great advantage to the trade and commerce of the place. Market on Saturday. This is four miles from Ulverston, and 275 N. N. W. of London.

DAM, *n. s.* } Fr. *dame*; Span. *dama*; Heb. *Dama*, *n. s.* } and Chald. *ܕܡܐ*; Arab. *ama*; Lat. *dama*, *domina*; which, however, Minshew derives from Heb. *דמך*, to govern; Sans. *amma*; Teut. *ama*, to which Thomson thinks Sax. *dey*, or *da*, one that gives milk, has been prefixed. A human mother; a female who has borne young animals. Also, a title of honor; a lady; an elderly woman.

But of bird song, it was as loud and yerno  
As any swallow sitting on a berno;  
There she rouded skip and make a game,  
As any kid or calf following his dame.

Chaucer. *Can. Tales.*

Their *dams* upstart out of her den effraide,  
And rushed forth, hurling her hideous taile  
About her cursed head. *Spenser. Faerie Queene.*

This brat is none of mine;  
It is the issue of Polixena:  
Hence with it, and, together with the *dams*,  
Commit them to the fire.

Shakespeare. *Winter's Tale.*

The *dams* runs lowing up and down,  
Lucking the way her harmless young one went,  
And can do nought but wail her darling loss.

Id.

Not all these lords do vex me half so much  
As that proud *dams*, the lord protector's wife.

Id.

Bless you, fair *dams*! I am not to you known,  
Though in your state of honor I am perfect.

Id.

Another layeth a well-marked lambe,  
Or spotted kid, or some more forward steere,  
And from the payle doth praise their fertile *dams*.

Bp. Hall. *Defiance to Eney.*

Who would not repeat that *Miss*,  
And frequent sight of such a *dams*  
Buy with the hazard of his fame?

Waller.

Another, says a sick kite, let me have your prayers.  
And, my child, says the *dams*, which of the gods shall I pray to?

L'Estrange.

They billed the poor cock; for, say they, if it were  
Not for his waking our *dams*, she would not wake us.

Id.

Hardly bring but one morsel of meat at a time, and  
Lay me fatter, it may be, than seven or eight young  
in the nest together, which, at the return of their *dams*,  
do all at once, with equal greediness, hold up their  
heads and gape.

Ray.

The word *dams* originally signified a mistress of a  
family, who was a lady; and it is used still in the  
Buckish law to signify a lady: but in common use,  
many days, it represents a farmer's wife, or a mis-  
tress of a family of the lower rank in the country.

Watts's *Logic.*

VOL. VII.

As is the hedgehog's,  
Which sucks at midnight from the wholesome *dams*  
Of the young bull, until the milkmaid finds  
The nipple next day sore and udder dry.

Byron.

No spectre gaunt she saw of bones entwined,  
With scythe wide brandished as to sweep mankind,  
But a plump *dams*, of pampered aspect sly,  
With fiendlike, scowling merriment of eye.

Dr. T. Brown.

DAM, *v. a. & n. s.* From Gr. *δαμαζω*, *δαμαω*,  
to reduce to quiet, or stillness; Ang.-Sax. *dem-*  
man; Belg. *dammen*. To confine and overcome  
the force of water; to shut up by moles or banks.  
To stop up an opening. Shakspeare applies it  
to fire, and Milton to light, restrained or con-  
fined.

I'll have the current in this place *dammed* up;  
And here the smug and silver Trent shall run  
In a new channel, fair and evenly.

Shakspeare. *Henry VI.*

The more thou *damdest* it up, the more it burns.

Id.

Now will I *dam* up this thy yawning mouth  
For swallowing the treasure of the realm.

Id.

Moon! if your influence be quite *dammed* up  
With black usurping mists, some gentle taper,  
Though a rush-candle from the wicker hole  
Of some clay habitation, visit us  
With thy long levelled rule of streaming light.

Milton.

As when the sea breaks o'er its bounds,  
And overflows the level grounds,  
Those banks and *dams*, that like a skreen  
Did keep it out, now keep it in.

Hudibras.

Home I would go,  
But that my doors are hatful to my eyes,  
Filled and *dammed* up with gaping creditors,  
Watchful as fowlers when their game will spring.

Otway.

Not with so fierce a rage the foaming flood  
Rears, when he finds his rapid course withstood,  
Bears down the *dams* with unresisted sway,  
And sweeps the cattle and the cots away.

Dryden.

The inside of the *dams* must be very smooth and  
straight; and if it is made very sloping on each side,  
it is the better.

Mortimer's Husbandry.

'Tis you must drive that trouble from your soul;  
As streams, when *dammed*, forget their ancient current,  
And, wondering at their banks, in other channels flow.

Smith.

DAMAGE, *v. a. & n. s.* } Fr. *domage*,  
DAMAGEABLE, *adj.* } *dommage*; Goth.  
*damnage*, from Lat. *damnum*, injury. To injure  
hurt, impair; and the injury, or harm done.  
Damages are an estimated value or supposed,  
reparation of injury done. Damageable goods  
are those readily susceptible of injury.

His heart exalts him in the harm  
Already done, to have dispeopled heaven,  
My *damage* fondly deemed!

Milton.

Gross errors and absurdities many commit for want  
of a friend to tell them of them, to the great *damage*  
both of their fame and fortune.

Bacon.

The bishop demanded restitution of the spoils taken  
by the Scots, or *damages* for the same.

Id.

Such as were sent from thence did commonly do  
more hurt and *damage* to the English subjects than to  
the Irish enemies, by their continual cess and extortion.

Darwin.

E

They believed that they were not able, though they should be willing to sell all they have in Ireland, to pay the damages which had been sustained by the war.

*Id.*

**DAMAGE-FEASANT.** Beasts are said to be damage-feasant, or doing damage, when those of one person are found upon the land of another without his permission and without his fault; for if the owner of a field or enclosure adjoining upon another enclosure neglects to repair his fences, and the beasts pass through, he cannot seize them as damage-feasant. But if the beasts break into a close from the highway, where they were wrongfully left to run at large, the owner of the close may take them up, or restrain them as damage-feasant, though the fence of the close on the side next the highway was defective; for the owner is not obliged to make a fence against beasts where they cannot be lawfully left at large. The owner of land has a right to sue the owner of the beasts in trespass for the damage done by them to his crops, &c., but the law gives him also the means of stopping the damage, for he may distrain and impound the beasts.

**DAMAR**, a considerable town and district of Arabia, in the country of Yemen. It is well-built, and has a large castle and a university of the Mussulman sect Zeidi, which, Niebuhr was informed, contained 500 students. It is said to contain 5000 houses. Distant fifty-six miles north of Sana, and ninety-four north-east of Mocha.

**DAMASCENE**, Lat. *damascenus*. From Damascus; a plum. See PRUNUS.

In fruits the white commonly is meener, as in pears, plums, and *damascenes*; and the choicest plums are black.

*Buom.*

**DAMASCENUS** (John), an illustrious father of the church in the eighth century, born at Damascus, where his father, though a Christian, enjoyed the office of counsellor of state to the Saracen caliph, to which the son succeeded. He retired afterwards to the monastery of St. Sabas, and spent the remainder of his life in writing books of divinity. His works have been often printed; but the Paris edition, in 1712, two vols. folio, is esteemed the best.

**DAMASCIUS**, a celebrated heathen philosopher, born at Damascus, A.D. 1540, when the Goths reigned in Italy. He wrote the life of his master, Isidorus, and dedicated it to Theodora, a very learned and philosophical lady, who had also been a pupil to Isidorus. In this life, which was copiously written, he frequently made oblique attacks on the Christian religion. We have nothing remaining of it but some extracts preserved by Photius. Damascius succeeded Theon in the rhetorical school, and Isidorus in that of philosophy, at Athens.

**DAMASCUS**, דַּמַּשְׁק, Heb.; a very ancient city of Syria, in Asia. The ancients supposed it to have been built by one Damascus, from whom it took its name; and one of the medals of the city represents a hind suckling a child, supposed to have an allusion to the founder of the city, who is said to have been brought up by dama, a hind, whence his name. 'This city was in being

in the time of Abraham, Gen. xiv. 15; and consequently may be looked upon as one of the most ancient cities in the world. In the time of David it seems to have been a very considerable place; as the sacred historian tells us that the Syrians of Damascus sent 20,000 men to the relief of Hadadezer, king of Zobah. We are not informed whether, at that time, it was governed by kings, or was a republic. Afterwards, however, it became a monarchy, and proved very hostile to the kingdom of Israel, and would have destroyed it entirely, had not the Lord miraculously interposed in its behalf. This monarchy was destroyed by Tiglath Pileser, king of Assyria, and Damascus was never afterwards governed by its own kings. From the Assyrians and Babylonians it passed to the Persians, and thence to the Greeks, under Alexander the Great. After his death it belonged, with the rest of Syria, to the Seleucids, till their empire was subdued by the Romans, about A. A. C. 63. From them it was taken by the Saracens, A. D. 633; and it is now in the hands of the Turks.

Notwithstanding the tyranny of the Turkish government, Damascus is still a considerable place. It is situated in a plain of so great extent, that one can but just discern the mountains, which compass it on the other side. It stands on the west side of the plain, about two miles from the head of the river Barrady, which waters it. It is of a long, straight figure, extending about two miles in length, adorned with mosques and steeples, and encompassed with gardens, computed to be full thirty miles round. The river Barrady, as soon as it issues from the cleft of the Antilibanus into the plain, is divided into three streams; the middle one, which is the largest, runs directly to Damascus, and is distributed to all the cisterns and fountains of the city. The other two seem to be artificial; and are drawn round, one to the right, and the other to the left, on the borders of the gardens, into which they are let by little currents, and dispersed every where. This river finally flows into a hollow of the south-east desert, called Beharrah-el-Merdi, the Lake of the Meadow.

The houses of the city, whose streets are very narrow, are all built on the outside, either with sun-burnt bricks, or Flemish wail; and yet it is no uncommon thing to see the gates and doors adorned with marble portals, carved and inlaid with great beauty and variety; and, within these portals, to find large courts, beautified with fragrant trees and marble fountains, and surrounded with splendid apartments. In these apartments the ceilings are usually richly painted and gilded; their duans, which are a sort of low stages, seated in the pleasantest part of the room, and elevated about sixteen or eighteen inches above the floor, are floored, and adorned on the sides with variety of marble, mixed in mosaic knots and mazes, spread with carpets, and furnished all round with bolsters and cushions, to the very height of luxury. No city in the world has an equal number of fountains, or more splendid private houses. The interior of some of them is said to contain furniture worth £5000 or £6000. In this city are shown the church of John the Baptist, now converted into

a famous mosque; the house of Ananias, which is only a small grotto, or cellar, wherein is nothing remarkable; and the house of Judas, with whom Paul lodged. In this last is an old tomb, said to be that of Ananias, which the Turks hold in such veneration, that they keep a lamp continually burning over it. There is a castle belonging to Damascus, which is like a little town, having its own streets and houses; and here a magazine of the famous Damascus steel was formerly kept. The principal public building worth notice is the Zekia mosque, remarkable for its noble dimensions and general architecture. This is of the Corinthian order throughout; it has two minarets, and is of an oblong figure, crowned by a large stone cupola, supported by four enormous pillars. The gateway is supported by large columns of red granite; on the outside is a superb fountain, which throws the water twenty feet high. Another, with a grove of trees on each side, stands in a spacious court within. Numerous columns support galleries within, and portions of the walls exhibit the remains of mosaic work, with which they were once adorned. An hospital for the indigent sick is attached. This mosque is said to have been originally the cathedral church of Damascus. The Christians affirm, that it was dedicated to St. John Damascenus, whose body reposes here; but the Turks call it the mosque of St. John the Baptist. Another mosque is beautifully adorned with all kinds of fine marble, like mosaic pavement; and the tower or minaret of a third, is entirely cased with pantiles. The finest of its numerous hospitals is that constructed by the sultan 'Selim, consisting of a spacious quadrangle, lined by an interior colonnade, which is entirely roofed by forty small domes, covered with lead. (On the south side of the court there is a mosque, with a magnificent portico, and two exquisite little minarets, surmounted by a spacious cupola. The patriarch of Antioch has his see at Damascus, where he commonly resides. There is also a Greek, Maronite, Syrian, and Armenian church; and three convents of Franciscan monks. There are eight Jewish synagogues.

Damascus was, at one time, noted for its general ill-treatment of Europeans; but, although no one can venture to traverse the streets, unless in the Oriental costume, without insult, there is now little difference between the citizens of Damascus, and those of other eastern cities. A number of persons are generally seen in the streets, calling themselves saints, and appearing like idiots or madmen.

The fruit-tree, called the damascene, and the flower, called the damask-rose, were transplanted from the gardens belonging to this city; and the silk and lince, known by the name of damask, were first manufactured by its inhabitants. Niebuhr, who has given a plan of this city, makes it 3250 toises, or something less than a league and a-half in circumference, and it probably contains 180,000 inhabitants. The greater part of these are Arabs and Turks; the number of Christians is estimated at 20,000. Damascus is the rendezvous for all the pilgrims who go to Mecca, from the north of Asia, as

Cairo is for those from Africa. Their number, every year, amounts to from 30,000 to 50,000. Many of them repair here for four months before the time, but the greatest number only at the end of the Ramadan. Damascus then resembles an immense fair; nothing is to be seen but strangers from all parts of Turkey, and even Persia; and every place is full of camels, horses, mules, and merchandise. By means of this caravan, Damascus is become the centre of a very extensive commerce. By Aleppo, the merchants of this city correspond with Armenia, Natolia, Diarbekir, and even with Persia. They send caravans to Cairo, which, following a route frequented in the time of the patriarchs, take their course by Djesryakoub, Tiberias, Naplous, and Gaza. In return, they receive the merchandise of Constantinople and Europe, by way of Said and Bairout. The home consumption is supplied by silk and cotton-stuffs, which are manufactured here in great quantities, and are very well made; by the dried fruits, of their own growth, and sweetmeats, cakes of roses, apricots, and peaches, of which Turkey consumes to the amount of about 40,000 lbs. The remainder, paid for by course of exchange, occasions a considerable circulation of money, in custom-house duties, and the commission of the merchants. The pachalic of Damascus comprehends nearly the whole eastern part of Syria. In this vast extent of country, the soil and its productions are very various; but the plains of Hauran, and those on the banks of the Orontes, are the most fertile; they produce wheat, barley, sesamum, doura, and cotton. This city was one of the objects of Buonaparte's ambition while in the east: a small detachment of his cavalry had defeated the pacha's troops, and he was about to proceed to take possession of Damascus, when he was checked in his progress, in this direction, by British prowess and the disastrous results of the siege of Acre. In the year 1811 the city was menaced by the Wahabees, but the pacha going out to meet them, at the head of 6000 men, they retired. Damascus is 190 miles south of Antioch, 136 N. N. E. of Jerusalem, and 276 S. S. W. of Diarbekir.

DAMASCUS STEEL. See STEEL and CUTLERY.

DAM'ASK, *v. a. & n. s.* } Fr. *damasquin*;

DAMASKEN'ING, *n. s.* } Ital. *damaschino*.

DAM'ASK-ROSE, *n. s.* } Damask is a silk,

first manufactured at Damascus: damaskening an operation of cutlery, whereby the blades of swords and locks of pistols are ornamented, as at Damascus: and damask-rose, a rose variegated, after the manner of damask, with red and white: hence the damask of a cheek.

Not any weaver which his work doth boast  
In diaper, damask, or in lince. *Spenser.*

*Damask-roses* have not been known in England above one hundred years, and now are so common. *Bacon.*

And for some deal perplexed was her spirit,  
Her damask late, now changed to purest white. *Fairfax*

They sat recline  
On the soft downy bank, *damasked* with flowers. *Milton.*

Wipe your shoes, for want of a clout, with a damask  
sash.  
*Swift's Rules to Servants.*

Around him dance the rosy hours,  
And damasking the ground with flowers,  
With ambient sweets perfume the morn. *Fenton.*  
No gradual bloom is wanting from the bud,  
Nor broad carnations, nor gay spotted pinks,  
Nor, showered from every bush, the damask-rose.

*Thomson.*  
Loud claps the grinning fend his iron hands,  
Stamps with black hoof, and shouts along the lands;  
Whisks the damask cheek, unnerves the strong,  
And drives with scorpion lash the shrieking throng.  
*Darwin.*

DAMASK, a silk stuff, with a raised pattern, so that the right side of the damask is that which has the flowers raised above the ground. Damasks should be of dressed silk, both in warp and woof. Those made in France are half an ell in breadth.

DAMASK is also a kind of wrought linen, made chiefly in Flanders; so called, because its large flowers resemble those of damasks. It is chiefly used for tables.

DAMASKEERING, or DAMASKING, partakes of the mosaic, of engraving, and of carving; like the mosaic, it has inlaid work; like engraving, it cuts the metal, representing divers figures; and, as in chasing gold and silver, is wrought in relief. There are two ways of damasking; the one, which is the finest, is when the metal is cut deep with proper instruments, and inlaid with gold and silver wire; the other is superficial only.

DAMAUN, a sea-port in the province of Aurungabad, Hindostan, 100 miles north from Bombay. The Portuguese, who still retain it, reduced this place so early as 1531. Its houses and churches make a conspicuous figure from the sea; but the commerce is now reduced. Ship-building, however, is carried on to a considerable extent, the teak-forests of the vicinity supplying excellent timber. A ship, coppered, and equipped for sea, in the European style, in 1800, cost about £14 sterling per ton, according to Mr. Hamilton. The harbour is commodious for vessels of a small size.

DAMIANISTS, in church history, a branch of the ancient Acephali Severite. They agreed with the catholics in admitting the sixth council, but disowned any distinction of persons in the God-head; and professed one single nature incapable of distinction; yet they called God 'the Father, Son, and Holy Ghost.'

DAMIENS (Robert Francis), a French assassin, of some notoriety for his attempt on the life of Louis XV., and for the tortures inflicted on him for that attempt, was born in Artois in 1715. He was the son of a small farmer; and his character, even in his childhood, procured him the name of Robert le Diable. He enlisted, when young, for a soldier, deserted, and afterwards became the servant of an officer, whom he attended to the siege of Philipburgh. He was afterwards a domestic in the Jesuits' College at Paris. He finally left their service in 1738. He is accused of having afterwards poisoned one of his masters, after which he fled into Flanders. On the last day of the year 1760, he returned

to Paris, whence he proceeded to Versailles; and on the evening of the 5th of January, 1757, went to the palace, and, as his majesty was about to get into his carriage, to go to Trianon, pushing aside the attendants, made his way up to the king, and stabbed him in the side. He made no effort to escape, but was taken immediately; and, after having been interrogated at Versailles, was transferred to Paris. On his trial he denied having any accomplices, nor did the application of the most cruel tortures wring from him any probable accusation. On being questioned as to the cause of his crime, he said he did not mean to kill the king, and that he could have done it, if he had thought proper. He added, 'What I did was, that God might touch the king's heart, and induce him to restore order and tranquillity to the nation. The archbishop of Paris is the sole cause of our troubles.' Having been repeatedly tortured, he was sentenced to be put to death in the same cruel manner with Ravillac, the murderer of Henry IV.

DAMIETTA, a port-town of Egypt, on the east mouth of the Nile, four miles from the sea-coast. The present town stands upon a different site from the ancient Damietta, so repeatedly attacked by the European princes. The latter, according to Abulfeda, was 'a town surrounded by walls, and situated at the mouth of the eastern branch of the Nile.' Stephen of Byzantium informs us, that it was called Thamiatis, under the government of the Greeks of the lower empire, but that it was then very inconsiderable. It increased in importance, in proportion as Pelusium, which was frequently plundered, lost its power. The total ruin of that ancient town, occasioned the commerce of the eastern parts of the Delta to be transferred to this. It was, however, no longer a place of strength, when, about the year 238 of the Hegira, the emperor of Constantinople took possession of it a second time. The importance of a harbour, so favorably situated, opened the eyes of the caliphs. In the year 244 of the Hegira, Elmetouakkel surrounded it with strong walls. This obstacle did not prevent Roger, king of Sicily, from taking it from the Mahomedans, in the year 550 of the Hegira. He did not, however, long enjoy his conquest. Salah Eddin, who about that period mounted the throne of Egypt, expelled the Europeans from Damietta. They returned to besiege it fifteen years after; but the sultan baffled all their efforts. Notwithstanding their land army was supported by a fleet of 1200 sail, they were obliged to make a disgraceful retreat. It was the fate of this place to be often besieged. In the year 615 of the Hegira, under the reign of Eladel, the crusaders attacked it with a very considerable force. They landed on the western shore of the Nile, and their first care was to surround their camp with a ditch and palisadoes. The mouth of the river was defended by two towers, furnished with numerous garrisons. An enormous iron chain, stretching from one side to the other, hindered the approach of vessels. The crusaders carried, by storm, the tower on the same side with their camp, broke the chain, and opened the entrance of the river for their

Elm Eddin, the sultan's son, who was near Damietta, covered it with an attempt to stop the enemy's vessels, he threw a net over the Nile. The Franks overturned the prince adopted the measure of choking the mouth of the river, which he rendered impassable by several large boats he sunk after alternate successes, many bloody and a siege of seventeen months, the princes took Damietta by storm. They, however, long enjoy the fruit of so much spilt, and of an armament which cost immense sums. Completely invested by the Egyptian army, they purchased their liberty by the sacrifice of a quest. Thirty-one years after this deliverance carried Damietta without striking.

The Arabs, however, soon recovered tired of keeping a place, which continued upon them the most warlike nations, they totally destroyed it, and built another up in the country. This modern city, first called Menchie, as Abulfeda tells preserved the memory of its origin, in a hill called by that name. Writers, in have confounded these two towns, as the one the attributes of the other.

Present Damietta is of a semicircular stands also on the east bank of the Nile, five miles and a-half from its mouth. It is, by Savary, to contain 80,000 souls, has been thought an excessive estimate. Several squares, the most considerable of which retained the name of Menchie. The city is filled with merchants. Spacious bazaars, collecting under their porticos the silks of India, the silks of Mount Lebanon, the pyramids of rice, proclaim its wealth and respectability. The houses, those in which are on the banks of the river, lofty. They have, in general, handsome in the top of their terraces, open to every where the Turk, reclining on a sofa, a life in smoking, or in looking on the sea bounds the horizon on one side; on the lake that extends itself on the other; the Nile, which, running between them, is a rich country. Several large mosques, with minarets, are dispersed over the city. The public baths, lined with marble, are in the same manner as those of Cairo. The linen is clean, and the water pure. The heat, and the treatment in the far from injuring the health, serve to cool and improve it, if used with moderation. The custom, founded on experience, is general in Egypt. The port of Damietta is contended with a multitude of boats and small boats called scherm serve to convey the cargo on board the ships in the road, and the others carry on the coasting. This town carries on a great trade with Cyprus, and Marseilles. The rice, called *dam*, of the finest quality in Egypt, is cultivated in the neighbouring plains. The exports of rice, annually, to about six millions of livres. Besides the produce of the country are ammoniac, corn, &c. The Christians

of Aleppo and Damascus, settled in this town, have, for several ages, carried on its principal commerce. The bad state of the port is very detrimental to Damietta. The road, where the vessels lie, being exposed to every wind, the slightest gale obliges the captains to cut their cables, and take shelter in Cyprus, or stand off to sea. The tongue of land, on which Damietta is situated, straitened on one side by the river, and on the other by the western extremity of the lake Menzale, is only from two to six miles wide from east to west. It is intersected by innumerable rivulets in every direction, which render it the most fertile spot in Egypt. There are many villages around the town, in which are manufactures of the most beautiful linens. The finest napkins, in particular, are made here, fringed with silk. Damietta is 100 miles N. N. E. of Cairo.

DAMN, *v. a.*

DAMNED, *part. & n. s.*

DAM'NABLE, *adj.*

DAM'NABLENESS, *n. s.*

DAM'NABLY, *adv.*

DAM'NATION, *n. s.*

DAM'NATORY, *adj.*

DAM'NIETY, *v. a.*

DAM'NINGNESS, *n. s.*

Lat. *damno*; Old Fr. *danner*; which Minshew derives from the Heb. *דן*, the shedding of blood in sacrifice or punishment. To condemn; and the state of being condemned, temporally or eternally. To curse; to disapprove; to explode. 'Indecently used,' also, as Johnson says, 'in a ludicrous (and trifling) sense.'

I answeride, that it is not custom to romayns, to dampne any man before that he that is accused haue his accusers present. Wickliff. *Dedid.* 25.

And not as we ben blasfemed, and as sum men seyn, that we seyn, do we yuele things that goode thingis come, whos dampnacoun is just. Id. *Romayns*, iii. 8.

For wel thou wost thy selven veraily That thou and I be damned to prison Perpetual; us gaineth no rainson.

Chaucer. *Cunt. Tales.*

When now he saw himself so freshly hear, As if late fight had nought him damified, He was dismayed, and gan his fate to fear.

Faerie Queene.

Not in the legions Of horrid hell can come a devil more damned In evils to top Macbeth.

Shakespeare. *Macbeth.*

Let not the royal bed of Denmark be A couch for luxury and damned incest. Id. *Hamlet.*

He's a creature unprepared, unmeet for death; And to transport him in the mind he is Were damnable.

Id. *Measure for Measure.*

It gives him occasion of labouring with greater earnestness elsewhere, to entangle unwary minds with the snares of his damnable opinion. Hooker.

Whence damned vice is shrouded quite from shame, And crowned with virtue's meed, immortal name! Infamy disposses of native due, Ordained of old on looser life to sue.

Bishop Hull. *Prologue to Satires.*

He that hath been affrighted with the fears of hell, or remembers how often he hath been spared from an horrible damnation, will not be ready to strangle his brother for a trifle. Taylor's *Worthy Communicant.*

He may vow never to return to those sins which he hath had such experience of, for the emptiness and damnable of them, and so think himself a complete penitent. Hammond.

Now mince the sin,  
And mollify damnation with a phrase:  
Say you consented not to Sancho's death,  
But barely not forbade it.

Dryden.

His own impartial thought  
Will damn, and conscience will record the fault. *Id.*

We will propose the question, whether those who hold the fundamentals of faith may deny Christ damnably, in respect of those consequences that arise from them? *South's Sermons.*

He, who has suffered the damage, has a right to demand in his own name, and he alone can remit, satisfaction: the *damified* person has the power of appropriating the goods or service of the offender, by right of self-preservation. *Loche.*

Dare not  
To brand the spotless virtue of my prince  
With falsehoods of most base and damned contrivance. *Rosce.*

As he does not reckon every schism of a *damnable* nature, so he is far from closing with the new opinion of those who make it no crime. *Swift.*

The more sweets they bestowed upon them, the more *damnable* they conserved stunk. *Dennis.*

You are so good a critick, that it is the greatest happiness of the modern poets that you do not hear their works; and, next, that you are not so arrant a critick as to *damn* them, like the rest, without hearing. *Pope.*

Clouds  
Rise curling fast beneath me, white and sulphury,  
Like foam from the roused ocean of deep Hell,  
Whose every wave breaks on a living shore,  
Heaped with the *damned* like pebbles.—I am giddy. *Byron.*

DAMNII, an ancient people of Britain, who inhabited the district situated between the territories of the Selgovæ on the south, and the Caledonii on the north, now called Clydesdale.

DAMOCLES, one of the flatterers of Dionysius the elder, of Sicily. He admired the tyrant's wealth, and pronounced him the happiest man on earth. Dionysius prevailed upon him to undertake, for a while, the charge of royalty, and be convinced of the happiness which a sovereign enjoyed. Damocles ascended the throne, and while he gazed upon the wealth and splendor which surrounded him, he perceived a sword hanging over his head by a single hair. This so terrified him, that all his imaginary felicity vanished at once, and thus represented to him the danger and misery of royal state.

DAMON AND PYTHIAS, two illustrious friends of antiquity, who have immortalised their names by the strength and sincerity of their friendship. Damon was a Pythagorean philosopher, who, having incurred the displeasure of Dionysius, tyrant of Syracuse, was condemned to death. He asked a short respite, till he should settle some domestic business, of the utmost importance to his family, but which required his personal presence at some distance from Syracuse. Dionysius agreed to grant his request, upon a condition, which he supposed impossible to be complied with, viz. that Damon should find some person who was willing to suffer death in his stead, provided he did not return at the time appointed. Pythias, to the surprise of the tyrant, absolutely considered himself as a pledge for his friend Damon: who, after settling

his business, astonished the tyrant still more, by returning punctually at the hour fixed for his execution. Dionysius was so struck with the fidelity of these two friends, that he remitted the punishment, and entreated them to permit him to share their friendship, and enjoy their confidence.

DAMP, *v. a., n. s. & adj.* } Sax. and Belg.  
DAMP'NESS, *n. s.* } damp; Teutonic,  
DAMP'ISH, *adj.* } dampf. Serrenus  
DAMP'ISHNESS, *n. s.* } says from Scyth.  
DAMP'Y, *adj.* } dan, vapor. To

wet, moisten, make humid; foggy, moist, or heavy air; and hence to depress, deject, make dull, discourage. Dampish, dampishness, and dampy are diminutives of the same signification.

It has been used by some with great success to make their walls thick; and to put a lay of chaff between the bricks, to take away all dampishness. *Bacon.*

A soft body *dampeth* the sound much more than a hard. *Id.*

Night; not now, as ere man fell.  
Wholesome and cool, and mild; but with black air  
Accompanied, with *damps* and dreadful gloom. *Milton.*

All these and more came flocking, but with looks  
Downcast and *damp*: yet such wherein appeared  
Obscure some glimpses of joy. *Id.*

Unless an age too late, or cold  
Climate, or years, *damp* my intended wing  
Depressed. *Id.*  
The very loss of one pleasure is enough to *damp*  
the relish of another. *L'Estrange.*

Nor need they fear the *dampness* of the sky  
Should flag their wings, and hinder them to fly,  
'Twas only water thrown on sails too dry. *Dryden.*

She said no more: the trembling Trojans hear,  
O'erspread with a *damp* sweat and holy fear. *Id.*

This commendable resentment against me, strikes a *damp* upon that spirit in all ranks and corporations of men. *Swift.*

Even now, while thus I stand blest in thy presence,  
A secret *damp* of grief comes o'er my thoughts. *Johnson.*

An eternal state he knows and confesses that he has made no provision for, that he is undone for ever: a prospect enough to cast a *damp* over his spiritless hours. *Rogers.*

Driv'd of death hangs over the mere natural man,  
and, like the hand-writing on the wall, *damps* all his jollity. *Atterbury.*

The heat of the sun, in the hotter seasons, penetrating the exterior parts of the earth, excites those mineral exhalations in subterraneous caverns, which are called *damps*: these seldom happen but in the summer-time, when, the hotter the weather is, the more frequent are the *damps*. *Woodward.*

The lords did dispel *dampy* thoughts, which the remembrance of his uncle might raise, by applying him with everies and disports. *Hayward.*

Cypress and ivy, weed and wall-flower grown  
Mixed and matted together, bilboes heaped  
On what were chambers, arch crushed, columns strewn  
In fragments, chas'd up walls, and floors strewn  
In subterraneous *damps*, where the owl peeped,  
Dawning a midnight. *Byron.*

Damp, in natural history, from the Saxon word *damp*, signifying vapour, are certain nomi-

lations issuing from some parts of the chiefly observed in mines and coal-pits: vapors of the same kind often issue from the burning mountains, in those countries volcanoes are common. In mines and coal-pits are chiefly of two kinds, called by the coal colliers the choke and fire-damps. The choke is very much of the nature of fixed air, and usually infests those places which have formerly worked, but long neglected, and was to the miners by the name of wastes. The fire-damp suffocates the miners suddenly, the appearances found in those suffocated miners. Being heavy, it descends towards the lowest parts of the workings, and thus is dangerous to the miners, who can scarcely avoid it. The fire-damp, which seems chiefly composed of inflammable air, rises to the top of the workings, as being specifically lighter than the common atmosphere; and hence, though it suffocates as well as the other, it seldom is so dangerous in this way as by its inflammable property, by which it often takes fire from candles, and explodes with extreme violence. See COAL-MINES.

In the formation of these damp we have as yet no theory; nor, though the experiments of Lavoisier are able to show the composition and of forming these noxious airs artificially, they yet thrown much light on the method of nature prepares them on a large scale. There are two general ways in which we may prevent this to be done; one by the stagnation of the air in old waste places of mines and shafts, and its conversion into these mephitic forms; the other by their original formation in phlogistic or other materials found in the earth, without any interference of the atmosphere. See GAS and CARBURETTED HYDROGEN.

DANIEL (William), a famous navigator, descended from a respectable family in Somersetshire, and born in 1652. Losing his father very young, he went to sea, where he soon distinguished himself. His Voyage round the world is well known, and have gone through many editions. He appears afterwards to have been in an expedition concerted by the merchants of Bristol to the South Sea, commanded by Captain Woods Rogers; who sailed in 1708, and returned in September 1711: for further particulars of his life or death see DANIEL.

DAMSEL, *n. s.* Goth. *damoisell*; Ital. and *donzella*; *n. e.* a female don, from Lat. *don*. 'A gentlewoman, unmarried, being a lady,' says Minshew; and 'quasi parvus dominus, a little lord or master.' Johnson says it having formerly been applied to both sexes, but gives no instance of it in the masculine. It is now only used in verse.

Side go ye away for the damsel is not deed but  
and then scorneden him.

Wiclif. *Matthew 9.*

At last she has

and spyde slow-footing her before,

on her shoulders said a pot of water bore.

Spenser. *Faerie Queene.*

With her train of damells she was gone

shady walks, the scorching heat to shun.

Dryden.

Kneeling, I my servant's smiles implore,  
And one mad damsel dares dispute my power.  
Prior.

DAM'SON, *n. s.* Corruptly from *damascene*  
A small black plum. See DAMASCENE.

My wife desired some damsons,  
And made me climb with danger of my life.  
Shakespeare.

DAN, *n. s.* From *dominus*, as now *don* in Spain, and Ital. *donna*, from *domina*. The old term of honor for men, as we now say master. 'I know not,' says Dr. Johnson, 'that it was ever used in prose, and imagine it to have been rather of ludicrous import.' But Spenser uses it in serious praise of Chaucer, below.

Old dan Geoffrey, in whose gentle spright  
The pure well-head of poetry did dwell—  
He whilst he lived was the sovereign head  
Of shepherds all.  
Spenser.

This whimpled, whining, purblind, wayward boy,  
This signior Junio's giant dwarf, dan Cupid.  
Shakespeare.

Dick, if this story pleaseth thee,  
Pray thank dan Pope, who told it me.  
Prior's *Alms.*

DAN, *Jl* Heb. *i. e.* judgment, one of the twelve patriarchs, the fifth son of Jacob. Of his history nothing is recorded, except that he had but one son, named Hushim; though his posterity was afterwards very numerous.

DAN, or the DANITES, one of the twelve tribes of Israel, descended from the patriarch Dan. Their number, at the emigration from Egypt, amounted to 62,700, and they increased in the wilderness. After their settlement in Canaan, a party of them, who went to take Laish, in their way robbed Micah the Ephraimite of his idol, which they continued to worship till they were carried captive by Tiglath Pileser. Samson, the heroic judge of Israel, was of this tribe; and 28,600 of them attended at David's coronation. The Danites appear to have been early acquainted with commerce, for they had ships in the time of Jabin, king of the Canaanites. See Judges v. 17. Their territory extended west of Judah, and was terminated by Azotus and Dora on the Mediterranean.

DAN, in scripture geography, a city of the Danites, situated on the east side of the springs of Jordan, on the south of Mount Lebanon. It was named Laish or Leshem. Here Jeroboam established idolatry by setting up his golden calves. This city and Beersheba were the two extremities of the kingdom of Israel. Dan was taken and pillaged by Benhadad king of Syria; notwithstanding which it made some figure after the captivity. Some authors say, that it was rebuilt by Philip the tetrarch of Galilee, in our Saviour's time, and named by him Casarea Philippi. It lay east of Sidon and west of Damascus. It is thought by some to be the Lasha of Gen. x. 19.

DAN, in modern geography, a considerable river of the United States in North Carolina, which has been rendered navigable for boats a great way up. It unites with the Staunton in Virginia, and forms the Roanoke.

**DANAE**, in antiquity, a coin somewhat more than an obolus, used to be put into the mouths of the dead, to pay their passage over the river Styx.

**DANAE**, in fabulous history, the daughter of Acrisius, king of Argos, by Eurydice. She was confined in a brazen tower by her father, who had been told by an oracle that his daughter's son would put him to death. But Jupiter, who was enamoured of Danae, introduced himself to her bed by changing himself into a shower of gold. From his embraces Danae had a son, with whom she was exposed on the sea by her father. The wind drove the bark which carried her to the coasts of the island of Seriphus; where she was saved by some fishermen, and carried to Polydectes king of the place, whose brother, Dictys, educated the child, named Perseus, and tenderly treated the mother. Polydectes fell in love with her; but, being afraid of her son, he sent him to conquer the Gorgons, pretending that he wished Medusa's head to adorn his nuptials with Hippodamia the daughter of Ctenomachus. When Perseus had victoriously finished his expedition, he retired to Argos with Danae to the house of Acrisius, whom he inadvertently killed. Virgil says that Danae after this came to Italy, and founded the city of Ardea. Some suppose that it was Proetus, the brother of Acrisius, who introduced himself to Danae in the brazen tower; but, whoever was her seducer, the fable of the golden shower plainly implies that the keepers of the tower were bribed. Against such showers, indeed, towers of brass and bars of iron are no defence.

**DANAIDES**, in fabulous history, the fifty daughters of Danaus king of Argos. When their uncle Egyptus came from Egypt with his fifty sons, they were promised in marriage to their cousins; but before the celebration of their nuptials, Danaus, who had been informed by an oracle that he was to be killed by the hands of one of his sons-in-law, made his daughters solemnly promise that they would destroy their husbands. They were provided with daggers, and all except Hypermnestra proved but too obedient to their father's bloody injunctions, as a proof of which they presented him with the heads of their murdered husbands, on the morning after their nuptials. Hypermnestra was summoned to appear and answer for her disobedience in suffering her husband Lynceus to escape; but the unanimous voice of the people declared her innocent, and she dedicated a temple to the goddess of Persuasion. The forty-nine sisters were condemned, in hell, to fill with water a vessel full of holes, so that their labor was infinite and their punishment eternal.

**DANAUS**, in fabulous history, a son of Belus and Anchinoe, who, after his father's death, reigned conjointly with his brother Egyptus on the throne of Egypt. Some time after a difference arose between the brothers, and Danaus set sail with his fifty daughters in quest of a settlement. He visited Rhodes, where he consecrated a statue to Minerva, and arrived safe on the coast of Peloponnesus, where he was hospitably received by Gelanor king of Argos. Gelanor had lately ascended the throne, and the first years

of his reign were marked by dissections with his subjects. Danaus took advantage of his unpopularity, and obliged him to resign the crown. The success of Danaus led the fifty sons of Egyptus to embark for Greece. They were received with hypocritical kindness by their uncle; and soon after all murdered, except Lynceus. See **DANAIDES**. Danaus at first persecuted Lynceus with unremitted fury; but he was afterwards reconciled to him, and acknowledged him for his son-in-law and successor after a reign of fifty years. He began his reign about A.A.C. 1586; and after death was honored with a splendid monument in Argos, which existed in the age of Pausanias.

**DANBURY**, a town of the United States of America, in Connecticut, fifty-five miles N. N. E. of New York, and 116 south-west of Boston. This town was settled in 1687, and, with a great quantity of military stores, was burnt by the British on the 26th of April, 1777, but has been rebuilt since the peace. It lies thirty-three miles north-west by west of New Haven.

**DANCE**, *v. a. v. n. & n. s.* } Goth. & Belg. *dans*; Fr. *dance*; Ital. *danza*, from the Heb. *דָּנָה*, to leap, says Menesheu. To step, or move in measure; to dandle; a motion of one or more musically regulated. one who practises such motions is a dancer; he who teaches them a dancing-master; and a dancing-school the place where they are professedly taught. Dancing is also used for any concerted and regular motion or attendance.

But in the day of eroudis birtho, the daughter of erodias *daunside* in the myddil and pleside eroude. *Wiclif. Matt. xii.*

Now his elder son was in the field, and, as he came and drew nigh to the house, he heard music and dancing. *Luke xv.*

In olde dayes of the king Artour,—  
The Elf quene with hire joly compaignie  
Danced ful ofte in many a grene mede.  
This was the old opinion as I rede.

*Chaucer. Cant. Tales.*

In pestilences, the malignity of the infecting vapour *danceth* the principal spirits. *Hobbes.*

The honourablest part of talk is to give the occasion, and again to moderate and pass to somewhat else; for then a man leads the *dance*. *Id.*

What say you to young Mr. Fenton? He capers, he dances, he has eyes of youth, he writes verses.

*Shakespeare*

Thy grandaie loved thee well,  
Many a time he *danced* thee on his knee. *Id.*

He at Philippi kept  
His sword e'en like a *dancer*, while I strook  
The lean and wrinkled Cassius. *Id.*

They bid us to the English *dancing-schools*,  
And teach *lambolles* high, and swift *courantos*;  
Saying our grace is only in our heels. *Id.*

Musicians and *dancers* take some truce  
With these your pleasing labours, for great use  
As much weariness as perfection brings. *Dennis.*

Men are sooner weary to dance attendance at the gates of foreign lords, than to carry the good lessons of their own magistrates. *Raleigh's Essays.*

An Egyptian king endowed a dancing-school  
in imitation of apes of quality. *L'Etrange.*

They were taught their apes' tricks by a dancing-  
Id.

How I loved,  
ye days and nights, and all ye hours,  
and away with down upon your feet,  
our business were to count my passion.  
*Dryden.*

It upbraids you,  
our father's friend, for three long months,  
our attendance for a word of audience.  
Id.

at a dancing-master, and the fingers of a  
ball, as it were, naturally, without thought  
of regular and admirable motions.

*Locke on Understanding.*

I thought, performed too mean a part,  
her movements to the rules of art;  
and, I found that the musician's hand  
the dancer's mind too great command.

*Prior.*

Midnight shout, and revelry,  
fury, dance, and jollity. *Byron.*

But nor slight the sufferance, when the  
light  
of sin provokes unpitied Fate;  
of mutiny, in frets begun,  
forgotten 'er the dance is done,  
drivings, more of fancy than of heart,  
in treason, light the venging smart.

*Dr. T. Brown.*

ANCIENT. There is no account of the  
dancing among mankind. It is found  
among the most barbarous and uncivil-  
ized, and is too intimately connected  
with the mechanism of the human body to be  
derivable from art. The Greeks were  
people, however, who reduced it to a  
system. At Athens, it is said, that the dance of  
Muses, or Furies, on the theatre had so  
a character as to strike the spectators  
with terrible terror; and people imagined  
in earnest the personified deities com-  
ing with the vengeance of heaven to pur-  
punish their crimes. They had also  
dances, to keep up the warlike spirit of  
the youth. Plato reduces the dances of the  
Greeks to three classes, viz.

1. *Agonistic Dances.* Of these, some were  
of gambols, or sportive exercises, which  
character of imitation, and of which the  
art exist to this day. The others were  
of a more solemn, more agreeable, figured, and were  
accompanied with singing. Among the  
simple ones was the *ascolasmus*; which  
consisted in jumping, with one foot only, on  
filled with air or with wine, and rubbed  
anointed with oil. The *kybestesis* was  
famous in this country the Somerset. Of  
this kind was that called the wine-press,  
there is a description in Longinus, and  
of dances.

2. *Religious Dances.* These were used in  
sacred mysteries. Among the ancients  
no festivals nor religious assemblies  
were accompanied with songs and  
dances. They were looked upon to be so essen-  
tial kinds of ceremonies, that to express

the crime of such as were guilty of revealing the  
sacred mysteries, they employed the word  
*kheistm*, 'to be out of the dance.' The most an-  
cient of these religious dances is the Bacchic;  
which was not only consecrated to Bacchus, but  
to all the deities whose festival was celebrated  
with a kind of enthusiasm. The most grave and  
majestic was the *hyporchemetic*; it was executed  
to the lyre, and accompanied with the voice.—  
At his return from Crete, Theseus instituted a  
dance at which he himself assisted, at the head of  
a numerous and splendid band of youth, round  
the altar of Apollo. The dance was composed  
of three parts, the strophe, the antistrophe, and  
the stationary. In the strophe the movements  
were from the right to the left; in the antistrophe  
from the left to the right. In the stationary  
they danced before the altar; so that the station-  
ary did not mean absolute pause or rest, but  
only a more slow or grave movement. Plutarch  
is persuaded that in this dance there is a pro-  
found mystery. He thinks that by the strophe  
is indicated the motion of the world from east to  
west; by the antistrophe the motion of the plan-  
ets from west to east; and, by the stationary,  
the stability of the earth. To this dance These-  
us gave the name of *geranos*, or 'the crane,'  
because the figures which characterised it bore a  
resemblance to those described by cranes in their  
flight.

3. *Military Dances*, which tended to make  
the body robust, active, and well disposed for all  
the exercises of war. Of these there were two  
sorts; viz. the *gymnopedic*, and the *pyrrhic*. 1.  
The *gymnopedic* dance, or the dance of children,  
was invented by the Spartans for an early excita-  
tion of courage in their children, and to lead  
them on insensibly to the exercise of the armed  
dance. This dance used to be executed in the  
public place. It was composed of two choirs;  
the one of grown men, the other of children;  
whence, being chiefly designed for the latter, it  
took its name. They were both in a state of  
nudity. The choir of the children regulated  
their motions by those of the men, and all danced  
at the same time, singing the poems of Thales,  
Alcman, and Dionysodotus.

The *Pyrrhic*, or *Enoplian* dance, was per-  
formed by young men armed cap-a-pee, who ex-  
ecuted, to the sound of the flute, all the proper  
movements either for attack or for defence. It  
was composed of four parts: 1. The *podism* or  
footing, which consisted in a quick shifting mo-  
tion of the feet, such as was necessary for over-  
taking a flying enemy, or for getting away from  
him when an overmatch: 2. The *xiphism* was a  
kind of mock fight, in which the dancers imitated  
all the motions of combatants; aiming a stroke,  
darting a javelin, or dexterously dodging, parry-  
ing, or avoiding a blow or thrust. 3. The *ko-  
mos* consisted in very high leaps or vaultings,  
which the dancers frequently repeated, for the  
better using themselves occasionally to leap over  
a ditch, or spring over a wall. 4. The *tetracomos*  
was the last part; this was a square figure, exe-  
cuted by slow and majestic movements, but it is  
uncertain whether it was every where executed  
in the same manner. Of all the Greeks, the  
Spartans most cultivated the *Pyrrhic* dance.

Athenæus relates that they had a law by which they were obliged to exercise their children at it from the age of five years. This warlike people constantly retained the custom of accompanying their dances with hymns and songs. The following was sung for the dance called trichoria, said to be instituted by Lycurgus, and which had its name from its being composed of three choirs, one of children, another of young men, and the third of old. The old men opened the dance, saying, 'In time past we were valiant.' The young men answered, 'We are so at present.' 'We shall be still more so when our time comes,' replied the chorus of children. The Spartans never danced but with real arms. In process of time, however, other nations came to use only weapons of wood on such occasions. Nay, it was only so late as the days of Athenæus, who lived in the second century, that the dancers of the Pyrrhic, instead of arms, carried only flasks, thyrsuses or reeds. But, even in Aristotle's days, they had begun to use thyrsuses instead of pikes, and lighted torches in lieu of javelins and swords. With these torches they executed a dance which was called the conflagration of the world.

*Religious dances* were not confined to the pagan world. They have been practised both by Jews and Christians. Among the ancient Jews, it appears to have made a part of religious worship on some occasions, as we learn from passages in the Psalms, though we do not find it enjoined as a divine precept. In the Christian churches mentioned in the New Testament, there is no account of dancing being introduced as an act of worship, though it is certain that it was used as such in after ages.

*Theatrical or stage dances.* The Greeks were the first who united the dance to their tragedies and comedies; not indeed as making part of those spectacles, but merely as an accessory. The Romans copied after the Greeks; but in the reign of Augustus they left their instructors far behind them. Two remarkable men made their appearance at that time, who invented a new species of entertainment, and carried it to a great degree of perfection. These were Pylades and Bathylus, who first introduced among the Romans what the French call the ballet d'action, wherein the performer is both actor and dancer. Pylades undertook the task of representing, with the assistance of the dance alone, strong and pathetic situations. He succeeded perhaps beyond his own expectation, and may be called the father of that style of dancing which is known to us by the name of grave or serious pantomime. Bathylus, an Alexandrian, and a freedman of Meccenas, took upon himself to represent such subjects as required a certain liveliness and agility. He was handsome in his person; and the two great scourges of Roman follies, Persius and Juvenal, speak of him as the gallant of every woman in Rome. After their death the art gradually sunk into obscurity, and became even entirely forgotten on the accession of Trajan to the empire. Thus buried with the other arts in oblivion, dancing remained uncultivated till about the fifteenth century, when ballets were revived in Italy at a magnificent entertainment

given by a nobleman of Lombardy at Tortonæ on account of the marriage between Galeas duc of Milan and Isabella of Arragon. At first the women had no share in the public or theatrical dance; but, in 1681, we find the then dauphine, the princess of Conti, and some other ladies of the first distinction in the court of Louis XIV. performed a ballet with the opera called *Le Triomphe de l'Amour*. This union of the two sexes served to enliven and render the spectacle more pleasing and far more brilliant. It was received with so much applause, that in the May of that year, when the same opera was acted in Paris at the theatre of the Palais Royal, it was thought indispensable for the success of that kind of entertainment to introduce female dancers, and they have continued ever since to be the principal support of the opera. Thus, what was at first introduced as a mere accessory to the musical performance, became in process of time its only support; and this circumstance excited the emulation of several ballet masters.

Modern dancing is so much the creature of change and fashion, that we feel it impossible to detail its ever-varying steps in a work of science. We must refer our younger readers to the professors of the art; observing, only, that it seems in itself a natural and most innocent mode of exercise and graceful motion; while, on the other hand, in crowded assemblies, among the suffocating vapors of innumerable lights and breaths, the blood becomes often unnaturally propelled to the breast and head; perspiration is dangerously checked; the lungs are expanded, and the foundation is too often laid of that fatal disease, consumption.

DANCER (Daniel), an extraordinary miser, born near Harrow, in Middlesex, in 1716, of a family who possessed a considerable estate in that county. He succeeded to the family estate in 1736. For upwards of fifty years he led the life of a hermit, having no dealings with mankind but what the sale of his hay necessarily occasioned; and was seldom seen, except when he was out gathering logs from the common, or old iron, or sheep's dung under the hedges. His house was at one time robbed, to prevent which, he fastened up the door, and, by means of a ladder, went in at an upper window, drawing the ladder carefully up after him. He had a sister who lived with him for a number of years, and who left him a considerable increase to his store, at her death; on which occasion, to put himself in decent mourning, he purchased a pair of second-hand worsted stockings. Even this was an article of luxury, for he commonly wore bands of hay around his legs. He died in 1794, and left his estates to lady Tempest, who had been very charitable to the poor man and his sister.

DANCETTE, in heraldry, an epithet applied to the bordure or ordinary, when very deeply indented, so as to make generally but three points in the breadth of the shield, as fig. 1. a fesse dancette sable, fig. 2, azure two bars indented or. Name James. Double dancette, fig. 3, is an epithet belonging peculiarly to the bend, as argent a bend double dancette, azure, name Hericson.

Fig. 1.

Fig. 2.

Fig. 3.

**DANDELION**, *n. s.* *Fr. dent de lion.* A of the symgenesia class. See **LEONTODON**.

*For cowslips sweet let dandelions spread,  
Blissfulinda, blithesome maid, is dead.*

*Gay.*

**DANDINI** (Cesar), an historical painter, was of Florence, and successively studied with G. Carracci, Passignano, and Christopher from whom he acquired a very pleasing way of designing and coloring. He was excellent in his drawing, and finished his works highly. Several noble altar-pieces in churches of Florence are of his hand; and such is to the chapel l'Annonciata, is partly admired.

**DANDINI** (Peter), an eminent painter, born at Rome in 1646. He received his first instruction from Valerio Spada, who excelled in small works with a pen. He afterwards travelled to most of the cities of Italy, studying the works of those who were most distinguished; resided long at Venice, where he copied the works of Titian, Tintoretto, Paul Veronese, &c. &c. When he returned to Florence and duke Cosmo III. kept him perpetually employed in painting fresco, as well as in oil; objects being taken not only from sacred and profane history, but from his own fancy, which greatly furnished him with whimsical caricatures. He died in 1712.

**DANDIPRAT**, *n. s.*, or **DONKIN**, says Minerva little among other money, as a dandiprat among other men. For according to Henry VII. stamped a small coin of this. Dr. Johnson says, 'a fool.'

A very dandiprat and exceedingly deformed.  
*World of Wonders*, 1608.

**DANLE**, *v. a.* *Fr. dandiner*; *Teut. tanzeln*, *n. s.* *dlt*; *Belg. danden*, to trifle. Also a child; to lull it, or dance it lightly down. Also to trifle away time; to

And ye shall suck at the breast,

Ye shall be carried at the side,

And ye the dices shall ye be dandled.

*Isaiah lxxi. Bishop Lowth's Translation.*

Do so dandle their doings, and dally in the way, if they would not have the enemy subdued.

*Spenser.*

There are but superficial schools  
Dandle fools.

*Bacon.*

Their child shall be advanced,  
To receive for the emperor's heir,  
And the emperor dandle him for his own.

*Shakespeare.*

Seeing the lion ramped, and in his paw  
Had the kid.

*Milton.*

In careless sleep, as we find by the custom  
Of putting two and three children in cradles, or dandling  
These nurses' arms.

*Tillotson.*

They have put me in a silk gown, and a gaudy fool's cap; I am ashamed to be dandled thus, and cannot look in the glass without blushing, to see myself turned into such a little pretty matter.

*Addison's Guardian.*

**DANDOLO** (Henry), doge of Venice, was born in 1108, and chosen to that office in 1192. He was nearly blind at the period of his election, but neither that circumstance, nor his age, impaired the vigor of his mind, and the events of his government became the principal causes of the greatness of his country. Dandolo induced the senate to join in the fourth crusade, but directed the first efforts of the armament to recover Zara, which had revolted from its allegiance to the republic. He accompanied the expedition to Constantinople, and, on the storming of the city, was the first who leaped on shore. After the various changes with respect to the imperial throne, which succeeded the second siege, Dandolo was nominated emperor, but in consequence of his age, and his pressing ties to Venice, the choice ultimately fell on Baldwin. But Venice, in the sharing of the imperial dominions, obtained a full moiety, and Dandolo was solemnly invested as prince of Romania. He ended his extraordinary life at Constantinople, at the age of ninety-seven.

**DANDOLO** (Andrew), a learned doge and historian of Venice, was born about 1310. He rose first to the office of procurator of St. Mark, and then to that of doge in 1343. Making war against the Turks with considerable success, he greatly extended Venetian commerce and opened her trade with Egypt. Genoa beoming jealous of this trade, a powerful Genoese fleet arrived in the gulf of Venice, and caused so much anxiety to the doge, that it brought on an illness which terminated his life, September 1354. Andrew Dandolo was a correspondent of Petrarch, and to him is ascribed the compilation of the sixth book of the Venetian Laws, and a Chronicle of Venice, written in Latin, and comprehending the History of the Republic, from its commencement to 1342. It was first published by Muratori in his collection of original Italian Historians.

**DANEGETL**, an ancient annual tax of the Anglo-Saxons, first of 1s. afterward of 2s. for every hide of land through the ream, and for maintaining such a number of forces as were thought sufficient to clear the British seas of Danish pirates, who then greatly annoyed our coasts. The danegelt was first imposed as a standing yearly tax on the whole nation, under king Ethelred, A. D. 991. King Stephen, on his coronation day, abrogated it for ever. No church, or church-land paid the danegelt; because, as it is said in an ancient Saxon law, the people of England placed more confidence in the prayers of the church than any military defence they could make!

**DANG'ER**, *v. a.*, & *n. s.*

**DANG'EROUS**, *adj.*

**DANG'ERLESS**, *adj.*

**DANG'EROUSNESS**, *n. s.*

Minsheu, from *lavoc*, death; but this seems far-fetched. To put to risk, hazard, or per; a state

Goth *dunger*;

*Fr. danger*; from

Latin, *damniger*,

bringing or caus-

ing injur; or, says

of risk or hazard. It has been used in an obsolete sense for custody, as in the old French *dangerier*. See the first example.

In *danger* had he at his own gise  
The yonge girles of the diocise,  
And knew hircounseil and was of hir rede  
A garland haade he sette upon his hede.

Chaucer. *Prolog. to Cant. Tales.*

Fareth every knight thus with his wif as ye?  
Is this the lawe of king Artoure's hous?  
Is every knight if his thus *dangerous*?

Id. *Cant. Tales.*

Our craft is in *danger* to be set at nought.

Acts x. 27.

Fompey's son stands up  
For the main sodier; whose quality going on,  
The sides o' th' world may *danger*. Shakespeare.

He hath writ this to feel my affection to your honour,  
and to another pretence of *danger*. Id.

A sort of naughty persons  
Have practis'd *dangerously* against your state,  
Dealing with witches and with conjurors. Id.

Wyser Raymondus, in his closet pent,  
Laughs at such *loungey* and adventurement;  
When halfe his lands are spent in golden smoke,  
And now his second hopeful glass is broke.

Bishop Hall's *Satires*, iv. 3.

It is just with God to permit those, which think  
they stand securely, to fall most *dangerously*.

Hammond on *Fundamentals*.

More *danger* now from man alone we find,  
Than from the rocks, the billows, and the wind.

Waller.

I shall not need to mind you of judging of the  
*dangerousness* of diseases, by the mildness of the part  
affected.

Boyle.

Already we have conquered half the war,  
And the less *dangerous* part is left behind.

Dryden.

He showed no less magnanimity in *dangerless* de-  
spising, than there in *dangerous* affecting, the multi-  
plying of kingdoms.

Sidney.

It is *dangerous* self-flattery to give soft and smooth-  
ing names to sins in order to disguise.

Mason.

Wealth based on wealth, nor truth nor safety buys,  
The *danger* rather as the treasures rise.

Johnson. *Vanity of Human Wishes*.

Deep in woe caves below the *dangerous* soil  
Blue sulphur flame, imprisoned waters boil.

Darwin.

To me, Almighty, in thy mercy shining,  
Life's dart and *dangerous* portals thou didst ope;  
And softly a my mother's lap reclining,  
Breathed through my breast the lively soul of hope.

K. White.

Thy days of health, and nights of sleep; thy toils,  
By *danger* drained, yet guiltless; hopes  
Of cheerful old age and a quiet grave,  
With cross and garland over its green turf,  
And thy grand-children's love for epitaph;  
This do I see—and then I look within—

Byron.

DANIEL ISLES, or three islands in the Pacific  
Ocean, seen by commodore Byron, in June  
1765; and which he supposed to be the same  
with those seen by Quiros, in the beginning  
of the seventeenth century, and named Solomon's  
Islands. They were very populous, but so sur-  
rounded with rocks on all sides, that it was not  
safe to attempt to land. \* The islands themselves  
had a more fertile and beautiful appearance than

any we had seen before," says this navigator  
"and like the rest, swarmed with people, whose  
habitations we saw standing in clusters all along  
the coast. We saw also a large vessel under  
sail at a little distance from the shore; but  
our unspeakable regret we were obliged to leave  
the place without further examination, for it was  
surrounded in every direction by rocks and  
breakers, which rendered the hazard more than  
equivalent to every advantage we might procure."  
Long. 169° 28' W., lat. 10° 15' S.

DA'NGLE, *v. n.* } Swed. *dingle* or *dangla*.  
DA'NGLER, *n. s.* } seems, as Mr. Todd sug-  
DA'NGLING, *adj.* } gests, the most probable ety-  
mology; but Skinner derives it from Saxon *dang*,  
down, and hangan, hanging. To hang loose; to  
hang on and downwards; to follow. A dangle  
is a follower.

Go, bind thou up yon *dangling* aprico cks.

Shakespeare.

He'd rather on a gibbet dangle,  
Than miss his dear delight to wrangle.

Hudibras.

Codrus had but one bed; so short, to boot,  
That his short wife's short legs hung *dangling* out.

Dryden.

But have you not with thought beheld  
The sword hang *dangling* o'er the shield?

Prior.

The presbyterians, and other fanaticks that dangle  
after them, are well inclined to pull down the present  
establishment.

Swift.

A dangler is of neither sex.

Ralph.

In faithful memory she records the crimes  
Or real, or fictitious, of the times;  
Laughs at the reputations she has torn,  
And holds them *dangling* at arm's length on scorn.

Cowper. *Task*.

DANIEL; דָּנִיֵּאל, Heb. i. e. my judge is  
God; the fourth of the greater prophets, was  
born in Judea, of the tribe of Judah, about the  
thirteenth year of the reign of Josiah, A. M.  
3376. He was led captive to Babylon, with  
other young Hebrews, after the taking of Jere-  
salem by Nebuchadnezzar. That prince gave  
them masters to instruct them in the language  
and sciences of the Chaldeans, and ordered them  
to be fed with the most delicate viands; but they  
desired the king's officers to allow them only  
pulse. The wisdom and conduct of Daniel  
pleasing Nebuchadnezzar, that monarch gave  
him several posts of honor. We need not par-  
ticularise them, or the few events of his life: they  
are contained in the prophecies universally attri-  
buted to him. It is believed that Daniel died in  
Chaldea, and did not take advantage of the per-  
mission granted by Cyrus to the Jews of return-  
ing to their own country. St. Epiphanius says  
he died at Babylon. The prophecies of Daniel  
concerning the coming of the Messiah, and the  
other great events of after times, are so clear and  
explicit, that, as St. Jerome tells us, Porphyry  
insisted that those which related to the kings of  
Syria and Egypt, chap. xi., must have been  
written after the times of Antiochus Epiphanes;  
whereas this prophecy was translated into Greek  
100 years before his time, and was in the hands  
of the Egyptians, who had no particular kind-  
ness for the Jews or their religion. Josephus  
says the prophecies foretelling the successes of  
Alexander, chap. viii. 3, xi. 3, were shown to him

Jews, in consequence of which they obtained several privileges from him. *Antiq. lib.*

The style of Daniel is not so lofty and as that of the other prophets; but it is clear and concise, and his narrations and facts are simple and natural; in short, he more like a historian than a prophet. Part of the book, viz. from the fourth verse of chapter vi. to the end of chapter vii. was originally written in Greek, all the rest of the book is in Hebrew. The six chapters are a history of the kings of Judah, and what befel the Jews under their reigns. In the last six he is altogether a prophet, foretelling not only what should happen to his own church and nation, but events in foreign princes and kingdoms were contained, and some of which appear to be even fulfilled.

*St. Gabriel*, a celebrated Jesuit, and one of the best French historians, was born at Paris in 1649. He taught polite literature, philosophy, and divinity, among the Jesuits; and was superior of their house at Paris, where he died in 1728. There are a great number of his works published in French, of which the principal are: 1. A History of France, of which he has made an abridgment, in 9 vols. 12mo. 2. A History of the French Militia, in 2 vols. 4to. 3. Answer to the Provincial Letters. 4. A Treatise on the World of Descartes. 5. Letters on the Doctrines of the Theorists, and on Probabilities. 6. New Difficulties relating to the Rights of Brutes: and, 7. A Theological Treatise on the Efficacy of Grace.

*St. Samuel*, an eminent poet and historian, was born near Taunton in Somersetshire, in 1698, and educated at Oxford; but, leaving that university without a degree, he applied himself to history and poetry under the patronage of Lord Pembroke. He was afterwards tutor to Lord Ann Clifford; and, upon the death of that nobleman, was created poet laureat to queen Anne. In king James's reign he was appointed gentleman extraordinary, and afterwards became groom of the privy chamber to the king. He wrote a History of England, dramatic pieces, and some poems, and died in 1739.

*D. n. s. & adj.* } *Swed. dunk*; *Germ. dunken*.  
} *timek*. Skinner says, from the  
} *Swed. German word tunken*. Damp,  
} *ground*; or inclining to that state. Milton  
} *uses it as a substantive*.

Under the maiden sleeping found,  
The dank and dirty ground. *Shakespeare.*

They bound me, bore me thence,  
In a dank and dankish vault at home  
They left me. *Id.*

Yet oft they quit  
Me, and rising on stiff pinions tour  
Several sky. *Milton.*

Though each thicket dank or dry,  
Black mist, low creeping, he held on  
His night search. *Id.*

In the skins of beasts and fowls herewith,  
To keep them from growing dank in moist weather.  
*Grew.*

Dark steam the rocking marsh exhales,  
And vapours, and volcanic gales. *Darwin.*

Along the leaguered wall and bristling bank,  
Of the armed river, while with stragling light  
The stars peep through the vapours dim and dank.  
*Byron.*

**DANMONII**, an ancient British nation, supposed to have inhabited the tract of country now called Cornwall and Devonshire, bounded on the south by the British Ocean, on the west by St. George's Channel, on the north by the Severn Sea, and on the east by the country of the Durotriges. Some other British tribes were also seated within these limits: as the Cossini and Ostidamni, which were probably particular clans of the Danmonii. Ptolemy names a few places, both on the sea-coasts and in the inland parts of their country, which were known to the Romans. The most considerable of these are the famous promontories of Rolerium and Ocrinium, now the Landsend and the Lizard; and the towns of Isca Danmoniorum and Tanare, now Exeter and Saltash. After the depature of the Romans kingly government was immediately revived amongst the Danmonii in the person of Vortigern.

**DANTE** (Aligheri), a most distinguished poet of Italy, was born at Florence in 1265, of an ancient and honorable family. Boccaccio, who lived in the same period, has left a very curious and entertaining treatise, on the life, studies, and manners of this extraordinary man; whom he regarded as his master, and for whose memory he professed the highest veneration. He relates that Dante, before he was ten years old, conceived a passion for the lady whom he has immortalised in his poems. Her age was near his own; and her name was Beatrice, the daughter of Folco Portinari, a noble citizen of Florence. The passion of Dante, however, seems to have been of the platonic kind; but on the death of his mistress, at the age of twenty-four, he fell into a deep melancholy, from which his friends endeavoured to raise him, by persuading him to marriage. He followed their advice, but unfortunately made choice of a Xantippe. The poet, not possessing the patience of Socrates, separated from her, and never afterwards admitted her to his presence. In the early part of his life he gained some credit in military character; distinguishing himself by his bravery in an action where the Florentines obtained a signal victory over the citizens of Arezzo. He became still more eminent by the acquisition of civil honors; and at the age of thirty-five rose to be one of the chief magistrates of Florence, being elected by the suffrages of the people. Italy was at that time distracted by the contending factions of the Gibellines and the Guelphs: the latter, among whom Dante took an active part, were again divided into the Blacks and the Whites. Dante, says Gravina, exerted all his influence to unite these inferior parties, but his efforts were ineffectual, and he had the misfortune to be unjustly persecuted by those of his own faction. A powerful citizen of Florence, named Corso Donati, had taken measures to terminate these intestine broils, by introducing Charles of Valois, brother to Philip the Fair, king of France. Dante, with great vehemence, opposed this disgraceful project, and obtained the banishment of

Donati and his partizans. The exiles applied to pope Boniface VIII., and by his assistance succeeded in their design. Charles of Valois entered Florence in triumph, and those who had opposed his admission were banished in their turn. Dante took refuge at signa, and afterwards at Arezzo, where many of his party were assembled. An attempt was made to surprise the city of Florence, by a small army which Dante is supposed to have attended; but the design miscarried, and our poet wandered in various parts of Italy, till he found a patron in the great Candella Scala, prince of Veron, whom he has celebrated. The high spirit of Dante was ill suited to courtly dependence; and he is said to have lost the favor of his Veronese patron by the rough frankness of his behaviour. From Verona he retired to France, according to Manetti; and Boccaccio affirms that he is reputed in the theological schools of Paris with great reputation. The election of Henry count of Luxemburg to the empire, in November, 1308 afforded Dante a prospect of being restored to his native city, as he attached himself to the interest of the new emperor, in whose service he is supposed to have written his Latin treatise *De Monarchia*, in which he asserted the rights of the empire against the encroachments of the papacy. In 1311 he instigated Henry to lay siege to Florence; in which enterprise, however, he did not appear in person. The emperor was repulsed by the Florentines; and his death, in 1312, deprived Dante of all hope of re-establishment in Florence. After this he passed some years in Italy, in a state of poverty and distress, till he found an establishment at Ravenna, under the protection of Guido Novello da Polenta, the lord of that city, who received this illustrious exile with the most dearest liberality, continued to protect him through the few remaining years of his life, and extended his munificence to his ashes. Eloquence was one of the many talents which Dante eminently possessed, and on this account he was employed on fourteen different embassies. Guido sent him to negotiate a peace with the Venetians who were preparing to attack Ravenna. Manetti asserts that he was unable to procure a public audience at Venice, and returned to Ravenna by land, from his apprehensions of the Venetian fleet; when the fatigue of his journey, and the mortification of failing in the attempt to preserve his patron from the impending danger, threw him into a fever, which terminated in death on the 14th of September, 1321. He died in the palace of his friend; and the affectionate Guido paid him the most tender regard to his memory. He commended the body to be adorned with ornaments, and after being carried on a bier through the streets of Ravenna, by the most illustrious citizens, to be deposited in a marble coffin. He himself pronounced the funeral oration, and expressed his design of erecting a splendid monument in honor of the deceased: a design which his subsequent misfortunes rendered him unable to accomplish. This was afterwards done by Bernard Bembo, the father of the cardinal of that name. Boccaccio asserts that Dante began his *Inferno*, the work which has immortalised his name, and finished seven cantos of it before his exile; that in the plunder of

his house, on that event, the beginning of the poem was fortunately preserved, but remained for some time neglected, till its merit being accidentally discovered by an intelligent poet, Dino, it was sent to the marquis Malespina, an Italian nobleman, by whom Dante was then protected. The marquis restored these papers to the poet, and intreated him to proceed in the work. To this incident we are probably indebted for this celebrated poem, which Dante must have continued under all the disadvantages of an unfortunate and agitated life. It does not appear at what time he completed it; perhaps before he quitted Verona, as he dedicated the *Paradise* to his Veronese patron. The very high estimation in which this production was held by his countrymen, appears from a singular institution in the republic of Florence; which, in 1372, assigned a public stipend to a person appointed to read lectures on it. The critical dissertations that have been written on Dante are almost as numerous as those to which Homer has been birth; the Italian, like the Grecian bard, has been the subject of the highest panegyric, and of the grossest invective. Voltaire has spoken of him with that precipitate vivacity which so frequently led him to insult the reputation of the best writers. But more temperate and equitable critics have sufficiently vindicated his claims as an original and most captivating poet. There are many valuable editions of his works, among which it will be sufficient to specify those of Conte Zapato, Venice, 1767, 3 vols. 4to. and Parma, Bodoni, 1796, 3 vols. folio. There is an English translation of his *Comedia* by the Rev. H. Boyd; and another and much better by the Rev. H. F. Carey of Chiswick.

DANTON (George James), a celebrated French politician, who took an active part during the French revolution, in erecting those bloody tribunals, and establishing that despotic power, to which he himself fell a victim. He was born at Arcis sur l'Aube, in 1760; was bred to the law, and became an advocate: with regard to religious opinions, he openly avowed himself an atheist; and, in politics, he was a decided republican: but having differed with Robespierre he was accused of monarchical opinions, and, being condemned by the revolutionary tribunal, was guillotined with eight other deputies at Paris on the 5th of April, 1794, in the thirty-fourth year of his age.

DANTZIC, or DANTZIG, the capital of West Prussia, is seated on a branch of the Vistula, about five miles above its embouchure into the Baltic. This city is famous in history on several accounts, particularly as having been formerly at the head of the Hanse towns. It is large, beautiful, populous, and rich; its houses being generally five stories high, and many of its streets planted. It is traversed by two branches of the Vistula, and consists properly of three towns: the Vorstadt, or Fore-town; the Altstadt, or Old-town; and the Reichstadt. The suburbs, called Old and New Scotland, are the best built parts of the place; and the Scotch have considerable privileges here, in consequence, as they tell us, of their gallant defence of the town under one of the family of Douglas, when it was besieged by the

Polen. In the time of king Charles II. there were about 33,000 of that nation in the neighbourhood, and Sir John Denham and Mr. Killigrew were sent to tax them by the poll, with the king of Poland's licence; which having obtained, they brought home £10,000 sterling, besides their charges in the journey.

Dantzic has a noble harbour; and is still an important commercial city, although it seems to have past its meridian: which it enjoyed probably about the time that the president De Thou wrote his *Historia sui Temporis*, in which he speaks so highly of its commerce and grandeur. It was then a republic, claiming a small adjacent territory, about forty miles round, under the protection of the king and republic of Poland. Its magistracy and the majority of its inhabitants are Lutherans; although other religious professions are tolerated. It has twenty-six parishes, with many convents and hospitals; and contains four dock-yards for building merchantmen. It has an annual fair, called the fair of St. Dominic, which begins on the 5th of August. Accounts are kept in florins, the value of which is much less than that of Holland or Germany, being not quite equal to 9d. sterling. The chief public buildings are the cathedral, the church of St. Catherine, the Jesuits' college, the town-house, the arsenal, and the court of the nobles. The inhabitants were once computed to amount to 200,000; but later computations, and its memorable connexion with the late continental wars, have reduced them to little above 40,000 or 45,000.

The road, or gulf of Dantzic consists of an arm of the sea, sheltered from north winds by a tongue of land on which stands the small town of Helia. Its own shipping is numerous, but the foreign ships constantly resorting to it are more all of these the British are the most in number, particularly when our corn laws admit of the exportation of that commodity; Poland being the greatest magazine for corn in all Europe, and Dantzic the principal port for its exportation. Besides which, Dantzic exports considerable quantities of naval stores, potash, linen, and amber. The value of these, and still more that of corn, is of course fluctuating, but £1,500,000 sterling is considered a fair average of the annual value of its exports. See our article CORN LAWS. It exports, from various parts of Europe, wine, oil, groceries, woollens, silk, iron, copper, lead, skins, and furs.

Dr. Besching affirms that, as early as the year 1007, Dantzic was a considerable commercial city. The inhabitants have often changed their masters, and have been under the protection of the English, Dutch, French, and Prussians in succession. The city is surrounded with ramparts which mount upwards of 100 brass cannon; and although it could not, through its situation, stand a long siege, by the facility it possesses of maintaining the neighbourhood it has offered, as in 1607, an effectual resistance to assailants. In 1784 the inhabitants discovered a remarkable attachment and fidelity towards Stanislaus, king of Poland, not only when his enemies the Russians were at their gates, but even in possession of the city. This city was exempted by Frede-

rick the Great, king of Prussia, from those claims which he made on the neighbouring countries; notwithstanding which, Frederick William II., his successor, seized its territories, under pretence of their having been formerly part of Polish Prussia, and possessed himself of the port-duties. In 1784 it was blockaded by his troops, on various pretences; but by the interposition of the empress of Russia, and the king of Poland, they were withdrawn; and, a compromise having taken place, the city was restored to its former immunities. In 1793 the king of Prussia seized on the city itself with the remainder of the province, which he added to his dominions. Its internal government, however, was undisturbed; and thus it remained until 1807, when the French entered it after a long siege, and held it until the peace of 1814, when it returned to Prussia. It was blockaded for a great length of time previously, and ably, though not very humanely, defended by general Rapp. The German is the language in common use here. Dantzic is sixty-eight miles W.S.W. of Königsberg, thirty south-east of Marienburg, and 235 north-east of Berlin.

DANUBE, the largest and most considerable river in Europe, rising in the Black Forest, near Zunberg, and running north-east through Suabia, by Ulm the capital of that country, then running east through Austria, it passes by Ratisbon, Passau, Ens, and Vienna. It then enters Hungary, and runs south-east from Presburg to Buda, and so on to Belgrade; after which it divides Bulgaria from Morlachia and Moldavia, discharging itself by several channels into the Black Sea, in the province of Bessarabia. Towards the mouth it was called, by the ancients, the Ister; and it is now said that four of the mouths are choked up with sand, and that there are only two remaining. It receives sixty rivers, great and small, in its course; and runs near to, or washes the following cities and towns:—Eschingen, Ulm (where it begins to be navigable), Donawert, Neuburg, Ingoldstadt, Passau, Linz, Ips, Stein, Vienna, Presburg, Raab or Javaria, Comorn, Waitzen, Pest, Buda, Belgrade, &c. &c. It is so deep between Buda and Belgrade, that both the Turks and Christians have had men of war upon it; and yet it is not navigable to the Black Sea, on account of the cataracts. The Danube was generally supposed to be the northern boundary of the Roman empire in Europe. It was worshipped as a deity by the Scythians. It abounds in fish, and particularly in a large kind of sturgeon.

DANUBE, CIRCLE OF THE UPPER, one of the chief divisions of the kingdom of Bavaria. It has on its frontiers the circles of the Regat, the Regen, and the Iser; Tyrol, the lake of Constance, and Wirtemberg. It contains 4350 square miles, and 470,000 inhabitants, mostly Catholics. The capital is Eichstadt, and the other chief towns are, Neuburg, Nordlingen, Dillingen, Gunzburg, Hochstadt, Pappenheim, Donauwerth, and Ingoldstadt. The surface is in general hilly, diversified with forests and lakes, particularly in the direction of the Suabian Alps: and, besides the Danube, it is watered by the Iller and the Lech. In the low country, corn, hemp, and flax abound.

but the majority of the peasantry rear cattle. Iron, coal, and copper, are the mineral productions, and in the towns the manufacture of paper and linen is carried on.

DANUBE, CIRCLE OF THE LOWER, another circle of Bavaria, consists of the greater part of Lower Bavaria Proper, and the principality of Passau. It borders on Bohemia, Upper Austria, and the circles of the Iser and Regen. Its area is 4335 square miles, and its inhabitants amount to 396,150. The surface is an alternate succession of mountains, valleys, and plains. It is also traversed by the Inn, the Ilz, and the Iser. The climate is mild except in the north-west; and the tracts on the south side of the Danube are so fertile in corn as to be accounted the granary of Bavaria: they have besides an excellent breed of horses. The chief productions are corn, flax, and hemp. In the larger towns there are manufactures of linen and other cloths, which, together with the natural productions, produce a brisk trade in the Danube, the Iser, and the Inn. The capital is Passau.

DANVERS, a township of Massachusetts, in Essex county, adjoining Salem on the north-west, in which it was formerly comprehended by the name of Salem village. It consists of two parishes, and was incorporated in 1757.

DANVILLE, a post town of the United States, in Kentucky, situated in a large fertile plain on Dick's River. It consists of about eighty houses. Thirty-five miles S. S. W. of Lexington, and 830 from Philadelphia.—Also a township in Vermont.

DAP, or DARE, *v. n.*, probably the same with DAB, which see. Dr. Johnson says it is a corruption of dip.

I have taught him how to catch a chub by *dapping* with a grasshopper. Walton.

DAPATICAL, *adj.* Lat. *capiteus*, sumptuous. Bailey.

DAPHNE, in ancient geography, a small district on the lake Samachonites, in the Higher Galilee, very pleasant, and plentifully watered with springs, which feed the Lesser Jordan, whence its name seems to arise, probably in imitation of that near Antioch.

DAPHNE, in botany, spurge laurel; a genus of the monogynia order and octandria class of plants; natural order thirty-first, vepreculæ: CAL. none: COR. quadrifid and marcescent, enclosing the stamina: FRUIT a monospermous berry. Species thirty, of which the following are the most remarkable—

1. *D. gnidium*, the flax-leaved daphne, is a low deciduous shrub: native of Italy, Spain, and about Montpellier. This species seldom grows higher than three feet. The branches are very slender, and ornamented with narrow, spear-shaped, pointed leaves, much like those of the common flax. The flowers are produced in panicles at the ends of the branches: they are small, come out in June, but are rarely succeeded by seeds in England.

2. *D. laureola*, the spurge laurel or evergreen daphne; a low evergreen shrub, common in some parts of this kingdom, also in Switzerland and France. This shrub seldom grows more than a yard or four feet high: it sends out many

branches from the bottom, and these are covered with a smooth light-brown bark that is very thick. The leaves sit close to the branches, and are produced in such plenty, that they have the appearance, at a small distance, of clusings at the end of the branches. They are spear-shaped, shining, smooth, and thick; their edges are entire. These leaves, when growing under the drip of trees, spread open, and exhibit the green color, pure, and untarnished: when placed singly, in exposed places, they naturally turn back with a kind of twist, and the natural green of the leaf is often alloyed with a brown tinge. This shrub is also valuable on account of the fragrance of its flowers: it blows the beginning of January, and will continue until the middle or latter end of April before the flower falls. They make but little show; being small, and of a greenish yellow. They are succeeded by oval berries, which are first green, and afterwards black when ripe.

3. *D. mezereum*, the mezereon, or spurge olive, is a low deciduous shrub. It is a native of Germany, and has also been discovered in some woods near Andover in Hampshire. Of this elegant plant there are four varieties: 1. The white; 2. The pale red; 3. The crimson; and 4. The purple flowering. They are of low growth, seldom arising to more than three or four feet in height, and, therefore, are proper even for the smallest gardens. They will be in bloom in February, nay, sometimes in January, when few trees, especially of the shrubby tribe, present their honors. Each tree has the appearance of a spike of flowers of the most consummate lustre; and, whether looked near or at a distance, it has a most enchanting appearance, and the air is perfumed with their odors to a considerable distance. Besides the beauty of the leaves, which come out after the flowers are fallen, and which are of a pleasant green color and an oblong figure, it will be full of red berries in June, which continue growing till the autumn. The root of the mezereon was long used in the Lisbon diet-drink, a remedy said to be good for several complaints, particularly nodes and other symptoms resisting the use of mercury. The composition of this diet-drink is described in the Edinburgh Physical Essays, by Dr. Donald Monro. On chewing the root it proves very pungent, and its acrimony is accumulated about the fauces, and is very durable. It is employed chiefly under the form of decoction; and enters the decoctum sarsaparilla: composition of the London college; but it has also been used in powder combined with some inactive one, as that of liquorice root. It is often usefully combined with mercury. The bark of the root, which is the most acrimonious part, is recommended, in the Pharmacopœia Chirurgica, to be steeped in vinegar, and applied to promote the discharge of issues. Mezereon has also been of use in tumors and cutaneous eruptions. The whole plant is very corrosive; and six of the berries, it is said, will kill a weasel. A woman gave twelve grains of the berries to her daughter who had a quartan ague; she vomited blood, and died immediately.

4. *D. villosa*, the hairy-leaved daphne, a low deciduous shrub; native of Spain and Portugal.

alks are ligneous, about two feet high, and with branches alternately from the sides. Leaves are spear-shaped, plane, hairy on the upper surface, and grow on very short foot-stalks. The flowers have very narrow tubes, are small, and make no great show; they come out in clusters and are not succeeded by ripe seeds in the autumn. This shrub, in some situations, retains its leaves all winter in such beauty as to be ranked among the low-growing evergreens, but in others it is sometimes shut out by the first black winds.

**DAPHNE**, in the Pagan mythology, daughter of Peneus by the goddess Terra, of whom Apollo became enamoured. This passion was raised by Cupid; with whom Apollo, after his late conquest of the serpent Python, disputed the power of his darts. Daphne, to avoid her father's addresses, and endeavouring to escape his importunity by flight, Apollo pursued her, and Daphne intreated the assistance of her mother, who changed her into a laurel. Apollo then, in his zeal with the leaves of the laurel, decreed that that tree should be for ever sacred to his divinity.

**DAPHNE**, a daughter of Tiresias, priestess in the temple of Delphi. She was consecrated to the service of Apollo by the Epigoni, or accorded to her by the goddess Tellus. She was punished on account of the wildness of her expressions when she delivered oracles. Her poems were generally in verse; and Homer, according to some, has introduced much of her in his compositions.

**DAPHNEPHORIA**, a festival in honor of Apollo celebrated every ninth year by the Bactrians. It was then usual to adorn an olive bough with garlands of laurel and other flowers, and to place on the top a brazen globe, on which were placed smaller ones. In the middle were placed a number of crowns and a globe of incense, and the bottom was adorned with a colored garment. The globe on the top represented the sun or Apollo. That in the middle was an emblem of the moon, and the smaller ones the stars. The crowns, which were 365 in number, represented the sun's annual revolution.

This bough was carried in solemn procession by a beautiful youth of an illustrious family, and whose parents were both living. He was called *Ἰαπωνόφορος*, daphnephorus, laurel-bearer, and at the time executed the office of Apollo. Behind him followed a train of boys with branches in their hands. In this manner the procession advanced as far as the temple of Apollo Iamienus, where supplicatory hymns were sung to the gods.

**DAPHNIN**, in chemistry, the bitter principle of the laurel, first discovered by M. Vauquelin.

From the alcoholic infusion of this bark a resin was separated by its concentration. The resin, being the tincture with water, filtering, and adding acetate of lead, a yellow daphnate precipitate fell, from which sulphureted hydrogen was separated, and the lead, and left the daphnin in small white crystals. They are hard, of a white color, a bitter taste when heated, evaporate and send vapors, sparingly soluble in water, but moderately in boiling water.

Vol. VII.

**DAP'IFER**, *n. s.* Lat. and Old Fr. *dapifer*; a dish carrier: formerly an officer of considerable rank at our coronations, and those of the kings of France. See **CORONATION**.

In France the barons and great men gave in like manner their attendance at the king's court. Such were the *dapifer*, butler, chamberlain, constable, chancellor, and others. *Madox's Hist. of the Excheq.*

**DAPPER**, *adj.* } Belg. *dapper*; Teut. *DAPFERLING*, *n. s.* } *tappir*; which signify brave, valiant; and therefore Dr. Johnson thinks this word is generally applied in contempt. But Minsheu suggests its possible derivation from *dapifer* (see above), and well defines it, neat; spruce; dainty. *Dapperling* is a diminutive of *dapper*.

The *dapper* ditties that I won't devise  
To please youths' fancy.

*Spenser. Shepherd's Calendar.*

And on the tawny sands and shelves,  
Trip the pert fairies and the *dapper* elves. *Milton.*

A pert *dapper* spark of a magpie fancied the birds  
would never be governed till himself should sit at the  
helm. *L'Estrange.*

**DAPPLE**, *v. s. & adj.*, from apple, as *pommelé* in the French. To variegate; to streak with different colors: that which is so streaked or variegated.

Horses that are *dappled* turn white; and old squires  
turn grisly. *Bacon.*

But under him a grey steed did he wield,  
Whose sides with *dappled* circles were endight.

*Spenser.*

The gentle day

*Dapples* the drowsy east with spots of grey.

*Shakespeare.*

Come, shall we go and kill us venison?  
And yet it irks me the poor *dappled* fools,  
Being native burghers of this desert city,  
Should, in their own confines, with forked heads,  
Have their round haunches gored. *Id.*

The lark begins his flight,  
From his watch-tower in the skies,  
Till the *dappled* dawn doth rise. *Milton.*

The *dappled* pink, and blushing rose,  
Deck my charming Chloe's hair. *Prior*

The gods, to curse Pamela with her prayers,  
Gave the gilt coach and *dappled* Flanders mares.

*Pope.*

**DAR, DART, or DACE**, *n. s.*, a fish. See **DACE**.

**DARABJIRB**, or **DARAB-GUIERD**, a town of Persia, in the province of Kerman, surrounded by groves of lemon and orange trees, yielding such abundance of fruit that the juice is exported to every part of Persia. It is watered by a copious stream. A considerable portion of the town is in ruins, but it contains a population of 10,000 or 15,000, and was formerly very celebrated, being supposed to have been founded by the Darius Nothus of ancient historians. It was invested by Looft Ali Khan, in the year 1794, but he was compelled to relinquish the siege. Distant 150 miles north-east of Schiras.

**DARAH**, or **DRAS**, a country of Northern Africa, bounded on the north by Morocco, Gezula, and Tafilet, on the east and the south by the Great Desert, and on the west by Suz. It takes its name from the river Darah, or Dras, which

passes through it, and is absorbed in the desert. The principal produce is indigo and dates. The inhabitants are Arabians and Mahomedans, and some of the districts of the country are dependencies of Morocco. It contains a superior breed of goats. Copper and antimony are found in the mountains, and in the southern part, at Atta and Takka, are places of rendezvous for the great caravan which passes to Timbuctoo from Morocco.

**DARANTASIA**, in ancient geography, a town of the Centrones, in Gallia Narbonensis, between Lemincum and Augusta Prætoria, called Forum Claudii by the Romans. It is now called Molitiers.

**DARAPTI**, among logicians, one of the modes of syllogisms of the third figure, whose premises are universal affirmatives, and the conclusion is a particular affirmative: thus,

**DAR** Every body is divisible;

**AP-** Every body is a substance;

**TI.** Therefore, some substance is divisible.

**DARCET** (John), a French physician and chemist, was born in 1725, at Douazit in Guienne. Being discarded by his father, who was a magistrate, for preferring the study of medicine to the profession of the law, he was obliged, while pursuing his studies, to teach Latin for his support, at Bourdeaux. Here he became acquainted with Montesquieu, with whom he went to Paris in 1742; remaining with him as a literary assistant till his death. He afterwards went with the duke de Lauraguais into Germany, and had an opportunity of critically examining the Hartz mines, in Hanover. At the peace he applied himself to technical chemistry, and the improvement of the porcelain manufacture, respecting which he drew up several memoirs presented to the Academy of Sciences in 1766 and 1768. He also demonstrated, about this time, the combustibility of the diamond; on which subject he addressed the academy in 1770. In 1762 he was made regent of the Faculty of Medicine at Paris; in 1771 he married the daughter of the chemist Rouelle; and in 1774 travelled over the Pyrenees, to study the geology of those mountains. He succeeded Mauquer as a member of the Academy of Sciences, and director of the manufactory of Sevres, and became afterwards inspector-general of the assay of coins, and of the gobein manufactory. His valuable life was preserved during the reign of terror, by Fourcroy, who procured the obliteration of his name from Robespierre's list; and he died in 1801, a member of the Institute, and of the conservative Senate.

**DARDANELLES**, two ancient and strong castles of Turkey, one of which is in Romania, and the other in Natolia, on each side of the ancient Hellespont, now the strait of Gallipoli, which opens a communication between the Archipelago, and the Propontis, or sea of Marmora. The mouth of the canal is four and a half miles over; and the castles which were built in 1659, to secure the Turkish fleet from the insults of the Venetians, are defended on each side by fourteen brass guns with chambers like mortars, to receive granite balls. They are twenty-two feet long, from twenty-five to twenty-eight inches

diameter in the bore, and lie on a paved terrace near the level of the water. They are called the Old Dardanelles, to distinguish them from others built at the entrance of the strait, about ten miles to the south-west, one of which stands in like manner in Asia, and the other in Europe, and called the New Dardanelles. The ships that come from Constantinople are searched at the castle on the side of Natolia. The passage betwixt both these pairs of castles was forced by a British fleet under admiral Duckworth, in February, 1807.

**DARDANIA**, in ancient geography, 1. A district of Moesia Superior on the south, now the south part of Servia, towards the confines of Macedonia and Illyricum. 2. A small district of Trouas, along the Hellespont. 3. The ancient name of Samothracia; from Dardanus, who removed thither.

**DARDANUS**, a son of Jupiter and Electra, who, after the death of his brother Jason, left Samothrace, his native country, and passed into Asia Minor, where he married Batia, the daughter of Teucer king of Teucra. After the death of his father-in-law, he reigned sixty-two years. He built the city of Dardania, and was reckoned the founder of the kingdom of Troy. He was succeeded by Erichthonius. According to some, Corybas, his nephew, accompanied him to Teucra, where he introduced the worship of Cybele. Dardanus taught his subjects to worship Minerva, and he gave them two statues of the goddess, one of which is well known by the name of Palladium. According to Virgil, Dardanus was originally an Italian.

**DARE**, *v. a.*, *v. p.* & *n. s.*

**DAREFUL**, *adj.*

**DARING**, *adj.* & *n. s.*

**DARINGLY**, *adv.*

**DARINGNESS**, *n. s.*

*Sax. dearren, Belg. and Teut. darren; Lat. audere; probably from the Greek dapper, to adventure. To be confident; to be prepared or bold for any purpose; to challenge; to defy. In Shakspeare only do we find dare used as a substantive. In Beaumont and Fletcher's Maid Tragedy, it is used for affrighting or amazing: and this seems to be the meaning in the phrase, to dare a lark or bird.*

*Dar* only of those that hath a cause against a mother be demed at wicked men, and not at hooli men!

*Wicklif. 1 Cor. vi.*

*She was so propre, and swete, and likerous, I dare well saun if she had ben a mous And he a cat he wolde hire hente anon*

*Chaucer. Cant. Telen.*

*'Ah! dame,' quoth he, 'thou temptest me in vaine*

*To dare the thing which daily yet I reu;  
And the old cause of my continued paine  
With like attempt to like end to renew.'*

*Spenser. Faerie Queene.*

*I dare do all that may become a man;  
Who dares do more, is none.*

*Shakspeare.*

*Sextus Pompeius  
Hath given the dare to Cæsar, and commands  
The empire of the sea.*

*Id.*

*We might have met them dareful, beard to beard,  
And beat them backward home.*

*Id.*

Shrimps are dipped up in shallow water with little round nets, not much unlike that which is used for *daring* larks.

Carew.

*Dare* to be true! Nothing can need a lie,—  
The fault that needs it most grow two thereby.

Herbert.

He had many days come half seas over; and  
sometimes passing further, came and lay at the mouth  
of the harbour, *daring* them to fight.

Knolles.

Time! I *dare* thee to discover

Such a youth, and such a lover.

Dryden.

As larks *be* *dared* to shun the hobby's flight. *Id.*

Maestros of the arts of policy thought that they  
might even *dare* and *dare* Providence to the face.

South.

The song 'no *daring*, and the theme too great.

Prior.

The last Georgick has many metaphors, but not so  
many as this: for human passions may be more na-  
turally sacrificed to a bee than to an inanimate plant.

Addison.

One of the great principles of religion are every  
day openly and *daringly* attacked from the cross.

Atterbury.

Your brother, fired with his success,  
Too *daringly* upon the foe did press.

Hulifax.

Grave not, O *daring* prince, that noble heart.

Pope.

He turned not—spoke not—sunk not—fixed his  
look.

And was the anxious frame that lately shook:  
He gazed—how long we gaze despite of pain,  
And know, but *dare* not own, we gaze in vain!

Byron.

But with the breath which fills

These mountain-pipe, so fill the mountaineers

With the fierce native *daring* which instills

The stirring memory of a thousand years,

And Evan's, Donald's fame rings in each clansman's  
ears! *Id.*

On that warm sod, uncrossed by wanderer's path,  
Some youthful blushing sweetness *dares* the bath;  
Half beld, half trembling, her last venture thrown,  
Safe from all eyes, yet shrieking from her own.

Dr. T. Brown.

DARES, a Phrygian, who lived during the  
Trojan war, in which he was engaged, and of  
which he wrote the history in Greek. This history  
was extant in the time of *Ælian*; the Latin  
translation, now extant, is universally believed  
to be spurious, though it is attributed by some  
to Cornelius Nepos. This translation first made  
its appearance A. D. 1477, at Milan. Homer  
mentions Dares, *Iliad*, lib. v., ver. 10, & 27.

DARFUR, Darsoor, or Fur, a large king-  
dom of Central Africa, between Abyssinia and  
Bornou. We are indebted for all our know-  
ledge of it to Mr. Browne, who resided here  
from 1793 to 1796. According to this writer it  
is bounded on the east by Kordofan, and the  
country of the Shilluks, which separates it from  
Sennaar and Abyssinia; on the west by Bergoo,  
which divides it from Begherme and Bornou;  
while the regions to the south are occupied by  
barbarous nations, extending to, and inhabiting  
the Mountains of the Moon, and the rise of the  
Bahr-el-Abad. It does not seem to contain any  
great river or lake; during the dry season, there-  
fore, all nature wears a parched and barren  
appearance; but the rainy season begins in June

and continues till September. This is the sow-  
ing season, and the king, with his attendants,  
goes out into the fields, and makes, with his own  
hand, the first holes in the ground. Water and  
vegetation are now most abundant. In the  
south the tamarind, plane, and sycamore are  
found. The heglig and the nebbek, having very  
hard wood, are two species peculiar to Darfur.  
A kind of bean and pea, used not for food but  
for being strung in beads, seems also indigenous  
here. Other plants largely produced are the  
mimosa nilotica, yielding a gum which is car-  
ried into Egypt; the water melon, the gourd,  
Cayenne pepper, hemp, and tobacco. But a  
small quantity of wheat is raised; the principal  
grains are the dokn, a species of millet, and  
another species of larger size, called the kassob.  
The harvest is conducted by women and slaves,  
who break off the ears with their hands, and  
carry it away in baskets; while the straw is left  
standing. The grain being threshed, is buried  
in the earth to preserve it. It is ground and  
boiled for food, and eaten either with milk or  
the juice of a particular kind of herb, which  
has a bitter and slightly acid taste.

The wild animals are the lion, hyena, leopard,  
wild buffalo, wolf, and jackall: herds of the  
jackall and hyena are said to enter the villages  
at night. Here are also found the rhinoceros, the  
elephant, the camelopardalis, the hippopotamus,  
and the crocodile; and still more abundantly the  
invaluable camel. The horses, asses, and sheep  
are inferior, but goats and horned cattle are nu-  
merous, and their flesh very good.

Gold is plentiful both to the east and west,  
and very fine copper is brought from the south.  
The rocks consist chiefly of gray granite; con-  
taining alabaster, various kinds of marble, sul-  
phur, and fossil salt.

The houses are built of clay, with a coating  
of plaster; the roofs being flat, and formed of  
light beams of wood, with a clay covering. A  
house containing two dongas, the apartment for  
the stowage of property, two knournaes and  
two sukteias, both sleeping and sitting rooms, is  
considered fit for the accommodation of persons  
of supreme rank.

Mr. Browne did not conceive that the popu-  
lation could be more than 200,000 souls.  
Cobbe, the capital, contains about 6000; our  
traveller heard only of eight other considerable  
places, Sweini, Kourma, Cubcaba, Ril, Cours,  
Shoba, Gidid, and Gelle; although a native of  
the country named to Dr. Seetzen more than  
fifty. The capital is wholly occupied by foreign  
merchants, from Egypt and the eastern countries  
of Dongola, Kordofan, and Sennaar. Other  
great towns abound also with Arabs and other  
foreigners.

On the death of the monarch, the crown, which  
is perfectly despotic, descends to the eldest son;  
or is seized by any stronger or more popular  
member of the royal family. The military have,  
in this case, the chief influence, and are always  
much courted. The usual residence of the  
sultan is at a village near Cobbe, called El  
Fasher. Mr. Browne, being admitted to an  
audience of state, found the monarch seated  
on his throne, under a lofty canopy, composed

of various stuffs of Syrian and Indian fabric, hung loosely on a light frame of wood, and spread with small Turkey carpets. The ministers, or meleks, were seated at some distance on the right and left, and behind them was a line of guards, bearing a spear and target, with caps, in which a black ostrich feather was stuck. The ground in front was filled with spectators and petitioners, to the number of 1500. On the monarch's left hand stood a person whose employment was to sound his praises, and who vociferated continually, 'See the buffaloe, the offspring of a buffaloe, a bull of bulls, the elephant of superior strength, the powerful sultan Abd-el-rach-man-el-rashid.' His revenue is derived from various sources, and often collected by troops who march through the territory, and seize the cattle until it is paid. The king is also an extensive merchant, exporting and importing every year a large quantity of goods on his own account.

The religion of Mahomet is professed universally and zealously. But the people are cheerful in their dispositions; and the females not immodest, nor, unless in the case of the great, are their faces veiled. A fermented liquor called merise, the same with the bouza of the negroes, is universally indulged in, however, and by both sexes. The men sometimes sit whole days over it. The intercourse of the sexes is extremely licentious, and polygamy has no bounds. The Furians are also considered as by no means conspicuous for honor or even honesty. No property is found to be safe out of the sight of the owner.

The grand intercourse of Darfur is with Egypt, and is carried on entirely by caravans, whose motions from Fur are, however, extremely uncertain, and sometimes two or even three years elapse without one. The caravan going to Egypt is much larger than the one returning, and often consists of 2000 camels. The water is carried in goat-skins or ox-hides, artificially covered to prevent evaporation, and every tenth camel is loaded with straw and beans. Among the articles sent to Egypt, the most important are slaves, taken in the negro countries of the south; ivory, the horns, teeth, and hide of the rhinoceros, the hippopotamus, and the camel. The imports comprise beads of all sorts, toys, glass, arms, light cloths, Barbary caps, carpets, silks, shoes, and writing-paper in large quantities. Commerce is transacted entirely by barter. There is also a considerable intercourse with Mecca, which takes the route by Suakem and Jidda, as much shorter than that by Egypt.

DARIC, in antiquity, a famous gold coin, first struck by Darius the Mede, about A. A. C. 538; probably during his stay at Babylon. From thence the darics were dispersed over the east, and into Greece; where they were also called stateres, and were the gold coins best known in Athens in ancient times. According to Dr. Bernard, the daric weighed two grains more than our guineas. Plutarch says, they bore on one side an archer clothed in a long robe, and crowned with a spiked crown, holding a bow in his left hand, and an arrow in his right; and on the other side the effigies of Darius. There were afterwards half darics.

DARIEN, or TERRA FIRMA PROPER, once the northern division of Terra Firma, or Castle del Oro, is now a province of Colombia, and is bounded on the north by the Spanish Main, or Caribbean Sea; on the east by Carthagen, on the west by Panama; and on the south by the Pacific Ocean, and the province of Choco. Darien is one of the largest provinces of Tierra Firme: It is about 200 miles long, and eighty broad.

The Gulf of Darien, which is the mouth of the Rio Atrato, or rather a large arm of the Atlantic, is the most important part of the northern coast, and contains several islands of considerable size. The rivers are very large, but few of them navigable, owing to the shoals, bars, and rapids, in which they abound; most of them, however, yield grains of gold.

The province of Darien is thinly inhabited, and almost wholly by native tribes, who amount perhaps to 30,000; the unhealthiness of the climate and the impenetrable forests preventing the formation of European settlements. The valleys are so marshy, from the overflowing of the rivers, that the natives generally build their habitations in the branches of high trees.

The chief products are cotton and tobacco. The mouth of the Atrato, though wide, has many shoals; yet it serves to export much of the internal produce of the neighbouring provinces, and is a noted smuggling station, where European goods are exchanged for the gold of Choco. A small fort which protects the gold mines of Cana is the principal station on the frontiers of Choco: its garrison is sent monthly from Panama.

Santa Cruz de Cana is the capital, and was formerly a considerable place. There were also at one time nine other towns or missions, and several hamlets; but most of them have been abandoned. In this province the Scotch attempted a settlement in 1699; and for this project a fund was subscribed, amounting to about £900,000 sterling. The plan, however, completely failed, partly, it is said, through the jealousy of the English, but chiefly from the unhealthiness of the climate. Of 1200 individuals who embarked for the colony, not above thirty survived.

DARIEN, a town of the United States, in Liberty county, Georgia, on the banks of the North Channel of the river Altamaha, ten miles below Fort Barrington.

DARII, in logic, one of the modes of syllogism of the first figure, wherein the major proposition is an universal affirmative, and the minor and conclusion particular affirmatives: thus,

Da- Every thing that is moved is moved by another;

ai- Some body is moved;

i, Therefore, some body is moved by another.

DARIUS THE MEDE. See CYANARES II.

DARK, *v. a., n. s. & adj.* Saxon, *deorck*

DARK'EN, *v. a. & n. s.* Irish *dorch*. By

DARK'ENED, *n. s.* antiphrasis, from

DARK'ISH, *adj.* *deorck*, to see, says

DARK'LING, *part.* Minshew. To de-

DARK'LY, *adv.* prive of light (one

DARK'NESS, *n. s.* of our oldest verbs,

DARK'SOME, *adj.* as Mr. Todd re-

DARK-WORSHIP, *adj.* marks): the state

of being deprived: not light; opaque; obscure; blind. Hence gloomy, not cheerful; not of a showy or vivid color. To darken is to make, as well as to grow, or gradually become, dark. Darkish is dusky; that which is approaching a black or dark color. Darkling is a poetical participle to express the state of being without light. The meaning of the other derivatives seems sufficiently obvious.

And the sunne was *derked* and the eir, of the smoke of the jett. *Wiclif. Apoc. 9.*

Then the priest shall look: and, behold, if the bright spots in the skin of their flesh be *darkish* white. *Bible. Lev. 14.*

Who hath delivered us from the power of *darkness*, and translated us into the kingdom of his dear Son. *Colossians.*

They saw I first the *derke* imagining  
Of *solonice* and alle the compassing;  
The cruel ire, red as any glode,  
The pikeperce, and eke the pale drede.  
*Chaucer. Cant. Tales.*

For when that cloud of pride, which oft doth *dark*  
Her goodly light, with smiles she drives away. *Spenser.*

For light she hated as the deadly bale,  
Ay wout in desert *darkness* to remaine,  
Where paine none might her face see, nor she see any  
laine. *Spenser. Faerie Queene.*

What may seem *dark* at the first, will afterwards  
be found more plain. *Hooker.*

Such was his wisdom, that his confidence did sel-  
dom *darken* his foresight, especially in things near at  
hand. *Bacon.*

You must not look to have an image in any thing  
*lightsome*; for even a face in iron, red-hot, will not be  
warm, the light confounding the small differences of  
*lightsome* and *darksome*, which shew the figure. *Id.*

Come, thick night,  
And pall thee in the dunnest smoke of hell,  
That my keen knife see not the wound it makes;  
Nor heaven peep through the blanket of the *dark*,  
Tarry, hold! hold! *Shakespeare. Macbeth.*

Flavius, his son, who keeps him company,  
Must embrace the fate of that *dark* hour. *Shakespeare.*

Meantime we shall express our *darker* purpose. *Id.*

The instruments of *darkness* tell us truths;  
Woe as with honest trifles, to betray us  
In deepest consequence. *Id.*

*Darling* stands  
The varying shore o' the world *Id.*

Cloud and ever-during *dark*  
Surrounds me! from the cheerful ways of men  
Cut off. *Milton.*

Me, here with us to be,  
Furnish the courts of everlasting day,  
And close with us a *darksome* house of mortal clay. *Id.*

The wakeful bird  
Sings *darbling*, and, in shadiest covert hid,  
Tunes her nocturnal note. *Id.*

The age, wherein he lived, was *dark*; but he  
Could not want sight, who taught the world to see. *Denham.*

The love and passions of men do sully and darken  
their minds, even by a natural influence. *Tillotson.*

Thou wretched daughter of a *dark* old man.  
Conduct my weary steps. *Dryden and Lee's Oedipus.*

For well you know, and can record alone,  
What fame to future times conveys but *darkens* down. *Dryden.*

Mistaken blessing, which old age they call,  
'Tis a long, nasty, *darksome* hospital. *Id.*

All the light truth has, or can have, is from the  
clearness and validity of those proofs upon which it is  
received; to talk of any other light in the under-  
standing, is to put ourselves in the *dark*; or in the  
power of the prince of *darkness*. *Locke.*

Whether the *darkened* room to muse invite,  
Or whitened wall provoke the skaver to write. *Pope.*

All men of *dark* tempers, according to their degree  
of melancholy or enthusiasm, may find convents fitted  
to their humours. *Addison on Italy.*

Foul ministers, *dark-working* by the force  
Of secret, sapping gold. *Thomson.*

Must helpless man, in ignorance sedate,  
Roll *darling* down the torrent of his fate?  
Must no dislike alarm, no wishes rise,  
No cries invoke the mercies of the skies?  
*Johnson. Vanity of Human Wishes.*

Their quickness is owing to their presumption and  
rashness, and not to any hidden irradiation that in a  
moment dispels all *darkness* from their minds. *Burke.*

*Dark* will thy doom be, *darker* still  
Thine immortality of ill. *Byron. Siege of Corinth.*

So do the *dark* in soul expire,  
Or live like Scorpion girt by fire  
So writhes the mind Remorse hath riven,  
Unfit for earth, undoomed for heaven,  
*Darkness* above, despair beneath  
Around it flame, within it death! *Byron.*

DARLING, *adj. & n. s.* Sax. *deorling*, the  
diminutive of *dear*. Favorite; beloved. One  
much beloved.

Lo my child whom I have chosen; my *dearly* in  
whom is hath wel pleased to my soul, I schal putte my  
spirit on hym: and he schal telle doom to bethene  
men. *Wiclif. Matt. 12.*

Young Ferdinand they suppose is drowned,  
And his and my loved *darling*. *Shakespeare.*

In Thames, the ocean's *darling*, England's pride,  
The pleasing emblem of his reign does glide. *Halifax.*

She became the *darling* of the princess. *Addison.*

Have a care lest some beloved notion, or some *dar-*  
*ling* science, too far prevail over your mind. *Watts.*

And to find out our most beloved sin, let us con-  
sider what are those worldly objects or amusements  
which give us the highest delight; this, it is proba-  
ble, will lead us directly to some one of our *darling*  
iniquities. *Mason.*

The text, that sorts not with his *darling* whim,  
Though plain to others, is obscure to him. *Cowper. Progress of Error.*

Save me, oh! save me, from the sword dividing;  
Give me my *darling* from the jaws of death;  
Thee will I praise, and, in thy name confiding,  
Proclaim thy mercies with my latest breath. *K. White.*

DARLINGTON, a county of the United  
States, in Cheraws district, South Carolina,  
bounded on the south and south-west by Lynch's

Creek. It is thirty five miles long, and twenty-four broad.

DARLINGTON, a town of Durham, situated on a flat on the river Skerne. It stands on the great road from London to Edinburgh. It has a weekly market, and, excepting January and February, a fair once a fortnight through the year. This town carries on linen and woollen manufactures. A curious water machine for grinding optical glasses, and spinning linen yarn, has been erected here; the invention of a native of the town. It is nineteen miles south of Durham, and 247 north by west of London.

DARMSTADT, a neat town of Germany, the capital of the grand duchy of Hesse. It was fortified by a wall in 1330. The town contains a regency, a court of appeals, a consistory, and criminal court. The prince of Hesse Darmstadt entered into the late confederation of the states of the Rhine, and, by the treaty of alliance, received the title of grand duke, and royal highness. The palace of the landgrave Louis VII., and the modern residence of the grand duke, with its beautiful gardens, are principal objects: to which may be added, the town church with the tombs of the landgraves; the state house; the pedagogium, or academy; the public library; the library of the grand duke; the cabinet of natural history (containing a number of curious fossils); the military school; and the building appropriated to military exercises, an edifice 300 feet by 150, and capable of containing 3000 men. It is situated on a river of the same name, thirty miles north-west of Heidelberg, and contains 13,000 inhabitants.

DARN, or DEARNE, *v. a. & adj.* Ang.-Sax. *deorn*, secret, or concealed; Arm. and Wel. *durne*, a patch. To sew up, or conceal holes or rents by imitating the original texture: solitary; secret.

By many a *dearne* and painful perch,  
Of Pericles the careful search  
Is made. *Shakespeare. Pericles.*

He spent every day ten hours in his closet, in *darning* his stockings, which he performed to admiration. *Swift.*

Will she thy linen wash, thy hosen darn? *Gay.*

DARN'EL, Sax. *derren*, hurtful. A grass of the temulentum species, hurtful to corn.

But while people were asleep, his enemy came, and sowed *darnel* among the wheat.

*Matt. xiii. 25. Campbell's Translation.*

He was met even now  
Crowned with rank fumiter and furrow-weeds,  
*Darnel*, and all the idle weeds that grow  
In our sustaining corn. *Shakespeare.*

No fruitful crop the sickly fields return;  
But oats and *darnel* choke the rising corn. *Dryden.*

DARNLEY'S ISLAND, a beautiful island in the Eastern seas, in Torres Strait, between New Holland and New Guinea. It is about fifteen miles in circumference, and varied with hills and plains covered with vegetation. The inhabitants are stout, and exceed the ordinary size. The men go perfectly naked, and the women nearly so. They dwell in conical huts, disposed in villages, and adorned with two or three human

skulls, and several strings of hands, five or six on a string. Their arms are bows and arrows, lances, and long clubs; and they have handsome canoes from fifty to seventy feet in length. They are apparently a treacherous race. *Long. 147° 59' 15" E., lat. 9° 39' 30" S.*

DARRAIN', *v. a.* Old Fr. *desreiner*. By Jo-nius referred to dare. 'It seems to me,' says Dr. Johnson, 'more probably deducible from *arranger la bataille*.' To prepare, or range troops for battle; to commence single combat.

And on the morwe, or it were day light,  
Ful prively two barneis bath he dight,  
Both sufficient and mete to *darreine*  
The bataille in the field betwix him twine. *Chaucer. Cant. Tales.*

Therewith they 'gan to hulen greedily.  
Redoubted battle ready to *darrains*. *Spenser.*  
Comes Warwick, backing of the duke of York;  
*Darrain* your battle; for they are at hand. *Shakespeare.*

The town-boys parted in twain, the one side calling themselves Pompeians, the other Cesarians; and then *darraining* a kind of battle, but without arms, the Cesarians got the over hand.

*Carew's Survey of Cornwall.*

DART, *v. a., v. n. & n. s.* Fr., Teut. and Arm. *dard*; Swed. *dart*; Ital. *dardo*; from Gr. *daps*. To throw a missile, or short lance; to project any thing offensive; to emit; to fly as a dart; to let fly. As a substantive, it is the weapon thrown or darted.

In alle thingis take ghe scheelde of feith in which  
ghe moun quenche all the fyry *dartis* of the worste. *Wiclif. Effences vi.*

Now, *darting* Parthia, art thou struck. *Shakespeare.*  
He wets his tusks, and turns, and dares the war;  
The invaders *dart* their javelins from afar. *Dryden.*  
O'erwhelmed with *darts*, which from after they  
fling,  
The weapons round his hollow temples ring. *Id.*

Pan came, and asked what magic caused my smart;  
Or what ill eyes malignant glances *dart*. *Pope.*  
See, prompt to ill, the insidious foe  
Now couched in secret bend the bow,  
Now to the string adjust the *dart*  
That thirsts to wound the guiltless heart. *Merrick's Pauline.*

Glad zephyr leads the van, and waves above  
The barbed *darts*, and blazing torch of love;  
Reverts his smiling face, and pausing sings  
Soft showers of roses from aurelian wings. *Darwin.*

And that sarcastic levity of tongue,  
The stinging of a heart the world hath stung,  
That *darts* in seeming playfulness around,  
And makes those feel that will not own the wound,  
All these seemed his. *Byron.*

DARTFORD, a market town of Kent, in the road from London to Canterbury. Here was a celebrated nunnery, which Henry VIII. converted into a royal palace, and which is now a gentleman's seat. The river Darent will admit boats to bring up goods to the town. The first paper-mill in England was erected on this river by Sir John Spilman, to whom king Charles I. granted a patent with £200 a-year to encourage the manufactory. On this river also was the first

slitting iron bars to make wire. The town first that engaged in the rebellion of Wat and Jack Straw: the market on Saturday supplied with provisions. It is seven west of Gravesend, fifteen east by south of

**DTMOOR**, an extensive moor and forest in Devonshire, reaching from Brent to Oaken, twenty miles from south to north, and from five and fifteen miles broad from east to west. It contains about 80,000 acres, and is bounded by the river Dart. Many sheep are reared, but of a small kind, and subject to disease.

The chief riches of the inhabitants of Dartmoor are their black cattle, which thrive on the coarse herbage. Some thousands of acres have lately been cleared, and planned; much barren ground has also been converted into tillage, under the direction of Tyrwhitt, by order of his late majesty, George of Wales. The French prison, formerly on this moor, is converted into an agricultural settlement for the poor.

**EXETER**, a sea-port town in Devonshire, situated on the river Dart, near its fall into the sea, said to have been formerly called Cliffric, is an ancient corporation, and a borough sending one member to parliament. The town is large, well built, and populous; but the harbor is narrow, though well paved. The harbor is large and safe, capable of containing 500 ships, and the inhabitants have a considerable trade. The south of Europe, and to Newfoundland. Exeter is esteemed a great nursery for the fishery employing nearly 3000, a number of which the owners are obliged to send to parliament to select from land men. It is a busy market on Friday for corn and provisions, and one almost every day for fish. It was first in the reign of Richard I. by the king, and again in the reign of Henry VI. It was emptied it afterwards, but were repulsed, by the bravery of the women. Beside a daughter which was made, they took M. de French general, three lords, and thirty-eight prisoners. It lies thirty miles east of Exeter, and 204 west by south of

**FAIRPORT**, a thriving sea-port town of the United States, in Bristol county, Massachusetts, on the west side of the Accushnet, seventy miles south of Boston. It was incorporated in 1786.

**FAIRPORT**, a town of the United States, in Appling county, Georgia, situated on the peninsula between the confluence of Broad and Savannah rivers, two miles from Fort James. Dartmouth. Also a town of the United States, in Appling county, New Hampshire, north-west of the White Mountains: thirty-three miles east of Haverhill, and eighty-seven north of Portsmouth.

**FAIRWAR**, also called Nasserabad, a town in the province of Bejapore, Hindostan, although not regularly fortified, it is by its very strong, and the ditches are good. The town is situated to the south of the fort, and is enclosed by a wall and ditch. In the year 1761 it was taken from the king of Bejapore by

Aurangzebe, and, soon after the decease of that monarch, fell into the hands of the Mahrattas, from whom it was taken by Tippoo in 1784, and retained by him till the year 1791, when it was retaken by the Mahrattas, assisted by the British, after a tedious siege of twenty-nine weeks. It has been lately ceded to the British.

**DARWIN** (Erasmus), an English physician and poet, was born in December, 1731, at Elston, near Newark. After receiving the early part of his education at Chesterfield, he was sent to St. John's College, Cambridge, where he studied medicine, and took his bachelor's degree in 1755. He was elected to one of Lord Chesterfield's scholarships, worth about £16 per annum. On leaving Cambridge, he attended the lectures of Dr. Hunter in London, and afterwards completed his medical studies at Edinburgh, where he took the degree of M.D. He first settled at Nottingham, as a physician; but, not meeting with the practice he hoped for, he went to Litchfield, where his knowledge and acquirements were justly appreciated. In 1757 he married the daughter of Charles Howard Esq., who died in 1770, leaving him three sons. Not long after the death of his wife, Dr. Darwin commenced his laborious work, the *Zoonomia*, but which he declined publishing for above twenty-five years. He next wrote his *Botanic Garden*, and *The Loves of the Plants*. About 1780 Dr. Darwin married the widow of colonel Pole, of Radbourne-hall, near Derby, who brought him a large fortune; and he removed, in consequence of this connexion, to Radbourne, with a view of settling in Derby. He continued in this neighbourhood till February 1802, when he removed to Breadwall Priory, about three miles distant, a commodious retirement for his age and infirmities, and at this place he died in his seventy-first year. The literary fame of Dr. Darwin rests on the *Botanic Garden*, with philosophical notes, in two parts; 1. *The Economy of Vegetation*; 2. *The Loves of the Plants*, 2 vols. 8vo.: *Zoonomia*, or the *Laws of Organic Life*, 4 vols. 8vo.: *Phytologia*, or the *Philosophy of Agriculture and Gardening*, 1 vol. 4to.: works which display not only the poet, but the botanist and the philosopher; though there is frequently too much sacrificed to imagination; and the author evinces a contempt for all religion. Dr. Darwin was also the author of several medical and philosophical papers in the *Philosophical Transactions*, a *Treatise on Female Education*, and a poem published since his death, entitled *The Temple of Fame*. He had likewise a principal share in the translation of Linnaeus's *Systema Vegetabilium*, published in the name of the Botanical Society of Litchfield.

**DASH**, *v. a. v. n., n. s. & adv.* Goth. and Swed. *daska*; Scot. *dusch*. Serenius refers to the first as the etymology of our word, which Dr. Johnson considers in all its senses 'very doubtful.' Minshew derives it from the Gr. *dusa*, *duson*, and defines it 'to bedash, dabble, bemire with dust.' This is at any rate not improbable. It is a word variously applied. It signifies to throw; to strike; to break to pieces by collision; to besprinkle; to agitate; to mingle fluids; to strike off in haste; to blot; to confound; to strike down. As a neuter verb, in *fly*

off; to rush through, so as to scatter; to strike, as a ship upon a rock. As a noun, it expresses collision; infusion; a stroke made with the pen; a sudden blow, or striking appearance. Dryden uses it adverbially to express the sound of falling water.

Happy shall he be, that taketh and *dasheth* thy little ones against the stones. *Ps. cxxxvii. 9.*

If you *dash* a stone against a stone in the bottom of the water, it maketh a sound. *Bacon.*

They that stand high have many blasts to shake them;  
And, if they fall, they *dash* themselves to pieces. *Shakespeare.*

This tempest,  
*Dashing* the garment of this peace, aboded  
The sudden breach on't. *Id. Henry VIII.*

David's throne shall then be like a tree,  
Spreading and overshadowing all the earth;  
Or as a stone, that shall to pieces *dash*  
All monarchies besides throughout the world. *Milton.*

His tongue  
Dropped manna, and could make the worse appear  
The better reason, to perplex and *dash*  
Maturest councils. *Id.*

If a woman once *dash* upon the rock of reproach,  
she hardly ever recruits her credit. *Bp. Taylor.*

Whacum, bred to *dash* and draw,  
Not wine, but more unwholesome law. *Hudibras.*

Nothing *dashed* the confidence of the mule like the  
braying of the ass, while he was dilating upon his  
genealogy. *L'Estrange.*

A man that cuts himself, and tears his own flesh,  
and *dashes* his head against the stones, does not act  
so unreasonably as the wicked man. *Tillotson.*

At once the blushing oars and brassen prow  
*Dash* up the sandy waves, and ope the depths below. *Dryden.*

Doeg, though without knowing how or why,  
Spurred boldly on, and *dashed thro'* thick and thin;  
Thro' sense and nonsense, never out or in. *Id.*

To *dash* this caviel, read but the practice of Chris-  
tian emperors. *South.*

Some stronger power eludes our sickly will;  
*Dashes* our rising hope with certain ill. *Prior.*

Never was *dashed* out, at one lucky hit,  
A fool so just a copy of a wit. *Page.*

To *dash* over this with a line, will deface the whole  
copy extremely, and to a degree that, I fear, may dis-  
please you. *Id.*

There is nothing which one regards so much with  
an eye of mirth and pity, as innocence, when it has  
in it a *dash* of folly. *Addison.*

Middling his head, and prone to earth his view,  
With ears and chest that *dash* the morning dew. *Titchel.*

Torrents that from yon promontory's head  
*Dashed* furious down in desperate cascade  
Heard from afar amid the lonely night,  
That oft have led the wanderer right,  
Are silent at the noise, *Beattie.*

— Here Time's huge fingers grasp his giant mace,  
And *dash* proud Supercatition from her base. *Darwin.*

I should be so.

Had I a knife even; but it matters not—  
Death hath a thousand gates; and on the marble,  
Even at the altar foot, whence I look down  
Upon destruction, shall my head be *dashed*, *Bp.*  
Ere thou ascend it.

DASTARD, *v. a., n. s. & adj.* } From *Nat*  
DASTARDISE, *v. a.* } *abapripigat*  
DASTARDLY, *adj. & adv.* } *tertify* *I.*  
affright; make faint-hearted; a coward; *pa-*  
*tron.*

The cruelty and envy of the people,  
Permitted by our *dastard* nobles,  
Have suffered me by the voice of slaves to be  
Whooped out of Rome. *Shakespeare.*

*Dastard* and drunkard, mean and insolent  
Tongue-valiant hero, vaunter of thy might,  
In threats the foremost, but the last in fight. *Dryden.*

He had such things to urge against our marriage  
As, now declared, would blanch my sword in battle,  
And *dastardise* my courage. *Id.*

Brawl and clamour is so arrant a mark of a *dar-*  
*sardly* wretch, that he does as good as call himself *so*  
that uses it. *L'Estrange.*

Bug-bear thoughts, in the minds of children, make  
them *dastards*, and afraid of the shadow of darkness  
ever after. *Lucia.*

Curse on their *dastard* souls, they stand astounded!  
*Adams.*

DASYPUS, the armadillo, or tatou, in  
zoology; a genus of quadrupeds, belonging to  
the order of bruta. The dasypus has neither  
fore-teeth nor dog-teeth; it is covered with a hard  
bony shell, intersected with distinct moveable  
zones or belts: this shell covers the head, the  
neck, the back, the flanks, and extends even to  
the extremity of the tail; the only parts to which  
it does not extend, are the throat, the breast, and  
the belly, which are covered with a whitish skin  
of a coarse grain, resembling that of a hen after  
the feathers are pulled off. The shell does not  
consist of one entire piece, like that of the tor-  
toise; but is divided into separate belts, connected  
with each other by membranes, which enable the  
animal to move it, and even to roll itself up like  
a hedgehog. All the species of this animal are  
originally natives of the western continent, and  
are endowed with the faculty of extending and  
contracting their bodies, and of rolling themselves  
up like a ball, like the hedgehog, though not  
into so complete a sphere. They are very in-  
offensive, excepting when they get into gardens,  
where they devour the melons, potatoes, and  
other roots. They walk quickly; but can hardly  
be said to run or leap, so that they seldom escape  
the pursuit either of men or dogs. But they dig  
deep holes in the earth, and seldom go very far  
from their subterraneous habitations; or, when at  
a great distance, require but a few moments to  
make one. When taken, they roll themselves up,  
and will not extend their bodies unless they are  
held near a fire. There is no other method of  
making them come out from deep holes, but by  
forcing in smoke or water. The female gene-  
rally brings forth four young ones every month;  
which is the reason why the species are so nume-  
rous, notwithstanding they are much sought after

of the sweetness of their flesh. The likewise make baskets, boxes, &c., of the which cover their heads. Linnæus enumerates species of *dasytus*, principally distinguished by the number of their moveable belts. Buffon, who prefers the arrangement of Buffon of Linnæus, enumerates ten species of *dasytus*.

**DATI**, among mathematicians, a term for such quantities, as are given, or known, in kind and other things thereby that are undetermined. Euclid uses the word *data* (on which he illustrates the tract) for such spaces, lines, and angles, as are given in magnitude, or to which we are to find others equal. From the use of this word in geometry, it has been transplanted into philosophy, medicine, &c.; where it signifies any quantity which, for the sake of a calculation, is taken for granted to be true, without requiring an immediate proof for its truth; called also the given quantity, *numerus datus*.

**DRET**, a town in Buckinghamshire, near High Wycombe, with a bridge over the Thames, built in the reign of queen Anne, and noted for its freestone quarries. It is situated in a valley surrounded every side with steep hills.

*v. d. & n. s.* } Fr. *date*, from Ital. *data*, adj. } *dato*; Lat. *datum*. To denote time; a time noted or appointed; and place at which a letter is written.

His days of wives hath he redde,  
And slain his husbandes in his bedde.

Chaucer. *Canterbury Tales*.

His days and times are past,  
My reliance on his fracted dates  
Shall lose my credit.

Shakespeare. *Timon*.

Then raise,  
A confluent mass, purged and refined,  
From the new earth, ages of endless date,  
In righteousness.

Milton.

On the declining of this fate, O friend,  
Can immortality extend?

Denham.

My father's promise ties me not to time;  
Who without a date, they say, are void.

Dryden.

Who would spare, from steel receives its hurt,  
And, like men, submit to fate.

Pope.

The name of Elizabeth, from which we date the  
of our language.

Johnson. *Plan of Dictionary*.

**DATUM** is derived from the Latin *datum*, given, and denotes the place from whence, as well as when. Our ancient deeds had no dates, but the month and year, to signify that they were made in haste, or in the space of a day, and longer and more mature deliberation. The grants began with these words, *præsentis futuri, &c.*; but the grants of prisoners, with *omnibus præsentibus literis in-*

*v. d. & n. s.* } Lat. *dactylus*. A species of palm.

These keys, and fetch more spices, nurse,  
And for dates and quinces in the pastry.

Shakespeare.

In botany. See **PHENIX**

**DATE**, in law. A deed is good, though it mentions no date or has a false, or even an impossible date, as the 30th of February; provided the real day of its being dated or given, that is, delivered, can be proved. *Blackstone's Commentary*, vol. ii. p. 304.

**DATI** (Carlo), professor of polite learning at Florence, his native country, and the private friend of the poet Milton. The chief work to which Dati applied himself, was *Della Pittura Antica*, of which he published an essay in 1667. He died in 1675.

**DATISCA**, in botany, a genus of the dodecandria order, and diœcia class of plants; natural order thirty-fourth, miscellanæ. Male, *cal.* pentaphyllous: *cor.* none: the anthers are sessile, long, and fifteen in number. Female, *cal.* bidentate: the *styles* three: *cap.* triangular, three-horned, unilocular, perversus, polyspermous, inferior. Species two: 1. *D. Cannabina*, a native of Canada with a smooth stem; 2. *D. hirta*, a native of Pennsylvania with a rough hairy stem.

**DATISI**, in logic, a mode of syllogisms in the third figure, wherein the major is a universal affirmative, and the minor and conclusion particular affirmative propositions. Thus,

**DA**- All who serve God are kings;

**TI**- Some who serve God are poor;

**SI**- Therefore, some who are poor are kings.

The **DATIVE**, in Latin and Greek grammar, is the third case, and is used to express the state or relation of a person or thing to whose advantage or disadvantage some other thing is referred. In the English language, which has no dative, this relation is expressed by the prepositions *to* or *for*. In the Greek language, which has no ablative, the dative is used instead of it. See **ABLATIVE**.

**DATUM**, or **DATUS**, in ancient geography, a town of Thrace, situated between Neapolis and the river Nessus, built by a colony of Thracians, according to Eustathius; who places it on the sea-coast, near the Strymon, in a rich and fruitful soil, famous for ship-building and mines of gold; hence the proverb *Δαρεος Αγαθου*, denoting prosperity and plenty. It was taken by Philip of Macedon, who changed its name to Philippi. It was afterwards famous for the defeat of Brutus and Cassius by Augustus and Antony.

**DATURA**, the thorn apple, in botany, a genus of the monogynia order, and pentandria class of plants; natural order twenty-eighth, *turidæ*: *cor.* funnel-shaped, and plaited: *cal.* tubular, angulated, and deciduous; *caps.* quadrivalved. There are seven species. *D. stramonium*, the common thorn-apple, rises about a yard high, with an erect, strong, round, hollow, green stalk, branching luxuriantly on every side; large, oval, irregularly angulated, dark green leaves; and from the divisions of the branches, large white flowers singly succeeded by oval, prickly capsules, growing erect, commonly called thorn apples. At night the upper leaves rise up and enclose the flowers. The blossoms have sometimes a tinge of purple or violet. The flowers consist of one large, funnel-shaped petal, having a long tube, and spreading pentagonal limb, succeeded by large roundish capsules of the size

of middling apples, closely beset with sharp spines. An ointment prepared from the leaves gives ease in external inflammations, and in the hæmorrhoids. Cows, horses, sheep, and goats, refuse this plant.

DAVAL (Peter Esq.) F.R.S., an eminent English mathematician. He was bred a barrister at law; was afterwards master in chancery; and at last accountant general of that court. He translated the Memoirs of the Cardinal de Retz, printed in 12mo. 1723. In the dispute concerning elliptical arches, when Blackfriars bridge was built, his opinion was applied for by the committee. His answer may be seen in the London Magazine for March 1760. He died January 8th, 1763.

DAVALLIA, in botany, a genus of the cryptogamia class, and order filices. Fructification in roundish distinct dots near the margin: involucre membranaceous, from the surface half-hooded, distinct, somewhat truncate, opening towards the margin. Species nineteen.

DAVANGIRI, a town of the south of India, province of Mysore, district of Chittledroog. It consists of 500 houses, with a small fort in the centre, and has an extensive manufacture of blankets. It carries on a good trade with the Carnatic and its vicinity.

DAUB, *v. a. v. n. & n. s.* Fr. *dauber*; Belg. *dabben*; Irish *diob*, (mortar). To smear; cover with something adhesive, and gross, as mortar. Hence, to paint coarsely and vilely; to cover with gaudy or showy ornaments; to flatter. As a neuter verb, to play the hypocrite. Daubery and daubing are both used in the sense of the substantive daub; and dauby is an adjective, signifying viscous, adhesive.

She took for him an ark of bulrushes, and daubed it with slime and with pitch. *Ereodus.*

When the wall is fallen, shall it not be said unto you, Where is the daubing wherewith ye have daubed it? *Ezechiel xlii.*

Since princes will have such things, it is better they should be graced with elegance, than daubed with cost. *Bacon.*

So smooth he daubed his vice with shew of virtue, He lived from all attainder of suspect. *Shakespeare.*

I cannot daub it further; And yet I must. *Id.*

She works by charms, by spells; and such daubry as this is beyond our element. *Id.*

They snatched out of his hands a lame imperfect piece, rudely daubed over with too little reflection. *Dryden.*

Let him be daubed with lace, live high, and whore; Sometimes be lousy, but he never poor. *Id.*

A sign-post dauber would disdain to paint The one-eyed hero on his elephant. *Id.*

Not in vain the industrious kind With dauby wax and flowers the chinks have lined. *Id.*

Let every one, therefore, attend the sentence of his conscience; for, he may be sure, it will not daub nor flatter. *South.*

Hasty daubing will but spoil the picture, and make it so unnatural as must want false light to set it off. *Ormsby.*

The treacherous tapster, Thomas, Hangs a new angel two doors from us, As fine as daubers hands can make it. *South.*

And did you step in to look at the grand picture of your way back?—'Tis a melancholy daub' mine eyes, not one principle of the pyramid in any one place. *Bacon.*

If a picture is daubed with many bright and gaudy colours, the vulgar admire it as an excellent picture. *Id.*

DAUBENTON (Louis-Jean Marie), an eminent French anatomist and naturalist, born at Montbar in Burgundy, on the 29th of May 1716. His father designed him for the church; but on his death, in 1736, Daubenton relinquished that pursuit for the study of physic and natural history; and in three years after took his degree at Rheims; after which he returned to his native country with the design of following the profession of medicine. But the celebrated Buffon, who was also a native of Montbar, having been before succeeded Dufay in the superintendency of the botanic garden, selected Daubenton to assist him in his improvements and arrangements. In 1742 Buffon procured for him the place of demonstrator of the cabinet of natural history, with a salary of only 500 francs, which was afterwards raised to 2000. The cabinet of natural history, which was of immense service, was arranged and in a great measure collected by his means. The appearance of the History of Quadrupeds, wherein he gave the dissection and description of 183 species, gained him a very high reputation, but raised the jealousy of Reaumur, who then considered himself at the head of natural history. About this time Buffon was persuaded to separate himself from Daubenton; but their intimacy afterwards revived, and continued till Buffon's death. Daubenton was admitted a member of the Academy of Sciences in 1744; and contributed many valuable dissertations on natural history to its memoirs. But his service to science was not confined to his pen and the press: from 1775 he gave lectures on natural history in the college of medicine; and in 1783 on rural economy. In 1784 he published his Instructions to Shepherds, a work of great excellence. In 1794, when France was ruled by a lawless rabble, it became a matter of necessity with Daubenton to make application to the section of Sans-culottes for a certificate of civism, to enable him to hold his place in the garden of plants. His request was made under the title of Shepherd Daubenton; and it was granted to him under that name with the greatest facility. At the garden of plants the Convention appointed him professor of mineralogy; and he gave lectures during the ephemeral existence of the Normal School. He was also the author of a Methodical View of Minerals, and a contributor to both the French encyclopædias. In 1799 he was elected a member of the conservative senate; but the first meeting he attended he fell from his seat in an apoplectic fit. Speedy assistance being procured, he was restored to his senses, and calmly pointed out, in different parts of his body, the progress of the paralysis, which terminated his life on the 1st of January 1800 in his eighty-third year.

the carrot, in botany: a genus of order, and pentandria class of plants; forty-fifth, umbellatæ: con. a little amphrodite. The fruit bristly with seeds. There are six species; but the one which merits attention is the *D. carota*, the carrot. There are several varieties, the orange, and the purple carrot; the orange is the most esteemed. It is propagated by seeds, sown at different times of the year, to afford a supply for all times. The season for sowing this crop is soon after Christmas. The ground should be open, and in a warm sandy soil dug to a good depth, that the seed may meet with no obstruction in running down to make them forked. The next year it is sown in February, and the third year in autumn; and lastly in the end of those which are to stand the winter. It will be fit for use in March, before any spring ones; but they are seldom so well tasted. Carrots were first introduced into England by the Flemings, in the reign of Elizabeth.

DANT (Charles), LL.D., an eminent physician, eldest son of Sir William Dant, was born in 1656, and educated in Oxford. He wrote several political tracts, &c. &c. He was in 1685 empowered, master of the revels, to inspect the plays on the stage, that no immoralities were presented; and was also inspector of exports and imports. His *Essays on the History of the Stage* were reprinted in 5 vols. 8vo in 1771.

DAVEY (John), bishop of Salisbury, the eminent merchant in London, where he died in 1570. He took his degree of Doctor in Divinity at King's College, Cambridge, in 1587, and LL.D. in 1600, when he was elected Bishop of Salisbury, and is chiefly known as the friend of James I. to the synod of 1604.

DAVID (Sir William), an eminent poet, died in 1606. After some stay at the court, he entered into the service of Frances, Countess of Richmond, and afterwards of the Earl of Arundel. Upon the death of the Earl, he was created poet laureate. He wrote *Andromeda* at Paris, where he formed a company of actors, and was carrying over a considerable number of his company to Virginia; but his company were seized by some whips, and he was carried prisoner to the Tower of London, where, by the mediation of Milton, he was to be a prisoner at large. At his death, his comedies being produced up an opera, to be performed by his company and music. This Italian opera was afterwards removed to the Cockpit Lane, and was much frequented for some time.

His *Madagascar*, and other poems, were published in 1648. He died in 1668.

DAVEY, an incorporate town of North Devon, situated near the sources of the Taw, which flow into opposite seas.

It is seventy-two miles N. N. W. from London, and ten from Northampton. The manor formerly belonged to John of Gaunt who had a castle here. The ancient priory is in ruins, but parts of it are inhabited by the poor. On a hill in the neighbourhood are some strong entrenchments occupied by Charles I. before the battle of Naseby. The ground formerly was used as a race course. The town is very narrow and badly paved, and the church but a poor piece of architecture. The affairs of the corporation are managed by thirteen burgesses, one of whom is annually chosen bailiff, a recorder, town clerk, two head wardens, and twenty common councilmen. The bailiff acts as justice of the peace and coroner of the inquest, and the bailiff and ex-bailiff, with the recorder, constitute a quorum of the corporation, and can attach for debts under £100, or, in criminal cases, commit the accused to the county-gaol. Daventry has a considerable manufacture of whips, and a good market for provisions on Wednesday.

DAUGHTER, *n. s.* } Sax. *vohtren*; Goth. *daught'eri*, *adj.* } *dauhtar*; Runick *dotter*; Germ. *dohter*; Dut. *dochter*. A female child; the wife of a son; in the plural, the females of a country. A female taken into the relation of a child, or addressed tenderly. Any female deity or imaginary personage. Daughtery is like, or behaving with the duty of, a daughter.

Jacob went out to see the daughters of the land.

*Genesis.*  
Daughter, be of good comfort, thy faith hath made thee whole. *Matt. ix. 22.*

A daughter hadden they betwix hem two  
Of twenty yere, withouten any mo,  
Saving a child that was of half yere age  
In cradle it lay and was a propre page.

*Chaucer. Cant. Tales.*

Your wives, your daughters,  
Your matrons, and your maids, could not fill up  
The cistern of my lust. *Shakespeare.*

Are you at leisure, holy father, now,  
Or shall I come to you at evening mass?—  
—My leisure serves me, pensive daughter, now *Id.*

Sir Thomas liked her natural and daughtery affection for him. *Cavendish's Life of More.*

Now Aurora, daughter of the dawn,  
With rosy lustre purpled o'er the lawn. *Pope.*

Commerce, however we may please ourselves with the contrary opinion, is one of the daughters of fortune, inconstant and deceitful as her mother.

*Johnson. Thoughts on Agriculture.*

Is thy face like thy mother's, my fair child!  
Ada! sole daughter of my house and heart?  
When last I saw thy young blue eyes they smiled,  
And then we parted,—not as now we part,  
But with a hope. *Byron.*

DAVID, דָּוִד, Heb. i. e. beloved, king of Israel, and Hebrew poet, was born at Bethlehem A.A.C. 1085, and died A.A.C. 1015, after having reigned seven years and a half in Hebron, and thirty-three in Jerusalem. We have a complete and faithful portrait of this great prince and poet of the Jews in Scripture; and while in this portrait no friend of revelation will pretend that we can exhibit a faultless character, the infidel Bayle allows him to have been a great and justly distin-

guished monarch and poet; and we may refer to his Historical and Critical Dictionary, for a full and tolerably impartial disquisition on the subject.

DAVID (—), a celebrated modern French painter, was born about the middle of the last century, and became the pupil of Vien, an artist of considerable eminence. He was painter to the unfortunate Louis XVI. and in September, 1790, presented to the legislative body a picture, representing his entrance into the national assembly. He was afterwards a deputy from Paris to the national convention, where he voted for his royal master's death. With perfect consistency he became a member of the committee of Public Safety during the reign of terror, and closely connected himself with Robespierre. In January, 1794, he was president of the convention. On the fall of Robespierre, he contrived to elude the danger for some time; but at length, in May, 1795, he was committed to the Luxembourg. His professional friends, however, procured his liberation; but during the following winter he joined a new society of terrorists, assembled near the pantheon, and became their first president; and in 1799 attempted to re-establish the jacobin club. About this time he was made a member of the National Institute for the class of painting; and Buonaparte, in 1800, appointed him painter to the government. During the imperial domination, David enjoyed his highest reputation as a painter, and exercised considerable influence over the measures adopted by the government for the cultivation of the fine arts. On the restoration of the Bourbons he was exiled to Brussels, where he continued to employ his talents till the time of his death, which took place December the 29th, 1825. His best paintings are—The Rape of the Sabines; The Oath of the Horatii; The Death of Socrates; Napoleon presenting the Imperial Eagles to his Troops; Mars Disarmed by Venus and the Graces, a work executed at Brussels; and The Coronation of Napoleon, exhibited in London in 1822, and said to be the largest painting ever made on canvass. David was clearly of a most cruel and sanguinary disposition in the height of his political career, and it seems to have infected at one time the efforts of his genius. The deputy Reboul found him, in 1792, in the prison of La Force, calmly sketching the prisoners who were going to execution: 'What are you about,' said Reboul, 'I am catching the last impulses of nature in these rascals,' replied David. He will be thought by some of our readers a characteristic painter of Napoleon presenting the Imperial Eagles.

DAVID I., king of Scots, succeeded his brother Alexander I., A. D. 1124, and died at Carlisle, A. D. 1153. See SCOTLAND.

DAVID II., king of Scots, succeeded his father Robert Bruce, A. D. 1320, when only seven years of age. His nonage proved disastrous to Scotland, and afforded Edward Baliol the opportunity of usurping the crown, by the aid of the English.

DAVID'S (St.), an episcopal town of South Wales, in Pembrokeshire, seated in a barren soil on the river Hen, not a mile from the sea. It

was once a considerable place, and which are now demolished. The fine structure. The see has a bishop, chancellor, treasurer, four arch-deacons, prebendaries, eight vicars choral, &c. church formerly stood a college.

Well, near this place, is occasionally on account of its medicinal virtues. cape, near it, there is a prospect into It is twenty-four miles north-west of and 266 west by north of London.

DAVIDSON, a county of the Union in Mero district, in Tennessee, bounded north by the state of Kentucky, on the Sumner, and on the south by the territory. Its chief town, Nashville, lies on the great bend of Cumberland River.

DAVIES (Sir John), a distinguished man, and poet, born at Tisbury, in W. 1570, received his academical education at Queen's College, Oxford, and removed to the Middle Temple to study the law; being called to the bar, was expelled the society, for an insult which he publicly offered the recorder of London. He now returned to his native place, where he wrote his celebrated poem, *Sum*, a poem, and courted the patronage of Elizabeth by writing, under the name of Hymns of Astrea, twenty-six acrostichs of praise. In 1601 he was restored to the bar, and in the same year was chosen member of parliament for Corfe Castle, and took a distinguished part in the suppression of the rebellion. He was sent to Ireland as solicitor-general on the accession of James I., and became successively attorney-general, and justice of the peace. He was made a sergeant of law, and knighted, in 1607 he accompanied the chief justice on a progress through the counties of Fermanagh, and Cavan, and drew up a report of the circuit. He soon after visited England, before the king an account of that which he seems to have exercised his function with great impartiality and purity, and on his return assiduously recommenced his labors. In 1612 he published *A Declaration of the true Causes why Ireland has never been subdu'd and brought under Obedience to the Crown of England, until the Beginning of His Majesty's happy Reign*. During the first parliament was convoked to form a general representation of the Catholics and Protestants, and Sir John was chosen member of the house of commons. He published in 1614, *A Declaration concerning the Prince of Wales*; and the year following, *Reports of Cases adjudged in the King's Bench in Ireland*. Soon after, returning to England, he went several circuits as a judge, and was elected member for Newcastle-under-Lyme. He was subsequently raised to the office of justice of England, but almost immediately fell off by a fit of apoplexy, in December 1615. His poems were reprinted in 1773, and form a part of various modern collections. His prose works were collected in one volume, under the title of *Historical Tracts*, by Davies. This acute lawyer and poet married a daughter of lord Audley, but

his family, his son proving an idiot, his daughters of a remarkably flighty nature. His second daughter married lord

A (Henry Catherine), a celebrated the youngest son of Antonio Davila, noble of Cyprus. He was born in an ancient castle in Padua, but was early into France. At the age of eight, equalized himself in the military scenes country; and at the siege of Amiens, fought under Henry IV., received a wound in the knee. After peace was established, he withdrew into Italy, and entered the service of the Venetians. While at Venice, wrote his admirable History of the Civil Wars of France, from the death of Henry II. in 1559 to the peace of Vervins in 1598. He contributed to the republic of Venice with great success, till he was murdered, in 1631, by a Venetian, called Il Turco, who entered a room of an hotel where he and his family were sitting, and, being reprimanded for his insolence, by Davila, discharged a pistol at the emperor, and shot him dead in an instant. His son Antonio, a youth of eighteen, revenged the death of his father by killing the murderer on

A (John), a famous navigator in the 17th century, was born at Sandridge, near Exeter, in Devonshire; and distinguished himself by making three voyages to the northern parts of America, in order to find out a north-west passage to the East Indies; in which he discovered the Straits which bear his name. He performed five voyages to the East Indies, the last of which he was slain in a battle with some Japanese, near Malacca, on the 27th of December, 1691. He wrote an account of a second voyage to discover the north-west passage; and a description of the East Indies; and other tracts.

A (STRAIT), a narrow sea, lying between the continent of America, and the western coast of Europe, running north-west from Cape Horn, Lat. 60° N. to Baffin's Bay in 80° N. to long. 75° W. communicating with the Bay, which lies to the north of this part of the North Main, or James's Island.

DAVIDSON (William), a statesman of Scottish birth, became secretary of state to queen Anne. His early life is little known, but in 1690 he was employed on a mission to Brabant; and commissioned, in a similar manner, to the states of Holland. In 1693 he was employed confidentially in Scotland; and acquired considerable fame as a diplomatist, and clerk of the council. On his return, he was sent on an embassy into the Low Countries, and made secretary of state. Camden says he was raised to this office in order to be the witness of the mysterious transaction which proved his ruin. When the commission was opened to bring Mary queen of Scots to trial, the name of secretary Davidson was inserted, but it does not seem that he was present; so it was opened, or ever assisted at the trial. The unhappy princess's fate was resolved upon, it only remained to determine the manner of it, and here Davidson

differed with Walsingham, being of opinion that it should be open; upon which the latter pretended sickness, which threw the business of drawing up the warrant and bringing it to the queen for signature, on Davison. If Davison's apology, indeed, may be believed, he acted throughout under dictation; but he was tried in the Star Chamber for revealing the secrets of the queen's council, fined 10,000 marks, and sentenced to imprisonment during her majesty's pleasure; a copy of the proceedings being sent to king James to account for the death of his mother. The fine was rigorously levied; but he was assisted from time to time with small sums of money, and recommended to king James by the friendship of the earl of Essex. His final fortunes and time of death are not known.

DAVIT, in a ship, a long beam of timber, used as a crane whereby to hoist the flukes of the anchor to the top of the bow, without injuring the sides of the ship as it ascends; an operation which, by mariners, is called fishing the anchor. The anchors being situated on both the bows, the davit may be occasionally shifted, so as to project over either side of the ship, according to the position of that anchor on which it is employed. The inner end of the davit is secured by being fixed in the fore channels *b*, and upon the outer end is hung a large block *c*, through which a strong rope traverses, called the fish-pendent *d*; to the foremost end of which is fitted a large iron hook *e*, and to the after end a tackle or complication of pulleys *f*; the former of which is called the fish-hook, and the latter the fish tackle. The anchor being previously raised to the cat head, the fish-hook is fastened upon its flukes; and the effort of the tackle being transmitted to the hook, by means of the fish-pendent, draws up that part of the anchor sufficiently high upon the bow to fasten it. There is also a davit of a smaller kind occasionally fixed in the long-boat, and employed to weigh the anchor therein.

DAULE, a large navigable river of Quito, in the province of Guayaquil, which, after a course of sixty miles, falls into the Guayaquil, in lat. 2° 8' S., on the west side. Its shores are covered with estates and gardens belonging to the inhabitants of Guayaquil, and abound in delicious fruits. It gives name to a small district.

DAUNT, *v. a.* } Fr. *domter*; Lat. *domiter*;  
DAUNTLESS, *adj.* } but perhaps more immediately derived to our language from Goth. and Swed. *dana*, signifying to make faint, amazed. To daunt, to discourage, to intimidate. A dauntless man is he who cannot readily be intimidated.

Metellus, the fowle cherle, the swine  
That with a staf becraft his wif hire lif,  
For she drank wine, though I had ben his wif.  
Ne shuld he nat have daunted me fra drink.

Chaucer. *Cant. Tales.*

**DAUPHIN**, a title given by the court of France to the presumptive heir of the crown, on account of the province of Dauphiné, which in 1349 was given to Philip VI. on this condition, by Hubert II. dauphin of Viennois. He is styled the eldest son of France. His crown is a circle of gold set round with eight fleur-de-lis, closed at the top with four dolphins, whose tails conjoin under a fleur-de-lis.

**DAUPHIN**, in geography, a county of Pennsylvania, formerly contained in that of Lancaster. Its form is triangular; and it is surrounded by the counties of Mifflin, Cumberland, York, Berks, and Northumberland.

**DAUPHINE**, an extensive south-east province of France, containing the three departments of

	Population.	Chief Towns.
Isero,	471,660,	Grenoble.
Drôme,	253,372,	Valence.
Upper Alps,	124,763,	Gap.

849,795.

Its entire area is about 6700 square miles, the surface being very mountainous, and the lower division intersected by a ridge of the Alps. The pasture is universally good, except where the hills are covered with forests. They contain mines of copper, iron, and lead. The principal rivers are the Isere, the Durance, and the Drome, which rise in the Alps, and terminate in the Rhone. In the higher mountains it is cold and sharp, but on the banks of the Rhone the climate is warm. The valleys produce corn, flax, and olives; and the sides of the hills are covered with vines. The culture of silk is also prosecuted with success, particularly in Valence, Romans, Pierrelatte, and Montelimart. Cheese is a principal article of export. The ecclesiastical dignitaries are one archbishop (of Vienne), and three bishops (Grenoble, Valence, and Gap).

**DAVY** (sir Humphrey, bart.), one of the most distinguished chemists of the age, was born at Penzance, in Cornwall, December 17th, 1779. After having received the rudiments of a classical education, he was placed with a surgeon and apothecary, who pronounced him an 'idle and incorrigible boy.' He had, however, already distinguished himself at school, and a taste for chemistry, which he displayed in some experiments on the air contained in sea-weed, attracted the attention of Mr. Gilbert, afterwards president of the royal society, and of Dr. Beddoes. The latter, who had just established a pneumatical institution at Bristol, offered him the place of assistant in his laboratory. Here Davy discovered the respirability and exhilarating effect of the nitrous oxide. He published the results of his experiments, under the title of *Chemical and Philosophical Researches*, &c., London, 1800. This work immediately obtained him the place of professor of chemistry in the royal institution at the age of twenty-two. In 1803 he was chosen a member of the Royal Society. His lectures at the Royal Institution were attended by crowded and brilliant audiences, attracted by the novelty and variety of his experi-

ments, the eloquence of his manner, clearness of his exposition. His experiments with the galvanic battery, his decomposition of the earths and alkalies, and ascertainment of metallic bases, his demonstration of the nature of the oxy-muriatic acid (which gave the name of chlorine), &c., obtained an extensive reputation; and, in 1807, he received the prize of the French Academy. In 1814 he was elected a corresponding member of that body. Having been elected a member of chemistry to the board of agricultural chemistry, he delivered lectures on agricultural chemistry for ten successive years, and, in 1813, published his valuable *Elements of Agricultural Chemistry*. His next discovery was of no less importance to humanity than his former researches; and valuable to science. The numerous experiments arising from fire-damp in mines led him upon a series of experiments on the nature of the explosive gas, the result of which was the invention of his safety-lamp. In 1819 he visited Italy, and made successful attempts to unravel the Herculean manuscripts. In 1820 he succeeded Sir Humphrey Banks, as president of the royal society. In 1824 he visited Norway for the purpose of making some scientific investigations, and on his voyage he proved the efficacy of his safety-lamp in preserving the copper of ships, by coating it in part with a certain quantity of the same time the trigonometrical measurements of Denmark and Hanover were conducted in his direction, by chronometrical observations, with the measurements in England. The distinguished philosopher died May 29th, 1829, at Geneva, whither he had gone for the purpose of his health. Besides the works already mentioned, the most important are *Electrical Researches*; *Elements of Chemical Philosophy*, vol. i. 1802; *Bakerian Lectures*, 1803; *Researches on the Oxy-muriatic Acid*, 1804; *The Fire-Damp*, 1816. He also communicated some valuable papers to the *Philosophical Transactions*, and the journals of Nicholson and Tillich.

**DAVY** (William), a clergyman, was educated at Balliol College, Oxford, where he obtained the degree of B.D. was curate of Launceston, Devonshire, and the editor, printer, and publisher of a work entitled, 'A System of Christian Religion; or some of the most important doctrines of the Christian Religion in connexion with the several Virtues and Vices of Man; occasional Discourses: being a compilation of the best sentiments of the polite writers on the most sound divines, both ancient and modern, on the same subjects, properly connected and improved; particularly adapted to the use of chiefs of families and students in the churches, and for the benefit of mankind in general,' 26 vols. 8vo 1785-1807. The success of this production is said to be this:—'He having completed his preliminary arrangements, issued proposals for publishing his work; but, being unpatronised and neglected, he had no success. Undaunted by this disappointment, he determined to become

with a press which he constructed (as many worn and cast-off types from a country printing-office) as at up two pages, he fell to work. Every operation with the assistance of a domestic only, and working off a time, he finished forty copies of the press. Twenty-six copies he distributed to the universities, the bishops, the judges, and the reviews, expecting to derive a quarter or other that patronage to which he fancied himself entitled. Time disappointed, he would not pursue his project, but contracted his stock in future to spare his expenses. He had reserved only fourteen copies, and number he limited the impression of the work. After years of unremitting toil, completed in 26 volumes. Disdaining success, for which he could ill afford to wait, the books in boards with his own hand took a journey to London for the purpose of depositing a copy in the principal public libraries of the metropolis. *Quarterly Review*.

Supposed by Skinner so named after Junius to be corrupted from *German. tul*, and *dol* in the Bavarian having the same signification. The *bird*.

(Richard), a learned critic of the law, was born in 1708, in Leicestershire. Educated at Market Bosworth, and admitted of Emanuel College, Cambridge, he became a fellow in 1731, and in the degree of M.A. He distinguished himself by his violent asperity towards Bentley, published a proposal for printing by a translation into Greek verse of *Paradise Lost*; but the plan did not take. In 1738 he was appointed master of a grammar-school at Newcastle-upon-Tyne. He published his *Miscellanea Critica*, a specimen of an intended emendation of all the Attic poets. But neither was ever completed; the *Miscellanea*, however, gained the author great reputation, and edition of it, with additions, was published in 1781, by Dr. Burgess, bishop of Exeter. He resigned his schools in 1749, and died at Heworth, where he died in 1786.

*DAV*, *n. s.* Scot. *dalk*. To mark a blow. A word among workmen for a cut, or incision, in their stuff.

*DAV*, *n. s.* The past participle, according to Mr. Johnson (of Purley, v. ii.), of *Anglo-Saxon*, to grow light. To become day; to glimmer. Hence to glimmer; to appear; to commence. The dawn, or the time between the first of the sun's light and sun-rise.

To dawn towards the first day of the life of Mary Magdalene to see the sepulchre.

*Matthew*. Slept, oblivious of my pain; and Phœbus shined in vain. *Pope*. The circumstances diffuse a dawn of serenity. *Id.*

In such an enterprise to die is rather  
The dawn of an eternal day, than death. *Byron*.

DAX, an old town of France, in Gascony, situated on a plain on the left bank of the Adour, a bridge across which unites it to the suburb, Sablar. It has a wall flanked with towers, and a castle. The place has been long celebrated for its mineral waters. In the middle of the town is a large and deep spring which throws out warm water in large quantities. The surrounding country is flat and sandy, but productive. To the north-west is an immense forest. Population 4400. It is twenty-five miles north-east of Bayonne, and eighty-five south by west of Bourdeaux.

Ang.-Sax. *dag*; Goth.

Swed. and Belg. *dag*; Teut.

*tag*; Icel. *dagur*; Lat. *dies*;

all probably from Gr. *dan*,

light. Minsheu says from

Heb. *דאג*, to fly; or from

the Belg. *dacht*, i. e. *de acht*

(of aught, or some value),

as Belg. *nacht*, night, is

from *nie acht*, no value.

The last conjecture is cu-

rious, and the coincidence

remarkable. We leave the

decision of these conflict-

ing etymologies with the

learned reader. The time

between sun-rise and sun-

set; from noon to noon; from one evening to another; or from midnight to midnight; or between any two points marking an artificial division of time of this kind; light, sunshine; any specified or appointed time; particularly a time appointed to give judgment, and therefore that judgment given; the period of human life; any remarkable period; time in general. To-day appears simply to signify on this day. The meaning of the compounds is obvious, except perhaps that of *daysman*, which signifies an umpire or judge. Dr. Johnson says, 'a surety.' But the instances from Job ix. and Spenser seem to confirm the former meaning, which is what Ainsworth gives. Wiclif clearly uses it for 'judgment,' in 1 Cor. iv.

And to me it is for the leeste thing that I be deemed of ghou or of mannys dai, but neither I deme myself. *Wiclif*. 1 Cor. iv.

I worche a werk in ghoure daies, a werk that ghe schulen not bileene if ony man schal telle it ghou. *Id.*

And God called the light *day*, and the darkness he called night. And the evening and the morning were the first day. *Bible*. Gen. i. 5.

For he is not a man, as I am, that I should answer him, and we should come together in judgment. Neither is there any *daysman* betwixt us, that might lay his hand upon upon us both. *Id.* Job. ix. 32, 33.

To-day, if ye will Hear his voice, harden not your hearts. *Psalm* xciv. 7.

Upon a day he got him more monie Than that the persons gat in monethes twie. And thus with fained flattering and gapes, He made the persons and the people his apes. *Chaucer*. *Prod. to Con. Tales*.

After him reigned Guth'line his heir,  
The justest man and truest in his days.

*Spenser. Faerie Queene.*

By this the drooping daylight 'gan to fade,  
And yield his room to and succeeding night. *Id.*

For what art thou,  
That makest thyself his dayeman, to prolong  
The vengeance prest? *Id.*

Bavaria hath been taught, that merit and service  
doth oblige the Spaniard but from day to day.

*Bacon.*

In the daytime Fame sitteth in a watch-tower, and  
sieth most by night; she minglcth things done with  
things not done, and is a terror to great cities. *Id.*

How many hours bring about the day,  
How many days will finish up the year.

*Shakespeare.*

Much are we bound to heaven  
In daily thanks, that gave us such a prince. *Id.*

The noble Thianca do bravely in the war;  
The day almost itself professes yours,  
And little is to do. *Id. Macbeth.*

Calling my officers about me, in my branched  
velvet gown; having come down from a daybed,  
where I have left Olivia sleeping.

*Id. Twelfth Night.*

Thou shalt buy this dear,  
If ever I thy face by daylight see.  
Now go thy way. *Id.*

I meant to make her fair, and free, and wise,  
Of greatest blood, and yet more good than great:  
I meant the daystar should not brighter rise,  
Nor lend like influence from his lucent seat.

*Ben Jonson.*

True labour in the vineyard of thy lord,  
Ere prime thou hast the' imposed daywork done.

*Fairfax.*

Or objects new  
Casual discourse draws on, which intermits  
Our day's work. *Milton.*

Doth God exact daylabour, light denied,  
I fondly ask? *Id.*

In one night, ere glimpse of morn,  
His shadowy flail hath threshed the corn  
That ten daylabourers could not end. *Id.*

The breath of heaven, fresh-blowing, pure and  
sweet,  
With daypring born, here leave me to respire. *Id.*

Sunk though he be beneath the wat'ry floor;  
So sinks the day-star in the ocean bed,  
And yet anon repairs his drooping head. *Id.*

I saw you every day, and all the day;  
And every day was still but as the first:  
So eager was I still to see you more. *Dryden.*

Would you the' advantage of the fight delay,  
If, striking first, you were to win the day? *Id.*

Or if my debtors do not keep their day,  
Deny their hands, and then refuse to pay.  
I must with patience all the terms attend. *Id.*

I watched the early glories of her eyes,  
As men for daybreak watch the Eastern skies. *Id.*

Daylabour was but an hard and a dry kind of live-  
lihood to a man that could get an estate with two or  
three strokes of his pen. *South.*

We have, at this time of day, better and more  
certain means of information than they had.

*Woodward.*

Yet are we able only to survey  
Datums of beams, and promises of day.

*Prior.*

Cease, man of woman born! to hope  
From daily trouble, and continued grief.

I think, in these days, one honest man  
to acquaint another who are his friends.

If bodies be illuminated by the ordinary  
tick colours, they will appear neither of  
daylight colours, nor of the colour of the light  
them, but of some middle colour between both.  
*Newton.*

Of night impatient, we demand the day  
The day arrives, then for the night we pine  
The night and day successive come and go  
Our lasting pains no interruption know.

My ants never brought out their corn  
at night when the moon did shine, and kept  
ground in the daytime.

Th: daily labours of the bee  
Awake my soul to industry;  
Who can observe the careful ant  
And not provide for future want?

The past is all by death possess'd,  
And frugal fate, that guards the rest,  
By giving, bids us live to-day.

Are these the questions that raise a fine  
minds of men at this day? If ever the  
the constitution of England should fall in this  
(and they will fall together), it is not pre-  
popish hierarchy that will rise upon their ruins.

Thus Genius rose and set at ordered times  
And shot a day-spring into distant climes;  
Ennobling every region that he chose;  
He sunk in Greece, in Italy he rose.

*Comptin's Tale.*

Parting day

Dies like the dolphin, whom each pond  
With a new colour as it gasps away,  
The last still loveliest, till—'tis gone— and is

DAY, CIVIL. See CHRONOLOGY.

DAY, NATURAL. See CHRONOLOGY.

DAY, SIDEREAL; DAY, SOLAR. See  
NOMY.

DAYS OF GRACE, in commerce, an  
tomary number of days allowed for the  
of a bill of exchange, &c., after the  
comes due. Three days of grace are all  
Britain; ten in France and Dantzic;  
Naples; six at Venice, Amsterdam, Rou-  
and Antwerp; four at Francfort; five in  
twelve at Hamburg, &c. In Britain the  
grace are given and taken as a matter of  
the bill being only paid on the last day.  
other countries, where the time is much  
it would be thought dishonorable for a  
to take advantage of it; bills are therefor  
on the very day they fall due.

DAYS OF GRACE, in law, are those  
by the court at the prayer of the defend-  
plaintiff.

DAY (Thomas), a benevolent English  
born in the metropolis, in 1748. While  
faint, he was left heir to a fortune of  
year by the death of his father, who was  
lector of the customs. He received a  
part of his education at the Charter-house,  
was afterwards sent to Corpus Christi  
Oxford. Leaving Oxford he entered of the  
Temple, and, having been disappointed

on, took two foundling girls, with  
in of modelling their minds and  
The former he placed with a milliner,  
er he took under his own instruction,  
his scheme fruitless, he gave it up,  
to a school. He is principally  
author of the History of Sandford  
a tale for youth, bearing no small  
to Rousseau's *Emilius*. Mr. Day's  
more theoretical and sentimental  
to the world as he found it: an  
which occasioned his death. Having  
he wished to ride, he would not  
be previously broke in, by those  
employed in the task, but, undertaking  
ment of it himself, was thrown from  
and received a severe kick on the head,  
died, September 8th, 1789.

DAL, in natural history, a name given  
ers of England, and the people who  
countries, to that seam or stratum of  
ch lies uppermost in the earth. See

s. } Sax. *dagian*, to shine.

than that glare of paint and airs and apparel, which  
may *dazzle* the eye, but reaches not the affections.

Humor  
We gaze and turn away, and know not where,  
*Dazzled* and drunk with beauty, till the heart  
Reels with its fulness; there—for ever there—  
Chained to the chariot of triumphal Art,  
We stand as captives, and would not depart.

Byron.  
DAZE, in natural history, a name given by  
our miners to a glittering sort of stone, which  
often occurs in their works; and, as it is an un-  
profitable substance, is one of those things they  
call weeds. The word is applied by them to  
every stone that is hard and glittering; and there-  
fore comprehends the whole genus of the telangia,  
or stony nodules, which have the flakes of talc in  
their substance.

DEACON, n. s. } Gr. *διακονος*. A minis-  
DEACONESS, } ter or official servant of the  
DEACONRY, } church, from *δια*, empha-  
DEACONSHIP. } tic; and *κονω*, to serve.  
See the following article. Deaconry is both the  
office of a deacon, and a sort of hospital or re-  
ligious house at Rome.

Also (it bithoueth) *dehones* to be chaast, not double  
tongued.

Wiclif. 1 *Tyme*. iii.  
Likewise must the *deacons* be grave, &c.

Bible. 1 *Tim*. iii.  
When a contemptuous bold *deacon* had abused his  
bishop, he complained to S. Cyprian, who was an  
arch-bishop, and indeed S. Cyprian tells him he did  
honour him in the business that he would complain to  
him.  
Bp. Taylor.

Timothy was to prefer those who formerly had been  
employed by the church as *deaconesses*, and had dis-  
charged that office with faithfulness and propriety.

Macknight on 1 *Tim*. v. 10.  
There were fourteen of these *deaconries* or hospitals,  
at Rome, which were reserved to the cardinals. Du  
Cange gives in their names.  
Chambers.

DEACON, in civil polity, the praeses of a cor-  
poration, in the royal boroughs of Scotland.

DEACON, in ecclesiastical polity, *διακονος*, a  
servant, one whose business is to baptize, read  
in the church, and assist at the celebrations of  
the eucharist. Seven deacons were instituted by  
the apostles, Acts vi., which number was retained  
a long time in several churches. Their office was  
to serve in the Agape, and to distribute the bread  
and wine to the communicants. Another part  
of their office was to be a sort of directors to the  
people in the exercise of their public devotions  
in the church; for which purpose they used cer-  
tain forms of words, to give notice when each  
part of the service began. Whence they are  
sometimes called *cirokerukes*, or holy criers of  
the church. Deacons had, by license from the  
bishop, a power to preach, to reconcile penitents,  
to grant absolution, and to represent their  
bishops in general councils. Their office out of  
the church was to take care of orphans, widows,  
prisoners, and all the poor and sick who had any  
title to be maintained out of the revenues of the  
church; to enquire into the morals of the people,  
and to make their report to the bishop. Whence,  
on account of the variety of business, it was usual  
to have several deacons in the same church. In  
the Romish church, it is the deacon's office to

statues, or unbreathing stones,

more,

As if the clouds its echo would repeat,

And nearer, clearer, *deadlier* than before!

Arm! arm!—it is—it is—the cannon's opening roar!

*Id.*

DEAD-EYE, in maritime affairs, a sort of round  
flattish wooden block, usually encircled with a  
rope, or with an iron band, *g*, and  
pierced with three holes through the  
flat part, in order to receive a rope  
called the lanyard *h*, which, corres-  
ponding with three holes in another  
dead-eye *i*, creates a purchase employed  
for various uses, but chiefly to extend  
the standing rigging. In order to form  
this purchase, one of the dead-eyes is  
fastened in the upper link of each  
chain on the ship's side, which is made  
round to receive and encompass the  
hollowed outer edge of the dead-eye.  
After this the lanyard is passed alter-  
nately through the holes in the upper  
and lower dead-eyes, till it becomes  
six-fold; and is then drawn tight by  
the application of mechanical powers.

DEAD-LIGHTS, certain wooden ports, which are  
made to fasten into the cabin windows, to prevent  
the waves from gushing into the ship in a high  
sea; and, as they are made exactly to fit windows,  
and are strong enough to resist the waves, they  
are always fixed in on the approach of a storm,  
and the glass lights taken out, which must other-  
wise be shattered to pieces by the surges, and  
suffer great quantities of water to enter the  
vessel.

DEADLY FEUD, in English law-books, a pro-  
fession of irreconcilable enmity, till a person is  
revenged by the death of his enemy. See FEUD.  
Such enmity and revenge were allowed by law in  
the time of the Saxons. If any man was killed,  
and a pecuniary satisfaction was not made to the  
kindred, it was lawful for them to take up arms  
and revenge themselves on the murderer: this  
was called deadly feud; and probably was the  
original of an appeal.

DEAD SEA, in geography, a lake of Judea, into  
which the river Jordan discharges itself. See  
ASPHALITES.

DEAD WATER, at sea, the eddy water just  
astern of a ship; so called because it does not pass  
away so swift as the water running by her sides  
does. They say that a ship makes much *dead*-  
water when she has a great eddy following her  
stern.

Come on my right hand, for this ear is deaf.  
*Shakespeare.*

I will be deaf to pleading and excuses;  
Nor tears nor prayers shall purchase out abuses. *Id.*

Hearing hath deafed our sailors; and if they  
Know how to hear, there's none know what to say.  
*Donne.*

I found such a deafness that no declaration from  
the bishops could take place. *King Charles.*

A swarm of their aerial shapes appears,  
And fluttering round his temples, deafs his ears.  
*Dryden.*

But Salus enters: and, exclaiming loud  
For justice, deafens and disturbs the crowd. *Id.*

Nor silence is within, nor voice express,  
But a deaf noise of sounds that never cease;  
Confused and chiding like the hollow roar  
Of tides receding from the insulted shore. *Id.*

Those who are deaf and dumb, are dumb by conse-  
quence from their deafness. *Holder.*

Whilst virtue courts them; but, alas, in vain!  
Fly from her kind embracing arms,  
Deaf to her fondest call, blind to her greatest charms.  
*Rowe common.*

If any sins afflict our life  
With that prime ill, a talking wife,  
Till death shall bring the kind relief,  
We must be patient, or be deaf. *Prior.*

Thus you may still be young to me,  
While I can better hear than see:  
Oh ne'er may fortune shew her spite,  
To make me deaf, and mend my sight. *Swift.*

Hope, too long with vain delusion fed,  
Deaf to the rumour of fallacious fame,  
Gives to the roll of death his glorious name.  
*Pope.*

The Dunciad had never been writ, but at his re-  
quest, and for his deafness; for, had he been able to  
converse with me, do you think I had amused my  
time so ill? *Id.*

From shouting men, and horns, and dogs, he flies,  
Deafened and stunned with their promiscuous cries.  
*Addison.*

Wheel in wide circle, form in hollow square,  
And now they frint, and now they fly the war,  
Pierce the deaf tampest with lamenting cries,  
Prize their parched lips, and close their blood-shot  
eyes. *Darwin.*

DEAFNESS arises commonly either from an  
obstruction or a compression of the auditory  
nerve; from some collection of matter in the  
cavities of the inner ear; from the auditory pas-  
sage being stopped up by some hardened excre-  
ment; or lastly, from some excrescence, a swelling  
of the glands, or some foreign body introduced  
within it.

There are also diseases of the internal ear that  
admit of no distinct classification, and sometimes  
such defects of the auditory nerves, either as a  
whole or in part, as to occasion this unhappy  
peculiarity. The sensibility of these nerves, like  
that of the rest of the body, becomes also weak-  
ened by age and various diseases, so as to  
occasion what is properly called a loss of  
hearing.

Our object in this paper is to consider deafness  
distinctly, and as a disease. Its unhappy con-  
sequence, in those who are born deaf, DUMBNESS,  
is an entirely different topic: at least in a now-  
logical point of view. We shall first treat of  
both distinctly, and then, in the latter article,  
give some account of the modern efforts to  
ameliorate the situation of those in whom these  
disorders are hopeless. And,

1. Of deafness from deficiency in the auditory  
organs.—We are said to possess more accurate  
and detailed descriptions of the anatomy of the  
ear than of any other part of the body: in our  
articles ANATOMY and PHYSIOLOGY we shall be  
seen to avail ourselves of them. But it is re-  
markable that the profession of an aurist is  
almost new to the medical world, and that many  
diseases and deficiencies of the organs of the  
ear are yet to be explained. We have perhaps,  
therefore, less of the just application of know-  
ledge to its diseases than to those of any other  
part. See ACCOUSTICS.

The office of individual portions of this com-  
plicated organ, for instance, has been but very im-  
perfectly ascertained. Numerous observations  
seem to indicate that considerable injuries and  
deficiencies of the membrana tympani may take  
place without producing much effect upon the  
faculty of hearing. Persons who, by driving  
smoke taken in at the mouth, in large volumes  
through the ears, indicate a deficiency of this  
kind, are often found acute in the perception of  
sounds; and Sir Astley Cooper mentions an  
instance in which the membrana tympani of one  
ear being totally destroyed, and that of the other  
nearly so, by disease, it appeared that the deaf-  
ness was inconsiderable, and that sound was  
most readily perceived by the ear in which no  
trace of the membrane could be discovered. In  
the same case, the ear was nicely susceptible of  
musical tones, the individual played well on the  
flute, and sang perfectly in tune. The power of  
accommodating the ear to differing intensity of  
sound was, indeed, lost for some time after the  
destruction of the membrane: it, however,  
gradually returned; and at the period of ex-  
amination there was no distress arising from this  
deficiency.

Where deafness has followed the accidental  
destruction or continued disease of this mem-  
brane, it would appear to arise more directly,  
therefore, from its effect on neighbouring or-  
gans, as on the membranes of the fenestra, and  
the fluid of the labyrinth, which seem to be es-  
sential to the distinct conveyance of sound. The  
tympanum is, in fact, only one of the outward  
portals of this mysterious temple, though the last  
of them at which the sound arrives.

Its functions seem to be analogous with those  
of the pinna, or outward ear, i. e. to regulate

not only in a more perfect degree, the impressions of sound. In the case noted, after this membrane had been so injured, the muscles of the external ear acquired a new power of moving forward and backwards, which was regularly exerted in the effort to catch an indistinct sound. As to the pinna, we need hardly observe, frequently removed without any abiding effect on the hearing. And in cases where the ear never been formed, the functions of the ear have been found perfect. Scarpa considered the fenestra rotunda as a species of tympanum. So long, therefore, as the ear is sound and healthy, all the essential parts of this organ will proceed.

A practical remark may be permitted us as a very common practice. Sir Hans Sloane observed, 'that among the many deaf in England who had applied to him on account of deafness, the far greater part were brought to their complaints by too often picking at the ear, and thereby bringing humors, or ulcers, on them.'—*Phil. Trans. No. 46.*

*Diseases of the meatus auditorius, or entrance of the ear.*—In this passage, and in the ear, arise the most common impediments to the hearing. The exact, healthy quantum of cerumen, or wax, which should be here secreted, has not been ascertained. But in a diseased state this part of the ear the cerumen has been found completely stopping up the passage, sometimes forming a false tympanum. The hardened and permanently lodged on the drum is a frequent and uniform cause of deafness. The common application of warm oil to this accumulation has never been improved. This passage is also subject to inflammation, which produces a great thickening of the membrane, and consequent obstruction. It is, exuding from the ulcerated surface, in the passage, and is accompanied by pain. This disease generally yields to the application of solutions of the metallic muriated mercury in lime-water; or of the zinc; or to the use of the unguentum nitratum; calomel, or other alterative taken at the same time. (Saunders). The excrescences and other extraneous matters sometimes require to be removed by means from this passage.

*Diseases or obstructions of the Eustachian tube.*—This, in fact, the body of the drum, is allowed the phrase, of which the tube largely consists. Communicating with the palate, it admits a portion of air into the ear, that in the meatus, and assists in the vibrations of the tympanum, perfecting the distinct sensation of sound. Inveterate deafness is therefore often the result of the disease or obstruction of this tube in its cavity. When air is no longer admitted, the tympanum is unduly forced and flattened, and thus cannot vibrate as in its regular state.

Obstructions of this tube arise frequently from ulcers in the throat, or sloughing in the pharynx. The deafness ensues on

the healing of the ulcers, that is, when the obstruction is complete. The descent of a nasal polypus into the pharynx, and enlarged tonsils, have also been known to close the tube. Sometimes the cavity has been found filled with mucus.

The only symptom to which medical men can advert in this case is, that when the patient blows, with his nose and mouth stopped, he does not experience that peculiar sensation, which arises from the inflation of the tympanum. He speaks only of the loss of sense, and complains of no particular symptom. In this respect the deafness differs from all other species.

Sir Astley Cooper has, however, introduced a method of relieving this previously incurable disease of the ear, by puncturing the tympanum. The effect is said to be an instantaneous restoration to the faculty of hearing. But there is some difficulty in keeping open the puncture, which is, in point of fact, to become, in this case, an artificial Eustachian tube. A large hole diminishes the perfection of the returning tension sense, and a small one is perpetually closing. If the membrane also be much lacerated or detached at its circumference, the tension will be lessened; yet even, in these cases, the patient receives an evident benefit.

The instrument, in this operation, is passed through the meatus and the anterior or inferior part of the tympanum. The position of the manubrium of the malleus demanding this precaution: a little crack will immediately be heard like that which is occasioned in pricking a common drum, particularly if the tube be entirely closed, as the sound will then be more acute, from the rapid entrance of the air. The instrument must not penetrate far into the tympanum, lest it should pierce its vascular lining; and the escape of blood injure the operation.

4. We come now to the more numerous and important diseases of the internal ear.—It is evident that deafness often exists when no apparent cause or morbid affection appears; and that it arises from a nervous insensibility, in some cases, which no surgical aid can remove. The tympanum will appear perfect, and exercise, apparently, its usual functions; and the secretions of the meatus seem healthy. In some cases, complaint is made of great noises in the head, and, as they often correspond with the beating of the pulse, this has been traced to a peculiar perception of the pulsation of the arteries. The organic causes of some of these diseases are even traceable to the brain. Where the deafness has been preceded by local inflammation in the head, evacuations, particularly local ones, are generally prescribed; such as the application of leeches and blisters to the neck and behind the ears; and the general antiphlogistic plan should be pursued more or less, according to the nature of the plethoric symptoms.

Imperfect circulation, on the other hand, and general debility, will sometimes be the cause of deafness; when the usual stimulants of electricity and galvanism have been found effectual, and stimulating liquids may be cautiously dropped into the ear. In the swelling, or enlargement of neighbouring parts of the head or

neck, through scrophulous or syphilitic affections, these disorders, of course, must be attended to, as the root of the disorganisation.

Mr. Saunders has described, at some length, one of the most common and important diseases, connected both with the external and internal ear; and, at the same time, one of the most common causes of deafness that occur. We mean the puriform discharge, or 'running,' as it is popularly called, from the tympanum. He considers it under three states or stages: 1. A simple puriform discharge. 2. A puriform discharge, complicated with fungi and polypi. 3. A puriform discharge, with a caries of the tympanum. The time of transition from one of these stages to another is quite uncertain. In some instances, years do not affect it; and, in others, it seems to advance, almost at once, to a carious state of the bone.

This puriform discharge from the tympanum, he insists, is a local disease, and does not depend on any disordered state of the constitution: general remedies are, therefore, inefficacious. But, as a bad state of health is unfavorable to the healing of any parts, so, in this particular complaint, any disordered condition of the habit should be corrected. The chief dependence is to be placed on direct applications to the parts affected. Injections of vitriolated zinc, acetate of lead, &c., are very efficacious in suppressing the discharge; and their effects may be aided by the external employment of blisters and setons. The fungous and polypous excrescences must be removed or destroyed by mechanical means; they are only incidental occurrences, and their removal reduces the disease to the first stage.

The deafness during the continuance of this discharge is sometimes very considerable, when the real injury which the organ has sustained is trivial. In the first stage, the mere thickening of parts, or the collection of the discharge, must impede the action of the intervening machinery between the external and internal parts of the ear; and, in the second, the mechanical obstruction of the fungous or polypous excludes the pulses of sound. On this account there is often a remarkable increase of the power of hearing, when the discharge is suppressed in the first and second stages. But as the parts are invisible, it is difficult, if not impracticable, to decide *a priori*, how far the power of hearing can be restored. This, however, is no valid objection to attempting the cure. The sense will not be rendered worse by a failure; and if the discharge should be stopped, the disease which caused it is removed, the organ safe from farther injury, and the patient freed from an offensive malady. In the last stage, the sense is almost, if not totally, destroyed; and although the discharge be stopped, the patient's hearing will be very little, if at all, improved.

When this disease is cured, the tympanum is exposed to the free ingress and egress of the air, and the mucilaginous discharge inspissates, as the mucus of the nose, by the exhalation of its watery parts. By this accident the patient's deafness increases at intervals, for which he often seeks relief. The practitioner, on sounding the ear, perceives this hardened matter, and con-

ceiving, as is really the case, that it is an augmentation of deafness, is tempted to it. But nothing stimulative, nor attempts, can be safe, for there is great danger of reproducing the discharge. Having a discharge has pre-existed, it will be to leave it to spontaneous separation.

*Anatomy and Diseases of the Ear.*  
This is frequently the disorder attended with violent inflammations of the ear, and even with delirium: remarkable, in its fluctuations, the tooth-ache is popularly but most improperly treated by similar stimulating applications. Individuals who have the care of children should be too observant of the nature of the discharges from the ear, and should consult for a good medical opinion as to their

DEAL, *v. a.*, *v. n.* & *n. s.* } Sax.  
DEALER, *n. s.* } *dail*;  
DEAL'ING, *n. s.* } Belg.

Gr. *ἐὶλεω*, says Minshew, to distribute. These are clearly the leading ideas in all its various applications. To deal is to distribute in portions; to dispose to scatter; to give to different persons; to trade; to transact business; hence, to negotiate and mediate between different parties; taking positions, as to deal by, deal in, &c. As a substantive, it expresses the property divided or distributed; the act of apportioning out a pack of cards; fir, divided, split, or sawn out from a tree; dealer is a trader, or distributor of commodities for profit. Dealing, the trading, and hence any kind of business, or intercourse.

Deal thy bread to the hungry, and that are cast out to thy house.

And with the one lamb, a tenth deal of the fourth part of an hin of be.

The treacherous dealer dealeth treason to the spoiler spoileth.

He kept his patient a ful grown  
In houres by his magike naturel.  
Chaucer. *Proel. to.*

Neither can the Irish, nor yet the English think themselves wronged, nor hardly have that which is none of their own give.

When men's affections do frame if they are in defence of error worse deal, than, for the most part, sound belief maintenance of truth.

Concerning the dealings of men with government, and unto whom the execution belongeth, they have their judge, heaven.

But this was neither one pope's nor prince's destiny: he must write a story that means to tell of all their dealings.

Sometimes he that deals between men raiseth his own credit with both, by private interest than he hath in either.

generally better to deal by speech than by  
by a man himself, than by the mediation  
*Id.*

with them that weep, doth ease some deal;  
doubted at is double death. *Shakespeare.*

Two deep enemies,  
my rest, and my sweet sleep's disturbers,  
that I would have thee deal upon. *Id.*

What these are!

How hard dealings teach them to suspect  
thoughts of others. *Id.*

Deal of cold business doth a man mispend  
his life in! In scattering compliments,  
empty visits. *Ben Jonson.*

What me, I should know what passion to  
Sidney.

In the night she weeps, and her tears fall  
her cheeks along, and none of all  
can comfort her. Perfidiously  
she has dealt, and now are enemy.

Dance. On the Lamentat. of Jeremy.

They were commanded to remain in the  
to govern the people, easy to be dealt with  
and in fear. *Hayward.*

Various dealings with men, are the aids and  
necessary to us in the pursuit of piety.  
*Hammond.*

Who then shall guide

Who defend! Will they not deal  
with his followers, than with him they dealt?  
*Milton.*

How fond, that a piece of deal, far thicker  
could easily imagine, being purposely inter-  
posed my eye, placed in a room, and the  
light, was not only somewhat transparent,  
and quite through a lovely red.

Boyle on Colours.

Not only exercise this providence towards  
people, but he dealt thus also with other

Tillotson.

They and sell, they deal and traffic. *South.*  
Some never so much as doubted of the  
their spiritual estate, and, if so, they have  
no more reason, a great deal, to doubt of it.

*Id.*

With a broken truncheon deals his blows.

Dryden.

He deal the more civilly with his two poems,  
being ill is to be spoken of the dead. *Id.*

From the vengeance of thy darts,

His devoted issue felt,

Coming through the skies the feathered deaths  
in death. *Id.*

He deals not fairly by his own mind, nor  
own understanding aright. *Locke.*

The fond maids in palmistry he deals,

The secret which he first reveals. *Prior.*

On the merits of the cause, as well as of the  
have been thus dealt with by their country.

Swift.

How can the muse her aid impart,

Adapted in all the terms of art?

In harmonious numbers put

Deal, the shuffle, and the cut? *Id.*

In common with these small dealers in wit and  
to give themselves a title from their first  
*Id.*

apture forbids even the countenancing a  
in his cause; which is a popular way of  
justice, that some men have dealt in,  
that success which they proposed to  
*Atterbury.*

Wherever I find a great deal of gratitude in a poor  
man, I take it for granted there would be as much  
generosity if he were a rich man. *Pope.*

You wrote to me with the freedom of a friend,  
dealing plainly with me in the matter of my own  
trifles. *Id.*

Among authors, none draw upon themselves more  
displeasure than those who deal in political matters.  
*Addison.*

The business of mankind, in this life, being rather  
to act than to know, their portion of knowledge is  
dealt them accordingly. *Id.*

True logick is not that noisy thing that deals all in  
dispute, to which the former ages had debased it.  
*Watts's Logick.*

How Spain prepares her banners to unfold,  
And Rome deals out her blessings and her gold.  
*Tickell.*

The nightly mallet deals resounding blows.

Gay.

Nature seldom forms an universal genius; but  
deals out her favours in the present state with a par-  
simonious hand. *Mason.*

I do readily admit that a great deal of the wars,  
seditions, and troubles of the world did formerly  
turn upon the contention between interests that went  
by the names of protestant and catholic. *Burke.*

The Goth, the Christian, Time, War, Flood, and  
Fire

Have dealt upon the seven-hilled city's pride;

She saw her glories star by star expire,

And up the steep barbarian monarchs ride,

Where the car climbed the capitol. *Byron.*

DEAL, in carpentry, a thin kind of fir plank,  
formed by sawing the trunk of a tree into a great  
many longitudinal divisions, of greater or less  
thickness according to the purposes it is in-  
tended to serve. A good method of seasoning  
planks for deal, is to throw them into salt water  
as soon as they are sawed, and keep them there  
three or four days, frequently turning them. In  
this case they will be rendered much harder, by  
drying afterwards in the air and sun; but neither  
this, nor any other method yet known, will pre-  
serve them from shrinking. Rods of deal expand  
laterally, or cross the grain, in moist weather, and  
contract again in dry.

DEAL, in geography, a market town and sea-  
port of Kent, between Dover and Sandwich, and  
supposed to be the Dola of Nennius, and situa-  
ted on a flat and level coast. The town of Deal,  
except it may be the sea's shrinking a little from  
it, is in much the same condition in which it  
ever was, even from the earliest accounts. Dr.  
Halley has proved, in his *Miscellanea Curiosa*,  
that Julius Cæsar landed here, August 26th,  
A. A. C. 55. The great convenience of landing  
has been of infinite service to the place; so that  
it is large and populous, divided into the upper  
and lower towns, adorned with many buildings,  
and is in effect the principal place on the Downs.  
To the south of the town is a castle, surrounded  
by a ditch; it consists chiefly of a round tower,  
containing apartments for the captain and other  
officers, and a battery. The batteries and mar-  
tello towers, constructed during the late war,  
command from the eminences, every access to the  
shore. Anchors, cables, &c., are always ready to

single days last summer there. I am a very  
weather-sensitive matter and in January and Feb-  
ruary, when I was supplied with very much  
of previous day. I am never more than a  
few of hundred and one hundred and one to one  
of London.

14-00000-111, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845

444351, in the morning, the person was not supposed to provide any further information.

[illegible]

For some time previous, in pursuance of authorized functions, some of your men in the district; they were not ready to go to court with the taking for the same, and the County Government in various instances. As you have not received a further order in these forms, you are at the last purpose. Yours,

Then set up the stand, away with her to the doorway,  
and began to sing. Merrymongers.

He will no longer carry the banner of the changed world.

For with time as you, it, it that's not much more  
the,

Interest of the United States the necessary details.

*Secro.* As there are two foundations of cathedral churches in England, the one was the one like the one from which Henry VIII, upon suppression of it, gave, transferred to the dean of York, and canon, to the two chapters, as there was one canon of exchequer dean; some of the old foundation was supposed to have been, in the old charter, the king first having been enough to give to the chapters, the chapters then provided, and the money transferred, and giving the materials to build them. Some of the old foundation was, by a charter issued, granted by virtue of the king's letters patent, without election or confirmation. This word is also applied to the chief officers of certain particular churches or chapters; as the dean of the king's chapel, the dean of the archiepiscopal, the dean of St. George's chapel at Windsor, and the dean of Beeking in Poole. The dean and chapter are the council of the bishop, to assist him with their advice in affairs of religion, as well as in the temporal concerns of his see. When the rest of the clergy were settled in the several parishes of each diocese, there were reserved for the celebration of divine service in the bishop's own cathedral; and the chief of them, who presided over the rest, obtained the name of dean, or dean, being, probably, at first appointed to superintend ten canons or prebendaries. The chapter, consisting of canons or prebendaries, are sometimes appointed by the king, sometimes by the bishop, and sometimes

element of mass action. The first is one of the essential elements of a movement is their voluntary and conscious and not, generally speaking, the passivity of mass, and a voluntary leadership element. They will show a check in 2 countries, but, for, all the rest, I say, it is the power of mass which makes the difference between mass and classes.

There is, perhaps, a fainter of Chamberlain, amongst the few names of Minnesota. The first named JOHN was of Irish, and a twenty-three year old man, but he with great assistance of his wife rendered the chief support of the Eng and the Irish mission. It is an Irish contribution to history. I suppose have increased the quantity of the Irish mission. It is not a small thing. The Irish mission is not a small thing. The Irish mission is not a small thing.

**DEAR GENTLE DEAR** is MYRTLE

*Dr. T. Brown.*

Sax. *depe*, from *depan*, to injure.  
 Bitter; hateful; grievous. An obso-  
 lete frequently used in this sense by

me in this wise his lif he ledde,  
 then so in pees and eke in werre,  
 no man that Theseus hath derre.  
*Chaucer. Cant. Tales.*

his boldness brought thee to their mercies,  
 in terms so bloody, and so dear,  
 mine enemies?  
*Shakespeare. Twelfth Night.*

Let us return,  
 what other means is left unto us  
 peril. *Id. Timon.*

Some dear cause  
 sentiment wrap me up a-while:  
 known right, you shall not grieve  
 this acquaintance. *Id. King Lear.*

and met my dearest foe in heaven,  
 I seen that day. *Id. Hamlet.*

banished son, with his dear sight  
 and bloodless. *Id. Titus Andronicus.*

LY, *adv.* Sax. *dearn*. Secret, or  
 DARN. Here applied to deep and  
 long.

as chanced them by a forest side  
 to succour from the scorching ray,  
 a fearful voice, that dearly cried  
 his shrieks. *Spenser.*

II, *n. s.* The third person, according  
 to, of *depan*, to injure. Minshew  
*dy. dier*, dear, and *tut*, time: a dear  
*tid*, as used with the Goths, says  
 to, 'a time of dearness.' It is meta-  
 phorical applied to the mind.

In times of dearth, it drained much coin out of the  
 kingdom, to furnish us with corn from foreign parts.  
*Bacon.*

Pity the dearth that I have pined in,  
 By longing for that food so long a time.  
*Shakespeare.*

Of every tree that in the garden grows,  
 Eat freely with glad heart; fear here no dearth.  
*Milton.*

The French have brought on themselves that dearth  
 of plot, and narrowness of imagination, which may be  
 observed in all their plays. *Dryden.*

There have been terrible years dearths of corn, and  
 every place is strewed with beggars; but dearths are  
 common in better climates, and our evils here lie much  
 deeper. *Swift.*

DEATH, *n. s.* } Sax. *deað*; Belg. *doel*;  
 DEATH-BED, } Teut. *tod, todt, thot*; from  
 DEATHFUL, *adj.* } Gr. *thanatos*, says Minshew  
 DEATHLESS, *adj.* } or the Heb. *מוֹת*, *doth*.  
 DEATH-LIKE, } The cessation or extinction  
 DEATH'S-DOOR, } of life; the state of the  
 DEATH'S-HEAD, } dead; the immediate cause  
 DEATH'S-MAN, } or causer of death; the  
 DEATH-WATCH. } final perdition of wicked

men. A death's man is a public executioner:  
 death's door, a near approach to death. A death-  
 watch is an insect making a ticking noise, like a  
 watch, and supposed to presage death. The  
 other compounds seem to require no explana-  
 tion.

For the sorrows that is aftr God worthith penance  
 into stidefast heelte, but sorrow of the worlde worthith  
 death. *Wiclif. 2 Cor. vii.*

They cried out, and said, O thou man of God, there  
 is death in the pot. *2 Kings iv. 40.*

He is the mediator of the New Testament, that by  
 means of death, for the redemption of the transgre-  
 ssions, they which are called might receive the promise  
 of eternal inheritance. *Heb. ix. 15.*

Thou shalt die the deaths of them that are slain in  
 the midst of the seas. *Ezekiel xxviii. 8.*

We pray that God will keep us from all sin and  
 wickedness, from our ghostly enemy, and from ever-  
 lasting death. *Church Catechism.*

They were adradde of him as of the death.  
 His wanning was ful fayre upon an heath.  
*Chaucer. Prol. to Cant. Tales.*

He answered naught, but in a traunce still lay,  
 And on those guileful dazed eyes of his  
 The cloude of death did sit. *Spenser. Faerie Queene.*

As in manifesting the sweet influence of his mercy,  
 on the severe stroke of his justice; so in this, not to  
 suffer a man of death to live. *Bacon.*

Time itself, under the deathful shade of whose  
 wings all things wither, hath wasted that lively virtue  
 of nature in man, and beasts, and plants. *Raleigh.*

In swinish sleep  
 Their drenched natures lie, as in a death.  
*Shakespeare.*

I had rather be married to a death's head, with a  
 bone in his mouth, than to either of these. *Id.*

He's dead; I'm only sorry  
 He had no other deathman. *Id.*

Death, a necessary end,  
 Will come when it will come.  
*Id. Julius Caesar.*

Sweet soul, take heed, take heed of perjury;  
Thou art on thy *death-bed*. *Id. Othello.*

Life, by this *death* abled, shall controll  
*Death*, whom thy *death* slew; nor shall to me  
Fear of first or last *death* bring miserie,  
If in thy life's book my name thou enroll.

*Donne. Divine Poems.*

There was a poor young woman, that had brought  
herself even to *death's* door with grief for her sick  
husband. *L' Estrange.*

No blacks, nor soul-bells, nor *death's-heads* on our  
rings, nor funeral sermons, nor tombs, nor epitaphs,  
can fix our hearts enough upon our frail and miserable  
condition. *Bishop Hall. Sermon 30.*

On seas, on earth, and all that in them dwell,  
A *deathlike* quiet and deep silence fell. *Waller.*

Blood, death, and *deathful* deeds, are in that noise,  
Ruin, destruction at the utmost point. *Milton.*

A *deathlike* sleep!

A gentle wafting to immortal life! *Id.*

God hath only immortality, though angels and hu-  
man souls be *deathless*. *Boyle.*

I myself knew a person of great sanctity, who was  
afflicted to *death's-door* with a vomiting.

*Taylor's Worthy Communicant.*

These are such things as a man shall remember  
with joy upon his *death-bed*; such as shall cheer and  
warm his heart, even in that last and bitter agony.

*South's Sermons.*

He must his acts reveal,  
From the first moment of his vital breath,  
To his last hour of unrepenting *death*. *Dryden.*  
Then round our *death-bed* every friend should run,  
And joy us of our conquest early won. *Id. Fables.*

Your cruelty was such, as you would spare his life  
for many *deathful* torments. *Sidney.*

Faith and hope themselves shall die,  
While *deathless* charity remains. *Prior.*

A *death-bed* repentance ought not indeed to be ne-  
glected, because it is the last thing that we can do.  
*Atterbury.*

Of, as in airy rings they skim the heath,  
The clam'rous lapwings feel the leaden *death*. *Pope.*

Black Melancholy sits, and round her throws  
A *death-like* slumber, and a drear repose. *Id.*

These eyes behold  
The *deathful* scene; princes on princes rolled. *Id.*

Misers are muckworms, silkworms beaus,  
And *deathwatches* physicians. *Id.*

He caught his *death* the last county-sessions, where  
he wou'd go to see justice done to a poor widow-woman.  
*Addison.*

The solemn *deathwatch* clicked the hour she died.  
*Gay.*

We learn to presage approaching death in a family  
by ravens, and little worms, which we therefore call  
a *deathwatch*. *Watts.*

*Death* opens the gate of fame, and shuts the gate  
of envy after it,—it unlooses the chain of the captive,  
and puts the bondsman's task into another man's  
hands. *Sterne.*

Heavens! on my sight what sanguine colours  
blaze!

Spain's *deathless* shame! the crimes of modern days  
When avarice, shrouded in religion's robe,  
Sailed to the west, and slaughtered half the globe.  
*Macaulay.*

Ever since the passing of the acts, which punish  
with *death*, the stealing in shops, or houses, or on  
board ships, property of certain stated values, juries  
have, from motives of humanity, been in the habit of

frequently finding by their verdicts, that  
stolen were worth much less than had  
proved. *Sir I.*

Horribly beautiful! but on the verge  
From side to side, beneath the glittering  
An Iris sits, amidst the infernal surge,  
Like Hope upon a *death-bed*, and, unworn  
Its steady dyes, while all around is torn  
By the distracted waters.

DEATH is generally considered as t  
tion of the soul from the body; in w  
it stands opposed to life, which consis  
union. Physicians have defined de  
total stoppage of the circulation of t  
and a cessation of the animal and vital  
consequent thereon, as respiration,  
&c. The signs of death are in many c  
uncertain. If we consult what Wi  
Bruchier have said on this subject, we  
convinced, that between life and death  
is so very undistinguishable, that all th  
of art can scarcely determine where the  
and the other begins. The color of t  
the warmth of the body, and the supp  
the joints, are but uncertain signs of  
subsisting; while, on the contrary, the  
of the complexion, the coldness of the  
stiffness of the extremities, the cessati  
motion, and the total insensibility of  
are but uncertain marks of death begu  
same manner also, with regard to the  
breathing; these motions are often so s  
it is impossible to perceive them. T  
to be a caution against hasty burials,  
in cases of sudden death, drowning,  
DROWNING.

DEATH, in law. The law makes a c  
between natural and civil death. 1. C  
takes place, where a person is not actu  
but adjudged so by law. Thus, if an  
for whose life an estate is granted, re  
yond sea, or is otherwise absent, and  
and no proof of his being alive, he st  
counted naturally dead. 2. Natu  
means a person actually dead.

DEATH-WATCH, in natural history,  
of fermes, so called on account of an  
tion, that its beating or ticking in a s  
is a sure sign of death. See FERMES.

DEAURATE, *r. u. & part. pass.* }  
DEAURATION, *n. s.* } ro  
gilded.

And while the twilight and the rowis re  
Of Phœbus' light were *deaurat* alike.

*Chaucer. Comp. of Blac*

DEBACCHATION, *n. s.* Lat. *de*  
A raging; a madness.

DEBARI, *r. a.* From *de* and *bar*.  
To exclude; to preclude; to shut out  
thing; to hinder.

The same boats and the same building  
in countries *debarred* from all commerce by  
mountains, lakes, and deserts. *Raleigh*

Not so strictly hath our Lord imposed  
labour, as to *debar* us when we need  
Refreshment, whether food, or talk betw  
Food of the mind.

are client's poverty  
 journey of his wanted fee?

*Bishop Hall's Satires, v. 3.*

abled to make us easy, is employed in  
 ad fetters upon us, in *debarring* us of  
 in crossing our most reasonable de-  
*Swift.*

*v. a.* Lat. from *de* and *barba*,  
 his beard.

*v. u. & n.* Fr. *debarquer*. To dis-  
 EMBARK. Also to strip a tree of

it appears that the branches of de-  
 produce fewer leaf-buds, and more  
 such last circumstance I suppose must  
 bring sooner or later *debarbed* in the  
*Darwin.*

*v. a.* } Old Fr. *debas*, from *de*  
*v. s.* } and *base*. See BASE. To  
 reduce, degrade, adulterate,  
 &c.

of taking God's name in vain, to de-  
 with frivolous disputes. *Hooker.*  
 hard and hard, no stone  
 to touch them on. *Hudibras.*

the coin, which was much adulterated  
 the times and troubles of king Stephen  
*Hale.*

led to teach, that pleasure and sen-  
 into heats. *Brown on the Odyssey.*

and *debasement* of that sprightly faculty,  
 to be made the interpreter to a goat  
*Government of the Tongue.*

possessions has not leisure to consi-  
 der expense, and will not *debase* him-  
 self of every trade. *Dryden.*

others, yet himself not free;  
 by power, *debased* by dignity. *Id.*

you raise silver, you *debase* gold; for  
 condition of two things put in opposite  
 as the one rises, the other falls.  
*Locke.*

be careful of not letting his subjects  
 and betray him into a uncanoness of ex-  
*Addison.*

*v. a., v. n. & n. s.* } Fr. *debattre*;  
*adj.* } Ital. *debatire*,  
 from Lat. *bat-  
 tuo*, to beat.

To controvert,  
 and far: as a neuter verb to delibe-  
 or upon; to dispute. Debate-  
 table; liable or likely to be con-  
 debate, a formal and personal dis-  
 putation.

write the hodi ghyngye more wor-  
 den it failide, that debate he not in the  
 Wulf. l. Cor 12.

use with thy neighbour himself, and  
 set to another. *Proverbs xxv. 9.*

Hoste, A. Sure, ye shuld ben hende,  
 a man of your estat,  
 will have no debat.

*Chaucer. Cant. Tales.*

Your several suits  
 considered and debated on.

*Shakespeare.*

husen doth give successful end  
 at the death at our doors.

all lead on to higher fields,  
 and but what are sanctified. *Id.*

Without *debatement* further, more or less,  
 He should the bearers put to sudden death. *Id.*

Have I not vowed for shunning such *debate*,  
 (Pardon ye Satyres), to degenerate?  
 And, wading low in this plebeian lake,  
 That no salt wave shall froth upon my backe.

*Bp. Hall. Satires, iv. 4.*

The French requested, that the *debatable* ground,  
 and the Scottish hostages, might be restored to the  
 Scots. *Hayward.*

He could not *debate* any thing without some com-  
 motion, even when the argument was not of moment.  
*Clarendon.*

'Tis thine to ruin realms, o'erturn a state;  
 Betwixt the dearest friends to raise *debate*. *Dryden.*

A way that men ordinarily use, to force others to  
 submit to their judgments, and receive their opinion  
 in *debate*, is to require the adversary to admit what  
 they alledge as a proof, or to assign a better. *Locke.*

He presents that great soul *debating* upon the sub-  
 ject of life and death with his intimate friends.  
*Tatler.*

It is to diffuse a light over the understanding, in  
 our enquiries after truth, and not to furnish the tongue  
 with *debate* and controversy. *Watts's Logic.*

It is knowledge and experience that make a *debator*.  
*Chesterfield.*

DEBAUCH', *v. u. & n. s.* } Fr. *desbaucher*;  
 DEBAUCHER', *n. s.* } from Lat. *debuc-*  
 DEBAUCH'ER, } chor, to offer sa-  
 DEBAUCH'ERY, } crifice to Bacchus:  
 DEBAUCH'MENT. } anciently written

in our language *dehoise* and *debosh*. To corrupt;  
 to violate; to vitiate, whether by lewdness or  
 intemperance: a fit or habit of intemperance or  
 lewdness. *Debauchery*, the constant practice of  
 them. A *debauchee* is one who is himself de-  
 voted to lewdness or excess; a *debaucher*, one  
 who corrupts others, or seduces them into vice.

Here do you keep a hundred knights and esquires  
 Men so disordered, so *debauched*, and bold,  
 That this our court, infected with their manners,  
 Shews like a riotous inn. *Shakespeare. King Lear.*

Reason once *debauched*, is worse than brutishness.  
*Bp. Hall. Contemplations.*

They told them ancient stories of the ravishment  
 of chaste maidens, or the *debauchment* of nations, or  
 the extreme poverty of learned persons.

*Taylor's Rule of Holy Living.*

This it is to counsel things that are unjust; first, to  
*debauch* a king to break his laws, and then to seek  
 protection. *Dryden's Spanish Friar.*

The first physicians by *debauch* were made;  
 Excess began, and sloth sustains the trade.  
*Dryden.*

A man must have got his conscience thoroughly  
*debauched* and hardened, before he can arrive to the  
 height of sin. *South.*

Could we but prevail with the greatest *debauchees*  
 among us to change their lives, we should find it no  
 very hard matter to change their judgments. *Id.*

Oppose vices by their contrary virtues; hypocrisy  
 by sober piety, and *debauchery* by temperance.  
*Spratt.*

He will for some time contain himself within the  
 bounds of sobriety; till within a little while he reco-  
 vers his former *debauch*, and is well again, and then  
 his appetite returns. *Columy.*

No man's reason did ever dictate to him, that it is  
 reasonable for him to *debauch* himself by intemperance  
 and brutish sensuality. *Tillotson.*

*Debauched from nature, how can we relish her genuine productions? As well might a man distinguish objects through the medium of a prism, that presents nothing but a variety of colours to the eye, or a maid pining in the green sickness prefer a biscuit to a rinder.* *Smollet.*

DEBE'L, v. a. } Lat. *debello*. To conquer; to overcome in war. Obsolete.  
DEBE'LLATE, v. a. }  
DEBELLA'TION, n. s. }

It doth notably set forth the consent of all nations and ages, in the approbation of the extirpating and debellating of giants, monsters, and foreign tyrants, not only as lawful, but as meritorious even of divine honour. *Bacon's Holy War.*

Him long of old  
Thou didst *debel*, and down from heaven cast  
With all his army. *Milton.*

DEBENTURE, n. s. } Lat. *debentur*, of  
DEBENTURED, part. } *debeo*, to owe. A note of debt, generally now used respecting goods entitled to an allowance at the custom-house.

You modern wits, should each man bring his claim,  
Have desperate *debentures* on your fame;  
And little would be left you, I'm afraid,  
If all your debts to Greece and Rome were paid. *Swift.*

DEBENTURE is used at the custom-house for a kind of certificate, signed by the officers of the customs, which entitles a merchant, exporting goods, to the receipt of a bounty or draw back. The forms of debentures vary according to the merchandise exported.

DEBILITATE, v. a. } Lat. *debilito*, of *de*  
DEBI'LE, adj. } and *habilis*, fit, proper. To weaken; make unfit for exertion; to emasculate. Debile is weak, enfeebled. The substantives express a confirmed or habitual state of weakness.

I have not washed my nose that bled,  
Or soiled some *debile* wretch, which without note  
There's many else have done. *Shakespeare.*

Methinks I am partaker of thy passion.  
And in thy case do glass mine own *debility*. *Sidney.*

The weakness cannot return any thing of strength, honour, or safety to the head, but a *debilitation* and ruin. *King Charles.*

The spirits being rendered languid, are incapable of purifying the blood, and *debilitated* in attracting nutriment. *Harvey on Consumptions.*

In the lust of the eye, the lust of the flesh, and the pride of life, they seemed as weakly to fail as their *debilitated* posterity ever after. *Bruno's Vulgar Errors.*

Aliment too vaporous or perspirable will subject it to the inconveniences of too strong a perspiration, which are *debility*, faintness, and sometimes sudden death. *Arbuthnot.*

Thus Conscience pleads her cause within the breast,  
Though long rebelled against, not yet suppressed,  
And calls a creature formed for God alone,  
For Heaven's high purposes, and not his own,  
Calls him away from selfish ends and aims,  
From what *debilitates* and what inflames. *Cowper. Retirement.*

DEBIR, in ancient geography, a city of Palestine, in the southern part of Judah, not far from Hebron. It called Kirjath-sepher, and Kirjath-sanna. Josh. xv. 15, 49.

DE-BOIS-BLANC, an island of the States, belonging to the north-western which was a voluntary gift of the Ch. Indians, at the treaty of peace, concluded by general Wayne, at Greenville, in 1795.

DEBONAIR, adj. } Fr. *debonnaire*.  
DEBONAIR'LY, adv. } bably from *de* Civil; gentle; courteous; well-bred; *Spenser. Faerie.*

He, in the first flowe of my freshest age,  
Betrothed me unto the only haire  
Of a most mighty king, most rich and sage  
Was never prince so faithful and so faire,  
Was never prince so meek and *debonnaire*. *Spenser. Faerie.*

Crying, let be that lady *debonair*.

Zephyr met her once a-maying;  
Filled her with thee, a daughter fair,  
So buxom, blithe, and *debonair*.

The nature of the one is *debonair* and of the other, retired and supercilious; the one is cheerful and sprightly, the other slow and stammering. *Houel's Vowels.*

And she that was not only passing fair,  
But was withal discreet and *debonair*,  
Resolved the passive doctrine to fulfil.

DEBORAH, דְּבוּרָה, Heb.; i. e. a nurse of Rebecca, whom she accompanied to Padanaram, and survived. She lived in family to an advanced age, and died near where she was buried under an oak. xxiv. 59. xxxv. 8.

DEBORAH, a prophetess, poetess, and Israel, who excited Barak to deliver him from the oppressions of Jabin. See Her message to Barak, her reproof of cowardice, and her song upon the victory recorded in Judges iv. & v. She died about A. M. 2651.

DEBRUISED, in heraldry, a term peculiar to the English, by which is intimated the restraint of any animal, debarred of its natural freedom, by any of the ordinaries being laid over it. *Argent*, a lion rampant; or *debruised* by a fesse; gold. *Charleston.*

DEBT, n. s. } Old Fr. *debte*,  
DEBT'ED, part. } *bitum*, of *debet*,  
DEBT'OR, n. s. & adj. } That which is  
DEBT-ROLL, n. s. } due to another. Debted is used by Shakespeare as a modern word indebted. A debtor owes money or any other obligation.

I am *debtor* both to the Greeks and to the Latins, both to the wise and to the unwise. *Rom.*

This worthy man ful wel his wit beette  
Ther wiste no wight that he was in *debte*,  
So stedfastly dide he his governance  
With his bargeines and with his cheerance. *Chaucer. Prolog.*

one that died greatly in debt: Well, says  
poor, then he hath carried five hundred  
with him into the other world.

*Bacon's Apothegms.*

my lord, has paid a soldier's debt;  
but till he was a man,

he died. *Shakespeare. Macbeth.*

amount to three odd ducats more  
owed to this gentleman. *Shakespeare.*

year latter hazard back again,  
thou rest debtor for the first. *Id.*

merchant's debt-ride new defect,  
knocked manour crost his boots at last.

*Bp. Hall's Satires, iv. 1.*

great loss a sea of tears is due;  
whole debt not to be paid by you.

*Waller.*

of imperial grandeur is imitated by all  
subordinate sorts of it, as if it were a  
man. They must be cheated of a third  
part; two other thirds they must ex-  
pend, so that they remain debtors for all the  
purvisions of life, and have no way to sa-  
tisfaction, but out of the succours and supplies

*Cowley.*

ten, a thousand pounds in debt,  
at home, and in a mighty fret  
the day and night.

*Swift.*

is but a mad ridiculous derider of piety;  
who makes a sober jest of God and reli-  
gion: it is easier to be upon his knees than to  
act as if like an impudent debtor, who  
dare to talk familiarly to his creditor, with-  
out what he owes.

*Pope.*

and upon the debtor side, I find such in-  
stances, that I want arithmetick to cast  
up when I look upon the creditor side, I  
find blank paper.

*Addison.*

If he his ample palm  
empty on ill-fated shoulder lay  
he, strait his body, to the touch  
stone, as whilom knights were wont,  
an enchanted castle is conveyed. *Philips.*

who sleeps too much, borrow the pillow of  
A Spanish Proverb, quoted by Johnson.

NATIONAL. See FUNDS, and Na-  
tional.

DEBILITATION, *n. s.* Lat. *debullitio*. A  
weakening over.

DEBILITATED, *adj.* Lat. *decacumi-*  
nating the top cut off.

DEC, *n. s.* } Gr. *deka*; Lat. *decas*  
DEC, *n. s.* } The sum of ten; a num-  
ber ten. A decagon (adding *γωνια*,  
a figure in plane geometry, contain-  
ing ten angles.

not only out in the number of some  
decade of a few years, but might be wide  
epochs, and divers decades of years.

*Brown's Vulgar Errors.*

cycles and periods of years; as, decades  
of chiliads, chiefly for the use of compu-  
tation, chronology, and astronomy.

*Holder on Time.*

by ten; whole decades, when they dine,  
a Trojan slave to pour the wine. *Pope.*

DECAY, *n. s.* Fr. *decadence*. Decay;  
DECAY.

DECAGYNIA, from *deka*, ten, and *γυνή*, a  
woman, an order in the class decandria, consist-  
ing of plants, whose flowers are furnished with  
ten stamina, and the same number of styles. See  
BOTANY.

DECALOGUE, *n. s.* Gr. *δεκαλογος*. The  
ten commandments given by God to Moses.

The commands of God are clearly revealed both in  
the decalogue and other parts of sacred writ.

*Hammond.*

DECALOGUE, in theology, the ten command-  
ments, which were engraved by God on two  
tables of stone. The Jews, by way of eminence,  
call these commandments, after Deut. x. 4, the  
ten words, from whence they had afterwards the  
name of decalogue. The church of Rome has,  
in some catechisms, united the second command-  
ment, in an abridged form, with the first; and,  
to make their number complete, has divided the  
tenth into two. The reason is obvious. See  
Stillingfleet's Works, vol. vi. It should, in fair-  
ness, however, be added, that Jews, as well as  
Christians, have divided the commandments dif-  
ferently.

DECA'MP, *v. n.* } Fr. *decamper*. To shift  
DECA'MPMENT, *n. s.* } the camp; to move off.  
The act of shifting the camp.

The king of Portugal would decamp on the twenty-  
fourth in order to march upon the enemy. *Tutler.*

DECANT, *v. a.* } Fr. *decanter*; Lat. *de-*  
DECANTER, *n. s.* } *canto*. To pour off gently  
DECANTA'TION. } by inclination. A decanter  
is a vessel made for receiving wine perfectly  
clear.

Take aqua fortis and dissolve it in ordinary coined  
silver, and pour the coloured solution into twelve  
times as much fair water, and then decant or filtrate  
the mixture, that it may be very clear. *Boyle.*

They attend him daily as their chief,

Decant his wine, and carve his beef. *Swift.*

DECANUS, in Roman antiquity, an officer  
who presided over the ten officers, and was head  
of the contubernium, or serjeant of a file of  
soldiers.

DECA'PITATE, *v. a.* } Lat. *decapito*. To  
DECAPITATION, *n. s.* } behead. A behead-  
ing, or DECOLLATION, which see.

DECAPOLIS, in ancient geography, a dis-  
trict beyond Jordan, almost wholly belonging to  
the half tribe of Manasseh; before the captivity,  
called Bethsan; but after, occupied by heathens.  
It comprises, as the name denotes, ten principal  
cities on the other side of the Jordan, except  
Scythopolis, which stood on this side, but its  
territory lay on the other.

DECA'PROTI, DECEMP'RIMI, in Roman an-  
tiquity, officers for gathering the taxes. The de-  
caproti were also obliged to pay for the dead, or  
to answer to the emperor, for the quota parts of  
such as died out of their own estates.

DECASPERMUM, in botany, a genus of the  
monogynia order and icosandria class of plants:  
CAL. perianth turbinated, quinquefid at the apex:  
COR. five roundish petals. The stamina are  
many filiform filaments, a little shorter than the  
corolla: PERICARP. is a dry, globular, decemlo-  
cular berry, with solitary egg-shaped seeds.

DECASTYLE, in the ancient architecture, a  
building, with an ordnance of ten columns in  
front, as the temple of Jupiter Olympius was.

DECAY, *v. a., & n. & n. s.* Fr. *decheoir*; DECAFEN, *n. s.* (from Lat. *de* and *cado*. To impair; to make less in value; to decline; to lose excellence; to be impaired.

And if thy brother be waxen poor, and fallen in decay with thee, then thou shalt relieve him.

*Levit. xxv. 35.*

Cut off a stock of a tree, and lay that which you cut off to putrefy, to see whether it will decay the rest of the stock.

*Bacon.*

Infirmity, that decays the wise, doth ever make better the fool.

*Shakespeare.*

I am the very man

That, from your first of difference and decay,

Have followed your sad steps. *Id. King Lear.*

Your water is a sore decayer of your whorson dead body.

*Id. Hamlet.*

She has been a fine lady, and paints and hides Her decays very well.

*Ben Jonson.*

And those decays, to speak the naked truth,

Through the defects of age, were crimes of youth.

*Denham.*

He was of a very small and decayed fortune, and of no good education.

*Clarendon.*

In Spain our springs, like old men's children, be decayed and withered from their infancy.

*Dryden.*

The monarch oak,

Three centuries he grows, and three he stays

Supreme in state, and in three more decays.

*Dryden.*

By reason of the tenacity of fluids, and attrition of their parts, and the weakness of elasticity in solids, motion is much more apt to be lost than got, and is always upon the decay.

*Newton.*

Each may feel increases and decays, And see now clearer and now darker days.

*Pope.*

Now kindred merit fills the sable bier,

Now lacerated friendship claims a tear;

Year chases year, decay pursues decay;

Still drops some joy from withering life away.

*Johnson. Vanity of Human Wishes.*

Alas! the lofty city! and alas!

The trebly hundred triumphs! and the day

When Brutus made the dagger's edge surpass

The conqueror's sword in hearing fame away!

Alas, for Tully's voice, and Virgil's lay,

And Livy's pictured page!—but these shall be

Her resurrection; all beside—decay.

*Byron*

DECCAN, or the Country of the South, an extensive region of Hindostan, bounded on the north by the Narbuddah, and on the south by the Krishna, or Kistnah river, extending across the peninsula from sea to sea. It was possessed, in former times, by the rajah of Telingana, and the Hindoo princes, and first invaded by the Mahomedans in 1293. They plundered the city of Deoghur, now called Dowlatabad, and the Tagura of Ptolemy. In the year 1306 the city and fortress were taken, and the rajah, Ram Deo, carried to Delhi. In 1323, Warunkul, the capital of Telingana, was also taken by the Mahomedans, and the Hindoo dynasty overthrown. For some time the Deccan remained subject to Delhi, till the governor having rebelled, laid the foundation of an independent state, under the title of the Bhamenee sultans, whose capital was Gallsenga; this was in 1347. The Bhamenee dynasty, consisting of fourteen persons, continued till the year 1518. On the dissolution of this empire, the Deccan was subdivided into the five following states: the Adil Shahy, or Beja-

pore kingdom; the Kootub Shahy, or the Nizam Shahy, or Ahmednagar; the Beeral Shahy, or Berar; the Beeral Beeder.

During the reign of Aurungzeb, the states were reduced, and the Deccan annexed to the kingdom of Delhi. It divided into six governments, viz. Ahmednagar, Beeder, Golconda, Berar. In subsequent reigns, these came under the superintendence of who, taking advantage of the weak court of Delhi, after the Persian in 1739, threw off his allegiance, became independent, and fixed his court at Hydrabad. The Mahrattas, however, were now rising, and the nizam was obliged to cede territories now constituting the dominions of the peishwa. See HINDOSTAN.

DECEASE, *v. n. & n. s.* Lat. *decedere* from *de* and *cado*, to fall. To die; to death.

He tells us Arthur is deceased to-day.

Lands are by human law, in some place owner's decease, divided unto all his heirs, some, all descendeth to the eldest son.

*You shall die*

Twice now, where others, that more often In her fair arms holds, shall but once

His latest victories still thickest came, As, near the centre, motion doth increase Till he, pressed down by his own weight, Did, like the vestal, under spoils deccase.

DECEIT, *n. s.*

DECEITFUL, *adj.*

*deceptus*;

DECEITFULLY, *adv.*

*capio, capio*

DECEITFULNESS, *n. s.*

A taking by fallacy; a cheat: deceitful is, fraudulent degree: deceitfulness, tendency to do

My lips shall not speak wickedness, nor utter deceit.

The care of this world, and the desire of riches, choke the word, and he becometh

His demand

Springs not from Edward's well-meant love, But from deceit, bred by necessity.

I grant him blood

Luxurious, avaricious, false, deceitful

Exercise of form may be deceitfully done.

Those, which are plain-hearted in themselves, the bitterest enemies to deceit in others.

*Bp. Hall's Cont.*

Outward appearances are deceitful in judgment, or affections.

The lovely young Lavinia once had And fortune smiled, deceitful on her

Human nature is the same now as it was, heart as deceitful: and the necessity of knowing, and keeping it, the same.

He, who still expects deceit,

Only teaches how to cheat. *Johnson*

A true artist should put a generous and noble design before the eyes of the spectators, and effect the noblest designs by the most subtle means.

disguising our motives, we may impose on, but at the same time we impose upon our-  
selves, whilst we are deceiving others, our own

hearts deceive us: and, of all impostures, self-deception is the most dangerous, because least suspected.

Mason.

I have not loved the world, nor the world me;  
But let us part fair foes: I do believe,  
Though I have found them not, that there may be  
Words which are things,—hopes which will not de-  
ceive.

And virtues which are merciful, nor weave  
Snarers for the falling.

Byron.

DECEMBER, n. s. Lat. *december*. The last month of the year, named *december*, or the tenth month, when the year began in March.

What should we speak of

When we are old as you? When we shall hear

The rain and wind beat dark *December*, or the

Men are April when they woo, and *December* when they wed.

Id. As You Like It.

DECEMBER is the month wherein the sun enters the tropic of Capricorn, and makes the winter solstice. Among the ancient Romans, December was under the protection of Vesta. Romulus assigned it thirty days, Numa reduced it to twenty-nine, which Julius Caesar increased to thirty-one. In the reign of Commodus this month was called, by way of flattery, *Amazonius*, in honor of a courtesan, whom that prince passionately loved, and had painted like an Amazon; but this name died with that tyrant. At the end of December they had the juveniles ludi; and the country people kept the feast of the goddess Vacuna in the fields, having then gathered in their fruits, and sown their corn; whence seems to be derived our popular festival called harvest-home.

DECEMPEDA, *δεκαπυδα*, from *decem*, ten, and *pes*, a foot; ten-feet rod, an instrument used by the ancients in measuring. It was a rule, or rod, divided into ten feet; the foot was subdivided into twelve inches, and each inch into ten digits. The decempeda was used both in measuring land, like the chain among us; and by architects, to give the proper dimensions and proportions to the parts of their buildings, which use it still retains.

DECEMPEDAL, *adj.* Lat. *decempeda*; from Gr. *δεκα*. Ten feet in length.

DECEMVIRI, ten magistrates of absolute authority among the Romans. The privileges of the patricians raised dissatisfaction among the plebeians; who, though freed from the power of the Tarquins, still saw that the administration of justice depended upon the will and caprice of their superiors; and it was at length agreed that ten new magistrates, called decemviri, should be elected from the senate, to put the project into execution. Their power was absolute, all other offices ceased after their election, and they presided over the city with regal authority. They were invested with the badges of the consul, in the enjoyment of which they succeeded by turns; and only one was preceded by the fasces, and had the power of assembling the senate, and confirming decrees. The first decemviri were, Appius Claudius, T. Genutius, P. Sextus, Sp. Veturius, C. Julius, A. Manlius, Ser. Sulpitius, Pluricius, T. Romulus, and Sp. Posthumius; A. U. C. 302. Under them the

laws, which had been exposed to public view, were publicly approved of as constitutional, and ratified by the priests and augurs, in the most solemn manner. They were ten in number, and were engraved on tables of brass; two were afterwards added, whence they were called the laws of the twelve tables, *leges XII tabularum*, and *leges decemvirales*. The decemviral power, which was at first beheld by all ranks of people with the greatest satisfaction, was continued; but in the third year after their creation, the decemviri became odious on account of their tyranny; and the attempt of Ap. Claudius to ravish Virginia totally abolished the office. Consuls were again appointed, and tranquillity re-established in the state. There were other officers in Rome called decemviri, who were originally appointed in the absence of the prætor, to administer justice. Their appointment became afterwards necessary, and they generally assisted at sales, called *subhastationes*, because a spear, *hasta*, was fixed at the door of the place where the goods were exposed to sale. They were called decemviri *litibus judicandis*. The officers, whom Tarquin appointed to guard the Sybilline books, were also called decemviri. They were originally two in number, called *duumviri*, till A.U.C. 388, when their number was increased to ten, five of whom were chosen from the plebeians and five from the patricians. Sylla increased their number to fifteen, hence called *quindecimviri*.

DECENCE, or } Fr. *decence*; Lat. *de-*  
DECENCY, *n. s.* } *cor*, it becometh. Pro-  
DECENT, *adj.* } priety of form or man-  
DECENTLY, *adv.* } ner, principally the lat-  
ter; modesty. Decent is, becoming; fit; suit-  
able; and hence sometimes applied to that  
which is grave or formal.

Come, pensive nun, devout and pure,  
Sober, stedfast, and demure,  
All in a robe of darkest grain  
Flowing with majestic train,  
And sable stole of Cyprus lawn  
O'er the decent shoulders drawn. *Milton.*

Those thousand *decencies* that daily flow  
From all her words and actions. *Id.*

They could not *decently* refuse assistance to a per-  
son, who had punished those who had insulted their  
relation. *Broom.*

And must I own, she said, my secret amart,  
What with more *decences* were in silence kept?  
*Dryden.*

Since there must be ornaments both in painting  
and poetry, if they are not necessary, they must  
at least be *decent*; that is, in their due place, and but  
moderately used. *Id.*

Past hope of safety, 'twas his latest care,  
Like falling Cæsar, *decently* to die. *Id.*

The consideration immediately subsequent to the  
being of a thing, is what agrees or disagrees with that  
thing; what is suitable or unsuitable to it, and from  
this springs the notion of *decency* of indecency, that  
which becomes or is becomes. *South.*

In good works there may be goodness in the gen-  
eral but *decence* and gracefulness can be only in the  
particulars in doing the good. *Syrat.*

Immodest words admit of no defence.  
For want of *decency* is want of sense. *Rowconnon.*

Performed what friendship, justice, truth  
What could be more, but *decently* retire?

Were the offices of religion stript of all  
*decencies* of worship, they would not make  
pression on the minds of those who assist.

She speaks, behaves, and acts just as she  
But never, never reached one generous thought  
Virtue she finds too painful an endeavour,  
Content to dwell in *decencies* for ever.

Sentiments which raise laughter, can  
be admitted with any *decency* into an heroic

Give every bishop income enough, not  
of worldly pomp and fashionable luxury, to  
enable him to maintain works of charity, and  
decent provision for his family. *Bishop.*

DECENNIAL, *adj.* From Lat. *decem*.  
Continuing for the space of ten years.

DECENNALIA, ancient Roman  
celebrated by the emperors every tenth  
year, with sacrifices, games, and  
for the people. Augustus first instituted  
solemnities, in which he was imitated by  
his successors.

DECENNOVAL, *adj.* } Lat. *decem*  
DECENNOVARY } *novem*.  
to the number nineteen.

Meton, of old, in the time of the Pelopon-  
nesian war, constituted a *decennoval* circle, or of  
years; the same which we now call the golden  
age.

Seven months are retrenched in this  
notary progress of the epacts, to reduce the  
of her motion and place to those of the sun.

DECEPTION, *n. s.* } From Lat. *deceptio*.  
DECEPTIBILITY, } See DECEIT.  
DECEPTIBLE, *adj.* } the act or  
DECEPTIOUS, } fraud. Deceit-  
DECEPTIVE, } and decepti-  
DECEPTORY, } press a high

imposture; deceptions and deceptive, or  
or design of deceiving. Deceptory,  
Johnson, is, containing means of deception.

Yet there is a credence in my heart,  
That doth invert the' attest of eyes and ears  
As if those organs had *deceptions* functions,  
Created only to calumniate. *Sh.*

Reason, not impossibly, may meet  
Some spacious object by the foe suborned,  
And fall into *deception* unaware.

The first and father cause of common error  
common infirmity of human nature; of which  
condition, perhaps, there should not  
other evicition, than the frequent errors  
ourselves commit.

Being thus divided from truth in themselves  
are yet farther removed by adventitious *deceptions*.

All *deception* is a misapplying of those signs  
by compact or institution, were made the  
men's signifying or conveying their thoughts.

Some errors are so froshed in us, that they  
tain their interest upon the *deceptibility* of our  
natures.

DESCRIPT, *adj.* } Lat. *descriptus*.  
DESCRIPTIBLE, *adj.* } ped; taken off.  
DESCRIPTION, *n. s.* } which may be  
taken off; the act of taking off.

Do not *deceptions* of our parents, then I  
am guilty of all the sins that ever were  
in my progenitors ever since Adam.

*Glouceille.*

**DECIMATION**, *n. s.* Lat. *decertatio*. A  
striving; a dispute.

**DECISION**, *n. s.* Lat. *deccasio*. A de-  
ciding away.

**DECHARMER**, *v. a.* Fr. *decharmer*. To coun-  
teract; to disenchant.

Seeking the help of physick, he was sud-  
denly *decharming* the witchcraft. *Harvey.*

**DECIDERE**, *v. s.* & *v. n.* Fr. *decider*, Ital.  
*decidere*; Lat. *decido*, from *de* and *cæ-*

*do*, or *scindo*. To cut  
short a controversy,

says Minshew. To  
fix an event or is-  
sue; to determine.

He is a judge of controverted matters.  
The act or habit of determining, and  
of determining promptly. Decisory,  
resumme.

The time approaches,  
with due decision make us know  
what we have, and what we owe.

*Shakespeare.*

Pleasure and revenge  
are more deaf than adders to the voice  
of decision.

*Id.*

Approached, when fortune should *decide*  
our enterprise, and give the bride.

*Dryden.*

Arms are to the last *decision* bent,  
labours with the vast event.

*Id.*

Wounded oft, and oft in battle tried,  
thy master and the world *decide*.

*Graville.*

Is no ill *decider* in common cases of pro-  
perty is out of the question.

*Swift.*

Reflection, though it carries nothing per-  
sonal in it, yet creates a mighty confidence in  
and strengthens him much in his opinion.

*Atterbury.*

Direct appeal to God for the *decision* of  
us, which can by no other means be de-  
*Id.*

Will *decide*, when doctors disagree,  
what *caecista* doubt?

*Pope.*

What that a jester or a monkey, a droll  
can be proper judges or *deciders* of con-  
Watts.

For on the event,  
of this bloody day, depends  
the fate of kingdoms.

*Philips.*

Emblimed myself with answering any argu-  
ment the opponents in the divinity-schools  
on the articles of the church, nor ever  
with authority as *decisive* of a difficulty; but  
on occasions to say to them, holding the  
text in my hand, 'En *sacrum codicem*!'

*Bp. Watson.*

**DECIDENCE**, *n. s.* Lat. *decidentia*. The  
falling shed, or of falling away; the  
falling away.

During the *decidence* of their horn, do fall  
and that it annually roteth away, and  
renoveth again.

*Brounne's Vulgar Errors.*

VII.

**DECIDUOUS**, *adj.* } Lat. *deciduus*. Fall-  
**DECIDUOUSNESS**, *n. s.* } ing; not perennial;  
not lasting through the year.

In botany, the perianthium, or calyx, is *deciduous*,  
with the flower. *Quincy.*

**DECIL**, in astronomy, an aspect or position  
of two planets, when they are distant from each  
other a tenth part of the zodiac.

**DECIMAL**, *adj.* Lat. *decimus*. Numbered  
or multiplied by ten.

In the way we take now to name numbers by mil-  
lions of millions of millions, it is hard to go beyond  
eighteen, or, at most, four-and-twenty *decimal* pro-  
gressions, without confusion. *Locke.*

**DECIMAL ARITHMETIC**, the art of computing  
by decimal fractions. See **ARITHMETIC**, Index.

**DECIMATE**, *v. a.* } Lat. *decimus*. To  
**DECIMATION**, *n. s.* } tithe; to take the tenth;  
a tithing; a selection by lot of every tenth sol-  
dier, in a general mutiny, for punishment.

By *decimation* and a tithed death,  
Take thou the destined tenth. *Shakespeare.*

A *decimation* I will strictly make  
Of all who my Charinus did forsake;  
And of each legion each centurion shall die.

*Dryden.*

**DECIMATION** was a punishment inflicted by  
the ancient Romans, on such soldiers as quitted  
their posts, or behaved themselves cowardly in  
the field. The names of the guilty were put into  
an urn, or helmet, and as many were drawn out  
as made the tenth part of the whole number,  
and those were put to the sword, and the others  
saved. The ancient Roman militia, to punish  
whole legions when they had failed in their duty,  
made the soldiers draw lots, and put every tenth  
man to death for an example. The Romans  
had also the vicesimatio, and even centesimatio,  
when only the twentieth or hundredth man suf-  
fered by lot.

**DECIPHER**, *v. a.* Fr. *dechiffrer*, from *de*  
and *cipher*. See **CIPHER**. To explain that  
which is written in ciphers; hence to unfold;  
to explain; to write out.

Zelmene, that had the same character in her heart,  
could easily *decipher* it. *Sidney.*

Assurance is writ in a private character, not to be  
read, nor understood, but by the conscience, to which  
the Spirit of God has vouchsafed to *decipher* it.

*South.*

Could I give you a lively representation of guilt  
and horreur on this hand, and point out eternal wrath  
and *decipher* eternal vengeance on the other, then  
might I shew you the condition of a sinner hearing  
himself denied by Christ. *Id.*

Then were laws of necessity invented, that so every  
particular subject might find his principal pleasure  
*deciphered* unto him, in the tables of his laws.

*Locke.*

**DECIPHERING**, the art of reading or explain-  
ing ciphers. See **CIPHER**.

**DECIUS** (Cn. Metius), a native of Pannonia,  
sent by the emperor Philip, to appease a sedition  
in Mæsia. Instead of obeying his master's com-  
mand, he assumed the imperial purple, and  
soon after marched against him, and, at his  
death, became the only emperor. He signalized  
himself against the Persians; but when he  
marched against the Goths, he pushed his horse

II

into a deep marsh, from which he could not extricate himself, and perished, with all his army, by the darts of the barbarians, A. D. 251, after a reign of two years.

**DECURUS MUS**, the name of three patriotic Romans, viz. 1. a celebrated consul, who, after many glorious exploits, devoted himself to the gods manes, for the safety of his country, in a battle against the Latins, about 340 years before the Augustan age. 2. His son, Decius Mus, imitated his example, and devoted himself, in like manner, in his fourth consulship, when fighting against the Gauls and Samnites. 3. His grandson also did the same in the war against Pyrrhus and the Tarentines.

**DECK**, *v. a. & n. s.* } Sax. *decan, decan*; *DECKER*, *n. s.* } Bel. *decken*, from Lat. *tego, tectum*. To cover; to adorn; ornament; dress. A deck is the covering of a ship's hold.

His goodly image, living evermore  
In the diuine resemblance of your face,  
Which with your vertues ye embellish more,  
And native beauty deck with heauenlie grace.

*Spenser. Sonnets.*

We have also raised our second decks, and given more vent thereby to our ordnance, trying on our nether overloop.

*Raleigh.*

Sweet ornament! that decks a thing diuine.

*Shakespeare.*

Long may'st thou live to wail thy children's loss,  
And see another, as I see thee now,  
Decked in thy rights, as thou art stalled in mine.

*Id.*

Her keel plows hell,

And deck knocks heauen. *Ben Jonson.*

The eader Satyr should go ragged and bare,  
And show his rougher and his hairy hide,  
Tho' mine be smooth, and deckt in careless pride.

*Rp. Hall. Desiance to Rney.*

Ye mists and exhalations, that now rise  
From hill or steaming lake, dusky or grey,  
Till the sun paint your fleecy skirts with gold;  
In honour to the world's great Author, rise!  
Whether to deck with clouds the uncoloured sky,  
Or wet the thirsty earth with falling showers,  
Rising or falling, still advance his praise. *Milton.*  
Now the dew with spangles decked the ground,  
A sweeter spot of earth was never found. *Dryden.*

At sun-set to their ship they make return,  
And anore secure on decks till rosy morn.

*Id. Æneid.*

If any, born and bred under deck, had no other information but what sense affords, he would be of opinion that the ship was as stable as a house.

*Glanville.*

Besides gems, many other sorts of stones are regularly figured: the amianthus, of parallel threads, as in the pile of velvet; and the selenites, of parallel plates, as in a deck of cards. *Grew.*

It was intended by the means of these precepts, not to deck the mind with ornaments, but to protect it from nakedness; not to enrich it with affluence, but to supply it with necessities.

*Johnson. Preface to Preceptor.*

**DECK**, the planked floors of a ship, which connect the sides together, and serve as different platforms to support the artillery and lodge the men; as also to preserve the cargo from the sea, in merchant-vessels. As all ships are broader at the lower deck than on the next above it, and as the cannon thereof are always heaviest, it is

necessary that the frame of it should be stronger than that of the others; at the same reason, the second, or middle, deck, should be stronger than the upper-deck. Ships of the first and second rates are built with three whole decks, reaching from the stern, besides a fore-castle and a main-deck, which extends from the stern to the mast; between which and the fore-castle, a cency is left in the middle, opening into the main-deck, and forming what is called the inferior ships of the line-of-battle are built with two decks and a-half; and frigates with one gun-deck and a-half, and the deck below to lodge the crew. The hull is formed and sustained by the beams, the water-ways, the carlings, the ledges, and two rows of small pillars, called knees, &c. See SHIP-BUILDING.

**DECK, FLUSH**, implies a continued surface from stem to stern, upon one line, without stops or intervals.

**DECK, HALF**, a space under the gun-deck of a ship of war, contained between the most bulk-head of the steerage and the bulk-head of the quarter-deck. In the colliery-land, the steerage itself is called the half-deck, and is usually the habitation of the crew.

**DECKENDORF**, a town of the Electorate of the Danube. In the year 1633 it was taken by the troops of the duke of Saxe-Weimar. It is 12 miles north-west of Passau, and 12 miles E. S. E. of Ratisbon. Long. 12° 46' 50' N.

**DECLAIM**, *v. a. & n.* } Fr. *declamer*.

**DECLAIMER**, *n. s.* } *declamator*.

**DECLAIMING**, *n. s.* } *declamatio*.

**DECLAMATION**, *n. s.* } *clamor*, 10.

**DECLAMATORY**, *adj.* } —To

—To speak with formality or vehemence, or to declaim the passions rather than the judgments; times a college theme or composition particularly, a declamation.

The cause why declamations prevail is, for that men suffer themselves to be deluged with them.

What are his mischiefs, consul? You  
Against his manners, and corrupt your

This a while suspended his interment,  
a declamatory theme amongst the religious  
age.

Thou mayest forgive his anger, while  
use of the plainness of his declamation.

He has run himself into his own death,  
and almost forgotten that he was now  
a moral poet.

The splendid declaimings of novices and

It is usual for masters to make their  
both sides of an argument.

Your salamander is a perpetual death,  
jealousy.

Who could, I say, hear this generous  
without being fired at his noble zeal?

Dress up all the virtues in the best  
tory, and declaim aloud on the praise of

task imposed upon myself a task of composing or a declamation in Latin or English. pleasure in lately finding among my papers some declamations; there is nothing excellent of them; yet I cannot help valuing them,  
*Bishop Watson.*

anvros may be defined a speech made on the tone and manner of an oration, expression of action to the propriety of action, in order to give the sentiment expression upon the mind. See ORATION. word is now principally used in a loose sense.

DECLARATIVE, v. a. & v. n.

DECLARATIVE, adj.

DECLARATORY, adj.

DECLARATORILY, adv.

DECLARATIVELY, adv.

DECLARATION, n. s.

DECLARATIVE, adj.

DECLARATIVE, part.

DECLARATIVE is capable of proof: declaration is the instrument or act of making clear or known: declarative is explanatory, in the form of a declaration, affirmative, or that which removes a doubtful, obscure sense, or is avowedly. Declaring, as a synonym with declaration.

to glory among the heathen.

1 Chron. xvi. 24.

the most part of our old martyrs they would do, or once kneel or offer up of innocence before an image, suffered most terrible deaths, as the histories of them attest.

*Sermon against Peril of Idolatry.*

three sabots he declaride to hem of scrip-  
pwyde and schewide, that it bihoote crist  
to rise aghen fro death.

Wiclif. Dodi. 17.

may the woful spirit in myn herte  
point of all my sorwes amerte  
my lady, that I love most,

praises the service of my gost.

Chaucer. Cant. Tales.

They on humble knee

praise, did the cause declare

the crime her roiall state to see,

a wide report of her great maiestee.

Sponser. Faerie Queene.

are nothing else but declarations what  
for the good of men.

Hooker.

army somewhat the soldiers would have  
they would not declare themselves in it, but  
and a discharge.

Bacon.

dearable from the best writers.

Brown.

it caldly into electricity; that is, into a  
net straws, or light bodies; and convert  
heavily placed, which is a declamation of  
the parts.

Id.

Alvatus the civilian, and Franciscus de  
both declaratorily confirmed the same.

Id. Vulgar Errours.

within a little, we must assume that the  
such bodies are exactly smooth.

Hog.

and faculties of will and understanding  
declaring against them.

Taylor.

These blessings are not only declaratory of the good  
pleasure and intention of God towards them, but like-  
wise of the natural tendency of the thing. Tillotson.

There are no where so plain and full declarations  
of mercy and love to the sons of men, as are made in  
the gospel. Id.

The sun by certain signs declares,

Both when the south projects a stormy day,

And when the clearing north will puff the cloud away.

Dryden's Virgil.

God is said not to have left himself without witness  
in the world; there being something fixed in the na-  
ture of men, that will be sure to testify and declare  
for him. South's Sermons.

Though wit and learning are certain and habitual  
perfections of the mind, yet the declaration of them,  
which alone brings the repute, is subject to a thousand  
hazards. South.

To this we may add the vox populi, so declarative  
on the same side. Swift.

A declared gout is the distemper of a gentleman;  
whereas, the rheumatism is the distemper of a hackney-  
coachman or chairman, who are obliged to be out at  
all weathers, and in all hours. Chesterfield.

I have had and used the opportunities of conversing  
with men of the greatest wisdom and fullest experience  
in those matters, and I do declare to you most solemnly  
and most truly, that on the result of this reading,  
thinking, experience, and communication, I am not  
able to come to an immediate resolution in favour of  
a change of the groundwork of our constitution.

Burke.

My declared opposition to the increased and increas-  
ing influence of the Crown had made a great impres-  
sion on His Majesty's mind; for on the day I did  
homage, he asked the Duke of Rutland if his friend  
the Bishop of Landaff was not a great enemy to the  
influence of the Crown. Bishop Watson.

DECLINE', v. a., v. n. & n. s.

DECLIN'SION, n. s.

DECLIN'ABLE, adj.

DECLIN'ATION, n. s.

DECLIN'ATOR,

DECLIN'ATORY.

Fr. decli-

ner; Span.

and Port. de-

clarinar; Ital.

declinaire;

Lat. declino,

from deorsum, downwards, and clino, to bind;  
Gr. κλινω.—Minsheu. To bend downwards;  
to bring down; to shun; avoid; sink: as a neuter  
verb, to lean or incline downward; to deviate;  
to sink; decay. Decline, as well as declension,  
signifies also the state of decrease, or alteration  
for the worse; a tendency to a less degree of  
excellence; descent. Declinable is principally  
a term of grammar, and expresses that quality of  
words whereby they can be traced to their roots.  
Declination, and declinator, are also scientific  
terms, for which see the articles following:

Neither shalt thou speak in a cause to decline after  
many, to wrest judgment. Exodus xxiii. 2.

And now fair Phœbus 'gan decline in haste

His weary waggon to the western vale. Sponser.

The queen, hearing of the declination of a mo-  
narchy, took it so ill, as she would never after hear  
of his suit. Bacon.

They'll be by the fire, and presume to know

What's don i' th' capitol; who's like to rise,

Who thrives, and who declines.

Shakespeare.

Sons at perfect age, and fathers declining, the father  
should be as a ward to the son. Id.

A beauty-waining and distressed widow,  
Even in the afternoon of her best days,  
Seduced the pitch and height of all his thoughts,  
To base declension. *Id. Richard III.*

Since the muses do invoke my power,  
I shall no more decline that sacred bower,  
Where Gloriana, their great mistress, lies. *Waller.*

Hope waits upon the flow'ry prime;  
And summer, though it be less gay,

Yet is not looked on as a time  
Of declination or decay. *Id.*

Sometimes nations will decline so low  
From virtue, which is reason, that no wrong,  
But justice, and some fatal curse annexed,  
Deprives them of their outward liberty. *Milton.*

And nature, which all acts of life designs,  
Not like ill poets, in the last declines. *Denham.*

He had wisely declined that argument, though in  
their common sermons they gave it. *Clarendon.*

If it should be said that minute bodies are indis-  
soluble, because it is their nature to be so, that would  
not be to render a reason of the thing proposed, but,  
in effect, to decline rendering any. *Boyle.*

That a peccant creature should disapprove and re-  
pent of every declination and violation of the rules of  
just and honest, this right reason, discoursing upon  
the stock of its own principles, could not but infer.

*South's Sermons.*

Thus then my loved Euryalus appears;  
He looks the prop of my declining years! *Dryden.*

Autumnal warmth declines;  
Ere heat is quite decayed, or cold begun. *Id.*

There is no declination of latitude, nor variation of  
the elevation of the pole, notwithstanding what some  
have asserted. *Woodward.*

Thy rise of fortune did I only wed,  
From its decline determined to recede. *Prior.*

We may reasonably allow as much for the declen-  
sion of the land from that place to the sea, as for the  
immediate height of the mountain. *Burnet's Theory.*

Those fathers lived in the decline of literature.  
*Swift.*

Faith and morality are declined among us. *Id.*

God, in his wisdom, hath been pleased to load our  
declining years with many sufferings, with diseases,  
and decays of nature. *Id.*

Whatever they judged to be most agreeable or dis-  
agreeable, they would pursue or decline. *Atterbury.*

Supposing there were a declination of atoms, yet will  
it not effect what they intend; for then they do all  
decline, and so there will be no more concurrence than  
if they did perpendicularly descend. *Ray.*

You decline *musa*, and construe Latin, by the help  
of a tutor, or with some English translation. *Watts.*

There are several ways to know the several planes;  
but the readiest is by an instrument called a *declina-*  
*tory*, fitted to the variation of your plate. *Moxon.*

*Declension* is only the variation or change of the  
termination of a noun, whilst it continues to signify  
the same thing. *Clarke's Latin Grammar.*

And leaves the semblance of a lover, fixt  
In melancholy deep, with head declined,  
And love-dejected eyes. *Thomson.*

The surest way to conquer, is sometimes to decline  
a battle; to weary out the enemy, by keeping him at  
bay. *Mason.*

But, though the felon on his back could dare  
The dreadful leap, more rational, his steed  
Declined the death, and wheeling swiftly round,  
Or e'er his hoof had pressed the crumbling verge.  
*Cowper.*

This praise, O Cheronean sage, is thine  
Why should this praise to thee alone  
All else from Nature's moral path decline  
Lured by the toys that captivate the

Statues of glass—all shivered—the long  
Of her dead Doges are declined to dust  
But where they dwell, the vast and sumptuous  
Bespeaks the pageant of their splendid

DECLINATION, in astronomy, is either  
or south, and either true or apparent,  
ing as the real or apparent place of the  
considered. See *ASTRONOMY*.

DECLIVITY, *n. s.* } Old Fr.  
DECLIVOUS, *adj.* } from the Lat.  
*declino*. See *DECLINE*. Descent;  
downwards; gradual descent, opposi-  
clivity.

Rivers will not flow unless upon declivity;  
sources be raised above the earth's ordin-  
so that they may run upon a descent.

I found myself within my depth; and  
rity was so small, that I walked near a  
got to the shore. *Gulliver.*

And on thy happy shore a temple still  
Of small and delicate proportion, keeps  
Upon a mild declivity of hill,  
Its memory of thee; hush! it sleeps  
Thy current's calmness.

DECOCT, *v. a.* } Fr. *decoction*  
DECOCTION, *n. s.* } *coctione*; Span.  
DECOCTIBLE, *adj.* } from Lat. *deco-*  
DECOCTURE, *n. s.* } and *coquo*, to  
extract the virtues of any thing by  
heat. Shakspeare uses it, barbarously  
for strengthening by boiling; decoct  
act of boiling to extract the virtue,  
paration decocted; and the latter  
meaning also of decocture.

Senna loathes its windiness by decocting;  
or windy spirits are taken off by incensa-  
ration.

In infusion, the longer it is, the greater  
of the gross body that goeth into the liq-  
*decoction*, though more goeth forth, yet  
purgeth at the top, or setteth at the bottom.  
Can sodden water, their barley broth,  
Decoet their cold blood to such valiant heat.

They distil their husbands' land  
In *decoctima*; and are manned  
With ten empirics, in their chamber  
Lying for the spirit of amber.

There she decocts, and doth the food  
There she distributes it to every vein;  
There she expels what she may fitly spare.

The lineaments of a white lily will be  
the strongest decoction.

DECOLLATE, *v. a.* } Fr. *decoller*  
DECOLLATION, *n. s.* } Lat. *decoll-*  
*collum*, the neck. To behead; a be-  
decapitation. Applied also metaphorically.

A fine piece (a painting) of a *decollation*.  
St. John the Baptist was shown to a Tur-  
ror; he praised many things, but he did

not shrink from the wounded part of the  
*Berke on the Sublime.*

decollation of all hope, annihilated his  
by an immoderacy thereof, destroyed  
*Brown.*

COMPOSE, *v. a.* } *Fr. decomposer ;*  
POSITIVE, *adj.* } *Lat. decompono,*  
COMPOSITION, *n. s.* } *decompositus, of*  
COMPOUND, *v. a. & adj.* } *de and compono,*  
COMPOSE, which see. To compound  
time, to dissolve (chemically), seem  
meaning of both verbs. Decomposite and  
as adjectives, mean compounded a  
Decomposition, the act or practice  
compounding, or a resolution of the parts  
chemically.

of three metals, or more, are too long  
but except there be some compositions of  
only observed, *Bacon.*

metals salts and sulphur are so far from  
primary parts extracted out of the body of  
that they are rather, to borrow a term of  
artisans, *decompound* bodies, made up of the  
and the menstruum, or other additaments  
to disguise it. *Boyle.*

what happens in the compositions and  
of saline particles. *Id.*

should use any compound or *decompound*  
mutual verbs. *Arbuthnot and Pope.*

word stands for a very complex idea, that  
and *decompound*, it is not easy for  
and retain that idea exactly, *Locke.*

red, blue, and green be intercepted, the  
yellow, orange, and red will compound upon  
orange, and then if the intercepted co-  
pass, they will fall upon this compounded  
together with it, *decompound* a white.  
*Newton.*

it becomes bleached by exposure to the  
in a similar manner as metals become  
rusty, viz., by the water on their surface  
exposed, and hence the inflammable mate-  
riaus the colour becomes united with vital  
a new acid, and is washed away.  
*Darwin.*

the salt from the brine, there is a re-  
which is formed by the separation and de-  
of the grosser particles from the pure salt.  
*Sir T. Barnard.*

COMPOSITION, in chemistry, usually signi-  
fies the union or separation of the constituent  
bodies. It differs from mere mechanical  
in that, when a body is chemically de-  
the parts into which it is resolved are  
different from the body itself; but  
mechanical force is applied to it ever  
or if with ever so much violence, the  
particles into which the body may be  
will retain their original nature. Thus,  
is reduced to ever so fine a powder,  
it retains the nature of nitre as much  
pounded mass; but, if oil of vitriol is  
decomposition takes place, and one of  
component parts of the nitre rises in  
a smoking acid spirit, which never  
been suspected to lie hid in the neu-  
See CHEMISTRY.

DECORATE, *a. a.* } *Fr. decorer ; Ital. de-*  
DECORAMENT, *n. s.* } *corature ; from Lat. de-*  
DECORATION, *n. s.* } *coro, of decus, honor. To*  
DECORATER } *adorn, beautify, dress,*  
embellish. Decorament seems synonymous with  
decoration.

The ensigns of virtues contribute to the ornament  
of figures ; such as the decorations belonging to the li-  
beral arts, and to war. *Dryden.*

After all, to inherit is not to acquire, to decorate is  
not to make. *Johnson.*

DECOROUS, *adj.* } *Lat. decorus, decet,*  
DECORUM, *n. s.* } *it becometh. See DE-*  
corate. Becoming, becoming, proper, suitable  
to character or station ; therefore decorum is be-  
coming gravity and seemliness of behaviour.

If your master  
Would have a queen his beggar, you must tell him  
That majesty, to keep decorum, must  
No less beg than a kingdom. *Shakespeare.*

I am far from suspecting simplicity, which is bold  
to trespass in points of decorum. *Wotton.*

Every one is a virtuoso, of a higher or lower de-  
gree : every one pursues a Grace, and courts a Venus  
of one kind or another. The venustums, the hones-  
tums, the decorum of things, will force its way.  
*Shaftesbury.*

Beyond the fixed and settled rules  
Of vice and virtue in the schools,  
The better sort shall set before 'em  
A grace, a manner, a decorum. *Prior*

Gentlemen of the army should be, at least, obliged  
to external decorum : a profligate life and character  
should not be a means of advancement. *Swift.*

It is not so decorous, in respect of God, that he  
should immediately do all the meanest and triflingest  
things himself, without any inferior or subordinate  
minister. *Ray.*

If the prudence of reserve and decorum dictates si-  
lence in some circumstances, in others prudence of a  
higher order may justify us in speaking our thoughts.  
*Berke.*

No band of friends or heirs be there,  
To weep, or wish, the coming blow :  
No maiden, with dishevelled hair,  
To feel, or feign, decorum woe. *Beattie.*

DECORTICATE, *v. a.* } *Lat. decortico.—*  
DECORTICATION, *n. s.* } *To divest of the*  
bark or husk ; to husk ; to peel ; to strip.

Take great barley, dried and *decorticated*, after it is  
well washed, and boil it in water. *Arbuthnot.*

DECOY, *v. a. & n. s.* } *From Goth. duck and*  
DECOY-DUCK, *n. s.* } *kui, or Dut. kooey, a*  
cage. To entrap ducks into a net, or otherwise ;  
and hence to entrap or ensnare generally. The  
decoy-duck is the instrument of lure. See  
below.

A fowler had taken a partridge, who offered to de-  
coy her companions into the snare. *L' Etranger.*

These exuberant productions of the earth became a  
continual decoy and snare : they only excited and fo-  
mented lusts. *Woodward.*

The Devil could never have had such numbers, had  
he not used some as decoys to ensnare others.  
*Government of the Tongue.*

An old dramdrinker is the Devil's decoy. *Berkeley*

There is a sort of ducks, called *decoy-ducks*, that will bring whole flights of fowl to their retirements, where are conveniences made for catching them.

*Mortimer.*

*Decoyed by the fantastic blaze,*

Now lost, and now renewed, he sinks absorbt,  
Rider and horse.

*Thomson.*

A stifled smile of stern vindictive joy  
Brightened one moment Edwin's starting tear,  
But why should gold man's feeble mind decoy  
And innocence thus die by doom severe? *Beattie.*

DECOY, among fowlers, a place made for catching wild fowl. A decoy is generally made where there is a large sheet of water surrounded with wood, and beyond that a marshy and uncultivated country. As soon as the evening sets in, the decoy rises, as they term it, and the wild fowl feed during the night. The decoy-ducks are fed with hemp-seed, which is thrown over the skreens in small quantities, to bring them forwards into the pipes or canals, and to allure the wild fowl to follow, as this seed floats. There are several pipes, as they are called, which lead up a narrow ditch that closes at last with a funnel net. Over these pipes, which grow narrower from their first entrance, is a continued arch of netting suspended on hoops. It is necessary to have a pipe or ditch for almost every wind that can blow, as upon this circumstance it depends which pipe the fowl will take to; and the decoy-man always keeps on the leeward side of the ducks, to prevent his effluvia reaching their sagacious nostrils. All along each pipe, at certain intervals, are placed skreens made of reeds, so situated, that it is impossible the wild-fowl should see the decoy-man, before they have passed on towards the end of the pipe, where the purse-net is placed. The inducement of the wild-fowl to go up one of these pipes is, because the decoy-ducks trained to this lead the way, either after hearing the whistle of the decoy-man, or enticed by the hemp-seed: the latter will dive under water, whilst the wild-fowl fly on, and are taken in the purse net. It often happens, however, that the wild-fowl are in such a state of sleepiness and dozing, that they will not follow the decoy-duck. Use is then generally made of a dog, who is taught his lesson; he passes backwards and forwards between the reed-skreens, in which are little holes, both for the decoy-man to see, and the dog to pass through; this attracts the eye of the wild-fowl, who, not choosing to be interrupted, advance towards the small and contemptible animal, that they may drive him away. The dog all the time, by the direction of the decoy-man, plays among the screens of reeds, nearer and nearer the purse-net; till at last the man appears behind a screen, and the wild-fowl not daring to pass by him in return, nor being able to escape upwards, on account of the net covering, rush on into the net. Sometimes the dog will not attract their attention, if a red handkerchief, or something very singular, is not put about him. The general season for catching fowls in decoy, is from the end of October till February. Decoys are commonly let at a certain annual rent, and yield large quantities of ducks, wigeons, and teal; but they have been diminished

in number by the recent drainage of many fenny parts of England.

DECREASE, *v. a. & n. & n. s.*

DECREMENT, *n. s.*

DECRESCENT, *adj.*

crease. To make less; diminish: as a verb, to grow less; be diminished. The act of growing less: decrement is the lost in decrease; and decrescient, growing

From the moon is the sign of feasts, a light  
creaseth in her perfection. *Eccles.*

He did dishonourable find

Those articles, which did our state demean

See in what time the seeds, set in the time  
the moon, come to a certain height, and how  
fer from those that are set in the decrease of

Unto fifty years, as they said, the heart  
increaseth the weight of one drachm; after  
the same proportion, it decreaseth.

*Braune's Vulgar*

Upon the tropick, and first descension from  
stice, we are scarce sensible of declination;  
clining farther, our decrement accelerates  
apace, and in our last days precipitate into

Rocks, mountains, and the other elevated  
earth, suffer a continual decrement, and grow  
lower. *W.*

By weakening toil and hoary age o'ercome  
See thy decrease, and hasten to thy tomb.

Heat increases the fluidity of tenacious  
of oil, balsam, and honey; and thereby decreaseth  
resistance.

When the sun comes to his tropicks, days  
and decrease but a very little for a great while

They who are now, like the Baptist, burn-  
ishing lights, must like him gradually decreas-  
others are increasing about them.

*Doddridge's M.*

DECREE, *v. a., v. n. & n. s.*

DECRETAL,

DECRETIST,

DECRETORY,

from Lat. *decretum*; qu. Gr. *apru*, to judge  
doom or decide formally or publicly; to  
an edict; to establish by law; resolve. A  
cree is the edict, law, rule, or decision. A  
tal, a book of decrees or laws, and particu-  
the popes: decretist, he who professedly  
or is skilled in the decretals: decretory, a  
decisive, final.

When he made a decree for the rain, and  
for the lightning of the thunder. *Job xxx.*

There went a decree from Caesar Augustus,  
the world should be taxed. *Luk.*

They shall see the end of the wise, and  
understand what God in his counsel hath de-  
him. *W.*

The second room, whose walls

Were painted fair with memorable deeds  
Of magistrates, of courts, of tribunals.  
Of laws, of judgments, and of decretals.

If you deny me, lie upon your law!

There is no force in the decrees of Venice

*Shak.*

Traditions and decretals were made of equal  
and as authentic as the sacred charter itself.

*Howell's Vocal*

that harvest of rebellious rage,

thou flatterest thy decrepit age.

Dryden.

in his staff, and stooping as he goes,

shades his furrowed brows;

this decrepit form arrayed,

entered, and the fruits surveyed. *Pope*.

Mother earth, in this her barrenness and decrep-  
tude of age, can procreate such swarms of curious  
engines.

Bentley.

The charge of witchcraft inspires people with a  
malevolence towards those poor decrepit parts of our  
species, in whom human nature is defaced by infir-  
mity and dotage.

Addison.

Time in advance behind him hides his wings,

And seems to creep decrepit with his age.

Young.

The emaciated and decrepid appearance, with the  
ridiculous and idiotic gestures, of the opium-eaters in  
Constantinople, is well described in the *Memoirs* of  
Baron de Tott.

Darwin.

DECREPITATION, in chemistry, the crackling  
noise which several salts make when suddenly  
heated, accompanied by a violent exfoliation  
of their particles. This phenomenon has been  
ascribed to the 'sudden conversion of the water  
which they contain into steam.' But absolutely  
dry sulphate of barytes decrepitates furiously  
without any possible formation of steam, or any  
loss of weight. The same holds with respect to  
common salt, calcareous spars, and sulphate of  
potash, which contain no water. In fact, it is the  
salts which are anhydrous, or destitute of water,  
which decrepitate most powerfully; those that  
contain water generally enter into tranquil lique-  
faction on being heated. Salts decrepitate, for  
the same reason that glass, quartz, and cast-iron  
crack, with an explosive force, when very sud-  
denly heated; namely, from the unequal expan-  
sion of the laminæ which compose them, in  
consequence of their being imperfect conductors  
of heat.

DECRESCENT, in heraldry, a term signifi-  
ing a representation of the moon when declining  
from the full to the last quarter, her horns being  
turned to the sinister side of the shield.

The *DECRETALS* compose the second part of  
the canon law. The first, acknowledged by all  
the learned as genuine, is a letter of Pope Siri-  
cius, written A. D. 385, to Himerus, bishop of  
Tarragona, in Spain, concerning some disorders  
which had crept into the churches of Spain.  
Gratian published a collection of decretals, con-  
taining all the ordinances made by the popes till  
A. D. 1150. Gregory IX. in 1227, following the  
example of Theodosius and Justinian, formed a  
constitution of his own, collecting into one body  
all the decisions and all the causes which served  
to advance the papal power; which collection of  
decretals was called the *pentateuch*, because it  
contained five books.

DECURY', v. a. Fr. *decrier*, de and cry. See  
CRY. To censure; to blame clamorously, or  
vehemently.

Malice in critics reigns so high,

That for small errors they whole plays decry.

Dryden.

Quacks and imposters are still cautioning us to  
beware of counterfeits, and decry others' cheats only  
to make more way for their own.

Swift.

Those measures, which are extolled by one half of  
the kingdom, are naturally decry'd by the other

Addison.

Then prompt no more the follies you decry,

As tyrants doom their tools of guilt to die.

Johnson.

**DECUMANA**, in ancient history and geography, the name of a nation of the Marse or Marcomanni. See **DECUMATES AGRI**.

**DECUMARIA**, in botany: a genus of the monogynia order, and dodecandria class of plants: CAL. decaphyllous, superior; petals ten; CAPS. eight or nine cells and polyspermous. Species two, both natives of Carolina.

**DECUMATES AGRI**, fields granted on a tithe, as appears from Tacitus, to the Gauls who succeeded the Marcomanni, that had till then proved a check to the Roman conquests, on the Rhine; and hence, probably, their name, people living on the marches or limits of the empire.

**DECUMBENCE**, *n. s.* } Lat. *decumbo*.  
**DECUMBENCY**, } The act of lying  
**DECUMBITURE**, } down; the posture  
 of lying down.

This must come to pass, if we hold opinion they lie not down, and enjoy no *decumbence* at all; for station is properly no rest, but one kind of motion.

*Browne's Vulgar Errors.*

Not considering the ancient manner of *decumbency*, he imputed this gesture of the beloved disciple unto rusticity, or an act of incivility. *Id.*

If but a mile she travel out of town,  
 The planetary hour must first be known,  
 And lucky moment: if her eye but akes,  
 Or itches, its *decumbiture* she takes. *Dryden.*

**DECUPLE**, *adj.* Lat. *decuplus*, tenfold. The same number ten times repeated.

Man's length, that is, a perpendicular from the vertex unto the sole of the foot, is decuple unto his profundity; that is, a direct line between the breast and the spine. *Browne's Vulgar Errors.*

Supposing there be a thousand sorts of insects in this island, if the same proportion holds between the insects of England and of the world, as between plants domestick and exotick, that is, near a *decuple*, the species of insects will amount to ten thousand. *Ray.*

**DECURIA**, or **DECURY**, among the ancient Romans, ten men under one leader, called the decurio. The decuria was the third part of a turma, or the thirtieth of a legion of horse, which consisted of 300 men. The Roman cavalry was divided into decurie, which were subdivisions of a century, each century containing ten decuries.

**DECURIO**, a subaltern officer in the Roman armies, who commanded a decuria.

**DECURION**, *n. s.* Lat. *decurio*. A commander over ten; an officer subordinate to the centurion.

He instituted *decurions* through both these colonies, that is, one over every ten families. *Temple.*

**DECURIONES MUNICIPALES**, magistrates in the Roman provinces, who formed a body to represent the Roman senates in free and corporate towns. They consisted of ten, whence the name; and their duty was to watch over the interests of their fellow citizens, and to increase the revenues of the commonwealth. Their court was called *curio decurionum* and minor *senatus*; and their decrees, called *decreta decurionum*, were marked D.D. at the top. They generally styled themselves *civitatum patres curiales*, and *honorum municipiorum senatores*. They were elected with the same ceremonies as the Roman

senators; they were to be at least years of age, and to be possessed of

**DECURSION**, *n. s.* Lat. *decursum* and *cursum*. The act of running down.

What is decayed by that *decurision* of water supplied by the torrene faces which water brings.

**DECUSSATE**, *v. a.* } Lat. *decussatus*.  
**DECUSSATION**, *n. s.* } intersect at angles.

The act of crossing, or state of being unequal angles. See **OPTICS**.

The crucigerous ensign carried this figure, namely, two bands intersected, but in this case, after the form of an Andrian or cross, which answereth this description.

This it performs by the action of a needle on each side, having the form of the lens up of many fibres, *decussating* one another.

Though there be *decussation* of the rays of the eye, and so the image of the object on the retina, or bottom of the eye, be inverted; yet the object appear inverted, but in its natural posture.

**DECUSSORIUM**, an instrument of surgery, which, by pressing gently on the mater, causes an evacuation of the pituitous matter between it and the cranium, through the operation made by the trepan.

**DEDDINGTON**, a market-town in Northamptonshire, formerly a corporation and horthorough, and of considerable advantage to the neighbourhood are two medicinal springs, one of which is highly impregnated with sulphur. It has a weekly market on Saturday. It is seated on an eminence, seventeen miles from Oxford, and sixty-nine N.N.W. of

**DEDECORATE**, *v. a.* } Lat. *dedecoratus*.  
**DEDECORATION**, *n. s.* } disgrace.  
**DEDECOROUS**, *adj.* } reproachful.

act of disgracing; disgrace. Disgraceful.  
**DEDENTITION**, *n. s.* Lat. *dedentitio*. Shedding of teeth. The loss or shedding of teeth.

Solon divided life into ten septenarij, every one thereof a man received some advantage; in the first is *dedentition*, or falling of teeth. *Browne's Vulgar Errors.*

**DEDHAM**, a town and parish of the county of Essex, situated on the river of the Colne, over which is a bridge. It is six miles from Colchester, and its church is noted for its Gothic steeple. Population about 2200.

**DEDHAM**, a township of Massachusetts, incorporated in 1637.

**DEDHAM**, a town in the above township of Norfolk county, called by the Indians Tiot. It lies on the south side of Cambridge, eleven miles south-west of Boston, and is distant from Philadelphia.

**DEDICATE**, *v. a. & adj.* } Free.  
**DEDICATION**, *n. s.* } Port.  
**DEDICATORY**, } *dicare*.  
**DEDICATOR**, } *dicare*.

*dicare*, from *Deo*, *dicare*, to consecrate; to devote to some duty, or to some pious service; to resign, appropriate, or to a particular person or service.

form, or inscription, used in dedication, says Johnson, with more accuracy, is one who inscribes his iron, with compliment and servility.

offered for dedicating the altar, in the appointed. *Numb. vii. 10.*

A pleasant grove,  
high, full of the stately tree,  
is to Olympick Jove,  
son Alcides. *Spenser.*

A general welcome from his grace  
all: this night he dedicates  
me and you. *Shakespeare.*

Prayers from preserved souls,  
maids, whose names are dedicate  
temporal. *Id.*

be laid to many men's charge, that they  
careless as to trouble bishops with placing  
in the churches; or so scrupulous as, af-  
fian of them, to make any great ado for  
them. *Hooker.*

part, or tithe, being thus assigned unto  
as a thing dedicate and appropriate  
Spelman.

ten elegant books, and dedicated them  
surgley. *Peacham.*

to learn the profession of a soldier, to  
dedicated himself. *Clarendon.*

Bid her instant wed,  
dedicate her remnant life,  
duties of an humble wife. *Prior.*

ould make a real progress in knowledge  
his age as well as youth, the latter  
all as the first fruits, at the altar of truth.  
*Berkeley.*

ould begin my epistle if it were a dedica-  
tion is a friendly letter. *Pope.*

as Apollo on his forked hill,  
known Bubo, puffed by every quill;  
such dedication all day long,  
and he went hand in hand in song. *Id.*

ingenuous truths to unsuccessful satires;  
to fulsome dedications. *Id.*

which solemnities there is none so glorious  
the reign of king Solomon, at the dedi-  
cample. *Addison.*

ing names the weekly scribbler lies,  
wealth the dedicator flies.

*Johnson. Vanity of Human Wishes.*

now, the act of consecrating a temple,  
palace, &c. to the honor of some  
use of dedications is very ancient  
the worshippers of the true God  
the heathens: the Hebrews call it

chah, 'initiation'; which the Greek  
gender *Εγκαίνια*, and *Εγκαίνισμος*;  
In the Scripture we meet with dedi-  
the tabernacle, of altars, of the first

temple, and even of the houses of  
sons. One of the most solemn on  
of the first temple by Solomon,  
ii. 2 Chron. vi. There were also  
of vessels, and of the garments of the

Levites, as well as of persons them-  
heathens had also dedications of  
bars, and images of their gods, &c.

hazzar held a solemn dedication of his  
m. 2. Tacitus, Hist. lib. iv. ch. 53,  
the dedication of the capitol, upon  
it by Vespasian, &c. In modern

times dedication is only applied to a church;  
and is properly the consecration of it performed  
by a bishop, with a number of ceremonies pre-  
scribed by the church. See CONSECRATION.

DEDITION, *n. s.* Lat. *deditio*. The act of  
yielding up any thing; surrendry.

It was not a complete conquest, but rather a *dedition*  
upon terms and capitulations agreed between the con-  
queror and the conquered. *Hale.*

DEDUCE, *v. a.* } Fr. *deduire*; Span.  
DEDUCIBLE, *adj.* } *deduzar*; Ital. *didurre*;  
DEDUCIVE, } Lat. *deduco, deducere*, of  
DEDUCEMENT, *n. s.* } *de* and *duco*. To lead or

DEDUCT, *v. a.* } draw. To draw or de-  
DEDUCTION, *n. s.* } rive a conclusion in  
DEDUCTIVE, *adj.* } argument; to trace a

DEDUCTIVELY, *adv.* } series of events, or con-  
catenations circumstances; to subtract or take  
off; hence to separate, divide. Deducible, and  
deductive, mean consequential, evident to reason.  
Deductive, performing, or drawing a conclusion.  
Deductively, consequentially. Deduction, the  
result of a series of argumentation; a conse-  
quence, as well as a sum or thing subtracted.

Having yet, in his deducted spright,  
Some sparks remaining of that heavenly fire.

*Spenser.*  
Out of scripture such duties may be deduced, by  
some kind of consequence; as by long circuit of de-  
duction it may be that even all truth, out of any truth  
may be concluded. *Hooker.*

I will deduce him from his cradle, through the deep  
and lubric waves of state and court, till he was swal-  
lowed in the gulph of fatality. *Wotton Bach.*

The condition, although deducible from many  
grounds, yet shall we evidence it but from few.

*Brown's Vulgar Errors.*

There is scarce a popular error passant in our  
days, which is not either directly expressed, or deduc-  
tively contained in this work. *Id.*

You have laid the experiments together in such a  
way, and made such deductions from them, as I have  
not hitherto met with. *Boyle.*

All cross and distasteful humours are either ex-  
pressly, or by clear consequence and deduction, forbid-  
den in the New Testament. *Tillotson.*

So far, therefore, as conscience reports any thing  
agreeable to or deducible from these, it is to be hear-  
ened to. *South.*

Praise and prayer are his due worship, and the  
rest of those deducements which I am confident are the  
remote effects of revelation. *Dryden.*

The general character of the new earth is paradisi-  
cal; and the particular character, that it hath no sea:  
and both are apparently deducible from its formation.

*Burnet.*  
Reason is nothing but the faculty of deducing un-  
known truths from principles already known. *Locke.*

All properties of a triangle depend on, and are de-  
ducible from, the complex idea of three lines, includ-  
ing a space. *Id.*

We deduct from the computation of our years that  
part of our time which is spent in incoactivity of in-  
fancy. *Norris.*

All knowledge of causes is deductive; for we know  
none by simple intuition, but through the meditation  
of their effects. *Glanville.*

That by diversity of motions we should spell out  
things not resembled by them, we must attribute to some

secret deduction; but what this deduction should be, or by what medium this knowledge is advanced, is as dark as ignorance. *Id.*

O goddess, say, shall I deduce my rhimes  
From the dire nation in its early times? *Pope.*

Bring then these blessings to a strict account;  
Make fair deductions; see to what they mount. *Id.*

A reflection so obvious, that natural instinct seems  
to have suggested it even to those who never much  
attended to the deductions of reason. *Rogers.*

Lend me your song, ye nightingales! oh pour  
The mazy-running soul of melody  
Into my varied verse! while I deduce,  
From the first note the hollow cuckoo sings,  
The symphony of spring. *Thomson.*

Set before you the moral law of God, with such deductions from it as our Saviour hath drawn, or our own reason, well informed, can make. *Duessa.*

DEE, a river of England and Wales, which rises at the foot of the lofty mountain Arun, in the north-west angle of Merionethshire, from which it runs through a fine valley in a north-east direction to Denbighshire; visits the north-west border of Cheshire, to which it serves as a boundary; then crossing over to Chester, it flows thence to the sea, forming a broad sandy estuary, which separates Cheshire from Flintshire. This river is navigable from Elsemere, in Shropshire, to Chester; but at this city the navigation is interrupted by a ledge of rocks running across the bed of it, and causing a cascade. The Dee falls into the Irish Sea, fifteen miles below Chester.

DEE, a river of Scotland, in Aberdeenshire, which rises from the hill Breirach, and after running through the parishes of Braemar, Crathy, and many others, with vast rapidity, falls into the German Ocean at Aberdeen, 140 miles from its source. It produces, in great plenty, trout, pikes, eels, &c., and affords one of the greatest salmon-fisheries in Scotland. In passing through Braemar, the Dee has a fine cascade, with the additional singularity, that for sixty yards it is confined between two rocks, within so narrow a space, that some persons have ventured to step over it.

DEE (John), a famous mathematician and astrologer, born in London, July 1527. In 1542 he was sent to St. John's College, Cambridge. After five years close application to the mathematics and astronomy, he went to Holland; and, on his return to Cambridge, was elected a fellow of Trinity College, then first erected by king Henry VIII. In 1548 he took the degree of M.A. and left England a second time on account of the suspicion attached to his character as an astrologer. Upon leaving England, he went to the University of Louvain, where he took the degree of LL.D. In 1551 he returned to England, and obtained the rectory of Upton-upon-Severn; but soon after the accession of queen Mary, he was accused of practising against her life by enchantment. He suffered a tedious confinement on this account, and was several times examined; till, in 1555, he obtained his liberty by an order of council. In 1564 he made another voyage to the continent, to present a book he had dedicated to the emperor Maximilian. He returned to England; but, in 1571,

we find him at Lorrain; where, being seriously ill, the queen sent over two physicians for his relief. Having once more returned to his native country, he settled at Mortlake, where he continued his studies with industry and ardor, and collected a considerable library of curious books and MSS. with a vast number of instruments, most of which were afterwards seized by the mob. In 1579 queen Elizabeth was desirous of information concerning the discoveries of her subjects in America, and commanded Mr. Dee to furnish her with geographical descriptions. Accordingly he appeared before her, in three weeks after, with two volumes on which the new countries were geographically described and historically illustrated: these are preserved in the Cottonian library. Dee became acquainted with one Edward Kelley, by whose assistance he performed various magical operations, and affected, it is said, to converse with the spirits of the dead. In 1583 they were both introduced to a nobleman, then in England, named Alphonso, palatine of Siradia, who persuaded him to accompany him to his native country; he visited, successively, Poland, the court of emperor Rodolph II., and Bohemia; but when they returned to England, and Dee was more graciously received by the queen, she made him Warden of Manchester College. In 1604 he returned to his house at Mortlake, where he died in 1608. Queen Elizabeth was much to have made use of Dee, as an occasional political agent: he was evidently a man of considerable genius; but his credulousness to astrological and alchemical knowledge has disgraced his memory. Dr. M. Casaubon, in 1659, 'A true and faithful Relation of the life and death of Dr. John Dee and of his magical operations, passed between Dr. John Dee and some of his friends.' *Sax. 220; B.*

DEED, *n. s.* } *Sax. 220; B.*  
DEEDLESS. } Goth. *dad*; Lat. *factus*.  
says Minsheu; and this from Gr. *deinai*, to give (effect). An action: anything done or performed; a completed legal instrument; fact; reality. Deedless is, inactive without performance of pledges or promises.

And manye men bileueyden, and eslecheinge and tellynge her dedis. *Wiclif.*

The same had not consented to the deed.

They desire, with strange absurdity, the same senate it should belong to give full matter of excommunication, and to absolve pleased them, clean contrary to their deeds and oaths.

The solicitor gave an evidence for a man who was impeached to be fraudulent.

From lowest place when virtuous things  
The place is dignified by the doer's deed.

Speaking in deeds, and deedless in words.

Nor knew I not  
To be with will and deed created

I, on the other side,  
Used no ambition to commend my deeds.  
The deeds themselves, tho' mute, spoke for me.

he thought replied; for words were vain,  
Could only deeds unjust maintain.

*Dryden.*

He excluded from the expectation of re-  
wardable deeds. *Smulridge's Sermons.*

He cried, your female discord end,  
He bustlers' and the song attend. *Pope.*

He in early youth he wont retire  
Sweet Solitude, and taste her charms  
Whom caught the martial fire;  
His name was great in deeds of arms.

*Gay.*

How deep and dark blue Ocean—roll!  
And fleets sweep over thee in vain;  
The earth with ruin—his control  
Is there;—upon the watery plain  
Lies all thy deed. *Byron.*

A celebrated town and fortress of  
in the province of Agra. It was  
the Jauts in the year 1776, by the  
Jaut Khan, after a siege of twelve  
days, and was afterwards restored. Here in  
1782 defeated the Mahratta army, com-  
manded by Holkar, and, took this supposed im-  
punity by storm. At the peace it was  
restored to Raja Runjeet Sing.

*DEEP*, *adj.* & *n. s.* Sax. *depmān*;  
Swed. *doma*; Teut. *doeman*. Gr. of  
*do*. To judge; to determine; to  
consideration: also, as a neuter  
verb, to descend slowly, or by degrees. The  
adverb, and other substantives, follow these  
meanings.

That glen be not demed. For, in what  
you, ye schulen be demed; and, in what  
you, it schal be meten agon to you.

*Wiclif. Matt. 7.*

Thou shalt not of so heavenly matter,  
I know not, envy, or admire,  
Thou envy, let them wonder at her,  
Thou of her desert aspire. *Spenser.*

That famous golden apple grow,  
The Idian ladies disagreed,  
Paris dempt it Venus' due. *Id.*

In the union of religion with justice, that  
thy doom there is neither, where both are  
Hooker.

My love, be thou but true of heart,  
Now? what wicked deem is this?  
*Shakespeare.*

He who to be deemed  
Fondly into Aetna's flames. *Milton.*  
Sings, friend, a deity bestowed;  
So I deem him less than god. *Dryden.*

Nature, disturbed,  
Radiative to have changed her course.  
*Thomson.*

They are gone,  
None: so flows the wave on wave  
To creatures call eternity,  
Themselves the breakers of the ocean,  
But its bubbles, ignorant  
Their foundation. *Byron.*

He she, who in Love's tranquil bower,  
Sweet prize of conquest, not the power;  
He gave her charms to all prefers,  
His heart returns the warmth of hers,  
Of crowds to half her beauty chill,  
Some flirt of fashion fairer still.  
*Dr. T. Brown.*

DEEMSTERS, or DEMSTERS. All contro-  
versies in the Isle of Man are decided without  
process, writings, or any charges, by certain  
judges chosen yearly from among themselves,  
called deemsters, there being two for each divi-  
sion of the island: they sit judges in all courts,  
either for life or property; and, with the advice  
of twenty-four keys, declare what is law in un-  
common emergencies.

DEEP, *adj.* & *n. s.* Sax. *deep*; Goth. and  
DEEP'EN, *v. a.* & *n.* Swed. *diup*; Belg. *diep*,  
DEEP'ENING, *n. s.* old Goth. *dy*, to which  
DEEPLY, *adv.* Serenius traces this word.  
DEEP'-MOUTHED, Mr. Tooke says, 'it is  
DEEP'-MUSING, merely the past participle  
DEEPNESS, *n. s.* of *dippan*, to dip, or

dive.' Profound; having length downwards;  
depressed; sunk; and, because that which is  
deep in the earth is dark, remote, and un-  
disturbed, gloomy; dark-colored; a dark or  
strong shade of any color; voluminous in sound;  
quiet; still. Also, in a metaphorical sense,  
gloomy; remote in meaning; sagacious; far-  
penetrating. Deep, as a substantive, expresses  
the still and quiet part of night; an abyss; and,  
more particularly, the sea. To deepen is, as an  
active verb, to make deep; to sink low or lower;  
to darken; becloud; make gloomy: as a neuter  
verb, to descend slowly, or by degrees. The  
adverb, and other substantives, follow these  
meanings.

And I saigh an angel comynge down fro heuene,  
hauynge the keye of depness and a great chayn in  
his hond. *Wiclif. Apoc. 20.*

And the Lord God caused a deep sleep to fall upon  
Adam. *Genesis ii. 21.*

Deep calleth unto deep at the noise of thy water-  
spouts: all thy waves and thy billows are gone over  
me. *Psalm xlii. 7.*

Some fell upon stony places, and they withered,  
because they had no deepness of earth. *Mat. xlii. 5.*

Hee was close and secrete, a deep dissimuler, lowly  
of countenance, arrogant of heart, outwardly coun-  
tinable where he inwardly hated, not letting to know  
whom he thought to kyll. *Sir T. Moore.*

Yet we did lift up our hearts and voices to God  
above, who sheweth his wonders in the deep. *Bacon.*

To keep his promise with him, he had deeply of-  
fended both his nobles and people. *Id. Henry VII.*

He's meditating with two deep divines.  
*Shakespeare.*

There want not many that do fear,  
In deep of night, to walk by this Herne's oak. *Id.*

This avarice  
Strikes deeper, grows with more pernicious root.  
*Id.*

Behold the English beach  
Pales in the flood with men, with wives and boys,  
Whose shouts and claps outvoice that deep-mouthed sea.  
*Id.*

When I have most need to employ a friend,  
Deep, hollow, treacherous, and full of guile,  
Be he to me. *Id. Richard III.*

Klockings so deeply hath sworn ne'er more to come  
In bawdy-house, that he dares not go home. *Donne.*

If we go down to the great *deep*, the womb of moisture, the well of fountains, the great pond of the world, we know not whether to wonder at the element itself, or the guests which it contains.

*Bishop Hall's Contemplations.*

He in my ear

Vented much policy and projects *deep*  
Of enemies, of aids, battles, and leagues,  
Plausible to the world, to me worth nought.

*Milton.*

And in the lowest *deep*, a lower *deep*,  
Still threatening to devour me opens wide,  
To which the hell I suffer seems a heaven.

*Milton's Paradise Lost.*

For, even in that season of the year, the ways in that vale were very *deep*.

*Clarendon.*

Fear is a passion that is most *deeply* rooted in our natures, and flows immediately from the principle of self-preservation.

*Tillotson.*

You must *deepen* your colours so, that the orpiment may be the highest.

*Peucham.*

What earth in her dark bowels could not keep

From greedy man, lies safer in the *deep*.

*Waller.*

Having taken of the *deeply* red juice of buckthorn berries, I let it drop upon white paper.

*Boyle.*

The gaping gulph low to the centre lies,  
And twice as *deep* as earth is distant from the skies.

*Dryden.*

Thou hast not strength such labours to sustain :  
Drink hellebore, my boy ! drink *deep*, and scour thy brain.

*Id.*

With *deeper* brown the grove was overspread. *Id.*  
Then toils for beasts, and lime for birds were found,  
And *deep-mouthed* dogs did forest walks surround.

*Id.*

If the matter be knotty, and the sense lies *deep*, the mind must stop and buckle to it, and stick upon it with labour and thought, and close contemplation.

*Locke.*

Her gloomy presence saddens all the scene,  
Shades every flower, and darkens every green,  
*Deepens* the murmurs of the falling fountains,  
And breathes a browner horror on the woods.

*Pope.*

But he *deep-musing* o'er the mountains strayed,  
Through many thickets of the woodland shade.

*Id.*

The city of Rome would receive a great advantage from the undertaking, as it would raise the banks and *deepen* the bed of the Tiber.

*Addison.*

Virgin face divine

Attracts the hapless youth through storms and waves,  
Alone in *deep* of night.

*Philips.*

Hills, dales, and forests far behind remain,  
While the warm scent draws on the *deep-mouthed* train.

*Gay.*

While at the bow the watch Arion keeps,  
To shun what cruisers wander o'er the *deep*s.

*Falconer.*

We have to supply means of occupation and subsistence for those, to whom not only England, but Europe is so *deeply* indebted.

*Sir T. Bernard.*

Cosmetic succour won a vermillion hue,  
All soft she spreads, and lo ! the rouge is blue !  
In vain she wipes and washes, frets and scrubs,  
The horrid scarer *deepens* as she rubs.

*Dr. T. Brown.*

Such writings, though they may be lightly passed over by many readers, yet if they make a *deep* impression on one active mind in a hundred, the effects may be considerable.

*Franklin.*

Her hollow womb,

Conceiving thunders, through a thousand *deep*s  
And fiery caverns, roars beneath his foot.  
The hills move lightly, and the mountains smoke,  
For he has touched them.

*Campbell.*

Me they revile, with many ills molested,  
They bid me seek from thee, my Lord, redress  
On God, they say, his hope and trust he rests  
Let God relieve him in his *deep* distress.

*Knox.*

The sweetness of the violet's *deep* blue eye  
Kissed by the breath of heaven, seems colour'd  
skies.

The Convent bells are ringing,  
But mournfully and slow ;  
In the gray square turret swinging,  
With a *deep* sound, to and fro.

The struggle ; vain, against the coiling snake  
And gripe, and *deepening* of the dragon's  
The old man's clench ; the long envenom'd  
Rivets the living links,—the enormous  
Enforces pang on pang, and stifles gasp on gasp.

DEER, *n. s.* Sax. *deor* ; Goth. *diur* ; Teut. *their* ; from Gr. *θηρ* ; and thence probably from Heb. *אריה*, Originally signifying any wild animal now confined to the cervine species.

You have beaten my men, killed my  
broke open my lodge.

The pale that held my lovely *deer*.

I was a stricken *deer* that left the herd  
Long since, with many an arrow *deep* in  
My panting side was charged, when I with  
To seek a tranquil death in distant shades

*Cowper.*

DEER, in zoology. See CERVUS. Of ful animal there are three principal in this country, viz. the stag, *C. elaphus* ; *C. capreolus* ; and *C. dama* the fallow, castrating the males when newly dropped. Mr. Loudon, which is not in the least dangerous, affords the means of having good venison at Christmas, without any other sort of the common grass : they also fatten more the operation must, however, be performed they are quite young. By stat. 16 cap. 30., if any person shall hunt or snare, or kill or wound any red or fallow any forest, chase, &c., whether enclosed or in any closed park, paddock, &c., without the consent of the owner, or be aiding in fence, they shall forfeit £20 for the first offence and also £30 for each deer wounded, taken. A game-keeper offending, to be transported for seven years. By stat. 2 cap. 19, destroying goss, furze, and ferns and chafers, being the covert for subjects the offenders to a penalty from one to three months' imprisonment.

DEER, GREAT, an island of the Red Sea, near the west coast of the island of Long. 119° 35' E., lat. 5° 12' S.

DEER, LITTLE, a rocky islet in the Red Sea, near the west coast of the island of Long. 119° 35' E., lat. 5° 5' S.

DEER ISLAND, or MUDLOWEN, a small island of the Hebrides, near that of Barry.

DEER ISLAND, a small island of Ireland, bay of Galway. Long. 9° W., lat. 53° 20' N. an island on the coast of North America, in the Chesapeake Bay, about eighteen miles in

It is 170 miles north-east of Boston. Long. 73° W., lat. 41° 10' N.

DEFACE, *v. a.* } Fr. *effacer*; Lat. *defacio*, of *de* & *facies*, a face.

DEFA'CEMENT. } To mar, disfigure, ruin, destroy. Defacement is the injury done. De-

face, he who performs or accomplishes it.  
Be shame ye fasten nyle be ye maad as ypo-  
crites unweyful, for thei defacen hem self to seme fas-  
tous to man, treuly I seye to you thei han resseyved  
thei dnyght. *Wiclif. Matt. 6.*

Let this be this image, and how is it defaced? the  
face and Lyons will tell you, that the image of  
God a party, and the defacement sin. *Bacon.*

Give me leave to speak as earnestly in truly com-  
mending it, as you have done in untruly and unkindly  
defacing and slandering it. *Whitgift.*  
Pay him us thousand, and deface the bond. *Shakespeare.*

The first defacer of God's handy work  
Thy want let loose to chase us to our graves. *Id.*

Fatal this marriage,  
Defacing monuments of conquered France, *Id.*

As man was the image of God, so was that earthly  
garment so image of heaven; both the images are  
defaced, both the first patterns are eternal.

*Bishop Hull. Contemplations.*  
While statues, freises, columns broken lie,  
And, though defaced, the wonder of the eye. *Dryden.*

One nobler wretch can only rise,  
To be whose fury shall deface  
The earth's image in this piece. *Prior.*

The very weeds are beautiful, thy waste  
Was rich than other climes' fertility;  
Thy wreck a glory, and thy ruin graced  
With an immaculate charm which cannot be defaced. *Byron.*

DE FACTO, something actually in fact, or  
existing, in contradiction to de jure, where a  
thing is only so in justice: as, a king de facto  
is a person who is actually in possession of a  
crown, and a king de jure is the person who has  
a just right to the crown. It was a distinction  
mentioned at the period of the Revolution.

DEFAILLANCE, *n. s.* Fr. *defaillance*. Fai-  
lure, miscarriage. Obsolete.

The elections were the authors of that unhappy  
defaillance. *Glanville.*

DEFALCATE, *v. a.* } Fr. *defalquer*; from  
DEFALCATION, *n. s.* } *fals, falsis* a sickle.  
To cut off; to lop; to take away part of an al-  
luminate.

The table is set forth with its accustomed bill of  
fare, and without any defalcation. *Addison.*

DEFA'LC, *v. a.* See DEFALCATE. To cut  
off, to lop away.

When a defalcate from some insipid sin, is but to  
make one other more gustful. *Decay of Piety.*

DEFA'CE, *v. a. & n. s.* } Fr. *defamer*; It.  
DEFA'CE, *n. s.* } *diffamare*; Span.

DEFA'CE, *n. s.* } and Port. *defamar*;  
DEFA'CE, *n. s.* } Latin, *defamare*,

DEFA'CE, *adj.* } from Greek, *φῆμη*,  
false, and *de*, privative. To slander, make infamous,

calumniate, deprive of good fame or honor by  
words or deeds. Defamatory, is libellous; tend-  
ing to defame. The substantives are obvious

in their meaning. In Wiclif's translation of the  
New Testament, this word is used in the sense of  
spreading fame or a report; the *de* being only an  
expletive.

And the yghen of hem wearen opened, and Jhe-  
sus throttenyde hem and seide se ye that no man  
wite. But thei gheden out and defameden him  
thorough al that lond. *Wiclif. Matt. 9.*

I heard the defaming of many. *Jer. xx. 10.*

Many doughty knights he in his days  
Had done to death,  
And hung their conquered arms for more defame  
On gallowtrees. *Spenser.*

My guilt thy growing virtues did defame;  
My blackness blotted thy unblemished name. *Dryden.*

Be silent, and beware, if such you see;  
'Tis defamation but to say, that's he. *Id.*

Augustus, conscious to himself of many crimes,  
made an edict against lampoons and satires, and defa-  
matory writings. *Id.*

Defamation is the uttering of contumelious language  
of any one, with an intent of raising an ill fame of  
the party; and this extends to writing, as by defama-  
tory libels; and to deeds, as reproachful postures,  
signs, and gestures. *Ayliffe.*

It may be a useful trial of the patience of the de-  
famed, yet the defamer has not the less crime.  
*Government of the Tongue.*

The most eminent sin is the spreading of defamatory  
reports. *Id.*

They live as if they professed Christianity merely  
in spite, to defame it. *Decay of Piety.*

Many dark and intricate motives there are to de-  
traction and defamation; and many malicious spies are  
searching into the actions of a great man. *Addison.*

DEFAMATION is punishable according to the  
nature of the offence, either by action upon the  
case at common law, or by statute in the eccle-  
siastical court.

DEFATIGATE, *v. a.* } Lat. *defatigo*. To  
DEFATICA'TION, *n. s.* } weary; to tire.

The power of these men's industries, never defati-  
gated, hath been great. *Dr. Maine.*

DEFA'ULT, *v. a. & n. s.* } Old Fr. *default*;  
DEFA'ULTER, *n. s.* } Ital. *diffalta*; Lat.

*defectus, de*, privative, and *facio*, to do. To fail in  
performance. A default is failure of that which  
ought to be done legally or morally. Defect;  
want.

But what man wolde him selfe auise  
His conscience, and nought misuse,  
He maie well at the first excuse  
His God, whiche ever stant in one,  
In him there is default none. *Gower.*

But sith thou mayst not so, give leave a while  
To baser wit, his power therein to spend,  
Whose grosse defaults thy daintie pen may sile  
And unadvised our sights amend. *Spenser. Sonnets.*

Sundrye victories hadde hee, and sometime over  
throws, but neuer in defaulte as for his owne par-  
sonne, either of hardinesse or polytike order. *Sir T. More.*

We, that know what it is to fast and pray,  
Are penitent for your default to-day. *Shakespeare.*

In default of the king's pay, the forces were laid  
upon the subject. *Davies.*

Let me not rashly call in doubt  
Divine prediction : what if all foretold  
Had been fulfilled, but through mine own *default*,  
Whom have I to complain of but myself? *Milton.*

Partial judges we are of our own excellencies, and  
other men's *defaults*. *Swift.*

Cooks could make artificial birds and fishes, in *de-*  
*fault* of the real ones. *Arbuthnot on Coins.*

DEFEASANCE. } Fr. *defausance*; Ital.  
DEFEASIBLE. } *deficiemento*; Law Lat.  
*defeisantia*. The act of annulling or abrogating  
any contract or stipulation.

That hoary king, with all his train,  
Being arrived where that champion stout,  
After his foe's *defausance*, did remain,  
Him goodly greets, and fair does entertain.

He came to the crown by a *defeasible* title, so was  
never settled. *Spenser.*  
*Davies.*

*Defausance* is a condition annexed to an act; as to  
an obligation, a recognizance, or statute, which per-  
formed by the obligee, or the cognisee, the act is dis-  
abled and made void, as if it had never been done.

*Concell.*

DEFEASANCE, or DEFEISANCE. The difference  
between a common condition and a defeasance  
is, that the condition is annexed to, or inserted  
in, the deed; and the defeasance is a deed by it-  
self, concluded and agreed on between the parties,  
and having relation to another deed.

DEFEAT, v. a. & n. s. } Old Fr. *defaite*,  
DEFEATURAL, n. s. } from Lat. *de*, priva-  
tive, and *facere*, to complete an action. To over-  
throw; to frustrate; undo; mar. Shakspeare  
says, 'defeat thy favor,' meaning disguise thy  
face; and defeatures of the face mean disfigura-  
tions of it.

They invaded Ireland, and were *defeated* by the  
lord Mountjoy. *Bacon.*

To his accusations  
He pleaded still not guilty, and alledged  
Many sharp reasons to *defeat* the law. *Shakspeare.*

*Defeat* thy favour with usurped beard.  
Ye gods, ye make the weak most strong. *Id.*

Grief hath changed me,  
And careful hours, with time's deformed hand,  
Hath written strange *defeatures* in my face. *Id.*

Death,

Then due by sentence when thou didst transgress,  
*Defeated* of his seizure many days,  
Given thee of grace. *Milton.*

He finds himself naturally to dread a superior  
Being, that can *defeat* all his designs, and disappoint  
all his hopes. *Tillotson.*

End Marlborough's work, and finish the *defeat*.  
*Addison.*

Oh, more than all!—untired by time :  
Which, nor *defeated* hope, nor baffled will,  
Could render sullen were she ne'er to smile,  
Nor rage could fire, nor sickness fret to vent  
On her one murmur of his discontent. *Byron.*

DEFECATION. n. s. } Lat. *defecatio*. From  
DEFECATE, v. a. & adj. } *de* and *fecer*, *fecis*,  
filth. To purge or make clear from lees; to pu-  
rify.

This liquor was very *defecate*, and of a pleasing  
golden colour. *Boyle.*

The blood is not sufficiently *defecated* or *clarified*,  
but remains muddy, *Harvey.*

We *defecate* the notion from material  
abstract quantity, place, and all kind of corp  
it.

Provide a brazen tube  
Inflex; self-taught and voluntary lies  
The *defecated* liquor, through the vent  
Ascending; then, by downward tract con  
Spouts into subject vessels lovely clear.

DEFECT, n. s. & v. n. } Fr. *def*  
DEFECTION, n. s. } *defetto*;  
DEFECTIVE, adj. } *fecto*;  
DEFECTIVELY, adv. } *tus*, from  
DEFECTIVENESS, n. s. } *tive* and  
DEFECTIBLE, adj. } *tus*, to  
DEFECTIBILITY, } neuter ve

deficient; to fall short of; to fail. De  
substantive, is want; insufficiency;  
that which is proper to a person or th  
hence injury; mistake; error. Defectio  
ing away; an act or course of apos  
abandonment: defectible, imperfect;  
defectibility, a state of deficiency, or imp

This *defection* and falling away from G  
found in angels, and afterwards in men.

We had rather follow the perfection  
whom we like not, than in *defects* rem  
whom we love.

Neither can this be meant of evil gov  
tyrants, but of some perverseness and *defect*  
very nation itself.

Oft 'tis seen  
Our mean secures us, and our mere *defect*  
Prove our commodities. *Id.*

You praise yourself,  
By laying *defects* of judgment to me.  
Errors have been corrected, and *defects*

He was diverted and drawn from his  
general *defection* of the whole realm.

Some lost themselves in attempts above  
yet the enquiries of most *defected* by the  
tired within the sober circumference of kn  
*Broune's Vulgar.*

Nor will polished amber, although it co  
gross and corporeal exhalation, be for  
time *defective* upon the exactest scales.

The extraordinary persons, thus highly  
were for a great part of their lives in  
ible condition.

The corruption of things corruptible dep  
the intrinsic *defectibility* of the connection  
of the parts of things corporal. *Id. Origin of*

Men, through some *defect* in the org  
words, yet fail not to express their univers  
signs.

It will very little help to cure my igno  
this is the best of four or five hypotheses  
which are all *defective*.

If we fall away after tasting of the good  
God, how criminal must such a *defection* be

'Trust not yourself; but, your *defects* to  
Make use of ev'ry friend—and ev'ry foe.

Had this strange energy been less  
*Defect* had been as fatal as excess.

If it renders us perfect in one accom  
generally leaves us *defective* in another.

The lowness often opens the building in  
the *defectiveness* of some other particular  
single part appear in perfection.

more evil owing to our original *defection* and the foolish and evil dispositions that fallen man.

Watts.

which has less of that prudence which is to manage a family, yet the parents and of young married persons are generally heed their advice, which amply supplies

Franklin.

achieved—though barbarous wreck o'er-  
laid, and lay its glories low;  
sculptured ruin rise to day,  
and worshipped in decay.

Sheridan.

your defenders, till at length  
once deliver you,  
wied captives, to some nation  
you without blows.

Id.

A field,  
Which nothing but the sound of Hotespar's name  
Did seem to make *defensible*. Id  
Line and new repair our towns of war  
With men of courage, and with means *defendant*. Id.

This is the day appointed for the combat,  
And ready are the appellants and *defendants*. Id.  
Stout men of arms, and with their guide of power,  
Like Troy's old town *defensi* with Ilion's tower.

Furfox.

My unpreparedness for war testifies for me that  
I am set on the *defensive* part. King Charles.

O sons! like one of us man is become,  
To know both good and evil, since his taste  
Of that *defended* fruit. Milton.

My sister is not so *defenceless* left  
As you imagine: she has a hidden strength  
Which you remember not. Id.

A village near it was *defended* by the river.  
Clarendon.

His majesty, not at all dismayed, resolved to stand  
upon the *defensive* only. Id.

So lawyers, lest the Bear *defendant*,  
And plaintiff Dog, should make an end on't;  
Do stave and tail with writs of error,  
Reverse of judgment, and demurrer. Hudibras.

A very unsafe *defensive* it is against the fury of  
the lion, and surely no better than virginity, or blood  
royal, which Pliny doth place in cock-broth.

Broune's Vulgar Errors.

Severe *defences* may be made against wearing any  
linen under a certain breadth. Temple.

The use of wine is little practised, and in some  
places *defended* by customs or laws. Id.

Undoubtedly there is no way so effectual to betray  
the truth, as to procure it a weak *defender*. South.

If the bishop has no other *defensatives* but excom-  
munication, no other power but that of the keys, he  
may surrender up his pastoral staff. Id.

And here the access a gloomy grove *defends*  
And here the unnavigable lake extends. Dryden.

Do't thou not mourn our power employed in vain,  
And the *defenders* of our city slain? Id.

He would not be persuaded by danger to offer any  
offence, but only to stand upon the best *defensive*  
guard he could. Sidney.

Let me be foremost to *defend* the throne,  
And guard my father's glories and my own.

Pope.

Having often heard Venice represented as one of  
the most *defensible* cities in the world, I informed  
myself in what its strength consists. Addison.

There is nothing so bad which will not admit of  
something to be said in its *defence*. Sterne.

Those high towers, out of which the Romans might  
more conveniently fight with the *defendants* on the  
wall, those also were broken by Archimedes' engines.  
Wilkins's Math. Magic.

I conceive it very *defensible* to disarm an adversary,  
and disable him from doing mischief. Cullier.

If I could not avoid his company, why did I not  
arm myself? Why did I venture *defenceless* into so  
much danger. Mason.

The car of victory, the plume, the wreath,  
*Defend* not from the bolt of fate, the brave.

Boettie.

DEFENDER OF THE FAITH. Fidei defensor, a  
peculiar title belonging to the king of England;  
as Catholicus to the king of Spain, and Christian-

issimus to the king of France, &c. These titles were originally given by the popes. That of Fidei defensor was first conferred by Leo X. on king Henry VIII. for his memorable book against Martin Luther; and the bull for it bears date quinto idus Octob. 1521. It was afterwards confirmed by Clement VII. Chamberlayne says, the title belonged to the kings of England before that time; and for proof hereof appeals to several charters granted to the university of Oxford: so that pope Leo's bull was only a renovation of the ancient right.

DEFER, *v. a. & v. n.* Fr. *differer*; Span. *differir*; Ital. *differire*; Lat. *differre*, from *de* and *fero*, to bear away. To put away for a time; to put off; delay; withhold. It is also used for refer, and thus becomes the parent of the substantive deference.

The commissioners *deferred* the matter unto the earl of Northumberland, who was the principal man of authority in those parts *Bacon.*

He will not long *defer*  
To vindicate the glory of his name  
Against all competition, nor will long  
Endure it. *Milton.*

Neither is this a matter to be *deferred* till a more convenient time of peace and leisure. *Swift.*

Inure thyself betimes to the love and practice of good deeds; for the longer thou *deferrest* to be acquainted with them, the less every day thou wilt find thyself disposed to them. *Atterbury.*

*Defer* the promised boon the goddess cries.

Be wise to-day; 'tis madness to *defer*;  
Next day the fatal precedent will plead;  
Thus on, till wisdom is pushed out of life.

*Young.*

DEFERENCE, *n. s.* Fr. *deference*. Regard; respect. See DEFER.

Virgil could have excelled Varius in tragedy, and Horace in lyric poetry, but out of *deference* to his friends he attempted neither. *Dryden.*

A natural roughness makes a man uncomplaisant to others; so that he has no *deference* for their inclinations, tempers, or conditions. *Locke.*

He may be convinced that he is in an error, by observing those persons, for whose wisdom and goodness he has the greatest *deference*, to be of a contrary sentiment. *Swift.*

*Deference* is the most complicate, the most indirect, and the most elegant of all compliments. *Shenstone.*

Most of our fellow-subjects are guided either by the prejudice of education, or by a *deference* to the judgment of those who, perhaps, in their own hearts, disapprove the opinions which they industriously spread among the multitude. *Addison.*

We ought to show the regard, *deference*, and honour, which belong to superiors; and the candour, integrity, and benevolence, we owe to all. *Mason.*

DEFERENT, *adj. & n. s.* From Lat. *deferens*, of *deferro*. See DEFER. That which carries or conveys. That carries up and down.

The figures of pipes or concaves, through which sounds pass, or of other bodies *deferent*, conduce to the variety and alteration of the sound. *Bacon.*

It is certain, however, it crosses the received opinion, that sounds may be created without air, though air be the most favourable *deferent* of sounds. *Id.*

DEFFAND (Marie du), a French lady, distinguished both for her talents and extensive acquaintance with the literati of the last century, was born in 1696, and was the daughter of Gaspard de Vichy, comte de Champ-Rond. She received an excellent education, but no care seems to have been taken to regulate her temper and moral habits, which displayed throughout her life a disgusting portion of selfishness. In 1714 she married J. B. J. du Deffand, marquis de la Lande, whose ancestors had signalised themselves by their attachment to the dukes of Burgundy. Madame du Deffand left no monument of her abilities except her Correspondence, which has been highly praised by D'Alembert, as affording a model of epistolary style. She died in 1780, having, during the last thirty years of her life, been afflicted with blindness. In 1810 appeared Correspondance ineditte de Madame du Deffand avec D'Alembert, Montesquieu, le president Hault, la Duchesse du Maine; Mesdames de Choiseul, de Stael; le Marquis d'Argentan, Chevalier d'Aydie, &c., 3 vols. 8vo. Her letters to Horace Walpole have also been printed.

DEFIANCE. See DEFY.

DEFICIENCE, or DEFICIENCY, *n. s.* Lat. *deficio*; *de* privative, and *ficio*, to make. Want, imperfection, defect. Deficient; defective, imperfect. See DEFECT.

Figures are either simple or mixed: the simple are either circular or angular; and of circular, either complete, as circles, or deficient, as ovals. *Wheeler.*

O woman! best of all things as the will  
Of God ordained them: his creating hand  
Nothing imperfect or deficient left. *Milton.*

Thou in thyself art perfect, and in thee  
Is no deficiency found. *Id.*

Scaliger finding a defect in the reason of Aristotle, introduceth one of no less *deficiency* himself.

*Brouncker's Vagabond.*

Neither Virgil nor Homer were deficient in any of the former beauties. *Dryden.*

The characters of comedy and tragedy are never made perfect, but always to be drawn with some specks of frailty and *deficiency*, such as they have been described to us in history. *Id.*

Several thoughts of the mind, for which we have either none or very deficient names, are diligently to be studied. *Locke.*

What great *deficiency* is it if we come short of others? *Spratt.*

There is no burden laid upon our posterity, nor any *deficiency* to be hereafter made up by ourselves, which has been our case in so many other subsidies. *Addison.*

DEFILE, *v. a. & n. s.* Compound of DEFIL'ER, *n. s.* } *de* and *foul*. *Sax.*  
DEFIL'EMENT. } *scyllan*. Goth. *fyia*.

Belg. *vayl*; from the Gr. *polluc*, vile, unclean. Minsheu. To make foul, or unclean; to pollute, violate, corrupt, taint; and hence to calumniate.

That which dieth of itself he shall not eat to *defile* himself therewith. *Lev. xiii. 8.*

Forgetfulness of good turns, *defiling* of souls, seditary, and shameless uncleanness. *Wind. xiv. 26.*

There is a thing, Harry, known to many in our land by the name of pitch; this pitch, as ancient writers do report, doth *defile*. *Shakespeare.*

Lust,

By unchaste looks, loose gestures, and foul talk,  
Lies in *defilement* to the inward parts. *Milton.*

God requires rather that we should die, than *defile* ourselves with impieties. *Stillfleet.*

Every object his offence reviled;  
The husband murdered, and the wife *defiled*. *Prior.*

He is justly reckoned among the greatest prelates of this age, however his character may be *defiled* by mean and dirty hands. *Swift.*

Let not any instances of sin *defile* your requests. *Wake.*

The unchaste are provoked to see their vice exposed, and the chaste cannot rake into such silt without danger of *defilement*. *Spectator.*

At the last tremendous day, I shall hold forth in my arms my much wronged child, and call aloud for vengeance on her *defiler*. *Addison.*

Thus when Cambyse led his barbarous hosts  
From Persia's rocks to Egypt's trembling coasts,  
Beside each hallowed fane, and sacred wood,  
And, drunk with fury, swelled the Nile with blood. *Darwin.*

*DEFILER*, v. n. & n. s. Fr. *defile*, from file, a line of soldiers, itself derived from Lat. *filum*, a thread. To pass off in files; a narrow passage; a long narrow pass; a lane.

There is in Oxford a narrow *defile*, to use the military term, where the partisans used to encounter. *Addison.*

It has been mentioned by a writer of military manoeuvres, that *defiling* should be performed with rapidity. *bc.* *Jones.*

*DEFILÉ*, in war, a narrow lane or passage, through which a company of horse or foot can pass only in file, by making a small front; so that the enemy may take an opportunity to stop their march, and to charge them with so much the more advantage, as those in front and rear cannot reciprocally come to the relief of one another.

*DEFINÉ*, v. a. & v. n.

*DEFINABLE*, adj.

*DEFINER*, n. s.

*DEFINITE*, n. s. & adj.

*DEFINITENESS*,

*DEFINITION*,

*DEFINITIVE*,

*DEFINITIVELY*.

*DEFINITIVENESS*.

Fr. and Port. *definir*; Spanish, *definir*; Ital. *diffinire*; Lat. *definire*. From *do* and *finem*, to give a limit. To set a limit by words or actions; to mark a bound. As a neu-

ter verb, to decide, determine. Definable is, capable of being defined. Definer, he who defines; and *definere* who explains or describes a thing. *Definitus*, n, precise; exact; determined; and *definitus* is used as a substantive. *Definiteness*, n. certainty; limitedness. *Definition*, the act or form of defining; the concise description of a thing. *Definitive* is, determinate; express; final. *Definitiveness*, decisiveness.

The unjust judge is the capital remover of landmarks, when he *defineth* armies of lands and properties. *Bacon.*

Idiot in this case of favour,  
Would to wisely *define*. *Shakespeare.*

VOL. VII.

*Definitively* thus I answer you :

Your love deserves my thanks; but my desert,  
Unmeritable, shuns your high request. *Id.*

Bellarmino saith, because we think that the body of Christ may be in many places at once, locally and visibly; therefore we may say and hold, that the same body may be circumspectively and *definitively* in more places at once. *Hall.*

Other authors write often dubiously, even in matters wherein is expected a strict and *definitive* truth. *Bruene's Vulgar Errors.*

*Definitions* do not tell an sit, but quid sit; the first is to be supposed before any *definition* is to be inquired after. *Bishop Taylor.*

The Supreme Nature we cannot otherwise define, than by saying it is infinite; as if infinite were *definable*, or infinity a subject for our narrow understanding. *Dryden.*

I drew my *definition* of poetical wit from my particular consideration of him; for propriety of thoughts and words is only to be found in him. *Id.*

Though *defining* be thought the proper way to make known the proper signification, yet there are some words that will not be *defined*. *Locke.*

Whose loss can'st thou mean,

That doest so well their miseries *define*? *Sidney.*

Either to your labour divers times he repaired, and here, by your means, had the sight of the goddess, who, in a *definite* compass, can set forth infinite beauty. *Id.*

Concerning the time of the end of the world the question is, whether that time be *definable* or *Burnet's Theory.*

So universally does repetition contribute to our pleasure in the fine arts, that beauty itself has been *defined* by some writers to consist in a due combination of uniformity and variety. *Darwin.*

Your God, forsooth, is found

Incomprehensible and infinite;

But is he therefore found? Vain searcher. no;

Let your imperfect *definition* show,

That nothing you, the weak *definer*, know. *Prior.*

When the rings appeared only black and white, they were very distinct and well *defined*, and the blackness seemed as intense as that of the central spot. *Newton.*

What is man? Not a reasonable animal merely; for that is not an adequate and distinguishing *definition*. *Bentley.*

Special bastardy is nothing else but the *definition* of the general; and the general, again, is nothing else but a *definite* of the special. *Ayliffe.*

*DEFINITE*, in grammar, is applied to an article that has a precise determinate signification; such as the article *the* in English, *le* and *la* in French, &c., which fix and ascertain the noun to which they belong; whereas *a*, *an*, *un*, or *une*, mark nothing particular, and are therefore called indefinite. See ARTICLE.

*DEFLAGRABLE*, adj.

*DEFLAGRATION*, n. s.

*DEFLAGRABILITY*, n. s.

From Lat. *deflagrare*, to burn. Combustibility; the quality of taking fire, and burning totally away.

The true reason why paper is not burned by the flame that plays about it, seems to be, that the aqueous part of the spirit of wine, being imbibed by the paper, keeps it so moist, that the flame of the sulphureous parts of the same spirit cannot fasten on it; 1

and therefore, when the *deflagration* is over, you shall always find the paper moist. *Boyle.*

Our chymical oils, supposing that they were exactly pure, yet they would be, as the best spirit of wine is, but the more inflammable and *deflagrable*.

*Id.*

We have spent more time than the opinion of the ready *deflagrability*, if I may so speak, of salt petre did permit us to imagine. *Id.*

DEFLECT', *v. a.* } From Lat. *de* and *flect*  
DEFLECTION', *n. s.* } *to*, to turn. To turn  
DEFLEX'URE, *n. s.* } aside; to deviate.

At some parts of the Azores the needle *deflecteth* not, but lieth in the true meridian: on the other side of the Azores, and this side of the equator, the north point of the needle wheeleth to the west.

*Brown's Vulgar Errors.*

Needles incline to the south on the other side of the equator; and at the very line, or middle circle, stand without *deflection*. *Id.*

For, did not some from a straight course *deflect*, They could not meet, they could no world erect.

*Blackmore.*

As by the cultivation of various sciences, a language is amplified, it will be more furnished with words *deflected* from their original sense.

*Johnson. Preface to Dictionary.*

DEFLECTION OF THE RAYS OF LIGHT, a property which Dr. Hook observed in 1675, and read an account of before the Royal Society, March 18th, the same year. He says he found it different both from reflection and refraction, and that it was made towards the surface of the opaque body, perpendicularly. This property Sir Isaac Newton calls inflection.

DEFLOUR', *v. a.* } Fr. *deflorer*; Span. *des-*  
DEFLOUR'ER, *n. s.* } *florar*; Lat. *deflorare*;  
DEFLOURATION, *n. s.* } from *de* privative and  
*floreo, flos, floris*, a flower. To violate a virgin; hence to mar or deface any thing that is beautiful; to select the most valuable of a number of things. The meaning of the substantives is obvious.

How on a sudden lost,

Defaced, *deflowered*, and now to death devoted!

*Milton.*

The laws of Normandy are, in a great measure, the *defloration* of the English laws, and a transcript of them. *Hale.*

If he died young, he died innocent, and before the sweetness of his soul was *deflowered* and ravished from him by the flames and follies of a froward age.

*Taylor.*

I have often wondered, that those *deflowers* of innocence, though dead to all the sentiments of virtue and honour, are not restrained by humanity.

*Addison.*

DEFLUX', *n. s.* } Lat. *defluxio*, from *de*,  
DEFLUOUS, *adj.* } and *fluo*, to flow.  
DEFLUATION, *n. s.* } flow of humors downwards.

Both bodies are clammy, and bridle the *deflux* of humours, without penning them in too much.

*Bacon.*

We see that taking cold moveth looseness by contraction of the skin and outward parts; and so doth cold, likewise, cause rheums and *defluxions* from the head. *Id.*

DEF'FLY, *adv.* From DEFT, which see. *De-*  
terously; skilfully. Obsolete. Properly *deftly*.

Lo, how finely the graces can it foot

To the instrument;

They dauncen *deftly*, and singen soote,

In their merriment.

*Spenser.*

DE FOE (Daniel), a celebrated miscellaneous writer of the last and preceding century. When king William, to allay the dissent of the people, was obliged to dismiss his Dutch guards, De Foe ridiculed the enemies of government in a well-known poem, called the True-Born Englishman. He next wrote a tract, called the Shortest Way with the Dissenters, a satire on those who now, having the power, wished to retaliate on the Romanists and dissenters those persecutions they had loudly complained of when inflicted on themselves. For this he was sentenced to the pillory, which so little intimidated him, that, in defiance of this usage, he wrote a Hymn to the Pillory. It is unnecessary to enumerate all his publications: the following are the principal. The History of the Plague in 1665; a novel, entitled The History of Colonel Jack; a New Voyage Round the World by a Company of Merchants, printed for Bettesworth, 1725; The History of Roxana; Memoirs of a Cavalier; The History of Mad Flanders; a religious romance, entitled Religious Courtship; and The Life and Adventures of Robinson Crusoe, a well-known tale, of which there have been editions without number. The basis of this popular story was afforded by the real history of a Scottish sailor, Alexander Selkirk, who had been left ashore on the island of Juan Fernandez. Selkirk used to relate his adventures at a coffee-house in London, where money was frequently given him by the company, and where De Foe so often heard them, that out of them he formed the above mentioned history. De Foe's malignant enemies have misrepresented this to his disadvantage. He died at Islington in 1731.

DEFECATION, *n. s.* Lat. from *defecare*, of *de* and *fecare*, foul. The act of making filthy; pollution. This is not an English word; at least, to make it English, it should be written *defecation*, says Dr. Johnson.

What native unextinguishable beauty must be impressed and instinctured through the whole, which the defeculation of so many parts by a bad printer, and worse editor, could not hinder from shining forth.

*Bentley.*

DEFORCEMENT, *n. s.* from force. A withholding of lands and tenements by force from the right owner. 'It may be grounded,' says Blackstone, 'on the disability of the party de-  
forced.'

DEFORM', *v. a. & adj.* } Fr. *déformer*; Ital.  
DEFORM'ED, *part. adj.* } *difformare*; Span.  
DEFORMATION, *n. s.* } *desformar*; Lat. *de-*  
DEFORM'EDLY, *adv.* } *formare*; i. e. *demere*  
DEFORM'EDNESS, *n. s.* } *formam*, to take away  
DEFORM'ITY. } beauty. To disfigure; to mar the form of any thing; to dishonor, disgrace. Deformation is a defacing, disfiguring. Deformity is ugliness, irregularity of form; hence inordinateness, ridiculousness.

I did proclaim,  
That whoso killed that monster most deform,  
Should have mine only daughter to his dame.

Spenser.

I that am curtailed of all fair proportion,  
Cheated of feature by dissembling nature,  
Deformed, unfinished, sent before my time  
Into this breathing world, scarce half made up.

Shakespeare.

Where sits deformity to mock my body,  
To shape my legs of an unequal size,  
To disproportion me in every part.

Id.

No glory is more to be envied than that of due re-  
forming; either church or state, when deformities are  
such, that the perturbation and novelty are not like to  
wound the benefit of reforming.

King Charles.

Why should not man,  
Retaining still divine similitude  
In part, from such deformities be free,  
And for his Maker's image sake, exempt?

Milton.

So spake the grisly terror; and in shape,  
So speaking and so threatening, grew tenfold  
More dreadful and deform.

Id.

Old men with dust deformed their hoary hair.

Dryden.

It is well known what strange work there has been  
in the world, under the name and pretence of reforma-  
tion; how often it has turned out to be, in reality,  
a tinkering sort of business, where, while one hole has been mended, two have  
been made.

Bishop Horne.

Affliction is certain deformity; by forming them-  
selves on fantastic models, the young begin with being  
ridiculous, and often end in being vicious.

Blair.

Had no Power presented me  
The possibility of change, I would  
Have done the best which Spirit may, to make  
to way, with all Deformity's dull, deadly,  
Discouraging, weight upon me, like a mountain.

Byron.

DEFORMITY may be defined, in general, the  
want of uniformity; though it certainly does not,  
as some have supposed, include the want of that  
perfect degree of uniformity that is necessary to  
constitute beauty. Many are the objects in na-  
ture that cannot be said to be beautiful, and yet  
are by no means deformed. Deformity is either  
natural or moral. These are both referred by  
Mr. Hutcheson to an internal sense; and our  
perceptions of them, as he supposes, arise from  
an original arbitrary structure of our own minds,  
by which certain objects, when observed, are  
connected the occasions of certain sensations and  
affections. See BEAUTY.

DEFRAUD, v. a. } Fr. *defraudier*; Span.  
DEFRAUDATION, n. s. } *defraudár*; Lat. *defraus-*  
DEFRAUDER. } *are*, from *de* and *fraus*,  
fraus, deceit. To cheat; deceive; beguile of  
something: always taking of before the thing  
gained. Defraudation is privation by deceit or  
fraud. Defrauder, he who cheats another of his  
property.

My son, defraud not the poor of his living, and  
make not the needy eyes to wait long. Eccl. iv. 1.

Charles seem injured and defrauded of their rights,  
when places, not sanctified as they are, prevent them  
unnecessarily in that pre-eminence and honour.

Houder.

Their imposture are worse than any other, de-  
luding not only into pecuniary defraudations, but the  
irreparable deceit of death. *Brown's Vulgar Errors.*

There they, who brothers better claim disown,  
Expel their parents, and usurp the throne;  
Defraud their clients, and, to lucre sold,  
Sit brooding on unprofitable gold.

Dryden.

There is a portion of our lives which every wise man  
may justly reserve for his own particular use, without  
defrauding his native country.

Id.

But now he seized Briseis' heavenly charms,  
And of my valour's prize defrauds my arms.

Pope.

The profligate in morals grows severe,  
Defrauders just, and sycophants sincere.

Blackmore.

DEFRA'Y, v. a. } Fr. *defrayer*, accord-  
DEFRA'YER, n. s. } ing to Minsheu, from  
DEFRA'YMENT, n. s. } the old Fr. *fredun*, a  
fine. Rather, from *de*, and *fra's*, Fr. expense. It  
may, however, be nothing more than a com-  
pound of the English verb, free. To pay expenses;  
to discharge a charge made; defrayment is, com-  
pensation; satisfaction. Defrayer, he who pays  
or discharges an account.

He would, out of his own revenue, defray the  
charges belonging to the sacrifices. 2 Mac. ix. 16.

It is easy to lay a charge upon any town; but to  
foresee how the same may be answered and defrayed,  
is the chief part of good advice.

Spencer's State of Ireland.

It is long since any stranger arrived in this part,  
and therefore take ye no care; the state will defray  
you all the time you stay; neither shall you stay one  
day the less for that.

Bacon.

DEFT, adj. Sax. *dræft*. Obsolete. Neat;  
handsome; spruce; fitting.

You go not the way to examine; you must call the  
watch that are their accusers.

— Yea, marry, that's the deftest way.

Shakespeare.

Come, high or low,

Thyself and office deftly show. Id. Macbeth.

Loud fits of laughter seized the guests, to see  
The limping god so deft at his new ministry.

Dryden.

The wanton calf may skip with many a bound,  
And my ear, Tray, play deftest feats around. Gay.

Young Colin Clout, a lad of peerless mood,  
Full well could dance, and deftly tune the reed. Id.

DEFUNCT, n. s. & adj. } Lat. *defunctus*,  
DEFUNCT'ION, n. s. } of *de* and *fungor*,  
to finish. In a state of death; dead.

Nature doth abhor to make his couch

With the defunct, or sleep upon the dead.

Shakespeare.

I therefore beg it not

To please the palate of my appetite;  
Nor to comply with heat, the young effects  
In me defunct, and proper satisfaction.

Id.

Here entity and quiddity,

The souls of defunct bodies, &c. Hudibras.

In many cases, the searchers are able to report the  
opinion of the physician who was with the patient, as  
they receive the same from the friends of the defunct.

Grout.

DEFY, v. a. & n. s. } Sax. and Teut. *figan*;  
DEFY'ER, n. s. } Goth. *figu*; Fr. *defier*;  
DEFI'ANCE. } Span. *desufier*; Ital. *dis-*  
*sidere*, from Lat. *dissidere*, to differ; because,

says Minshew, we differ with those whom we defy. To dare; to challenge; to call to combat; to despise; to disdain; to deny. Defy is used as a substantive by Dryden, but not commonly. Defiance is the instrument or mode of challenge; any expression of enmity, abhorrence, or contempt.

I knowe her eke a false dissimulour,  
For finally fortune I do defie.

Chaucer. *Prolog. to Cant. Tales.*

As many fools that stand in better place,  
Garnished like him, that for a tricky word  
Defy the matter. *Shakespeare.*

The fiery Tybalt, with his sword prepared,  
Which, as he breathed defiance to my ears,  
He swung about his head. *Id.*

I once again  
Defy thee to the trial of mortal fight. *Milton.*

How many of us can bid defiance to death, and suggest answers to absent temptations, which when they come home to us, we fly off, and change our note.

Ep. Hall's *Contemplations.*

Nor shall it e'er be said that wight  
With gantlet blue and bates white,  
And round blunt truncheon by his side  
So great a man at arms defied. *Hudibras.*

Is it not then high time that the laws should provide, by the most prudent and effectual means, to curb those bold and insolent defiers of heaven?

Tillotson.

At this the challenger, with fierce defy,  
His trumpet sounds; the challenged makes reply:  
With clangour rings the field, resounds the vaulted sky. *Dryden.*

Nor is it just to bring  
A war without a just defiance made. *Id.*

Nobody will so openly bid defiance to common sense, as to affirm visible and direct contradictions. *Locke.*

Here let the pippin, fretted o'er with gold,  
In fostering straw defy the winter's cold;  
The hardier russet here will safely keep,  
And dusky rennet, with its crimson cheek. *Sheridan.*

And one enormous shout of "Allah!" rose  
In the same moment, loud as even the roar  
Of war's most mortal engines, to their foes  
Hurling defiance. *Byron.*

DEGEN'ERATE, *v. n. & adj.* Fr. *dégénérer*;  
DEGEN'ERACY, *n. s.* Span. *degenerar*; Ital. *dégenerare*; Latin, *degenero*;  
DEGEN'ERATENESS, from *de* and  
DEGEN'ERATIVE, *from de* and  
DEGEN'EROUS, *adj.*  
DEGEN'EROUSLY, *adv.*

*genere errare*, to wander from its kind. To fall off from the virtue or fame of one's ancestors; to decline in station, in kind, or in class: as an adjective, unlike or unequal to ancestry; unworthy; base. Degeneracy, degenerateness, and degeneration are synonymous, and signify a state or act that exhibits degradation from the excellence or honor of ancestors; an apostasy or declining from that which is good. Degenerous is synonymous with degenerated.

Most of these fruits that used to be grafted, if they be act of kernels or stones, degenerate. *Bacon.*

Thou art like enough

To fight against me under Piercy's pay;  
To onc his heels, and curtsy at his frowns,  
To show how much thou art degenerate. *Shakespeare.*

Let not the tumultuary violence of some men's immoderate demands ever betray me to that degenerate and unmanly slavery, which should make me strengthen them by my consent. *King Charles.*

In plants, these transplantations are obvious; as barley into oats, of wheat into darnell; and those grains which generally arise among corn, as cockle, ararus, ogilops, and other degenerations.

Brown's *Vulgar Errors.*

So all shall turn degenerate, all depraved;  
Justice and temperance, truth and faith, forgot!  
One man except. *Milton.*

When wit transgresseth decency, it degenerates into insolence and impiety. *Tillotson.*

'Tis true, we have contracted a great deal of weakness and impotency by our wilful degeneracy from goodness; but that grace, which the gospel offers us for our assistance, is sufficient for us. *Id.*

Fair, tall, his limbs with due proportion joined;  
But of a heavy dull degenerate mind,  
His soul belied the features of his face;  
Beauty was there, but beauty in disgrace. *Dryden.*

Degenerous passion, and for man too base,  
It seats its empire in the female race;  
There rages, and, to make its blow secure,  
Puts flattery on, until the aim be sure. *Id.*

When a man so far becomes degenerate as to quail the principles of human nature, and to be a noxious creature, there is commonly an injury done some person or other. *Locke.*

Degenerate from their ancient brood,  
Since first the court allowed them food. *Swift.*

The ruin of a state is generally preceded by an universal degeneracy of manners, and contempt of religion, which is entirely our case at present. *Id.*

How wounding a spectacle is it to see heroes, like Hercules at the distaff, thus degenerately employed! *Decay of Poetry.*

There is a kind of sluggish resignation, as well as poorness and degeneracy of spirit, in a state of slavery. *Addison.*

When we think of the infinite purity of God, who cannot behold iniquity; and consider the corrupted and degenerate state of human nature; this is apt to make us more apprehensive than is reasonable, of the difficulty of our duty. *Clarke's Sermons.*

Tongues, like governments, have a natural tendency to degeneration; we have long preserved our constitution, let us make some struggles for our language. *Johnson. Preface to Dictionary.*

DEGLUTITION, *n. s.* Lat. *deglutitio*, of *de* and *glutitio*, from Gr. *γλῦζω*, to swallow.—Aimsworth. The act or power of swallowing.

When the deglutition is totally abolished, the patient may be nourished by clysters. *Arbuthnot on Diet.*

DEGLUTITION, in the animal economy, is performed in the first place by means of the tongue, driving the aliment into the oesophagus or gullet, and then, by the contraction of the sphincter, and the fleshy fibres of the oesophagus, which, lessening its aperture, protrude the contents downward into the stomach. In its course, by pressing the glands, the food itself increases the mucus required for lubrication, and thus easily passes without irritation.

DEGRADE, *v. a.* } Fr. *dégrader*; Span.  
DEGRADATION, *n. s.* } *dégradar*; Ital. *degradare*; from Lat. *de* privative, and *gradus* a step.

To deprive of rank or degree; to reduce from a higher to a lower rank or value. Degradation is the state of deprivation so effected; dismissal from trust or office.

He should

Be quite degraded, like a hedgeborn swain,  
That doth presume to boast of gentle blood.

*Shakespeare.*

Nor shalt thou, by descending to assume  
Man's nature, lessen or degrade thine own.

*Milton.*

All higher knowledge in her presence falls  
Degraded.

*Id.*

So deplorable is the degradation of our nature, that whereas before we bore the image of God, we now bear only the image of men.

*South.*

The word degradation is commonly used to denote a deprivation and removing of a man from his degree.

*Ayliffe.*

Time hath not yet the features fixed,  
But brighter traits with evil mixed;  
And there are hues not always faded,  
Which speak a mind not all degraded  
Even by the crimes through which it waded.

*Byron. The Giaour.*

DEGRADATION from political rank or station was, and is, performed in a different manner in the cases of a peer, a priest, a knight, a gentleman, an officer, &c. In the time of Francis I. M. Faugel, a French officer, having, in a cowardly manner, given up Fontarabia, whereof he was governor, was publicly degraded. On this occasion twenty or thirty cavaliers were assembled, before whom this gentleman was accused of treason and breach of faith by a king at arms. Two scaffolds were erected, the one for the judges, heralds, and pursuivants, and the other for the guilty cavalier, who was armed at all points, and his shield placed on a stake before him, with the point reversed. On one side stood twelve priests, in surplices, who sung the psalms of the dead. At the close of each psalm they made a pause, during which the officers of arms stripped the condemned of some piece of his armour, beginning with his helmet, and proceeding thus till he was quite disarmed; which done, they broke the shield in three pieces with a hammer. Then the king at arms emptied a basin of hot water on the criminal's head; and the judges, putting on mourning habits, went to the church. The degraded was then drawn from off the scaffold with a rope tied under his arm-pits, laid on a bier, and covered with mortuary clothes; the priests singing some of the prayers for the dead; and then he was delivered to the civil judge and the executioner of justice. Sir Andrew Harclay, earl of Carlisle, being convicted of treason, 18 Edward II. coram rege: after judgment was pronounced, his sword was broken over his head, and his spurs hewn off his heels, Sir Anthony Lucy, the judge, saying to him: 'Andrew, now thou art no knight, but a knave.' It has been maintained that the king may degrade a peer; but it appears from later authorities, that he cannot be degraded but by act of parliament. We have an instance of ecclesiastical degradation, before condemnation to death, in the eighth century, at Constantinople, in the person of the patriarch Constantine, whom Con-

stantine Copronymus caused to be executed. He was made to ascend the ambo; and the patriarch Nicetas sent some of his bishops to strip him of the pallium, and anathematised him: then they made him go out of the church backwards. When Crammer, archbishop of Canterbury, was degraded by order of queen Mary, they dressed him in episcopal robes, made only of canvas, put the mitre on his head, and the pastoral staff in his hand; and in this attire showed him to the people. They then stripped him piece by piece. Pope Boniface pronounced that six bishops were required to degrade a priest; but the difficulty of assembling so many bishops, rendered the punishment frequently impracticable.

DEGRADED, in heraldry, the name of a cross when it has steps at each end, as *argent*, a cross, degraded *sable*. Name Wentworth.

DEGREE, *n. s.* Fr. *degré*; Port. *grao*; Span. and Ital. *grado*, from Lat. *gradus*, a step. See DEGRADE. Rank; quality; order; place of relative merit or precedence; measure; proportion. Various applied in the sciences: see the following articles. By degrees is, gradually; by steps, or graduated progress.

Surely men of low degrees are vanity, and men of high degrees are a lye: to be laid in the balance, they are altogether lighter than vanity. *Psalm lxxi. 9.*

Methinkith it accordant to reason,  
To tell you alle the condition  
Of ech of them, so as it semid me,  
And which they werin, and of what degree,  
And eke in what array that they wer in;  
And at a knight then woll I first begin.

*Chaucer. Prolog. to Cant. Tales.*

It was my fortune, common to that age,  
To love a lady fair, of great degree,  
The which was born of noble parentage,  
And set in highest seat of dignity.

*Spenser.*

I embrace willingly the ancient received course and conveniency of that discipline, which teacheth inferior degrees and orders in the church of God.

*Hooker.*

The book of Wisdom noteth degrees of idolatry, making that of worshipping petty and vile idols more gross than simply the worshipping of the creature.

*Bacon.*

Degree being vizarded,  
The unworthiest shows as fairly in the mask.

*Shakespeare.*

How vainly do we hope to be perfect at once! It is well for us, if through many degrees we can rise to our consummation. *Bishop Hall. Contemplations.*

A strange harmonious inclination  
Of all degrees to reformation. *Hudibras.*  
In minds and manners, twins opposed we see;  
In the same sign, almost the same degree. *Dryden.*

If all the parts are equally heard as loud as one another, they will stun you to that degree, that you will fancy your ears were torn in pieces. *Id.*

As if there were degrees in infinite,  
And Heaven itself had rather want perfection  
Than punish to excess. *Id.*

Farmers in degree,  
He a good husband, a good housewife she. *Id.*

The several degrees of angels may probably have larger views, and be endowed with capacities able to set before them, as in one picture, all their past knowledge at once.

Locke.

Poesy

Admits of no degrees; but must be still  
Sublimely good, or despicably ill.

Roscommon.

But in no rank, no station, no degree,  
From this contagious taint of sorrow free?

Prior.

Exulting in triumph now swell the bold notes;  
In broken air, trembling, the wild music floats

Till by degrees remote and small,

The strains decay,

And melt away,

In a dying, dying fall.

Pope.

The unusual extension of my muscles on this occasion, made my face ache on both sides to such a degree, that nothing but an invincible resolution and perseverance could have prevented me from falling back to my monosyllables.

Spectator.

A person who is addicted to play or gaming, though he took but little delight in it at first, by degrees contracts a strong inclination towards it.

Id. No. 447.

Men's prejudices, I was sensible, could only be lessened by degrees; and I was firmly of opinion that no change ought ever to be made in quiet times, till the utility of the change was generally acknowledged.

Bishop Watson.

Without hinting the abolition of the order, [I] strongly insisted on the propriety of obliging them to keep exercises in the schools, as the other candidates for degrees did.

Id.

How numerous were the instances in which juries found a compassionate verdict, in direct contradiction to the plain facts clearly established before them, we do not know; but that these evils must all have existed to a considerable degree, no man can doubt.

Sir Samuel Romilly.

DEGREE, in universities, denotes a quality conferred on the students or members thereof, as a testimony of their proficiency in the arts or sciences, and entitling them to certain privileges.

DEGREE OF LATITUDE. See LATITUDE.

DEGREE OF LONGITUDE. See LONGITUDE.

DEHORT, v. a. Lat. *dehortor*; of *de* and *hortor*; Gr. *opw*, *oprai*, to incite. To dissuade.

One severely dehorted all his followers from prostituting mathematical principles unto common apprehension or practice.

Wilkins.

The apostles vehemently dehort us from unbelief.

Ward.

The author of this epistle, and the rest of the apostles, do every where vehemently and earnestly dehort from unbelief: did they never read these dehortations?

Id. on Infidelity.

DEJANIRA, in fabulous history, daughter of Ceneus, king of Aetolia, and wife of Hercules. The centaur Nessus, endeavouring to ravish her, was slain by Hercules with a poisoned arrow. Nessus, when dying, gave his bloody shirt to Dejanira; assuring her that it was a sovereign remedy to cure her husband, if he proved unfaithful. Some time after, Dejanira, suspecting his fidelity, sent him the shirt, which he put on, and was seized with the most excruciating torments. Being unable to support his pains, he retired to Mount Oeta, and erecting a pile of wood set fire

to it, and threw himself into the flames; upon which Dejanira killed herself in despair.

DEICIDE, n. s. From Lat. *deus* and *caedo*. A barbarism of Prior's, meant, we suppose to express the death of Christ as being both God and man. Fully believing that such he was, we cannot think that a sober theology will warrant this term.

Explaining how Perfection suffered pain,  
Almighty languished, and Eternal died;  
How by her patient victor Death was slain,  
And earth profaned, yet blessed with deicide! Prior.

DEJECT, v. a. & adj.

DEJECT EDLY, adv.

DEJECT EDNESS, n. s.

DEJECTION,

DEJECTURE.

Old Fr. *dejecter*: Lat. *dejacere*, from *de*, and *jacio*, to cast. To cast or throw down; depress; debase: hence to afflict in any way; to mar with grief. The adjective signifies cast down; depressed; low in spirits and manner: dejecture, that which is thrown down in a particular way.

No man in that passion doth look strongly, but dejectedly: and that repulsion from the eyes diverteth the spirits, and gives heat more to the ears, and the parts by them.

Bacon.

I am of ladies most deject and wretched,  
That sucked the honey of his music vows.

Shakespeare.

The lowest, most dejected thing of fortune,  
Stands still in esperance; lives not in fear!

Id.

What besides

Of sorrow, and dejection, and despair,

Our frailty can sustain, thy tidings bring.

Milton.

The liver should continually separate the choler from the blood, and empty it into the intestines, where there is good use for it, not only to provoke dejection, but also to attenuate the chyle.

Ray on the Creation.

Oh! If I did but steadfastly believe, I could not be dejected; for I will not injure myself to say, I offer my mind any inferior consolation to supply this loss.

Lady Russell's Letters.

Eneas here beheld, of form divine,

A godlike youth in glittering armour shine,

With great Marcellus keeping equal pace,

But gloomy were his eyes, dejected was his face.

Dryden.

Nor think to die dejects my lofty mind;

All that I dread is leaving you behind!

Pope.

The effects of an alkalescent state, in any great degree, are thirst and a dejection of appetite, which painful things occasion more than any other.

Arbuthnot on Aliments.

A disease opposite to spissitude is too great fluidity, the symptoms of which are excess of animal secretions, as of perspiration, sweat, urine, liquid dejections, looseness, weakness, and thirst.

Id.

Deserted and astonished, he sinks into utter dejection; and even hope itself is swallowed up in despair.

Hopson.

She was dejected; she learned an humbler language, and seemed, if she did not trust in God, at least to have renounced her confidence in herself.

Courier. Private Correspondence.

Or fondly gay, with unambitious glee,

Attempts no prize but favouring Beauty's smile;

Or bear dejected to the lonely grave

The soft despair of unrequited love.

Sherraden.

**DEIFICATION**, *n. s.* From Lat. *deifero*. A solemn oath.

**DEIFORM**, *adj.* From Lat. *deus* and *forma*. Like form.

**DEIFY**, *v. a.* Fr. *deifier*; Lat. *deus*, and *fio* to be. To make like God; to treat as a deity; to praise excessively.

He again so extol and deify the pope, as made him had said in praise of his master and mistress temperate and passable. *Bacon.*

Is the covetous man not to deify his money, and good man not to adore himself. *South.*

Is the fields' delight, the shepherds' love, and on earth, and deified above. *Dryden.*

Is the star of Venus over them, though all graven after his death, as a note that he is a deity. *Id.*

Half of thee is deified before thy death. *Prior.*

He deifies, self-chested of their sound judgment, that he is but man, and deify and fume him so, the season he forgets it too.

*Cowper's Task.*

His stroke with a whole life may glow, the canvas till it shine  
Only so surpassing all below,  
Who kneel to idols so divine  
Commandment, for high Heaven is there  
All, transfigured. *Byron.*

**DEIGN**, *v. a. & n.* Fr. *daigner*; Lat. *dignor*. To be active, to vouchsafe; to think worthy (one condescension). To grant; allow;

Iseno, Norway's king, craves composition; and we deign him burial of his men, adorned ten thousand dollars. *Shakespeare.*

He deign to descend now lower, and relate how no less perhaps avail us known.

*Milton.*

He deign to visit our forsaken seats, many fountains, and the green retreats.

*Pope.*

He deigns his care, to all her children just, richer treasures and an ampler state than at large whatever happy man deigns to use.

*Alonzo.*

Have I none that I can deign to write, as it rained prodigiously last night.

*Cowper. Private Correspondence.*

**DEINGRATE**, *v. n.* Lat. from *de* and *grate*. To take from the whole; to spoil; to

**DEIPHON**, in fabulous history, a brother of Demetrius, and son of Cereus and Metanira. Ceres travelled over the world, she stopped at her brother's court, and undertook to nurse him as he grew up. To reward the hospitality of the goddess, to make his son immortal, she placed him on burning coals, to burn from his mortal particles. The ungrateful growth of Deiphon astonished Metanira, and she went to see what Ceres did to make him immortal. She was frightened to see her son lying on coals; and her shrieks disturbing the operations of the goddess, Deiphon fell in the flames.

**DEISCAL**, or **DEISREAL**, in the ancient British customs, a ceremony originally used in the druidical worship. The temples of the ancient Britons were all circular; and the druids in performing the public offices of their religion, never neglected to make three turns round the altar, from east to west, accompanied by all the worshippers. This was called the deiscal, from *deas*, the right hand, and *sul*, the sun.

**DE'ISM**, *n. s.* } Fr. *deisme*; from Lat. **DE'IST**, *n. s.* } *deus*, God. See **DEITY**  
**DEIST'ICAL**, *adj.* } Strictly, a belief in God, or one God; but generally applied to those who, professing such a belief, reject Revelation. See the following article.

In the second epistle of St. Peter, certain *deists*, as they seem to have been, have laughed at the prophecy of the day of judgment. *Barnet.*

*Deism*, or the principles of natural worship, are only the faint remnants or dying flames of revealed religion in the posterity of Noah. *Dryden.*

Weakness does not fail only to the share of Christian writers, but to some who have taken the pen in hand to support the *deistical* or anti-christian scheme of our days. *Watts.*

**DEISM** may properly be used to denote natural religion, as comprehending those truths which have a real foundation in reason and nature; and in this sense it is so far from being opposite to Christianity, that it is one great design of the gospel to illustrate and enforce it. In this sense some of the deistical writers have affected to use it. But deism popularly signifies that system of religion and morals which is supposed to be derived, by the mere force of reason, from the contemplation of the works of nature, and which rejects revelation. In the article **REVELATION**, we shall present the reader with a complete view of the entire argument on this momentous subject.

**DE'ITY**, *n. s.* Fr. *deité*; Span. and Port. *diudad*; Arm. *dei*, from Lat. *deitus*, *deus*; Gr. *Δεος*, God. Applied also to fabulous gods, and the supposed qualities of a divinity.

**DE JURE**. See **DE FACTO**.

**DELAPEDE** (Bernard Germain Stephen Laville, count), a French naturalist, of noble family, was born at Agen, December 16th, 1750. He was originally destined for the army, and entered while a youth into the Bavarian service. But his love of science soon procured him the post of keeper of the cabinets in the Jardin du Roi at Paris, for which he abandoned the army, and which he held to the period of the revolution. He composed, as a continuation of the great work of Buffon, the Natural History of Oviparous Quadrupeds and Serpents. He much improved the royal cabinet; and in 1798 published the Natural History of Fishes, 5 vols. 4to. But the events of the revolution now distracted his attention. He became a member of the department of Paris, and in 1791 one of the deputies of that city. He was successively secretary and president of the National Assembly; and was one of the very few conspicuous men who steered in safety through the public storms. He was chosen one of the first members of the National Institute, and on the 20th of

January, 1796, carried up an address from a deputation of that body to the council of five hundred, declaring its hatred of royalty. Buonaparte nominated him in 1799 a member of the Conservative Senate; in 1801 he was president of that body, in 1803 grand chancellor of the legion of honor, and in 1804 senator of Paris. He had frequent intercourse with the emperor, to whom he manifested much attachment; but in January, 1814, when the power of his master was tottering, he assumed a new tone, and at the head of the senate recommended peace. At the restoration of the Bourbons he returned to his studies. His lectures at the Garden of Plants were numerous attended. He published several tracts, and contributed to the *Annales du Museum d'Histoire Naturelle*, and other periodical works. His *History of Cetaceous Animals*, which appeared in 1804, was his last work of importance. He died of the small-pox, October 6th, 1825, and his funeral was attended by several peers of France, members of the Institute, &c.

**DELACERATION**, *n. s.* From Lat. *delacero*. A tearing in pieces.

**DELACRYMATION**, *n. s.* Lat. *delacrymatio*. A falling down of the humors; the wateriness of the eyes, or a weeping much.

**DELACTION**, *n. s.* Lat. *delactatio*. A weaning from the breast.

**DELAMBRE**, one of the most distinguished astronomers of our time, born at Amiens in 1749, studied under the abbé Delille, who always remained his friend. He first applied himself to the languages, particularly most of the living ones, and made himself one of the best Hellenists in France. His studies were not directed to astronomy until his thirty-sixth year. He enriched the writings of Lalande with a commentary, and became the friend and pupil of the author, who proudly called him his best work. In 1790, eight years after the discovery of Herschel, Delambre published the tables of that planet, although in that period it had performed but a small part of its eighty years' course. He also constructed tables of Jupiter and Saturn, and of the satellites of Jupiter, which, with several treatises, procured him a reception into the National Institute. He was engaged with Méchain, from 1792 till 1799, in measuring an arc of the meridian from Barcelona to Dunkirk for the verification of which he measured two bases of 6000 toises, one near Melun, the other near Perpignan. See his *Base du Systeme Métrique décimal, ou Mesure de l'Arc du Méridien compris entre les Parallèles de Dunkerque et Barcelonne*, Paris, 3 vols. 4to.; and *Recueil d'Observations Géodésiques faisant Suite au 3me vol. de la Base du Syst. Metr. rédigé par Biot et Arago*. He was made member of the bureau des longitudes. In 1802 Napoleon appointed him inspecteur-général des études, which post he resigned when chosen perpetual secretary of the class of mathematical sciences in 1803. His first tables of the sun were published in 1792; in 1806 appeared his new ones. In 1807 he succeeded Lalande in the college de France, and wrote his *Traité d'Astronomie théorique et pratique*, 3 vols. 4to. 1814, *Histoire de l'Astronomie*

du moyen âge, 1819; *Hist. de l'Astron. moderne*, 1821, 2 vols.; and *Hist. de l'Astron. du 18me. Siècle*, 2 vols.; a collection of works such as no other nation can show. Delambre also distinguished himself, as perpetual secretary of the institute, by the justice and elegance of his eulogies. He died in 1822.

**DELAMERE FOREST**, a forest of England, in Cheshire, north of Chester, near the Weaver; abounding with wood on its hills, fine pasture in its valleys, and fish in its waters.

**DELANY** (Patrick), a learned divine, and ingenious author, was born in Ireland about 1686. He received his education at Trinity College, Dublin, which he entered in the character of a sizer, and afterwards became a fellow. Under the patronage of lord Carteret he obtained preferment in the church; and in 1732 published in London a work entitled *Revelation Examined with Candor*. In 1738 he published his *Reflections upon Polygamy*; and, not long after, the *Life of David, king of Israel*, a work displaying much ingenuity and labor. In 1743 he married a second wife, the widow of a Cornish gentleman, and the following year obtained the deanery of Downe. In 1754 he published *Observations on Lord Orrery's Remarks on the Life and Writings of Swift*, in which there are many curious anecdotes of the latter. Dr. Delany continued writing for the public till a short time before his death; and his *Sermons on Social Duties* are still in estimation. He died at Bath in 1768.

**DELA'PSED**, *adj.* Lat. *delapsus*, with physicians. Bearing or falling down. It is used in speaking of the womb, and the like.

**DELA'TE**, *v. a.* } Lat. *delatus, deferro*. To  
DELA'TION, *n. s.* } carry, convey, or spread  
DELA'TOR, *n. s.* } Applied both literally, and to the carrying intelligence, or an accusation. A delator is an accuser; an informer.

**DELATIN**, a market town of Austrian Galicia, in the circle of Stanislawow. Near the town are extensive quarries of alum slate. It is twenty-four miles from Stanislawow.

**DELAVAL** (Edward Hussey), a chemist and natural philosopher, F. R. S. of London and Gottingen, was a brother of lord Delaval, and died at his house in Parliament-place, Westminster, August 14th, 1814, aged eighty-five. He particularly directed his studies to the chemistry of optics, on which he published many excellent papers in the *Philosophical Transactions*. He was the author of an *Experimental Enquiry into the Cause of the Changes of Colors in Opaque and Colored Bodies*, with an Historical Preface relative to the Parts of Philosophy therein examined, and to the several Arts and Manufactures dependent on them, 1777, 4to.; a work which was translated into French and Italian.

**DELAWAR**, a town of Virginia, in King William's county, situated on the peninsula formed by the confluence of the Pamunky and Mattapony. Twenty miles north by west of Williamsburg.

**DELAWARE**, one of the United States of North America, situated between 38° 29' 30", and 39° 54' N. lat., and between 75° and 75° 45'

being in length ninety miles, and in twenty-five, contains 1700 square miles, or 1,088,000 acres. It is bounded on the north by Pennsylvania, on the south and west by Maryland, and on the east by Delaware Bay and the Atlantic Ocean. It is divided into three counties, Newcastle, Kent, and Sussex; of which the towns are Wilmington, Dover, and Newark. The state of Delaware, the upper part of the county of Newcastle excepted, is a low and level. Large quantities of water, at particular seasons of the year, covering a great portion of the land, render it unfit for the purposes of agriculture, and is injurious to health. The spine, or highest part of the peninsula, runs through the state of Delaware, inclining to the eastern, or Delaware side, there is a remarkable chain of hills from which the waters descend on each side, running on the east to the Delaware, and on the west to the Chesapeake. Many of the plants, growing in these swamps, are such as those found on the highest mountains. It is chiefly an agricultural state. It is a very fertile tract of country; and every part of the United States is better adapted to the different purposes of agriculture, than a greater variety of the most useful crops can be conveniently and plentifully raised. The soil along the Delaware River, and for ten miles into the interior country, is a rich clay, producing large timber. The soil to the swamps above-mentioned, is light, sandy, and of an inferior quality. The surface of the country is very favorable to cultivation. The heights of Christiana are rough and stony; some of the hills of Kent are rough and stony; but descending to the river, and a few others, the lower part is so little diversified as almost to form a level plain. In the county of Newcastle there is a mixture of a strong clay; in Kent there is a considerable mixture of sand; and in Sussex sand altogether predominates. It is the staple of this state. It grows here in perfection, as not only to be particularly adapted to the manufacturers of flour throughout the state, but also to be distinguished and preferred for its superior qualities, in foreign markets. It possesses an uncommon softness, and is very favorable to the manufacture of fine flour, and in other respects far superior to the hard and flinty grains raised in the higher lands. This state also produces plentiful crops of Indian corn, barley, wheat, buck-wheat, and potatoes. It has also in natural and artificial meadows, cotton, and silk, if properly attended to, and the county of Essex exports very large quantities of lumber, obtained from a swamp, on the Indian River, or Cypress Swamp, lying within this state, and partly in the state of Maryland. This morass extends six miles to the west, and nearly twelve from north to south, including an area of nearly 50,000 acres of land. The whole is a high and level land, though undoubtedly the highest

land between the sea and the bay, whence the Pokomoke descends on the one side, and Indian River and St. Martin's on the other. It contains a great variety of plants, trees, wild beasts, birds, and reptiles.

Few minerals are found in this state, except iron; but large quantities of bog iron ore, fit for casting, are obtained in Sussex county, among the branches of Nanticoke River.

The coast of this state is indented with a large number of creeks, or small rivers, which generally have a short course, soft banks, and numerous shoals; and are skirted with very extensive marshes. In the southern and western parts spring the head waters of Pokomoke, Wicomico, Nanticoke, Choptank, Chester, Sassafras, and Bohemia rivers, all falling into the Chesapeake; some of them are navigable twenty or thirty miles into the country, for vessels of fifty or sixty tons.

In the beginning of the seventeenth century, the Dutch, under the pretended purchase made by Henry Hudson, took possession of the lands on both sides the river Delaware, and as early as 1623 built a fort at a place since called Gloucester. In 1627, by the influence of William Usseling, a respectable merchant in Sweden, a colony of Swedes and Finns came over, furnished with all the necessaries for beginning a new settlement, and landed at Cape Henlopen; at which time the Dutch had wholly quitted the country. The latter however returned in 1630, and built a fort at Lewistown, called by them Hoarkill. The year following, the Swedes built a fort near Wilmington, which they called Christian, or Christiansa. Here also they laid out a small town, which was afterwards demolished by the Dutch. The same year they erected a fort higher up the river, upon Tenecum Island, which they called New Gottenburgh, and about the same time built forts at Chester, Elsingburgh, and other places. In 1655 the Dutch, under the command of Peter Stuyvesant, arrived in Delaware River, from New York, then called New Amsterdam, in seven vessels, with 600 or 700 men. They dispossessed the Swedes of their forts on the river, and sent the officers and principal inhabitants prisoners to Holland. The rest submitted to the conquerors, and remained in the country. On the 1st of October, 1664, Sir Robert Carr obtained the submission of the Swedes on the Delaware. Four years after, colonel Nicholls, governor of New York, with his council, on the 21st of April, appointed six persons to assist captain Carr in the government of the country. In 1672 the town of Newcastle was incorporated by the state of New York, to be governed by a bailiff and six assistants. They were to have a free trade, without being obliged to make entry at New York, as had formerly been the practice. Wampum was at this time the principal currency of the country. In 1674 Charles II., by a second patent, dated 29th of June, granted to his brother, the duke of York, all that country called by the Dutch New Netherlands, of which the three counties of Newcastle, Kent, and Sussex were a part. In 1683 the duke of York sold to William Penn the town of Newcastle, with the whole of the

territory which, till the revolution, was called the Three Lower Counties. These three counties were considered as a part of Pennsylvania in matters of government. The same governor presided over both: but the assembly and courts of judicature were different, as to their constituent members, though in form nearly the same. At the revolution they became a distinct territory, called the Delaware State. See AMERICA, NORTH.

The population of the three counties of Delaware, subdivided into hundreds, was thus returned, under the last census:—

## I. NEWCASTLE COUNTY.

	Population in 1820.
Brandywine hundred . . .	2796
Borough of Wilmington . . .	5268
Christiana hundred . . .	3087
Newcastle hundred . . .	2671
Mill Creek hundred . . .	3046
White Clay Creek hundred . . .	1904
Red Lion hundred . . .	929
Pencader hundred . . .	1876
St. George's hundred . . .	2934
Appoquinimink hundred . . .	3385

Total of Newcastle county 27,899

## II. KENT COUNTY.

	Population in 1820.
Duck Creek hundred . . .	3951
St. Jones hundred . . .	1590
Little Creek hundred . . .	1963
Murderhill hundred . . .	7358
Mispillion hundred . . .	5731

Total of Kent county 20,793

## III. SUSSEX COUNTY.

Cedar Creek hundred . . .	2200
Broad Kiln hundred . . .	2731
Lewes and Rehoboth hundred . . .	1657
Indian River hundred . . .	1887
Nanticoke hundred . . .	2335
North-west Fork hundred . . .	3456
Baltimore hundred . . .	2057
Dagsborough hundred . . .	2204
Broad Creek hundred . . .	2599
Little Creek hundred . . .	2851

Total of Sussex county 24,057

Grand total 73,749

The following table shows the population of Delaware, at each of the four national censuses:—

	1790.	1800.	1810.	1820.	Increase in 30 years.	Rate of Increase.
Whites . . .	46,308	49,852	55,361	55,282	8,974	19 per cent.
Slaves . . .	8,887	6,143	4,177	4,509		
Free blacks . . .	3,899	8,278	13,136	12,958	9,059	232 per cent.
Total . . .	59,094	64,273	72,674	72,749	13,645	23 per cent.

DELAWARE, a river of the United States, which rises at two principal heads in the state of New York. It runs towards the south, and in its course forms the boundary line between Pennsylvania, New York, and Jersey; a few miles below Philadelphia it separates the state of Delaware from Jersey, and afterwards loses itself in Delaware Bay. The bay and river are navigable for 155 miles from the sea, up to the great or lower falls at Trenton. A seventy-four gun ship may ascend to Philadelphia; and sloops thirty-five miles further.

DELAWARE BAY, a large bay or arm of the sea, between the Delaware and New Jersey states, and formed by the mouth of the Delaware river, and several other small ones. The bay is about sixty miles long, and thirty miles across in the centre. It opens into the Atlantic north-west and south-east, between Cape Henlopen on the right and Cape May on the left, and its mouth is twenty-one miles broad.

DELAWARE COUNTY, in Pennsylvania, is south-west of Philadelphia county, on Delaware River. It is about twenty-one miles in length, and fifteen in breadth, containing 115,200 acres, and subdivided into nineteen townships; the chief of which is Chester. The number of inhabitants is 9,483. The lands bordering on the Delaware are low, and afford excellent meadows and pas-

turage; and are guarded from inundations by mounds of earth or dykes. Great numbers of cattle are brought here from the western parts of Virginia and North Carolina, to be fattened for supplying the Philadelphia market.

DELAWARE COUNTY, a county in the state of New York, on the head waters of Delaware River, taken from Otsego county. It is bounded on the north by Otsego county, east by Schoharie and Green counties, south by Ulster and Sullivan counties, and west by the state of Pennsylvania, by Broome county, and a small part of Chenango county. Its greatest length is six-four miles, its greatest breadth thirty-five. Its area 1425 square miles, or 912,000 acres, between 41° 51' and 42° 1' north lat. It is of a broken and diversified surface, containing rugged and lofty mountains, with low plains and rich valleys. It sends two members to the house of assembly.

DELAWARES, a nation of North American Indians, formerly numerous and powerful, and who possessed part of Pennsylvania, New Jersey, and New York. This name was given them by the Europeans; for they call themselves *Laxa-lenape*, that is, Indian men; or *Wic-pamunk*, which signifies a people living towards the rising sun. They are now, however, much reduced in number.

*v. a., v. n. & n. s.* } Fr. *delayer*;  
*n. s.* } Span. and Port.  
*d. dilatare*; Lat. *delatio, differre*, from  
 to, to put off. To procrastinate;  
 hence to hinder, frustrate, as well as  
 to qualify: as a neuter verb, to stop;  
 action. As a substantive, inactivity;  
 way. A *delayer* is an habitual pro-

the people saw that Moses *delayed* to  
 out of the mount, the people gathered  
 together unto Aaron. *Exod. xxiii. 1.*

learned that fearful commenting  
 creator to dull *delay*;  
 an impotent and snail-paced beggary.

*Shakespeare. Richard III.*

which must be is mitigated with speed,  
 and with *delay*.

TABLE, *adj.* } Fr. Span. and  
*delectus, n. s.* } Portug. *delectable*;  
*delect, adv.* } Ital. *delectabilis*; Lat.  
*delectus, n. s.* } *delectabilis*, from  
 and *lacto*, to suckle; to delight. De-  
 lecting: state of being pleasing or

the tears for joy and *delectation*.

*Sir T. More.*

Evening now approached:

have also our evening and our morn:  
 for change *delectable*, not need. *Milton.*

brought thee into this delicious grove,  
 when planted with the trees of God;  
 both to behold and taste. *Id.*

his attributes, and the manifestations  
 not only highly *delectable* to the intellec-  
 but are suitably and easily conceivable  
 apparent in his works; as his good-  
 ness, wisdom, and power. *Hale.*

The apple's outward form,

low witless again beguiles;  
 when mouth, and spattering noise,  
 times murch. *Philips.*

DELEGATE, *v. a., n. s. & adj.* } Span. and  
 DELEGATION. } Portug. *dele-*

*gar*; Fr. *deleguer*; Lat. *deligo*; *de* and *lego*; Gr.  
*λεγω*; Heb. *קבל*; to choose. To appoint ano-  
 ther one's representative; to entrust with power.  
 A delegate is the party so commissioned; a  
 vicar. The court of delegates is defined by  
 Ayliffe as a court wherein all causes of appeal,  
 by way of devolution from either of the arch-  
 bishops, are decided.

If after her

Any shall live, which dare true good prefer,  
 Every such person is her *delegate*,  
 To' accomplish that which should have been her fate.

*Donno.*

As God hath imprinted his authority in several  
 parts upon several estates of men, as princes, parents,  
 spiritual guides; so he hath also *delegated* and com-  
 mitted part of his care and providence unto them.

*Taylor.*

Princes in judgment, and their *delegates* judges,  
 must judge the causes of all persons uprightly and im-  
 partially. *Id.*

When bishops divided parishes, and set the pres-  
 byters upon a cure, so many parishes as they distin-  
 guished, so many *delegations* they made.

*Bp. Taylor.*

Why does he wake the correspondent moon  
 And fill her willing lamp with liquid light;  
 Commanding her, with *delegated* powers,  
 To beautify the world, and bless the night?

*Prior.*

Let the young Austrian then her terrors bear,  
 Great as he is, her *delegate* in war. *Id.*

Elect by Jove, his *delegate* of sway,

With joyous pride the summons I'd obey.

*Pope.*

As God is the universal monarch, so we have all  
 the relation of fellow-subjects to him; and can pre-  
 tend no farther jurisdiction over each other, than  
 what he has *delegated* to us. *Decay of Piety.*

The goddess ceased,—the *delegated* throng,  
 O'er the wide plains delighted rush along;  
 In dusky squadrons, and in shining groups,  
 Hosts follow hosts, and troops succeed to troops.

*Dorwin.*

DELEGATES, COURT or, is the great court of  
 appeal in all ecclesiastical causes. These dele-  
 gates are appointed by the king's commission  
 under his great seal, and issuing out of chancery,  
 to represent his royal person, and hear all appeals  
 to him made by virtue of the statute 25 Henry  
 VIII. cap. 19. The commission is usually filled  
 with lords, spiritual and temporal, judges of the  
 courts at Westminster, and doctors of the civil  
 law.

DELENIFICAL, *adj.* Lat. *deleñificus*.  
 Having virtue to assuage or ease pain.

DELETE, *v. a.* }

DELETERIOUS, *adj.* } Lat. *deletus*, from *deleo*,  
*de*, privative, and *lin*, to

DELETTERY,

DELETION, *n. s.* }

paint. To blot out; to ob-  
 literate: deleterious and  
 deletery signify, destructive; poisonous; deletion  
 is razing out or destroying.

Many things, neither *deleterious* by substance in  
 quality, are yet destructive by figure, or some occa-  
 sional activity. *Provins.*

## DEL

Indeed, if there be a total *deletion* of every person of the opposing party or country, then the victory is complete, because none remains to call it in question.  
*Hale.*

Composed of two *deleterious* materials, chlorine and arsenium, the united substance is more beneficial and salubrious, than it is in the power of our limited understanding to comprehend.  
*Sir T. Bernard.*

Nor doctor epidemick,  
Though stored with *deleterious* medicines,  
Which whosoever took is dead since,  
E'er sent so vast a colony  
To both the under worlds as he.  
*Hudibras.*

'Tis pity wine should be so *deleterious*,  
For tea and coffee leave us much more serious.  
*Byron.*

DELF, *n. s.* } From Sax. *delpan*, to dig. A  
DELFE. } mine; a quarry; a pit dug.  
Also a particular kind of earthenware. See below.

Yet could not such mines, without great pains and charges, if at all, be wrought: the *delfs* would be so sown with waters, that no gins or machines could suffice to lay and keep them dry.  
*Ray.*

DELT WARE is a kind of pottery of a baked earth, covered with an enamel or white glazing, which gives it the appearance and neatness of porcelain. Some kinds of it differ much from others, either in sustaining sudden heat without breaking, or in the beauty and regularity of their forms, of their enamel, and of the painting with which they are ornamented. In general, the fine and beautiful enamelled potteries, which approach the nearest to porcelain in external appearance, are least able to resist a brisk fire. Those which best sustain a sudden heat are coarse, and resemble common pottery. The basis of this pottery is clay, which is to be mixed, when too fat, with such a quantity of sand, that the earth shall preserve enough of its ductility to be worked, moulded, and turned easily: and yet that its fatness shall be sufficiently taken from it, that it may not crack or shrink too much in drying or in baking. Vessels formed of this earth must be dried very gently to avoid cracking. They are then to be placed in a furnace to receive a slight baking, which is only meant to give them a certain consistence of hardness. And, lastly, they are to be covered with an enamel or glazing; which is done by putting upon the vessels thus prepared, the enamel, which has been ground very fine, and diluted with water. As vessels on which the enamel is applied are but slightly baked, they readily imbibe the water in which the enamel is suspended, and a layer of this enamel adheres to their surface: these vessels may then be painted with colors composed of metallic calces, mixed and ground with a fusible glass. When they are become perfectly dry, they are to be placed in the furnace, included in cases of baked earth called seggars, and exposed to a heat capable of fusing uniformly the enamel which covers them. This heat, given to fuse the enamel, being much stronger than that which was applied at first to give some consistence to the ware, is also the heat necessary to complete the baking of it. The furnace, and the colors used for painting this ware, are the same as those

## DEL

employed for porcelain, which, it was once exclusively famous for *delft*: its sale has lately been greatly rivalled by the potteries of England and Germany.

DELFT, a fine old town of South Holland, once the capital of Delftland, is situated on a canal called the *Shie*, which, after traversing the city, joins the Meuse at Schiedam, a few miles in circuit. Its figure is a parallelogram, well built, having many handsome and magnificent edifices, particularly the town hall. The city holds a third rank in the country. The magistracy is composed of four burgoes and seven eschevins, jointly with the town or common council, who name the magistrates for three years, and continue him if they please. It has an arsenal generally well supplied, and the country around it is agreeably cultivated, low, that, if great care were not taken, the dykes and sluices in good repair, it soon be overwhelmed. The building of the city was begun in 1075, by Godfrey, after he had conquered Holland; since which it has often experienced the calamities as well as those of fire. In the fourteenth century, Albert de Bavaria, count of Holland, ruined it after a siege of six weeks, disarming the castle, and obliged the citizens to pay 10,000 crowns. In 1536, it was reduced to ashes by a dreadful fire, during which not being able to save her young, was obliged to precipitate herself into the flames. It was soon after rebuilt with greater magnificence, but in 1654 it was again greatly damaged by a fire which destroyed a magazine of gun-powder above 500 houses; since which the powder magazine is built at some distance from the town. Besides the Reformation, Delft had ten religious orders, besides hospitals and chapels. In the present churches is the tomb of William of Orange, who was assassinated in 1672, which is still standing; and in another is the tomb of the celebrated admiral Tromp. The celebrated *Huis* was a native of this place. The *Doelen* is the scene of many of the councils and actions of the Dutch patriots in their resistance against Spain. Delft was formerly celebrated for beer, of which it exported large quantities; and also for a peculiar kind of earthenware, called *delft* ware. Here were made several kinds of fine cloth, as *Butter* and tobacco pipes also are made in considerable quantities. It is nine miles west of Rotterdam, and thirty south of Amsterdam.

DELHI, or DELLI, an extensive city of Hindostan, bound on the north by the Jumna, and on the south by the *Indus*. It is situated in several districts in Northern Hindostan, viz. *seer*, *Dewarcote*, and *Serinagur*; to the west it has the *Agra* and *Ajmeer*; to the east it has the *various ridges of high hills*, which are the *frontiers* of Northern Hindostan; and to the south it is bounded by *Ajmeer* and *Labore*. In length it is estimated at 240 miles, by 180 the average. The greater part of this province is in a wretched state of barrenness, having been the theatre of continued war for many years; and is naturally very sterile, though formerly was

to trees, scarcely one is now to be seen. The River overflows part of the Hurri-  
 ing the rainy season, after which the  
 is excellent, and the country toler-  
 by until the desert to the west be-  
 ed; and, between the Jumna and  
 the soil produces wheat, barley, gram,  
 grains; but it is but little cultivated.  
 necessary to insure any crop, and  
 at ten or twelve cubits from the  
 the earth; yet wells are seen only near  
 villages. This province is, at present,  
 in the following manner. The whole  
 east of the Jumna and round the city  
 with a considerable portion of the  
 quarter, are possessed by the British,  
 ed by a regular civil establishment.  
 west is occupied by the Machery  
 the rajah of Bhurtpoor, and other  
 who are in alliance with, or under  
 of the British. The country to  
 west of the Jumna and south of the  
 is occupied by a number of petty Seik  
 other native princes, in dependence  
 lah, who form a barrier to their terri-  
 quarter. The western frontier has  
 protection, from the immense extent of  
 sterile territory by which it is bounded.  
 the country possessed by the British,  
 has still continue to carry on internal  
 which they have been so long accus-  
 they are extremely expert in the use  
 particularly the lance, sabre, and match-  
 principal towns are Delhi, Sirhind,  
 Barieli, Anopsheher, Merat, His-  
 ma, Pattealah, and Budavoon.  
 a celebrated city, for many years the  
 the foregoing province of Hindos-  
 tan on the banks of the Jumna; and  
 era of its prosperity, is said to have  
 pace of twenty miles in length. Its  
 was Indraput, or Inderprest. It  
 the Mahomedans in the year 1193,  
 Shaddeen Khan, who fixed his resi-  
 and made it his capital. Several suc-  
 cessors increased and improved it till  
 of the sixteenth century, when the  
 arch, Sekunder Lody, made Agra the  
 care, and Delhi was neglected until  
 Homayon from Persia in the year  
 he rebuilt the old fort of Inderprest,  
 it Dreenpunnah, or the asylum of  
 During the reigns of Akbar and Jehan-  
 was again deserted; but the emperor  
 restored it to its former splendor,  
 ed immense sums of money on the  
 tress, the cathedral, mosque, &c.  
 laces, mosques, and colleges, in dif-  
 of the city, were raised by his court  
 ce. The walls which environ the town  
 to repair, and its seven gates erected  
 Its noble gardens were also now  
 of the tombs of the saints and deceased  
 thoroughly repaired. The canal was  
 and deepened, and Delhi was ren-  
 dory of Hindostan. One garden alone  
 have cost a million sterling. The  
 y, apportioned into thirty-six divisions,  
 after some ancient noble family, con-

tains many good brick houses. The streets are  
 narrow, with the exception of two; the first lead-  
 ing from the palace to the Delhi Gate, which is  
 broad and spacious, and had formerly an aque-  
 duct along its whole extent; the second from the  
 palace to the Lahore Gate. The bazars appear  
 in a dilapidated state; but in the Chandeny  
 Choke, or Silver Square, is a number of well-  
 furnished shops. The population has consid-  
 erably increased under the British management, and  
 every species of property is yearly rising in value.  
 The English resident and other gentlemen live  
 in the town, while the troops have a distinct  
 cantonment. Precious stones of a good quality  
 are to be had at Delhi, particularly the large red  
 and black cornelian and peerozas; beedree  
 hookah bottoms are also manufactured here.  
 The cultivation in the neighbourhood is princi-  
 pally on the banks of the Jumna, where corn,  
 rice, millet, and indigo, are raised. It stands in  
 long. 77° 19' E., lat. 28° 43' N.

DELIA, in antiquity, a festival celebrated  
 every fifth year in the island of Delos, in honor  
 of Apollo. It was first instituted by Theseus;  
 who, at his return from Crete, placed a statue  
 there, which he had received from Ariadne. At  
 the celebration they crowned the statue of the  
 goddess with garlands, appointed a choir of  
 music, and exhibited horse-races. They after-  
 wards led a dance, in which they imitated, by  
 their motions, the various windings of the Cretan  
 labyrinth, from which Theseus had extricated  
 himself by Ariadne's assistance.—There was  
 another festival of the same name yearly cele-  
 brated by the Athenians in Delos. It also was  
 instituted by Theseus, who, in going to Crete,  
 made a vow, that he would yearly visit the tem-  
 ple of Delos. The persons employed in this  
 annual procession were called Deliasæ and  
 Theori. The ship, the same which carried The-  
 seus, and had been carefully preserved by the  
 Athenians, was called Theoria and Delias. When  
 the ship was ready for the voyage, the priest of  
 Apollo solemnly adorned the stern with gar-  
 lands, and a universal lustration was made all  
 over the city. The Theori were crowned with  
 laurels, and before them proceeded men armed  
 with axes, in commemoration of Theseus, who  
 had cleared the way from Troezen to Athens,  
 and delivered the country from robbers. When  
 the ship arrived at Delos, they offered solemn  
 sacrifices to the god of the island, and celebrated  
 a festival to his honor. After this they retired  
 to their ship and sailed back to Athens, where  
 all the people of the city ran in crowds to meet  
 them. Every appearance of festivity prevailed  
 at their approach, and the citizens opened their  
 doors and prostrated themselves before the Deli-  
 asæ as they walked in procession. During this  
 festival it was unlawful to put to death any male-  
 factor, and on that account the life of Socrates  
 was prolonged for thirty days.

DELIACUS, among the ancients, denoted a  
 poulterer, or a person who sold fowls, fatted  
 capons, eggs, &c., because the people of Delos  
 first practised this occupation. Cicero, in his  
 Academic Questions, lib. iv., Pliny, lib. x. cap.  
 30, and Columella, lib. viii. cap. 8, mention the  
 Deliaci.

DELIBERATION, *n. s.* Lat. *delibatio*. An essay; a taste.

DELIBERATE, *v. a. & n.*

DELIBERATELY, *adv. & adj.*

DELIBERATENESS, *n. s.*

DELIBERATION,

DELIBERATIVE,

DELIBERATIVENESS.

balance. To weigh in mind; consider: as a neuter verb, says Minshew, to think with a view to choose, or decide; to hesitate. Deliberate is circumspect; wary; advised.

Commonly it is for virtuous considerations, that wisdom so far prevaileth with men as to make them desirous of slow and deliberate death, against the stream of their sensual inclination. *Hooker.*

Echoes are some more sudden, and chop again as soon as the voice is delivered; others are more deliberate, that is, give more space between the voice and the echo, which is caused by the local nearness or distance. *Bacon.*

In deliberatives, the point is, what is evil; and, of good, what is greater; and of evil, what is less. *Id.*

Most Grave-belly was deliberate,  
Not rash, like his accusers. *Shakespeare. Coriolanus.*

They would not stay the fair production of acts, in the order, gravity, and deliberateness befitting a parliament. *King Charles.*

How should we deliberate in our actions, which are so subject to imperfection! since it pleased thine infinite perfection, not out of need, to take leisure. *Bishop Hall. Contemplations.*

If mankind had no power to avoid ill or choose good by free deliberation, it should never be guilty of any thing that was done.

*Hammond's Fundamentals.*

He judges to a hair of little indecencies; knows better than any man what is not to be written; and never hazards himself so far as to fall, but plods on deliberately; and, as a grave man ought, is sure to put his staff before him. *Dryden.*

When love once pleads admission to our heart,  
In spite of all the virtue we can boast,  
The woman that deliberates is lost. *Addison.*

Where men are the most sure and arrogant, they are commonly the most mistaken, and have there given reins to passion, without that proper deliberation and suspense, which can alone secure them from the grossest absurdities. *Hume.*

DELIBERANDI ANNUS, in the Scottish law, a year allowed to an heir, to deliberate whether he will enter as heir or not.

DELIBERATIVE VOICE, a right to give advice and to vote in an assembly. In councils, the bishops have deliberative voices; those beneath them have only consultative voices.

DELICATE, *adj. & n. s.*

DELICACY, *n. s.*

DELICATENESS,

DELICATELY,

DELICIES, *n. s. & pl.*

agreeable to the taste, or the senses generally; nice; of small constituent parts; felicitous in construction; elegant; and, as agreeableness, 'sweet, attractive grace,' is peculiarly feminine: a delicate is an effeminate, though not an agreeable man; and expresses also inability to bear hardships. A delicate is used by the Tatler for a nice man; but the plural substantive, deli-

Fr. *deliberer*; Span. and Por. *deliberar*; Ital. *deliberare*; from *de*, and *libro*, a balance.

cates, expresses, like the old word delicacies, i. e. dainties, viands.

And klugis of the erthe and marchants erthe diden fornycacioun with hir, and thei riche of the vertus of delices of hir. *Wiclif. A.*

The delicate woman among you would venture to set the sole of her foot upon the grass delicateness and tenderness. *Deut. 28.*

Yet was I late promised otherwise,  
This yere to live in welth and delicie. *Sh. T.*

And now he has poured out his idle mind  
In dainty delices and lavish joys,  
Having his warlike weapons cast behind,  
And flowers in pleasures and vain pleasing.

Tender and delicate persons must never be angry, they have so many things to trouble them, which more robust natures have little sense of.

Witness this army, of such mass and chafed  
Led by a delicate and tender prince. *Sh.*

Where they most breed and haunt, I have served,  
The air is delicate.

The shepherd's homely curd,  
His cold thin drink out of his leather bottle,  
All which secure and sweetly he enjoys,  
Are far beyond a prince's delicacies.

These delicacies  
I mean of taste, sight, smell, herbs, flowers,  
Walks, and the melody of birds.

Eat not delicately, or nicely; that is, be not so to thyself or others in the choice of food, or the delicacy of thy sauces.

Persons born of families noble and rich, weakness of constitution from the ease and their ancestors, and the delicacy of their education.

A man of goodly presence, in whom nature took not away delicacy, nor beauty fierceness.

Van Dyck has even excelled him in the softness of his colouring, and in his cabinet pieces.

That which will distinguish his style from other poets, is the elegance of his words, and the sweetness of his verse: there is nothing as turned in all the Roman language.

They their appetites not only feed  
With delicacies of leaves and marshy weed,  
But with thy sickle reap the rankest land.  
Any zealous for promoting the interest of  
try, must conquer all that tenderness and  
which may make him afraid of being sports.

You may see into the spirits of them all,  
your pen from these general notions and  
thought and happy words.

And such, I exclaimed, is the pitiless pain  
Some act by the delicate mind.  
Regardless of wringing and breaking a heart  
Already to sorrow resigned.

But in his delicate form—a dream of Love  
Shaped by some solitary nymph, whose tears  
Longed for a deathless lover from above,  
And maddened in that vision!

To thee, that art the summer's nightingale,  
 The souverain goddesses most deare delight,  
 Why do I send this rustic madrigale,  
 That may thy tunefull care unseason quite.

Id. Faerie Queene.

Come, sisters, cheer we up his sprights,  
 And shew the best of our delights:  
 We'll charm the air to give a sound,  
 While you perform your antic round.

Shakespeare.

O voice! once heard

Delightfully, increase and multiply;

Now death to hear.

Milton.

If happiness had consisted in doing nothing, man  
 had not been employed; all his delights could not  
 have made him happy in an idle life.

Bp. Hall. Contemplations.

The prince's delighting their conceits with confirming  
 their knowledge, seeing wherein the sea-discipline  
 differed from the land service, had pleasing entertain-  
 ment.

Sidney.

This indeed shews the excellency of the object, but  
 doth not altogether take away the delightfulness of the  
 knowledge.

Tillotson.

She was his care, his hope, and his delight,

Most in his thought, and ever in his sight.

Dryden.

Poor insects, whereof some are bees, delighted with  
 flowers, and their sweetness; others beetles, delighted  
 with other kinds of viands.

Locke.

He heard, he took, and pouring down his throat,  
 Delighted, swilled the large luxurious draught.

Pope.

No spring, nor summer, on the mountain seen,  
 Smiles with gay fruits or with delightful green.

Addison.

God has furnished every one with the same means  
 of exchanging hunger and thirst for delightful vigour

Grew.

We love

The king, who loves the law, respects his bounds,  
 And reigns content within them: him we serve  
 Freely and with delight, who leaves us free.

Cowper's Task.

But you will say, it is reasonable to conclude that as  
 all your predecessors, in this vale of misery and hor-  
 ror, have found themselves delightfully disappointed at  
 last, so will you.

Id. Private Correspondence.

When the soft lute in sweet impassioned strains,  
 Of cruel nymphs or broken vows complains,  
 As on the breeze the fine vibration floats,  
 We drink delighted the melodious notes.

Darwin.

Yes, woman, yes! Though in his pompous school  
 Man proud may learn to think and talk by rule,  
 There is the native eloquence, whose grace  
 Flows true to every hour and every place—  
 That with a swain familiar can recal  
 Scenes, persons, things, and spread delight on all.

Dr. T. Brown.

duty. One criminally neglectful of duty : neg-  
lect ; failure of duty.

All ruined, not by war, or any other disaster, but  
by justice and sentence, as *delinquents* and criminals. *Bacon.*

The next news we heard was, the House of Com-  
mons had drawn up a bill against us, wherein they  
declared us to be *delinquents* of a very high nature.

*Bp. Hall's Hard Measures.*

Such an envious state,

That sooner will accuse the magistrate

Than the *delinquent* ; and will rather grieve

The treason is not acted, than believe. *Ben Jonson.*

They never punish the greatest and most intolerable  
*delinquency* of the tumults, and their excitors. *King Charles.*

He had, upon frivolous surmises, been sent for as  
a *delinquent*, and been brought upon his knees. *Dryden.*

Can

Thy years determine like the age of man,  
That thou should'st my *delinquencies* enquire,  
And with variety of tortures tire ?

*Sandy's Paraphrase of Job.*

A *delinquent* ought to be cited in the place or juris-  
diction where the *delinquency* was committed by him. *Ayliffe.*

Does law, so jealous in the cause of man,  
Denounce no doom on the *delinquent* ? None. *Copper's Task.*

DELIQUATE, *v. n. & a.* } *Lat. deliquo* ; from

DELIQUATION, *n. s.* } *de* and *liquo* (*lix*,

DELIQUUM, *n. s.* } liquid) to melt. As

a verb active, to dissolve into liquid : deliquation  
and deliquum both signify a dissolving chemi-  
cally ; and hence fainting or swooning.

It will be resolved into a liquor very analogous to  
that which the chymists make of salt of tartar, left in  
moist cellars to *deliquate*. *Boyle.*

Their conscience was not stark dead, but under a  
kind of spiritual *deliquium*. *Leuth.*

When salt of tartar flows per *deliquium*, it is visible  
that the particles of water are moved towards the  
particles of salt. *Bp. Berkeley.*

Such an ebullition as we are made by the mixture of  
some chymical liquors, as oil of vitriol and deliquated  
salt of tartar. *Cudworth.*

DELIQUESCENT, in chemistry, the prop-  
erty which certain bodies have of attracting  
moisture from the air, and thereby becoming  
liquid. This property is never found but in  
saline substances, or matters containing them.

It is caused by the great affinity which  
substances have with water. The more  
they are, according to Mr. Macquer, the  
they incline to deliquescence. Hence,  
and certain alkalis, which are the most  
are also the most deliquescent salts.  
neutral salts are deliquescent, chiefly  
whose bases are not saline substances.  
the immediate cause of deliquescence is  
traction of the moisture of the air, yet it  
to be discovered, why some salts attract  
moisture powerfully, and others, though  
ingly equally simple, do not attract it  
vegetable alkali, for instance, attracts it  
powerfully ; the mineral alkali, though  
pearance equally simple, does not attract  
all. The acid of tartar by itself does  
tract the moisture of the air ; but if mixed  
borax, which has a little attraction for  
the mixture is extremely deliquescent.

CHEMISTRY.

DELIR'RATE, *v. n.*

DELIRATION, *n. s.*

DELIRAMENT,

DELIRIOUS, *adj.*

DELIRIOUSNESS, *n. s.*

DELIRIUM.

*Lat. delirus*  
*de*, and *lira*  
or furrow)  
mad, because  
person passes  
bounds of

Ainsworth. To dote ; talk wildly or  
liration is the same with delirium, and the  
a more common word, signifying alienated  
mind ; a state of dotage : delirious is light-  
partaking of delirium.

The people about him said he had been  
hours delirious ; but when I saw him he had  
derstanding as well as ever I knew.

On bed

Delirious sang, sleep from his pillow flew.

Too great alacrity and promptness in  
especially in persons naturally of another ten-  
a sign of an approaching delirium ; and in a  
delirium there is a small inflammation of the brain.

*Arbutnotus*

On the 6th, he was all day delirious, and  
mentioned four days afterwards as a sufficing  
liation of the vanity of man. At the inter-  
his deliriousness, he was always saying something  
either of his present or his absent friends.

*Johnson's Life*

How profound

The gulf ! and how the giant element  
From rock to rock leaps with delirious bound,  
Crushing the cliffs, which, downward worn  
With his fierce footsteps, yield in chasms a bound.

DELIRIUM. When the ideas excited  
mind do not correspond to the external  
but are produced by the change induced  
common sensorium, the patient is said to  
a delirium. See MEDICINE.

DELITIGATION, *n. s.* *Lat. delitigare*  
and *litigo* (*lites ago*, to raise strife), to  
rel. A striving or contending. See LITIGATION.

DELIVER, *v. a. & n.*

DELIVERANCE, *n. s.*

DELIVERER,

DELIVERY.

*Fr. deliverer*  
*liber* ; *Ital. lib-*  
from *Lat. liber*  
*liber*, free). To

or set free ; to disburden ; to rescue ; to give  
hence to offer ; present ; exert one's self  
by speech : delivering over and delivering  
are only forms of delivering, and mean the

Deliverance and delivery are the act of delivering; utterance; activity; and the latter has particular application to childbirth.

Thou art he deliver'd to him Barabas, but he took him Jesus, scourg'd to be crucified.

Wiclif. Matt. xxvii.

Thou shalt deliver Pharaoh's cup into his hand, in the former manner, when thou wast his butler.

Gen. xl. 13.

Deliver me not over unto the will of mine enemies, for false witnesses are risen up against me, and such as breathe out cruelty.

Psal. xvii. 12.

Like as a woman with child, that draweth near the time of her delivery, is in pain, and crieth out.

Isaiah xxvi. 7.

He hath sent me to heal the broken-hearted, to send deliverance to the captives, and recovering of sight to the blind, to set at liberty those that are bound.

Luke iv. 18.

He that spared not his own son, but delivered him for us all, how shall he not, with him also, freely give us all things?

Rom. viii. 32.

We allege what the Scriptures themselves do openly speak, for the saving force of the word of God, not with restraint to any certain kind of delivery, but howsoever the same shall chance to be made known.

Hooker.

People have a superstitious belief, that in the labours of women it helpeth to the easy deliverance.

Bacon.

A mirth-moving jest,

Which, his fair tongue, conceit's expositor,

Delivers in such apt and gracious words,

That aged ears play truant at his tales.

Shakespeare.

Are the cities, that I got with wounds,

Downed up again with peaceful words?

Id.

The constables have deliver'd her over to me, and she shall have whipping enough, I warrant her.

Id.

He swore, with sob,

That he would labour my delivery.

Id.

On her fright and fears,

She is something before her time deliver'd.

Id.

DELL, s. s. Goth. dale; Belg. del. See DELLE.

DELLILE (Jacques), a celebrated French jurist, born in 1738, at Clermont in Auvergne, and educated at the university of Paris. He was early distinguished for the brilliancy of his talents, and the extent of his acquirements; but the firm work by which he made known his name to the public, and laid the foundation of his eternal fame, was a translation of Virgil's *Georgics*. This procured him a seat in the *Académie*. His next performance was an original work, entitled *Les Jardins*, which added considerably to his reputation. About this time, M. le Comte de Choiseul Gouffier, who had formerly visited and described the interesting ruins of Greece, was appointed ambassador to Constantinople, and Dellile was persuaded to accompany him to that city. Thence he went to Greece, where he remained for several months, and finally passed over to Asia Minor, where he was first attacked with a distemper in his eyes, that after his return deprived him entirely of sight. At Constantinople he wrote a considerable portion of his poem on *Imagination*, and on his return published a translation of the *Faust*. He continued also to read lectures at Paris, till the revolution obliged him to emigrate into Switzerland. He afterwards visited

VOL VII.

Germany and England. Here, in misfortune and banishment, 'muses of melancholy inspiration,' he composed his poem, *Le Malheur et la Pitié*, to give vent to his oppressed feelings. While he remained in England he also translated the *Paradise Lost*. After France had become settled under Napoleon, he returned to his native land, where he died in the summer of 1813. His other works are *L'Homme des Champs*; ou, *les Georgiques Françaises*, 1808; *Les Trois Regnes de la Nature*, 1809; and *La Conversation*, 1812, a playful satire.

DELOLME (John Louis), born at Geneva, 1740 (according to some in 1745), was a lawyer in his native city, and the part which he took in its internal commotions by a work entitled *Examen des trois Points de Droit*, obliged him to repair to England, where he passed some years in great indigence. He wrote for journals, frequented low taverns, was devoted to gaming and pleasure, and lived in such obscurity, that, when he became known by his work on the English Constitution, and some people of distinction were desirous of relieving him, it was impossible to discover his place of residence. His pride was gratified by this kind of low independence, and he rejected all assistance, excepting some aid from the literary fund, to enable him to return to his country. This was probably in 1775, since, from that time, he calls himself member of the council of the two hundred in Geneva. Among his peculiarities was this, that, although principally occupied with political law, he was never present at a session of parliament. At the time of his arrival in England, aristocratical arrogance and turbulence had reached its highest pitch in Sweden and Poland, and it was feared, not without reason, in England, that the same evils threatened that country. Delolme entered into an investigation of this subject. Hence originated his famous work, *Constitution de l'Angleterre, ou Etat du Gouvernement Anglais comparé avec la Forme républicaine et avec les autres Monarchies de l'Europe* (Amsterdam, 1771); and a work in English, called *A Parallel between the English Government and the former Government of Sweden* (London, 1772). In both, his principal object was to illustrate the excellence and stability of the English constitution. Its character of a spirited eulogium is undoubtedly the reason that the first politicians of England, lord Chatham, the marquis of Camden, and the author of the celebrated *Letters of Junius*, spoke so highly of this work of a foreigner. It contains much ingenious reflection on the English constitution, on the energy arising from a happy union of royal power with popular liberty, and particularly on the value of an independent judiciary and the freedom of the press, subjected to penal laws, but not to a censorship. This work, translated by the author himself into English, in 1772 (fourth English edition, 1784, with observations by doctor Charles Coote), is still considered, in England, one of the most ingenious works on the English constitution. Delolme also published, in English, his *History of the Flagellants, or Memorials of Human Superstition* (1783, 4to.); *An Essay on the Union*

K

with Scotland (London, 1796, 4to.) On the occasion of the will of Mr. Thelluson, he wrote his *Observations on the Power of Individuals to prescribe, by testamentary Dispositions, the particular future Uses to be made of their Property* (London, 1798, 4to.) He died in July, 1806, at a village in Switzerland.

DELOS, an island of the Archipelago, very famous in ancient history. Originally it is reported to have been a floating island, but afterwards it became fixed. It was fabled to have been the birth-place of Apollo and Diana. It was governed by its own kings. Virgil mentions Anius a king of Delos, in the time of the Trojan war, who was afterwards high priest of Apollo, and entertained Æneas with great kindness. The Persians allowed the Delians to enjoy their ancient liberties, after they had reduced the rest of the Grecian islands. In after ages, the Athenians made themselves masters of it; and held it till they were driven out by Mithridates, who granted the inhabitants many privileges, and exempted them from all sorts of taxes. Strabo and Callimachus tell us that Delos was watered by the river Inapus: but Pliny calls it only a spring; and adds, that its waters swelled and abated at the same time with those of the Nile. At present there is no river in the island, but one of the noblest springs in the world, twelve paces in diameter, and enclosed partly by rocks, and partly by a wall. So sacred was the island of Delos held by the ancients, that hostilities were suspended by nations at war, when they happened to meet in this place. Livy tells us, that some Roman deputies being obliged to put in at Delos, in their voyage to Syria and Egypt, found the galleys of Perseus king of Macedon, and those of Eumenes king of Pergamus, anchored in the same harbour, though these two princes were then at war.—Hence this island was a general asylum, and protection was extended to all living creatures, dogs excepted; for this reason it abounded with hares, no dogs being suffered to enter it. No dead body was suffered to be buried in it, nor child to be born there; all dying persons, and women ready to be delivered, were carried over to the neighbouring island of Rhenea. It is now called Sdhli.

DELOS, an extensive city in the above island, which occupies a spacious plain, reaching from the one coast to the other. It was well peopled, and, after the destruction of Corinth, the richest city in the Archipelago; merchants flocking thither from all parts, both on account of the immunity they enjoyed, and of its convenient situation between Europe and Asia. It contained many stately buildings; as the temple of Apollo, Diana, and Latona; an oval basin, made at an immense expense, for the representation of sea-fights; and a most magnificent theatre. The temple of Apollo was, according to Plutarch, begun by Erichthon, the son of Cecrops; but afterwards enlarged and embellished at the common charge of all the states of Greece. It contained an altar built with horns of various animals, so artificially adapted to one another, that they hung together without cement. This altar is said to have been a cube; and the doubling it was a famous mathematical problem

among the ancients. This went under the name of *Problema Deliacum*, and is said to have been proposed by the oracle, to free the country from a plague. The trunk of the famous statue of Apollo, mentioned by Strabo and Pliny, is still an object of great admiration to travellers. It is without head, feet, arms, or legs; but from the parts that yet remain it plainly appears, that the ancients did not exaggerate when they commended it as a wonder of art. It was of gigantic size, though cut out of a single block of marble; the shoulders being six feet broad, and the thighs nine feet round. Plutarch tells us in his *Life of Nicias*, that he caused to be set up near the temple of Delos, a huge palm-tree of brass, which he consecrated to Apollo; and adds, that a violent storm of wind threw down this tree on a Colossean statue raised by the inhabitants of Naxos. Round the temple were magnificent porticoes built at the charge of various princes, as appears from inscriptions which are still very plain.

DELPHI, in ancient geography, a town of Phocis situated on the south-west extremity of mount Parnassus, famous for a temple and oracle of Apollo. A number of goats that were feeding on mount Parnassus, approached a place which had a deep and long perforation. The steam which issued from the hole seemed to inspire the goats, and they played and frisked about in such an uncommon manner, that the goatherd was tempted to lean on the hole, and see what mysteries the place contained. He was immediately seized with a fit of enthusiasm, and his expressions were so wild and extravagant, that they passed for prophecies. This circumstance was soon known, and many experienced the same enthusiastic inspiration. The place was revered; a temple erected to Apollo; and a city built, which became the most illustrious in Phocis. The influence of its oracle controlled the councils of states, directed the course of armies, and decided the fate of kingdoms.

The temple of Apollo was at first a kind of cottage covered with boughs of laurel. An edifice of stone was next erected by Trochilus and Agamenes, which subsisted about 700 years, and was burnt in the year 636 after the destruction of Troy, and A.A.C. 548. It is mentioned in the hymn to Apollo ascribed to Homer. An opulent and illustrious Athenian family, called Alcmæonidae, which had fled from the tyrant Hippias, raised a new temple, the front of which was of Parian marble. The pediments were adorned with Diana, Latona, Apollo, Æsculapius, the setting of the sun, the Muses, and the Thyiades. The architraves were decorated with golden armour; bucklers suspended by the Athenians after the battle of Marathon; and shields taken from the Gauls under Brennus. In the portico were inscribed the celebrated maxims of the seven sages of Greece. There was an image of Homer, and in the cell was an altar of Neptune, with statues of the Fates, and of Jupiter and Apollo. Near the hearth before the altar, stood the iron chair of Pindar. In the sanctuary was an image of Apollo gilded. The enclosure was of great extent, and filled with treasures (in which many cities had con-

erated tenths of spoils taken in war), and with the public donations of renowned states in various ages.

The oracles were delivered by a priestess called *Pithia*, who received the prophetic influence in the following manner. A lofty tripod, decked with laurel, was placed over the aperture, whence the sacred vapor issued. The priestess, after washing her body, and especially her hair, in the cold water of *Castalia*, mounted on it, to receive the divine effluvia. She wore a crown of laurel, and shook a sacred tree which grew close by. Having mounted the tripod, she was seized with the most violent paroxysms of frenzy, and in that situation delivered her oracular responses; and if she declined acting, they dragged her by force to the tripod. The habit of her order was that of virgins. The season of enquiry was in the spring, during the month called *Bonus*; after which *Apollo* was supposed to visit the altars of the *Hyperboreans*.

The city of *Delphi* arose in the form of a theatre, upon the winding declivity of *Parnassus*, whose fantastic tops overwhelmed it like a canopy on the north, while two immense rocks rendered it inaccessible on the east and west, and the rugged and shapeless mount *Cirphis* defended it on the south. The foot of *Cirphis* was washed by the rapid *Plistus*, whose waters fell into the sea a few leagues from the city. This inaccessible and romantic situation from which the place derived the name of *Delphi*, or solitary, was rendered still more striking by the measurable echoes which multiplied every sound, and increased the ignorant veneration of visitants for the god of the oracle. The principal inhabitants of *Delphi*, claiming an immediate relation to *Apollo*, were entitled to officiate in the rites of his sanctuary; and even the inferior ranks were continually employed in dances, festivals, processions, and all the gay pageantry of an elegant superstition. *Delphi*, lying in the centre of Greece, and, as was then imagined, of the universe, was conveniently situated for the conflux of votaries. It was customary for those who consulted the oracle to make rich presents to the god: his servants and priests feasted on the numerous victims which were sacrificed to him; and the rich magnificence of his temple had become proverbial even in the age of *Homer*. In aftertimes *Cræsus*, the wealthiest of monarchs, was particularly magnificent in his donations. The sacred repository was, therefore, often the object of plunder. *Neoptolemus* the son of *Achilles* was slain while sacrificing, by a priest, on suspicion of a design of that kind. *Xerxes* divided his army at *Platææ*, and proceeded with the main body through *Bœotia* into *Attica*, while a part, keeping *Parnassus* on the right, advanced along *Saronic* to *Delphi*; but they were seized with a panic when near *Ithum*, and fled. The divine house was seized by the *Phocians* under *Philomelus*, and dissipated in a long war with the *Amphicorynæans*. The Gauls experienced a reception like that of the *Persians*, and manifested similar dismay and superstition. *Sylla*, more wily, wanting money to pay his army, sent to borrow from the holy treasury; and when his

messenger would have frightened him, by reporting that the sound of a harp had been heard from within the sanctuary, he replied, it was a sign that the god was happy to oblige him. But the temple, in the time of *Strabo*, was reduced to extreme poverty; and *Apollo* was silent. *Nero* attempted to drive him, as it were by violence, from the cavern; killing men at the mouth, and polluting it with blood. An oracle of *Apollo* at another place informed the consultants, that he should no more recover the power of utterance at *Delphi*, but enjoined the continuance of the accustomed offerings.

Yet the store appeared inexhaustible; and the robbery of *Nero*, who removed 500 brazen images, was rather regretted than perceived. The holy treasuries, though empty, served as memorials of the piety and glory of the cities which erected them. The *Athenian* portico preserved the beaks of ships and the brazen shields, trophies won in the *Peloponnesian* war; and a multitude of curiosities remained untouched. *Constantine the Great*, however, proved a more fatal enemy to *Apollo* and *Delphi*, than either *Sylla* or *Nero*. He removed the sacred tripods to adorn the *Hippodrome* of his new city; where these, with the *Apollo*, the statues of the *Heliconian* muses, and the celebrated *Pan*, dedicated by the Greek cities after the war with the *Medes*, were extant when *Sozomen* wrote his history. Afterwards *Julian* sent *Oribasius* to restore the temple; but he was admonished by an oracle to represent to the emperor the deplorable condition of the place. 'Tell him,' said the oracle, 'that the well-built court is fallen to the ground. *Phœbus* has not a cottage, nor the prophetic laurel, nor the speaking fountain, *Cassotis*; and even the beautiful water is extinct.'

**DELPHINIA**, a new alkali, procured by the action of dilute sulphuric acid, on the bruised unshelled seeds of the larkspur. The solution of sulphate, thus formed, is precipitated by subcarbonate of potassa. Alcohol separates from this precipitate the vegetable alkali in an impure state.

Pure delphinia is crystalline while wet, but becomes opaque on exposure to air. Its taste is bitter and acid. When heated it melts; and on cooling becomes hard and brittle like resin. If more highly heated, it blackens and is decomposed. Water dissolves a very small portion of it. Alcohol and æther dissolve it very readily. The alcoholic solution renders syrup of violets green, and restores the blue tint of litmus reddened by an acid. It forms soluble neutral salts with acids. Alkalies precipitate the delphinia in a white gelatinous state like alumina.

**DELPHINIC ACID**. The name of an acid, extracted from the oil of the dolphin. It resembles a volatile oil; has a light lemon color, and a strong aromatic odor, analogous to that of rancid butter. Its taste is pungent, and its vapor has a sweetened taste of æther. It is slightly soluble in water, and very soluble in alcohol. The latter solution strongly reddens litmus. 100 parts of delphinic acid neutralise a quantity of base, which contains 9 of oxygen, whence its prime equivalent appears to be 11.11.

**DELPHINIUM**, dolphin flower, or larkspur:

in botany, a genus of the trigynia order, and polyandria class of plants; natural order twenty-sixth, multisiliquæ: CAL. none; petals five; nectarium bifid, and horned behind; siliquæ three or one. Species fourteen; two of which are perennial. They are herbaceous plants of upright growth, rising from eighteen inches to four feet in height, garnished with finely divided leaves, and terminated by long spikes of pentapetalous flowers of blue, red, white, or violet colors. One species, viz. *D. consolida*, is found wild in several parts of Britain, and grows in corn fields. The seeds are acrid and poisonous. When cultivated, the blossoms often become double. Sheep and goats eat this plant; horses are not fond of it; cows and swine refuse it. The annual larkspur makes a very fine appearance in gardens, and is easily propagated by seeds, being so hardy that it thrives in any soil or situation.

**DELPHINUS**, the dolphin, in zoology, a genus of fishes belonging to the order of cetæ. There are five species, viz. 1. *D. delphis*, the dolphin. This fish was consecrated to the gods, and, celebrated in the earliest time for its fondness of the human race, was honored with the title of the sacred fish. Arion the musician, when flung into the ocean by the pirates, was said to be received and saved by this benevolent fish. Its natural shape is almost straight, the back being very slightly incurvated, and the body slender; the nose long, narrow, and pointed, not much unlike the beak of some birds, for which reason the French call it *l'oye de mer*. It has forty teeth; twenty-one in the upper jaw and nineteen in the lower; a little above an inch long, conic at their upper end, sharp-pointed, bending a little in. They are placed at small distances from each other; so that when the mouth is shut, the teeth of both jaws lock into one another. The spout-hole is placed in the middle of the head; the tail is semilunar; the skin smooth, the color of the back and sides dusky, the belly whitish: it swims with great swiftness; and its prey is fish. It was formerly reckoned a great delicacy. This species of dolphin must not be confounded with that to which seamen give the name; the latter being quite another kind of fish, viz. the *coryphæna hippurus* of Linnæus, and the dorado of the Portuguese. 2. *D. leucas*, a species called by the Germans *wit-fisch*, and by the Russians *beluga*; both signifying white fish: but to this the latter add *morsknaia*, 'of the sea,' to distinguish it from a species of sturgeon so named. They are numerous in the gulf of St. Lawrence, and go with the tide as high as Quebec. 3. *D. orca*, the grampus, is found from the length of fifteen feet to that of twenty-five. It is remarkably thick in proportion to its length, one of eighteen feet being in the thickest part ten feet diameter. With reason then did Pliny call this 'an immense heap of flesh armed with dreadful teeth.' It is extremely voracious; and will not even spare the porpoise, a congenerous fish. It is said to be a great enemy to the whale. 4. *D. orca ensidorantus*, the sword fish. The nose is truncated; the teeth, of which there are forty in both jaws, are sharp-pointed; and on the back is a very long sword-like spine, or bony fin. It inhabits the European seas, the Atlantic, towards

the Antarctic Pole, and Davis's Straits. It is the largest species of the genus, being twenty-four or twenty-five feet long, and from ten to thirteen feet in diameter where thickest; the lower jaw is much larger than the upper: the spout-hole is on the top of the head, and has two orifices. The spine on the back is often six feet long. It is broadest at the base, and resembles a scimitar or bent sword; being, however, covered with the common skin of the back. It is a bitter enemy to the whale, and carries on a constant war with the seals. It also feeds on flounders. 5. *D. phocæna*, the porpoise. This species is found in vast multitudes in all parts of the British seas; but in greatest numbers at the time when fish of passage appear, such as mackerel, herrings, and salmon, which they pursue up the bays.

**DELPHOS**, now called Castri, a town, or rather village, of Turkey in Asia, in Livadia; occupying part of the site of the ancient Delphi. Some vestiges of temples are visible; and above them, in the mountain side, are sepulchres, niches with horizontal cavities for the body, some of which are covered with slabs. A monastery is erected on the site of the Gymnasium. Strong terrace walls and other traces of a large edifice remain. The village is at a distance. Castala is on the right hand in ascending to it, the water coming from on high and crossing the road; a steep precipice, above which the mountain still rises immensely, continuing on in that direction. The village consists of a few cottages covering the site of the temple and oracle.

**DELTA**, a part of Lower Egypt, which occupies a considerable space of ground between the branches of the Nile and the Mediterranean Sea: the ancients call it Delta, because it is in the form of a triangle, like the Greek  $\Delta$ . It is about 130 miles along the coast from Damietta to Alexandria, and seventy on the sides from the place where the Nile begins to divide itself. It is the most fertile country in all Egypt, and it rains more there than in other parts, but the fertility is chiefly owing to the inundation of the Nile. The principal towns on the coast are Damietta, Rosetta, and Alexandria; but, within land, Menousia, and Maala or Elmala. See EGYPT.

**DELTOIDE**, *adj.* from delta, the fourth letter of the Greek alphabet; so called by reason of its resembling this letter. An epithet applied to a triangular muscle arising from the clavicle, and from the process of the same, whose action is to raise the arm upward.

Cut still more of the *deltoides* muscle, and carry the arm backward. *Shoep's Surgery.*

**DELU'DE**, *v. a.* } Ital. and Lat. *deludere*,  
**DELU'DER**, *n. s.* } from *de*, and *ludo* to de-  
**DELU'DABLE**, *adj.* } ceive. To cheat; deceive.  
 impose upon: deludable is, easily imposed upon.

O, give me leave, I have deluded you;

'Twas neither Charles, nor yet the duke.

*Shakspeare. Henry VI.*

Not well understanding omniscience, he is not so ready to deceive himself, as to falsify unto him whose cogitation is no ways deludable.

*Brown's Vulgar Errors.*

Let not the Trojans, with a feigned pretence  
 Of proffered peace, delude the Latian prince.

*Dryden.*

the sweet danders sing their song.

Pope.

Our poor deluged people at home, and abroad, read the poisonous and inflammatory are daily published with impunity — they act accordingly.

Junius.

Overbearing man, betrayed by venturous pride  
To dreary paths without a guide,  
The phantoms in the mist delude,  
And ill, or chases airy good.

Johnson. *Vanity of Human Wishes.*

v. a. & n. s. } Sax. *delpan*; Teut.  
n. s. } *delben*; Belgic *delven*;  
a subterranean place. Srenius re-  
last as the origin of the Saxon be-  
bury; and Wiclif confirms this  
by using *dalf* for *delve*. See below.  
figuratively, to endeavour to fathom  
It is used as a substantive by Spenser  
for the pit or place dug: a *delver*

It hadde taken oon ghede forthe and *dalf*  
he: and hidde the money of his Lord.

Wiclif. *Matt. xxv.*

Adam *delved*, and Eve span,  
Then the Gentleman? *Old Ballad.*

He by and by  
Sweet directed to the cry;  
That shady *delve* him brought at last,  
Whom erst did sun his treasury.

Spenser.

It shall go hard,  
Will *delve* one yard below the mines,  
Nor them at the moon. *Shakespeare.*

What's his name and birth?  
Nor *delve* him to the root: his father  
Held Sicilius. *Id.*

A light and mettled dance  
Is never yet in France;  
Leadmen, for the nonce,  
Are round like grindle-stones,  
They dig out fro' the *delves*,  
Is bairns' bread, wives, and selves.

Ben Jonson.

Unweaving depth your thrashing floor,  
And clay, then fill and face it o'er.

Dryden.

Althy swine with *delving* anout  
And forest undermine. *Philips.*

NO, one of the principal towns of  
Asia, between Joannina and Butrinto.  
On the side of a mountain, on the site  
of Eleus, between the P'aria, or an-  
hous, and P'istrini; and is well de-  
a castle. Population 8000. It is  
E. N. E. of Larissa.

Fr. *deluge*; Span. Ital. and  
Portug. *diluvium*, from *diluo*, de  
to wash.

And not been so deep a *deluge* of sin, there  
up of the waters.

Bishop Hall *Contemplations.*

On bays and dams they strive to force  
To a new or narrow course,  
Within his banks he dwells,  
Great, then a *deluge*, swells. *Donham.*

The apostle doth plainly intimate, that the old  
world was subject to perish by a *deluge*, as this is sub-  
ject to perish by conflagration. *Burnet's Theory.*

At length corruption, like a general flood,  
Shall *deluge* all. *Pope.*

Still the battering waves rush in  
Implacable, till *deluged* by the foam,  
The ship sinks, foundering in the vast abyss.  
*Philips.*

The restless flood the land would overflow,  
By which the *deluged* earth would useless grow.  
*Blackmore.*

DELUGE. Several deluges are recorded in  
history; as that of Ogyges, which overflowed  
almost all Attica; and that of Deucalion, which  
drowned all Thessaly in Greece: the most memo-  
rable however was the universal deluge or Noah's  
flood, which overflowed and destroyed the whole  
earth; and from which only Noah, and those  
with him in the ark, escaped. See ANTEDILU-  
VIAN, an article in which we have entered into  
this subject at some length, and particularly its  
epoch. See also CHRONOLOGY.

But the deluge is a topic of great interest both  
to science and religion. It has given birth, there-  
fore, to various theories and controversies on  
every point connected with it; and, while we  
cannot devote much space to the review of them  
in this work, some of the principal considerations  
that have been offered respecting its causes and  
effects may be acceptable to the reader. The  
great points in question may be reduced to three:  
1. Was the deluge universal, as is commonly  
supposed, or partial? 2. Was it from natural  
agency only, and if so what natural agency effected  
this mighty convulsion? 3. What were the  
principal effects and changes resulting?

1. Isaac Vossius and bishop Stillingfleet are  
amongst the most respectable supporters of an  
opinion that the deluge was but *partial*. But  
the reasoning of the former upon this subject is  
a little involved in our second question, respect-  
ing the agency employed; for it rests partly upon  
the difficulty there must have been in effecting a  
universal deluge. 'Many miracles,' he says,  
'must have concurred; but God works no mira-  
cles in vain. What need was there to drown  
those lands where no men lived, or are yet to be  
found? Although we should believe that part  
of the earth only to have been overflowed by the  
waters which we have mentioned, and which is  
not the hundredth part of the terrestrial globe,  
the deluge will nevertheless be universal (ecce-  
menical), since the destruction was universal, and  
overwhelmed the whole habitable world.' Bishop  
Stillingfleet adopted the same opinion, from a  
persuasion that the earth was by no means fully  
peopled, and therefore there was no necessity for  
the deluge being universal. 'I cannot,' says he,  
'see any urgent necessity from the Scripture to  
assert that the flood did spread itself all over the  
surface of the earth. That all mankind, those in  
the ark excepted, were destroyed by it, is most  
certain according to Scripture. When the Lord  
said that he would destroy man from the face of  
the earth, it could not be any particular deluge of  
so small a country as Palestine, as some have  
ridiculously imagined; for we find a universal

corruption in the earth mentioned as the cause; a universal threatening upon all men for this cause; and afterwards a universal destruction expressed as the effect of this flood. So then it is evident that the flood was universal with regard to mankind; but from thence follows no necessity at all of asserting the universality of it as to the globe of the earth, unless it be sufficiently proved; and what reason can there be to extend the flood beyond the occasion of it, which was the corruption of mankind? The only probability of asserting the universality of the flood, as to the globe of the earth, is from the destruction of all living creatures, together with man. Now though men might not have spread themselves over the whole surface of the earth, yet beasts and creeping things might, which were destroyed with the flood; for it is said that 'all flesh died that moved upon the earth, and every man.' To what end should there be not only a note of universality added, but such a particular enumeration of the several kinds of beasts, creeping things, and fowls, if they were not all destroyed? To this I answer; I grant that, as far as the flood extended, all these were destroyed; but see no reason to extend the destruction of these beyond that compass and space of the earth where men inhabited, because the punishment upon the beasts was occasioned by, and could not be concomitant with the destruction of man; but (the occasion of the deluge being the sin of man, who was punished in the beasts that were destroyed for his sake, as well as in himself) where the occasion was not, as where there were animals and no men, there seems no necessity of extending the flood thither.

The bishop, therefore, thinks it probable that this visitation of divine judgment extended only to the continent of Asia, and those animals only which were immediately connected with mankind; and he thinks the latter a sufficient reason for Noah's preserving the pairs of animals which he was commanded to take with him into the ark. But it is shown, under the article ANTI-DILUVIAN, that, according to the most moderate computations, the world was probably more full of inhabitants than at present; the expression of Scripture is strong, 'that the earth was filled with violence;' and if it were admitted that 'the earth' means only continental Asia, the supposition of a partial deluge involves almost all the difficulties, with regard to the agency employed, that are supposed to be connected with that of a universal one. If the tops of the highest mountains, in a very considerable part of the earth, were covered, the laws of gravity would carry the water that must have been thus elevated over all the ordinary habitations of men, or it would require a miracle to suspend their operation. We shall see that nothing strictly miraculous is supposed on our hypothesis of a universal deluge.

Mr. Bryant, in his *Ancient Mythology*, adverts at great length to the traditional traces of the fact of a universal deluge in all the early fables and histories of the heathen world. He even contends that this fact furnished the principal, if not the only foundation of ancient idolatry; that the first of all the heathen deities was Noah;

that all the ancient nations regarded him as their founder; and that he, his sons, and the first patriarchs, are alluded to, in most if not all the religious ceremonies. The Egyptian Osiris (he says) was the same with Ham the son of Noah; though the name was sometimes bestowed on Noah himself. Osiris, according to Diodorus Siculus, was wonderfully preserved in an ark, and taught the use of the vine; to build, plant, &c. 'We may reasonably suppose,' says Mr. Bryant, 'that the particulars of this extraordinary event would be gratefully commemorated by the patriarch himself, and transmitted to every branch of his family; that they were made the subject of domestic converse, where the history was often renewed, and ever attended with a reverential awe and horror, especially in those who had been witnesses to the calamity, and had experienced the hand of Providence in their favor. When there was a falling off from the truth, we might farther expect, that a person of so high a character as Noah, so particularly distinguished by the Deity, could not fail of being revered by his posterity; and, when idolatry prevailed, that he would be one of the first among the sons of men to whom divine honors would be paid. Lastly, we might conclude, that these memorials would be interwoven in the mythology of the Gentile world; and that there would be continual allusions to these ancient occurrences, in the rites and mysteries as they were practised by the nations of the earth. In conformity to these suppositions, I shall endeavor to show that these things did happen; that the history of the deluge was religiously preserved in the first ages; that every circumstance of it is to be met with among the historians and mythologists of different countries, and traces of it are to be found particularly in the sacred rites of Egypt and of Greece.'

If the success of this author, in his great undertaking, was not complete; if his theories involve many doubtful points of history, and some altogether conjectural assumptions; if he embodies on the other hand many unquestionably interesting and important facts, connected with this subject, and which the reader who is desirous of a complete review of it should not overlook. Of Noah, he says, they styled him Prometheus, Deucalion, Atlas, Theuth, Zuth, Xuthus, Inachus, Osiris. When there began to be a tendency towards idolatry, and the adoration of the sun was introduced by the posterity of Ham, the title of Helius, among others, was conferred upon him. Noah was the original Zeus and Dios. He was the planter of the vine, and inventor of fermented liquors; whence he was denominated Zeuth, which signifies ferment, rendered Zeus by the Greeks. He was also called Dionusius, interpreted by the Latins Bacchus, but very improperly. Bacchus was thus the grandson of Noah; as Ammon may be esteemed Ham, so much revered by the Egyptians. Among the people of the east, the true name of the patriarch was preserved; they called him Noas, Naus, and sometimes contracted Noos; and many places of sanctity, as well as rivers, were dedicated from him. Anaxagoras of Clazomenae had obtained some knowledge of him in Egypt

by him the patriarch was denominated Noas or Nous; and both he and his disciples were sensible that this was a foreign appellation; notwithstanding which he has acted as if it had been a term of the Greek language. Eusebius informs us, that the disciples of Anaxagoras say, that Nous is by interpretation, of the deity *Das* or *Dios*; and they likewise esteem Nous the same as Prometheus, because he was the renewer of mankind, and was said to have fashioned them again, 'after they had been in a manner extinct. Suidas has preserved, from some ancient author, a curious memorial of this wonderful personage, whom he affects to distinguish from Deucalion, and styles Nannacus. According to him, this Nannacus was a person of great antiquity, and prior to the time of Deucalion. He is said to have been a king, who, foreseeing the approaching deluge, collected every body together, and led them to a temple, where he offered up his prayers for them, accompanied with many tears.' Other well known traditions, mentioned by Stephenson, speak of the flood of Deucalion in which all mankind were destroyed. Afterwards, when the surface of the earth began to be again dry, Zeus ordered Prometheus and Minerva to make images of clay in the form of men; and, when they were finished, he called the winds, and made them breathe into each, and rendered them vital.' From these accounts, Mr. Bryant concludes: 'However the story may have been varied, the principal outlines plainly point out the person who is alluded to in these histories. It is, I think, manifest, that Annacus, and Nannacus, and even Inachus, relate to Noachus or Noah. And not only these, but the histories of Deucalion and Prometheus have a like reference to the patriarch: in the 600th year, and not the month, of whose life the waters prevailed upon the earth. He was the father of mankind, who were renewed in him. Hence he is represented by another author, under the character of Prometheus, as a great artist, by whom men were formed anew, and were instructed in all that was good. He seems in the east to have been called Noas, Noasis, Nasus, and Nus; and by the Greeks his name was compounded Dionusus. The Amorians, wherever they came, founded cities to his honor; hence places called Nusa were occur, and many of them are mentioned by ancient authors. These, though widely distant, being situated in countries far removed, yet retained the same original histories; and were generally famous for the plantation of the vine. Moved by this similarity of traditions, people in after times imagined that Dionusus must necessarily have been where his history occurred; and as it was the turn of the Greeks to place every thing to the account of conquest, they made him a great conqueror, who went over the face of the whole earth, and taught mankind the plantation of the vine. Though the patriarch is represented under various titles, and even these not always uniformly appropriated; yet there continually occur such peculiar circumstances of his history, as plainly point out the person referred to. The person preserved is always mentioned as preserved in an ark. He is described as being in a state of darkness, which is repre-

sented allegorically as a state of death. He then obtains a new life, which is called a second birth; and is said to have his youth renewed. He is, on this account, looked upon as the first born of mankind; and both his antediluvian and postdiluvian states are commemorated, and sometimes the intermediate state is also spoken of. Diodorus calls him Deucalion; but describes the deluge as almost universal.' We have noticed the corresponding Chaldean tradition, &c. mentioned by Berosus in the article ANTEDILUVIANS. While we consider the further range of these traditional accounts of the flood over the continent of India, and as far as China, has also its weight in establishing the Mosaic accounts, we shall shortly advert to the present and permanent effects of such a visitation, now remaining, as another proof both of the fact of a deluge, and of its universality. At present we enquire:

2. *What was the nature of the agency employed on this occasion?* Dr. Thomas Burnet, in his *Telluris Theoria Sacra*, endeavours to show, that all the waters in the ocean are not sufficient to cover the earth to the depth assigned by Moses. Supposing the sea drained quite dry, and all the clouds of the atmosphere dissolved into rain, we should still want the greatest part of the water of a deluge. According to the Dr. no less than eight oceans would have been requisite. To get clear of this difficulty, he and others have adopted Descartes's theory. That philosopher will have the antediluvian world to have been perfectly round and equal, without mountains or valleys. He accounts for its formation on mechanical principles, by supposing it at first in the condition of a thick turbid fluid replete with divers heterogeneous matters; which, subsiding by slow degrees, formed themselves into different concentric strata, or beds, by the laws of gravity. Dr. Burnet improves on this theory, by supposing the primitive earth to have been no more than a crust investing the water contained in the ocean, and in the central abyss, which he and others suppose to exist in the bowels of the earth. See *ABYSS*. At the time of the flood, this outward crust broke in a thousand places; and sunk down among the water, which thus spouted up in vast cataracts, and overflowed the whole surface. He supposes also, that before the flood there was a perfect coincidence of the equator with the ecliptic, and consequently that the antediluvian world enjoyed a perpetual spring; but that the violence of the shock, by which the outer crust was broken, shifted also the position of the earth, and produced the present obliquity of the ecliptic. This theory is not only equally arbitrary with the former, but directly contrary to the words of Moses, who assures us, that all the high hills were covered; while Burnet affirms that there were no hills then in being. Dr. Hook conjectured that the shell of earth was subjected at the deluge to a compression into a prolate spheroid, thereby pressing out the water of an abyss under the earth. Dr. Halley ascribes the deluge to the shock of a comet, whereby the polar and diurnal rotation of the globe was changed; and the ingenious Whiston so far adopted and improved upon this hypothesis, that he published a tract

on the subject entitled, *The Cause of the Deluge* demonstrated.

The theories above enumerated, though sanctioned by those names which entitled them to our notice, are, we conceive, one and all, destitute of any thing amounting to proof. The following, which endeavours to account for this most remarkable event, without doing any violence to the established laws of nature, is the hypothesis, we believe, of a Mr. James Tytler, a chemist of Edinburgh, who contributed largely to the *Encyclopædia Britannica*, from which work we make the extract.

1. 'If we consider the quantity of water requisite for the purpose of the deluge, it will not appear so very extraordinary as has been commonly represented. The height of the highest hills is thought not to be quite four miles. It will therefore be deemed a sufficient allowance, when we suppose the waters of the deluge to have been four miles deep on the surface of the ground. Now it is certain, that water, or any other matter, when spread out at large upon the ground, seems to occupy an immense space in comparison of what it does when contained in a cubical vessel, or when packed together in a cubical form. Suppose we wanted to overflow a room sixteen feet every way, or containing 258 square feet, with water, to the height of one foot, it may be nearly done by a cubical vessel of six feet filled with water. A cube of eight feet will cover it two feet deep, and a cube of ten feet will very nearly cover it four feet deep. It makes not the least difference whether we suppose feet or miles to be covered. A cube of ten miles of water would very nearly overflow 256 square miles of plain ground to the height of four miles. But if we take into our account the vast number of eminences with which the surface of the earth abounds, the above-mentioned quantity of water would do a great deal more. If, therefore, we attempt to calculate the quantity of water sufficient to deluge the earth, we must make a very considerable allowance for the bulk of all the hills on its surface. To consider this matter, however, in its utmost latitude: the surface of the earth is supposed, by the latest computations, to contain 199,512,595 square miles. To overflow this surface to the height of four miles, is required a parallelepiped of water sixteen miles deep, and containing 49,878,148 square miles of surface. Now, considering the immense thickness of the globe of the earth, it can by no means be improbable, that this whole quantity of water may be contained in its bowels, without the necessity of any remarkable abyss or huge collection of water, such as most of our theorists suppose to exist in the centre. It is certain, that as far as the earth has been dug, it has been found not dry, but moist; nor have we the least reason to imagine that it is not, at least, equally moist all the way down to the centre. How moist it really is cannot be known, nor the quantity of water requisite to impart to it the degree of moisture it has; but we are sure it must be immense. The earth is computed to be nearly 8000 miles in diameter. The ocean is of an unfathomable depth; but there is no reason for supposing it more than a few miles. To

make all reasonable allowances, however, we shall suppose the whole solid matter in the globe to be only equal to a cube of 5000 miles; and even on this supposition we shall find, that all the waters of the deluge would not be half sufficient to moisten it. The above-mentioned parallelepiped of water would indeed contain 798,050,368 cubic miles of that fluid; but the cube of earth containing no less than 125,000 millions of cubic miles, it is evident that the quantity assigned for the deluge would be scarcely known to moisten it. It could have indeed no more effect this way, than a single pound of water could have upon 150 times its bulk of dry earth. We are persuaded, therefore, that any person who will try by experiment how much water a given quantity of earth contains, and from that experiment will make calculations with regard to the whole quantity of water contained in the bowels of the earth, must be abundantly satisfied, that though all the water of the deluge had been thence derived, the diminution of the general store would, comparatively speaking, have been next to nothing. 2. It was not from the bowels of the earth only that the waters were discharged, but also from the air; for we are assured by Moses, that it rained forty days and forty nights. This source of the diluvian waters has been considered as of small consequence by almost every one who has treated on the subject. We shall transcribe the general opinion from the *Universal History*, Vol. I. where it is very fully expressed, 'According to the observations made of the quantity of water that falls in rain, the rains could not afford one ocean, nor half an ocean, and would be a very inconsiderable part of what was necessary for a deluge. If it rained forty days and forty nights throughout the whole earth at once, it might be sufficient to lay all the lower grounds under water, but it would signify very little as to the overflowing of the mountains, so that it has been said, that if the deluge had been made by rains only, there would have needed not forty days, but forty years, to have brought it to pass. And if we suppose the whole atmosphere condensed into water, it would not all have been sufficient for this effect; for it is certain, that it could not have risen above thirty-two feet, the height to which water can be raised by the pressure of the atmosphere; for the weight of the whole air, when condensed into water, can be no more than equal to its weight in its natural state, and must become no less than 800 times denser; for that is the difference between the weight of the heaviest air and that of water. On this subject we must observe, that there is a very general mistake with regard to the air, similar to the above-mentioned one regarding the earth. Because the earth below our feet appears to our senses firm and compact, therefore the vast quantity of water, contained even in the most solid parts of it, and which will readily appear on proper experiment, is overlooked, and treated as a non-entity. In like manner, because the air does not always deluge with excessive rains, it is also imagined that it contains but very little water. Because the pressure of the air is able to raise only thirty-two feet of water on the surface of the earth, it is therefore supposed that

to what depth the atmosphere could be earth, if it was to let fall the whole contained in it. But daily observations of the pressure of the atmosphere has lost connexion with the quantity of vapour. Nay, if there is any connexion it seems to be lightest when it contains air. In the course of a long summer's drought, the mercury in the barometer stands at thirty inches, or little more. At the beginning of the drought, it ascends continually during the time the drought continues; because the air all the absorbing water in great quantity from the surface of the earth and sea. This, however, is contrary to fact. At such times it does not ascend, but remains stationary. That is still more extraordinary, when it is about to have an end, the air, which contains the whole quantity of water vapour, and has not discharged one single drop suddenly lighter, and the mercury rises an inch before any rain falls. A surprising phenomenon, however, is observed. After the atmosphere has been disordered for a number of days successively a fluid matter 800 times heavier than itself, being lightened by the discharge, it becomes, nay, specifically heavier than it was. It is also certain, that very dry air, which it is not at the same time very hot, is the heaviest; and the driest air which we are acquainted with, namely, Dr. Priestley's dephlogisticated air, is considerably heavier than the common air we breathe. For these reasons the quantity of water contained in the atmosphere ought to be considered as a fluid, especially as we know that by what agent it is suspended, that agent must be the force of gravity, otherwise the fluid immediately descend; and while the gravity in any substance is counteracted, it cannot appear to us to gravitate at all. The above considerations render it probable, that there is in nature a quantity sufficient to deluge the world, provided applied to the purpose. We must next consider whether there is any natural agent powerful enough to effect this purpose. We find in the phrases used by Moses in their various senses. The breaking up of the deep we may reasonably suppose to have been the opening of all the passages, small or great, through which the subterranean waters possibly could discharge themselves on the surface of the earth. The opening of the windows of heaven we may also suppose to have been the pouring out the water contained in the atmosphere through those invisible passages by which it enters in such a manner as totally to supply one of our senses, as when water is evaporated by the air in evaporation. As both had to have been opened at the same time, it seems from thence probable, that one agent was employed to do both. Now it is probable that the industry of modern enquirers has discovered an agent unknown to the former ages, whose influence is so great, that with this world it may be said to have a

kind of omnipotence. The agent we mean is electricity. It is certain, that, by means of it, immense quantities of water can be raised to a great height in the air. This is proved by the phenomena of water-spouts. Mr. Forster relates, that he happened to see one break very near him, and observed a flash of lightning proceed from it at the moment of its breaking. The conclusion from this is obvious. When the electric matter was discharged from the water, it could no longer be supported by the atmosphere but immediately fell down. Though water-spouts do not often appear in this country, yet every one must have made an observation somewhat similar to Mr. Forster's. In a violent storm of thunder and rain after every flash of lightning, or discharge of electricity from the clouds, the rain pours down with increased violence; thus showing that the cloud, having parted with so much of its electricity, cannot longer be supported in the form of vapor, but must descend in rain. It is not, indeed, yet discovered that electricity is the cause of the suspension of water in the atmosphere; but it is certain that evaporation is promoted by electrifying the fluid to be evaporated. It may therefore be admitted, as a possibility, that the electric fluid contained in the air is the agent by which it is enabled to suspend the water which rises in vapor. If, therefore, the air is deprived of the due proportion of this fluid, it is evident that rain must fall in prodigious quantities. Again: we are assured from the most undeniable observations, that electricity is able to swell up water on the surface of the earth. This we can make it do even in our trifling experiments; and much more must the whole force of the fluid be supposed capable of doing it, if applied to the waters of the ocean, or any others. The agitation of the sea in earthquakes is a sufficient proof of this. It is certain, that at these times there is a discharge of a vast quantity of electric matter from the earth into the air; and, as soon as this happens, all becomes quiet on the surface of the earth. From a multitude of observations it also appears, that there is at all times a passage of electric matter from the atmosphere into the earth, and vice versa from the earth into the atmosphere. There is, therefore, no absurdity in supposing the Deity to have influenced the action of the natural powers in such a manner that for forty days and nights the electric matter contained in the atmosphere should descend into the bowels of the earth; if, indeed, there is occasion for supposing any such immediate influence at all, since it is not impossible that there might have been, from some natural cause, a descent of this matter from the atmosphere for that time. But by whatever cause the descent was occasioned, the consequence would be, the breaking up of the fountains of the deep, and the opening of the windows of heaven. The water contained in the atmosphere being left without support, would descend in impetuous rains; while the waters of the ocean, those from which fountains originate, and those contained in the solid earth itself, would rise from the very centre, and meet the waters which descended from above. Thus the breaking up of the fountains of the deep, and

the opening the windows of heaven, would accompany each other, as Moses tells us they actually did; for, according to him, both happened on the same day. In this manner the flood would come on quietly and gradually, without that violence to the globe which Burnet, Whiston, and other theorists, are obliged to suppose. The abatement of the waters would ensue on the ascent of the electric fluid to where it was before. The atmosphere would then absorb the water as formerly: that which had ascended through the earth would again subside; and thus every thing would return to its pristine state.'

3. We conclude by noticing some of the alterations and effects which are supposed to have taken place in consequence of the deluge. One of these is the much greater quantity of water in the present than in the old world. Dr. Keill has, indeed, endeavoured to prove, that the present extent of the surface of the waters is necessary to raise such a quantity of vapors as may supply the surface of the earth with rain and with springs. In answer to this it is said, that it may justly be questioned whether all springs are derived from the vapors raised by the sun's heat? and, secondly, Whether the primitive earth stood in need of such a quantity of rain to render it fertile as the present? Dr. Woodward supposes the antediluvian seas to have been nearly of the same extent with those at present, because 'the spoils of the sea, the shells and other marine bodies, are left in such prodigious numbers in the earth, that they could not have been left in such quantities, had not the seas occupied much the same space as they do now.' This argument, however, is thought by Mr. Cockburn to be inconclusive; and that the seas in the present earth are vastly more extended, and consequently the dry land so much less in proportion, may be inferred, he thinks, from the great multitude of islands that lie near the shores of the greater continents, &c. To all this it may be replied, that the Mosaic account says nothing of the extent of the seas either before or after the flood; but simply tells us, that the waters were poured out upon the surface of the earth from the windows of heaven and the fountains of the deep, and that as the flood decreased the waters returned from off the face of the earth. That the fish, as well as land animals, were more numerous in the antediluvian world than now when such quantities are destroyed by mankind, is also probable, as we see they abound to this day in uninhabited places. This may account for the astonishing quantities of exuviae to be met with in many different parts of the earth; but from the formation of islands nothing can be concluded concerning the antediluvian world. The late discoveries have shown that many islands have a volcanic origin; that others are formed by the growth of coral; and some by an accumulation of sea-weeds and other matters floating on the surface of the ocean, and detained upon sand-banks and sunk rocks; while not a few of those near the great continent owe their origin to the quantities of mud brought down by the great rivers which fall into the ocean. The inferior fertility of the earth after the deluge is much insisted upon by the same author.

There has been a valuable addition to the spe-

culations we have noticed above, in a new work of the Rev. Mr. Townsend, entitled, *Character of Moses established for Veracity by a Historian, recording Events from the Creation to the Deluge*. It might be said on opening the volume, Is it necessary again to take up a defence of Moses? is not the phalanx of good and good men who have already stood for his behalf sufficient to secure him from any attack? It is true, indeed, that the rays of celestial wisdom has often darted its benedictions on the impious cavillers, but they rise with new courage from the ruin which has overwhelmed them, and rush with blind rage on bulwarks whence they have been so often repelled. They have begun, of late, to try the effect of new methods of assault, and to make in the advantageous display of their reason. It was no small triumph over Revelation to prove that the earth was never created, but originally a splinter struck off from the sun, a heavy body which happened to impinge upon it. But a great Epicurean philosopher recently funct, has proceeded much further, and finally developed the theory of the animal creation. It seems that the primitive world was a vast pool, in which all creatures sported in the shape of tadpoles, until some of them longed to walk on dry land, legs fitted for that purpose spontaneously sprang forth from the hinder parts. Some affected hoofs, and gradually became horses; while others, of a more ambitious character, forced their humbler brethren to carry them on their backs. A great metaphysician, the son of Scotland, proved, in defiance of Moses, that the primitive men wore tails, and that owing to the friction of tight clothing the posterity have lost so ornamental an appendage. We have not heard, indeed, that the Socratic philosophers have recovered this badge, but they are well rid of all other symptoms of animality; but it is impossible to say how perfectibility may reach, and to what new heights of dignity and honor they may be descended. It is surprising that the old tradition has not been rooted out by the improvements in science; but, as Moses stood his ground so long, there seems no chance of his holding out to the last. It is impossible to say what new stratagems he played off; and, as the enemy seems to be vanquished with victory, we are not displeased to have him as an auxiliary. We therefore enter upon some facts and reasonings of the work before us with considerable satisfaction.

The design of Mr. Townsend is, to compare the present state of our knowledge of the origin of man and of the earth with the relations contained in the early part of Genesis, and to make a comparison to establish the character of the biblical historian as a faithful recorder of events. The first part of his work contains a disquisition on the similarity of traditions which were handed among many nations from the most remote times; but the larger portion of the volume consists of a geological essay on the proofs that the globe has undergone a universal deluge, and shows that the creation of the world, emerging from a state of primitive chaos,

of the Grecian poets and philosophers traced among several more ancient a curious extract from one of the following details:—'Of all obliterated world, water existed first. It was dark. In this primeval water, in a masculine form, repose for the thousand ages; after which, the intensifying other beings, for his own wise became predominant in the mind of him. In the first place, by his will, and one flower of the lotus; then the Luma, who, emerging from the cup of looked round and beheld, from the four heads, an immeasurable expanse to this tower he passed 500 years in slumber, and prayer; after which he the four elements, and the genti which he them. From his right side there the omnipotence of God, a man of Swayambhura Menu, that is, son of the sun; and from his left side a woman Satarupa.' (P. 43, 44.) To the same is a passage in the ancient Edda published by Resenius.

subject of the deluge, which occupies a part of this work, he prefers dwellments which are in a great measure inferior to other writers for the history. This we approve, while we the historical part of the question is not exhausted. The Pralayas or periculations of the Hindoos, as related in the successive destructions and of the world, of which a correspondence is given by Sæmund in the Runic and by Seneca from the representations of the similar ceremonies practiced in this event in Egypt and in facts which deserve a careful eluci-

which Mr. Townsend brings forward a universal catastrophe are diffused in a geological disquisition which occupies a portion of the volume. He takes a general view of the surface of the earth, and the order of its strata, as far as they are explored; in the course of which he enters in a very interesting manner the diligent investigation, continued, as he says, during fifty years, and pursued in all parts of Europe. We may safely say that no work contains far more information on the same subject.

to lay a foundation for the development of more general phenomena to which the author gives a brief view first of the formation of our own island. We regret not to follow him through their details; we prepare the reader to contemplate the succession of formations in other parts of the world which has been explored by travellers in almost all parts of the world which has been explored. They are very general, yet sufficiently the conclusion which Mr. Townsend draws from them. 'Whether we observe, Europe, Asia, Africa, or

America, the same arrangement may be traced; with this exception, that both in our island, and over the surface of the globe, in some places, the superior strata are deficient, and may be supposed to have been carried off, after they had been deposited in the bosom of the ocean. This arrangement, as already stated, includes granite, gneiss, slate, and argillaceous schist, mountain lime-stone, coal, schist, calcareous rocks, with clay, sand, chalk, and its integument of sand and clay.'

The geological theory adopted by Mr. Townsend is highly favorable to this part of the Scriptural History. If, with him, we can trace the actual operation of agents sufficiently powerful to elevate the continent of South America, (which this author conceives to have been those now operating in her abundant volcanoes), and other such extensive regions from the depths of the ocean, it is no longer difficult to conceive, that the waters may have covered the highest mountains, and that great tracts of habitable land may have been submerged.

But absolute and distinct proofs of this event are to be found in the dislocations of strata, and in the phenomena connected with alluvial positions. There is no part of the earth in which the violent dislocations of the regular strata are not to be found; and they are chiefly abundant in mountainous tracts, of which no other proof need be cited than the vertical position which the strata forming high mountains now hold, while we are assured that these very strata were originally horizontal. But even in the most level countries we need not go far for evidences of these convulsions. Every river, every brook which breaks out under our feet, and every valley which diversifies the surface, owes its existence to the disruption of strata. All the rock formations were at first unbroken and continuous; wherever a valley occurs there is now an interruption of this continuity. That these hollows were not the mere effect of rivers which have worn out courses for their waters may be proved by a variety of geological facts which we have not room to introduce here; but it is put in sufficiently strong light by Mr. Townsend's observations on springs, which are in a great measure new, and of very general interest. Every stratum of rock, before it becomes broken up, carries with it in its course under the surface a stratum of water, which percolates its stony beds, and is confined between impervious layers of clay. It is only where these subterranean courses are disturbed, and the strata are torn asunder by some extraneous force, that fountains and rivers burst forth. These dislocations and disturbances of strata can only be attributed to the agency of vast torrents every where flowing over and disorganising the surface of the earth, and such torrents can only be furnished by the incursions of the ocean. Land floods and rivers are the effects of the previous disruption of the strata, and therefore cannot be considered the efficient causes.

The production of these phenomena by the waters of a deluge is further proved by alluvial deposit. The vast extent of alluvions, independently of all other proof, declares that the

ocean gave them birth. One great accumulation of debris fills nearly the whole of Flanders and Holland; it reaches across the channel, and covers the southern and eastern counties of England, concealing under it, at a great depth, the regular strata of these districts. Another alluvion forms Lower Saxony and Holstein. Similar appearances occur in all level countries, and valleys are generally filled with these accumulations, through the midst of which the feeble streams of the present rivers have opened for themselves diminutive channels. That these accumulations were affected at once by vast oceanic torrents, and not by the gradual influence of rain and land floods, appears, Mr. T. observes, from the alluvial strata not being mixed or blended together, but frequently disposed according to their specific gravity. The vast fragments of rock which are found scattered over plains and mountains, in so many parts of the earth, at great distances from their native mountains, lead us forcibly to the same inference.

One of the most important observations which relates to these deposits is the following:—'In all the alluvial districts here particularly noticed, it appears that only one bed of vegetable earth is to be seen. Consequently these strata have not been produced by land floods, at different and at distant periods. They direct our attention to one epoch, and most distinctly give us a measure, by which to estimate the time which has elapsed since either the elevation of our present continents, or the depression of the surrounding seas.'

We are assured, that the incursions of the ocean over the habitable surface of the earth took place at a time since it was actually inhabited by land animals, by the organic remains which the alluvions contain; and this remark leads us to our author's disquisition on the interesting subject of extraneous fossils, with which we shall close our observations. Mr. Townsend is the first who has given us any extensive account of the organic remains, in connexion with the strata to which they belong; and in this respect he has rendered great service to the public. The oldest class of rocks contain no vestiges of organised beings, and this fact is sufficient to silence the assertion of Hutton, that the world exhibits no traces of a beginning. Lithophytes and shells occur in the oldest secondary rocks, and more complicated beings gradually make their appearance. All these, however, and indeed all the organic remains occurring in strata which have never been disturbed and disintegrated, may be termed indigenous. It is plain, that the creatures of which they are the spoils lived and died on the places where they are here traced. The shells are found deposited according to families, and confined in a great measure each to its own stratum; and a similar remark applies to other animal remains of this department. It is not so with those of alluvial ground. These are assembled from all parts of the earth, and are thrown together in promiscuous heaps. In the same beds are found shells and corals only known in the Pacific Ocean, and the bones of elephants and rhinoceroses. 'They seem,' says Mr. Townsend, 'to have been transported from

distant climates, and to have been deposited in a tumultuous manner by some grand agency, which blended and buried terrenean productions, ancient and recent, in a common grave. The direction in which they are conveyed, appears to have been from the south to north-west. Hence, where we have the opportunity of making distinctions respecting natural habitations, as in the Asiatic elephants, it is remarkable that the fossils of the latter, are to be found fossil in Europe. Should the latter have been transported from their native seats by the same agency, it is probable that their relics have been deposited in the Atlantic Ocean.'

On the whole, though the arrangement of the author's materials might have been improved in this work, he has added considerably to the stores of natural history, and to the confirmation of the details of the deluge on this subject.

DELUSION, *n. s.* } Lat. *delusio*  
 DELUSIVE, *adj.* } LUDE. A delusion; hood; the act of deluding: the adjectives alike in sense.

Yea, they have chosen their own way, and have despised my counsel: they have despised my voice, and have despised my counsel, and have despised my counsel, and have despised my counsel.

Who therefore seeks in the True wisdom, finds her not, or by the way.

This confidence is founded on no better ground than a delusory prejudice.

Phænomena so delusory that it is very easy to be imposed upon and mistaken.

I waking, viewed with grief the rising sun, And fondly mourned the dear delusion.

While the base and grovelling soul listens to the delusive deities, those of a more exalted spirit separated themselves from the rest.

Why will any man be so impertinent as to tell me all prospect of a future state is delusion? Is there any merit in being a sinner of ill news? If it is a dream, let it be so, since it makes me both the happier and the wiser.

Unnumbered suppliants crowd the palace, Athirst for wealth, and burning to be great. Delusive fortune hears the incessant call, They mount, they shine, evaporate, and fall.

Can we persist to bid your sorrows cease, For fabled sufferers, and delusive woe?

DEMAGOGUE, *n. s.* Gr. *δημαγωγος*. A ringleader of the rabble; a popular orator.

Who were the chief demagogues and agitators, to send for them, to flatter and encourage them.

A plausible, insignificant word, in the mouth of an expert demagogue, is a dangerous and dangerous weapon.

Demosthenes and Cicero, though called leaders, or, as the Greeks called it, a popular state, yet seem to differ in their

*N. a. s.* } Old Fr. *demesne*; Fr. *domaine*; both probably from  
 } Lat. *dominus*. That land  
 holds originally of himself, called  
 by the civilians, and opposed to  
 fe, which signifies those that are held  
 of lord. It is sometimes used also  
 in relation between those lands that the  
 manor has in his own hands, or in  
 of his lessee, demised or let upon a  
 term of years or life, and such other  
 relating to the said manor as belong  
 to the holders. Estate in land, or land  
 in mansion, in which sense *demesne*  
 is thought to come from old Fr. *mesne*,  
*mesio*.

Having now provided  
 me of noble parentage,  
 I am, youthful, and nobly allied.  
*Shakespeare.*

He indeed had a royal jurisdiction and  
 through the lands of that county in *demesne*  
 and for the most part by the ancient in-  
*Daries.*

for planting forest trees have hitherto  
 been ineffectual, except about the *demesnes* of  
 the crown; and even there, in general, very  
 little.  
*Swift.*

*ED, v. a. & n. s.* } Fr. *demandeur*;  
*TABLE, adj.* } Span. and Portug. *demandar*;  
*AST, n. s.* } Ital. *demandare*; Lat. *de-*  
*mandare*; Lat. *de-*  
*mandare* and *mando* (*manu do*, to give  
 and). To claim; ask for as one's own  
 with authority; hence to question,  
 As a substantive it is the claim  
 amount of it in money; an application  
 for thing at its price: *demandable*,  
 is due: *demandant* and *demandeur*,  
 are his alleged due by law or other-

Uriah was come unto him, David de-  
 manded how Joah did, and how the people did,  
 and how he prospered.  
 2 Sam. xi. 7.  
 It is by the decree of the watchers, and  
 by the word of the holy ones.  
*Dan. iv. 17.*

*demandable*, for licence of alienation to be  
 withholden in chief, have been stayed in the  
 master.  
*Bacon.*

of Orah which I demand of him,  
 that; 'tis mine, and I will have it.  
*Shakespeare.*

Young one,  
 of thy fortunes; for, it seems,  
 we are to be demanded.  
*Id.*

very fat and fat, which also bettereth  
 and delivereth them to the *demandeur's* ready  
 hand.  
*Carew.*

of Apollo being demanded, when the  
 city of Greece should have an end, re-  
 they would double the altar in Delos,  
 in cubick form. *Poacham on Geometry.*

giving life and strength to our appo-  
 nents that has the confidence to turn his  
 demands, will be but a little way from  
 sight to obtain them.  
*Loehr.*  
 Her tells me, the demand for those my  
 own daily.  
*Addison.*

One of the witnesses deposed, that dining on a  
 Sunday with the *demandant*, whose wife had sat be-  
 low the squire's lady at church, she the said wife  
 dropped some expressions, as if she thought her hus-  
 band ought to be knighted.  
*Spectator.*

There are two manners of demands, the one of deed,  
 the other in law: in deed, as in every precept, there  
 is express demand; in law, as every entry in land dis-  
 tress for rent, taking or seizing of goods, and such  
 like acts, which may be done without any words, are  
 demands in law.  
*Blount.*

But the misery of it is, men will not think; will  
 not employ their thoughts, in good earnest, about the  
 things which most of all deserve and demand them.  
*Mason.*

Every man has frequent occasion to state a con-  
 tract, or demand a debt, or make a narrative of minute  
 incidents of common life.  
*Johnson.*

Thus for short sins short hours of penance flow,  
 But heavier guilt demands more lasting woe.  
*Dr. T. Brown.*

DEMBEA, a large lake of Abyssinia, is in  
 the heart of the country, and supposed to be  
 about 450 miles in circumference. It contains  
 many islands, particularly one of great size,  
 which is made a place of confinement. The  
 great river Bahr-el-Azrek, so often supposed to be  
 the true Nile, falls into it on the west, and issues  
 from it on the south-west: it is said that the  
 stream may be distinguished through the whole  
 of its passage. Various small streams also fall  
 into it.

DEMBEA, a province of Abyssinia, surrounding  
 the great lake of that name. On the north it  
 comprehends that fertile tract of which Gondar  
 is the capital. On the east it includes Foggora,  
 Dara, and Alata; and, on the west, the lands  
 about Waindaga and Dingleber. The whole re-  
 gion is fruitful, and finely varied by mountains  
 and plains. It is particularly described by Bruce.

DEMEAN, v. a. & n. s. } Fr. *menier*; Ital. *Fr.*  
*DEMEANOUR.* } *menare*; Norin. *Fr.*

*demesmer*; whence, thinks Mr. Todd, our word  
*manage*, i. e. conduct, carriage, *demeanour*: per-  
 haps the whole, we might add, from Lat. *manus*,  
 the hand. To behave; generally to carry one's  
 self in a particular way. There seems to be no  
 good authority for using it for debase. Dr. John-  
 son's instance from Shakspeare, and Mr. Todd's  
 from Doddridge, are equivocal; but the reader  
 will judge.

At his feet with sorrowful *demean*,  
 And deadly hue, an armed corpse did lie.  
*Spenser.*

Now, out of doubt, Antipholus is mad,  
 Else he would never so *demean* himself.  
*Shakspeare.*

Angels best like us, when we are most like unto them,  
 in all parts of decent *demeanour*.  
*Hooker.*

His gesture fierce  
 He marked, and mad *demeanour*, then alone,  
 As he supposed, all unobserved, unseen.  
*Milton.*

He was of a courage not to be daunted, which was  
 manifested in all his actions, especially in his whole  
*demeanour* at Rhee, both at the landing and upon the  
 retreat.  
*Clarendon.*

Those plain and legible lines of duty requiring us  
 to *demean* ourselves to God humbly and devoutly, to  
 our governors obediently, and to our neighbours justly,  
 and to ourselves soberly and temperately.  
*South.*

Of so insupportable a pride he was, that where his deeds might well stir envy, his *demeanour* did rather breed disdain.

*Sidney.*

A man cannot doubt but that there is a God; and that, according as he *demean*s himself towards him, he will make him happy or miserable for ever.

*Tillotson.*

Strephon had long perplexed his brains,  
How with so high a nymph he might  
*Demean* himself the wedding night.

*Swift.*

That brow in furrowed lines had fixed at last,  
And spake of passions, but of passions past;  
The pride, but not the fire, of early days,  
Coldness of mean, and carelessness of praise;  
A high *demeanour*, and a glance that took  
Their thoughts from others by a single look.

*Byron.*

Peter was so affected at his condescending to perform such a mean office, that he says to him, It is a thousand times fitter that I should wash thine, nor can I bear to see thee thus *demean* thyself.

*Doddridge's Expositor.*

DEMENTATE, *v. a.* } Lat. *demento*, of *de*  
DEMENTATION, *n. s.* } and *mens*, the mind. To make mad. Making mad, or frantic.

DEMERARA, or DEMERARA AND ESSEQUIBO, a colony of Great Britain, in the north-eastern part of South America. It is composed of two governments, named as above, both which, having been finally confirmed to Great Britain by the peace of 1814, are now one united colony. They form a part of what was originally Dutch Guienne; but the king of the Netherlands only retains, in this part of the world, the colony of Surinam. The general features and natural history of this country have been described already in our article AMERICA, SOUTH, par. 206—220. Demerara is bounded on the north by the Atlantic Ocean, on the east by a line drawn from the mouth of Albany Creek, in a south-east direction, dividing it from the British colony of Berbice, on the west by the river Pomaron, which divides it from Spanish Guiana; its southern boundary is undetermined. Staebrook, the only considerable town, and the seat of government, is in lat. 6° 46' N., and long. 57° 45' W. from London.

The whole country is low and swampy: on the coast the tides rise to the height of from sixteen to twenty-four feet. The rivers are the Essequibo, Demerara, and Canji or Cayonny, the last being supposed to communicate with the Oronoco. The Demerara River has a bar across its mouth, which prevents ships of large burden passing it; but vessels drawing fourteen feet may be loaded at Staebrook. Here are convenient wharfs: no large vessels, however, can lie near them, on account of the declivity of the bank, but are compelled to load and unload their cargoes in the middle of a rapid stream. The Essequibo is easily entered by the largest ships, but they must also be loaded and unloaded in the stream, as the same causes prevent their lying near shore.

We have also noticed the political history of these settlements. It is only necessary to add, that while, under the British government, the general internal policy is improved, and the roads, drainage, &c., have assumed a very different aspect to that which they bore in former times, the

curse of an extensive dependence on cultivation is no where more evident. Sugar and cotton, are the staple articles of produce; no where on earth is a finer soil produced by the hand of man. It has been transported from our western possessions as man has been known to produce thirty crop canes in succession, without replanting; sometimes it has been cropped two or three times, to reduce its excessive luxuriance afterwards with sugar canes; but the estate is intersected with dikes, communicating with the river, by means of small flat-bottomed boats, the advance of the produce is effected from the estate to another. Thus they remove from the field to the sugar-mill, and then to the house. The earth removed to form the beds, is thrown on beds, which contain the plants in rows six feet asunder. They are planted in rows from nine to twelve apart, and the intermediate spaces are either by plantain-trees, or the like, growing to the height of twelve or fifteen feet, and affording a welcome shade to the plants.

In the colony are from 60,000 to 80,000 kept in awe with difficulty, and in great degree by the strong aversion that subsists between them and the aboriginal Indians, who readily bring back all strange masters, and often assist in suppression. The colony is governed by Dutch laws. The free inhabitants are about 3000.

DEMÉRIT, *n. s.* Fr. *demerite*; Lat. of *demerco*. See MERIT.

They should not be able once to stir, but it should be known, and they should be to their demerits.

*Spenser.*

I fetch my life and name  
From men of royal siege; and my dear  
May speak, unbosoming, to as proud  
As this that I have reached.

*Shakespeare.*

Thou livest by me, to me thy brother  
Mine is the merit; the demerit thine.

Whatever they acquire by their industry, should be secure, unless forfeited by crime or offence against the custom of the country.

I considered the possession of it as a frequent occasion of personal demerit, the generality of the bishops bartering their office and the dignity of their order for the gratification, and polluting gospel-humility by prelacy.

DEMÉRSED, *part.* } From *de* and *mers*,  
DEMÉRSION, *n. s.* } *mergo*, to drown. A drowning. In chemistry any medicine in a dissolving liquid.  
DEMÉSNE. See DEMAIN.

DEMÉTRIUS I., surnamed the Great, destroyer of towns, was the son of Antiochus. At the age of twenty-two he was sent against Ptolemy, who invaded Syria; he defeated him at Gaza, but soon repaid

over one of the generals of the enemy. His ships sailed with a fleet of 250 ships to restore the Athenians to liberty, by taking from the power of Cassander and Ptolemy the garrison, which was stationed under Demetrius Phalereus. After this expedition, he besieged and took Munyphæ. He defeated Cassander at Thermopylæ. His return to Athens after these victories was attended with the most servile flattery; and the Athenians were not ashamed to raise altars to him as a god, and consult his oracles. This jealousy of the successors of Alexander; Ptolemy, Cassander, and Lysimachus united with Antigonus and his son. Their hostile meeting at Ipsus, A. A. C. 301: Antigonus was slain in the battle; and Demetrius, after a short time, retired to Ephesus. The Athenians, who had lately adored him as a god, refused to let him enter their city; but he soon after raised the territory of Lysimachus, and reconquered himself to Seleucus, to whom he gave his daughter Stratonice in marriage. Athens now free from tyranny, and Demetrius relieved of all time, and pardoned the inhabitants. When he had his possessions in Asia recalled him to Macedonia. Here he was continually at war with the neighbouring states, and the superior power of his adversaries obliged him to leave his throne after he had sat on it for seven years. He passed into Asia, and attacked some provinces of Lysimachus with various success. Famine and pestilence having destroyed a great part of his army, he applied to Seleucus for assistance. He, at first, met with a kind of success; but hostilities were again soon begun; and he gained some advantages over his rival, he was at last forsaken by his troops, and taken prisoner. Though Seleucus kept him in prison, he maintained him like a prince, and passed his time in hunting, and in other exercises. His son Antigonus offered him all his possessions, and even his person, to restore him his father's liberty, but in vain, and died in the fifty-fourth year of his age, at the advancement of three years, A. A. C. 286. His possessions were given to Antigonus, and he had a splendid funeral at Corinth, and was buried at Demetrias.

DEMETRIUS I., king of Syria, surnamed Soter, was son of Seleucus Philopater. He was taken prisoner at Rome, when his father died, and Antiochus Epiphanes, usurped the throne, and was succeeded by his son Antiochus. Demetrius at last procured his liberty on pretence of going to hunt, and fled to the troops, who received him as their lawful king. He put to death Eupator and Lysias, endeavouring to establish himself on his throne by cruelty and oppression. Alexander, the pretended son of Antiochus Epiphanes, claimed the crown, and defeated Demetrius in a battle, A. A. C. 150.

DEMETRIUS, the disciple of Apollonius Tyaticus, a cynic philosopher of the age of Caligula. He wished to gain him to his interest by a present; but Demetrius refused it with disdain, and said, If Caligula wishes to bribe

me, let him send me his crown. Vespasian was displeased with his insolence, and banished him to an island. The cynic derided the punishment, and satirised the emperor. He died in an extreme old age; and Seneca observes, that 'nature had brought him forth to show mankind, that an exalted genius can live securely without being corrupted by the vices of the surrounding world.'

DEMETRIUS PHALEREUS, a celebrated orator and peripatetic philosopher, was the scholar of Theophrastus. He acquired so much authority at Athens, that he governed the city for ten years; and he ruled with so much wisdom and virtue, that thirty-six statues were erected in honor of him. Being obnoxious, however, to the aristocratical party, they procured an order for his death; but, he escaped into Egypt, and was protected by Ptolemy Lagus. On the death of that prince he was banished by his successor. None of the works of this celebrated philosopher are extant, except his *Rhetoric*, which is usually printed among the *Rhetores Selecti*.

DEMETRIUS, czar of Russia, commonly called the false Demetrius, was, according to most authors, a native of Jaroslavl, and a novice in a monastery, where he was instructed by an old monk to personate Demetrius, son of the czar John Basilovitz, who had been murdered by Boris Gudunov, in 1597. The youth, according to his instructions, went under the name of Demetrius, and pretended to have escaped from his murderers into Lithuania, where he was taken into the service of a nobleman named Wicnovitski, to whom he told his story, and who espoused his cause. When Boris heard of this rival, he sent assassins to despatch him; but his patron being warned of it conveyed him to Mniieski, palatine of Sandomir, who promised to assist him in his design on the Russian throne, provided he would embrace the Roman Catholic religion, which he readily consented to, and was married to the palatine's daughter. Assisted by the Poles, Demetrius, in 1604, marched into Russia, at the head of a small army, and was soon joined by a number of Russians and Cossacs. He defeated an army sent against him, and an insurrection took place in his favor. On the death of Boris, the people strangled his son, and placed Demetrius on the throne; but his partiality to the Poles and contempt of the Greek religion occasioned an insurrection, and he was murdered in 1606, after a short reign of about eleven months. Mr. Archdeacon Cox, contrary to the generality of writers, considers him to have been the true prince Demetrius.

DEMI-ATTICI, in ancient history, boroughs or large villages of Attica. The Athenian tribes were distributed into Demi. Homer, in his catalogue, distinguishes the Athenians by the appellation Demos. And when Theseus prevailed on them to quit the country of Attica, and settle at Athens, they still continued to frequent the Demi, and to perform their religious ceremonies there.

DEMI-CANNON, *n. s.* From demi, half, and cannon. An ancient piece of artillery, carrying a thirty-six pound ball.

What! this a sleeve, 'tis like a *semi-cannon*.

*Shakespeare.*

Ten engines, that shall be of equal force either to a cannon or *semi-cannon*, culverin or *semi-culverin*, may be framed at the same price that one of these will amount to.

*Wilkins.*

**DEMI-CULVERIN.** An old piece of ordnance carrying a thirteen pound ball.

They continue a perpetual volley of *semi-culverins*.

*Ruleigh.*

The army left two *semi-culverins*, and two other good guns.

*Clarendon.*

**DEMI-DEVIL.** From demi and devil. Partaking of infernal nature; half a devil.

Will you, I pray, demand that *demi-devil*,

Why he hath thus ensnared my soul and body?

*Shakespeare. Othello.*

**DEMI-GOD, n. s.** From demi and god. Partaking of a divine nature; half a god; a hero produced by the cohabitation of divinities with mortals. See **HERO**.

He took his leave of them, whose eyes bade him farewell with tears, making temples to him as to a *demi-god*.

*Sidney.*

Be gods, or angels, *demi-gods*.

*Milton.*

Transported *demi-gods* stood round,

And men grew heroes at the sound,

Inflamed with glory's charms.

*Pope.*

Nay, half in heaven, except (what's mighty odd)

A fit of vapours clouds this *demi-god*.

*Id.*

Who is this?

Who truly looketh like a *demi-god*,

Blooming and bright, with golden hair, and stature,

If not more high than mortal, yet immortal.

*Byron.*

**DEMI-GORGE**, in fortification, is that part of the polygon which remains after the flank is raised, and goes from the curtain to the angle of the polygon. It is half of the vacant space or entrance into a bastion.

**DEMI-LANCE, n. s.** From demi and lance. A light lance; a short spear; a half pike.

On their steeled heads their *demi-lances* wore

Small pennons, which their ladies colours bore.

*Dryden.*

Light *demi-lances* from afar they throw,

Fastened with leathern thongs, to gail the foe.

*Id.*

**DEMI-MAN, n. s.** From demi and man. Half a man; a term of reproach.

We must adventure this battle, lest we perish by the complaints of this barking *demi-man*.

*Kneller.*

**DEMISE, v. a. & n. s.** Fr. *demis*; Lat. *demitto*, *demisi*, to hand down. (*de* and *mitto*, Gr. *μετιναι*). Applied to handing down by legacy or death; and, as a substantive, to death itself, by which the crown of a monarchy is generally transmitted.

Inexorable vigour is worse than a lasche *demission* of sovereign authority.

*L'Estrange.*

About a month before the *demise* of queen Anne, the author retired.

*Swift.*

My executors shall not have power to *demise* my lands to be purchased.

*Swift's Last Will.*

**DEMISE**, in law, is applied to an estate either in fee simple, fee-tail, or for a term of life or years; and so it is commonly taken in many writs.

**DEMISE**, and **RE-DEMISE**, denote a conveyance where there are mutual leases made from one to another of the same land, or something out of it.

**DEMI-SEMI-QUAVER**, in music, the shortest note, two of them being equal to a semi-quaver.

**DEMIT, v. a.** Lat. *demitto*. See **DARE**. To depress; to hang down; to let fall.

When they are in their pride, that is, advancing their train, if they decline their neck to the ground, they presently *demit* and let fall the same.

*Brown's Vulgar Errors.*

**DEMI-WOLF, n. s.** From demi and wolf. Half a wolf; a mongrel dog between a dog and wolf.

*Spaniels, curs,*

Showgas, water-rugs, and *demi-wolves*, are 'cleped

All by the name of dogs. *Shakespeare. Macbeth.*

**DEMOCRACY, n. s.** Fr. *democratic*;

**DEMOCRAT,** } Spanish *democracia*,

**DEMOCRATIC, n. s.** } from Gr. *δημοκρατος*

(*δημος* the people, and *κρατος* to govern). A government by the people at large. A democrat is an advocate or partizan of democracy. The old word democratic is only more agreeable to the etymology.

Thence to the famous orators repair,

Those ancient, whose resistless eloquence

Wielded at will that fierce *democratic*,

Shook the arsenal and falmined over Greece.

*Milton.*

They are still within the line of vulgarity, and no democratical enemies to truth.

*Brown's Vulgar Errors.*

While many of the servants, by industry and virtue, arrive at riches and esteem, then the nature of the government inclines to a *democracy*.

*Temple.*

The majority, having the whole power of the community, may employ all that power in making laws, and executing those laws; and there the form of the government is a perfect *democracy*.

*Locke.*

As the government of England has a mixture of *democratical* in it, so the right is partly in the people.

*Arminian.*

**DEMOCRITUS**, one of the greatest philosophers of antiquity, was born in Abdera, in Thrace, about the 80th Olympiad, or A.A.C. 466. His father, says Valerius Maximus, was able to entertain the army of Xerxes; and Diogenes Laertius adds, that the king, in return, presented him with some Magi and Chaldeans. From these he received the first part of his education; and, whilst yet a boy, learned theology and astronomy. He next applied to Leucippus, and learned from him the systems of atoms and a vacuum. His father dying, he and his two brothers divided the estate. Democritus made choice of that part which consisted of money, as being, though the least share, the most convenient for travelling; and it is said, that his portion amounted to 100 talents, which is nearly £20,000 sterling. He now went to visit the priests of Egypt, from whom he learned geometry: and it is said, that he penetrated even into India and Ethiopia, to confer with the Gymnosophists. In these travels he wasted his substance, so that on his return he was maintained by his brother; notwithstanding which, he procured the highest honors of his country,

governed with unlimited sway and its wisdom. The magistrates of Abbeville presented him a present of 500 talents, and refused to him, even in his lifetime; but, naturally more inclined to contemplation than with public honors and employment, he withdrew into solitude and retirement. He only laughed at human life, as a conceit, which made the inhabitants of Abbeville mad, on which they sent for him to cure him; but that celebrated physician told the Abderians, that those who considered themselves the most healthy were the most imbecile. Democritus died, according to Laetius, aged 100, A. A. C. 361. He is the author of many books, which are all borrowed from these Epicurus.

DEMOIVRE (Abraham), an eminent French mathematician, F. R. S. London, was a native of Champagne, and driven from his native country as a Protestant, by the revocation of the edict of Nantes. He settled in London as a mathematician, and was particularly celebrated for his skill and accuracy as a calculator, and he is referred to by Pope:

as Demoivre, without rule or line.

In 1754, at the age of eighty-six. His works are: *Miscellanea Analytica*, 4to.; *The Method of Chances*, or a Method of Calculating the Probabilities of Events at Play, 4to.; and *Arithmetica*, 4to.; besides papers in the *Transactions of the Royal Society*.

DEMOLISH, *v. a.* } Fr. *démolir*; from  
SHER, *n. s.* } Lat. *démoliri*, i. e. de-  
'TION. } and *molior* (moles, a  
to destroy a building; hence to de-  
molish.

and which, it is now demolished, and  
lyeth in the dust, buried in its own  
being nothing standing but a few broken  
seem to mourn their own approaching  
Fuller. *Worthies of Devon*.

I the fabrick of my book would long since  
demolished, and laid even with the ground.  
Tillotson.

ighting played along the firmament,  
demolished works to pieces rent.

men should have the direction in the  
Dunkirk. Swift.

met led him thro' a spacious hall,  
hung the half-demolished wall. Gay

are of the builder of a new system is to  
fabrics which are standing. Johnson.

essor of divinity had been nick-named  
victorinus; it was thought to be his duty  
every opinion which militated against  
the orthodoxy of the Church of England.  
Bp. Watson.

DEMON, *n. s.* } Fr. *démon*; Ital.  
AC, *n. s. & adj.* } from Lat. *dæmon*;  
ACAI, *adj.* } *δαίμων*, *δαίμων*, *δαίμων*,  
AN, *adj.* } *δαίμων*, knowing. An  
y; a devil; generally used in a bad

spirits now, from the element  
s reign allotted, rightlier called  
fire, air, water.

. VII.

Milton.

*Demoniac* phrensy, *roving melancholy*. Id.

I felt him strike, and now I see him fly:  
Cursed demon! O for ever broken lie  
Those fatal shafts, by which I inward bleed!

Prior.

Those lunatics and *demoniacs* that were restored  
to their right mind, were such as sought after him,  
and believed in him. Bentley.

But ah! those dreadful yells what soul can hear,  
That owns a carcase, and not quake for fear?  
*Dæmons* produce them doubtless, brassen-clawed,  
And fanged with brass the *dæmons* are abroad.

Cooper.

I said not

You were the *demon*, but that your approach  
Was like one. Byron.

DEMONA, VAL, a province of Sicily, which  
occupies the north-east portion of the island, ex-  
tending from the strait of Messina to Catania,  
and having the Val de Mazzara to the west, and  
Val de Noto to the south. Its greatest width is  
sixty-five miles, the length 112. To it belong  
the Lipari and other islands. The population  
is about 521,000. It is mountainous and woody,  
being fertile only on the banks of the rivers.  
The chief productions are silk, hemp, flax,  
olives, lemons, oranges, figs, and currants; but  
sulphur abounds in the neighbourhood of Mount  
Ætna. The atmosphere is here cool and humid.  
The capital is Messina; the other chief towns  
are Melazzo, Cefalu, and Taormina.

DEMONOCRACY, *n. s.* *δαίμων* and *κρατία*.  
The power of the devil.

DEMONOLATRY, *n. s.* *δαίμων* and *λατρεία*.  
The worship of the devil.

DEMONOLOGY, *n. s.* *δαίμων* and *λόγος*.  
Discourse of the nature of devils. Thus king  
James entitled his book concerning witches.

DEMONSTRATE, *v. a.* } Fr. *démonstrer*;  
DEMONSTRABLE, *adj.* } Span. *demostrar*,  
DEMONSTRABLY, *adv.* } *demostrar*; from  
DEMONSTRATION, *n. s.* } Lat. *demonstrare*,  
DEMONSTRATIVE, *adj.* } *de*, and *monstro*,  
DEMONSTRATIVELY, *adv.* } to show. To  
DEMONSTRATOR, *n. s.* } prove with cer-  
DEMONSTRATORY, *adj.* } tainty; to exhibit

facts: demonstrable is that which may be proved  
or exhibited: demonstration, the highest degree  
of proof; indubitable evidence: demonstrative,  
having the power of indubitable proof, or of  
clear expression. Demonstratory, having a ten-  
dency to demonstrate. The other derivatives  
seem plain.

An argument necessary and *demonstrative*, is such  
as, being proposed unto any man, and understood,  
the man cannot choose but inwardly yield. Hooker.

What appeareth to be true by strong and invincible  
*demonstration*, such as wherein it is not by any way  
possible to be deceived, thereunto the mind doth ne-  
cessarily yield. Id.

Where is a probability on one side, and no appear-  
ance of reason to the contrary; that probability does  
the work of a *demonstration*. Bishop Taylor.

He should have compelled his ministers to execute  
the law, in cases that *demonstrably* concerned the pub-  
lick peace. Clarendon.

*Demonstratively* understanding the simplicity of  
perfection, it was not in the power of earth to work  
them from it. Browne.

L

We cannot *demonstrate* these things so as to shew that the contrary often involves a contradiction.

Tillotson.

Painting is necessary to all other arts, because of the need which they have of *demonstrative* figures, which often give more light to the understanding than the clearest discourses.

Dryden.

No man, in matters of this life, requires an assurance either of the good which he designs, or of the evil which he avoids, from arguments *demonstratively* certain.

South.

Where the agreement or disagreement of any thing is plainly and clearly perceived, it is called *demonstration*.

Locke.

The grand articles of our belief are as *demonstrable* as geometry.

Glanville.

First, I *demonstratively* prove,  
That feet were only made to move. Prior.

As for business, the world yet knows nothing of his (the Duke of Grafton) talents or resolution; unless a wayward, wavering inconsistency be a mark of genius, and caprice a demonstration of spirit. *Junius's Letters*.

DEMONSTRATION. See LOGIC.

DEMOSTHENES, the famous Athenian orator, was born at Athens, A.A.C. 381. He lost his father at seven years of age, and was placed under the conduct of guardians, who plundered his property and neglected his education. Demosthenes soon repaired this loss by his extraordinary abilities. He became the disciple of Isaus and Plato, and studied the orations of Isocrates. At the age of seventeen he gave a proof of his eloquence and abilities against his guardians, from whom he recovered the greatest part of his estate. His rising talents were, however, impeded by various natural defects, but which he overcame by dint of resolution and unwearied attention. He declaimed by the seashore, that he might be used to the noise of a tumultuous assembly, and with pebbles in his mouth, that he might correct a defect in his speech. He confined himself in a subterraneous cave, to devote himself more closely to study; and, to check all inclination to appear in public, he shaved one half of his head. In this solitary retirement, by the help of a glimmering lamp, he composed the greatest part of those orations which have since been the admiration of all ages, though his contemporaries and rivals inveighed against them, and observed that they smelt of oil. His abilities, as an orator, raised him to consequence at Athens, and he soon influenced all the decisions of the government. In this capacity he roused his countrymen from their indolence, and animated them against the encroachments of Philip of Macedon. In the battle of Cheronæa, his eloquence, however, could not supply the want of courage, and he saved his life by flight. After the death of Philip, he declared himself warmly against his son Alexander. When the Macedonians demanded of the Athenians their orators, Demosthenes reminded his countrymen of the fable of the sheep which delivered up their dogs to the wolves. By the prevalence of party, however, he was forced to retire to Thrace and Egina, where, it is said, he lived effeminately. When Antipater made war against Greece, after the

death of Alexander, Demosthenes was publicly recalled from his exile, and a galley was sent to fetch him from Egina. His return was attended with much splendor, and all the citizens crowded at the Piræus to see him land. But his triumph and popularity were short. Antipater and Craterus were near Athens, and demanded all the orators to be delivered up into their hands. Demosthenes fled to the temple of Neptune, in Calauria; and when he saw no hopes of safety, he took a dose of poison, which he always carried in a quill, and expired on the day that the Thesmophoria were celebrated, A.A.C. 322. The Athenians raised a brazen statue to his honor, with an inscription, of which the following is a translation:

Si tibi par menti robur, vir magne, fuisseet,  
Græcia non Macedon succubisset hero.

Demosthenes has been deservedly called the prince of orators, and has often been compared with Cicero, whose magnificent eloquence has scarcely the effect of the powerful simplicity of his master, as he was accustomed to style him. Indeed, no orator had ever a finer field than Demosthenes, in his Olynthiæ and Philippicæ, which are his capital orations. For to the greatness of the subject, and to that integrity and public spirit which breathe in them, they owe the largest portion of their merit.

DEMOTICA, or DIMOTIC, a town of European Turkey, in the province of Romania, situated near the Maritsch, where a Greek archbishop resides, and the Christians have two churches. This town was the abode of Charles II. for some years. It is twelve miles south of Adrianople.

DEMPSTER or COURT, the name formerly given, in Scotland, to the common executioner, or hangman.

DEMULCENT, *adj.* Lat. *demulceo*, from *de*, and *mulceo* to soften. Softening; mollifying; assuasive.

Pease, being deprived of any aromatick parts, are mild and demulcent in the highest degree; but, being full of aerial particles, are flatulent, when disturbed by digestion.

Arcturius.

DEMULCENTS, among physicians, are those good against acrimonious humors. Such are the roots of marshmallows, white lilies, liquorice, and viper-grass, the five emollient herbs, &c.

DEMU'R, *v. a. & n. s.* } Fr. *démurer*;

DEMUR'ER, } Lat. *démorari*;

DEMUR'AGE, } from *de*, and *morare*, delay.

To doubt of; as a neuter verb, to delay a process; to pause; doubt. A demurrer is defined in the extract from Burns. Demurrage is an allowance to masters of ships for detaining them in port.

Upon this rub the English ambassadors thought to demur, and so sent into England to receive instructions from the lords of the council. Haywood.

The latter I demur; for in their looks

Much reason, and in their actions, oft appears. Milton.

O progeny of heaven, empyreal throne!  
With reason hath deep silence and demur.  
Seized us, though undimayned. 12

How can I c'er expect to have her,  
Having demurred unto her favour? Hudibras.

ing into demands, they expect from us a resolution in things wherein the devil of Delia demurs. *Brown's Vulgar Errors.*

Is this plea the plaintiff demurred.

*Walton's Angler.*

By the highest and dearest concerns of a life are infinitely less valuable than those of all; and consequently ought, without any all, to be sacrificed to them, whensoever in competition with them. *South.*

There she kept her word:

With rejoinders and replies,

And bells, and answers stuffed with lies,

And, impudence, and escoign,

Parties ne'er could issue join. *Swift.*

Is something in our composition that thinks friends, and reflects and deliberates, determines doubts, consents and denies; that wills, and resolves, and chuses, and rejects. *Bentley.*

My demurs but double his attacks;

He whispers, Do, and we go snacks. *Pope.*

In criminal cases, not capital, if the defendant in an indictment, &c., whether in abatement or otherwise, the court will not give judgment against him over, but final judgment.

*Burn's Justice.*

Demur signifies an abiding in point of law, when the defendant joins issue, allowing the issue as laid in the indictment. *Id.*

DEURE, *adj. & v. n.* } *Fr. de bons mœurs;*  
DEURELY, *adv.* } *from Lat. mores,*  
DEURENS, *n. s.* } *manners. Of good*

All these words have been used in a sense; but now commonly mean affected or gravity. See the admirable illustration in Dryden. Shakspeare uses demure as a verb, and demurely for solemnly.

Two most lovely virgins came in place,

Countenance demure, and modest grace. *Spenser.*

For many wise men, that have secret hearts  
Unparent countenances; yet this would be  
A demure abasing of your eye sometimes. *Bacon.*

A damsel, turned from a cat to a woman, sat  
Demurely at the board's end, till a mouse ran  
By her. *Id.*

A demure travel of regard, I tell them I  
In place, as I would they should do theirs. *Shakspeare.*

Put on a sober habit,

With respect, and swear but now and then,

My books in my pocket, look demurely. *Id.*

How the drums demurely wake the sleepers! *Id.*

My wife Octavia, with her modest eyes,

Still conclusion, shall acquire no honour,

Coming upon me. *Id.*

Come, pensive nun, devout and pure,

Sober, steadfast, and demure. *Milton.*

Next stood Hypocriasy with holy leer,

Smiling, and demurely looking down;

And hid the dagger underneath the gown. *Dryden.*

He lay and looked so demure as if there had  
Neither life nor soul in her. *L'Estrange.*

They having in them such a cheerfulness, as  
Seemed to smile in them; though her mouth

and cheeks obeyed to that pretty demureness, which  
the more one marked, the more one would judge the  
poor soul apt to believe. *Sidney.*

Silent when glad; affectionate though shy;

And now his look was most demurely sad;

And now he laughed aloud, yet none knew why. *Beattie.*

DEMY, in heraldry, an epithet for any charge borne half, as *a demy-lion rampant; gules, name Mallory.*

DEN. Sax. *den*; Belg. *denne*; Teut. *den*; Ital. *tanna*. A cavern; a low place. As the termination of a local name, says Gibson's Camden, it may signify either a valley or a woody place; for the Saxon *den* imports both.

And Jhesus seide to him, foxis han *dennes*, and  
briddis of hevene han nestis: but manne soþþæt hath  
not where he schal reste his hed. *Wiclif. Matt. 1.*

This is the wandering wood, this Errour's *den*,  
A monster vile whom God and man does hate;  
Therefore I read beware. *Spenser. Faerie Queene.*

They here dispersed, some in the air, some on the  
earth, some in the waters, some amongst the minerals,  
*den*, and caves under the earth. *Hooker.*

What, shall they seek the lion in his *den*,

And fright him there? *Shakspeare*

Whose attempt

At first against mankind so well had thrived  
In Adam's overthrow; and led their march  
From hell's deep-vaulted *den* to dwell in light. *Milton.*

'Tis then the shapeless bear his *den* forsakes;  
In woods and fields a wide destruction makes. *Dryden.*

DENARIUS, in antiquity, the chief silver coin among the Romans, worth, in our money, about 7½d. at 5s. 2d. per ounce, or 8½d. when bullion is high-priced. It was about the size of a six-pence, but much thicker, and had the emperor's head on the one side; the figures on the reverse were various. In our translation of the New Testament, the denarius is called a penny. See Matt. xxii. 19.

DENARY, *n. s.* A word formed between deny and nay. Denial; refusal.

DENBIGH, a borough, market, and fair town in the county of Denbigh, North Wales. It occupies the side of a steep limestone rock, the summit of which is crowned by the ruins of its once noble castle, and commands an extensive prospect over the admired and fertile vale of the Clwyd. The population is returned at 3,786. The old town lies at the foot of the rocky pedestal on which the castle rests, and the new town extends down the side of the hill in one long and handsome avenue, nearly a length of one mile. Here are a chapel of ease, a town hall, a public dispensary, an old established banking house, and two large inns. The corporation consists of an alderman, two bailiffs, a recorder and two coroners. Denbigh is contributing with Rhuthyn and other places in sending one member to parliament, and derived its charter from king Charles II. The parish church, usually called Whit-church, lies one mile from the town, and con-

tains the tombs of Humphrey Llwyd, the antiquarian, Edwards, the Cambrian Shakspeare, and of Richard Myddleton, father of Hugh, who brought the New River to London. The castle owes its greatness to Henry, earl of Lincoln, who also enclosed the town with walls, and, after passing through various owners, it was granted by Elizabeth to the earl of Leicester. This last proprietor raised here the walls of the first protestant church erected in Great Britain, but neglected to complete his design: the ruins stand upon the rock opposite St. Hilary's chapel. There is no event in the history of the fine castle of Denbigh more worthy of historic recollection than the gallant stand it made for king Charles, under the command of the brave William Salisbury. Near the lower termination of the main street, stand the remains of a Carmelite church desecrated into a malt-kiln, but still in excellent preservation.

DENBIGHSHIRE, one of six counties into which North Wales is divided. It presents a front to the Irish Sea on the north, is bounded on the east by Flintshire, Cheshire, and Shropshire. Merioneth and Montgomery shires enclose it on the south,—and Caernarvonshire constitutes its boundary on the west. Its dimensions are 39 miles in length, by an average breadth of 23, and its area occupies 410,000 acres of land. The population is calculated at 83,167. The surface is hilly and inclined to a mountainous character, but the soil in many places remarkably rich. Two ranges of elevated hills pervade the county, and preserve a parallelism to each other during their lengths: one rises from the sea, and crossing over near Gwytherin, and thence to Cerig-y-druidion, falls in with the masses of Merionethshire; Moel Eiddyn, the most elevated summit in the chain, stands 1660 feet above the level of the sea. The Clwydian hills extend a length of thirty miles and overhang the celebrated vale of Clwyd, whence the origin of their name. Rising near the sea at St. Asaph's, they culminate in Moel Famau, and descend gradually towards the beautiful vale of Llangollen. The loftiest point, Moel Famau, attains a height of 1845 feet above the sea, and this has been judiciously selected by the Cambrians as the site of a handsome obelisk, erected to commemorate the happy accomplishment of a fifty years' reign by king George III. The vales of Clwyd, Llanrwst, Llangollen, and the maritime portion of the county, are both beautiful and fertile, while the higher grounds, occupying one-third of the whole surface, are, from neglect, in a very unproductive state. The six hundreds into which the county is divided are called Bromfield, Chirk, Llaed, Isdulas, Yale, and Rhuthyn: these are ecclesiastically partitioned into fifty parishes, most of which are in the diocese of St. Asaph. The towns are larger than those of the other Welsh counties; Wrexham is the most populous, Denbigh an ancient borough, Rhuthyn the assize town, also a contributing borough, besides Llanrwst, Abergelle, and Ruabon, in which weekly markets are held. The Dee is the noblest river which waters the county, but the Conway is the most useful, being navigable for twelve miles

from its embouchure: the others are the Elwy, Aled, Alen, Clwyd, and the Ceiriog, which rates England from Wales in the valley of Chirk. The principal lakes are the Elwy, Aled, and Conway, in which the rivers bearing their names respectively originate. These all abound in fish, but are devoid of the picturesque scenery which characterizes the other Welsh pools. The artificial navigation established here is a branch of the Ellesmere canal, which is fed by the River Dee, crosses the vale of Llangollen by an aqueduct of twenty-one arches, called Pont-y-cym, and passing to Chirk is conducted over the Ceiriog by a second aqueduct of nine arches. Iron is manufactured at Ruabon, as well as at Chirk, coal of a superior quality worked. The woollen manufacture is spread very generally over the county: the slate exists only on the borders, but agriculture is a universal dominion here. But few remains of military antiquity are found here: of these castles of Denbigh and Rhuthyn are the most interesting; and, of the few monastic establishments, the abbey of Valle-Crucis and the fine church at Denbigh, now desecrated into a malt-kiln, are the principal. The county returns two members to parliament, and the boroughs of Wrexham, Holt, Denbigh, and Rhuthyn are third. The ancient family of Fielding is the earldom of Denbigh.

DENDERA, a town of Egypt, on the west side of the Nile, at the edge of a small but fertile plain, about half a mile from the river. The town are remarkably magnificent ruins, composed of an ancient temple of Serapis, or Venus. The portico contains twenty-four columns, three rows, each above twenty-two feet in circumference, thirty-two feet high, and covered with hieroglyphics. The great peculiarity consists in the square capitals, with a front face of Isis on each side, the effect of which, though singular, is by no means displeasing. All the walls and ceilings of the interior are covered with sculptures, which display the highest perfection of Egyptian art. They have originally been covered with paint, the brilliant colors of which partially remain. The subjects are various religious ceremonies, priests, offerings, deities, and human sacrifices. Isis, with Osiris before her, forms the grand theme of representation. There are also numerous astronomical figures on the ceilings; of these two zodiacs have, in a particular degree, attracted the attention of the learned, who have been much divided as to the date when they were formed. De la Lande would fix their period at 3000 years ago, or 1200 before the Christian era; but Mr. Hamilton is disposed to consider them as much more modern, and probably formed in the reign of Tiberius. On the side of the great temple is a smaller one supposed to have been dedicated to Typhon, whose figure is displayed on the capitals; but the object of adoration seems to be an infant figure in which may be distinguished the attitude and character of the young Harpocrates. Mr. Hamilton is of opinion, that several of these statues may have been raised in the time of the Ptolemies; and the names of Tiberius and other Roman emperors, which he found on the walls,

The whole of these edifices, with the exception of one propylon, is contained within a square of 1000 feet, surrounded by a brick wall. Within the enclosure, a great number of modern buildings have been erected, so as often to hide the ancient structures from view.

Richardson, one of our latest travellers in Egypt, thus describes this spot: 'The scene of nearly a mile square, and consists of houses of red brick, that have been repeatedly overthrown and at every restoration, the new houses are built on the top. The first thing that strikes the eye of the traveller, on the edge of this field of ruins, is a small square stone edifice with four columns; it has an unfinished roof, and is without hieroglyphics. It is difficult to say for what purpose this edifice was built; it looks like a porter's lodge, or habitation for the guardian of the precincts of the temple, and I should not have mentioned it at all, if it had not been constructed of the same sandstone with the temple itself; and as it must have been brought thither from a distance, and at a great expense, it is probable that this insignificant fabric was constructed for religious purposes. Advancing on, for several hundred yards among the ruins, we came to an elegant gateway, or pylon, which is also of sandstone, well hewn, and completely covered with sculpture and hieroglyphics, remarkably well cut. Immediately in the centre of the doorway is the beautiful ornament, usually called the globe, with four wings, emblematic of the globe, as it is poised in the airy firmament of heaven, and directed in his course by the wisdom of the Deity. The symbolism of Scripture, 'the sun of righteousness shall arise with healing in his wings,' would not be more accurately, or more fully represented to the human eye, than by this elegant device. To this succeed the statues of Osiris, Isis, and their son Horus, in the personages of priests and people advancing in pilgrimage, and presenting their offerings on their knees. Passing under the gateway, we find two principal devices on each side of the way, which are to be the sceptre of Osiris alternating with the letter T, suspended from a pole; or, to speak more correctly, with a ring attached to it ; it has been called the cross, the key of the Nile, and is honored by various designations.' Vol. i. 185—187.

Richardson considers this as the sign, or  
sign, mentioned in the Vulgate Latin  
of Ezekiel ix. 4; and there intimated as  
sign of life and salvation to those who  
it. Some of the female figures are ad-  
mired, and exhibit a remarkable mild-  
nature and expression. The remains of  
temples still exist. The largest of these is  
of fine preservation, and is emphati-  
cally the temple of Dendera. It is  
described by Dr. Richardson, whose  
as well as his disposition on Egyptian  
is not easily admit of abridgment. We

only remark, that he controverts the commonly received opinion, that the splendid sculptures in the pro-naos, which have lately arrived at Paris, are a zodiac; and in this opinion he is supported by some eminent French literati. He had an opportunity of comparing the original with part of the great French work on Egypt; to the elegant execution of which he gives the just tribute of praise, but he announces it to be extremely incorrect in every part. It is 242 miles south of Cairo, and forty-eight S. S. E. of Girge.

DENDERMONDE, a handsome town of the Netherlands, with a strong citadel. It is surrounded by marshes and fine meadows, which the inhabitants can lay under water when they please, and seated at the conflux of the Dender and Scheldt, fourteen miles east of Ghent, and nineteen south-west of Antwerp. Inhabitants 5000. In 1667 the town was besieged by Louis XIV, with an army of 50,000 men, but he was obliged to retreat with precipitation, the inhabitants having opened the sluices. The vicinity is very fertile.

**DENDRACHATES**, in natural history, from *δένδρον*, a tree, and *αχάτης*, an agate; the name used by the ancients for an extremely elegant and beautiful species of agate, the ground of which is whitish, variegated with veins of a brighter white. These veins are beautifully disposed in a number of various figures; but generally in many concentric irregular circles, drawn round one or more points. It is common also, in various parts of this stone, to find very beautiful delineations of trees, mosses, sea plants, and the like, so elegantly expressed, that many have erroneously taken them for real plants included in the substance of the stone; whence the name.

DENDROLOGY, n. s. Δένδρον and λογος.  
The natural history of trees.

**DENDROMETER**, from *δένδρον*, a tree, and *μετρέω*, to measure; an instrument so called from its use in measuring trees. This instrument

consists of a semicircle A, divided into two quadrants, and graduated from the middle; upon the diameter B there hangs a plummet L for fixing the instrument in a vertical position; there is also a chord D parallel to the diameter, and a radius E, passing at right angles through the diameter and chord. From a point on the radius hangs an altimeter C, between the chord and diameter, to which is fixed a small semicircle G, and a screw, to confine it in any position. The altimeter, which is contrived to form the same angle with the radius of the instrument, as the tree forms with the horizon, is divided from its centre both ways into forty equal parts; and these parts are again subdivided into halves and quarters. Upon the small semicircle G, which is accounted the quantity of the angle made by the altimeter and radius, are expressed degrees, and the radius is numbered with the same scale of divisions. There is also a nonius to the small semicircle, which shows the quantity of an angle to every five minutes. There is also a groove in the radius, that slides across the axis, by means of a screw I, working between the chord and semicircle of the instrument; and this screw is turned by the key O. The principal use of this instrument is for measuring the length and diameter of any tree, perpendicular or oblique, to an horizontal plane, or in any situation of the plane on which it rests, or of any figure, whether regular or irregular, and also the length and diameter of the boughs, by mere inspection.

**DENDROPHORI**, from *δένδρον*, a tree, and *φορεω*, to bear; tree-bearers. In antiquity, priests who marched in procession, carrying branches of trees in their hands, in honor of some god, as Bacchus, Cybele, Sylvanus, &c. The college of the dendrophori is often mentioned in ancient marbles; and we frequently see, in basso relievos, the bacchanals, represented as men, carrying little shrubs or branches of trees.

DENHAM (Sir John), an eminent English poet, was born in Dublin in 1613; but he received his education in England. In 1641 he published a tragedy, called *The Sophy*, which was much admired; and, in 1643, wrote his famous poem called *Cooper's Hill*, which, according to Dryden, will ever be a standard of good writing. Denham was sent ambassador from Charles II. to the king of Poland; and at the Restoration was made surveyor-general of his buildings, and created knight of the Bath. On obtaining this post, he is said to have renounced his poetry for more important studies; though he afterwards wrote a copy of verses on the death of Cowley. He died at his office, in Whitehall, in 1688.

**DENHAM** (Dixon, lieutenant-colonel), eminent by his expedition to central Africa, was born at London in the year 1786, and, after completing his studies at school, was placed with a solicitor; but, in 1811, he entered the army as a volunteer, and served in the peninsular wars. After the general peace he was reduced to half pay, and, in 1819, was admitted to the senior department of the Royal Military College at Farnham. In 1823-4 he was engaged, in company with captain Clapperton and doctor Oudney, in exploring the central regions of Af-

vicen. See CLAPPERTON. His courage, firmness, perseverance and moderation, energetic disposition, and his conciliatory manners, peculiarly fitted him for such a task. The narrative of the discoveries of the travellers was drawn up by Denham. He proceeded to Sierra Leone, as superintendent of the liberated Africans, and, in 1828, appointed lieutenant-governor of the colony. On the ninth of June, in the same year, he was attacked by a fever, and died after an illness of a few days.

**DENIAL, DENIER.** See **DENY.**

DENIE'R, *n. s.* Lat. *denarius*.  
denounced as *denear*, in two syllables.  
denomination of French money; the tw  
of a sous.

You will not pay for the glasses you have—No, not a *denier*.

DENIER is a small French copper which twelve make a sol. There are 12 of deniers, the one Tournois, the other the latter of which is worth a fourth less than the former. Denier is also the smallest weight, used in assaying silver. The carat, used in trying and expressing the fineness of gold, is rather imaginary than real. The whole mass of silver, whatever be its weight, is supposed to be divided into twelve deniers, as many twelfth parts, as it contains of silver, it is called silver of so many deniers. Thus sterling silver, of eleven deniers fineness, of which eleven parts are pure silver and one part copper. Each denier is to be divided into twenty-four grains; and estimating pure silver at 6s. per oz., sterling silver is worth 5s. 6d.; and the value of any quantity of silver can be calculated with the utmost exactness to half a grain or half a farthing in value per oz. The grains, used by the assaymasters for this purpose, are real weights, made with the most scrupulous exactness in the above proportions to each other.

DE'NIGRATE, *v. a.* } Lat. *denig*  
DENIGRA'TION, *n. s.* } *de* and *nig*  
blacken; to make black.

DENIZEN, or } Either, says  
DENIZON, v. a. & n. s. } from old Fr.  
DENIZATION, n. s. } giving (liberty)  
Dane's son, the son of a Dane, according  
Johnson, from the Danes being made  
Alfred. A freeman; a stranger made  
Welsh is *dinastidlyn*, a man of the city;  
*sydd*, free of the city). To make free.

*Denizen* is a British law term, which the  
and Angles found here and retained.

That the mere Irish were reputed aliens by the charters of denization, which in all were purchased by them.

Pride, lust, covetize, being several  
To these three places, yet all are in all  
Mingled thus, their issue is incestuous  
Falschood is *domesticed*, virtue is *barbered*

**DENIZEN**, in law, an alien made a subject by the king's letters patent; otherwise called *denizen*, because 'his legitimization pro-

donations regis, from the king's gift." A denizen is in a kind of middle state between an alien and a natural-born subject, and partakes of both of them. He may take lands by purchase or lease, which an alien may not; but cannot take by inheritance: for his parent, through whom he must claim, being an alien, had no inheritable blood; and, therefore, could convey none to the son: and, upon a like defect of blood, the issue of a denizen, born before denization, cannot transmit to him; but his issue, born after, may. A denizen is not excused from paying the alien's duty, and some other mercantile burdens. And no denizen can be of the privy council, or either house of parliament, or have any office of trust, civil or military, or be capable of any grant of lands, &c. from the crown.

**DENMAN** (Dr. Thomas), an eminent physician and medical writer, was born at Bakewell, in Derbyshire, in 1733, where his father was a respectable apothecary; on whose death, he was, for some time, an assistant to his elder brother. He afterwards came to London, and attended at St. George's Hospital: he then entered the navy, as surgeon's mate, and in 1757, was made surgeon of a ship. In 1763 he quitted the navy, after having served in the expedition against Belleisle. His first publication was in London, An Essay on Puerperal Fever, which was well received; but his professional prospects were so little satisfactory, that he was happy to obtain the situation of surgeon to one of the royal yachts, which brought him in a salary of £70 a-year, without interrupting his practice. He was shortly after (1770) chosen junior-physician and man-midwife to the Middlesex Hospital, and gave lectures on the latter branch of practice. He thus slowly emerged from obscurity into the most extensive practice: was appointed licentiate in midwifery of the College of Physicians in 1783, and, six years after, an honorary fellow of the Royal Society of Edinburgh. After the death of Dr. William Hunter, he was considered as the most eminent obstetrical practitioner in the metropolis. His great work, is *The Introduction to the Practice of Midwifery*, which, with his *Aphorisms for the Use of Junior Practitioners*, claims a place in every medical library. In the decline of life, Dr. Denman relinquished the more laborious part of his practice to his son-in-law, Sir Richard Croft, and became a consulting physician. His death, which was sudden, took place November 26th, 1815.

**DENMARK**, one of the most ancient monarchies in Europe, comprehends the peninsula of Jutland, Sleswick, Holstein, and Lauenburg on the continent; and the islands of Zealand, Funen, Langeland, Falster, Laaland, Bornholm, Møn, and several others in the Baltic. Denmark Proper is that part of Scandinavia which formerly went by the name of Cimbrica Chersonesus. It is every where bounded by the sea, except on its southern frontier in Holstein, and stretches northward from about 53° 30' to 57° 30' of lat., i. e. from the right bank of the Elbe, to the extreme point of Jutland. This main-land tract is divided into three divisions, of which Holstein forms the southern, Sleswick the central, and Jutland the northern province, each

being governed by laws and institutions, occasionally very dissimilar; and contains, together with the adjacent islands, a territory of about 22,000 square miles, and a population of about 1,635,000 inhabitants, thus distributed:

Jutland contains	400,000
Zealand (including Copenhagen), Funen, and other islands,	550,000
Sleswick	300,000
Holstein	350,000
Lauenburgh	35,000
	<hr/> 1,635,000

Iceland, the Faroe Islands, and the settlements of Denmark in the East and West Indies and Africa, are supposed to add about 155,000 more to the population in the following proportions:

Iceland	50,000
Faroe Isles	5,500
East and West Indies and Africa	100,000
	<hr/> 155,500

The dismemberment of Norway from Denmark, which took place in 1814, abstracted full one-third of her population and strength, that ancient possession of the Danish crown being estimated to contain at that period 900,000 inhabitants. Denmark received from Sweden, in exchange, Swedish Pomerania, which she again parted with to Prussia for the duchy of Lauenburgh, and a sum of money.

Her remaining territory is, however, compact, and well situated for commerce. The aspect of the continental part is flat and undiversified, containing neither mountains nor rivers of any magnitude, but it is in an excellent general state of cultivation; and, in the character of its climate and rich pasturage, very much resembling our own country.

It is largely indented by the sea, and possesses numerous creeks and bays, as well as internal lakes, but only one canal of importance, that of Kiel. This will admit vessels of 120 tons burden, and extends from the Baltic to the Eyder at Rendsburg, where the river becomes navigable, thus opening a communication between the two seas, or through 105 miles of territory. Its length is twenty-two English miles. Its breadth at top 100 feet, at bottom fifty-four, and depth ten feet. It was begun in 1777, and completed in 1785, at an expense of £800,000 sterling. During the late war between 3000 and 4000 vessels annually passed through it, but in time of peace the number is diminished. It has much improved the internal trade of Sleswick and Holstein.

The revenue of Denmark fluctuates between £1,700,000 and £2,000,000, about £120,000 of which arises from the dues of the Sound: the national debt is nominally £15,000,000. The military force somewhat exceeds 20,000 men; the naval force is only 4000 men in service, but capable of being increased with great facility, as there are between 14,000 and 15,000 registered seamen. The seafaring people of the kingdom are altogether little short of 50,000.

There are no mineral productions in Denmark of any commercial importance; salt is made in considerable quantities from the lime springs of Oldesloe; and a little coal is found; but turf is the great article of fuel. Both timber and salt are imported largely. The agricultural produce consists of wheat, in small quantity, barley, oats, beans, peas, and potatoes; the last very largely. Excellent madder also abounds, and hops, flax, hemp, and tobacco, are partially cultivated. Gardens are seldom seen except in Arak, the great kitchen garden of the capital. The horned cattle and horses are very superior; in Holstein are some of the best working breeds of both, that are known: the exportation of horses is said to amount to 1200 or 1500 annually, valued at from £160,000 to £200,000 sterling. Milch cattle are also well managed here: butter and cheese abound: the sheep, though recently improved by the introduction of merino, and other breeds, are still inferior. 'There are now better meadows, and more hedges and walls in Denmark,' says Mr. Loudon, 'than in any country of Germany of the same extent.' Here was founded, in 1686, the first veterinary school in Germany. 'Artificial grasses and herbage plants enter into most rotations, and rye-grass is perhaps more sown in Holstein than any where, excepting in England. In a word, considering the disadvantages of climate, the agriculture of Denmark is in a more advanced state than that of any other kingdom of Germany.' Fishing in the bays and creeks is conducted on a large scale; the most important branch is the herring fishery; beds of oysters and muscles are not uncommon: and fresh water fish abound in several arms of the Baltic, so little is that sea impregnated with salt.

Denmark has pursued a studiously pacific policy for more than half a century, and the consequence, until nearly the close of the late wars of the French revolution, were the uninterrupted improvement and extension of her commerce. In 1800 she possessed above 2000 merchant men, 20,000 seamen, and 250,000 tons of shipping. During our second war with France these were in a state of rapid increase, but the seizure of her navy in 1807 by Great Britain, and the consequent breach between the two countries, permitted her no longer to carry on a neutral trade, and she has scarcely to the present time recovered the blow. The chief intercourse of the Danes is with the adjacent coasts of the Baltic, with England, Holland, France, and the Mediterranean.

They have found the benefit of a general carrying trade so considerable, that they have pushed it with success, both in the Mediterranean (where their flag is respected by the Barbary states, equally with that of stronger powers), and to the most distant parts of the globe. The whale fishery, likewise, employs a considerable portion of their seamen, and in the West India trade they have about seventy sail of merchantmen. Their connexion with the Guinea and Gold coasts has been in a great measure discontinued since their honorable abolition of the slave trade in 1803.

The principal exports from Denmark to Eng-

land are skins, raw hides, and, when the laws permit, oats. Until lately the most active part of the trade between the two countries was timber from Norway. The imports of England are manufactured articles, and produce. The duties on the imports of foreign commodities into Denmark are high on all kinds of merchandise, with the exception of the following articles, are allowed to be imported, viz. sugar, either raw or refined, coming from European ports, porcelain, colored delf cards, roasted coffee, printed calicoes, and all kinds of woollen cloth.

In 1797 the government laid open to the East Indies (previously monopolised by the Danish East India Company), to all private merchants. Similar liberal regulations have since been made with regard to intercourse with the Indian possessions. The Icelandic trade was laid open by an ordinance from the king in the close of 1816. The exports of Denmark to this distant part of her dominions are wine, brandy, tobacco, and spices, together with linen and woollen cloths, timber, and hay. The vessels generally sail thither in May or June, and return with salt fish, whale oil, cloth, woollen stockings, gloves, hides, feathers, and Eider-down. All the necessaries of life are supplied for the Greenland colonies are imported from the parent country; and oil, bone, seal-skins, and other articles, furnished by the fisheries in the adjacent seas, are returned. The manufactures of Denmark are confined to the supply of her own most common wants: and it is necessary to import woollen ware, printed cottons, and linen. The paper manufacture is carried on by the government. A late return of the sugar refineries in Denmark makes their number forty-six; that of paper mills twenty-two; iron foundries four.

The constitution of Denmark was of Gothic origin. The convention of the nobles, even including the representatives of the clergy or peasants, elected the king, having assigned to him the sword of their late monarch, but, however, they made no scruple of setting aside the king if they deemed him unworthy of the royal dignity. The convention enacted laws; chose the great offices of state; debated all affairs relating to commerce, peace, war, and all other matters, and occasionally gave their consent to the imposition of necessary taxes. The king was the chief magistrate of the people. His power was to see justice administered impartially, to command the army in time of war; to encourage industry, religion, arts, and sciences; to watch over the interests of his subjects; to direct the revolution, in 1660, the constitution was new-modelled, and it was declared that hereditary kings of Denmark and Norway should be in effect, and ought to be esteemed their subjects, the only supreme head of the earth; they shall be above all human laws; they shall acknowledge, in all ecclesiastical and civil affairs, no higher power but God alone; the king shall enjoy the right of making and interpreting the laws; of abrogating, adding to, or dispensing with them. He may also annul the laws which either he or his predecessors

Map No. 1. 3. 1810

made, excepting this royal law, which is irrevocable, and be considered as fundamental law of the state. He has the declaring war, making peace, imposing and levying contributions of all sorts. It is finally added, 'If there is any law which has not been expressly specified shall be comprised in the following.' The king of Denmark and Norway is the hereditary monarch, and endued with the highest authority; inasmuch that all is said and written to the advantage of him, hereditary, and absolute king, shall be under the most favorable interpretation to hereditary king or queen of Denmark, &c. To this singular step the wishes of the people were urged at that time, the tyranny of the nobles. They found tyrants, as a late political bishop said, a times worse than one. The nobility agreed to make a similar surrender of their privileges.

Established religion is the Lutheran and so. The reformation was introduced in the crown taking possession at that period of the revenues of the church, and depriving them of their temporal power: they have full spiritual jurisdiction, but no votes in legislature; and there exists a complete toleration of dissenters. There is a university at Copenhagen on a large scale, and another of arts at Kiel. There is also a college of professors at Odensee in Funen; and literature, though not of general pretensions, yielded in modern times some distinguished names. We need only mention those of Le Brun.

Etymologists, the most ancient and best Danish historians, derives the name of Denmark from Dan the son of Humble, the first Mark, a word signifying a country, in dialects of the Teutonic; according to etymology, the word Denmark signifies the country of Dan. He is said to have flourished A. A. C. 1038 or 1050. Almost all agree that he was the son of Humble, of Zealand. His possessions and influence were very considerable, not only in Zealand in the islands of Langeland and Mona. His courage, however, and skill in the art of war, induced the inhabitants of Denmark to choose him for their king. He was with the assistance of the Jutlanders upon the invasion of the Saxons into their territories, himself the sovereignty of the country if he could not subdue the enemy. On this he raised an army and achieved a complete victory over the Saxons, and then they were made to leave the country; and he was accordingly elected king. The history of Denmark, for several ages after Dan, is filled with the exploits of heroes, encounters with giants, dragons, &c. One of their kings, Guthro, who reigned about A. A. C. 761, is said to have conquered Britain, Sleswick, Pomerania, Holstein, &c. an assertion which cannot easily be credited, considering the small number of succeeding warriors, even the best in the world, found to subdue the inhabitants of those countries. It is certain, how-

ever, that anciently the kingdom of Denmark made a much more conspicuous figure than it does at present. The Danes appear to have had a very considerable naval force almost from the foundation of their empire; and the conquests they undoubtedly made in our island are certain proofs of their valor. Their chief enemies were the Swedes, Norwegians, and Saxons; especially the first. With one or other of these nations almost perpetual war was carried on. The kingdom was also often rent by civil dissensions, which the neighbouring monarchs did not fail to take advantage of, in order to reduce the kingdom of Denmark under their subjection. As in general, however, neither party came off with much advantage, the history of these wars affords nothing interesting.

One of the most illustrious of the kings of Denmark was Canute II., the son of Sueno I., surnamed the Great, from his wisdom as well as his conquests. He was at once king of Denmark, Norway, and England. See CANUTE and ENGLAND. He also conquered a great part of Sweden. Alstedius ranks him as the sixty-seventh monarch of Denmark. Between his son Canute III. and Sueno III. there was a succession of ten kings of whom little important is recorded. One of the greatest of the Danish monarchs, after Canute the Great, was Valdemar I. who obtained the throne in 1157; having defeated and killed the usurper Sueno III. after a civil war of ten years. He maintained a long war with the Vandals, whose power he at last entirely broke, and reduced under his subjection the island of Rugen. He also proved victorious over the Norwegians, so that their king and queen came in person to submit to him. In 1165, he laid the foundations of the city of Dantzic; which, though it has since become a place of very great consequence, consisted at first only of a few poor fishermen's huts; but the privileges and immunities conferred upon it by this monarch, soon proved the means of its becoming a flourishing city. In 1169, he entirely subdued the Courlanders; and, soon after, was invested with the duchy of Holstein by the emperor Frederick Barbarossa. He is said to have been poisoned by a quack medicine, given with a design to recover him from a distemper with which he was seized in 1182, after reigning twenty-eight years. In 1195, Canute VI., Valdemar's son and successor, caused a muster to be made of all the men fit to bear arms in his dominions; and ordered each province to fit out its proportion of shipping, every way equipped, and ready for action. The whole force of Denmark, at that time, consisted of 670 ships of war, besides the squadrons supplied by vassals, tributary states, and allies. The number of the land forces is not mentioned. In the reign of this prince, the Danish dominions were enlarged by the conquest of Stromar, and the districts of Lubec and Hamburg, formerly Nordalbingia, but now included under the general name of Holstein. He died in 1203, and was succeeded by Valdemar II. who proved a very warlike prince. In 1211 he founded the city of Stralsund. He built the castle of Dronningholm in memory of his queen, that name importing the Queen's Island; and

gained in 1218 a victory over the Livonians near the fortress of Valdemar, which was thus named from him. The flourishing state in which Denmark was at this time, appears from an estimate of the revenues of the tributary provinces, which is still extant. He kept for constant service 1400 great and small ships, each of which at a medium carried 121 soldiers; making the whole of the standing forces, besides garrisons, consist of 169,400 fighting men. In 1223, however, Henry Palatine, earl of Swerin, a German prince, having been deprived of part of his dominions by Valdemar, surprised and carried off the king himself, and kept him close prisoner for three years. The conditions on which he at last obtained his liberty were,—that he should pay a large sum of money; relinquish Holstein, Swerin, Hamburg, and all his possessions on the other side of the Elbe; and solemnly swear that he would never take any measures to punish Henry or his associates. This treaty was signed on the 25th of March 1226. Besides these territories, which Valdemar was obliged to cede by treaty, many tributary princes took the opportunity of his captivity to recover their liberty; and among the rest the inhabitants of Lubec revolted, and entered into alliance with Albert, duke of Saxony, against him. Valdemar, however, was not of a disposition to submit tamely to such treatment. He obtained a dispensation from the pope to break his engagements with Henry, and immediately entered Holstein at the head of a numerous army. Here he was met by several German princes; and a desperate engagement ensued. Valdemar at first had the advantage; but, being wounded in the eye, his troops were at last defeated with great slaughter. It does not appear that he was ever able to revenge himself, or to recover the dominions he had lost. Instead of this he was obliged, in 1228, to cede Lauenburg to the duke of Saxony, who had already seized on Ratzburg and Molna. Soon after his eldest son, Valdemar, was accidentally killed as he was hunting, and his two other sons married the daughters of his two greatest enemies. Abel, the third son, married the daughter of Adolphus duke of Holstein; and Eric, the second, the duke of Saxony's daughter. These misfortunes are supposed to have hastened his death, which happened in April, 1242; and on this the kingdom was divided between the two young princes, a war commencing the very next year between them. A peace was concluded the year following, and war renewed the year after. In 1250 Eric paid a visit to his brother Abel, entreating his mediation between him and the princes of Holstein, with whom he was then at war. Abel received him, in appearance, with great kindness, but in the mean time laid a plan for murdering him at sea: this was effected, and Abel became master of the whole kingdom. But he did not long enjoy the sovereignty thus wickedly obtained. He was tormented by his own conscience, especially when he found, among his brother's papers, one by which he was left heir to the whole kingdom on the decease of Eric, and many kind expressions with regard to himself. He was at last killed in a battle with his own subjects in 1252.

From this time to 1333 the kingdom of Denmark gradually declined. Usurpers established themselves in different provinces; while the king of Sweden did not fail to avail themselves of the distracted state of the Danish affairs. In 1259 died Christopher II., who possessed only the cities of Scanderberg in Jutland and Næstved in Fionia, with some few other inconsiderable places, of all the hereditary dominions of Denmark. Halland, Holbeck, Calemberg, and Samsoe, were held by Canute Porsius; Schonen, Lystre, and Bleking, by the king of Sweden, whom they had been lately sold: John earl of Wagnia had the jurisdictions of Zealand, Færo, Laaland, and Femerin: Gerhard, those of Jutland and Fionia; and Lawrence Jonea those of Langeland and Arras. After the death of Christopher an interregnum of seven years, or according to Marcel of fifteen, ensued. The first attempt to the sovereignty was made by Otho, second son to the late king, who tried to drive Gerhard out of Jutland, but was taken prisoner, and closely confined by Gerhard. The king of Sweden wrote to pope Benedict XIII., beseeching his Holiness to confirm to him the provinces of Schonen, &c., which he possessed; and to oblige him to subdue the rest of the kingdom, which was now usurped and rendered miserable by a set of petty princes, who knew not how to govern. The influence the pope he promised to hold the kingdom of him, and to pay him the war collected by the church. This request, however, was refused. Valdemar of Sleswic, nephew of Gerhard, had formerly been elected king; but on account of the superior influence of Christopher, had never enjoyed the sovereignty. He was now, at the instigation of his uncle, resumed his ambitious views. Several of the nobles cast their eyes on young Valdemar, Christopher's son. But, while these two princes were busy with schemes to aggrandise themselves, the unhappy Danes were distressed by exorbitant taxes, famine, and pestilence, which destroyed more than half of the inhabitants. In the midst of these calamities Gerhard, sovereign of Jutland, proposed to his nephew Valdemar an exchange of territories, which he believed would prove favorable to the designs of the latter on the crown. A treaty for this purpose was actually drawn up and signed; but the inhabitants, notwithstanding their distressed situation, so highly resented the being disposed of like cattle, from one master to another, that they refused to pay the taxes. Gerhard resolved to compel them, and therefore he levied 10,000 men, whom he had levied in Germany, into the heart of the province. Proclaiming, however, now raised up an enemy to this tyrant. One Nicholas Norevi, a man greatly esteemed for his courage, public spirit, and prudence, bold with sorrow the condition to which Denmark was reduced. He had long meditated various projects for its relief. Young Valdemar, Christopher's son, had a number of adherents in the kingdom; his most dangerous enemy was Gerhard; and, if he could be removed, the Jutlanders would at least be free from an oppressor, and might choose Valdemar, or any other they thought proper, for their sovereign. Collecting, therefore, a body of chosen horse he marched in the night to Rand-

Gerhard had fixed his head-quarters; forced upon the tyrant's apartment, put him to death. He then fled with expedition, and, though overtaken by the enemy's horse, forced his way to and escaped. Gerhard's sons, after their father's death, retired into Holsten, the army, composed chiefly of Danes, to be cut to pieces by the enraged Swedes, who fell upon them from every quarter. The Holsteiners kept possession of the fortified places, from which Nils tried to dislodge them. He accordingly took Lunden, a castle situated on the river: After which he laid siege to the garrison making an obstinate defence, the siege into a blockade, by which the garrison was reduced to great extremity. He sent an express to Gerhard's sons, informing them with the impossibility of his relief more than a few days, without being able to march to his relief, and came to the conclusion just as the governor was ready to surrender, but were defeated; though Nicholas was killed in the engagement. The kingdom thus regained its liberty, the rest of the kingdom followed its example. Zealand declared itself. Here Henry, German, maintained several garrisons; and defended his possessions in spite of all the efforts of the inhabitants. For this purpose he gathered an army; but in the meantime rose among the peasants, on account of the oppression slain by the Holsteiners. By the people were so irritated that, falling upon the garrisons, they killed 300 of them, drove the king from the island, and chose Valdemar III. as their son, for their sovereign. The Danes lost their courage; the lands were cultivated, and pestilence ceased, and the kingdom began to flourish as formerly. Matters prospered till 1373, when Valdemar died, and was succeeded by his daughter Margareta, who raised her grandson Olaus IV. as her successor; but he, being an infant, hardly he said to have reigned, and Alstedius ranks his mother, who governed during his infancy, as the successor of

she raised the kingdom of Denmark to a new pitch of glory. She defeated and dethroned the king of Sweden, in 1447; and partly by force, partly by hereditary right, she united the kingdom of Calmar, by which she was proclaimed sovereign of Sweden, Denmark, Norway. She held her dignity with such courage, that she was justly styled the Queen of the North. Her only son, Olaus V. when ten years of age, in 1398, she adopted as her son, Eric duke of Pomerania, as her son, and died in 1412, after a glorious reign of twenty years. Eric IX., her successor, on account of her great qualifications, the union fell to nothing; but Norway still continued to Denmark. Some say he was not Alstedius states that he resigned the throne, and retired to Pomerania, where he died in 1425. Upon his resignation his nephew, Albrecht III. duke of Bavaria, and count

palatine of the Rhine, was elected. After an illustrious reign of ten years, during which Sweden was separated from Denmark, he died in 1448, and made way for a new royal race, which still continues to reign in Denmark, by the election of Christian, count of Oldenburg. Christian I. was crowned king of Denmark in 1448, of Norway in 1450, and of Sweden upon the deposition of Charles VIII. in 1457, who, however, was restored by the Swedes in 1464; Christian not having adhered to the terms he had made with them. He died in 1491, and was succeeded by his son John, who had frequent wars with the brave Swedish governors, Steno and Sweno Sture. John, dying in 1513, was succeeded by Christian II. who recovered Sweden for a short time on the death of Steno Sture; but was expelled for his cruelties, by the illustrious Gustavus Vasa, who threw off the Danish yoke, and restored the independence of his country in 1520. See SWEDEN.

Christian died in 1559, but was previously deposed, and Frederick I. duke of Holstein elected king in 1523. He reigned only ten years; dying in 1533, when he was succeeded by his son Christian III. a wise and politic prince, by whom, in 1536, the protestant religion was established in Denmark. He was succeeded in 1559 by his son Frederick II. who, after reigning about twenty-nine years, left the kingdom to his son Christian IV. who, however, was not crowned till 1596. This monarch twice visited England, in compliment to his son-in-law king James I.; in July 1606 and 1614. In 1629, he was chosen head of the Protestant league formed against the house of Austria; but, though personally brave, he was in danger of losing his dominions; when he was succeeded in that command by the famous Gustavus Adolphus king of Sweden. The Dutch having obliged Christian, who died in 1648, to lower the duties of the Sound, his son Frederic III. consented to accept of an annuity of 150,000 florins for the whole. The Dutch after this persuaded him to declare war against Charles X. king of Sweden, which had almost cost him his crown in 1657. Charles stormed the fortress of Fredericstadt; and, in the succeeding winter, he marched his army over the ice to the island of Funen, where he surprised the Danish troops, took Odensee and Nyburg, and marched over the Great Belt to besiege Copenhagen itself. Oliver Cromwell interposed; and Frederic defended his capital with great magnanimity till the peace of Roschild; by which he ceded the provinces of Halland, Bleking, and Scania, the island of Bornholm, Bahus, and Drontheim, in Norway, to the Swedes. Frederic sought to elude these severe terms; but Charles took Cronenburg, and once more besieged Copenhagen by sea and land. The steady intrepid conduct of Frederic under these misfortunes endeared him to his subjects; and the citizens of Copenhagen made an admirable defence, till a Dutch fleet arrived in the Baltic, and beat the Swedish fleet. The fortune of war was now entirely changed in favor of Frederic, who showed on every occasion great abilities both civil and military; and, having forced Charles to raise the siege of Copenhagen, might have carried the war into Sweden, had not the English fleet under Montague appeared in the Baltic.

This enabled Charles to besiege Copenhagen a third time: but, France and England offering their mediation, a peace was concluded in that capital: by which the island of Bornholm returned to the Danes; but the island of Rugen, Bleking, Halland, and Schonen, remained with the Swedes.

The year 1660, as we have already intimated, affords an instance of a revolution in Denmark, unparalleled in the annals of history, viz. that of a free people resigning their liberty into the hands of their sovereign of their own accord, and without the least compulsion rendering him despotic. This was in part occasioned by the great character which Frederic had acquired by his late prudent and valiant conduct. At that time he had also taken care to ingratiate himself with the commonalty, by obliging the nobility to allow them some immunities which they did not enjoy before, and permitting them by a special edict to possess lands. After the conclusion of the treaty with Sweden, a diet was summoned at Copenhagen, to take into consideration the state of the kingdom, which was now very much exhausted, by the calamities of war. This distressed state of affairs was, by the commons, attributed to the nobility; who, on the other hand, took no care to conciliate the affections of the inferior classes; but rather increased their discontents by their arrogance. They had even the imprudence to remonstrate against the immunities above mentioned, which had been granted by the king during the siege of Copenhagen. In consequence of this, the deputies of the commons and clergy united against them; and, being joined by the citizens of the capital, formed a very considerable party. On bringing forward in the assembly the sums necessary for the national exigencies, a general excise was proposed by the nobles on every article of consumption; and they professed themselves willing to submit to it, though, by an express law, their order was to be exempted from taxes. This offer, however, was accompanied with a remonstrance to the king; in which they endeavoured to reclaim many obsolete privileges, and to add fresh immunities, tending to diminish the royal prerogative, and check the rising influence of the commons and clergy. This proposal occasioned great disputes in the diet; and the two inferior orders insisted, that they would not admit of any tax which should not be levied equally upon all ranks. The nobles not only refused to comply with this proposal, but even to be subject to the present tax for more than three years; pretending that all taxes whatever were infringements on their privileges. By way of compensation, however, they proposed new duties upon leather and stamped paper, and at last offered to pay a poll tax for their peasants. This at first seemed to be agreeable to the two inferior estates; but they suddenly changed their minds, and demanded that the fiefs and domains, which the nobles had hitherto possessed exclusively, and at a very moderate rent, should be let to the highest bidder. In the heat of the dispute, one of the chief senators having imprudently thrown out some reproachful expressions against the commons, a general ferment ensued, and the assembly was broken up in confusion. This gave occasion

to the interposition of the king's friends, the idea of rendering the crown hereditary, enlarging the royal prerogative, began to be suggested as the proper method of humbling nobility. This was first proposed by the bishop of Zealand; an act for rendering the crown hereditary was drawn up; and the best method of publicly producing it taken into consideration. All this time the king seemed quite inactive; but he prevailed upon to take any part in an affair which so nearly concerned him. His indolence was abundantly compensated by his alertness and diligence of his queen. On the morning of the 8th of October, the bishop of Zealand having obtained the assent and signatures of the ecclesiastical deputies to the new proposal, delivered it to Nausen, master of Copenhagen and speaker of the commons, whose speech in favor of it had produced an effect upon the assembly, that they submitted to it unanimously; the nobles being all the while they professed their general willingness to assent to the declaration, observed to the commons that it required the most serious discussion. Nausen replied, that the commons had already taken their resolution; that they would lose no time in debate; and that, if the nobles would not concur with them, they would immediately repair to the palace by themselves. They had not the least doubt that the king would graciously accept their proffer. In the interim, the nobles had privately despatched a messenger to the king, intimating that they were willing to render the crown hereditary in the line of his issue, provided it was done in the usual formalities. But his majesty stipulated for an equal right of succession in the female line. He added, however, that he by no means intended to prescribe rules for their conduct; but to follow the dictates of their own judgment. He would owe every thing to their free choice. In the interim, the other deputies arrived at the palace, and the bishop of Zealand added his majesty on the resolution taken by the commons, adding, that they were ready to sacrifice their lives in the defence of an establishment so salutary to the country. His majesty, assured them of his protection, and promised to redress all grievances, mentioned by the commons, as a necessary condition, and dismissed them with an exhortation to continue their sittings until they should have arrived at a pacific conclusion. The nobles, breaking up without coming to any resolution, and preparing, it is said, to leave the king, the court and the popular party, necessary measures to force them to a compliance. Orders were given to shut the gates of the capital, when a message arrived that they were willing to concur with the commons, and submit to the conditions of the royal pleasure. The assembly now remained but to ratify the transaction with proper solemnity. Accordingly, on the 10th of October, the estates assembled in the usual manner, the capitulation or charter signed by the king on his accession to the throne; a bill

engagements, and cancelled all the imposed upon his sovereignty! The concluded by the ceremony of doing the new oath with great ceremony; a new form of government was under the title of The Royal Law

It was succeeded, in 1670, by his son who obliged the duke of Holstein renounce the advantages he had gained of Roschild. He then recovered a places in Schonen; but his army in the bloody battle of Lutzen XI. of Sweden. This put an end to the war, which minutely continued till he was only at the battle of Landskron; exhausted his dominions in his millions, he was in a manner abandoned his allies, and forced to sign a treaty prescribed by France, in 1679. He never did not desist from his military, and at last became the ally and Louis XIV. He died in 1699, and was succeeded by Frederic IV., who, like his father, maintained his pretensions upon the duchy, probably, would have become the duke, had not the English and raised the siege of Tonningen; while king of Sweden, Charles XII., then 18 years of age, landed within eight leagues, to assist his brother-in-law of Holstein. Charles probably would himself master of Copenhagen, had the majesty agreed to the peace of which was entirely in the duke's favour. The treaty concluded with the king, Frederic obliged himself to furnish troops who were to be paid by the king; and who afterwards did great service to the French. Notwithstanding Frederic was perpetually engaged in wars with the Swedes. While Charles was an ally, he marched through Holstein, Pomerania, and in 1712 into Breck the city of Stade. His troops, were totally defeated by the Swedes at who laid his favorite city of Altona. Frederic revenged himself by seizing the duke of Holstein, and forcing the duke, count Stenbock, to surrender, with all his troops. In 1716 Frederic was so great, in taking the city of Stralsund, driving the Swedes away, and in reducing Wismar and that his allies began to suspect he was the sovereign of all Scandinavia. The death of Charles of Sweden from his wounds in the war against Denmark withered spirit; but upon his death at Frederickshald, Frederic durst not receive his Britannic majesty's mediation for the crown of Sweden; in consequence a peace was concluded at which left him in possession of the duchy. Frederic died in 1730, after his capital reduced to ashes by an earthquake, in 1728. His son and successor made no other use of his power,

and the advantages with which he mounted the throne, than to cultivate peace with all his neighbours, and to promote the happiness of his subjects, whom he eased of many oppressive taxes. In 1734, after guaranteeing the Pragmatic Sanction, he sent 6000 men to the assistance of the emperor, during the dispute about the succession to the crown of Poland. Though he was pacific, yet he was jealous of his rights, especially over Hamburg. He obliged the Hamburgers, in 1736, to call in the mediation of Prussia, to abolish their bank, to admit the coin of Denmark as current, and to pay him a million of silver marks. He had, in 1738, a dispute with king George II. about the little lordship of Steinhors, which had been mortgaged to the latter by the duke of Holstein Lauenburg, and which Christian said belonged to him. Some blood was spilt during the contest; in which Christian, it is thought, never was in earnest. It brought on, however, a treaty, in which he availed himself of his Britannic majesty's predilection for his German dominions; for he agreed to pay Christian a subsidy of £70,000 sterling a year on condition of keeping in readiness 7000 troops for the protection of Hanover: which was a gainful bargain for Denmark. And two years after he seized some Dutch ships for trading without his leave to Iceland: but the difference was made up by the mediation of Sweden. Christian had so great a party in that kingdom, that it was generally thought he would revive the union of Calmar, by procuring his son to be declared successor to his then Swedish majesty. Some steps for that purpose were certainly taken: but whatever Christian's views might have been, the design was frustrated by the jealousy of other powers. Christian died in 1746, with the character of being an excellent monarch. His son and successor, Frederic V., had, in 1743, married the princess Louisa, daughter to king George II. He improved upon his father's plans for the happiness of his people; but took no concern, except that of a mediator, in the German war. For it was by his intervention that the treaty of Closterseben was concluded between the duke of Cumberland and the French general Richelieu. Upon the death of queen Louisa, mother to the late king, he married a daughter of the duke of Brunswick Wolfenbittel; and died in 1766.

He was succeeded by his son Christian VII. who married the princess Carolina Matilda of England, an alliance which proved unfortunate, as is generally stated through the intrigues of the queen dowager. The king had displaced several of her friends who had for some time had a share in the administration; and the two new favorites, Brandt and Struensee, who had now appeared, paid great court to the queen. The dowager on this took occasion to insinuate, that the queen had condescended to an intrigue with Struensee. The result is familiar to most of our readers. When the plan of removing the existing administration was brought to maturity, it was resolved to surprise the king in the middle of the night, and force him instantly to sign an order for committing the ministers to separate prisons; to accuse them of high treason in general, and particularly with a design to dethrone or poison

the king. If this could not be properly authenticated, it was determined to suborn witnesses to confirm the report of a criminal correspondence between the queen and Struensee. This design was executed on the night of the 16th of January, 1772, when a masked ball was given at the court. The queen, after having danced most part of the evening with count Struensee, retired to her chamber about two in the morning. About four the same morning prince Frederic rose, and went with the queen dowager to the king's bed-chamber, accompanied by general Eichstedt and count Rantzau. Having ordered his valet de chambre to awake the king, they informed him that the queen, with Struensee, his brother, and Brandt, were at that moment busy in drawing up an act of renunciation of the crown, which they would immediately after compel him to sign; and there was therefore a necessity for him to give an order for their arrest. Christian is said to have hesitated for some time, and to have been inclined to refuse this scandalous requisition; but at length, through importunity, and, according to some accounts, being even threatened into compliance, he consented to what they required. Count Rantzau was despatched, at an untimely hour, into the queen's apartments, and immediately executed the orders of the king. This unfortunate lady, together with an infant princess, was conveyed in one of the king's coaches to the castle of Cronenburgh, escorted by a party of dragoons. Struensee and Brandt were seized in their beds and imprisoned, as well as other members of the administration to the number of eighteen. The queen dowager and her adherents assumed the government, and a total change took place in all departments of the state. The prince royal, son of queen Caroline Matilda, then in the fifth year of his age, was put under the care of a lady of quality, who was appointed governess, under the superintendency of the queen dowager. Struensee and Brandt were put in irons, and underwent long and frequent examinations. Struensee at last confessed that he had conducted a criminal intrigue with the queen. These ministers were both beheaded on the 28th of April; but many of their partisans were set at liberty. Such is one mode of accounting for the revolution of 1772. The confession of Struensee is by many supposed to have been extorted by fear of the torture, and to have no foundation in truth; but, as no means were used by the court of Great Britain to clear up the queen's character, the affair undoubtedly wears a suspicious aspect. At last, however, his Britannic majesty interfered so far as to send a small squadron of ships to convoy the unhappy princess to Germany. The city of Zell was appointed for her residence; and in this place she died of a fever on the 10th May, 1775, aged twenty-three years and ten months.

Of Struensee as a minister, 'it must not be forgotten,' says an able writer in the *Edinburgh Review*, September 1826, 'that he was the first minister of an absolute monarchy who abolished the torture, and that he patronised those excellent plans for the emancipation of the enslaved husbandmen, which were first conceived by Reverdil a Swiss, and of which the adoption by the second Bernstorff has justly immortalised that

statesman. He will be honored by after what offended the Lutheran clergy: the exercise of religious worship granted to Catholics, Moravians, and even to Catholics. Danish clergy were ambitious of retaining the right to persecute, not only long after it was possible to exercise it, but even after they had the disposition to do so; at first to oppress, afterwards to degrade non-conformists; and, as a badge of the privileges and of an established church.'

The same writer, in a *Review of M. Klenk's 'Memoirs of the Revolution'*, observes, that the evidence against Struensee consisted in a number of circumstances, which were incapable of an innocent explanation, but which were attributed to by her attendants, who were employed to cover up her conduct. She owned that she was of much imprudence; but in her dying moments she declared to M. Roques, pastor of the church at Zell, that she never had been unfaithful to her husband. (Communicated by M. de M. Secretan, the editor of *Falken*, the 7th of March 1780. *Falk*. 234.) It is said that her own signature affixed to a confession alleged against her. But if general Falken was rightly informed (for he has etc. of honest intention), that signature proved to be the malice and cruelty of her physician, Schack, the counsellor sent to interrogate Struensee at Cronenburgh, was received by her with indignation when he spoke to her of her conduct towards Struensee. When he showed Struensee her confession to her, he artfully intimated that Struensee would be subjected to a violent death if he was found to have falsely sworn to the queen. 'What!' she exclaimed, 'I believe that if I was to confirm this deed, I should save the life of that unfortunate man.' Schack answered with a profound bow, 'The queen took a pen, wrote the first syllable of her name, and fainted away.' Schack completed the signature, and carried away the fatal document in triumph. Struensee herself, however, confessed his intercourse to the confessor. It is said that his confession was extorted by threats of torture, facilitated by the hope of life, and influenced by a knowledge of the proceeding against the queen could not be carried beyond divorce. But his repeated avowals to Dr. Munter do not seem to allow of such an explanation; any supposition favorable to this unnecessary remains, unless it should be thought that as Dr. Munter's narrative was written under the eye of her oppressors, they caused the confessions of Struensee to be inserted in it, by their own agents, without perhaps without the knowledge of Munter. His subsequent life is so little known, that it is difficult to determine whether he ever had the means of posing the falsification. It must be, however, it is added, that internal evidence does not favor this hypothesis; for the journal narrative, which contain the avowals of Struensee, have a striking appearance of genuineness.

Their treatment of Matilda did not seem advantageous to the queen dowager's party.—Another revolution took place

the queen dowager's friends were and a new council was formed under the auspices of the prince royal. After that king, who from the beginning of his reign had a great degree of incapacity, was excluded from the government; and the queen finally succeeded to the throne interdicted with great circumspection and reserve in the whole of the public affairs. The treaty with the late empress of Russia with the Turks, the immediate opponent being Sweden, and, in 1801, the confederacy formed by the northern powers, the naval superiority of Great Britain, the title of a Convention of Neutrality, this league was quickly dissolved by the success of Lord Nelson in the Baltic, the battle of the 2d April of that year, the alliance of defence formed by the Danish fleet at Copenhagen, and compelled the Danes to a cessation of arms, in order to prevent a capital. In this short war they lost 10,000 men in the West Indies, and the settlement of the coast of Coromandel. The war between England and the northern powers was soon after amicably adjusted by a treaty, and foreign possessions were restored to them. In 1807, a second rupture between Denmark and Great Britain in 1807, and in consequence to the commerce of the north, it led also to the still more humiliating the dismemberment of Norway. The united efforts of the allies to crush the monarchy, this country and Russia into that arrangement with the crown of Sweden, which terminated in his taking possession of this old appendage of Denmark.

The language of Denmark is a dialect of the German, and bears a strong affinity to that of the North Sea; it is disagreeable to strangers on account of its drawing tone with which it is pronounced, many words have been borrowed from French and the Dutch is often used in common. French also is well understood, and is spoken by all classes.

(John), once a critic of celebrity, a tradesman in London, was born in 1704, received the rudiments of his education at the University of Cambridge, and took his degree of A. B. in 1724, after which he travelled in Europe. On his return he was acquainted with Dryden, Wycherley, and Southern; whose conversation was with a passion for poetry, and the poet diverted him from the exercise of his trade. His zeal, however, for the profession recommended him to the duke of Devonshire, who procured him a place in the North of England worth £120 per annum; which he held some years, till, by want of economy, he was obliged to dispose of it to satisfy some demands. In 1704 came out his *Essay on Liberty Assented*; in which were some lines on the French nation, that he put himself into a persuasion, that the king would insist on his being delivered, he would consent to a peace; and in 1705, when the Congress was held at Utrecht, he is said

to have waited on his patron, the duke of Marlborough, to desire that no such article might be stipulated. The duke told him he really had no interest with the ministry; but had made no such provision for his own security, though he could not help thinking he had done the French as much injury as Mr. Dennis. Dennis, partly through a natural petulance of temper, and partly to procure the means of subsistence, was continually engaged in paper wars with his contemporaries. His attacks on distinguished authors were numerous, among whom were Addison, Steele, and Pope. In the close of his days a play was acted for his benefit, at the little theatre in the Hay-market; when Pope, notwithstanding his previous gross abuse of him, even wrote a prologue to the play. He died on the 6th of January, 1733. As a dramatic author, it was justly said of him by a wit, that he was the most complete instructor for a dramatic poet, since he could teach him to distinguish good plays by his precepts, and bad ones by his examples.

**DENON**, Dominique Vivant, baron de, was born Feb. 4, 1747, at Chalons-sur-Saône, of a noble family. He was destined to study law at Paris, where he was favorably received in society; and his talent and inclination led him to devote himself to the arts. A comedy which he wrote, called the Good Father, gained him the favor of the ladies. His amiable manners made him a favorite of Louis XV., who appointed him *gentilhomme ordinaire* about his person. He was afterwards attached to an embassy at St. Petersburg, where Catherine, however, observed him with a jealous eye. Subsequently he was intrusted with a diplomatic mission to Switzerland. On this occasion, he drew Voltaire's likeness (engraved by St. Aubin), and the well known picture *Le Dejeuner de Ferney*. He then occupied, during seven years, a place in the French embassy at Naples. His residence in this city, and repeated visits to Sicily and Malta, gave him an opportunity of exercising his talent for drawing and engraving. Denon had the principal direction of the artists engaged in preparing the *Abbe St. Non's Voyage Pittoresque de Naples et de Sicile*, and the text was chiefly taken from his journal. This elegant work appeared at Paris in 1788. The remainder of Denon's journal, relating to Sicily and Malta, appeared separately, in 1788. His career at Naples was interrupted by the death of the minister Vergennes, his patron, or, according to some, by the displeasure of the queen, Maria Caroline. But still his love for the study of the great masters detained him in Italy. He resided at Venice during several years, where he shone in the

circles of the countess Albrizzi, who was distinguished for her amiable and intelligent character, and loved to be surrounded by men of talent. Denon was not forgotten in her *Ritratti*, where she bestows the greatest praise on his character, his passion for the arts, his cheerfulness, and amiable disposition, and excuses the raillery with which he attacked the foibles of others. The observation and restraint, to which the revolution subjected Frenchmen in foreign countries, compelled him to leave Venice. After a short stay in Florence and Switzerland, he was obliged to return to France during the reign of terror; but he made himself agreeable to Robespierre, and was, in consequence, subsequently accused of devotion, at that time, to Jacobin principles. During this period he exercised himself in engraving. At last, he became acquainted with Buonaparte, and immediately united himself with him. He accompanied the general in his campaigns to Italy and Egypt, and Desaix to Upper Egypt. The work which was the result of this journey, was an addition to Denon's fame, particularly the engravings which ornament it (*Paris*, 1802, 2 vols. fol., and 3 vols. 12mo., without engravings). Denon, in this, has shown himself a very able artist. Nature, animate and inanimate, the monuments of centuries, and the Arabian flying through the desert, are represented with great fidelity. When he returned to Paris with Buonaparte, he was appointed general director of the museums, and all the works of art executed in honor of the French successes—monuments, coins, the erection of the triumphal pillar in the place de Vendôme, &c. He accompanied Napoleon in all his campaigns, and employed himself in drawing, and in selecting those masterpieces in the conquered countries, which were taken to Paris as trophies. In 1815, he was compelled to witness the restoration of the spoils. After the abdication of the emperor, he retained his office, but was deprived of it in 1815, in consequence of having joined Napoleon on his return from Elba. He retained, however, his place in the institute. From that time he lived retired, and the preparation of engravings and lithographs of his splendid collection of works of art, formed the occupation of his last years. He died at Paris, April 28, 1825. His mind was active to the last. Denon much resembled Voltaire in his old age. In 1826 appeared at Paris the *Description des Objets d'Art composant le Cabinet de feu M. le Bar. V. Denon*, in 3 vols. (*Monumens antiques, tableaux et estampes*). The cabinet was sold by auction.

**DENOTE**, *v. a.* } Lat. *denoto*, to mark;

**DENOTATION**, *n. s.* } to be a sign of; to be token; to show by signs: the act of denoting; a symptom

**DENOUNCE**, *v. a.* } Fr. *denoncer*; Span.

**DENOUNCEMENT**. } *ciare*; Lat. *denunciare*,

from *de* against, and *nuncio*, to carry orders. To threaten or impugn by public or open proclamation. Denouncement is the proclamation made.

**DENSE**, *adj.* } Lat. *densus*, close; com-

**DENSITY**, *n. s.* } pact; approaching to solidity.

**DENSITY**, denotes vicinity or closeness of particles; but in mechanical science, it is a term of comparison, expressing the proportion of equal molecular, or the quantity of matter in one body to the number of molecular in the same bulk of another body. Density, therefore, is directly as the quantity of matter and inversely as the magnitude of the body. Since it may be shown experimentally that the quantities of matter, or the weights of different bodies, are proportional to their densities, of consequence the density of any body is as its weight, and inversely as its magnitude; the inverse ratio of the magnitudes of two bodies having equal weights, in the same place, constitutes the ratio of their densities.

**DENSHIRE**, *v. a.* A barbarous term for husbandry.

**DENTAL**, *adj. & n. s.* } From Lat.

**DENTI'CLATION**, *n. s.* } *dens, dentis*,

**DENTI'CLATED**, *adj.* } Dental is,

**DENTI'FRICE**, *n. s.* } to the teeth,

**DENTI'ISE**, *v. a.* } name of

**DENTI'IST**, *n. s.* } shell-fish:

**DENTI'TION**. } lated, being

teeth, like a saw: dentifrice, a tooth-powder; to renew the teeth; dentition, the corresponding substantive; and dentist, a word for the profession of healing, painting, and drawing teeth.

**DENTALIUM**, in natural history, a genus of the order of vermes testacea, belonging to the order of vermes testacea, shell consists of one tubulous straight valve at both ends, and not divided into two. There are twelve species, distinguished by the angles, striae, &c., of their shells.

**DENTARIA**, tooth-wort, or tooth-pennywort, a genus of the siliquosa order, in the natural class of plants: natural order, eth, siliquosae. The siliqua parts with two valves, and the valves roll spirally backward. The stigma is emarginated; the calyx closes longitudinally. There are five species, all hardy perennials; producing annual twelve or eighteen inches high, adorned with many lobed leaves, and spikes of quadrifid cruciform flowers of a red or purple color, which delight in shady places, and are propagated either by seeds or parting the roots. They may be sown in autumn or early in the spring in a shady border of light earth; and the plants are three inches high, they may be transplanted where they are to remain. The time for transplanting the roots is in October or November, or the spring.

**DENTATUS** (Curius), a renowned Roman general, whose virtues render him more remarkable than his victories, flourished A. C. 400. He was thrice consul; conquered the Sabines, and Lucanians; and gave one hundred and forty acres of land, allowing himself no more. The ambassadors of the Samnites made a visit, found him boiling turnips in a pot, which they offered him gold to come out of interest: he told them his design was to be rich, but to command those who were defeated Pyrrhus near Tarentum, and the honour of a triumph.

rus (Sicinius), a hero of ancient Rome, plebeian order, who flourished about 500. When disputes ran high between patricians and plebeians, concerning the Agrarian Law, Dentatus addressed the people, and upon his achievements and his hardships had served his country in the wars.

He had been an officer thirty; first a tribune, and then a tribune; he had fought battles, and by the force of his single arm saved the lives of a multitude of his fellow countrymen. He had gained fourteen civic crowns, eight golden crowns; besides eighty-six bracelets, eighteen gilt spears, three horse-trappings, of which nine killed the enemy in single combat: he received forty-five wounds, all before, and none behind. These were his honors; yet notwithstanding all this, he had never received any reward for those lands which were won from the enemy, and continued to drag on a life of poverty, whilst others possessed those very lands which his valor had won, without any reward for them, or ever having contributed to the conquest. The people unanimously declared the law might be passed, and that Dentatus should not pass unrewarded.

The senators attempted to speak, but were overpowered by the cries of the people. A number of resolute young patricians, however, arose amongst the crowd, broke the ranks, and dispersed the multitude. For they were fined by the tribunes, but their object for the time, by getting the law postponed. Such was the character of the Roman patricians, at one of the most glorious periods of that celebrated republic. *ELLA*, in botany, a genus of the monadelphous, and pentandria class of plants: corolla parted perianth. with small subulated filaments. five short subulated filaments; all; PERICARP. globular; CAPS. bilocular, egg shaped, and very numerous. *ELLA*, a native of New Caledonia.

*ELLA*, n. s. Ital. Modillions. *ELLIONS*, or *dentelli*, make a noble show by their projections. *Spectator*, No. 415.

*ELLIS*, or *DENTILS*, in architecture, are in cornices bearing some resemblance particularly used in the Ionic and Corinthian orders.

*ESCALPRA*, in surgery, an instrument used to scrape off yellow, livid, or black teeth; to be applied, near the gums, it scrapes off a morbid crust. See *ODONTOLOGY*.

*DE*, v. a. } Lat. *denudo*, from *de* and *nudo* (*ne* and *duo*) } the root of *induo* to clothe; to make naked.

He denuded himself of all incumbrances, and decayed. *Decay of Piety*.

Victory can be obtained, unless we would desist from all force to defend us. *Clarendon*.

At any time you denude a vine-branch of its leaves, grapes will never come to maturity.

*Essay on the Creation*.

PL. VII.

**DENUNCIATION**, n. s. } Lat. *denuncial*

**DENUNCIATOR**, n. s. } See **DENOUNCE**.

The act of denouncing; the proclamation of a threat; a public menacer.

In a denunciation or indiction of a war, the war is not confined to the place of the quarrel, but is left at large. *Bacon*.

Christ tells the Jews, that, if they believe not, they shall die in their sins; did they never read those denunciations? *Ward*.

Midst of these denunciations, and notwithstanding the warning before me, I commit myself to lasting duration. *Congreve*.

The denunciator does not make himself a party in judgment as the accuser does. *Ayliffe's Parerg.*

**DENY**, v. a. } Fr. *nier*; Span. *denguar*;

**DENIAL**, n. s. } Ital. and Lat. *negare*; from

**DENYER**, } Lat. *ne* and *ago*, to refuse to

do. To refuse; contradict; and hence to disregard; denounce.

If we denyen he schal denye us; if we bilceuen not he dwellith faithful he mai not denye himself. *Wiclif*, 2 Tymo. 2.

It shall be therefore a witness unto you, lest you deny your God. *Joshua* xxiv. 27.

And therfor, though he had thus made a realme, holy Scripture denyid to cal hym a kyng. *Fortenque*.

The denial of landing, and hasty warning us away, troubled us much. *Bacon*.

My young boy

Hath an aspect of intercession, which Great nature cries—deny not. *Shakespeare*.

Here comes your father; never make denial:

I must and will have Catherine to my wife. *Id.*

It may be I am esteemed by my denier sufficient of myself to discharge my duty to God as a priest, though not to men as a prince. *King Charles*.

How unworthy is he of life, who with the same breath that he receives, denies the Giver of it.

*Bishop Hall. Contemplations.*

The negative authority is also deniable by reason.

*Bruce*.

Ah, charming fair, said I.

How long can you my bliss and yours deny? *Dryden*.

We may deny God in all those acts that are capable of being morally good or evil: those are the proper scenes in which we act our confessions or denials of him. *South*.

The best sign and fruit of denying ourselves, is mercy to others. *Spratt*.

Our Saviour assures us, that if a tender mother cannot deny the son of her love any reasonable request, much less will God deny his Holy Spirit to them that ask him. *Clarke's Sermons*.

No man more impudent to deny, whose proofs were not manifest; no man more ready to confess, with a repenting manner of aggravating his own evil, where denial would but make the fault fouler. *Sidney*.

By the word *Virtue* the affirmer intends our whole duty to God and man, and the *denier* by the word *Virtue* means only courage, or, at most, our duty towards our neighbour, without including the idea of the duty which we owe to God. *Watts*.

If you had been contented to assist him indirectly, without a notorious denial of justice, or openly insulting the sense of the nation, you might have satisfied every duty of political friendship. *Junius*.

It has been asserted, that, if you alter her symbols, you alter the being of the church of England. This, for the sake of the liberty of that church, I must absolutely deny. *Burke*.

M

I have gnashed  
My teeth in darkness till returning morn,  
Then cursed myself till sun-set;—I have prayed  
For madness as a blessing—'tis denied me. *Byron.*

**DENYS** (St.) a town of France, in the department of Paris, famous for a magnificent church, built by king Dagobert, in 632; in which were the tombs of many of the French kings, of the constable Guesclin, and of marshal Turenne. In the treasury, among other curiosities, were the swords of St. Lewis, and the Maid of Orleans, and the sceptre of Charlemagne. The abbey of the Benedictines, a magnificent piece of modern architecture, has more the appearance of a palace than a convent. In 1793 the republican populace broke into the royal tombs, and greatly dilapidated the buildings. In 1806 Bonaparte caused them to be repaired, selected the church as the burying-place for his own family, and founded a chapter here of ten canons, which the Bourbons have retained with some modifications. The late prince of Condé has been interred here since the return of Louis XVIII. St. Denys is seated on the river Crould, near the Seine, five miles north of Paris, and contains 6000 inhabitants.

**DEOBSTRUCT**, *v. a.* } From *de* privative,  
**DEOBSTRUENT**, *adj.* } and **OBSTRUCT**,  
which see. To clear away obstacles; *deobstruent*  
is, having the power to remove obstructions.

It is a singular good wound-herb, useful for *deobstructing* the pores of the body.

*Mora's Antidote against Atheism.*

Such as carry off the faces and mucus, *deobstruct* the mouth of the lacteals, so as the chyle may have a free passage into the blood. *Arbutnot on Diet.*

All scapes are attenuating and *deobstruent*, resolving viscid substances. *Id. on Aliments.*

**DEODAND**, *n. s.* Lat. *Deo dandum*. A thing given or forfeited to God.

*Deodanda* are forfeitures which the ignorance and superstition of ancient times introduced and called by the name of *deodanda*, from the application of them to pious uses. *Burn's Justice.*

**D'EON** (the Chevalier), born in 1728, at Tonnerre, in Burgundy, of a respectable family, is principally distinguished for consenting to appear half his life as a woman. He received a liberal education; and, becoming an orphan, the Prince de Conti procured him a commission as a cornet of dragoons. He was employed in 1755 on a mission to Petersburg, after which he joined his regiment, and served with considerable credit in the campaign of 1762, as aid-de-camp to Marshal Broglie. The year following he was invested with the order of St. Louis, and accompanied the duke de Nivernois to England as secretary. On the duke's leaving England, D'Eon remained in the character of minister plenipotentiary, until he was superseded by the count de Guerchy, to whom he was appointed secretary. At this arrangement he was very indignant, and published in revenge an account of the negotiations in which he had been engaged; wherein he stigmatized the conduct of the count. He was prosecuted by de Guerchy for a libel in the Court of King's Bench, in July, 1764, and being found guilty absconded, and was outlawed.

In 1771 doubts were entertained of his sex, and bets were laid to a great sum that D'Eon was a woman. In 1772 he produced an action at law, that ended in a verdict for him. The chevalier in the mean time returned to France, where he assumed (commonly said) the female dress, but for what he actually has never been ascertained; in this respect was certainly sanctioned by the law, which continued his pension, and to retain the cross of his order.

In 1785 D'Eon came to England, appearing as a woman, he gave lessons in French, but when the Revolution deprived him of his pension, he presented in June 1791 to the National Assembly, in which he complained of being obliged to wear a frock-coat, and asked permission to retain his military uniform. His petition remained unanswered. He now again sought an asylum in France, where he passed the latter part of his life in poor circumstances; and died in Paris, street, May 21st, 1810. His comrade, Andre Elysée, discovering that the chevalier was of male sex, after his decease invited him and other gentlemen to examine the body, which was interred in St. Pancras church-yard. He is registered, 'Charles Genevieve Le Beau', Andre Timothee D'Eon de Beaumont, said to have been the author of *L'Eon*, 6 vols. 12mo.; *Loisirs*, 13 vols. 8vo. *Mémoires, et Négociations particulières*, &c.

**DEOPTILATE**, *v. a.* Lat. *deoptilare*. To clear a passage; to free from obstruction.

Though the grosser parts be excluded, and the dissoluble parts extracted, what remains is effectual in *deoptilations*. *Brounne's V.*

A physician prescribed him a *deoptilative* apocrym.

**DEOSCULATION**, *n. s.* Lat. *deosculatio* (*os*, oris, the mouth). Kissing.

We have an enumeration of the ceremonies of worship required to be performed to impositions, genuflections, thurifications, &c.

**DEPAINT**, *v. a.* or **DEPEINT**, *v. a.* also writes it. Fr. *depeint*; *de*, and *peint*. To picture; to describe by colour; to resemble.

He did unwilling worship to the  
That on his shield *depaigned* he did.

The red rose meddled with the white  
In either cheek *depeint*ten lively hue.

Such ladies fair would I *depeint*  
In roundelay, or sonnet quaint.

**DEPART** *v. a.* & *n. s.* } *Se*  
**DEPARTER**, *v. a.* } *It*  
**DEPARTING**, *n. s.* } *La*  
**DEPARTMENT**, *n. s.* } *R*  
**DEPARTURE**, *n. s.*

**פָּרַד** (to divide). To separate; to neuter verb, to quit a place, taking to desert; to fall away; to be lost; to desist from a practice and to return; to departure both express the away, and abandoning, or death.

by a continental division of territory,  
as a general application.

*Polixis schulen be gederid bifore him; and  
herte bene atwynne, as a sheparde de-  
part fro his s.* *Wiclif. Matt. 25.*

(these N. to my wedded wife, to love and  
all death us depart.

*Old Family Prayer Book, (1661).  
soul was in departing; for she died.*

*Gen. xxxv. 18.*  
started quickly from the sepulchre, with  
great joy, and did run to bring his disciples  
*Matt. xxviii.*

at least thou thy servant depart in peace,  
thy word. *Luke xxix.*

there have a liquor called water of *de part*,  
*Bacon.*

which hath no stomach to this fight,  
to depart; his passport shall be made.

*Shakespeare.*  
with Christian peace to souls departed,  
a poor people's friend. *Id.*

his brave father breathed his latest gasp,  
swiftly as the post could run,  
of me of your loss and his depart.

*Id. Henry VI.*  
and dispatch in private by the consul;  
knew by him this evening  
gone. *Ben Jonson.*

What besides  
low, and dejection, and despair,  
dully can sustain, thy tidings bring;  
low from this happy place. *Milton.*

my prevailed not with any of them to de-  
most unreasonable of all their demands.  
*Clarendon.*

of the Lord, and departure from evil, are  
the importance. *Tillotson.*

but thou leave me, cruel, thus alone;  
I kiss from a departing son!  
last adieu! *Dryden.*

to their good prince in his timely depar-  
barred him from the knowledge of his  
re. *Sidney.*

on fleets, during their command at sea,  
veral stations and departments; the most  
was the Alexandrian fleet, and the se-  
African. *Arbutnot.*

women, his particular friends, in various  
of ministry, &c.

*Burke. Character of Lord Chatham.*

departing being's soul  
hymn peals, and the hollow bells knoll.  
*Byron.*

**DEPT.** This word was adopted by  
Assembly of France instead of pro-  
the ancient provinces of that king-  
divided into departments, of which,  
Corsica, there were eighty-three.  
ments were much more equal in  
tent than the provinces; some of the  
re provinces being divided into four  
ments, whilst some of the smaller  
ute exactly one, and in some instances  
are included in one department.  
ment has been subdivided into dis-  
each district again into cantons.

DEP. in navigation, is the easting or  
a ship in respect of the meridian it

departed or sailed from; or it is the difference  
of longitude, either east or west, between the  
present meridian the ship is under, and that  
where the last reckoning or observation was  
made. This departure, any where but under  
the equator, must be counted according to the  
number of miles in a degree proper to the pa-  
rallel the ship is under. The departure, in plane  
and Mercator's sailing, is always represented by  
the base of a right-angled plane triangle, where  
the course is the angle opposite to it, and the dis-  
tance sailed is the hypotenuse; the perpendi-  
cular or other leg being the difference of latitude.  
And then the theorem for finding it is always  
this: as radius to the sine of the course; so is  
the distance sailed, to the departure sought.

**DEPASTURE**, *v. a.* Lat. *depascere*; *de* and  
*pasco*, from Gr. *πάω*. To feed; to eat up.

They keep their cattle, and live themselves, in  
bodies pasturing upon the mountains, and removing  
still to fresh land, as they have depastured the former.  
*Spenser.*

**DEPAUPERATE**, *v. a.* Lat. *depauperare*;  
*de* and *pauper*. To make poor; to impoverish;  
to consume.

To represent God in a carved stone, or a painted  
table, does depauperate our understanding of God, and  
dishonours him below the painter's art. *Bp. Taylor.*

Great evacuations, which carry off the nutritious  
humours, depauperate the blood. *Arbutnot.*

**DEPECTIBLE**, *adj.* Lat. *depecto*. Tough;  
clammy; tenacious; capable of being extended.

It may be also, that some bodies have a kind of  
lensor, and are of a more depectible nature than oil,  
as we see it evident in coloration; for a small quan-  
tity of saffron will tinct more than a very great quan-  
tity of brazil or wine. *Bacon.*

**DEPEND**, *v. s.* } Fr. *dependre*, de-  
**DEPENDANCE**, *n. s.* } pendance; Span. and  
**DEPENDANT**, *adj. & n. s.* } Port. *dependier*; of  
**DEPENDENCY**, } Lat. *dependere*; *de*  
**DEPENDENCY**, } and *pendeo*. To hang  
**DEPENDENT**, *adj. & n. s.* } down, or from;  
hence, to be connected with, so as to be subject  
to the will of, or be supported by, another;  
and to be in suspense, whether of interest or  
attention. Dependence and dependence, the  
one from the older French and the other from the  
Latin verb, are both used in the literal as well as  
figurative sense.

On God, as the most high, all inferior causes in the  
world are dependent. *Houker.*

Never be without money, nor depend upon the  
courtesy of others, which may fail at a pinch. *Baron.*

Never was there a prince bereaved of his dependan-  
cies by his council, except where there hath been  
either an over-greatness in one counsellor, or an over-  
strict combination in divers. *Id.*

By no means be you persuaded to interpret your-  
self in any cause depending, or like to be depending, in  
any court of justice. *Id.*

We work by wit and not by witchcraft;  
And wit depends on dilatory time. *Shakespeare.*

Her madness hath the oddest frame of sense;  
Such a dependency of thing on thing,  
As ne'er I heard in madness. *Id.*

A great abatement of kindness appears as well in the general dependants, as in the duke himself also, and your daughter. *Shakespeare.*

What shalt thou expect,  
To be dependant on a thing that leans? *Id.*

How dependant and servile is the life of man, that cannot either want one element, or endure it corrupted. *Bishop Hall. Contemplations.*

For a six-clerk a person recommended a dependant upon him, who paid six thousand pounds ready money. *Clarendon.*

From the frozen beard  
Long icicles depend, and crackling sounds are heard. *Dryden.*

They slept in peace by night,  
Secure of bread, as of returning light;  
And with such firm dependance on the day,  
That need grew pampered, and forgot to pray. *Id.*  
Every moment we feel our dependance upon God,  
and find that we can neither be happy without him,  
nor think ourselves so. *Tillotson.*

In all sorts of reasoning, the connexion and dependance of ideas should be followed, till the mind is brought to the source on which it bottoms. *Locke.*

We speak of the sublunary worlds, this earth, and its dependencies, which rose out of a chaos about six thousand years ago. *Burnet's Theory.*

The expectation of the performance of our desire, is that we call dependence upon him for help and assistance. *Stillington.*

There is a chain let down from Jove,  
So strong, that from the lower end,  
They say, all human things depend. *Swift.*

The judge corrupt, the long depending cause,  
And doubtful issue of misconstrued laws. *Prior.*

The direful monster was afar descried,  
Two bleeding babes depending at her side. *Pope.*  
But if you're rough, and use him like a dog,  
Depend upon it—he'll remain incog. *Addison.*

We are indigent, defenceless beings; the creatures of his power, and the dependents of his providence. *Rogers.*

This is not like the tribute which earthly kings exact; who as much depend upon their subjects for the support of their power, as their subjects do upon them for the protection of their property. *Mason.*

Thus happiness depends, as nature shows,  
Less on exterior things than most suppose. *Comper.*

MAN. Think'st thou existence doth depend on time?  
It doth; but actions are our epochs. *Byron.*

DEPERDITION, *n. s.* Lat. *deperdo*; *de* and *perdo*; Gr. *ᾤσθω*; to lose or waste. Loss; destruction.

It may be unjust to place all efficacy of gold in the non-omission of weights, or deperdition of any ponderous particles. *Brown.*

DEPHLEGM, or } Low Lat. *de-*  
DEPHLEGMATE, *v. a.* } *phlegma*. To clear  
DEPHLEGMATON, *n. s.* } from phlegm, or  
aqueous insipid matter.

We have sometimes taken spirit of salt, and carefully dephlegmed it. *Boyle.*

In divers cases it is not enough to separate the aqueous parts by *dephlegmatio*; for some liquors contain also an unsuspected quantity of small corpuscles, of somewhat an earthy nature, which, being associated with the saline ones, do clog and blunt them, and thereby weaken their activity. *Id.*

The proportion betwixt the coralline solution and

the spirit of wine, depends much upon the former liquor, and the *dephlegmation* of

DEPHLOGISTICATED AIR. *S. GEN.*

DEPICT; Lat. *depingo*, *depictus*, *fr. pingo*, *pictus*; to paint; describe.

The cowards of Lacedemon depicted shields the most terrible beasts they could

When the distractions of a tumult depicted, every object and every occurrence presented to your view, that, while you read, indeed to see them.

In a cottage by night may I pass the soft  
In the field and the meadows all day;  
With the wife of my heart, whose charms  
prime,

Depict her as blooming as May. *Id.*

DEPILATORY, *n. s.* } Lat. *de-*  
DEPILOUS, *adj.* } and *pilus*,  
That which takes off the hair. Without

This animal is a kind of lizard, or quadruped and depilous; that is, without hair.

DEPILATORY MEDICINES, those which take off the hair; such are lime, caustic substances, which ought to be used with great caution. Unless they destroy the roots of the hair remain unaffected, and grow again.

DEPLETION, *n. s.* Lat. *depleo*, *depleo* act of emptying.

DEPLORE, *v. a.* } Fr. *deplorer*  
DEPLORABLE, *adj.* } Port. *deploravel*  
DEPLORABLENESS, *n. s.* } Lat. *deplorabilis*  
DEPLORABLY, *adv.* } *de* and *plorare*  
DEPLORATE, } To lament  
DEPLORATION, } bemoan; *de-*  
and deplorate, lamentable; that which bemoaned.

This was the deplorable condition to which was reduced.

The bill of all weapons gives the most deplorable wounds.

But chaste Diana who his death deplored  
With Esculapian herbs his life restored.

The case is then most deplorable when it is over to the wrong side. *L.*

Notwithstanding all their talk of reason and sophy, God knows, they are deplorably mistaken.

It will be considered in how deplorable a manner lies in that kingdom.

A third's all pallid aspect offered more

The traits of sleeping sorrow, and betrayed  
Through the heaved breast, the dream of  
shore  
Beloved and deplored.

DEPLUME, *v. a.* } Lat. *deplumare*  
DEPLUMATION, *n. s.* } pluck; or  
plucking, or plucking off the feathers;  
gery, a swelling of the eyelids, accompanied  
the fall of the hairs from the eye-brows.

DEPONE, *v. a.* } Lat. *depono*, *deponere*  
DEPONENT, *n. s.* } to lay down. To  
oath, in law. To pledge or adventure  
on some scheme of success. A party  
of verb. See the extract.

ary—such witness (who answers interrogatories) called a *deponent*. Cowell.

this I would *depose*  
as any cause I've known. Hudibras.

as have no active voice are called *de-*  
generally signify action only; as fateor,  
Clarke's Latin Grammar.

**PULATE**, v. a. & v. n. } Fr. *dé-*  
**PLA'TOR**, n. s. } *peupler*; It.  
**PLA'TION**, } *dispopulare*,  
*depopulare* (*de* and *populo*), to ravage.  
the people of a country; to ravage.  
ter verb, to become dispeopled. A  
is a destroyer or waster of inhabited

his arms upon unarmed and unprovided  
soil only and *depopulate*, contrary to the  
war and peace. Bacon.

Where is this viper,  
would *depopulate* the city, and  
every man himself? Shakespeare.

thou grieve then, Adam! to behold  
all thy offspring, and so sad  
as! thee another flood,  
sorrow a flood, thee also drowned  
as thy sons. Milton

exhausted to the last remains,  
and towns and driven plains. Dryden.

death in different shapes  
plagues the nations. Philips.

thou hearest the dire effect of war,  
Id.

not the place to enter into an enquiry  
country be *depopulating*. Goldsmith.

**RT**, v. a. & n. s. } Fr. *deporter*, *de-*  
**MENT**, n. s. } *portment*; Ital. *de-*  
from Lat. *portare*; Gr. *poprow*, to  
self. To behave, demean; generally  
a compound pronoun.

overstep the way with a few notes, touching  
own *deportment* in that island. Wotton.

She Delia's self  
surpassed and goddess-like *deport*. Milton.

ness of his temper, and the gravity of his  
carried him safe through many difficulties,  
and died in a great station. Swift.

ambassador *deports* himself in the most  
latter before a prince. Pope.

er's a fine person, or a beauteous face,  
deportment gives them decent grace  
with all other requisites to please,  
want the striking elegance of ease.

Churchill.

**ITATION**, Lat. *deportatio*, of *de* and

ation, which is a *deportation* for ever into  
ad, was anciently with us a civil-death.

Ayliffe.

**E**, v. a. } Fr. *deposer*; Ital. *deporre*;  
**PO**, n. s. } Span. *deponer*; Lat. *depo-*  
**ITION**, } *nere*, *depositus*, from *de* and  
lace. Hence, to swear, because by so  
deposits or pledges his faith to the  
a declaration. To lay down, lodge;  
deprive of; and generally, to lay  
up.

First, of the king; what shall of him become?  
The duke yet lives that Henry shall *depose*

Shakespeare.

There shouldst thou find one heinous article,  
Containing the *deposing* of a king. Id.

According to our law,

*Depose* him in the justice of his cause. Id.

Love straight stood up and *deposed*, a lie could not  
come from the mouth of Zelmane. Sidney.

Its shores are neither advanced one jot farther into  
the sea, nor its surface raised by additional mud *de-*  
*posed* upon it by the yearly inundations of the Nile.

Woodward.

If you will examine the veracity of the fathers by  
those circumstances usually considered in *depositions*,  
you will find them strong on their side.

Sir K. Digby.

A witness is obliged to swear, otherwise his *deposition*  
is not valid. Ayliffe.

His [James II.] conduct and the passage of Charles  
the Second's reign, might rankle still at the hearts of  
some men, but could not be set to account among the  
causes of his *deposition*. Bolingbroke.

**DEPOSITE**, v. a. & n. s. } For etymon,  
**DEPOSITARY**, } see *DEPOSE*. To  
**DEPOSITORY**. } lay up. The  
place of deposit is a depository; and a person in  
trust is a depositary.

I gave you all.

—Made you my guardians, my *depositaries*,

But kept a reservation to be followed

With such a number.

Shakespeare.

The Jews themselves are the *depositories* of all the  
prophecies which tend to their own confusion.

Addison.

They had since Marsellies, and fairly left it: they  
had the other day the Valtoline, and now have put it  
in *deposite*. Bacon.

God commands us to return as to him, to the poor,  
his gift, out of mere duty and thankfulness: not to  
*deposit* them with him, in hopes of meriting by them.

Sprut.

The eagle got leave here to *deposit* her eggs.

L'Estrange.

The difficulty will be to persuade the *deposing* of  
those lusts, which have, by I know not what fascina-  
tion, so endeared themselves. Decoy of Piety.

**DEPOSITION**. The proof in the high court of  
chancery is by the depositions of witnesses; and  
the copies of such regularly taken and published,  
are read as evidence at the hearing. For the  
purpose of taking deposition in or near London,  
there is an examiner's office appointed; but for  
such as live in the country, a commission to  
examine witnesses is usually granted to four  
commissioners, two named on each side, or any  
three or two of them to take the depositions  
there. And if the witnesses reside beyond sea,  
a commission may be had to examine them there  
upon their own oaths; and if foreigners, upon the  
oaths of two skilful interpreters. The commis-  
sioners are sworn to take the examinations truly  
and without partiality, and not to divulge them  
till published in the court of chancery; and  
their clerks are also sworn to secrecy. The wit-  
nesses may be compelled, by a process of sub-  
pœna, as in courts of common law, to appear  
and submit to examination; and when their de-  
positions are taken, they are transmitted to the

court with the same care that the answer of a defendant is sent. 3 *Black.* 455.

DEPOT denotes any particular place in which military stores are deposited for the use of the army. In a more extensive sense it signifies several magazines collected together for that purpose. It is likewise applied to any particular fort or place, appropriated for the reception of recruits to detached parties, belonging to different regiments. In England, the barracks near Maidstone are depôts for the British cavalry, and Chatham is allotted to the infantry. In the time of war the greatest attention should be given to preserve the several depôts which belong to the fighting army. Hence the line of operation should invariably be connected with them; or rather no advance should be made upon that line, without the strictest regard being had to the one of communication.

DEPÔT is again used to denote a particular place at the tail of the trenches, out of the reach of the cannon of the place attacked; where the troops generally assemble, when a sally from the besieged is suspected.

DEPÔT also means a temporary magazine for forage, for fascines, gabions, tools for mining, &c., with such other articles necessary for the support of an army, or for carrying on a siege.

DEPRAVE, v. a.	} Fr. <i>depraver</i> ; Span. and Portug. <i>depravar</i> ; Ital. and Lat. <i>depravare</i> , from <i>de</i> and <i>pravus</i> , crooked. To corrupt, vitiate, calumniate.
DEPRAYER, n. s.	
DEPRAVATION,	
DEPRAVEDNESS, n. s.	
DEPRAVEMENT,	
DEPRAVITY.	

ate: he who corrupts is a depraver; depravement, depravation, depravedness, and depravity a corrupt, vitiated state; depravation is used by Shakspeare for calumny.

We admire the providence of God in the continuance of scripture, notwithstanding the endeavours of infidels to abolish, and the fraudulence of heretics to deprave, the same. *Hooker.*

Who lives that's not depraved, or deprives?  
*Shakspeare.*

Stubborn critics are apt, without a theme  
For *depravation*, to square all the sex. *Id.*

What sins do you mean? Our original depravedness, and proneness of our eternal part to all evil.  
*Hammond.*

But from me what can proceed  
But all corrupt, both mind and will depraved?  
*Milton.*

He maketh men believe, that apparitions are either deceptions of sight, or melancholy depravements of fancy.  
*Browne.*

A taste which plenty does deprave,  
Loaths lawful good, and lawless ill does crave.  
*Dryden.*

We have a catalogue of the blackest sins that human nature, in its highest depravation, is capable of committing. *South.*

This will be equivalent to the proposal made by Boileau to the academicians, that they should review all their polite writers, and correct such impurities as might be found in them, that their authority might not contribute at any distant time to the depravation of the language. *Johnson. Plan of Dictionary.*

If this be so, there must be a cause or causes for such a depravity in our common people. *Fauslin.*

DEPRECATE, v. a.	} From <i>de</i> and <i>precare</i> , to pray against: from, appeal.
DEPRECATION, n. s.	
DEPRECATIVE, adj.	
DEPRECATORY, adj.	
DEPRECATOR, n. s.	

Bishop Fox understanding that the king was still discontent, being troubled that of breaking off the truce should grow, sent many humble and deprecatory letters to the king to appease him.

I, with leave of speech implying  
And humble deprecation, thus replied.

Strenuation they generally conceived, sign, or a bad one; and so, upon this commonly used a gratulation for the one deprecation for the other.

In deprecating of evil, we make acknowledgment of guilt, and of God's justising, as well as clemency in sparing, the sinner.

Poverty indeed, in all its degrees, unpersuaded to deprecate from themselves,

The judgments which we would deprecate removed.

The Italian entered them in his plea; the three evils he petitioned to be delivered might have deprecate greater evils.

*Baker's Reflections.*

DEPRECIATE, v. a.	} Fr. <i>depreciar</i> ; Lat. <i>de pretium</i> (from Gr. <i>πωρην</i> , a seller) and given to the seller for his goods. To diminish in price or value; the act of lessening of, or underrating a thing.
DEPRECIATION, n. s.	

They presumed upon that mercy, which in conversations, they endeavour to deprecate represent.

As there are none more ambitious of those who are coiners in poetry, it is very such as have not exceeded in it to the works of those who have.

It has been held, indeed, by some (but certainly not by all of them, or upon all occasions), that juries in favour fairly, in fixing the value of the property their consideration the depreciation of has taken place since the statutes passed. *Sir*

DEPREDATE, v. a.	} Fr. <i>depréder</i> ; Lat. <i>de</i> and <i>predare</i> , to rob. To devour.
DEPREDAATION,	
DEPRÉDATOR.	

The substantives plainly fulfil  
It maketh the substance of the body compact, and so less apt to be consumed, by the spirits.

It is reported that the shrub called *oxy*, which is a kind of briony, and coloured together, one or both will die: the cause they be both great depredators of the one of them starveth the other.

The land had never been before so full of berries and depredations as through his reign.

Were there not one who had said, If thou come, and no farther; we might such vicissitudes, such clashing in nature depredations and changes of era and land

**DEHEND**, v. a. } Lat. *deprehendo*,  
EXTENSION. } from *de* and *prehen-*  
take. To catch; to take unawares; to  
the fact.

can believe men upon their own authority,  
since *deprehended* in so gross and impious an  
More.

crested creature, being *deprehended* in that  
was held in ward. Hooker.

ions of the minute parts of bodies, which  
et effects, are invisible, and incur not to the  
yet they are to be *deprehended* by experience.  
Bacon.

**DESS**, v. a. & w. s. } Fr. *deprimer*; It.

they adhere.

tion of the nobility may make a king more  
but less safe. Bacon.

of a rectangular form, if laid one by another  
row between supporters sustaining the two  
the pieces between will necessarily sink by  
gravity; and much more, if they suffer  
down by other weight above them. Wotton.

one thing I have tried by letting a globe  
rolling or *depressing* the eye, or otherwise  
to make the angle of a just magnitude.  
Newton.

*depress* their own minds, despond at the  
fully, and conclude that the making any  
knowledge is above their capacities.

Locke.

Passion can *depress* or raise  
to heavenly, as the human mind. Prior.

careful truth is every where confessed,  
worth, by poverty *depressed*. Johnson.

**DEVE**, v. a. } Fr. *priver*; Span. and  
DEVIATION, n. s. } Port. *privar*; Ital. and  
DEVIATE, adj. } Lat. *privare*; from *de*  
To bereave or depose; taking of  
force to hinder, to debar from. Deprive  
certain formal and legal applications;  
Deprivable is that which may, in  
be taken away.

th *deprived* her of wisdom, neither hath he  
to her understanding. Job, xxxix. 17.

Most happy he,  
least delight sufficeth to *deprive*  
erance of all pains which him oppress.

Spenser.

ther that enjoy them, (the church's grants)  
been wrongfully, and are *deprivable* at all  
Hooker.

her, *deprived* for inconformity, said, that if  
and him, it should cost an hundred men's  
Bacon.

usted the loss of an excellent servant, and  
manner in which he had been *deprived* of  
Clarendon.

his face I shall be hid, *deprived*  
and countenance. Milton.

these end is destruction, and eternal *depriva-*  
Bentley.

Now wretched Oedipus, *deprived* of sight,  
Led a long death in everlasting night. Pope.  
I have no hope of a future existence except that  
which is grounded on the truth of christianity; I wish  
not to be *deprived* of this hope. Bishop Watson.

DEPRIVATION, ECCLESIASTICAL, is of two  
kinds, viz. à beneficio, when for some crime a  
minister is for ever deprived of his living; and  
ab officio, when a minister is for ever deprived  
of his order. It is the same with deposition and  
degradation. It is usually for some heinous  
crime deserving death, and is performed by the  
bishop in a solemn manner. See DEGRADATION.

DEPTFORD, a town situated on the Thames,  
partly in the county of Kent, and partly in  
Surrey. It derives its name from a deep ford  
over the Thames, formerly used, but now cleared.  
It was generally known in ancient records by the  
name of Deptford Strond. Deptford is now a  
large and populous town, though it has no mar-  
ket, and is divided into Upper and Lower Dept-  
ford. It contains about 3000 houses, many of  
which are neat and well built, two churches,  
several meeting-houses, and two charity schools.  
The greatest support and consequence of Dept-  
ford arises from its excellent docks. Here the  
royal navy was formerly built and repaired.  
The storehouses, which form a square, have, in  
the last war, had several additional buildings:  
the whole yard covers thirty-one acres of ground,  
containing two wet docks, one single, the other  
double, three slips, a basin, and two ponds for  
masts, with the various manufactories for anchors,  
cables, masts, blocks, &c., and apartments for the  
numerous officers employed. Here the royal  
yachts are generally kept. Besides the national  
docks, there are several others belonging to snip-  
builders for merchants' vessels. Near the dock  
formerly stood Says-Court, where Peter the  
Great resided for some time, and in this yard he  
completed his knowledge of the practical part of  
naval architecture. The Red-house, on the  
north-west side of the dock, is a large collection  
of warehouses and storehouses for navy provi-  
sions. At Deptford, in 1515, was first formed  
the society of the Trinity House, by Sir Thomas  
Spert. There are annually relieved by this com-  
pany about 3000 poor seamen, their widows and  
orphans, at the expense of £6000. The gover-  
nors are invested with the power of examining  
the mathematical classes of Christ's Hospital,  
and the masters of his Majesty's ships; and  
have the appointment of all pilots; erecting and  
maintaining lighthouses, buoys, beacons, &c.  
Their business was formerly carried on in a hall  
in the parish of Deptford Strond; but it is now  
conducted in a spacious building near the Tower,  
erected in 1787. This town is four miles east of  
London.

DEPTH, n. s. Belg. *diepte*; Teut. *tieff*. See  
DEEP. The measure of deepness; hence a deep  
place; the sea, an abyss, a quiet place, or season;  
and, figuratively, obscurity and sagacity. The  
plural, depths, is very frequent in the received  
translation of the Bible.

The depths have covered them: they sank into the  
bottom as a stone. Exod. xv. 6.

As for men, they had buildings in many places  
higher than the depth of the water.

Thou spirit, ————— Inspire,  
As thou art wont, my prompted song, else mute,  
And bear through height or depth of Nature's bounds.

Milton.

And in the depth of winter, in the night,  
You plough the raging seas to coasts unknown.

Dcnham.

The false tides skim o'er the covered sand,  
And seamen with dissembled depths betray.

Dryden.

or tho', in nature, depth and height  
Are equally held infinite;  
In poetry the height we know,  
'Tis only infinite below.

Swift.

There are greater depths and obscurities in an elaborate and well written piece of nonsense, than in the most abstruse tract of school divinity.

Addison's Whig Examiner.

It is certainly a sign of great self-ignorance, for a man to venture out of his depth, or attempt any thing he wants opportunity or capacity to accomplish.

Mason.

DEPULSION, n. s. } Lat. *depulsio*. A beat-  
DEPU'SORY, adj. } ing or thrusting away.

DEPURE', v. a. } Fr. *depurer*; from

DEPU'RATE, v. a. & adj. } Lat. *depurgo*; de  
DEPUR'ATION, n. s. } and *purgo*. To

cleanse, purify. The verbs are synonymous, and the meaning of the derivatives is plain.

It produced plants of such imperfection and harmful quality, as the waters of the general flood could not so wash out or depure, but that the same defection hath had continuance in the very generation and nature of mankind.

Ruleigh.

Brimstone is either used crude, and called sulphur vive; or is of a sadder color, and, after depuration, such as we have in magdecons, or rolls of a lighter yellow.

Broune's Vulgar Errors.

Chemistry enabling us to depurate bodies, and in some measure to analyse them, and take asunder their heterogeneous parts, in many chemical experiments we may, better than in others, know what manner of bodies we employ.

Boyle.

Neither can any boast a knowledge depurate from the defilement of a contrary, within this atmosphere of flesh.

Glanville.

DEPUTE', v. a. } Fr. *deputer*; Dut. *depu-*  
DEPU'ATION, } *teren*; Span. and Port. *depu-*

DEPU'TY. } *putar*; Ital. and Lat. *depu-*

*tare*; to judge or choose; hence *deputatus*, a person chosen. To send another; to empower another to transact one's business. A deputy is a person so sent, generally or specially.

And Absalom said unto him, See thy matters are good and right, but there is no man deputed of the king to hear.

2 Sam.

Presbyters, absent through infirmity from their churches, might be said to preach by those deputies, who, in their stead, did but read homilies.

Mouber.

A man hath a body, and that body is confined to a place; but where friendship is, all offices of life are, as it were, granted to him and his deputy; for he may exercise them by his friend.

Bacon.

Cut me off the heads  
Of all the favorites that the absent king  
In deputation left behind him here,  
When he was personal in the Irish war.

Shakespeare.

He looks not below the moon, but hath designed the regiment of sublunary affairs into sublunary deputies.

Brown.

He exerciseth dominion over them as the vicerent and deputy of Almighty God.

Hale's Origin of Manhood.

The authority of conscience stands founded upon its vicerency and deputation under God.

South.

And Linus thus, deputed by the rest,

The heroes welcome and their thanks expressed.

Ruscon.

A bishop, by deputing a priest or chaplain to administer the sacraments, may remove him.

Ayliffe's Paragon.

DEQU'ANTITATE, v. a. from Lat. *de ant* *quantitas*. To diminish the quantity of.

This we affirm of pure gold; for that which is current, and passeth in stamp amongst us, by reason of its alloy, which is a proportion of silver or copper mixed therewith, is actually dequantitated by fire, and possibly by frequent extinction.

Broune's Vulgar Errors.

DERA'CINATE, v. a. Fr. *deraciner*, from *de* and *racine*, a root, from Lat. *radix*, *raïna*. To tear up by the roots.

Her fallow leas

The darnel, hemlock, and rank fumitory

Doth root upon; while that the culter rasts

That should deraïcate such savagery.

Shakespeare.

DERAIGN', v. a. }

See ARR'IGN. Re

DERAIGN'MENT, or } Minsheu says from either

DERAÏN'MENT, n. s. } Fr. *desarrayer* or *de-*

*ranger*, to disorder, or Norman *desfranc*, 'a proofe of the deniall of a man's owne fact.' To prove, or justify.

When the parson of any church is disturbed to demand tythes in the next parish by a writ of *inducere* the patron shall have a writ to demand the advowson of the tythes being in demand: and when it is *deraigned*, then shall the plea pass in the court christian, as far forth as it is *deraigned* in the king's court.

Blount.

DERANGE', v. a. }

Fr. *desranger*, to dis-

DERANGE'MENT, n. s. } order. The quotation

from Blount includes a curious explanation of this word. It is of modern introduction, and its general, but now very common, application both to disordered minds and things.

In some places the substantive *derangement* is used in the very literal signification with the French *trayer*, or *desranger*; that is, turning out of course, displacing or setting out of order; as, *derangement* or departure out of religion, and *derangement* or discharge of their profession, which is spoken of those religious men who forsook their orders and professions.

Blount.

Most nations have adopted peculiar expressions, to signify the form or degree of *derangement* of intellect. The term *derangement*, which we have taken immediately from the French, and which means out of rank, or order, is metaphorically applied to the mind, to denote that its ideas are out of the rank, or order generally preserved by intelligent beings.

Dr. Rea.

DERAY, n. s. Fr. *desrayer*. To turn out of the right way; 'tumult; disorder; noise; metrimint;' and even 'solemnity,' says Dr. Johnson, adding, truly, 'not in use.'

DERBEND, or DERRENT, a town of Persia, said to have been founded by Alexander the Great, and once the residence of the celebrated caliph Haroun-al-Raschid. The Russians took it in the year 1722, and retained possession until

when it was restored to the Persians. It is it was subdued and possessed by them. In the year 1796, the empress of Russia declared war against the Persians, and having entered Daghestan, at the head of an army, having reconnoitred Derbend, he made an assault, but the town surrendered. The best part of the town is crowned by a wall of a triangular figure. Many of the towers used are cubes of six feet, but the streets are so narrow that cannon are mounted on the towers. The entrance to the town is by an ancient iron gate. There is a tradition in the neighbourhood that the empire of the Medians is to be overthrown by a yellow army, which shall enter by this gate. No foreigner is, therefore, permitted to enter the town, and a tax is taken of all strangers at the gate mentioned. The streets of Derbend are clean, but the town is well supplied with water by a fine, but almost ruined, aqueduct. The inhabitants consist of various eastern tribes, and amount altogether to about 4000. There is little trade, but a great quantity of wheat is cultivated in the neighbourhood, and the grapes are fine. To the north-east there are graves covered with flag-stones above the usual size of man; and many curious objects in the vicinity. One of these, some years ago, was found to contain undecayed bones of human dimensions, a battle-axe, shield, and arrows. The walls are built with stones as hard as flint, and near it are the remains of a wall reached from the Caspian to the Black Sea, situated near the Caspian Sea, at the foot of the Caucasus, in long 48° 60' E., lat. 40° 30' N., and is now the capital of the principality of Derbend. See below. It is on a declivity to the margin of the Caspian, about three miles, and is about half a mile from the west is a passage leading into the interior, which are possessed by barbarous tribes. Derbend is considered one of the gates of Persia, and its name signifies, a locked door. It is surrounded by towers of considerable strength.

DERBENT, a principality or klaniship of Derbend, bounded on the north by the river Derwent, on the south by the river Volga, on the east by the Caspian Sea, and on the west by the district of Talasseran, about twenty miles in length by fifteen miles; it is mountainous and well watered. It is very fertile, wheat yielding twenty and barley fifteen. There are also fine grapes produced; the wine is not good. Some silk manufactures are also carried on.

DERBY, or DERRENT, a town of European origin in the province of Romania, twenty miles from Adrianople.

DERBYSHIRE, or DERBYSHIRE, an inland county, situated nearly in the centre of the island at an almost equal distance from the midland western seas. It is bounded on the north by Yorkshire and part of Cheshire; on the east by Nottinghamshire; on the south by Leicestershire; and on the west by Staffordshire and Derby.

Its form is extremely irregular; but the figure to which it approaches the

nearest is that of an inverted pyramid; this, however, is extremely arbitrary, owing to its uncommon indentations and projections. It is of considerable extent, being computed to be the twentieth in point of magnitude, and the nineteenth in point of population, of all the English counties. Its greatest length, in a direction S.S.E. to N.N.W. is about fifty-six miles and a half. Its greatest breadth, from E.N.E. to W.S.W., thirty-three miles. It contains about 972 square miles, or 622,080 statute acres. Here are six hundreds, one borough, eleven market towns, and 116 parishes. This county is in the diocese of Litchfield and Coventry, and the province of Canterbury, and is included in the midland circuit.

Prior to the Roman invasion, the site of the present county belonged to the Coritani. The Romans included it in the division named Flavia Cæsariensis; but during the time of the Anglo-Saxons it belonged to the kingdom of Mercia. The word Derby, from whence comes the name of the county, is of uncertain derivation. By the Saxons it was called Northworthig, and by the Danes Deoraby. The latter is obviously the source whence its modern name, and probably that of the river Derwent, is derived; but its precise meaning cannot now be ascertained.

The eastern and western districts, into which the Derwent naturally divides this county, are materially different, both in respect to the air, the face of the country, and the soil. The climate of the eastern division is healthy, temperate, and pleasant; but in the western district the air is much keener, and the state of the weather always more changeable. The face of the country presents, if not the most agreeable and pleasing, certainly the most varied and romantic scenery of any county in England. There is the most striking difference and contrast of features between the northern and southern parts; the former abounding with hill and dale. The country gradually rises until we come to the neighbourhood of Wirksworth, and then begins to assume that picturesque and sublime appearance which it continues to possess to its extremity. That chain of hills arises, which stretching northwards is continued in a greater or less breadth quite to the borders of Scotland, and forms a natural boundary between the east and west sides of the northern part of the kingdom. Its course in this county is inclined a little to the west. It spreads as it advances northerly, and at length fills up the whole of the north-west angle; also overflowing a little, as it were, towards the eastern parts. The hills are at first of small elevation; but, being in their progress piled one upon another, they form very elevated ground in the tract called the High Peak, though without any eminences which can rank among the loftiest mountains even of this island. The most considerable in height are the Axe-edge and the Kinder-scout mountains. Mr. Farey, in his admirable and comprehensive View of the Agriculture and Minerals of this county, has given an alphabetical list of the several mountains, hills, and eminences throughout Derbyshire, or in the borders of the adjoining counties, describing their situations, the strata on the top of each,

&c. These amount to upwards of 700 in number. This intelligent and truly scientific writer has also enumerated upwards of fifty of the principal narrow and rocky valleys or defiles with precipitous cliffs in and near to this county, describing their situations, the strata exhibited in their sides and bottoms, and the names of the most noted rocks, caverns, &c., in each. These lists are uncommonly curious and interesting. The High Peak is not, as many suppose, a high barren rock, but an extensive range of rather elevated ground, called the Peak Hundred. It is cultivated and populous.

The principal rivers of Derbyshire, beside the Derwent, are the Trent, the Dove, the Wye, the Errewash, and the Rother. The Derwent rises in the High Peak district, and leaves this county on the Leicestershire border near Wilne. The Trent enters the county from Staffordshire, a little south of Calton, and leaves it near Barton, on the confines of Leicestershire. The Dove rises a little south of Buxton, and, joining the Trent near Burton in Staffordshire, finally quits the county. The Wye, rising in the vicinity of Buxton, never leaves the county, but falls into the Derwent a few miles below Bakewell. The Errewash rises in the coal district near Alfreton, and falls into the Trent a few miles below its junction with the Derwent. The Rother rises near Chesterfield, and enters Yorkshire between Kilmarsh and Beighton. These rivers are well stocked with almost every kind of fresh-water fish. The Dove and the Trent have been long celebrated by Cotton, and still more by his invaluable friend, the pleasing and honest Isaac Walton, in his admirable book on angling. Nor has the Derwent received less honor from the pens of Darwin and Seward. This county is benefited by an extensive inland navigation. The principal canals are the following: the Grand Trunk from the Trent near Wilden-Ferry to the river Mersey near Runcorn-Gap. It was planned by the ingenious Mr. Brindley, and was begun on July 17th, 1766, and finished in May 1777. The Chesterfield Canal, another of Mr. Brindley's projects, extends from Chesterfield to the river Trent, at which it arrives a little below Gainsborough: its whole length being about forty-six miles. Langley Bridge, or Errewash Canal, extends from Langley Bridge to the Trent, opposite to the entrance of the Soar. Its length is about eleven miles. The Peak Forest Canal was completed in the year 1800. It extends about fifteen miles in length, besides a railway of six miles, from the Ashton-under-line Canal, near Duckensfield Bridge, to the basin and limekilns at Chapel-Milton. The railway, passing Chapel-en-le-Frith, leads to Loads-knowl limestone quarries in the Peak. Cromford Canal begins at Cromford, near Matlock, and joins the Errewash Canal at Langley Bridge: its length is about fourteen miles. Ashby-de-la-Zouch Canal, about fifty miles in length, joins the Coventry Canal at Marston Bridge, about two miles to the south of Nuneaton, and ends at Ashby-de-la-Zouch in Leicestershire. The Derby Canal commences in the Trent, at Swarkestone Bridge; and, crossing the Trent and Mersey Canal, terminates at Little Eaton, about three miles north

of Derby. The length of this branch is eight miles and a half, with a rise of about nine feet. There is a railway branch of eight miles and a half to the Smithy Houses and to the collieries near Derby. Another branch of this canal begins at Derby, and holds an easterly direction nearly parallel to the road leading to Nottingham, and finally joins the Errewash between Long Eaton and Sandiacre: its length is eight miles and a half. This canal is four feet wide at top, twenty-four at bottom, and five deep in the ebbest part.

There is an almost endless variety of soil in this county. In the northern parts very sive peat-bogs exist. The soil in these consists chiefly of ligneous particles, the roots of decayed vegetables mixed with siliceous earth or sand, and a coaly substance derived from decayed vegetable matter. The surface presents nothing but the barren blaze thinly covered with heath or ling. But in some parts of the Peak there is to be found what the inhabitants call a corn-loam, apparently consisting of a virgin earth impregnated with lime. This soil is good; but the parts where it is found are counterbalanced by vast tracts of barren and mountains, whose sides present red soil, being chiefly composed of rocks. In some parts of Derbyshire near the borders of Cheshire and Staffordshire these barren rocks are high, bleak, and numerous. Indeed so rugged is almost all the road between Chesterfield in Cheshire and Buxton in this county that it has been quaintly remarked to be—

Up hill to Buxton all the way,  
And up hill all way back.

When the mountain is formed of the limestone soil, though scanty, is productive of good grasses, which form good pasturage for cattle. On that part which is called the East Moors, serves the Rev. D. P. Davies, a late writer on the history, &c., of this county, scarcely any vegetation; not a dale or a valley which seems to have received the cultivation of man, or the fostering smile of the sun. The most common soil in the southern parts is reddish clay or marl. This soil is also to be found prevail through the middle part of the county, and consists of much of the same earth, which readily effervesces with acid. Some parts of the southern district are sparsely covered with small beds of sand or gravel, and a large tract of country producing coal is covered with a clay of different colors; black, gray, and especially yellow. This kind of soil is found in some parts where the griststone is quarried; but there it is frequently of a bluish and bituminous quality. That on the north of the county, where the limestone prevails, is of a brown color and loose texture. The soil of the banks of the rivers and in the valleys is different from that of the adjacent parts, and is evidently been altered by the depositions of frequent inundations. It is extremely difficult to compress the great mass of information collected by Mr. Farey and others have collected relative to the soils of this county. Mr. Farey's work, however, contains a delineation of the

ends of this and the adjoining one. Those which belong to this are the following:—A very extensive tract, from Morley south, along the borders of Nottinghamshire, to the extreme boundaries of the county on the edge of Yorkshire north, consists of numerous strata of bind, clunch, ash, and other argillaceous strata, enclosing and separating seams of coal and coaly impressions of vegetables. These strata, on exposure to the air, rains, and frosts, perish and fall to different kinds of clay or loam.

The very extensive coal district, branching out of Derbyshire, north and south, into Yorkshire and a small part of Nottinghamshire, has been as usually denominated the Derbyshire and Yorkshire Coal Field. Mr. Farey, with his usual attention to interesting detail, has given an alphabetical list of about 500 collieries which are, or have been, worked in Derbyshire and in the bordering parts of the seven adjacent counties. Of these it appears nearly one-half are in Derbyshire.—The gravel of which these coal districts are chiefly composed, produces a clayey soil, which indiscriminately strewn over the county, but chiefly in patches about Derby and parts bordering on Staffordshire. These patches of gravel are again intermixed with other patches of residual strata, occupying the largest portion of the southern districts. The yellow limestone strata are to be found chiefly, if not entirely, in some few parts bordering on Nottinghamshire, a little above and below Bolsover, in this county. It occupies nearly 21,600 acres. The coal measures, or strata, already mentioned, occupy altogether 190,000 acres. The gritstone and chert strata occupy, with the exceptions yet to be mentioned, a tract of land about 160,500 acres, extending rather diagonally from Duffield south to the borders of Lancashire north; and in breadth in the widest part, from about Chapel-le-Frith to near Dove on the borders of Yorkshire. The ruinal limestone and toadstone strata occupy an unshapen mass of land, extending from Wirksworth to Castleton, being about 31,500 acres. Along the same tract of country, but more to the Staffordshire side, is chert limestone stratum, making a surface of about 40,500 acres. This limestone appears to have undergone an amazing degree of shrinking; and hence there are vast shake-holes and caverns, some of them of a tremendous and frightful depth, in various parts. These natural caverns are in number about twenty-seven. It will be proper to enumerate one or two of them in this place.

Bagshaw's Cavern, or the Crystallised Cavern, in Mule-Spinner Mine, is a little south-west of Bradwell, and is 400 yards in length. Eldon Hole, surrounded with a stone wall, a little north of Peak Forest Town, is a very deep hole, communicating with a vast lateral cavern below. The opening or chasma in the rock is about five yards long and three broad. The top of it is somewhat higher than the surface of the earth, with a very jagged and uneven mouth, opening into a chasm, steep, black, and full of horror. This chasm has more than once been descended. It was formerly represented as altogether unfathomable, and seeming, at a certain depth, with such

noxious air, that no animal could respire it without inevitable destruction. Cotton affirmed, more than a century ago, that he let down 884 yards of line, of which the last eighty yards were wet, without finding a bottom; and it has been confidently asserted, that a poor man, who was once lowered in a basket to the depth of 200 yards, on being drawn up died in a state of delirium. We cannot give a better description of the actual depth and dimensions of this singular cavern, than the following of Mr. Lloyd's, as contained in vol. xiii. of the Philosophical Transactions Abridged. Mr. Lloyd having seen several accounts of the unfathomable depth of Eldon Hole, in Derbyshire, and being in that neighbourhood, he was inclined to make some enquiries about that noted place, of the adjoining inhabitants; who informed him that about fourteen or fifteen years before, the owner of the pasture in which this chasm is situated, having lost several cattle, had agreed with two men to fill it up; but finding no visible effects of their labor, after having spent some days in throwing down many loads of stones, they ventured to be let down into it, to see if their undertaking was practicable; when, on finding at the bottom a vast large cavern, they desisted from their work, as it would have been almost impossible to have procured a sufficient quantity of stones to have filled it up. On enquiry of one of these men whether there were any dams at the bottom, and being assured in the negative, Mr. L. procured two ropes of forty fathoms nearly in length, and eight men to let him down.

For the first twenty yards Mr. L. was let down, he could assist himself with his hands and feet, as it was a kind of confined slope; but after that the rock jettied out into large irregular pieces, on all the three sides next him; and on that account he met with some difficulty in passing, for about the space of ten yards more; at which depth the rope was moved at least five or six yards from the perpendicular. Thence down, the breadth was about three yards, and the length at least five or six, through craggy irregular slits of rock, which were rather dirty, and covered with a kind of moss, and pretty wet, till he came within about twelve or fourteen yards of the bottom, and then the rock opened on the east side, and he swung till he descended to the floor of the cave, where he perceived there was light enough came from the mouth of the pit, though at the distance of sixty-two perpendicular yards, to read any print. When at the bottom, he perceived that the cavern consisted of two parts; the first being a cave, in shape not much unlike that of an oven; and the latter, a vast dome of the form of the inside of a glass-house; with a small arched passage from the one to the other, through which a slope of loose stones, that have been thrown in from time to time, extends from the wall at the west side of the first dome, to almost the bottom of the second cave or dome, with such an angle, that the farther end of the cave is lower by twenty-five yards than the place where he first landed. The diameter of this cavern may be nearly fifty yards: the top he could not trace with the eye; but he had reason

to believe it extended to a vast height; for when nearly at the top of one of the incrustated rocks, at the height of about twenty yards, he could find no closure of the dome, though he then saw much further than when he stood at the bottom.

The curiosities to be met with in the small cavern are not worth mentioning; indeed he did not meet there with any stalactitical incrustations whatever; but the wall consisted of rude and irregular fragments of rock. But among the singularities in the second cavern, he observed the following; climbing up a few loose stones on the south side, he descended again through a small slit into a little cave, four yards long and irregular, as to height not exceeding two yards; and the whole lined with a kind of sparkling stalactites, of a fine deep yellow color, with some small stalactitical drops hanging from the roof. Facing the first entrance is a most noble column, of the same kind of incrustation, above thirty yards high: and, proceeding on to the north, he came to a large stone, covered with the like matter; and under it was a hole two yards deep, lined with the same; whence sprung a rock consisting of vast solid round masses, like the former in color, though not in figure, on which he easily ascended to the height of twenty yards, and got some fine pieces of stalactites, pendent from the cragged sides which joined this rock.

After this, proceeding forward, he came to another pile of incrustations, different from the two former, and much rougher; and which was not tinged with such a yellow, but rather with a brown color; and at the top of this also is a small cavern, into which he went. The last thing he took notice of was the vast drops of stalactites, hanging like icicles from every part of the vault; some of which were as large as a man's body, and at least four or five feet long. The greatest part of the walls of the large cavern was lined with incrustations, and they were of three kinds: the first being the deep yellow stalactites; the second being a thin coating, like a kind of light stone-colored varnish on the surface of the limestone, and which glittered exceedingly by the light of the candles; and the third being a sort of rough efflorescence, every minute shoot resembling a kind of rose-flower. Having satisfied his curiosity with a view of this astonishing vault, he began to return. Fastening the rope to his body, he gave the signal to be drawn up; which he found to be a much more difficult and dangerous task than the descent, owing to his weight drawing the rope into clefts, between the fragments of the rock, which made it stick; and to his body jarring against the sides, which he could not possibly prevent with his hands. Another circumstance also increased the danger, which was, the rope loosening the stones over head, whose fall he every instant dreaded.

After writing the above, Mr. L. was informed there was formerly the mouth of a second shaft in the floor of the great cavern, somewhere under the great heap of stones; and that it was covered up by the miners, at the time when so many loads were thrown in from the top. It is reported to have gone down a vast depth farther, and to have had water at the bottom; but he did not perceive any remaining appearance of such

opening himself, nor did the miners, at down with him, say any thing about it.

Golconda is also a very large cavern at Hopton. Poole's Hole, about half a mile of Buxton, is a very long cavern. The is extremely narrow; but at the end of twenty or thirty yards a spacious and cavern opens, from the roof and sides of water, continually dropping, congeals in pillars and masses on the floor. Furber's cavern is a large suspended icicle or is denominated The Flitch of Bacon. Beyond the cavern again becomes contracted, little further on it again expands, into height and width, and continues so till what is called Mary Queen of Scots' name given to a large massy column of tites, on account of its having been what much injured princess during her Buxton, when she wrote on a pane of the hall:

Buxton, whose fame thy baths shall ever  
Which I, perhaps, shall see no more, fair

The cavern extends beyond this pillar at yards, and is, from its mouth to this place 669 yards. Peak's Hole, near Castleton, a remarkable cavern, in which are seven or springs of water. Besides these caverns there are numerous water-shallows in the rocks, into which streams of water disappear: in all about twenty.

Both Mr. Lloyd and the traditions in the neighbourhood, mention the appearance at the bottom of the several shafts. It is conjectured that this is the continuation of a subterranean river; indeed of that very which runs out of the mouth of the at Castleton.

Among the wonders of the Peak is the Weeden's Well, constituting one of which ebb and flow like the sea. That ebb and flow is certain; but it is at very periods, sometimes not in a day or two, sometimes twice in an hour. The basin spring is about a yard deep, and the length and breadth. When it flows, it rises with a bubbling noise, as if the air was pent up within the cavities of the rock forcing itself a passage, and driving the before it. It is occasionally used as a res.

But the great medicinal wonder of the shire is Buxton Wells, the waters of which side their medicinal use, have this sing that within five feet of one of the hot, there arises a cold one; as, indeed, in other places in England, and other countries. These springs possess a less degree of heat than those at Bath. The water is sulphur with a small quantity of saline particles, but not in the least impregnated with a sulphuric acid, hence they are very palatable in comparison with other medicinal waters. See Mr. Pennant observes, with his usual elegance 'With joy and gratitude I this moment collect with rapture the return of spirit from flight of pain, and the re-animation of long crippled rheumatic limbs.' About

East of Buxton, in one of the most situations of the whole kingdom, is

Here too is a medicinal bath of great warm springs of which were first discovered the year 1698. Near this place petrifying spring; and the whole surrounding is uncommonly interesting and

In many respects Matlock, as a watering-place, is preferable to Buxton. Here are noise, and dissipation.

dwelt at some length on the soil, &c., county, there is less occasion and still less detail its other natural productions. They consist of lead, antimony, mill-stones, marble, alabaster, alum, pit-coal, which constitute, of course the basis of its trade. In addition, there are cotton mills at Derby and Ashbourne; marble works at Ashford; and consolidated manufactories in various parts. No made in this county in considerable

It sends to parliament two members, and two for the town of Derby.

In a singular custom in this county of the churches on the anniversary of the death of the church, or on midsummer eve, &c. The ancient custom of hanging garlands of roses in the churches, with a pair cut out of white paper, which had been placed over the corpses of unmarried women generally, also prevails in the neighbourhood of the Peak; and the county wakes are observed on the Sunday following the dedication of the church or chapel, saint's day after whom it is named. Tumults, tumuli of earth and stones, bones, rock-basins, and rude military monuments the ancient British customs. The Roman remains are, an altar preserved in the church of St. Mary; some inscribed pugs of lead referred to the British Museum; and plate found in Risley-Park. Several roads passed through the county; and may be traced in several places.

Lord Arkwright, Brindley, Samuel Richardson, Anthony Blackwall, Flamsted the Duke of Devonshire, and bishop Halifax, are among the names it has produced. The gentlemen's houses, though not numerous, are nowhere except in the neighbourhood of the Peak, of individual splendor and romantic situation. See CHATSWORTH.

The county town of Derbyshire, is the Derwent, over which it has a handsome stone bridge. A small brook runs through the town. It is large, populous, well built; containing five churches, of which the church of St. Mary is the chief, the tower of which is in height, the upper part being richly decorated. The interior is particularly light, and spacious. The roof is supported by pillars on each side; the windows are handsome, and the symmetry and proportions of the whole building have a very pleasing effect. The ancient writings this church is called the church of St. Mary, which name it still retains among the people. It was originally a free chapel, and besides the master or rector, was the dean of Lincoln, had seven vicars. The county hall, county gaol, infir-

mary, an elegant assembly room, and a theatre, are the other principal buildings. The county hall is a handsome stone building, erected in the year 1730. In 1734 a machine was erected here by Sir Thomas Lombe, for the manufacturing of silk, the model of which he brought from Italy at the risk of his life. It was the first of its kind erected in England; and its operations are to wind, double, and twist the silk, so as to render it fit for weaving. It has employed many hands in the town. When Sir Thomas's patent expired, in 1732, parliament was so sensible of the value and importance of the machine that they granted him a further recompense of £14,000, for the hazard and expense he had incurred in introducing and erecting it, upon condition that he should allow an exact model of it to be taken. This model is deposited in the Tower of London. Derby has a considerable manufactory of silk, cotton, and fine worsted stockings; and a fabric of porcelain equal, if not superior, in quality to any in the kingdom. Several hands are employed in the lapidary and jewellery branches; and the work of this kind, executed here, is in high estimation. Derbyshire spar and marble, as well as foreign marble, are also wrought here into various ornamental articles. The malting trade is extensively carried on in this town. It is governed by a mayor, nine aldermen, &c. The aldermen are appointed for life, unless removed for ill behaviour. The recorder is chosen by the corporation, who can remove him at pleasure. The common-clerk is coroner and clerk of the peace, and is likewise chosen by the corporation; but both these officers must be approved of by his majesty. This town sends two members to parliament, who are elected by the corporation, freemen, and sworn burgesses; the mayor is the returning officer. A court of record is held here every second Tuesday, besides the quarter sessions, and a half-yearly court-leet.

The Derby General Infirmary is an excellent institution, situated near the London road, in a healthful, airy, and dry situation, abounding with good water. The building is constructed of a beautiful hard white stone, of a handsome, yet simple elevation, of three stories, containing a light central hall, with a double stair-case. Here the iron dome, the wide stone gallery, and the very large stone stair-case resting upon the perforated floor of the hall, which covers part of the basement story, excite admiration from their well known strength and solidity. This infirmary possesses a degree of perfection unknown to similar establishments; for instance, in the construction of two light and spacious rooms, one for each sex, called day, or convalescent rooms, where persons recovering, instead of being confined to the same room day and night, as has been the usual practice, may eat their meals and pass the day. Here is also a fever house, where relief is administered, in case of infectious diseases. The entrance to this is directly opposite to the front, and has no internal connexion with the infirmary. Besides the convalescent rooms, and the fever house, superior accommodations are provided for patients laboring under acute diseases in general; these consist of four small wards, containing one, two, three, and four beds respectively, with a

water-closet, nurse's bed-room, and scullery. This arrangement enables the medical men to separate the diseases from each other, as may best suit their natures; and the wards being parted off from the body of the house by folding doors, silence is obtained, and too much light excluded (essential in some cases), rendering this part of the establishment more convenient, perhaps, on the whole than many private houses. Another contrivance is, that ventilation shall be copious, and the warmth regulated at pleasure: and with respect to water-closets, to prevent the draft from the house being reversed, a mode of construction has been invented which does away every objection. A small steam engine is used to pump water, wash, &c. A statue of Esculapius, indicating the object of this useful institution, is placed upon the centre of the dome. The building is calculated to hold upwards of 100 patients. Three physicians, four surgeons, and a house apothecary, have been appointed to the institution since it was opened for relief of in and out patients in June 1810.

The ordnance depôt is situated near the infirmary, and was erected, according to a plan of Mr. Wyatt's, in 1805. It consists of an armory in the centre, calculated to contain 15,000 stand of arms. Above this is a room of the same proportions, containing accoutrements for the use of the army. On the north and south sides are two magazines, capable of containing 1200 barrels of ammunition. Four dwellings are situated in the angles of the exterior wall; two of which are barracks, and the other two are the residences of officers in the civil department.

Derby, as the centre of the literature of the county, and the scene of many of its improvements, has given birth to, and still boasts, many excellent literary institutions and libraries. The Derby Philosophical Society, the object of which is, the promotion of scientific knowledge by occasional meetings and conversation, and by the circulation of books, was founded by Dr. Darwin, who spent the last twenty years of his life in this neighbourhood. The first meeting, in the year 1788, was at Dr. Darwin's house; and he retained the chair of this society till his decease. It boasts a considerable number of members, and is in possession of an extensive and valuable library.

Another flourishing institution made its appearance here in the year 1808, under the title of the Derby Literary and Philosophical Society. The objects of this association are, 'the pursuit of literary and scientific enquiries, and the improvement of its members in the power of gaining and of communicating knowledge.' The means by which these objects are attempted to be accomplished are the production and discussion of papers, or essays, which may be written on any subject connected with literature or science, excluding only the practical departments of medicine and surgery, party politics and religion. It is a fundamental law of this society, that each member shall furnish an essay in his turn, and no instance has hitherto occurred in which this rule has been violated. The meetings are held monthly from September to April inclusively, one paper being read, and another

discussed, on each evening. These are the principal institutions, but there are eight or ten others in the town, and one exclusively devoted to the cultivation of French literature. Derby has a market on Wednesday and Friday. It is situated in a fine plain, opening as it advances southward into a beautiful and highly cultivated country. It is thirty-six miles north of Coventry, and 126 north-west by west of London.

DERBY, a town of the United States, Orleans county, Vermont, on the north border of the state, and on the east shore of Lake Memphremagog.

DERBY, a town of New Haven county, Connecticut, on the point of land formed by the confluence of Naugatuck and Housatonic rivers. This town was settled in 1665, under New Haven jurisdiction, and has an academy.

DERBY, a town of Pennsylvania, in Chester county, seven miles from Chester, and five from Philadelphia. It is situated on Derby Creek, which falls into Delaware River, near Chester.

DERBY, WEST, a township of England, in the county of Lancaster, four miles from Liverpool, and containing about 3000 inhabitants.

So from immortal race he does proceed,  
That mortal hands may not withstand his deed,  
Dread for his derring doe, and bloody deed,  
For all in blood and spoil is his delight.

*Fueris Quare*

DEREHAM, or MARKET DEREHAM, a market town of Norfolk, sixteen miles north from Norwich, and 100½ N.N.E. from London. It is a clean and well paved place, and situated on a small rivulet which supplies it with water. The church is a very ancient structure, and the steeple is open to the body like that of a cathedral: it contains four chapels, one of which, St. Edmunds, contains an antique chest, taken from the ruins of Beckenham Castle, in which is deposited the records of the church. The tower, erected in 1468, is a fine specimen of architecture, being richly carved. In the churchyard stands a square tower containing a peal of bells. In this church the poet Cowper is buried in 1800. Here are also three respectable meeting-houses. This town has sustained considerable damage by fires; first in the year 1679, when nearly the whole town was destroyed; and again in 1679. The market is on Friday, and is stocked with provisions, and the greatest market in the county.

DERELICT, *n. s. & adj.* *Lat. derelictus*

DERELICTION, *n. s.* *Sde and relinquere* *linquo*, to leave. Terms first applied to property voluntarily relinquished or forsaken, and to any other abandonment or forsaking; to destituteness; and figuratively to the mind.

There is no other thing to be looked for, but the effects of God's most just displeasure, the withdrawal of grace, *dereliction* in this world, and in the world to come confusion.

insert and elucidate the anomalous plurals of nouns  
and preterites of verbs.

*Johnson. Preface to Dictionary.*

Here is the fountain of truth, why do you follow  
the streams *derived* from it by the sophistry, or pol-  
luted by the passions of man? *Bishop Watson.*

The mind that is immortal—it *derides*  
No colour from the fleeting things without;  
But is absorbed in sufferance or in joy,  
Born from the knowledge of its own desert.

*Byron.*

*DERNIER*, *adj.* Last. Is a French word  
used only in the following phrase.

In the Imperial Chamber, the term for the prosecution of an appeal is not circumscribed by the term of one or two years, as the law elsewhere requires in the empire; this being the *dernier* resort. *Ayliffe*.

The court of *dernier* resort is the peerage of England. *Franklin*.

**DERMESTES**, in zoology, a genus of insects belonging to the order of coleoptera. The antennæ are clavated, with three of the joints thicker than the rest; the breast is convex; and the head is inflexed below the breast. Many varieties of this genus, as well as their larvae, are to be met with in dried skins, bark of trees, wood, seeds, flowers, the carcasses of dead animals, &c. There are eighty-seven species, of which the following are the most remarkable: *D. domesticus* varies greatly in size and color, some being found of a dark brown, others of a much lighter hue. The form of it is oblong, almost cylindrical. The elytra are striated, the thorax is thick and rather gibbous. This little animal, when touched, draws in its head under its thorax, and its feet beneath its abdomen, remaining so motionless that one would think it dead. This is the insect which makes in wooden furniture those little round holes that reduce it to powder. *D. ferrugineus* is the largest of the genus; its color is a rusty iron, having many oblong, velvet black spots upon the elytra, which give the insect a gloomy, yet elegant appearance. *D. lardarius*, of an oblong form and of a dim black color, easily distinguishable by a light brown stripe that occupies transversely almost the anterior half of the elytra. That color depends on small gray hairs situated on that part. The stripe is irregular at its edges, and intersected through the middle by a small transversal streak of black spots, three in number, on each of the elytra, the middlemost of which is somewhat lower than the rest, which gives the black streak a serpentine form. Its larva, which is oblong, somewhat hairy, and divided into segments alternately dark and light colored, gnaws and destroys preparations of animals preserved in collections, and even feeds upon the insects; it is also to be found in old bacon. This species may be destroyed by arsenic. *D. violaceus*, a beautiful little insect: its elytra are of a deep violet blue. The thorax is covered with greenish hairs, the legs are black. The whole animal's being of a glittering brilliancy renders it a pleasing object. The larva, as well as the perfect insect, inhabits the bodies of dead animals.

**DERMODY** (Thomas), an English poet, was born in the south of Ireland in 1775. His father was a schoolmaster at Ennis, and employed him, when only nine years old, in teaching the Latin and Greek languages. He, however, ran away from home at an early age, and enlisted as a common soldier. Having obtained the notice of the present marquis of Hastings, that nobleman procured him a commission; but his conduct was most dissipated, and rendered all efforts to serve him abortive. A volume of his poems appeared in 1800; and another was published in 1802, in which year he died, at Sydenham in Kent, of disease brought on by his vices. His pieces have since been collected and published by Mr. Raymond.

**DEROGATE**, *v. a. & v. n. & adj.*

**DEROGATELY**, *adv.*

**DEROGATION**, *n. s.*

**DEROGATIVE**, *adj.*

**DEROGATORY**, *adj.*

**DEROGATORILY**, *adv.*

from *de* and *rogo*, to demand. To act, diminish the legal force of a prior act, custom; hence to disparage generally. a neuter verb, to detract; lessen reputation; rate. The adjective means degenerate, graded. Derogative and derogatory detractuous; dishonorable.

So surely he is a very brave man, neither any thing which I speak to his derogation, for I said he is a mingled people, it is no disparage. *Spenser on R.*

We should be injurious to virtue itself, if we derogate from them whom their industry has great.

Is there no derogation in it?

—You cannot derogate, my lord.

Into her womb convey sterility;

Dry up in her the organs of increase,

And from her derogate body never spring

A babe to honour her. *Id. King*

The wisest princes need not think it an addition to their greatness, or derogation to the dignity, to rely upon counsel.

By several contrary customs and styles in many of those civil and canon laws are derogative and derogatory.

That spirits are corporeal, seems to me a derogative to himself, and such as he should labour to overthrow; yet thereby he establishes a doctrine of lustrations, amulets, and charms. *Brouncker's Vulgar*

That which enjoins the deed is certain law; and it is also certain, that the scripture allows of the will, is neither the derogation nor a violation of that law.

These deputed beings are derogatory from the dominion and power of the Author of Nature, who less can govern this machine he could create direct and easy methods than employing servient divinities.

None of these patriots will think it a loss from their merit to have it said, that they have many lights and advantages from their intemperance. *my lord Somers.*

**DEROGATORY CLAUSE**, in a testament, a certain sentence, cipher, or secret character, the testator inserts in his will, and of which he reserves the knowledge to himself alone, a condition, that no will he may make is to be reckoned valid, if this derogatory clause is not inserted expressly and word for word. It is a precaution invented by lawyers against wills extorted by violence or obtained by fraud.

**DERBY**, a township of the United Kingdom, in Dauphin county, Pennsylvania, situated on the east side of Swatara Creek, two miles from its confluence with the Susquehanna, celebrated for its curious cave. Its entrance is under a high bank, nearly twenty feet high, and about eight or ten feet in height. It gradually rises nearly to a level with the creek.

are numerous, of different sizes, and with stalactites curiously diversified in color.

IS. n. s. Fr. *dervis*, from Per. *derwish*. See article below. A priest or monk among

there, where Christ vouchsafed to teach, since dare an impostor preach. *Sandys*.

at first made some scruple of violating to the dying brachman; but told him, at could conceal nothing from so excellent Spectator.

or DERVICH, a name given to a sort among the Turks, who lead a very and profess extreme poverty; though allowed to marry. The word originally beggar, or a person who has nothing; the religious, and particularly the of Mevelava, profess not to possess, they call both the religious in general, Mevelavites in particular, dervises. In Egypt several kinds: those that are are a kind of religious order and live though there are of these some who return again to their convents. Some character, and yet live with their families exercise their trades: of this kind are dervises at Damascus, who go once week to a little uninhabited convent, in their extraordinary exercises. There sort of them who travel about the and beg, or rather oblige people to give, over they sound their horn something given them. The people of these Egypt, wear an octagonal badge, of a white alabaster, at their girdles, and a cap without any thing round it. The in Persia, are called abdals, servants See ABDALS. The dervises called are a Mahomedan order of religion, chief or founder of which was one Mevelava, they are very numerous. Their chief is that near Cogni in Natolia, where al makes his residence, and where all duties of the order are held; the other thing all dependent on this, by a privileged to this monastery under Ottoman I. vices affect humility and charity. They are bare-legged and open-breasted, and burn themselves with hot irons, to themselves to patience. They always fast weekdays, eating nothing on those days sun-set. Tuesdays and Fridays they sing, at which the superior presides. hem plays all the while on a flute, and dance, turning their bodies round and with the greatest swiftness imaginable. tice they observe with great strictness, y, it is said, of Mevelava their patriarch graciously round for the space of four out any food or refreshment, his companions playing on the flute; after which to an ecstasy, and therein received for the establishment of his order. ve the flute an instrument consecrated and the shepherds of the Old Testament they sang the praises of God upon profess poverty, chastity, and obedience. VII.

ence; but if they choose to go out and marry, they are always allowed. The generality of dervises are mountebanks: some apply themselves to legerdemain, postures, &c., to amuse the people; others pretend to sorcery and magic: but all of them, contrary to Mahomet's precept, are said to drink wine, brandy, and other strong liquors, to give them the degree of gaiety their order requires. The dervises are great travellers; and, under pretence of preaching, and propagating their faith, are continually passing from one place to another: on which account they have been frequently used as spies. See MAHOMET and KORAN.

DERWENT, a rapid river of the county of Cumberland, rising in Borrowdale, from whence it emerges to form a lake. It receives the Cocker at Cockermouth, after which it falls into the Irish sea at Workington.

DERWENT, a second river of England, which runs into the Ouse, five miles south-east of Selby, in the county of York. 3. A river of England, which rises in Northumberland, and flows into the Tyne, about three miles above Newcastle. 4. A river of England which rises in the northern part of the county of Derby, and is formed of several streams, one of which issues from the cavern of Castleton. It forms one of the principal ornaments of the magnificent seat of Chatsworth and afterwards falls into the Trent, eight miles E. S. E. of Derby.

DERWENT FELLS; a chain of mountains in Cumberland, reckoned among the loftiest in England. One of them is celebrated for its mines of black lead, from which, for its superior quality, great part of Europe and America are supplied. In travelling through the valley of Borrowdale, amongst these mountains, they exhibit to the admirer of nature's romantic beauties, the representation of a stormy ocean; the numerous distant hills appearing like so many waves rising and undulating behind each other. The immense masses of rugged rocks, however, abruptly broken off here and there, occasionally start up to dispel the illusions of fancy; and, together with the trees, villages, farms, and cattle, which he discovers as he proceeds, serve to convince the traveller that he is still on terra firma.

DERWENT WATER, or the LAKE OF KESWICK, a beautiful lake of Cumberland, in the vale of Keswick, lying between the mountain of Skiddaw on the north and the craggy hills of Borrowdale on the south, whence it derives its chief supplies of water. See CUMBERLAND.

DESAGULIERS (John Theophilus), a Protestant divine, born at Rochelle in 1683. He was educated at Christ Church, Oxford; where he succeeded Dr. Keill in reading lectures on experimental philosophy at Hart Hall. The duke of Chandos made Dr. Desaguliers his chaplain, and presented him to the living of Edgware, near his seat at Cannons: he was afterwards chaplain to Frederic prince of Wales. He introduced the practice of reading public lectures on experimental philosophy, in London, and continued them with great success to the time of his death in 1749. He communicated many curious papers to the Philosophical Transactions; published a valuable Course of Experimental Philosophy, in 2 vols. 8to; and edited

an edition of Gregory's Elements of Catoptrics and Dioptrics, with an Appendix on Reflecting Telescopes, 8vo. He was also a member of several foreign academies.

DESAIN (Louis Charles Anthony), a celebrated French general, born near Riom, in 1768. At an early life he made choice of the military life, and before the revolution had risen to the rank of lieutenant. In the republican army he was first employed as aid-de-camp to general Custine. He displayed great bravery at the battle of Lauterbourg, where, though severely wounded, he kept the field, rallying the disordered batallions. Having been successively created general of brigade and of division, he contributed, very considerably, to the famous retreat of Moreau. At the battle of Rastadt he commanded the left wing of the French army, obliging the archduke Charles to fall back; and he afterwards heroically defended the bridge of Kehl, where he was severely wounded. He accompanied Buonaparte into Egypt, where he was appointed governor of the upper part of the country. Having signed the treaty of El Arish with the Turks and English, he returned to Leghorn, but was detained there as a prisoner of war by admiral lord Keith. Upon obtaining his parole he returned to France, and accompanied Buonaparte to Italy. He was killed at the battle of Marengo, June 14th, 1800.

DESAQUADERO, a river of South America, in Peru, over which the Ynca Huana Capac built a bridge of flags and rushes, to transport his army to the other side, and which remained a few years since.

DESART, or DESERT, a large extent of country entirely barren, and producing nothing. In this sense some are sandy deserts; as those of Lop, Xamo, Arabia, and several others in Asia; in Africa, those of Libya and Zara: others are stony, as the desert of Paran in Arabia Petrea. The Desert, peculiarly so called in Scripture geography, is that part of Arabia south of the Holy Land, where the children of Israel wandered forty years. See DESERT.

DESATIR is a lately discovered collection of sixteen sacred books, consisting of the fifteen old Persian prophets, together with a book of Zoroaster. This, at least, is what the book itself pretends to be. The collection is written in a language not spoken at present any where, and equally different from the Zend, the Pelvi, and modern Persian. The last of the fifteen prophets, Sasan, who lived at the time of the downfall of the Sassanides, when the Arabians conquered the country, literally translated the Desatir, and accompanied it with commentaries. This work was afterwards, until the 17th century, one of the chief sources of the ancient Persian religious doctrines, interwoven with astrology and demonology; and, after having been forgotten for about a century and a half, a learned Parsee discovered it at Ispahan. His son, Molla Firuz, was induced by the marquis of Hastings to publish an edition of the Desatir at Bombay, in 1820, to which Erskine added an English translation. Erskine, however, considers the collection as spurious; and Sylvester de Sacy (Journal des Savants, Feb., 1821) believes that the Desatir is the work of a Parsee in the 4th century

of the Hegira, who, as he thinks, invented the language, in order to give to the collection which is itself an assemblage of old traditions and significant mysteries, an air of genuineness. Joseph von Hammer, on the contrary, is said to consider it as genuine. At all events, it is interesting to learn from this work, with greater accuracy, an old religious system of the East, which are to be found, with pandæmonism, the metempsychosis, the elements of the world of the stars, of astrology, the theurgy, the doctrine of amulets, as well as the elements of the Hindoo religion, particularly the system of castes, and many elements of the Christian religion. Yet no trace of any connexion with Zendavesta and the magic of the Parsees has been found in the Desatir.

DESCANT, *v. n., & n. s.* Span. and Ital. *canto*, from Lat. *de* and *canto*, to sing. The word seems formed in our language from the *canto*, which signifies a song or tune, in parts; a harmony for different voices or instruments: hence a discourse consisting of various parts, as singing in various parts. To discourse; declaim generally used in the latter sense, continuously.

DESCANT, in music, signifies the art of composing in several parts. Descant is threefold, viz. double, figurative, and plain. Double descant is when the parts are so contrived, that the treble, or any high part, may be made to answer the bass; and, on the contrary, the bass the treble. Figurative or florid descant is that part of the air of music wherein some discords are concerned, as well, though not so much, as concord. This may be termed the ornamental and rhetorical part of music, in regard that there are introduced all the varieties of points, syncopes, diversities of measure, and whatever is capable of adorning the composition. Plain descant is the ground-work and foundation of all musical compositions, consisting altogether in the placing of many concords answering to each other in counterpoint.

DESCARTES, René (Renatus Cartesius), an original thinker, and reformer of philosophy, with whom the modern or new philosophy is often considered as commencing, was born at La Haye, in Touraine, and died at Stockholm, in 1650. While pursuing his education in the Jesuits' school at La Fleche, where he studied philology, mathematics, and astronomy, his superior intellect manifested itself. After having read much, without coming to any certain conclusions, he travelled. Both his inclination and inclination led him to embrace the military profession, and he fought as a volunteer at the siege of Rochelle, and in Holland under prince Maurice. While he served in Holland, a mathematical problem in Dutch, pasted up in the streets of Breda, met his eye. Not being acquainted with the language, he asked a man who stood near him to translate the problem to him. This man happened to be professor Barrow, principal of the university of Dort, and himself a mathematician. He smiled at the question of the young officer, and was greatly surprised, the next morning, to find that he had solved it. From hence Descartes went to Germany, and

in Bavarian service. His situation, affording him little opportunity of pursuing his favorite studies, he left the army in 1643, visited Moravia, Silesia, Poland, and the shores of the Baltic. In West Friesland with advantage, he took a boat, and embarked with a single sailor, thinking him a foreign merchant, and much money in his baggage, resolved to see him. Imagining him ignorant of their design, they conversed of their plan openly. Perceiving his danger, drew his sword, and threatened them in their own tongue, and threatened the first man that should offer him aid. The sailors were overawed, and gave up the design. After a variety of travels, he returned to Holland, where he composed most of his works, from 1629 to 1649, drew about him a circle of scholars, and was engaged in many controversies, especially with theologians. His philosophical system abounds in singularities and subtleties; but a spirit of independent enquiry prevails throughout it, and has contrived to excite the same spirit in others. It has led to give to philosophical inquiries a new direction, and found many adherents, especially in England, France, and Germany. Descartes held the belief of the existence of a mind on the consciousness of thought: "I think, therefore I exist" (*cogito, ergo sum*). He applied his system with much ingenuity, from the then empiric philosophy of Bacon, and the Aristotelian scholastics, and the rigorous, systematic or mathematical reasoning. From his system originated a new notion among the moderns, that the clearness and certainty of philosophy consist in definitions, arguments, and a methodical arrangement of them. The thinking being, whether the body, or the soul, evidently differs from matter, whose existence consists in space or extension, by its simplicity and immateriality (and, as immortality), and by the freedom it pertains to it. But every perception of it is not clear and distinct; it is in a measure involved in doubt, and is so far an imperfect being. This imperfection of its perception led to the idea of an absolutely perfect being, therefore, here makes use of the ontological proof of the existence of God in a different manner from that in which Anselm of Canterbury had, somewhat earlier, made use of the same; and hence the name of the ontological proof. He placed at the head of his system the idea of an absolutely perfect being, which he considers as an innate idea, and from it all further knowledge of truth. He applied his system to metaphysics, he considered the substance and causality. He applied greatly to the advancement of mathematics and physics. He made use of the disquisitions and observations of others, defining them, and assigning them their place in his system. The higher departments of geometry (to which he successfully applied analysis), as well as optics, and mechanics, were attended by him, their method simplified, and thereby the way prepared for the great advances made in the sciences by Newton and

Leibnitz; for instance, he contributed much to define and illustrate the true law of refraction. His system of the universe attracted great attention in his time, but has been long since exploded. It rests on the strange hypothesis of the heavenly vortices, immense currents of ethereal matter, with which space is filled, and by which he accounted for the motion of the planets. He labored much to extend the Copernican system of astronomy. Descartes loved independence; he nevertheless suffered himself to be persuaded to go to Stockholm, upon the invitation of queen Christina, who was very desirous of his society. He died at that place four months after his arrival. His body was carried to Paris in 1666, and interred anew in the church of St. Genevieve du Mont. Descartes was never married, but had one natural daughter, Francina, who died in his arms, in her fifth year, and whose loss he felt acutely. His works have at various times been published, singly and together; as, for instance, at Amsterdam, 1692, 9 vols. 4to. Baillet and Tarpelius have written his life. (See his letters; also the eulogies on him by Gaillard, Thomas, and Mercier, and Leibnitz's account of him in his letters.)

DESCEND', *v. a. & v. n.*

DESCEND'ANT, *n. s.*

DESCEND'ENT, *adj.*

DESCEND'IBLE, *adj.*

DESCEN'SION, *n. s.*

DESCEN'SIONAL, *adj.*

DESCENT, *n. s.*

Fr. *descendre*;

Span. *descender*;

Ital. *discendere*;

Lat. *descendere*,

from *de* privative,

and *scandere*, to

clamber. To walk

downwards; or cling as to a rope, going downwards. As a neuter verb, to fall, or sink, or go downwards: hence, to be derived from, and to come in order of inheritance. A descendant is applied to offspring, near or remote: descendant, falling, sinking; derived from: descendible, that which may be descended, or may descend. Descension, figuratively, a degradation, or a declension.

DESCENT, in heraldry, is used to express the coming down of any thing from above; as, a lion en descent is a lion with his head towards the base points, and his heels towards one of the corners of the chief, as if he were leaping down from some high place.

DESCENT, or hereditary succession, in law, is the title whereby a man, on the death of his ancestor, acquires his estate by right of representation, as his heir at law. An heir, therefore, is he upon whom the law casts the estate immediately on the death of the ancestor; and an estate so descending to the heir is in law called the inheritance. See INHERITANCE. Descent is either lineal or collateral. Collateral descent is that springing out of the side of the line or blood; as from a man to his brother, nephew, or the like. See CONSANGUINITY. Lineal descent is that conveyed down in a right line from the grandfather to the father, from the father to the son, and from the son to the grandson, &c.

DESCENT OF DIGNITIES. A dignity differs from common inheritances, and goes not according to the rules of the common law: for it descends to the half blood: and there is no coparcenership in it, but the eldest takes the whole.

The dignity of peerage is personal, annexed to the blood; and so inseparable, that it cannot be transferred to any person, nor surrendered even to the crown: it can move neither forward nor backward, but only downward to posterity; and nothing but corruption of blood, as if the ancestor be attainted of treason or felony, can hinder the descent to the heir.

DESCRIBE', *v. a.* } Fr. *descrire*; Span. *describir*; *n. s.* } *describer*; Ital. *descrivere*; Lat. *describere*, *descrip'tion*, *n. s.* } *describere*; Lat. *describere*, *descript'ive*, *adj.* } from *de*, concerning, and *describ'e*, *v. a.* } *scribere*, to write. To delineate; trace out; distribute a thing or country into its parts: description is both the act and form of describing. Describe is used for describe by Surrey.

DESCRY', *v. a. & n. s.* } Fr. *descrier*. To *descri'er*, *n. s.* } give notice of any thing suddenly discovered: hence to spy out; detect; discover.

How near 's the other army?

—Near, and on speedy foot, the main *descry*  
Stands in the hourly thought. *Shakespeare.*

DESEADA, DESIRADA, or DESIDERADA, the first of the Caribbee Islands, discovered by Columbus in his second voyage, in 1494, when he gave it that name. It is ten miles long and five broad, and looks at a distance like a galleys, with a low point at the north-west end. The soil is in some places black and good, in others sandy and unproductive. It lies twelve miles east of Guadaloupe.

DESEADA, or CAPE DESIRE, the south point of the Straits of Magellan, at the entrance of the South Sea. Long. 74° 18' W., lat. 53° 4' S.

DES'ECRATE, *v. a.* } Lat. *desacro*, from *DESCRA'TION*. } *de*, privative, and *sacro*, to consecrate; although the Latin compound *desacro* also signifies to hallow. To apply to common or profane purposes, that which has been consecrated.

The founders of monasteries imprecated evil on those who should desecrate their donations.

*Salmon's Survey.*

DESERT', *v. a., n. s. & adj.* } Fr. *deserter*; *DESERT'ER*, } from Lat. *deser-*  
*DESERTION*, } *ro*, *desertum*.  
*DESERT'ICE*, *n. s. Fem.* } To leave, forsake, abandon. A desert is a solitary, forsaken place; hence, as an adjective, wild, unfrequented, uninhabited: a deserter, he who forsakes his post of duty; and Milton has afforded us a feminine substantive of this meaning.

And it is written in the book of saltness, the abscission of him be maad *desert*, and he there noon that dwelle in it, and another take his bishopricke.

*Wiclif. Dedu. 1.*

He found him in a *desert* land, and in the waste howling wildernesses. *Deuteronomy, xxii. 10.*

For light she hated, as the deadly bale,  
Ay wont in *desert* darkness to remaine,  
Where plain none might her see, nor she see any  
plaine. *Spenser. Faerie Queene.*

I have words

That would be howled out in the *desert* ait,  
Where hearing should not catch them.

*Shakespeare.*

He, looking round on every side, beheld  
A pathless *desert*, dusk with horrid shades.

[It is] as vain to go about to compel (the pair) into one flesh as to weave a garment of Cleave to a wife, but let her be a wife, not a sary, not a *desertrice*. *Id. Tenu.*

Heats of *deserters*, who your honour sold,  
And basely broke your faith for bribes of gold.

Christ hears and sympathises with the agonies of a soul under *desertion*, or the pain some stinging affliction.

What is it that holds and keeps the orb stations and intervals, against an incessant rent tendency to *desert* them?

The members of both houses, who at first were counted *deserters*, and outed of their parliament. *King.*

Thou, false guardian of a charge too good  
Thou, mean *deserter* of thy brother's blood.

A *deserter*, who came out of the citadel garrison is brought to the utmost necessity. *Tuttle.*

*Deserted* is my own good hall,

Its hearth is desolate;

Wild weeds are gathering on the wall

My dog howls at the gate.

DESERTER. A deserter is, by the law, punishable by death; which, a victim, is executed upon him at the regiment he formerly belonged to, with written on his breast. A reward of shillings is given to every person who apprehends a deserter, and persons concealing, buying the clothes, arms, &c. of such liable to very heavy penalties. No commissioned officer or soldier shall enlist in any other regiment, troop, or company, a regular discharge from the regiment, company, in which he last served, on the of being reputed a deserter, and accordingly: and in case any officer shall receive and entertain such non-commissioned officer or soldier, or shall not, after discovered to be a deserter, immediately him, and give notice thereof to the which he last served, he, the said offending, shall, by a court-martial, be

DESERT', *n. s.* } Old Fr. *desert*.

DESERT'LESS, *adv.* } participial form serve, which see. Merit or demerit reward or punishment: desertless is Dryden for without merit.

Being of necessity a thing common, in the manifold persuasions, dispositions, and of men, with equal *desert* both of praise and shunned by some, by others desired.

Use every man after his *desert*, and 'scape whipping?

She said she loved,  
Loved me *desertless*; who with shame could  
Another flame had seized upon my breast.

All *desert* imports an equality between conferred, and the good deserved, or made.

I was determined to be advanced in my  
by force of *desert*, or not at all. *Disch.*

**DESERVE**, *v. a.* } *Fr. deservir*; *Lat. de-*  
*mereri*, to be useful, from  
*DEMERIT*, *n. s.* } *de* and *meritus*, to be a  
*WIND*, *n. s.* } slave. To be worthy of  
 it: all the derivatives from this root  
 id to both by respectable writers. But  
 id absolutely, to be deserving, &c.,  
 idly expresses merit.

They honoured, as having power to work or  
 id deserved of them. *Hooker.*

Love is never linked to the deserver,  
 id deserts are passed. *Shakespeare.*

All friends shall taste  
 id of their virtue, and all foes  
 id of their deservings. *Id.*

With some high minds, is an overweight of  
 id, or otherwise great deservings do, perchance,  
 idable presumers. *Wotton.*

Will, if here would end  
 id: I deserved it, and would bear  
 id deservings. *Milton.*

King of others can be no excuse for our in-  
 id our uncharitableness.

*Bp. Hall. Contemplations.*  
 id the places where best manners flourish,  
 id deservings ought to rise. *Owen.*

Id cannot give him death: though he  
 id, he deserves it not from me. *Dryden.*

Id Orazio's death I have not seen  
 id so deservings to be queen. *Id.*

Id to the rule of natural justice, one man  
 id and deserves of another. *South.*

Id wrongly cuts himself off from the affec-  
 id community which he endeavours to sub-  
 id. *Addison.*

Id each bishoprick some portion of the royal  
 id patronage, which is now prostituted by  
 id and the Minister of the day to the  
 id parliamentary corruption, that every Bi-  
 id means sufficient to reward all the de-  
 id of his diocese. *Bp. Watson.*

**DESICATE**, *v. a. & n.* } *Lat. desicco, de-*  
*siccare*, to dry up; to exhaust; to grow dry;  
*DESICATED*, *n. s.* } and *siccus*; Heb. *ציה* dry (Min-  
 id are applications that dry up sores.  
 id there is moisture enough, or superfluous,  
 id helpeth to digest and desiccate the moisture.  
*Bacon's Natural History.*

Id issue out of the body, there followeth  
 id aduration, and consumption. *Id.*

Id elements were elevated from the sea, or  
 id places thereof, by the heat of the sun.  
*Hale.*

Id the beginning, may be prevented by desic-  
 id. *Wicman.*

Id desiccative, according to Paulli, it can-  
 id the fibres, as our author imagines; if it  
 id, it must constrict the stomach, rather  
 id. *Johnson.*

**DESIDERATE**, *v. a.* } *Lat. desidero. To*  
*DESIDERATION*, *n. s.* } want or desire in  
 id A desideratum is that which is much,  
 id long, desired.

Id of wonderful assistance toward the so-  
 id so desirable and so much desiderated  
 id. *Chrysostom.*

**DESIGN**, *v. a. & n. s.*  
**DESIGNABLE**, *adj.*  
**DESIGNATION**, *n. s.*  
**DESIGNEDLY**, *adv.*  
**DESIGNER**, *n. s.*  
**DESIGNING**, *part. adj.*  
**DESIGNLESS**, *adj.*  
**DESIGNLESSLY**, *adv.*  
**DESIGNMENT**, *n. s.*

taking for after it; to devote, taking to; to plan,  
 project. As a substantive a design is the scheme  
 or plan of an undertaking in the mind, or in any  
 form of development: and designment is syno-  
 nymous with design: designable is distinguish-  
 able: designation, the act or form of pointing or  
 marking out: designedly, purposely, with some  
 proposed object in view: designing is generally  
 used in an ill sense. Designless is without plan  
 or scheme, purposeless; designlessly is inadver-  
 tently.

Leave these sad designs  
 To him that hath more cause to be a mourner.  
*Shakespeare.*

News, lords! our wars are done:  
 The desperate tempest hath so banged the Turks,  
 That their designment halts. *Id.*

William the Conqueror forebore to use that claim  
 in the beginning, but mixed it with a titular pre-  
 tence, grounded upon the will and designation of  
 Edward the Confessor. *Hallam.*

We are to observe whether the picture or outlines  
 be well drawn, or, as more elegant artizans term it,  
 well designed; then, whether it be well coloured; which  
 be the two general heads. *Wotton.*

That Providence, which keeps the whole from  
 destruction, will also keep all its necessary parts from  
 corruption, lest the work of God become insufficient  
 to the end of its designation. *Bishop Taylor.*

One of those places was designed by the old man  
 to his son. *Clarendon.*

In this great concert of his whole creation, the  
 designlessly conspiring voices are as differing as the  
 conditions of the respective singers. *Boyle.*

'Tis a greater credit to know the ways of captivizing  
 nature, and making her subserve our purposes and de-  
 signments, than to have learned all the intrigues of  
 policy. *Glensville.*

Is he a prudent man, as to his temporal estate, that  
 lays designs only for a day, without any prospect to  
 the remaining part of his life? *Tillotson.*

The acts of religious worship were purposely de-  
 signed for the acknowledgment of a Being, whom the  
 most excellent creatures are bound to adore as well as  
 we. *Stillingfleet.*

You are not for obscurity designed,  
 But, like the sun, must cheer all human kind.  
*Dryden.*

He was born to the inheritance of a splendid for-  
 tune; he was designed to the study of the law. *Id.*

A sedate settled design upon another man's life,  
 puts him in a state of war with him against whom he  
 has declared such an intention. *Locke.*

'Tis not enough to make a man a subject, to con-  
 vince him that there is regal power in the world; but  
 there must be ways of designing and knowing the per-  
 son to whom this regal power of right belongs. *Id.*

The power of all natural agents is limited: the  
 mover must be confined to observe these proportions,  
 and cannot pass over all these infinite designable de-  
 grees in an instant. *Digby.*

Uses made things; that is to say, some things were made *designedly*, and on purpose, for such an use as they serve to.

*Ray on the Creation.*

There is a plain *designation* of the Duke of Marlborough: one kind of stuff used to fatten land is called marle, and every body knows that borough is a name for a town.

*Swift.*

There is a great affinity between designing and poetry; for the Latin poets, and the *designers* of the Roman medals, lived very near one another, and were bred up to the same relish for wit and fancy.

*Addison.*

The hand strikes out some new *design*,  
Where life awakes and dawns at every line. *Pope.*

'Twould show me poor, indebted, and compelled,  
*Designing*, mercenary; and I know  
You would not wish to think I could be bought.

*Southern.*

It has therefore always been both the rule and practice for such *designers* to suborn the publick interest, to countenance and cover their private.

*Decay of Piety.*

Spectators only on this bustling stage,  
We see what vain *designs* mankind engage.

*Churchill.*

Would I describe a preacher, such as Paul,  
Were he on earth, would hear, approve, and own,  
Paul should himself direct one. I would trace  
His master-strokes, and draw from his *design*.

*Cowper.*

**DESIGN**, in manufactories, expresses the figures with which the workman enriches his stuff, or silk, and which he copies after some painter or eminent draughtsman, as in diaper, damask, and other flowered silk and tapestry, &c. In undertaking of such kinds of figured stuffs, it is necessary, says Mons. Savary, that before the first stroke of the shuttle, the whole design be represented on the threads of the warp; we do not mean in colors, but with an infinite number of little packthreads, which being disposed so as to raise the threads of the warp, let the workman see, from time to time, what kind of silk is to be put in the eye of the shuttle for woof. This method of preparing the work is called reading the design, and reading the figure, which is performed in the following manner: a paper is provided, considerably broader than the stuff, and of a length proportionate to what is intended to be represented thereon. This they divide lengthwise, by as many black lines as there are intended threads in the warp; and cross these lines by others drawn breadthwise, which, with the former, make little equal squares; on the paper thus squared, the draughtsman designs his figures, and heightens them with colors as he sees fit. When the design is finished, a workman reads it, while another lays it on the simblot. To read the design is to tell the person who manages the loom the number of squares or threads comprised in the space he is reading, intimating at the same time, whether it is ground or figure. To put what is read on the simblot is to fasten little strings to the several packthreads, which are to raise the threads named; and this they continue to do till the whole design is read. Every piece being composed of several repetitions of the same design, when the whole design is drawn, the drawer, to re-begin the design afresh, has nothing to do but to raise the

little strings, with slip-knots, to the simblot, which he had laid down to the this he is to repeat as often as is need the whole is manufactured. The ribbon have likewise a design, but far more sin that now described. It is drawn on p lines and squares, representing the of the warp and woof. But instead of lines the figures of the former consist, these stituted of points only, or dots, placed of the little squares formed by the in of the lines. These points mark the of the warp that are to be raised, and of left blank denote the threads that are their situation: the rest is managed former.

**DESIGN**, in music, is defined by Row be the invention and the conduct of the the disposition of every part, and the order of the whole. See **MUSIC**.

**DESIGN** is particularly used, in painting the first idea of a large work, drawn with an intention to be executed and large. In this sense it is the simple outlines of the figures intended to be represented, or the lines that terminate and circumscribe them: such design is sometimes drawn on ink, without any shadows at all: as it is hatched, that is, the shadows are by sensible outlines, usually drawn up other with the pen, crayon, or graver; times the shadows are made with the rubbed so as that there do not appear at other times, the grains or stroke of the appear, as not being rubbed; sometimes sign is washed, that is, the shadows are with a pencil in Indian ink, or some other ink; sometimes the design is colored, that is, are laid on resembling those intended for grand work.

**DESIGNATION** of an estate is made by tenants, bailments, and bounding. At Rome there were designations of land and other magistrates, some time before elections.

**DESIGNATOR**, a Roman officer, who signed and marked each person his rank in public ceremonies, shows, processions, &c. He was a kind of master of the ceremonies, regulated the seats, march, order, &c. were designators at funeral solemnities, the games, theatres, and shows, who assigned every one his place, but also acted as herald; it, as appears from the prologue to the comedy of Placetus.

**DESIGNING**, the art of delineating or representing the appearance of natural objects, by the aid of the pen, pencil, or other instrument on a plane. To design, according to the rules of perspective, makes the object of perspective.

**DESIRE**, *v. a. & n. s.*

**DESIRABLE**, *adj.*

**DESIRABLY**, *adv.*

**DESIRABLENESS**, *n. s.*

**DESIRE**, *n.*

**DESIRE**, *adj.*

**DESIRE**, *n. s.*

admiration. To wish; to long for; to demand. As a noun it generally

*Fr. desire; rare, which thinks de de sublimis having been objects of*

of earnest wish. That is desirable which  
with earnestness; pleasant; delightful.  
is full of desire.

He said to him with *desire* I have desired to  
speak with you before that I suffer.

Wiclif. *Luk.* 22.

Desire of his dainties; for they are deceitful  
Prov. xiii. 3.

Desireable is, sin thou hast his presence,  
at a knight, a worthy and an able,  
by some cas, sin Fortune is changeable,  
nearest to thy *desire* sometime atteine.

Chaucer. *Cont. Tales.*

A doleful case desires a doleful song,  
about vain art or curious compliments.

Spenser.

True piety which maketh them that are in au-  
thority to please and resemble God by justice,  
in every way men of action with zeal to do  
Hooker.

Counterfeit the bewitchment of some popular  
and give it bountifully to the *desires*.

Shakespeare.

Entreat you home with me to dinner,  
humblly do *desire* your grace of pardon;  
away this night.

Id.

He droway and *desirous* to sleep before the fit  
and, yawn and stretch.

Bacon.

Adam the while,  
being *desirous* her return, had wove  
shouest flowers a garland.

Milton.

Have beheld it with a *desiring* look.

Dryden.

What's the vast extent of human mind;  
extends above, and leaves poor hope behind.

Id.

What the uneasiness a man finds in himself upon  
lack of any thing, whose present enjoyment  
is the idea of delight with it.

Locke.

Let me drop some expressions about an agate  
stone; I immediately took the hint, and bought  
it unwilling to omit any thing that might  
be honorable in her eyes.

Addison.

Desire of knowledge, like other affections  
of our nature, will be very apt to lead us  
if it be not well regulated.

Mason.

Desire raises the mind by accommodating the  
things to our desires, and not, like history  
writing, subjecting the mind to things.

Byron.

DESE, PORT, a harbour on the eastern coast  
of America, so called by Sir Thomas Ca-  
pe, in 1586. On the south side of its  
entrance is a remarkably steep rock, which is an  
old sea-mark. The harbour was found, by  
James Byron, to be narrow for nearly four  
miles with a tide running at the rate of eight  
miles an hour. There were also various rocks  
about; but they were all above water.  
64° 25' W., lat. 47° 7' S.

DESIST, v. n. } Fr. *desister*; Span. *desistir*; Ital. *desistere*; and Lat. *desistere* (from), and *sisto*, *sto*; Gr. *stano*, to  
stand off, or cease from any thing;  
Desistance is cessation.

Desist, thou art discerned,  
and toil'st in vain; nor me in vain molest.

Milton.

Men usually give freeliest where they have not  
given before: and make it both the motive and ex-  
cuse of their desistance from giving any more, that  
they have given already.

Boyle.

There are many who will not quit a project, though  
they find it pernicious or absurd; but will readily  
desist from it, when they are convinced it is imprac-  
ticable.

Addison.

DESISTIVE, adj. Lat. *desistus*. Ending  
concludent; final.

Inceptive and *desistive* propositions are of this sort  
the fogs vanish as the sun rises; but the fogs have  
not yet begun to vanish, therefore the sun is not yet  
risen.

Watts.

DESK, n. s. Dut. *disch*, a table; Teut. *tisch*.  
An inclining table for the use of writers or  
readers, made commonly with a box or reposi-  
tory connected with it.

Tell her in the desk,

That's covered o'er with Turkish tapestry.

There is a purse of ducats.

Shakespeare.

He is drawn leaning on a desk, with his bible before  
him.

Walton's Angler.

I have been obliged to leave unfinished in my desk  
the heads of two essays.

Pope.

Sweet sleep enjoys the curate in his desk,

The tedious rector drawing o'er his head;

And sweet the clerk below.

Cooper.

DESMOULINS (B. C.), one of the dema-  
gogues of the French revolution, was born at  
Guise, in Picardy, in 1762, and is said to have  
been a descendant of the celebrated Charles Du-  
moulin. Educated with Robespierre, for the  
bar, he became a counsellor of parliament, and  
commenced his career, as an advocate, by plead-  
ing against his father, on a charge for his board.  
From the commencement of the revolution he  
was connected with Robespierre, and became  
the editor of a journal, in which he styled him-  
self attorney-general of the Lantern. He was  
the great director of the factious mob of Paris,  
but at one time was esteemed by La Fayette.  
In a denunciation against him to the Constituent  
Assembly, in 1790, for his virulent abuse of the  
king, Desmoulins was warmly defended by all  
the jacobins. After the unhappy flight of Louis  
XVI. to Varennes, he was one of the instigators  
of the meeting of the Champ de Mars; and was  
conspicuous in the insurrection of the 20th of  
June, 1792, as well as in that of the 10th of  
August. He now became secretary to Danton,  
the minister of justice, and was chosen a deputy  
from Paris to the convention, in which, of course,  
he voted for the death of the king. Robespierre,  
however, was jealous of his connexion with  
Danton; he was arrested March 31st, 1794, and  
on the 5th of April suffered by the guillotine.  
Beside a great number of political pamphlets,  
Desmoulins published *Les Révolutions de*  
*France et de Brabant*; *Le Vieux Concléti*;  
*Histoires des Brissotins*; *Satires*; and *Opuscules*  
*de Camille Desmoulins*.

DESOLATE, v. a. & adj.

Fr. *desoler*; Sp.

DESOLATELY, adv.

*dessolar*; Italian

DESOLATION, n. s.

and Lat. *desolatio*,

DESOLATER.

from *de* and *solus*.

To depopulate; make desert; solitary; uninhab-  
ited. Desolation is the act or consummation  
of ruin or destruction; desolater, he who accom-

plishes it. *Wiclif* makes a curious use of the verb for being removed from.

And britheren, we *desolat* fro ghou for a tyme bi mouth and in beholdyng but not in herte, han highed more plenteuousli to se ghoure face with greet desier.

*Wiclif. 1 Tessal. ii.*

How is Babylon become a *desolation* among the nations ! *Jer. l. 23.*

The lion would not leave her *desolate*,  
But with her went along, as a strong gard  
Of her chast person. *Spenser. Faerie Queene.*

What with your praises of the country, what with your discourse of the lamentable *desolation* thereof made by those Scots, you have filled me with a great compassion. *Spenser's State of Ireland.*

Let us seek some *desolate* shade, and there  
Weep our sad bosoms empty. *Shakespeare.*

Without her follows to myself and thee,  
Herself, the land, and many a Christian soul,  
Denth, *desolation*, ruin, and decay. *Id.*

The island of Atlantis was not swallowed by an earthquake, but was *desolated* by a particular deluge. *Bacon.*

Thick around  
Thunders the sport of those, who with the gun,  
And dog impatient bounding at the shot,  
Worse than the season *desolate* the fields. *Thomson.*

It is remarkable, that they never see any way to their projected good but by the road of some evil. Their imagination is not fatigued with the contemplation of human suffering, through the wild waste of centuries, added to centuries of miseries and *desolation*. *Burke.*

He calls for famine, and the meagre fiend  
Blows mildew from between his shrivelled lips,  
And taints the golden ear. He springs his mines,  
And *desolates* a nation at a blast. *Cooper.*

The *desolater* *desolate* !  
The victor overthrown !  
The arbiter of others' fate  
A suppliant for his own ! *Byron.*

**DESPARD** (Edward Marcus), was a native of Queen's county, in Ireland, where his family maintained considerable respectability. When but nineteen, he entered into the army as an ensign, and soon became distinguished for his skill as an engineer. About the close of the American war, he served in the West Indies, where his talents appeared particularly conspicuous in an expedition on the Spanish Main. He was promoted to the rank of lieutenant-colonel for his achievements on this occasion, and, in 1784, was appointed English superintendent in the Bay of Honduras ; but his conduct proving offensive to the settlers, they complained to the government at home ; in consequence of which he was suspended. He arrived in England in 1790, and made application to government for an investigation of his conduct, but his claims were rejected, upon which he became a violent democrat, and, in consequence of his inflammatory conduct, was apprehended, during the suspension of the Habeas Corpus Act, and sent to Cold Bath-fields prison ; and finally to Tothill-fields bridewell. He was afterwards liberated on his own recognisance. Soured, apparently, by his disastrous fate, he now endeavoured to seduce and corrupt some of the lowest of the soldiery ; and, having collected some few of similar senti-

ments, held secret meetings with them at disreputable places, to which no persons were admitted but those who had taken a treasonable oath. Various plans were agitated in this club for the murder of the king and other desperate undertakings ; but, the conspirators having discovered the plot, the colonel, and several others, were apprehended and brought to trial by a special commission on February 5th, 1803. Despard and nine were found guilty, on the clearest proof, and executed on Monday, the 21st.

**DESPAIR**, *v. n. & n. s.* *Fr. despaier.*  
**DESPAIR'ER**, *n. s.* *Span. and*  
**DESPAIR'FUL**, *adj.* *desesperado.*  
**DESPAIR'INGLY**, *adv.* *desesperado.*

(privative) and *spero* to hope ; Heb. *tsaphar* to be hopeless ; to despond, taking of, in common usage, before the object. Despair is hope confirmed despondency ; and sometimes the cause of such a state of mind.

We are troubled on every side, yet not distressed ; we are perplexed, but not in despair. *2 Cor.*  
Other cries among the Irish savor of the barbarism ; as the lamentations of their *despairful* outcries.

Strangely visited people,  
All swollen and ulcerous, pitiful to the eye,  
The mere *despair* of surgery, he cures ;  
Hanging a golden stamp about their necks,  
Put on with holy prayers. *Shakespeare.*

We commend the wit of the Chinese, who make making of gold, but are mad upon making of

He speaks severely and *despairingly* of

That sweet but sour *despairful* care.

Equal their flame, unequal was their care,  
One loved with hope, one languished with

He cheers the fearful, and commends  
And makes *despairers* hope for good success.  
*Despair* is the thought of the unattainable good, which works differently in men's minds, sometimes producing uneasiness or pain, sometimes indifference and indolence.

Are not all or most evangelical virtues in danger of extremes ? As there is, God knows, often a defect on the one side, so there may be a defect on the other : may not hope in God, often, be perverted into presumption or *despair* ?

Enlivening Hope, and fond Desire,  
Resign the heart to Spleen and Care ;  
Scarce frighted Love maintains her fire,  
And rapture saddens to *despair*. *Johnson.*

**DESPATCH**, *v. a. & n. s.* *Fr. despatcher.*  
**DESPATCH'FUL**, *adj.* *Span.*

To send off or away in haste ; hence, in business quickly, and to assassinate, *despatchive* is used not only for promptness of business, but intelligence, or news, to be sent with *despatch* ; and in the official or public intelligence or *despatchful* is, sent in haste. The *despatch* has become of late almost univer-

And the company shall stone them  
and *despatch* them with their swords. *Each.*

What are the brothers parted ?

—They have *despatched* with Pompey ;

Edmund, I think, is gone,  
his misery to despatch  
his life.

*Shakespeare.*

His furious speeches are as fit for despatch as  
a battle, with a long train, is for a race.

*Bacon.*

His, with despatchful looks in haste,  
on hospitable thoughts intent.

*Milton.*

Of so quick despatch, that the joy of the  
is compared to a fire of thorns.

*Bp. Hall. Contemplations.*

Theodore Coleby, a sober man, I despatched  
to Utrecht, to bring the moss, and learn  
the method of using it.

*Temple.*

Save me quickly, I may death forgive;  
few tender else, and wish to live.

*Dryden.*

It is one action despatched, which, by such  
as thou as the will, we are set upon, but an-  
swer is ready to set us on work.

*Locke.*

The despatchful bid some swain to lead,  
the bullock from the grassy mead.

*Pope.*

How could you her inward motions watch,  
delay, she wishes for despatch;  
the woman's meaning would you look,  
and her backward.

*Gruncille.*

**DESPATCH, adj. & n. s.** *Lat. despera-*  
*tion, n. s.* } *tus. See Des-*  
*pair.* } *Hope-*  
*less; abandon-*  
*ment; without care of consequences;*  
*hence rash; mad; and expressing*  
*degree of any thing bad.*

But the part of a desperate physician to  
send dead, rather than to apply the best  
of his skill for his recovery?

*Spenser's State of Ireland.*

In exile she hath despised me most;  
my company, and rail'd at me,

a desperate of obtaining her.

*Shakespeare.*

How may be well called desperate ones; for  
they are then.

*Id.*

Can not only in terrors and amazement of  
but also boldly, hopefully, confidently, in  
of sin, is called a desperation also; and  
all thus, the more desperate.

*Hammond.*

As we are guilty of any past sin, and have  
of remission, whatever our future care be,  
of success chills all our industry, and  
because we have sinned.

*Id.*

As resisted turns to desperation.

*Bishop Hall. Contemplations.*

Minus, ere ye're giv'n o'er,

desperate med'cine more;

your case can be no worse,

what is the wisest course!

*Hudibras.*

Of Asia, the sick, when their case comes  
desperate, are carried out and laid on the  
they are dead, and left there.

*Locke.*

Imperately in love with him, and took  
Sicily in pursuit of him.

*Addison.*

Of all mere desperate wits and fools,  
apart from Aristotle's rules.

*Pope.*

Of desperate steps, the darkest day,

tomorrow will have passed away.

*Cowper.*

I find my hero; he is mixed

between crowd that now pursue

you, or battle with the desperate.

we turn!

*Byron.*

**DESPICABLE, adj.** } **See DESPISZ. Con-**  
**DESPICABLENESS, n. s.** } **temptible; mean-**  
**DESPICABLY, adv.** } **low.**

Our case were miserable, if that wherewith we most  
endeavour to please God were in his sight so vile and  
despicable as men's disdainful speech would make it.

*Hooker.*

All the earth he gave thee to possess and rule,  
No despicable gift.

*Milton.*

Not less even in this despicable hero,  
Than when my name shook Africk with asfright,  
And from your hearts beneath your torrid zone.

*Dryden.*

Here wanton Naples crowns the happy shore,  
Nor vainly rich, nor despicably poor;  
The town in soft solemnities delights,  
And gentle poets to her arms invites.

*Addison.*

We consider the great disproportion between the in-  
finity of the reward and the despicableness of our  
service.

*Decay of Piety.*

There is, indeed, no employment, however despic-  
able, from which a man may not promise himself more  
than competence, when he sees thousands and myriads  
raised to dignity, by no other merit than that of con-  
tributing to supply their neighbours with the means  
of sucking smoke through a tube of clay, &c.

*Adventurer.*

**DESPISE, v. a.** } **Span. despreciar, from**  
**DESPIS'ABLE, adj.** } **Lat. despiciere, from de,**  
**DESPIS'ER, n. s.** } **down and specio; Gr.**

*οφθαλμοι*; Heb. *אָפַר*, to look or see. To look  
upon with contempt; to scorn; abhor: despisa-  
ble is contemptible.

God chiecs the feeble things and despicable things  
of the world to confound the strong things.

*Wiclif. 1 Cor. 1*

Behold ye despisers, and wonder, and perish.

*Isaiah.*

However yet they me despise and spight.

I lead on sweet contentment of my thought.

*Spenser. The Tears of the Muses.*

Let not your ears despise my tongue for ever,  
Which shall possess them with the heaviest sound  
That ever yet they heard.

*Shakespeare.*

As the wicked have no peace with God, so the godly  
have no peace with men; for if they prosper not they  
are despised; if they prosper they are envied.

*Bp. Hall. Contemplations.*

All cold, but in her breast, I will despise;

And dare all heat but that in Celia's eyes,

*Roscommon.*

I am obliged to you for taking notice of a poor old  
distressed courtier, commonly the most despicable thing  
in the world.

*Arbutnot to Pope.*

Admire, exult—despise—laugh, weep,—for here

There is such matter of all feeling:—Man!

Thou pendulum betwixt a smile and tear,

Ages and realms are crowded in this span.

*Byron.*

**DESPITE, v. a. & n. s.** } **Fr. dépit; Dutch**  
**DESPIT'FUL, adj.** } **spijt; Ital. dispetto,**  
**DESPIT'FULLY, adv.** } **from Lat. despectus,**  
**DESPIT'FULNESS, n. s.** } **de and specio, spec-**  
**DESPIT'IOUS, adj.** } **tus. See DESPITE.**  
**DESPIT'IOUSLY, adv.** } **To vex, to do a**

malicious act to: malice; malignity; and hence  
defiance. Despitful is malicious, mischievous,  
spleetic. Despitfulness, synonymous with des-  
pise; and despitous, despitously, with despat-

tul, despitely. Wiclif uses despite for dishonor.

When a pottere of cley hath not power to make of the same gobet oo vessel into onour, a nothir into *dispyt*? Wiclif. *Romayne* 9.

Pray for them that *despitely* use you and persecute you. *Matthew* v. 44.

But out the child he bent  
*Despitously*, and gan a chere to make,  
As though he would have slain it or he went.  
*Chaucer. Cant. Tales.*

Pull many mischiefs follow cruell wrath;  
— Bitter *despyght*, with rancour's rusty knife;  
And fretting griefe the enemy of life.

*Spenser. Fuerie Queene.*  
The knight of the red-cross, when him he spied,  
Spurring so hot with rage *despitous*,  
Can fairly couch his speare. *Id.*

The mortal steel *despitously* entailed  
Deep in their flesh, quite through the iron walls,  
That a large purple stream adown their gimboux falls.

*Spenser.*  
The life thou gavest me first, was lost and done;  
Till with thy warlike sword *despite* of fate,  
To my determined time thou gavest new date.

*Shakespeare.*  
Turning *despitous* daughter out of door. *Id.*  
Saturn, with his wife Rhea, fled by night; setting  
the town on fire, to *despite* Bacchus. *Raleigh.*  
Preserve us from the hands of our *despitful* and  
deadly enemies. *King Charles.*

His punishment, eternal misery,  
It would be all his solace and revenge,  
As a *despite* done against the Most High,  
There once to gain companion of his woe. *Milton.*  
Know I will serve thee fair in thy *despite*.

*Dryden.*  
With men these considerations are usually the  
causes of *despite*, disdain, or aversion from others;  
but with God they pass for reasons of our greater tenderness towards others. *Sprat.*

Say, would the tender creature, in *despite*  
Of heat by day, and chilling dews by night,  
Its life maintain? *Blackmore.*  
Venice! thy lot

Is shameful to the nations,—most of all,  
Albion! to thee: the Ocean queen should not  
Abandon Ocean's children; in the fall  
Of Venice think of thine, *despite* thy watery wall.

*Byron.*  
DESPOIL', v. a. } De and spoil. Fr. *de-*  
DESPOILATION, n. s. } *pouiller*, Ital. *despogliare*;  
Lat. *despoliare*. See SPOIL. To rob; strip; di-  
vest; deprive; taking of. Despoliation is the act  
of stripping, or plundering.

A groom gan *despoil*  
Of puissant arms, and laid in easy bed. *Spenser.*  
You are nobly born,

*Despoiled* of your honour in your life. *Shakespeare.*  
He waits, with hellish rancour imminent,  
To intercept thy way, or send thee back  
*Despoiled* of innocence, of faith, of bliss. *Milton.*  
He, pale as death, *despoiled* of his array,  
Into the queen's apartment takes his way. *Dryden.*

Even now thy aid,  
Rugene, with regimenta unequal prest,  
Awaits: this day of all his honours gained  
*Despoils* him, if thy succour opportune  
Defends not the sad hour. *Philips.*

These formed stones, *despoiled* of their shells, and  
exposed upon the surface of the ground, in time  
moulder away. *Woodward.*

DESPOND', v. a. } Old F  
DESPONDING, adj. } Lat. *des-*  
DESPONDENCY, n. s. } *despair*;  
to become hopeless or desperate.

It is every man's duty to labour in  
not to *despond* for any miscarriages or  
that were not in his own power to prevent.

Physick is their bane:  
The learned leeches in despair despair  
And shake their heads, *desponding* of

Others depress their own minds, at  
first difficulty; and conclude, that mag-  
gress in knowledge, farther than serves  
business, is above their capacities.

It is well known, both from ancient  
experience, that the very boldest atheists,  
debauches and company, when they ch  
prised with solitude or sickness, are t  
cious, timorous, and *despondent* wretches.

Aim at perfection in every thing. Th  
things it is unattainable; however, th  
it, and persevere, will come much ne  
those whose laziness and *despondency* of  
it up as unattainable.

DESPONSATE, v. a. } Lat. *d-*  
DESPONSATION, n. s. } betroth  
to unite by reciprocal promises  
the act of betrothing.

DESPOT, n. s. } Fr.  
DESPOTIC, adj. } Gr. *des-*  
DESPOTICAL, adj. } *despotia*  
DESPOTICALNESS, n. s. } *despotia*  
DESPOTISM, } *despotia*  
rant: despotic is, absolute in power  
despotism, despoticalness, the power

God's universal law  
Gave to the man *despotic* power  
Over his female in due awe,  
Nor from that right to part an  
Smile she or lowre.

In all its directions of the interior  
conveyed its suggestions with clearness  
them with power: it had the passions  
jection; though its command over the  
suasive and political, yet it had the fast  
and *despotic*.

We see in a neighbouring government  
sequences of having a *despotic* prince.

Can *despots* compass aught that bails  
Or call with truth one span of earth  
Save that wherein at last they crumble.  
*Byron. Childs Harold.*

DESPOT originally signified the  
herus, a master. Nicephorus had  
his son, Staurocius, to be crown  
out of respect, would only take  
ΔΕΧΟΘΗC, leaving to his father  
ΒΑCΙΑΥC. The following emperor  
preferred ΔΕΧΟΘΗC to ΒΑCΙΑΥC  
lary Constantine XI.. Michael D  
nus Diogenes, Nicephorus Bot  
Comneni, and some others. In  
princes, the princesses likewise  
of ΔΕΧΟΙΝΑ. It was the emp  
Angelus that created the dignity  
made it the first after that of emp

thus, above those of Sebastocrator and Cæsar. The despots were usually the emperor's sons or sons-in-law, and their colleagues, or co-partners, the empire, as well as their presumptive heirs. Those who were sons of the emperors had more privileges and authority than those who were only sons-in-law. Codin, p. 38, describes the habit and ornaments of the despot. See the notes of Father Giar on that author. Under the successors of Constantine the Great, the title despot of Sparta was given to the emperor's son or brother, who had the city of Sparta or Lacedæmon by way of appendage.

**DESKUAMATION**, *n. s.* Lat. from *squama*. The act of scaling fowl bones. A surgical term.

**DESSAU**, or **DESSAU**, a strong town of Germany, in Upper Saxony, the capital of the principality of Anhalt. It was first fortified by prince Leopold in 1341, and has one Lutheran and two Calvinist churches, besides a Catholic and Jewish chapel. Inhabitants about 10,000, of which the Jews form one-tenth. Dessau, the surrounding district, contains 53,500 inhabitants: its chief products are corn and flax: it has considerable pastures. The people manufacture cloths, lints, and stockings. It is seated on the Mulda, a branch of the Elbe, twenty-eight miles south-east of Magdeburg, thirty-seven north of Leipsic, forty-eight south-west of Potsdam, and sixty north-west of Dresden. One of the most remarkable objects here is a dyke at the side of the Elbe, nearly five miles long, from ten to eleven feet high, and four feet thick at the base. Long. 12° 17' 1" E., Lat. 51° 50' 6" N.

**DESSALINES** (John James), brother of the late Toussaint l'Ouverture, of St. Domingo, was born in slavery, and first emerged with him in the active part they both took in the revolutions excited in St. Domingo in 1791. Dessalines particularly distinguished himself by his defence of Crete le Perrot against the French general Leclerc. When Toussaint was obliged to sue peace with the French, Dessalines was included in the treaty, though he by no means approved it; and what followed, but too well confirmed his suspicions of the French. Toussaint was treacherously seized, and carried to France, where he died. Dessalines was now unanimously elected commander-in-chief of the army, which rose upon Rochambeau, who had succeeded Leclerc, and who treated the black inhabitants of St. Domingo with no less cruelty than his predecessor. He, at once, attacked Rochambeau with the main body of his army, near Cape François, the capital of the island, and defeated him with great slaughter, compelling him to retreat into the town, and finally to surrender to the English. Dessalines now exerted himself to provide for the future security, and concerted a variety of measures for the internal regulation, of the island. He first caused a proclamation of independence to be issued on the 10th of November, 1803, in which the colony was solemnly declared to be for ever separated from France. His next step was to abolish the name of St. Domingo, and substitute in its place the original appellation of Hayti. He was subsequently chosen governor of Hayti during his

life, with authority to appoint his successor; and on the 8th of October, 1804, proclaimed emperor. This dignity, the acceptance of which forms the only conspicuous act of folly in his course, he only enjoyed about two years. In October, 1806, Christophe, the second emperor, headed a successful conspiracy against him, and murdered him, by surprise, in his palace.

**DESSAULT** (Peter Joseph), an eminent French surgeon, born at Magny Vernois, near Macon, in 1744. He received the early part of his education among the Jesuits, with a view to the priesthood, which profession he afterwards declined, and became a student in the military hospital of Besort. When about twenty years of age, he removed to Paris, where the greater part of his time was spent at the anatomical theatres and hospitals; and, in the winter of 1766 he commenced teacher of anatomy. His fame soon spreading, he was in a short time attended by 300 pupils; and, in 1776, was admitted a member of the corporation of surgeons. In 1782 he was appointed surgeon-major to the hospital of Charity. At this time Dessault was considered as one of the first surgeons in Paris; and having succeeded to the next vacancy at the Hotel Dieu, he was entrusted with almost the whole surgical department of that hospital, after the death of Moreau. A clinical school of surgery, on a liberal and extensive plan, was here instituted by him, which attracted a concourse of students, not only from all corners of France, but from foreign countries, and his lectures were frequently attended by 600 students; so that it may be said, the greater part of the surgeons in the French army derived the knowledge of their profession from his school. In 1791 he commenced his *Journal de Chirurgie*, a work of considerable reputation. In the midst, however, of his useful and important labors, the prevailing parties of this turbulent period took offence at him as standing neutral; and in 1792, after being twice examined, he was seized, while delivering a lecture, and confined in the Luxembourg prison, where he remained three days; but his usefulness restored him to his former situation. Upon the establishment of the school of health, he was made clinical professor for external maladies; and he was particularly instrumental in the conversion of the Eveché into an hospital for surgical operations. So deeply, however, was he affected by the horrid scenes which were exhibited in May, 1795, that he was seized with a fever, accompanied with delirium, and died on the 1st of June, aged fifty-nine.

**DESSERT**, *n. s.* Fr. *desserte*. The last course at an entertainment; the fruit or sweetmeats set on the table after the meat.

To give thee all thy due, thou hast the art  
To make a supper with a fine dessert. *Dryden.*  
At your dessert bright powder comes too late,  
When your first course was well served up in plate. *King.*

And here, assembled cross-legged round their trays,  
Small social parties just begun to dine,  
Above them their dessert grew on its vine,  
The orange and pomegranate nodding o'er,  
Dropped in their laps, scarce plucked, their mellow store. *Burns.*

DESTINE, *v. a.*DESTINATE, *v. a.*DESTINATION, *n. s.*

DESTINY,

*Lat. destino.* To doom; design for a given purpose; appoint irreversibly.

Out of this prison hope that we may 'escape,  
And if so be our *destine* be shape  
By eterne word to dwell in prison  
Of our lignage have som compassion.

*Chaucer. Cant. Tales.*

But who can turn the stream of *destiny*,  
Or break the chain of strong necessity,  
Which fast is tied to Jove's eternal seat?

*Æneid. Quæst.*

Thou art neither like thy sire or dam;  
But, like a foul mis-shapen stigmatack,  
Marked by the *destinies* to be avoided. *Shakespeare.*

The *destinies* of old put poverty upon the celestial  
herald as a punishment; and ever since these Ge-  
mini, or twin-born brats, Poetry and Poverty, have  
been inseparable companions.

*Burton.*

Wherefore cease we then?  
Say they who counsel war: we are decreed,  
Reserved and *destined* to eternal woe;  
Whatever doing, what can we suffer more? *Milton.*

They'll find i' th' physiognomies

O' th' planets, all men's *destinies*;

Like him that took the doctor's bill,

And swallowed it instead o' th' pill. *Hudibras.*

There is a great variety of apprehensions and fan-  
cies of men, in the *destination* and application of  
things to several ends and uses.

*Hale.*

All altars flame; before each altar lies,  
Drenched in his gore, the *destined* sacrifice. *Dryden.*

Birds are *destinated* to fly among the branches of  
trees and bushes.

*Ray on the Creation.*

The infernal judge's dreadful power  
From the dark urn shall throw thy *destined* hour.

*Prior.*

May heaven around this *destined* head,  
The choicest of its curses shed.

*Id.*

Some against hostile drives the hive defend,  
Others with sweets the waken cells distend;  
Each in the toil his *destined* office bears,  
And in the little bulk a mighty soul appears. *Gay.*

DESTITUTE, *adj.* } *Fr. destitue*; *Span.*

DESTITUTION, *n. s.* } *destituydo*; *Ital. desti-*  
*tuto*, from *Lat. destituo*, (*de* and *statuo*), to for-  
sake. Forsaken; abandoned; taking off; friend-  
less, low.

He will regard the prayer of the *destitute*, and not  
despise their prayer.

*Psalm cii. 17.*

That *destitution* in food and cloathing is such an  
impediment, as, till it be removed, suffereth not the  
mind of man to admit any other care.

*Hooker.*

The order of paying the debts of contract or resti-  
tution is set down by the civil laws of a kingdom; in  
*destitution* or want of such rules, we are to observe the  
necessity of the creditor, the time of the delay, and  
the special obligations of friendship.

*Taylor.*

Take the *destined* way

To find the regions *destitute* of day.

*Dryden.*

Nothing can be a greater instance of the love that  
mankind has for liberty, than such a savage mountain  
covered with people, and the Campagna of Rome,  
which lies in the same country, *destitute* of inhabi-  
tants.

*Adrian.*

DESTROY, *v. a.* }

*Fr. détruire*; *Span.*

DESTROYER, *n. s.* } *détruire*, *Ital. distrug-*  
*ger*, *Lat. destruere*, *de* privative, and *struo*, *Gr.*

*σρῶν*, to build. To overturn an edifice  
to ruin; lay waste; put an end to; kill.

Neither grutche ghe as *somme* of hem  
and thei perisscheden of a *distruere*. *Wiclif.*

The Lord will *destroy* this city.

*Gen.*

'Tis safer to be that which we *destroy*.  
Than by destruction dwell in doubtful joy.

Triumph, to be styled great conqueror,  
Patrons of mankind, gods, and sons of gods  
*Destroyers* rightlier called, and slayers of

The wise Providence has placed a certain  
between some animals and many insects,  
they delight in their destruction, though  
them not as food; as the peacock *destroys*  
adders; the weasel, mice and rats; spiders  
and some sorts of flies *destroy* spiders.

Do we not see that slothful, intemperate,  
continent persons *destroy* their bodies with  
their reputations with disgrace, and their  
with want?

Yet, guiltless too, this bright *destroyer* lies  
At random wounds, nor knows the wound

Armies, though always the supporters of  
absolute power, for the time being, are  
*destroyers* of it, too; by frequently changing  
in which they think proper to lodge it.

When Nero perished by the justest doom

Which ever the *destroyer* yet *destroyed*.

Amidst the roar of liberated Rome,

Of nations freed, and the world over,  
Some hands unseen strewed flowers upon

DESTRUCTION, *n. s.* }

DESTRUCTIBLE, *adj.*

DESTRUCTIBILITY,

DESTRUCTIVE, *adj.*

DESTRUCTIVEEY, *adv.*

DESTRUCTIVENESS, *n. s.*

DESTRUCTOR.

*Lat. a*

from *destruere*.

DESTRUY,

act or con-

struction of *des-*

hence, kill.

der. *De-*

is, liable to be destroyed; *destructive* is  
the quality of destroying; wasteful; to  
ruin, or causing it. The adverb and  
lowering, express a similar sense. *Dest*  
used by Boyle for *destroyer*.

For the armur of our knyghthood ben  
but myghty bio God to the destruction of us.

*Wiclif. 2.*

Broad is the way that leadeth to *destruction*.

'Tis safer to be that which we *destroy*.  
Than by *destruction* dwell in doubtful joy.

What a favour is it to men, to be rescued  
common *destruction*, to be sacrificed to the  
and Redeemer.

*Bp. Hall. Contem.*

Helmost wittily calls the fire the *destructive*  
artificial death of things.

In ports and roads remote,

*Destructive* fires among whole fleets we see

Excess of cold, as well as heat, pains us;  
it is equally *destructive* to that temper which  
sary to the preservation of life.

He will put an end to so absurd a practice  
makes our most refined diversions *destructive*  
politeness.

What remains but to breathe out words  
O that men were not so *destructively* foolish!

*Decay.*

professors exceeds the destructiveness of the assaults, as intestine treachery is less foreign violence. *Id.*

It be accurately told, though we are destructive it is. *Johnson.*

If he was phantasy, and could be classed which live and suffer—let that pass—away into destruction's mass. *Byron.*

**DETENTION**, *n. s.* Lat. *desudatio*. Aordinate sweating, from what cause

**DESUETUDE**, *n. s.* Fr. *desuetude*; Latin, *in desuetudo*, *desuetus*; *de* privative, *to be accustomed*. Cessation of cus-

tom they to be prejudiced, rescinded, abrogated laws, and *desuetude*, by change of time. *Bp. Taylor.*

Defeat of numerous armies of barbarous countries were quickly fallen off, with *desuetude*, from their former civility. *Hale.*

**DEULTOR**, in antiquity, a vaulter or leaper, on one horse by the bridle, and riding ped from the back of the one to the practice required great dexterity, and before the use of either saddles.

The custom was practised in the among the Numidians, who always them two horses for that purpose, as they tired: the Sarmatæ also masters of this exercise.

**DEULTORY**, *adj.* Latin *desultorius*. Vaulting or leaping to above. Unsettled; without method of action; wavering.

A *desultory* thought to atone for a lewd sin, nor for any thing but the superfluous habit upon a vicious one, to gradual conversion. *L'Estrange.*

At least trifle cross his way, and his *desultory* takes the scent, leaves the unadvised-mangled notion, and skips away in new game. *Norris.*

*Desultory* thoughts in their native order, as by mind, without being reduced to rules, and according to art.

*Felton on the Classics.*

**DESUMO**, *v. a.* Lat. *desumo*. To take from to borrow.

It doth suppose, as pre-existent to it, the matter out of which it is *desumed*, the source of the sun, and the due preparation.

*Hale.*

It left us relations suitable to those of time, whence they *desumed* their unreason. *Brown.*

**DETACH**, *v. a.* Fr. *detacher*, from *dis* Lat. *detrahere*. To separate, which see. To engage; hence to select and send out military: a detachment is applied to sent out.

While the Squire was on his way, To late orders to obey;

And for a strong detachment, Of countables, and watchmen.

*Hudibras.*

If ten men are in war with forty, and the latter *detach* only an equal number to the engagement, what benefit do they receive from their superiority?

*Addison.*

The several parts of it are *detached* one from the other, and yet join again, one cannot tell how.

*Pope.*

Besides materials, which are brute and blind, Did not this work require a knowing mind, Who for the task should fit *detachments* chase From all the atoms?

*Blackmore.*

**DETACHMENTS** are sometimes formed of entire squadrons and battalions; but more generally of a number of men picked out from several regiments or companies equally, to be employed as the general may see proper; whether on an attack, or to scour the country. A detachment of 2000 or 3000 men is a command for a brigadier general: 800 for a colonel: 400 or 500 for a lieutenant-colonel. A captain never marches on a detachment with less than fifty men, a lieutenant, an ensign, and two serjeants. A lieutenant is allowed thirty, and a serjeant; and a sea-jeant ten or twelve men.

**DETAIL**, *v. a. & n. s.* Fr. *detailler*. From *de* and *TELL*, which see. To relate in particulars, or with minuteness.

They will perceive the mistakes of these philosophers, and be able to answer their arguments, without my being obliged to *detail* them. *Cheyne.*

I was unable to treat this part of my subject more in *detail*, without becoming dry and tedious. *Pope.*

His train of reasoning is ingenious and whimsical; but I am not at leisure to give you a *detail*.

*Franklin.*

**DETAINEE**, *v. a.* Fr. *detiner*; Span. *detener*, from Lat. *detinere*, *de* and *teneo*; Gr. *tauvo*, to stretch. To hold or keep back; to restrain; to keep in custody. See **DETINUE**.

Let us *detain* thee until we shall have made ready a kid. *Judges*, xiii. 13.

These doings sting him

So venomously, that burning shame *detains* him From his Cordelia. *Shakespeare.*

*Detain* not the wages of the hireling; for every degree of detention of it, beyond the time, is injustice and uncharitableness. *Taylor.*

Judge of the obligation that lies upon all sorts of injurious persons; the sacrilegious, the *detainers* of tithes, and cheaters of men's inheritances. *Id.*

Had Orpheus sung it in the nether sphere, So much the hymn had pleased the tyrant's ear, The wife had been *detained* to keep her husband there. *Dryden.*

**DETECT**, *v. a.* Lat. *detectus*, from *de* and *TECTUM*, *n. s.* Lat. *de* privative, and *tego* to hide. To discover a crime, or scheme; to discover generally.

There's no true lover in the forest; else sighing every minute, and groaning every hour, would *detect* the lazy foot of time as well as a clock. *Shakespeare.*

Should I come to her with any *detection* in my hand, I could drive her then from the ward of her family. *Id.*

Though should I hold my peace, yet thou Wouldst easily *detect* what I conceal. *Milton.*

*Detection* of the incoherence of loose discourses was wholly owing to the syllogistical form. *Locke.*

The utmost infinite ramifications and inoculations of all the several sorts of vessels may easily be detected by glasses. *Ray.*

Not only the sea, but rivers and rains also, are instrumental to the detection of amber, and other fossils, by washing away the earth and dirt that concealed them. *Woodward.*

**DETENTION, n. s.** From **DETAIN**, which see. The act of keeping back, or withholding; restraint; custody.

How goes the world, that I am thus encountered  
With clamorous claims of debt, of broken bonds,  
And the detention of long-since due debts,  
Against my honour? *Shakespeare.*

This worketh by detention of the spirits, and constitution of the tangible parts. *Bacon.*

**DETENTS**, in a clock are those stops which, by being lifted up or let fall down, lock and unlock the clock in striking. See **CLOCK**.

**DETENT-WHEEL**, or **LOOP-WHEEL**, in a clock, a wheel which has a hoop almost round it, wherein there is a vacancy, at which the clock locks.

**DETER**, *v. a.* } Lat. *deterreo*, from *de*  
**DETERMENT**, *n. s.* } and *terreo*, to frighten;  
Gr. *τρεω*, to tremble. To discourage by terror; to affright from.

I never yet the tragick strain assayed,  
*Deterred* by the inimitable maid. *Waller.*

These are not all thy *determents* that opposed my obeying you. *Boyle.*

Many and potent enemies tempt and *deter* us from our duty; yet our case is not hard, so long as we have a greater strength on our side. *Tillotson.*

Beauty or unbecomingness are of more force to draw or *deter* imitation, than any discourses which can be made to them. *Locke.*

The ladies may not be *deterred* from corresponding with me by this method. *Addison.*

Death is not sufficient to *deter* men who make it their glory to despise it; but if every man who fought a duel were to stand in the pillory, it would quickly lessen the number of these imaginary men of honor. *Id.*

Get a habit of doing right, whatever pain it costs you; let no difficulties *deter* you in the way of virtue; and account every thing else despicable, in comparison of this. *Johnson.*

I do not give you to posterity as a pattern to imitate, but as an example to *deter*. *Junius.*

**DETERGE**, *v. n.* } Fr. *deterger*; Lat. *de-*  
**DETERGENT**, *adj.* } *tergere*, *de* and *tergo*. To cleanse, applied particularly to the cleansing of sores. Detergent, having the quality of cleansing.

The food ought to be nourishing and *detergent*. *Arbuthnot.*

Sea salt preserves bodies through which it passeth, from corruption; and it *detergeth* the vessels, and keeps the fluids from putrefaction. *Id.*

Consider the part and habit of body, and add or diminish your simples as you design to *deterge* or incarnate. *Wurmon.*

**DETERIORATION, n. s.** From Lat. *deterior*. The act of making, or state of growing worse.

When the deterioration of a commodity, as an officer, arises from the fault of the keep, answerable for the same. *Dr. d.*

**DETERMINE**, *v. a. & v. n.* } Fr.  
**DETERMINATE**, *v. u. & adj.* } *minuere*  
**DETERMINATELY**, *adv.* } *determi-*  
**DETERMINATION**, *n. s.* } *natio*  
**DETERMINATIVE**, *n. s. & adj.* } *deter-*  
**DETERMINATOR**. } *minare*

*terminus*; Gr. *ρῆμα*, a bound. To make a bound; hence to conclude; settle generally; and to choose or influence. As a neuter verb, to conclude; settle and decide and resolve. *Determinate* and *mine* seem synonymous as verbs active; former is obsolete.

And maad of oon al the kynde of men be on all the face of the erthe, *determinyng* ordeyned and teerays of the dwelling of be *Wiclif. Det.*

Jonathan knew that it was *determined* of to slay David. *1 Sam.*

In those errors they are so *determinedly* that they pay unto falsity the whole sum of ever love is owing unto God's truth.

DETEST, *v. a.*

DETEST'ABLE, *adj.*

DETEST'ABLY, *adv.*

DETESTA'TION, *n. s.*

DETEST'ER.

Fr. *detester*; Span. *detestar*; Lat. *detestare*, according to Minsheu, from *deum testari* (*odium illud est*), a form of declaring hatred to, and innocence of any crime. Detestatio was the swearing a thing to be hateful and odious. To hate; abominate: hateful; abhorred: a detester is one who hates or abhors.

He was deadly made,

And all that life preserved did *detest*.

*Fucrie Queens.*

That *detestable* sight him much amazed,

To see the unkindly imps of heaven accurst

Devoure their dam. *Spenser. Faerie Queene.*

I've lived in such dishonour, that the gods

*Detest* my baseness. *Shakespeare.*

Glory grows guilty of *detested* crimes,

When for fame's sake, for praise, an outward part,

We bend to that the working of the heart. *Id.*

He desired him to consider that both armies consisted of Christians, to whom nothing is more *detest-*  
*able* than effusion of human blood. *Hayward.*

Then only did misfortune make her see what she had done, especially finding in us rather *detestation*  
than pity. *Sidney.*

There is that naturally in the heart of man which abhors sin as sin, and consequently would make him *detest* it both in himself and others too. *South.*

Who dares think one thing, and another tell,

My heart *detests* him as the gates of hell. *Pope.*

Our love of God will inspire us with a *detestation* for sin, as what is of all things most contrary to his divine nature. *Swift.*

It is the peculiar condition of falsehood, to be equally *detested* by the good and bad. *Johnson.*

The *detestable* maxim, Qui nescit dissimulare nescit regnare, will not be heard of in heaven. *Bp. Watson.*

DETHRONE, *v. a.* Fr. *detroner*; *de* and throne (Lat. *thronus*). To divest of regal dignity.

The queen became the object of public hatred, the *dethroned* king was regarded with pity. *Hume.*

DETINUE, *n. s.* Fr. *detenue*. A writ that lies against him, who, having goods or chattels delivered him to keep, refuses to deliver them again.

DETINUE lies for any thing certain and valuable, wherein one may have a property or right; as for a horse, cow, sheep, hens, dogs, jewels, plate, cloth, bags of money, sacks of corn, &c. It must be laid so certain, that the thing detained may be known and recovered: and therefore, for money out of a bag, or corn out of a sack, &c., it lies not; for the money or corn cannot in this case be known from other money or corn; so that the party must have an action on the case, &c. Yet *detinue* may be brought for a piece of gold of the price of 22s. though not for 22s. in money. In this action, the thing detained is generally to be recovered, and not damages; but if one cannot recover the thing itself, he shall recover damages for the thing, and also for the detainer.

DET'ONATE, *v. n.*

DETONA'TION, *n. s.*

DET'ONISE, *v. a.*

Lat. *detono*, from *de* emphatic, and *tonus*, a sound. To thunder or make a great noise. It is used for various explosions in chemistry. To *detonise* is to calcine with detonation.

A new coal is not to be cast on the nitre, till the *detonation* occasioned by the former be either quite or almost altogether ended; unless it chance that the puffing matter do blow the coal too soon out of the crucible.

Boyle.

in sixteen parts in twenty of detonized nitre is destroyed in eighteen days.

Arbutnot on Air.

The nitrates yield oxygen gas mingled with nitrogen gas by the action of fire; they give out a white vapour of nitric acid when acted on by concentrated sulphuric acid; and, when mixed with combustible substances, produce, at a red heat, inflammation and *detonation*.

Purke's Chemical Catechism.

**DETORTION**, in chemistry, signifies an explosion with noise made by the sudden inflammation of some combustible body: such as are the explosions of gunpowder, and fulminating powders. See **CHEMISTRY**.

**DETORT**, *v. a.* Lat. *detortus*, of *detorqueo*. To wrest from the original import, meaning, or design.

They have assumed what amounts to an infallibility in the private spirit, and have *detorted* texts of scripture to the addition, disturbance, and destruction of the civil government.

Dryden.

**DETOUR DES ANGLAIS**, or English Turn, a circular direction of the river Mississippi, in North America, so very considerable, that vessels cannot pass it with the same wind that conducted them to it, and must either wait for a favorable wind, or make fast to the bank, and haul close; there being sufficient depth of water for any vessel that can enter the river. The two forts and batteries at this place on both sides the river, are more than sufficient to stop the progress of any vessel whatever. Dr. Cox, of New-Jersey, ascended the Mississippi to this place, anno 1698, took possession, and called the country Carolina. It lies eighteen miles below New Orleans, and eighty-seven above the Balize.

**DETRACT** *v. a.* } Fr. *detracter*; Span. *detratrar*; Lat. *detra-*  
**DETRACTER**, *n. s.* } here, from *de* (down-  
**DETRACTION**, } ward) and *trahere*;  
**DETRACTIOUS**, *adj.* } Gr. *spanaw*, to draw.  
**DETRACTORY**, }  
**DETRACTRESS**, *n. s.* } To take away or subtract; generally to take away, or derogate from, character. Detractory, and detractious, alike mean, dishonorable to character.

Lest pernicious stryngia, enyes, sturdness, dissencious, and *detractionis*, prius speclis of discord ben among ghoul.

Wiclif. 1 Cor. 12.

I am right glad to be thus satisfied, in that I yet was never able till now to choke the mouth of such detractors with the certain knowledge of their slanderous untruths.

Spencer on Ireland.

I put myself to thy direction, and  
Unspeak mine own *detraction*; here aligore  
The taints and blames I laid upon myself,  
For strangers to my nature.

Shakespeare.

Those were assistants in private, but not trusted to manage the affairs in public; for that would detract from the honour of the principal ambassador.

Bacon.

You shall enquire of the unlawful taking of partridges, and pheasants, or fowl, the *detraction* of the eggs of wild-fowls, &c.

Id.

By the largeness of the cornices they hinder both the light within, and likewise detract much from the view of the front without.

Wotton.

Fame, that her high birth to raise  
Seemed erst so lavish and profuse.

We may justly now accuse

Of *detraction* from her praise.

The painters are most envious, if they be  
Good colours for preferment; virtuous ladies  
Love this way to be flattered, and accuse  
The workman of *detraction*, if he add not  
Some grace they cannot truly call their own.

Mil.

This is not only derogatory unto the wisdom who hath proposed the world unto our hands and thereby the notion of himself; but also unto the intellect and sense of man.

The multitude of partners does detract from each private share, nor does the public it lessen propriety in it.

No envy can detract from this: it will stately, and, like swans, grow whiter the longer it dures.

Away the fair detractors went,

And gave by turns their censures vent.

If any shall detract from a lady's character she be absent, the said detractors shall be ordered to the lowest place of the room.

The detractory lye takes from a great reputation that justly belongs to him.

Art.

*Detraction*, in the native importance of the signifies the withdrawing or taking off from a good, as it is applied to the reputation, it denotes impairing or lessening a man in point of fame, making him less valued and esteemed by others, the final aim of *detraction*.

Hard is his fate on whom the public

Is fixed for ever to detract or praise;

Repose denies her requiem to his name,

And folly loves the martyrdom of Fame.

**DETRANCHE**, in heraldry, a line wise, proceeding always from the dexter but not from the very angle diagonally the shield.

**DETRIMENT**, *n. s.* } Fr. *detrimen-*

**DETRIMENTAL**, *adj.* } Porting. and

*trimento*; Lat. *detrimendum*, from *detraho*,

worn, because that which is worn is thus

injured. Injury; diminution; harm.

Detal is, mischievous; causing injury.

Difficult it must be for one Christian to cherish that which all had received and held fast of many ages, and that without any *detrimen-* religion.

I can repair

That *detrimen*t, if such it be, to loss  
Self-lost.

He with the foe began to buckle,

Vowing to be revenged for breach

Of crown and skin upon the wretch,

Sole author of all *detrimen*t

He and his fiddle underwent.

Let a family burn but a candle a night less usual number, and they may take in the without *detrimen*t to their private affairs.

Obstinacy in prejudices, which are *detrimen*tal to our country, ought not to be mistaken for resolution and firmness of mind.

And the reason seems to be, because an opinion of the displeasure of their superiors, and *detrimen*tal consequences which may accrue from may be a check upon them, and engage them the just regards which they expect.

ITION, *n. s.* Lat. *detereo, detritus*, and *tero*; Gr. *tripo*, to rub. The act of rubbing away.

OTT River, or Strait of St. Clair, or river which flows from lake St. Clair into Erie, and forms part of the boundary between the United States and Upper Canada. It is miles long, and the great channel by which the waters of the lakes of Canada, Huron, and Michigan, are conveyed to the sea. On the east side cultivation has made great progress.

OTT, a flourishing town of the United States, on the west side of the above river. The military works are very strong; but they were in 1812, by the British, under general

ODE, *v. a.* } Lat. *detrudo*; *de* and *trudo*, *n. s.* } *trudo*, to thrust; to push. The act of thrusting or forcing down.

Others are of opinion, that the souls of men who commit miscarriages, be detruded into the bosom of the earth.

Loche.

On the detrusion of the waters towards the side, towards the pole must be much increased.

Keil against Burnet.

By command the vernal sun awakes  
And vap, detruded to the root  
By winds.

Thomson.

Others as are detruded down to hell,  
For shame they still themselves retire,  
In chains, they in close prison dwell.

Davies.

TRUNCATE, *v. a.* } Lat. *detrunco*; *de* and *trunco*, *n. s.* } *de* and *trunco*. To cut; to shorten by deprivation of

Sometimes happen by hasty detroncation, the natural tendency of a sentence may be Johnson. Pref. to Dictionary.

INGEN, a village of Germany, in the county of Mentz, situated on the east side of the Rhine, where a battle was fought between the emperor, under the command of king George the first, and the earl of Stair, and the French, under the command of the duke of

The English had the honor of the victory, and were soon obliged to leave the field, which was taken possession of by the French, who treated the wounded English with humanity. It is nine miles south of Hanau, north-west of Aschaffenburg. Long. 49° 55' N.

DEGRADATION, *n. s.* Lat. *deturbo*. The lowering down; degradation.

EVAPORATION, *n. s.* Lat. from *de* and *vapor*. The condensation of vapour.

The wind blows uniformly upon this hot part of Peru, but no cause of deevaporation till it begins to ascend the mountainous land then its own expansion produces cold sufficient to condense its vapour. Darwin.

PRAYAGA, a town of the province of Gurjara, Northern Hindostan, situated at the junction of two branches of the most sacred river, the Ganges. It is built on the side of a hill, about 100 feet above the stream. The walls are of stone, covered with shingles. The principal temple of Ramachandra, containing the image of Vishnu.

a statue of the deity, of black stone, is constructed of large blocks of cut stone, piled up, without mortar, to the height of sixty feet. It is at the upper part of the town, and surrounded by twenty-five villages, which belong to the Brahmins. This place suffered much by an earthquake in 1803.

DEVASTATION, *n. s.* Lat. *devasto, de* and *vastus*. Waste; havock; desolation; destruction.

By devastation the rough warrior gains,  
And farmers fatten most when famine reigns Garth.

That flood which overflowed Attica, in the days of Ogyges, and that which drowned Thessaly in Deucalion's time, made cruel havock and devastation among them. Woodward.

If it exerts a man to wicked attempts, make him willing to sacrifice the esteem of all wise and good men to the acclamations of a mob; to overleap the bounds of decency and truth, &c. it is then not only vanity but vice; a vice, which of all others hath made the greatest havock and devastation among men. Mason.

DEUCALION, king of Thessaly, is said to have been the son of Prometheus. A flood recorded to have happened in this time (about A. A. C. 1500), is supposed to have been only an inundation of the neighbouring country, occasioned by heavy rains, and an earthquake that stopped the course of the river Peneus. He governed his people, we are told, with great equity; but the rest of mankind, being extremely wicked, were destroyed by a flood, while Deucalion and Pyrrha his queen saved themselves by ascending mount Parnassus. When the waters decreased, they went and consulted the oracle of Themis, on the means by which the earth was to be repopulated, and were ordered to veil their heads and faces, to unloose their girdles, and throw behind their backs the bones of their great mother. At this advice Pyrrha was seized with horror; but Deucalion explained the mystery, by observing, that their great mother must mean the earth, and her bones the stones; when taking them up, those Deucalion threw over his head became men, and those thrown by Pyrrha women. M. Bryant and others have supposed, that Deucalion was the same with the patriarch Noah; and that his flood in Thessaly, and those of Ogyges in Attica, and Prometheus in Egypt, were the same with that of Noah recorded in Scripture. See DELUGE.

DEUCE, Goth. *du*; Lat. *duisius*; Arm. *teus*, once applied to good as well as evil spirits. See DEMON.

'Twas the prettiest prologue, as he wrote it;  
Well, the deuce take me if I ha'n't forgot it.

Congreve.

DEUCE, *n. s.* Fr. *deux*. Two: a word used in games.

You are a gentleman and a gamester; then, I am sure, you know how much the cross sum of deuce amounts to. Shakespeare.

DEVELOP, *v. a.* Fr. *developper*; Lat. *develo*. To disengage from something that enfolds or conceals; to disentangle.

Take him to develop, if you can,  
And hew the block off, and get out the man.

Dunciad,  
O

In his eye

And nostril, beautiful disdain, and might,  
And majesty, flash their full lightnings by,  
Developing in that one glance the Deity. *Byron.*

DEVENTER, the capital of a district in the province of Overijssel, Netherlands, situated in a fertile country, on the right bank of the river Yssel, is not a town of great size, but is strong, being surrounded by a wall, well flanked with towers, and defended with broad and deep ditches. The cathedral is a fine structure. There are besides three parish churches, and several convents; and an athenæum, or provincial academy. The manufacture of this place is linen, and the trade is in butter, cheese, and cattle. There is a beautiful promenade on the Yssel. Population 10,100. It is eight miles N. N. W. of Zutphen, and forty-six east of Amsterdam.

DEVEREUX (Robert), earl of Essex. See *Essex*.

DEVE'ST, *v. a.* Fr. *devestir*; Lat. *de* and *vestis*. See *DIVEST*. To strip; to deprive of clothes.

What are those breaches of the law of nature and nations, which do forfeit and *devest* all right and title in a nation to government? *Bacon.*

Friends all but now,

In quarter and in terms, like bride and groom  
Devesting them for bed. *Shakespeare.*

Come on, thou little inmate of this breast,  
Which for thy sake from passions I *devest*. *Prior.*

DEVE'X, *adj.* } Lat. *deverus*. Bending  
DEVE'XITY, *n. s.* } down; declivous; incur-  
vated downwards; declivity.

DEVIATE, *v. n.* } Lat. *de viâ decedere*.  
DEVI'ATION, *n. s.* } To wander from the  
DE'VIOUS, *adj.* } right or common way;  
to go astray.

In this minute *devious* subject, I have been necessitated to explain myself in more words than may seem needful. *Holder.*

A story should, to please, at least seem true,  
Be apropos, well told, concise, and new:  
And whensoever it *deviates* from these rules,  
The wise will sleep, and leave applause to fools. *Stillingfleet.*

The rest to some faint meaning make pretence,  
But Shadwell never *deviates* into sense. *Dryden.*

Some lower muse, perhaps, who lightly treads  
The *devious* paths where wanton fancy leads. *Rowe.*

What makes all physical and moral ill?  
There Nature *deviates*, and here wanders Will. *Pope.*  
These bodies constantly move round in the same  
tracks, without making the least *deviation*. *Cheyne.*

One *devious* step at first setting out, frequently leads  
a person into a wilderness of doubt and error. *Clarissa.*

Worthy persons, if inadvertently drawn into a *deviation*, will endeavour instantly to recover their lost ground, that they may not bring error into habit. *Id.*

Every muse,

And every blooming pleasure, wait without  
To bless the wildly *devious* morning walk. *Thomson.*

To what gulfs

A single *deviation* from the track  
Of human duties leads even those who claim  
The homage of mankind as their born due,  
And find it, till they forfeit it themselves! *Byron.*

DEVICE', *n. s.* See *DEVISE*.

DEV'IL, } Goth. *diabl*; *See*  
DEV'ILISH, *adj.* } Tent. *teuffel*; *Id.*  
DEV'ILISHLY, *adv.* } Belg. *duvell*; *Id.*

Span. *diablo*, from Lat. *diabolus*; Gr. *διαβᾶλλω*, from *δια*, through and *βάλλω*, to strike through as with a dart; and with slander. The great spiritual man, called in Scripture 'an accuser of reproach, expressing extreme wroth, or supposed: a ridiculous expression. The adjective and adverb seem plain.

Clothe thou with the armure of God, that stando aghens aspiyngis of the *devel*. *Wiclif.*

Have not I chosen you twelve, and one a devil? *Bible. See*

This wisdom descendeth not from above earthly, sensual, *devilish*. *Id. See*

For grief thereof and *devilish* despairing,  
From his infernal furnace forth he threw  
Huge flames, that dimmed all the heavens  
Enrolled in dusky smoke and brimstone

The devil was ill and the devil a monk was  
The devil was well the devil a monk was

See thyself, *devil*;

Proper deformity seems not in the face  
So horrid as in woman. *Id.*

A *devilish* knave! besides, the knave is young, and blyth; all those requisites are delight.

Worldly wealth is the *devil's* bait; and minds feed upon riches, recede, in general happiness, in proportion as their stores in the moon when she is fullest of light is in the sun.

Be frustrate all ye stratagems of Hell,  
And *devilish* machinations come to nought.

Those trumpeters threatened them with alarms of damnation, if they did not venture, and all, in that which wickedly and those impostors called the cause of God.

The things, we know, are neither rich nor  
But wonder how the *devil* they got there!

With all these tokens of a knave complete  
If thou art honest, thou 'rt a *devilish* cheat

DEVIL, an evil angel, one of those celestial cast down from heaven for aspiring to with God. The Ethiopians paint the Satan and Belial are equivalent to this the Old Testament: nor do we meet with any heathen authors, in the sense in which Christians, that is, as a creature from God, although their theology was with evil genii and demons. See *DAEMONIAC*. Some of the aboriginal Americans have a notion of two collateral pendent beings, one of whom is good, the other evil; which last they imagine has the intendance of the earth, for which men chiefly worship him; and hence they are said to worship the devil. The Chaldeans, Persians, in like manner, believed in his principle and an evil one; which last imagined was an enemy to mankind. According to some commentators, when ap-

the king of Babylon, alludes to that devil, calling him Lucifer, son of the

The Arabians call Lucifer, Eblis; the writers suppose to be a diminutive of the word Diabolus.

DEVIL is a Bush, in botany. See NIGELLA.

DEVISE, *v. a.* } Fr. *deviser*; Span. and  
} Portng. *devisar*, according  
} to Skinner, from Lat. *devis-*  
} look about. To contrive; consider: a  
} the scheme or plan contrived: hence  
} each or drawing on a shield; a token.

I frame evil against you, and devise a death  
you. Jer. xiii. 11.

A merry fit she freshly 'gan to rear,  
And of joy and jollity devise,  
All to cherish and her guest to cheer.

*Faerie Queene.*

Let the nurse in her fool hardy wit  
And a bold devise, and thus bespake. *Id.*

For the exchange of laws in practice with  
time, which they say are better for the state  
arch, if they might take place; the farther  
as them, the greater cause we find to con-  
fess we continue the same we are, the  
the great. *Hooker.*

But how you'll use him when he comes, and  
I devise to bring him thither. *Shakespeare.*  
Made, never schooled, and yet learned; full  
of all sorts enchantingly beloved. *Id.*

This is our device,

That staff at that oak shall meet with us. *Id.*  
Divided from truth in themselves, they are  
removed by advenient deception; for true  
they are they are daily mocked into error by de-  
Broune.

Change we shields and their devices bear;  
I supply the want of force in war. *Dryden.*  
Of useful inventions, the devisers of  
the last, as were the philosophers of ancient  
honoured as the fathers and prophets of  
Grew.

Queen's harp, device of her command,  
From of her mirth, shall there be seen. *Prior.*

And it as a politic device to lessen their  
and keep them low in the world. *Atterbury.*

Of art, one curious piece device,  
Whose constructure motion shall arise. *Blackmore.*

Heaven with a gaudy sign,  
The bush is better than the wine,  
Cheat you once—will that device,  
As is imported, cheat you twice? *Garrick.*

As, in heraldry, painting, and sculpture,  
is used to represent a certain family,  
tion, or quality; with a suitable motto,  
is a figurative sense. The essence of a  
consists in metaphorical similitude be-  
tween things representing and represented:  
being nobleman, of great courage and  
is said to have borne his device, in a  
at the court of France, a rocket mounted  
with this motto in Italian, 'poco duri  
finalzi': importing, that he preferred a  
provided he might thereby attain to  
eminence. The Italians have reduced  
ing of devices into an art.

DEVISE, *v. a.* & *n. s.* } Old Fr. *deviser*, a  
DEVISEE, *n. s.* } will. To give by

will; the act of giving or bequeathing by will:  
devisee, he to whom something is bequeathed by  
will. Devisour, he who bequeaths it.

The alienation is made by devise in a last will only,  
and the third part of these profits is there demandable.  
*Locke.*

This word *devise* is properly attributed, in our com-  
mon law, to him that bequeaths his goods by his last  
will or testament in writing; and the reason is, be-  
cause those that now appertain only to the *deviseur*,  
by this act are distributed into many parts. *Cowell.*

DEVITABLE, *adj.* } Lat. *devitabilis*. Pos-  
DEVITATION, *n. s.* } sible to be avoided;  
avoidable: the act of escaping or avoiding.

DEVIZES, a town of Wiltshire, six miles north  
from Lavington, and eighty-nine west from London.  
It contains two churches and a chapel, besides a  
place of worship for dissenters, and returns two  
members to parliament. Here was formerly a  
castle, supposed to be one of the strongest in  
England; but it is now nearly destroyed. Two  
markets are held weekly, one on Monday, prin-  
cipally for butcher's meat; the other on Thursday  
for corn, wool, cattle, &c., considered one of the  
best in England. Considerable manufactures  
are carried on, particularly of serges, kersey-  
meres, and broad-cloth. In the market place  
is erected a stone with an inscription, as a me-  
morial of divine vengeance inflicted on a woman  
who called God to witness a falsehood concern-  
ing some money. The corporation consists of a  
mayor, recorder, ten magistrates, and twenty-  
four common-council-men. The number of bur-  
gesses is unlimited, and they have a right to vote  
for representatives in parliament as soon as they  
are made free. Its name is to be derived from  
the Latin *divisæ*, divided, from its having been  
anciently divided between the king and the  
bishop of Salisbury; and it is supposed to have  
been the Punetuboce of Ravennus. The Ro-  
mans enclosed it with a vallum and ditch, in  
which there is now a road almost round the town.  
Brass figures of household gods, coins, bricks,  
and urns, evidently Roman, have been dug up  
here.

DEVOID, *adj.* Fr. *vide*. Empty; vacant;  
void.

When I awoke and found her place devoid,  
And nought but pressed grass where she had lyen,  
I sorrowed all so much as erst I joyed.

*Faerie Queene.*

That the soul and angels are devoid of quantity and  
dimension, and that they have nothing to do with  
proper locality, is generally opinioned. *Glauville.*

DEVOIR, *n. s.* Fr. *devoir*; Lat. *debere*.  
To owe service.

DEVOLVE, *v. a.* & *n. s.* } Lat. *devolvere*; *de-*  
DEVOLUTION, *n. s.* } and *volvere*, to roll.

To roll down or upon; hence, to give in succe-  
sion. Devolution is the act of so removing or  
giving, or the removal so effected.

DEVON, a river of Scotland, in the counties  
of Perth and Clackmannan, which rises in the  
Ochil hills, and after running ten miles directly  
east, makes a turn to the west at a place hence  
called the Crook of Devon; then passes through

the vale of Glendovan to the Rumbling Bridge and Caldron Linn, where it forms a scenery, wild, beautiful, and romantic.

**DEVONPORT**, a sea-port, market, and borough town, in the county of Devon, England, returning two members to parliament under the Reform Bill of 1832. It is in the parish of Stoke Dancarel, on the Hamoaze, a creek in the estuary of the Tamar, and received its present name by command of George IV., in 1824. Its foundation may be attributed to the docks constructed here originally by William III., and enlarged in the reign of George III. The royal dock yard occupies an area of seventy-one acres and thirty-six poles, and includes one wet and three dry or graving docks, formed in so many excavations of a slaty stratum, and faced with Portland stone. In the dock yard is a chapel, opened in 1817, a magazine, gun-wharf, covering five acres of ground, a surgery and permanent medical establishment, besides officers' apartments, store houses, and other necessary buildings. The town is governed by commissioners, elected by those of the inhabitants who contribute eight pounds annually to the poor's rate, and for the election of members to parliament a returning officer is appointed by the sheriff of the county. Courts leet and baron are held by the constable of the manor, and petty sessions by the county magistrates. The commercial interests have been promoted by the erection of an exchange in Ker Street, and general traffic is conducted in a market place. The trade and manufacture peculiar to this place are block, sail, rope making, and such others as are connected with nautical equipment. The town is strongly fortified. The fort and battery on Mount Wise, command the harbour entrance and the sound, and here also is the house of the port admiral. There is one ferry at Crimble Passage, one to Mount Edgecombe, and a flying bridge preserves an easy communication with Saltash, in Cornwall. Devonport is 218 miles southward of London, and contains a population of 44,454 souls.

**DEVONSHIRE** is a maritime county, one of the most valuable in England; and is bounded on the north and north-west by the Bristol Channel; on the west by Cornwall, the river Tamar, and a small rivulet called Marsland Water; on the south and south-east it is skirted by the British Channel; on the east and north-east it borders on the counties of Dorset and Somerset, the dividing limits being artificial. In point of extent this county is second only to Yorkshire, and the fourth in population. Its greatest length, which is from north to south, is about seventy-three miles; and its greatest breadth, from east to west, sixty-five miles. It contains about 1,600,000 acres, or upwards of 2,493 square miles. This county is divided into thirty-three hundreds, 349 parishes, 117 vicarages, 1733 villages, one city, and thirty-seven market towns. It is in the diocese of Exeter, and the western circuit of the province of Canterbury.

It was incorporated by the Romans with Cornwall, under the general appellation of *Danmonium*; its original name being *Dynnamt*, signifying deeps or hollows. During the Heptarchy

it belonged to the West Saxons, and was then called *Devonscyre*. It was included in the Roman district, or *Britannia Prima*.

The climate of Devonshire differs materially in the northern and southern districts, is, however, in general mild and genial. The northern district, considered in its most extensive sense, as comprehending the whole line between Dartmoor and the British Channel, and more generally speaking, embracing only the tract round Bideford, Barnstaple, South Molton, and the north coasts, is by no means compared to the temperature which characterises the eastern parts of the county; yet even here, along the sea coasts, from the northern extremity of the district to the most southern, snow seldom lies longer than a few hours, except indeed on the summits of some of the high hills. In the southern parts the progress of vegetation is but little impeded during winter, and the ground almost constantly wears an aspect of verdant beauty. The climate of Devonshire has been frequently recommended by the faculty as preferable for delicate invalids, even to *Laurel* of the South of France. The face of the county exceedingly varied and uneven. The highest parts, but particularly in Dartmoor and the vicinity, swell into mountains; the altitudes of the principal eminences being from 1400 to 1800 feet. 'On approaching this tract from the south and south-east, the eye is bewitched by an extensive waste, exhibiting gigantic and large surfaces covered with masses of scoriaceous granite, and immense rocks, which seem to have been precipitated from the steep declivities of the valleys. These huge and craggy fragments are spread confusedly over the ground, and have been compared to the ponderous masses ejected by volcanoes, to the enormous ruins of fortifications, and to the wrecks of mountains torn piecemeal by the raging elements.' Taking the place of high water in the Bristol Channel as a base, it appears that the highest hill, which is Dunkery Beacon, on part of Exmoor Forest, is 1890 feet; the next, Castle Head-down, in Bray parish, 1500 feet. The lowest, which is Hilsborough, overhanging the town of Bideford to the east, is about 300 feet. Exmoor has recently been disforested by act of parliament.

The principal rivers of Devonshire are the Exe, the Torridge, the Teign, the Taw, the Ouse, the Dart, the Plym, the Otter, the Axe, and the Tamar: though this last belongs more properly to Cornwall. It forms at its mouth the harbour of Hamoaze, or Plymouth Sound. All these rivers abound in fine salmon. Sufficient attention does not appear to have been paid to the inland navigation of this extensive county, though it contains one of the most ancient specimens of canal navigation in the kingdom: this is the Great Ouse Haven at Exeter, which was formed in the year 1544. It is properly a canal, and conveys shipping from the tideway above Topsham to the quay at Exeter, which is effected by an embankment navigation, with a large lock placed near the middle of the line. The Crediton and Exeter Canal is also a fine work; as is the Tamar and Exe Canal, undertaken in the year 1803, under the superintendence of Mr. John Taylor. The Tamar Canal skirts the western edge of this county.

principal mineral waters in the county are Hampton, Cleeve, Lomerton, Lifton and Ta-  
 cock.

The soils of this county divide themselves into  
 kinds, the first of which is found to occupy  
 smallest space. Risdon, in his Survey of  
 Devon, says that 'on the east side of the shire  
 should standeth most upon white chalk, which  
 bearing good for sheep and corn.' The second  
 is the red land, surrounding Exeter, and extend-  
 ing considerably east and west of it; this is  
 good pasture land. The third is the  
 soil, of which Dartmoor furnishes the prin-  
 cipal example. Of this soil Risdon speaks  
 somewhat disparagingly, saying that it is richer  
 in bowels than in the face thereof, yielding  
 sand and turf.' The fourth, which pervades by far  
 the greater part of the county, though varied in  
 appearances by casual admixtures, is what  
 is lately obtained the name of dun-land. It is  
 formed probably by the decomposition of  
 a porous rock, on which it lies, and is found in  
 almost every state, from the most fertile to the  
 most sterile. The writer of most excellent and  
 accurate 'Remarks on the present State of the  
 County of Devon, introductory to the new edi-  
 tion of Risdon's Survey,' published in 1811,  
 observes that 'the soil most prevalent is remark-  
 able in two circumstances; its rapid spontaneous  
 production of grass when under good manage-  
 ment, and its total want of calcareous principle.'

The cattle of Devonshire are in the highest  
 esteem in all parts of the kingdom; and dis-  
 tinguished by fineness of bone and skin; the  
 sheep are small and subject to the rot. This  
 county has also long been famed for its cyder,  
 which is the beverage of the lower classes. Two  
 hundred years ago, many copyholders might  
 say the lords' rent with their cyder only. The  
 writer adds, that 'this is even now pro-  
 bably in some parts and in some seasons the  
 case, though the orchards are not either so large  
 and productive, or so numerous as they used to  
 be.' Much butter is made in the grass lands  
 and that without the churn. This writer has  
 given a truly interesting and scientific outline of  
 the mineralogy of Devon, which, as he very  
 justly observes, is a feature of distinguished im-  
 portance in this county, whether we regard the  
 nature of the mineral productions, or the pheno-  
 mena which it presents to the scientific enquirer.  
 The general character of this mineralogy is that  
 of an elevated tract of granite, running from  
 north to south across the district, and passing  
 under a superstratum of primitive schistus  
 on its western side, and of alluvial sand-stone  
 and chalk on the eastern limits. A vein of culm  
 was found some years ago near Chittlehampton,  
 varying from about four inches to one foot in  
 thickness, and dipping about one foot in three to  
 the southward. It was wrought for a short time,  
 but the expense being considerable, it was  
 abandoned. In Hovey Heathfield, which seems  
 to have been formerly covered by the tide, that  
 remarkable substance called Hovey coal, is found.  
 It runs nine miles to the southward, keeping to  
 the west of large beds of potters' clay. The  
 uppermost strata are within a foot of the surface,  
 and from eighteen inches to four feet thick: the

deepest stratum is sixteen feet thick. At the  
 bottom is a bed of clay and sand. This coal  
 retains the vegetable structure, and has the ap-  
 pearance of charred wood, impregnated with  
 bitumen. It is divided into two kinds, the stone  
 coal and the wood coal; the last has more of the  
 peculiar properties. When this coal is burning,  
 a thick heavy smoke, of a fetid and disagreeable  
 nature, arises from it. The small coal, thrown  
 into a heap, and exposed to the weather, will  
 take fire of itself. Its specific gravity is from  
 1.4 to 1.558, and its proportion of pure carbon  
 from 54 to 75 per cent.

The chief mineral productions are tin, which  
 the granite hills of Dartmoor have produced  
 probably for many ages, as traces of seam works  
 and mines are to be seen in every part of this  
 immense waste. Stone, which is justly esteemed  
 as the best in existence for the purpose of build-  
 ing where durability is to be regarded. The  
 same kind of granite rock, which produces tin,  
 has also produced some lodes of copper. This  
 county also produces lead and silver; also iron,  
 zinc, antimony, manganese, wolfram, arsenic,  
 and cobalt. 150 miles of this extensive county  
 lies on the sea-coast, and contains many excellent  
 bays, harbours, and sea-ports, of which the prin-  
 cipal, and one of the best in the world, is that  
 of Devonport (late Plymouth Dock). See PLY-  
 MOUTH. The coasts, as well as the rivers, abound  
 with fish, and particularly the southern coast.  
 Torbay is famous for its fine soles and turbot.  
 Plymouth for John-dorey; Topsham, Starcross,  
 and Lympstone for oysters; and the rare fish,  
 opah and torpedo, are sometimes caught on the  
 coasts. Its pleasant situation, and the cheap-  
 ness of all the necessaries of life, have induced  
 a great number of the nobility and gentry to  
 adorn it with seats.

This county sends twenty-two members to the  
 Imperial Parliament under the provisions of the  
 Reform Bill of 1832, viz. four for the county; two  
 for the city of Exeter; two for Totness; two for  
 Plymouth; two for Barnstaple; two for Honi-  
 ton; two for Tavistock; one for Ashburton;  
 one for Dartmouth; two for Tiverton, and two  
 for Devonport.

Of the 'Worthies of Devon,' collected down  
 to the commencement of the eighteenth century,  
 in a folio volume, by the Rev. John Prince, we  
 can only mention the following:—Sir John For-  
 tescue Aland, an able judge; Bishop Barring-  
 ton; Archbishop Baldwin, who accompanied  
 Richard I. to the Holy Land, and died there in  
 1191; Henry de Bathe, a learned judge, who  
 died 1261; Lady Mary Chudleigh; John  
 Churchill, the immortal duke of Marlborough;  
 The Rev. archdeacon Conant, on whom his  
 friend Dr. John Prideaux used thus admirably  
 to pun, 'Conanti nihil est difficile;' William  
 Courtney, archbishop of Canterbury, who con-  
 demned Wicliffe and his followers; Mrs. Han-  
 nah Cowley, an ingenious dramatic writer;  
 John Davis, the navigator who discovered the  
 well-known straights in North America, which  
 bear his name; Sir Francis Drake; John Dun-  
 ning, lord Ashburton; Sir John Fortescue;  
 Monk, duke of Albemarle; Sir Walter Raleigh;  
 Sir Joshua Reynolds, &c. &c.

The principal manufactures of the county are serges, kerseys, shalloons, broad-cloth, and blond lace, in which, and in corn, cattle, fish, and its mineral productions, the inhabitants carry on a considerable trade. Barnstaple potteries have increased of late years; they consist of dairy and kitchen utensils. There is a considerable ship-building trade at Barnstaple. The woollen cloth manufactures at Tiverton, Great Torrington, and the wool-combing of Chumleigh were formerly extensive, but have now decayed or vanished. There is, however, a considerable trade in the gloving business at the former place. The iron, cordage works, &c., for the Royal Dockyard at Plymouth, have long been extensive sources of manufacture. Serges are manufactured at Totness, Moreton, Hempstead, Chafford, and other places; and the long ells of Devonshire have been long known. Silk and porcelain have been deemed the principal manufactures of the county; but the productions from the minerals of the county are perhaps equal to any, excepting indeed the woollen manufactory. There is also a considerable quantity of yarn manufactured in the county, as well as of laces.

DEVONSHIRE (Georgiana, duchess of), was the eldest daughter of John earl Spencer, and born June 9th, 1757. She married, in 1774, William duke of Devonshire, and was long the object of attraction to the fashionable world, and the patroness of taste in the fine arts. She became well acquainted with the history and polity of nations, but the belles lettres principally attracted her regard. She left an elegant poem on the passage of Mount St. Gothard, which Deltile translated into French. She died at Devonshire House, Piccadilly, March 30th, 1806.

DEVORATION, *n. s.* See DEVOUR.

DEVOTE, *v. a. & adj.*

DEVOTEE, *n. s.*

DEVOTEDNESS, *n. s.*

DEVOTION, *n. s.*

DEVOTIONAL, *adj.*

DEVOTIONALIST, *n. s.*

manner: to resign. Hence, also, to doom, to execrate. A devotee, Dr. Johnson defines as one erroneously or superstitiously religious; but it is also used for one warm in religion generally. Devotion is the act, habit, or state, of being devoted or given up to; devotional pertaining to devotion; devotionalist, synonymous with devotee.

With *devotion* we ban avoid, that we schulen not taste any thing til we sleen poul.

Wiclif. *Dedic.* 23.

No *devoted* thing that a man shall *devote* unto the Lord, of all that he hath, both of man and beast, and of the field of his possession, shall be sold or redeemed.

Lev. xxvii. 21.

They tied were to steadfast chastity,  
And continence of life, that all fangon,  
They mote the better tend to their *devotion*.

Spenser. *Fairie Queene.*

Religious minds are inflamed with the love of public *devotion*.

Hooker.

What black magician coquers up this fiend,

To stop *devoted* charitable seeds?

Shakespeare.

Be opposite all planets of good luck  
To my proceeding, if, with pure heart  
Immaculate *devotion*, holy thoughts,  
I tender not thy beauteous princely

Nor are the soberest of them so apt for  
rational compliance and juncture of hearts,  
sire to bear in holy offices, to be performed

Kin

In vain doth man the name of just  
If his *devotions* he to God neglect.

To destruction sacred, and *devoted*,  
He with his whole posterity must

Grateful to acknowledge whence his  
Descends, thither with heart, and voice,  
Directed in *devotion*, to adore  
And worship God supreme, who made  
Of all his works.

Whatever may fall from my pen to her  
age, relates to her but as she was, or may  
an obstacle to your *devotedness* to scribble

He had a particular reverence to the  
king, and the more extraordinary *devotion*  
the prince, as he had had the honour to be  
his education

Goddess of maids, and conscious of our  
So keep me from the vengeance of thy den,  
Which Niobe's *devoted* issue felt,  
When, hissing through the skies, the fœtes  
were dealt.

The owning of our obligation unto vi-  
sited natural religion; that is to say, to  
unto God, so as to act according to his will

Your *devotion* has its opportunity: we  
always, but chiefly at certain times.

The favourable opinion and good will  
comes oftentimes at a very easy rate, by a  
looks, with some *devotional* postures and

Let her, like me, of every joy forgo  
*Devote* the hour when such a wretch was  
Like me to deserts and to darkness run  
From the full choir when loud hosannas  
And swell the pomp of dreadful exercises  
Amid that scene, if some relenting eye  
Glance on the stone where our cold relics  
*Devotion's* self shall steal a thought from  
One human tear shall drop, and be for

Ah why, Penelope, this counsel  
To render sleep's soft blessings insin  
Alike *devote* to sorrow's dire extremity  
The day reflection and the midnight

Pilgrimages are often either enjoined by  
or undergone by *devotees*.

Aliens were *devoted* to their rapine and  
Destruction

*Devotion* may be considered either as an  
public or private prayers at set times  
or as a temper of the mind, a state and  
the heart, which is rightly affected with

Love on Christ's

With such a cause as yours, my lord, in

He, wronged by Venice, vows to  
Her sons *devoted* to the grave.

were ideal, unintelligible, notion, fit only for  
 red monk, or the superstitious devotee.

*Porteus.*

ROM, among the ancient Romans, a kind  
 of or ceremony, whereby they conse-  
 crated themselves to the service of some person.  
 The Romans thought that the life of one might  
 be saved by the death of another; whence  
 devotion became frequent for the lives of  
 heroes. Devotion to any particular per-  
 son unknown among the Romans till the  
 Augustus. The day after the title  
 Augustus had been conferred upon Octa-  
 vius, a tribune of the people, pub-  
 lished, that he would devote himself to  
 him, and obey him at the expense of his  
 life, as he was commanded. This example of  
 devotion was immediately followed by all the rest;  
 and it became an established custom  
 to salute the emperor, without de-  
 votion they were devoted to him. Before  
 the Roman practice was much more noble  
 than this, viz. that of devoting themselves to  
 duty. See DECURS.

DEVOUR, *v. a.* } Lat. *devoro*; of Gr.  
 DEVOURE, *n. s.* } *βορα*, the food of beasts.  
 DEVOURING, *n. s.* } To eat up ravenously,  
 or wild animal; to destroy; hence  
 to devour with eagerness. Devoration  
 Johnson, is 'the act of devouring,' but  
 with no instance of its occurrence.

Not the food of the angel's hand and de-  
 vour, and it was in my mouth as sweet as honey.  
 I had devoured it my womb was bitter.

*Wielif. Apoc. 10.*

Knoweth before them, and behind them a  
 devourer. *Joel, ii. 3.*

A willing dainties enough: there cannot be  
 more in you, to devour so many  
 the greatness dedicate themselves,  
 it is so inclined. *Shakespeare*

Like the pent up lion o'er the wretch  
 rambles under his devouring paws. *Id.*

It is but a wilderness of tigers;  
 your prey, and Rome affords no prey  
 and mine: how happy art thou, then,  
 those devourers to be banished! *Id.*

Walks behind thee, and each flying hour  
 thy loose remnant of thy life devour. *Dryden.*

pleasure as grows fresher upon enjoyment;  
 continually fed upon, yet is never devoured.  
*South.*

Understanding that Socrates lived in the time of  
 his pestilence at Athens, he never caught  
 infection. *Addison.*

These leviathans are withdrawn, the lesser  
 supply their place: fraud succeeds to vio-  
 lence. *Decay of Piety.*

He amassed his hurrying hordes retire  
 full harbor of devouring fire.  
 the first art' with pungent rods to raise  
 attention the domestic blaze. *Darwin.*

DEVOT, *adj.* } Lat. *devotus*. See DE-  
 DEVOTION, *n. s.* } PIOUS; religious;  
 to holy duties.

lights were more clear than our mid-day.  
 and dawning than most use to pray. *Donne.*

Her grace rose, and with modest paces  
 Came to the altar, where she kneeled; and saint-like  
 Cast her fair eyes to heaven, and prayed devoutly. *Shakespeare.*

One of the wise men having a while attentively  
 and devoutly viewed and contemplated this pillar and  
 cross, fell down upon his face. *Bacon.*

Anon dry ground appears, and from his ark  
 The ancient sire descends with all his train;  
 Then with uplifted hands, and eyes devout,  
 Grateful to heaven. *Milton.*

For this, with soul devout, he thanked the god;  
 And, of success secure, returned to his abode. *Dryden.*

Think, O my soul, devoutly think,  
 How, with affrighted eyes,  
 Thou saw'st the wide extended deep  
 In all its horrors rise! *Addison.*

We must be constant and devout in the worship of  
 our God, and ready in all acts of benevolence to  
 our neighbour. *Rogers.*

To second causes we seem to trust, without ex-  
 pressing, or devoutly as we ought to do, our depen-  
 dence on the first. *Atterbury.*

DEUTEROCANONICAL, from *deuteros*, se-  
 cond, and *kanonikos*, canonical, in the school of  
 theology, an appellation given to certain books of  
 holy scripture, which were added to the canon  
 after the rest; either because they were not  
 written till after the compilation of the canon,  
 or by reason of some dispute about them. The  
 Jews acknowledge several books in their canon,  
 which were later than the rest. They say, that  
 under Ezra a great assembly of their doctors,  
 which they call by way of eminence the great  
 synagogue, made the collection of the sacred  
 books which we now have in the Hebrew Old  
 Testament, including those which were not  
 written before the Babylonish captivity, viz.  
 Ezra, Nehemiah, Esther, Ezekiel, Daniel, Hag-  
 gai, Zechariah, and Malachi; and the Romish  
 church has since added others to the canon, that  
 were not, and could not be, in the canon of the Jews,  
 being written long after. Such are several of the  
 apocryphal books, as the Maccabees, Ecclesiast-  
 icus, Wisdom, &c. Others were added still  
 later. The deuterocanonical books in the modern  
 canon are, the epistle to the Hebrews; those  
 of James and Jude; the second of St. Peter,  
 the second and third of St. John; and the Re-  
 velation.

DEUTEROGAMY, *n. s.* *Δευτερος* and *γαμος*  
 A second marriage;

DEUTERONOMY, *n. s.* *Δευτερος νομιος*. The  
 second book of the law; the fifth book of  
 Moses.

DEUTERONOMY was the last of the five books  
 written by Moses, and contains, as its name im-  
 ports, the repetition of the law. It was written  
 in the fortieth year after the delivery from Egypt,  
 Moses being then in the 120th year of his age.  
 In the Hebrew it contains eleven parables,  
 though there are only ten in the editions of the  
 rabbins at Venice, twenty chapters, and 955  
 verses. In the Greek, Latin, and other versions,  
 it contains thirty-four chapters. The last is not  
 by Moses. Some suppose it was written by  
 Joshua immediately after Moses's death; which  
 is the most probable opinion. Others say it was

added by Ezra. See PENTATEUCH. This book opens with an interesting address to the Israelites, in which Moses briefly recapitulates the many instances in which they had experienced the divine favor since their departure from Horeb. He describes the success and victories which had marked their progress; and the incredulous murmurs and ingratitude, by which the people had incensed God; so that of the multitude which were brought out of Egypt, few now remained. He proceeds to rehearse the various commandments, statutes, and judgments which had been delivered to them by God, that they might become 'a wise and understanding people;' and while he intersperses with those laws, frequent instances of their past misconduct, he unfolds the glorious attributes of God, and reiterates many persuasive motives. He enjoins them, on their first entrance into Canaan, to give a public display of their reverence for God's law, by erecting stones on which all its words and precepts might be inscribed. He renews the covenant with the people, including all that previously passed at Horeb; and ratifies those assurances of spiritual blessings, long since imparted to Abraham and his descendants. He then, in consistency with the promises and sanctions of both covenants, sets forth, for their instruction, life and good, and death and evil, temporal and eternal recompense, present and future punishment.

DEUTEROPOTMI, in Grecian antiquity, a designation given to such of the Athenians as had been thought dead, and, after the celebration of the funeral rites, unexpectedly recovered.

DEUTEROSCOPY, *n. s.* *Deutepoc* and *σκοπια*. The second intention; the meaning beyond the literal sense: not in use.

Not attaining the *deuteroscopy*, or second intention of the words, they are fain to omit their consequences, coherences, figures, or tropologies.

*Brown's Vulgar Errors.*

DEUX PONTS, a ci-devant duchy and principality of Germany, in the circle of the Upper Rhine. It was composed of the ancient county of the same name, and the county of Veldentz, and bounded by the provinces of Alsace and Lorraine on the south and south-west, by the electorate of Treves on the north, and the Lower Palatinate on the east; but much intersected by the possessions of different princes. In the year 1385 it was annexed to the Palatinate. The descendants of the princes palatine having obtained the throne of Sweden, and given three princes to that kingdom, Charles X. XI and XII, it remained under the dominion of Sweden during that period; but this line becoming extinct, it descended to the house of Birkenfeld, in the possession of which it continued till its late subjection to the power of France. The duchy was overrun by the French in 1793, and finally attached to that kingdom in 1797, when it was included in the department of the Sarre and Moselle. It is mountainous, and abounds in mines of copper, mercury, iron, and coals; as well as in vineyards, pastures, and corn-fields, which sufficiently supply the people. The principality, when under the German empire, paid for the Roman month 240 florins, and to the imperial

chamber 172 rix-dollars, and 60 kruntzers. The revenues were estimated at 400 florins. It returned in 1814 to the possession of Austria, and has since been exchanging other districts with Bavaria. It is now the Bavarian province of the Rhine, and about 60,000 inhabitants.

DEUX PONTS, or Zweybrucken, as the Germans call it, a town of Germany, now in France, and included in the department of Sarre and Moselle, of which it is the capital, it was, till December, 1797, of the duchy. It was the seat of justice for the principality, and has churches for Roman Catholics, Lutherans, and Calvinists. It is seated on the Erzbach, forty-six miles west of Mannheim, south-west of Mentz, and forty-nine miles west of Strasburgh. Long. 7° 26' E. Lat. 49° 16' N.

DEUX PONTS, LES, a town of the French States, the capital of the foregoing department, situated on the right bank of the Little Moselle, and has a castle, formerly the ducal residence. The chief objects of interest are a beautiful park in the town church, the new Lutheran academy, and the orphan-house. Stanislaus Leczynsky, king of Poland, in his residence here, and built the palace of the elector, about half a mile from the town. The town is distinguished for its valuable editions of the Greek and Latin classics. Population 10,000. It is forty-six miles west of Mannheim, and eight east of Mentz.

born child of the early sun;

also is but a winter's flower,  
on the hills cannot blast her bower,

lifts up her dray eye of blue  
youngest shy of the self-same hue.

*Byron.*

Dew is defined by Dr. Hutton 'a thin light insensible mist, or rain, ascending with a slow motion, and falling while the sun is below the horizon.' He adds, 'that it appears to differ from rain, as less from more' Its origin and matter are doubtless from the vapors and exhalations that rise from the earth and water. See EXHALATION.

As it appears only during clear nights, when the heavens seem to glow with constellations, the ancients finely imagined it to be actually shed from the stars, and therefore to partake of a pure and celestial essence. 'Hence,' says Mr. Leslie, 'the vulgar notion that dew falls, which has prevailed through all ages, and continues to tincture every language.' Plutarch asserts it to be most abundant in the time of full moon. The lunar beams themselves were supposed to contribute some influence, being of a cold nature, and therefore possessed of a humifying quality. The moon, it was imagined, performed merely the office of an imperfect mirror, reflecting the softened lustre of the sun without any portion of his heat.' Certain abstergent qualities were at the same period ascribed to dew. Ammianus Marcellinus says that the health of mountaineers is principally owing to their constant exposure to bracing dews.

It was long disputed whether the dew is formed from the vapors ascending from the earth during the night time, or from the descent of such as have been already raised through the day. M. Huet shows that dew does not fall but rises. Some of the most remarkable experiments in support of this hypothesis are those of Mr. Du Fay of the (Royal) Academy of Sciences at Paris. He supposed, that if the dew ascended, it must wet a body placed low down sooner than one placed on a higher situation; and if a number of bodies were placed in this manner the lowermost would be wetted first, and the rest in like manner, gradually up to the top. To determine this, he placed two ladders against one another, meeting at their tops, spreading wide asunder at the bottom, and so tall as to reach thirty-two feet high. To the several steps of these he fastened large squares of glass like the panes of windows, placing them in such a manner that they should not overshadow one another. On the trial it appeared exactly as Mr. Du Fay had apprehended. The lower surface of the first piece of glass was first wetted, then the upper, then the lower surface of the pane next above it; and so on, till all the pieces were wetted to the top. Hence it appeared plain to him, that the dews consisted of the vapors ascending from the earth during the night; which, being condensed by the coldness of the atmosphere, are prevented from being dissipated as in the day-time by the sun's heat. He afterwards tried a similar experiment with pieces of cloth instead of panes of glass, and the result was quite conformable to his expectations. He weighed all the pieces of cloth next morning, to know what quantity of water each had imbibed, and found those that had been placed lowermost considerably heavier than such as had been placed at the top; though he owns that this experiment did not succeed so perfectly as the former. M. Muschenbroeck, who embraced the contrary opinion, thought he had

that a coat of glass, or varnish, destroys the lustre of the metal, but that an additional coat restores it.

Dr. Wells was at first disposed to attribute the phenomena to the effects of electricity, but it is possible to explain them all by the heat only; for this purpose he assumes, first, that glass attracts humidity the more powerfully its temperature is lower; secondly, that it attracts it but very little; thirdly, that in this attraction, notwithstanding the difference of other bodies; and, fourthly, that glass, placed in their neighbourhood, has the power of being heated by warm air, or cooled by cold air, with greater rapidity, so that the temperature of the glass is more nearly to that of the air on the side next to the metal, and attracts the humidity more or less, either to its own surface or to that of the metal. We should, however, have expected a contrary effect; that glass would rather have tended to communicate its temperature of the air on its surface, but, granting that the assumptions of Dr. Wells serve to generalise the facts with their temporary utility is as great as if they were fundamentally probable.

Dr. Wells, however, has traced up the phenomena to their legitimate sources. 'Very often,' observes, with Aristotle, 'is deposited, in calm and clear nights, or when the moon is high. It is never seen on nights both calm and windy; and if, in the course of the night, the weather, from being serene, should become stormy, dew, which had been deposited, will disappear. In calm weather, if the sky is partially covered with clouds, more dew appears than if it were entirely un-

usually begins in the country to appear, in places shaded from the sun, and in calm weather, soon after the temperature of the atmosphere has declined, and continues deposited through the whole night, a little after sun-rise. Its quantity will be in some measure, on the proportion of the temperature of the atmosphere, and is, consequently, greater after rain than after a long tract of clear weather; and in Europe, with southerly and westerly winds, than with those which blow from the north and the east. The direction of the winds determines this relation of the winds to the quantity of dew. In Egypt, dew is scarcely ever observed when the northerly or Etesian winds blow. Hence, also, dew is generally more abundant in spring and autumn, than in summer. It is always very copious on those clear nights which are followed by misty mornings, when the air is to be loaded with moisture. In the morning, following a cloudy night, there is a plentiful deposition of the retained moisture. When warmth of atmosphere is combined with clearness, as is the case in southern France, though seldom in our country, the dew is much more copious, because the air contains more moisture. Dew continues to be deposited in great copiousness, as the night advances, and the increased refrigeration of the ground. According to Aristotle, is a species of

rain, formed in the lower atmosphere, in consequence of its moisture being condensed, by the cold of the night, into minute drops. Opinions of this kind, says Dr. Wells, are still entertained by many persons, among whom is the very ingenious professor, Leslie. (*Relations of Heat and Moisture*, pp. 37 and 132). A fact, however, first taken notice of by Gerstin, who published his *Treatise on Dew* in 1773, proves them to be erroneous; for he found that bodies a little elevated in the air, often become moist with dew, while similar bodies, lying on the ground, remain dry, though necessarily, from their position, as liable to be wetted, by whatever falls from the heavens, as the former. The above notion is perfectly refuted by what will presently appear relative to metallic surfaces exposed to the air in a horizontal position, which remain dry, while every thing around them is covered with dew.

After a long period of drought, when the air was very still and the sky serene, Dr. Wells exposed to the sky, twenty-eight minutes before sun-set, previously weighed parcels of wool and swan-down, upon a smooth, unpainted, and perfectly dry fir-table, five feet long, three broad, and nearly three in height, which had been placed, an hour before, in the sunshine, in a large level grass-field. The wool, twelve minutes after sun-set, was found to be  $14^{\circ}$  colder than the air, and to have acquired no weight. The swan-down, the quantity of which was much greater than that of the wool, was, at the same time,  $13^{\circ}$  colder than the air, and was also without any additional weight. In twenty minutes more, the swan-down was  $14^{\circ} 30'$  colder than the neighbouring air, and was still without any increase of its weight. At the same time the grass was  $15^{\circ}$  colder than the air four feet above the ground.

Dr. Wells, by a copious induction of facts, derived from observation and experiment, establishes the proposition, that bodies become colder than the neighbouring air before they are dewed. The cold, therefore, which Dr. Wilson and Mr. Six conjectured to be the effect of dew, now appears to be its cause. But what makes the terrestrial surface colder than the atmosphere? The radiation or projection of heat into free space. Now the researches of professor Leslie and count Rumford have demonstrated, that different bodies project heat with very different degrees of force.

In the operation of this principle, therefore, conjoined with the power of a concave mirror of cloud, or any other awning, to reflect, or throw down again those caloric emanations which would be dissipated in a clear sky, we shall find a solution of the most mysterious phenomena of dew. Two circumstances must here be considered:—

I. The exposure of the particular surface to be dewed, to the free aspect of the sky.

II. The peculiar radiating power of the surface. 1. Whatever diminishes the view of the sky, as seen from the exposed body, obstructs the depression of its temperature, and occasions the quantity of dew formed upon it, to be less than would have occurred, if the exposure to the sky had been complete.

Dr. Wells bent a sheet of pasteboard into the shape of a pent-house, making the angle of flexure  $90^\circ$ , and leaving both ends open. This was placed one evening, with its ridge uppermost, upon a grass-plot, in the direction of the wind, as well as this could be ascertained. He then laid ten grains of white, and moderately fine wool, not artificially dried, on the middle part of that spot of the grass which was sheltered by the roof, and the same quantity on another part of the grass-plot, fully exposed to the sky. In the morning, the sheltered wool was found to have increased in weight only two grains, but that which had been exposed to the sky, sixteen grains. He varied the experiment on the same night, by placing, upright, on the grass-plot, a hollow cylinder of baked clay, one foot diameter, and two feet and a-half high. On the grass round the outer edge of the cylinder, were laid ten grains of wool, which, in this situation, as there was not the least wind, would have received as much rain as a like quantity of wool fully exposed to the sky. But the quantity of moisture acquired by the wool partially screened by the cylinder from the aspect of the sky, was only about two grains, while that acquired by the same quantity, fully exposed, was sixteen grains. Repose of a body seems necessary to its acquiring its utmost coolness, and a full deposit of dew. Gravel-walks and pavements project heat, and acquire dew, less readily than a grassy surface. Hence, wool placed on the former, has its temperature less depressed than on the latter, and, therefore, is less bedewed. Nor does the wool here attract moisture by capillary action on the grass, for the same effect happens if it be placed in a saucer. Nor is it by hydrometric attraction; for, in a cloudy night, wool placed on an elevated board acquired scarcely any increase of weight.

If wool be insulated a few feet from the ground, on a bad conductor of heat, as a board, it will become still colder than when in contact with the earth, and acquire fully more dew than on the grass. At the windward end of the board it is less bedewed than at the sheltered end, because, in the former case, its temperature is nearer to that of the atmosphere. Rough and porous surfaces, as shavings of wood, take more dew than smooth and solid wood; and raw silk and fine cotton are more powerful in this respect than even wool. Glass projects heat rapidly, and is as rapidly coated with dew. But bright metals attract dew much less powerfully than other bodies. If we coat a piece of glass, partially, with bright tin-foil, or silver leaf, the uncovered portion of the glass quickly becomes cold by radiation, on exposure to a clear nocturnal sky, and acquires moisture; which, beginning on those parts most remote from the metal, gradually approaches it. Thus, also, if we coat outwardly a portion of a window-pane with tin-foil, in a clear night, then moisture will be deposited inside, on every part except opposite to the metal. But if the metal be inside, then the glass under and beyond it will be sooner, or more copiously bedewed. In the first case,

the tin-foil prevents the glass under it from dissipating its heat, and, therefore, it can have no dew; in the second case, the tin-foil coats the glass, which it coats, from receiving the caloric influence of the apartment, and is sooner refrigerated by external radiation than the rest of the pane. Gold, silver, copper, tin, bad radiators of heat and excellent conductors, acquire dew with greater facility than platinum, which is a more imperfect conductor; or than lead, zinc, and steel, the better radiators. Hence, dew which has been upon a metal will often disappear, when other substances in the neighbourhood remain. A metal, purposely moistened, will dry, while neighbouring bodies are acquiring moisture. This repulsion of dew is communicated by metals to bodies in contact with them. Wool laid on metal acquires more dew than wool laid on the contiguous grass.

If the night becomes cloudy, after having been very clear, though there be no change in the aspect to calmness, a considerable alteration in the temperature of the grass always takes place. Upon one such night, the grass, after having been  $12^\circ$  colder than the air, became only  $2^\circ$  colder than the atmospheric temperature being the same as on the previous observations. On a second night, the grass came  $9^\circ$  warmer in the space of an hour and half. On a third night, in less than five minutes, the temperature of the grass was  $34^\circ$ , while that of the neighbouring air increased to  $34^\circ$ . During a fourth night, the temperature of the grass, at half past nine o'clock, was  $32^\circ$ ; twenty minutes afterwards, it was found to be  $39^\circ$ , the sky in the mean time having become cloudy. At the end of twenty minutes, the sky being clear, the temperature of the grass again  $32^\circ$ . A thermometer lying on a board will sometimes rise several degrees, when it comes to occupy the zenith of a clear sky.

When, during a clear and still night, several thermometers, placed in different situations, are examined at the same time, those which are situated where most dew was formed, were found to be the lowest. On dewy nights, the temperature of the earth, half an inch or more beneath the surface, is always found to be warmer than the grass upon it, or the air about it. The differences on five such nights were from  $12^\circ$  to  $16^\circ$ .

In making experiments with thermometers, it is necessary to coat their bulbs with silver leaf, otherwise the glassy surface indicates a lower temperature than that of the air, or the object it touches. Swandown seems to be a greater cold, on exposure to the aspect of a clear sky, than any thing else. When grass is laid low the atmospheric temperature, was commonly  $15^\circ$ . Fresh unbroken snow, or shreds of paper, rank in this respect as the coldest. Charcoal, lamp-black, and raw silk are also very productive of cold. Snow is  $4^\circ$  or  $5^\circ$  higher than swandown laid up in a clear night.

The following tabular view of observations by Dr. Wells, is peculiarly instructive.

	6h. 45'	7h.	7h. 20'	7h. 40'	8h. 45'
of the air four feet above the grass,	60½°	60½°	59°	58°	54°
— wool on a raised board,	53½	54½	51½	48½	44½
— swandown on the same,	54½	53	51	47½	42½
— surface of the raised board,	58	57	55½	—	—
— grass-plot,	53	51	49½	49	42

temperature always falls in clear nights; position of dew, depending on the air, may occur or not. Now, if the effect of dew, the cold connected with it to be always proportional to the fluid; but this is contradicted. On the other hand, if it be dew is water precipitated from the by the cold of the body on which it same degree of cold in the precipitation may be attended with much, with no dew, according to the existing air in regard to moisture; all instances are found really to take actual precipitation of dew, indeed, give heat.

degrees of difference of temperature the grass and the atmosphere are determine the formation of dew, is in a proper state. But a difference 30°, or more, sometimes exists, by loss of heat from the earth to the and hence, the air near the refrigerator must be colder than that somewhat agreeably to Mr. Six's observations, here, at the height of 220 feet, is often, nights, 10° warmer than what it is above the ground. And had not the heat imparted some of its heat to the latter would have been probably 40° temperature of the air.

bodies, or prominent points, are covered with hoar-frost and dew than cause the equilibrium of their temperature difficult to be restored. As aerial necessary to the cooling effect of radiation can understand why the hurtful effect, heavy fogs, and dews, occur chiefly in confined places, and less frequently in like manner, the leaves of trees are dry throughout the night, while the grass are covered with dew.

experiments can be made to ascertain in which clouds prevent or lessen force of a cold at night, upon the surface of the earth, greater than that of the atmosphere; but it may be concluded from the observations, that they produce this effect solely by radiating heat to the earth, in that which they intercept in its progress towards the heavens. The heat lost by the condensation of transparent into cloud must soon be dissipated; the effect of greatly lessening, or preventing together, the appearance of a greater heat than that of the air, will be by a cloudy sky during the whole of a

thus explain, in a more satisfactory manner than has usually been done, the sudden

warmth that is felt in winter, when a fleece of clouds supervenes in clear frosty weather. Chemists ascribed this sudden and powerful change to the disengagement of the latent heat of the condensed vapors; but Dr. Wells's thermometric observations on the sudden alternations of temperature by cloud and clearness, render that opinion untenable. We find the atmosphere itself, indeed, at moderate elevations, of pretty uniform temperature, while bodies at the surface of the ground suffer great variations in their temperature. This single fact is fatal to the hypothesis derived from the doctrines of latent heat.

'I had often,' says Dr. Wells, 'smiled, in the pride of half knowledge, at the means frequently employed by gardeners to protect tender plants from cold, as it appeared to me impossible that a thin mat, or any such flimsy substance, could prevent them from attaining the temperature of the atmosphere, by which alone I thought them liable to be injured. But when I had learned that bodies on the surface of the earth become, during a still and serene night, colder than the atmosphere, by radiating their heat to the heavens, I perceived immediately a just reason for the practice which I had before deemed useless. Being desirous, however, of acquiring some precise information on this subject, I fixed perpendicularly, in the earth of a grass-plot, four small sticks, and over their upper extremities, which were six inches above the grass, and formed the corners of a square whose sides were two feet long, I drew tightly a very thin cambric handkerchief. In this disposition of things, therefore, nothing existed to prevent the free passage of air from the exposed grass to that which was sheltered, except the four small sticks, and there was no substance to radiate downwards to the latter grass, except the cambric handkerchief.'

The sheltered grass, however, was found nearly of the same temperature as the air, while the unsheltered was 5° or more colder. One night the fully exposed grass was 11° colder than the air; but the sheltered grass was only 3° colder. Hence we see the power of a very slight awning to avert or lessen the injurious coldness of the ground. To have the full advantage of such protection from the chill aspect of the sky, the covering should not touch the subjacent bodies. Garden walls act partly on the same principle. Snow screens plants from this chilling radiation. In warm climates, the deposition of dewy moisture on animal substances hastens their putrefaction. As this is apt to happen only in clear nights, it was anciently supposed that bright moonshine favored animal corruption.

From this rapid emission of heat from the surface of the ground, we can now explain the formation of ice during the night in Bengal, while the temperature of the air is above 32°. The

nights most favorable for this effect, are those which are the calmest and most serene, and on which the air is so dry as to deposit little dew after midnight. Clouds and frequent changes of wind are certain preventives of congelation. 300 persons are employed in this operation at one place. The enclosures formed on the ground are four or five feet wide, and have walls only four inches high. In these enclosures, previously bedded with dry straw, broad, shallow, unglazed earthen pans are set, containing unboiled pump-water. Wind, which so greatly promotes evaporation, prevents the freezing altogether, and dew forms in a greater or less degree during the whole of the nights most productive of ice. If evaporation were concerned in the congelation, wetting the straw would promote it. But Mr. Williams, in the 83d vol. of the Philosophical Transactions, says, that it is necessary to the success of the process that the straw be dry. In proof of this he mentions, that when the straw becomes wet by accident it is renewed; and that when he purposely wetted it in some of the enclosures, the formation of ice there was always prevented. Moist straw both conducts heat and raises vapor from the ground, so as to obstruct the congelation. According to Mr. Leslie, water stands at the head of radiating substances.

DEWARCUNDALI, a sterile, or rather a desolated district of Hindostan, province of Golconda, extending along the south side of the river Godavery, and situated between the eighteenth and nineteenth degrees of northern latitude. The country contains the ruins of a number of forts and villages, which evince it to have been formerly well cultivated.

DEW-BOM, in country affairs, a distemper in cattle, being a swelling in the body, as much as the skin can hold, so that some beasts are in danger of bursting. It proceeds from greediness in feeding, when put into a rank pasture; but commonly when the grass is full of water. In this case the beast should be exercised, and made to purge well; but the proper cure is bleeding in the tail; then take a grated nutmeg, with an egg, and breaking the top of the shell, put out so much of the white as that you may have room to slip the nutmeg into the shell; mix them together, and then let shell and all be put down the beast's throat; that done, walk him up and down, and he will soon mend.

DE WITT (John), a celebrated Dutch statesman, born in 1625, at Dort. At the age of twenty-three, he published *Elementa Curvarum Linearum*; and, after taking his degrees, became, in 1650, pensionary of Dort, and distinguished himself very early in the management of public affairs. He opposed the war with the English as injurious to the States; and when the event justified his predictions, he was unanimously chosen pensionary of Holland. In this capacity he labored to procure a peace with Cromwell; in which peace a secret article was introduced for the exclusion of the House of Orange. In the war with England, after the Restoration, when it was thought expedient, on Oplum's defeat and death, that some of their own deputies should command the fleet, he was one of the three in commission, and wrote an accurate re-

lation of all that happened during the war; for which, at his return, he received solemn thanks of the States-General. He established the perpetual edict for the office of Stadtholder, which produced factions and tumults; on which he begged dismissal from his post, and was granted, with thanks for his services, an invasion of the French, and the internecine war among the Hollanders, spread every where and confusion. Cornelius, the younger brother, was imprisoned, and confined to exile; and a report being raised that he would be rescued, the mob armed, and surrounded the prison where the two brothers were confined, dragged them out, barbarously murdered them, hung the bodies on the gallows, and cut them to pieces. Such was the end of Joost, a man whose life had been devoted to the service of his country, without any consideration of his own emolument. Besides the works mentioned, he wrote a book on the constitution of the government, a translation of which, *The true Interest and Political Maxims of the Republic of Holland*, has been published in London.

DE WITT'S LAND, part of the west coast of New Holland, discovered by the navigator of that name, in 1628. It is situated to comprehend about ten degrees of latitude and fifteen of longitude. Many low islands, were afterwards discovered off the coast, by the French.

DEXTER, *adj.*

DEXTRAL, *adj.*

DEXTRALITY, *n. s.*

DEXTERITY, *n. s.*

DEXTEROUS, *adj.*

DEXTEROUSLY, *adv.*

The right, not the left; a term in heraldry, in which dextral is a synonymous general term. It signifies the state of being on the right hand; dexterous is, clever; expert; because the right hand is generally more so than the left.

My mother's blood

Runs on the dexter cheek, and thus aims  
Bounds in my side's.

His wisdom, by often evading from dangers, when they pressed him, than his dexterity to deliver him from dangers, when they pressed him, than his dexterity to prevent and remove them afar off.

In business dexterous, weighty in debate.

As for any tunicles or skins, which absorb the liver from enabling the dextral parts, to convey it diffuseth its virtue by more than but by its veins and proper vessels.

Brounne's Vulgar

If there were a determinate propensity, and such as ariseth from a constant root, we might expect the same in other animals; but they are also differenced by dextrality.

They attempted to be knaves, but wanted dexterity.

But then my study was to cog the  
And dextrously to throw the lucky die.

They confine themselves, and are dexterous enough of the wares and products of wit, which they content themselves.

For both their dexterous hands the  
wield.

tures, for instance, in which your Grace's been chiefly exerted, as they were adopted, should have been conducted with more dexterity. *Junius.*

in heraldry, an appellation given to belongs to the right side of a shield or ensign: thus we say, bend dexter, dexter

the title of the sovereign of Algiers, in protection of the grand signior. A ruler under this title, was appointed by the request of the Turkish soldiers, in the term dey, in the Turkish language, an uncle by the mother's side. The denomination is this: the Turkish consider the grand seignior as their father as their mother, by which they are bred and maintained; and the dey as ruler of the state, and consequently the ruler who are under his dominion. See

**DIATES.** *n. s.* Διαβαστης. A morbid disease of urine; a fatal colliquation by the discharges.

One of that secretion may accompany the dyscrasias; as in fluxes, hectic sweats and fevers, and other consumptions.

*Derham's Physico-Theology.*

One of the diabetes and dropsy, produced by fermented or spirituous liquors, is explained on the inverted motions of the lymphatic system. *Darwin.*

**DIABETES,** from δια, through, and βασις, An immoderate flow of urine. A disease in the class neuroses, order spasmodic. There are two species of this complaint, diabetes insipidus, in which there is a constant discharge of limpid urine, of its own taste; and diabetes mellitus, in which urine is very sweet, and contains a quantity of sugar.

**DIABOLICAL,** *adj.* From Lat. *diabolus*. Devilish. See **DEVIL**. Devilish; of the qualities of the devil; impious;

This, in other beasts observed,  
Might beget of diabolick power,  
Within, beyond the sense of brute.

*Milton.*

The practice of lying is a diabolical exercise, and we are the devil's children. *Ray.*

How beautiful, and cannot, sure, be demons?  
Alas! True;

Evil's always ugly; and your beauty  
Is diabolical.

*Byron.*

**DIALON,** in pharmacy, an emollient plaster composed of mucilages or juices drawn from certain plants. See **EMULSION**.

**DIADYME,** *n. s.* Διαδυμεν. The syrup of

**DIADYME,** *n. s.* Διαδυμεν. The doc-

**DIADYME,** in antiquity, the name of a faction in Athens. That city was divided into two parties, one desired an oligarchy, and would employ a few persons employed in the government; the others were for a democratical government, wherein the whole people should

have a share. The first were called diacrii, and the latter pediacy; the latter inhabiting the lower, and the former the upper part of the city.—The laws of Solon imported, that Pisistratus should be chief of the diacrii; though the scholiast on Aristophanes's comedy of The Wasps, affirms that Pandion distributed the quarter of the diacrii among his sons, and put Lycus at their head.

**DIADELPHIA,** from δια twice, and αδελφος a brother, the seventeenth class in the sexual system, comprehending those plants which bear hermaphrodite flowers with two sets of united stamens; but this circumstance must not be absolutely depended on. They are the papilionaceae of Tournefort, the irregulares tetrapetali of Rivinus, and the leguminosa of Ray. See **BOTANY**.

**DIADEM,** *n. s.* Fr. *diadème*; Span. and **DI'ADEMED,** *adj.* Lat. *diadema*; Gr. διαδημα, from δια and δειν, to bind. The fillet, tiara, or crown of monarchs. See **CROWN**. Diademed is crowned.

And the ighen of him weren a sawme of fier, and in his heed manye diademys. *Wiclif. Apoc. xix.*

Thou shalt be a crown of glory in the hand of the Lord, and a royal diadem in the hand of thy God.

*Isaiah liii. 3.*

The sacred diadem in pieces rent,  
And purple robe gored with many a wound.

*Spenser.*

Methought I sat in seat of majesty.

In the cathedral church of Westminster,

And in that chair where kings and queens are crowned,

Where Henry and Dame Margaret kneeled to me,  
And on my head did set the diadem. *Shakespeare.*

A crown,

Golden in show, is but a wreath of thorns;  
Brings dangers, troubles, cares, and sleepless nights,  
To him who wears the regal diadem. *Milton.*

A list the coblers' temples ties,

To keep the hair out of their eyes;

From whence 'tis plain the diadem,

That princes wear, derives from them. *Swift.*

Not so, when diademed with rays divine,  
Touched with the flame that breaks from virtue's shrine,

Her priestless muse forbids the good to die,  
And opens the temple of eternity. *Pope.*

What is the exaltation of the meanest beggar from a dunghill to an earthly diadem, when compared with that of human nature from the grave to the throne of God.

*Bp. Horne, Poel. cxiii. 7.*

And she, proud Austria's mournful flower,

Thy still imperial bride;

If still she loves thee hoard that gem,

'Tis worth thy vanished diadem.

*Byron. Ode to Napoleon.*

**DIADYM,** in antiquity, a head-band or fillet, worn by kings as a badge of their royalty. It was made of silk, thread, or wool, and tied round the temples and forehead, the ends being tied behind, and let fall on the neck. It was usually white and plain, though sometimes embroidered with gold, and set with pearls and precious stones. In latter times it came to be twisted round crowns, laurels, &c., and even appears to have been worn on divers parts of the

body. The word is derived from the Greek, as mentioned in the preceding article.

**DIADEM**, in heraldry, is applied to circles or rims serving to inclose the crowns of sovereign princes, and to bear the globe and cross, or the fleurs-de-lis for their crest. The crowns of sovereigns are bound, some with a greater, and some with a less number of diadems. The bandage about the heads of Moors on shields is also called diadem, in blazoning.

**DI'ADROM**, *n. s.* *Διαδρομή*. The time in which any particular motion is performed.

A gry is one tenth of a line, a line one tenth of an inch, an inch one tenth of a philosophical foot, a philosophical foot one third of a pendulum; whose *diadroms*, in the latitude of forty-five degrees, are each equal to one second of time, or a sixtieth of a minute.

*Locke.*

**DIE'RESIS**, *n. s.* *Διαρέσις*. The separation or disjunction of syllables, as *aër*.

*Diæresis* is also a kind of metaplasm, or addition to a word, by dividing one syllable into two; as *salas*, by a *diæresis*, is a word of three syllables, instead of one.

*Dr. A. Ross.*

**DIE'RESIS**, in medicine, is the consuming of the vessels of an animal body, when, from some corroding cause, certain passages are made which naturally ought not to have been, or certain natural passages are dilated beyond their ordinary dimensions, so that the humors which ought to have been contained in the vessels extravasate or run out.

**DIE'RESIS**, in surgery, an operation serving to divide and separate the part when the continuity is a hindrance to the cure.

**DIETETÆ**, in Grecian antiquity, a kind of judges, of which there were two sorts; viz. *Dietetæ cleroti*, public arbitrators, chosen by lot to determine all causes exceeding ten drachms, within their own tribe; and from their sentence an appeal lay to the superior courts. And *dietetæ diallecterii*, private arbitrators from whose sentence there lay no appeal. They always took an oath to administer justice without partiality.

**DIAGLYPHICA**, the art of cutting or engraving figures on metals, such as seals, intaglios, matrices of letters, &c., or coins for metals. See **ENGRAVING**.

**DIAGNO'STICK**, *n. s.* *Διαγνωστικόν*. A symptom by which a disease is distinguished. Used also figuratively.

One of our physicians proved disappointed of his prognosticks, or rather *diagnostics*.

*Harvey on Consumptions*

**DIAG'ONAL**, *adj. & n. s.* } Fr. *diagonal*,  
**DIAG'ONALLY**, *adv.* } from Gr. *διαγώνως*

*μεγ, δια* and *γωνία*, an angle. A line from one angle of a square to another

The monstrosity of the badger is ill-con with some disadvantage; the shortness into the legs of one side, that might have properly placed upon the *diagonal* movement.

*Brown's's Vulgar*

When a man has in his mind the idea of viz. the side and *diagonal* of a square, & *diagonal* is an inch long, he may have the division of that line into a certain equal parts.

All sorts of stone composed of granules and rive in any direction, as well in a perpendicular or in a *diagonal*, as horizontally and parallel side of the strata.

If a region of air be gradually removed to south, it would also blow *diagonally* to north and east.

**DIAGONAL**, in geometry, a right line across a quadrilateral figure, from one another; by some called the diameter others the diametral, of the figure. **METRY.**

**DIAGORAS**, surnamed the Atheist, the ninety-first Olympiad. He was not of Athens, but he taught there. He composed a poem which a certain poet set him. He sued the thief, who swore it own, and obtained fame by it. This Diagoras to deny a Providence. The Athenians summoned him to give an account of trine. He fled, and they set a price head, promising a reward to any who kill him; but he took shipping, and was wrecked.

**DI'AGRAM**, *n. s.* *Διαγράμμα*. A diagram of geometrical figures; a mathematical

Many a fair precept in poetry is like a demonstration in the mathematics; very like the *diagram*, but failing in the mechanic of

Why do not these persons make a *diagram* cogitative lines and angles, and demonstrate properties of perception and appetite, as philosophers know the other properties of triangles and

**DIAGRY'DIATES**, *n. s.* From *Irydium*. Strong purgatives made with *rydium*.

All cholerick humours ought to be evacuated by *diagrydiates*, mixed with tartar, or some acid baro powder.

## DIALLING

*Lat. dialle*, belonging to the day. An instrument for marking the hour of the day. Dialling is the art of making

of windowes and delightful bowers, top a dial told the hours.

*Spenser. Faerie Queene.*

When, the time of life is short :  
That shortness basely were too long,  
He did ride upon a dial's point  
At the arrival of an hour.

*Shakespeare. Henry IV.*

necessary in the arts of dialling or navigation  
the true system or earth's motion.

*Berkely.*

lar shadow in all latitudes, and, on all  
*Maxon.*

It is derived from the Latin *dies*, day,  
indicates the hour of the day, the an-  
cient called it *sciatherium*, from its effect  
low.

A line may be defined the art of draw-  
ing the surface of any given body,  
plane or curved. By the Greeks and  
this art is called *gnomonica*, and *sciath-*  
because it distinguishes the hours by the  
the gnomon.

It is of great antiquity, for we read in  
Win. 8, of the dial of Abaz, who began  
60 years before Alexander, and within  
of the building of Rome.

Among the ancients Anaximenes the Mile-  
tians, are said to have made dials; and  
mentions one made by the ancient Chal-  
in Berosus, on a reclining plane almost  
the equator.

Archus of Samos invented the hemi-  
spherical, and there were at the same time  
circular ones, with a needle for a  
The discus of Aristarchus was an  
dial, with its rim raised up all  
prevent the shadow from stretching

late before the Romans became ac-  
quainted with dials. The first sun-dial at Rome  
by Papirius Cursor, about the year of  
59; before which time, says Pliny, there  
was any reckoning of time but by the  
of day and setting: it was set up at or near  
of Quirinus, but was very inaccurate.  
Twenty years after M. Valerius Messala,  
brought out of Sicily another dial,  
set up on a pillar near the rostrum; but  
was not made for that latitude it did  
not tell the time truly. They made use of it for  
211

ninety-nine years; till Martius Philippus set up  
another more exact.

6. The first professed writer on dialling is Clavius: who demonstrates both the theory and the operations, after the manner of the ancient mathematicians; but with so much intricacy, that few perhaps ever read them all. Dechales and Oranam give much simpler demonstrations in their Courses, and Wolfius in his Elements. M. Picard has given a new method of making large dials, by calculating the hour lines; and M. De la Hire, in his Dialling, printed in 1683, a geometrical method of drawing hour lines from certain points determined by observation. Eberhardus Welperus, in 1625, published his Dialling, in which he lays down a method of drawing the primary dials on a very easy foundation. The same foundation is described at length by Sebastian Munster, in his Rudimenta Mathematica, published in 1551.

7. Sturmius, in 1672, published a new edition of Welperus's Dialling, with the addition of a whole second part, about inclining and declining dials, &c. In 1708 the same work, with Sturmius's additions, was republished, with the addition of a fourth part, containing Picard's and De la Hire's methods of drawing large dials. Paterson, Michael and Muller, have each written on dialling in German; Coetsius, in his *Horologographia Plana*, printed in 1689; Gauppenius in his *Gnomonica Mechanica*; Bion in his *Use of Mathematical instruments*; the late ingenious Mr. Ferguson in his *Select Lectures*; Mr. Emerson in his *Dialling*; and Mr. W. Jones in his *Instrumental Dialling*, &c.

## DEFINITIONS.

8. A dial is a surface, generally plane, upon which lines are described in such a manner, that the shadow of a wire, or of the upper edge of another plane, erected perpendicularly on the former, may show the time of the day.

9. The edge of the plane by which the time of the day is found is called the stile of the dial, which must be parallel to the earth's axis; and the line on which the said plane is erected is called the substile.

10. The angle included between the substile and stile is called the elevation, or height, of the stile.

11. Dials, the planes of which are parallel to the plane of the horizon, are called horizontal dials; and those which have their planes perpendicular to the plane of the horizon, are called vertical, or erect, dials.

12. Erect dials, the planes of which directly front the north or south, are called direct north, or south, dials; all other erect dials are called decliners, because their planes are turned away from the north or south.

13. Dials, the planes of which are neither parallel nor perpendicular to the plane of the horizon, are called inclining or reclining dials, according as their planes make acute or obtuse angles

with the horizon; and, if their planes are also turned aside from facing the south or north, they are called declining inclining, or declining reclining, dials.

14. The intersection of the plane of the dial, with that of the meridian, passing through the stile, is called the meridian of the dial, or the hour line of XII.

15. Meridians, the planes of which pass through the stile, and make angles of  $15^\circ$ ,  $30^\circ$ ,  $45^\circ$ ,  $60^\circ$ ,  $75^\circ$ , and  $90^\circ$ , with the meridian of the place, which marks the hour line of XII, are called hour circles; and their intersections with the plane of the dial are called hour lines.

16. In all declining dials the substile makes an angle with the hour line of XII., and this angle is called the distance of the substile from the meridian.

17. The declining plane's difference of longitude is the angle formed at the intersection of the stile and plane of the dial, by two meridians; one of which passes through the hour line of XII, and the other through the substile.

#### PRINCIPLES OF DIALLING.

18. If the whole earth, *a P e p*, fig. 1, plate I. were transparent and hollow, like a sphere of glass, and had its equator divided into twenty-four equal parts by so many meridian semicircles, *a, b, c, d, e, f, g, &c.*, one of which is the geographical meridian of any given place, as London, (which is supposed to be at the point *a*); and if the hour of XII were marked at the equator, both upon that meridian and the opposite one, and all the rest of the hours in order on the rest of the meridians, those meridians would be the hour circles of London: then, if the sphere had an opaque axis, as *P E p*, terminating in the poles *P* and *p*, the shadow of the axis would fall upon every particular meridian and hour when the sun came to the plane of the opposite meridian, and would consequently show the time at London, and at all other places on the meridian of London.

19. If this sphere were cut through the middle by a solid plane, *A B C D*, in the rational horizon of London, one-half of the axis *E P* would be above the plane, and the other half below it; and, if straight lines were drawn from the centre of the plane to those points where its circumference is cut by the hour circles of the sphere, those lines would be the hour lines of a horizontal dial for London: for the shadow of the axis would fall upon each particular hour line of the dial when it fell upon the like hour circle of the sphere.

20. If the plane which cuts the sphere be upright, as *A F C G*, fig. 2. touching the given place (London) at *F*, and directly facing the meridian of London, it will then become the plane of an erect direct south dial; and if right lines be drawn, from its centre, *F*, to those points of its circumference where the hour circles of the sphere cut it, these will be the hour lines of a vertical or direct south dial for London, to which the hours are to be set, as in the figure, and the lower half, *E p*, of the axis will cast a shadow on the hour of the day in this dial, at the same time that it would fall upon the like hour

circle of the sphere if the dial plane were horizontal.

21. If the plane (still facing the meridian) be made to incline, or recline, any given number of degrees, the hour circles of the sphere will still cut the edge of the plane in those points to which the hour lines must be drawn straight from the centre; and the axis of the sphere will cast a shadow on these lines at the respective hours.

22. The same will be the case if the plane be made to decline by any given number of degrees from the meridian towards the east or west: provided the declination be less than  $90^\circ$ , or the declination be less than the co-latitude of the place; and the axis of the sphere will be a gnomon, or stile, for the dial. But it cannot be a gnomon when the declination is quite  $90^\circ$ , nor when the declination is equal to the co-latitude; because, in these two cases, the axis has no elevation above the plane of the dial. And thus it appears that the plane of every dial represents the plane of some great circle upon the earth; and the gnomon the earth's axis, whether it be a fine wire, as in the above figures, or the edge of a thin plate, as in the common horizontal dials.

23. The whole earth, as to its bulk, is but a point, if compared to its distance from the sun; and therefore, if a small sphere of glass be placed upon any part of the earth's surface, so that its axis be parallel to the axis of the earth, and the sphere have such lines upon it, and such plane within it, as above described, it will show the hours of the day as truly as if it were placed at the earth's centre, and the shell of the earth were transparent as glass.

24. But because it is impossible to have a hollow sphere of glass, perfectly true, blown round a solid plane; or, if it were, we could not get at the plane within the glass to set it in any given position; we make use of a wire sphere to explain the principles of dialling, by joining twenty-four semicircles together at the poles, and putting a thin flat plate of brass within it, as is shown in the preceding figures.

#### DIALLING BY THE TERRESTRIAL GLOBE

25. A common globe of twelve inches diameter has generally twenty-four meridian semicircles drawn upon it. If such a globe be elevated to the latitude of any given place, and turned about until one of these meridians cut the horizon at the north point, where the hour of XII is supposed to be marked, the rest of the meridians will cut the horizon at the respective distances of all the other hours from XII. And if these points of distance be marked on the horizon, and the globe be taken out of the horizon, and a thin board or plate be put into its place, even with the surface of the horizon; then if straight lines be drawn from the centre of the board, to those points of distance on the horizon which were cut by the semicircles; these lines will be the hour lines of a horizontal dial for that latitude, the edge of whose gnomon must be in the very same situation in which the axis of the globe was before it was taken out of the horizon: that is, the gnomon must make an angle with the plane of the dial,

# DIALLING.

PLATE I.

Fig. 2.

Fig. 3.

Fig. 4.

Fig. 5.

Fig. 6.

## DIALLING SCALE.

al to the latitude of the place for which the is made

8. If the pole of the globe be elevated to the altitude of the given place, and any meridian brought to the north point of the horizon, the of the meridians will cut the horizon in the active distances of all the hours from XII, for erect south dial, the gnomon of which must an angle with the plane of the dial equal to co-latitude of the place; and the hours on dial must be placed in a direction contrary but in which they stand on the horizontal

9. But if the globe have more than twenty-meridian semicircles upon it, we must take following method for making horizontal and dials:—Elevate the pole to the latitude of place, and turn the globe until any particular dian (suppose the first) comes to the north of the horizon, and the opposite meridian cut the horizon in the south. Then set the index to the uppermost XII on its circle, turn the globe westward until  $15^\circ$  of the equator pass under the brazen meridian, and the index will be at I, for the sun moves  $15^\circ$  an hour), and the first meridian will cut the horizon in the number of degrees from the north that I is distant from XII. Turn on until  $15^\circ$  of the equator pass under the brazen meridian, and the hour index will then be II, and the first meridian will cut the horizon in the number of degrees that II is distant from XII; and so, by making  $15^\circ$  of the equator pass under the brazen meridian for every hour, the meridian of the globe will cut the horizon in the distances of all the hours from XII to VI, which is just  $90^\circ$ ; and then the distances of XI, IX, VIII, VII, and VI, in the forenoon will be the same from XII, as the distance of I, II, III, IV, V, and VI, in the afternoon: and these hour lines continued through the centre, will give opposite hour lines on the other half of the dial.

10. To make a horizontal dial for the latitude of London, which is  $51^\circ 30'$  north, elevate the pole of the globe  $51^\circ 30'$  above the north point of the horizon; and then turn the globe, until the first meridian (which, on the British globe, is that of London), cuts the north point of the horizon, and set the hour index to XII at noon. Then turning the globe eastward until the index points successively to II, III, IV, V, and VI, in the afternoon, or  $15^\circ$ ,  $30^\circ$ ,  $45^\circ$ ,  $60^\circ$ ,  $75^\circ$ , and  $90^\circ$  of the equator pass under the brazen meridian, the first meridian of the globe will cut the horizon in the same numbers of degrees from the north point of the horizon, viz.  $11^\circ$ ,  $24^\circ$ ,  $38^\circ$ ,  $53^\circ$ ,  $71^\circ$ , and  $90^\circ$ ; which are the respective distances of those hours from XII upon the plane of the dial. To transfer these, and the rest of the hour lines, to a horizontal plane, draw the parallel lines  $ac$ , and  $db$ , fig. 3, upon that plane, and from each other as is equal to the intended length of the gnomon or stile of the dial, and space included between them will be the measure of twelve o'clock line on the dial. Cross the meridian at right angles with the six o'clock line  $ab$ , and setting one foot of the compasses in

the intersection  $a$ , as a centre, describe the quadrant  $ke$  with any convenient radius or opening of the compasses; then setting one foot in the intersection  $b$ , as a centre, with the same radius describe the quadrant  $fh$ , and divide each quadrant into ninety equal parts or degrees, as in the figure.

29. As the hour lines are less distant from each other about noon than in any other part of the dial, it is best to have the centres of these quadrants at a little distance from the centre of the dial plane, on the side opposite to XII, in order to enlarge the hour distances thereabouts, under the same angles on the plane. Thus the centre of the plane is at C, but the centres of the quadrants are at  $a$  and  $b$ . Lay a ruler over the point  $b$ , and (keeping it there for the centre of all the afternoon hours in the quadrant  $fh$ ), draw the hour line of I through  $11^\circ 30'$  in the quadrant; the hour line of II through  $24^\circ 30'$ ; of III through  $38^\circ 5'$ ; IV through  $53^\circ 30'$ ; and V through  $71^\circ 4'$ ; and, because the sun rises about four in the morning on the longest days, at London, continue the hour lines of IV and V in the afternoon through the centre  $b$  to the opposite side of the dial.

30. the other quadrant is now to be divided, but it is very obvious that the same minute process need not be gone through in doing so, as the divisions already laid down may be readily transferred to the quadrant  $ek$ ; as the labor of dividing both may be much shortened by working from a scale, having a line of chords upon it, as will be shown presently.

31. If a plate similar to this triangle be made as thick as the distance between the lines  $ac$  and  $bd$ , and set upright between them, touching at  $a$  and  $b$ , its hypothenuse  $ag$  will be parallel to the axis of the world, when the dial is truly set; and will cast a shadow on the hour of the day.

32. To make an erect direct south dial, fig. 4, elevate the pole to the co-latitude of the place, and proceed in all respects as above for the horizontal dial, and from VI in the morning to VI in the afternoon; only the hours must be reversed, as in the figure; and the hypothenuse  $ag$ , of the gnomon  $agb$ , must make an angle with the dial-plane equal to the co-latitude of the place. As the sun can shine no longer on this dial than from six in the morning until six in the evening, there is no occasion for having any more than twelve hours upon it.

33. To make a direct dial, declining from the south towards the east or west, elevate the pole to the latitude of the place, and screw the quadrant of altitude to the zenith. Then, if the dial decline towards the E. (which we shall suppose it does), count in the horizon the degrees of declination, from the E. point towards the N. and bring the lower end of the quadrant to that degree of declination at which the reckoning ends. Then bring any particular meridian of the globe (suppose the first) directly under the graduated edge of the upper part of the brazen meridian, and set the hour to XII at noon. Then, keeping the quadrant of altitude at the degree of declination in the horizon, turn the globe eastward on its axis, and observe the degrees cut by the

first meridian in the quadrant of altitude (counted from the zenith), as the hour circle comes to XI, X, IX, &c., in the forenoon, or as 15, 30, 45, &c. degrees of the equator pass under the brazen meridian at these hours respectively; and the degrees then cut in the quadrant by the first meridian, are the respective distances of the forenoon hours from XII on the plane of the dial.

34. Then, for the afternoon hours, turn the quadrant of altitude round the zenith until it comes to the degree in the horizon opposite to that where it was placed before; namely, as far from the W. point of the horizon towards the S. as it was set at first from the E. point towards the N.; and turn the globe westward on its axis, until the first meridian comes to the brazen meridian again, and the hour index to XII; then, continue to turn the globe westward, and as the index points to the afternoon hours, I, II, III, &c., or as 15°, 30°, 45°, &c., of the equator pass under the brazen meridian, the first meridian will cut the quadrant of altitude in the respective number of degrees from the zenith that each of these hours is from XII on the dial. And when the first meridian goes off the quadrant at the horizon in the forenoon, the hour index shows the time when the sun will come upon this dial, and when it goes off the quadrant in the afternoon, the index will point to the time when the sun goes off the dial. Having thus found all the hour distances from XII, lay them down upon the dial plane, either by dividing a semicircle into two quadrants of 90° each (beginning at the hour line of XII), or by the line of chords, as above directed.

35. In all declining dials, the line on which the stile or gnomon stands (commonly called the substile line) makes an angle with the twelve o'clock line, and falls among the forenoon hour lines, if the dial declines towards the E; and among the afternoon hour lines, when the dial declines towards the W. that is, to the left hand from the twelve o'clock line in the former case, and to the right hand from it in the latter.

36. To find the distance of the substile from the twelve o'clock line, if the dial declines from the S. towards the E. count the degrees of the declination in the horizon from the E. point toward the N. and bring the lower end of the quadrant of altitude to that degree of declination where the reckoning ends; then, turn the globe until the first meridian cuts the horizon in the like number of degrees, counted from the S. point toward the E. and the quadrant and the first meridian will then cross one another at right angles; and the number of degrees of the quadrant, which are intercepted between the meridian and the zenith, is equal to the distance of the substile line from the twelve o'clock line; and the number of degrees of the first meridian, which are intercepted between the quadrant and the N. pole, is equal to the elevation of the stile above the plane of the dial.

37. If the dial declines westward from the S., count that declination from the E. point of the horizon towards the S. and bring the quadrant of altitude to the degree in the horizon at which the reckoning ends; both for finding the forenoon hours, and distance of the substile from the meridian; and for the afternoon hours, bring the qua-

drant to the opposite degree in the horizon, namely, as far from the W. towards the N. and then proceed in all respects as above.

38. Thus when our declining dial is finished, we have four dials, viz. 1. A north dial declining eastward by the same number of degrees; 2. A north dial declining the same number west; 3. A south dial, declining east; and, 4. A south dial declining west; only placing the proper number of hours, and the stile or gnomon respectively, upon each plane. For, in the S. W. plane, the substilar line falls among the afternoon hours; and in the S. E. of the same declination, among the forenoon hours, at equal distances from XII. And so all the morning hours on the W. decliner, will be like the afternoon hours on the E. decliner; and the S. W. decliner, the N. E. decliner, by only extending the hour lines, stile and substile, quite through the centre: the axis of the stile (or edge that casts the shadow on the hour of the day), being in all dials whatever, parallel to the axis of the world, and consequently pointing towards the north pole of the heaven in north latitudes, and towards the south pole, in south latitudes.

#### METHOD OF CONSTRUCTING DIALLING LINES.

39. Describe, with any opening of the compasses, as EA, fig. 5, according to the intended length of the scale, the circle ADCB, and cut it at right angles by the diameters CE A and DB; divide the quadrant AB first into 9 equal parts, and then each part into 10; so shall the quadrant be divided into 90 equal parts or degrees. Draw the right line AFB for the chord of this quadrant; and, setting one foot of the compasses in the point A, extend the other to the several divisions of the quadrant, and transfer these divisions to the line AFB by the arcs 10, 20, 30, &c., and this will be a line of chords, divided into 90 unequal parts.

40. Divide the quadrant CD into 90 equal parts, and from each point of division draw right lines, as i, k, l, &c., to the line CE; all perpendicular to that line, and parallel to DE, which will divide EC into a line of sines; and although these are seldom put among the dialling lines on a scale, yet they assist in drawing the line of latitudes. For if a ruler be laid upon the point D, and over each division in the line of sines, it will divide the quadrant CB into 90 unequal parts, as Ba Bb, &c., shown by the right lines 12 a, 20 b, 30 c, &c., drawn along the edge of the ruler. If the right line BC be drawn, subtending this quadrant and the nearest distances, Ba, Bb, Bc, &c., be taken in the compasses from B, and set upon this line in the same manner as directed for the line of chords, it will make a line of latitudes BC, equal in length to the line of chords AB, and an equal number of divisions, but very unequal as to their lengths.

41. Draw the right line DGA, subtending the quadrant DA; and parallel to it, draw the right line rs, touching the quadrant DB at the numeral figure 3. Divide this quadrant into six equal parts, as 1, 2, 3, &c., and through the points of division draw right lines from the centre E to the line rs, which will divide it at the points where the six hours are to be placed, as in the

ry sixth part of the quadrant be  
 a four equal parts, right lines  
 a centre through these points of  
 continued to the line  $r s$ , will divide  
 it into quarters.

#### INSTRUCTING DIALS BY DIALLING LINES.

the easiest of all mechanical me-  
 much the best, when the lines are  
 and not only the half hours and  
 be laid down by all of them, but  
 late by most, and every single mi-  
 where the line of hours is a foot in  
 ing drawn the double meridian line  
 on the plane intended for a hori-  
 crossed it at right angles by the  
 $f e$ , as in fig. 3, take the latitude  
 with the compasses, from the scale of  
 set that extent from  $c$  to  $e$ , and  
 the six o'clock line; then, taking  
 hours between the points of the  
 on the scale of hours, with that ex-  
 on the point  $e$ , and let the other  
 it will upon the meridian line  $c d$ ,  
 the same from  $f$  to  $b$ , and draw the  
 $f b$ , each of them will be equal  
 the whole scale of hours. Then,  
 with the compasses in the begin-  
 at XII, and extending the other  
 on the scale, lay off these extents  
 the afternoon hours, and from  $b$   
 of the forenoon: this will divide  
 and  $b f$  in the same manner as the  
 divided at 1, 2, 3, 4, and 6; on  
 pers may also be laid down, if re-  
 laying a ruler on the point  $c$ , draw  
 pers in the afternoon, from that  
 the dots at the numeral figures 1,  
 the line  $d c$ ; and continue the lines  
 through the centre  $c$ , to the other  
 al, for the like hours of the morn-  
 ing, lay the ruler on the point  $a$ ,  
 last five hours in the forenoon  
 its, 5, 4, 3, 2, 1, on the line  $f b$ ;  
 hour lines of VII and VIII through  
 the other side of the dial, for the  
 the evening; and set the hours to  
 lines, as in the figure. Lastly,  
 upon the same way as directed above  
 dial, and the whole will be

an erect south dial, take the co-  
 place from the scale of latitudes,  
 and in all respects for the hour  
 horizontal dial; only reversing the  
 4, and making the angle of the  
 equal to the co-latitude.

#### METHOD OF DRAWING THE HOUR LINES.

construct a horizontal dial, fig. 1,  
 scribe with any opening of the com-  
 the two semicircles  $l f h$  and  $l q k$ ,  
 $z$  and  $z$ , where the six o'clock  
 double meridian line; and divide  
 into twelve equal parts, begin-  
 ough strictly speaking, only the  
 $L$  to the six o'clock line need be

divided); then connect the divisions which are  
 equi-distant from  $L$ , by the parallel lines  $K l d$ ,  
 $I N$ ,  $l l O$ ,  $G P$ , and  $F Q$ . Draw  $V Z$  for the hy-  
 pothenuse of the stile, making the angle  $V Z E$   
 equal to the latitude of the place; and continue  
 the line  $V Z$  to  $R$ . Draw the line  $R r$  parallel  
 to the six o'clock line, and set off the distance  
 $a K$  from  $Z$  to  $Y$ , the distance  $b I$  from  $Z$  to  $N$ ,  
 $c H$  from  $Z$  to  $W$ ,  $d G$  from  $Z$  to  $T$ , and  $e F$  from  
 $Z$  to  $S$ . Then draw the lines  $S s$ ,  $T t$ ,  $W w$ ,  $X x$ ,  
 and  $Y y$ , each parallel to  $R r$ . Set off the dis-  
 tance  $y Y$ , from  $a$  to 11, and from  $f$  to 1; the  
 distance  $x X$  from  $b$  to 10, and from  $g$  to 2;  $w W$   
 from  $c$  to 9, and from  $h$  to 3;  $t T$  from  $d$  to 8,  
 and from  $i$  to 4;  $s S$  from  $e$  to 7, and from  $n$  to 5.  
 Then laying a ruler to the centre  $Z$ , draw the  
 forenoon hour lines through the points 11, 10, 9,  
 8, 7; and laying it to the centre  $z$ , draw the af-  
 ternoon lines through the points 1, 2, 3, 4, 5;  
 continuing the forenoon lines of VII and VIII  
 through the centre  $Z$ , to the opposite side of the  
 dial, for the like afternoon hours; and the after-  
 noon lines IV and V through the centre  $z$ , to  
 the opposite side for the like morning hours.  
 Set the hours to these lines as in the figure, and  
 then erect the stile or gnomon, and the dial will  
 be finished.

45. II. To construct a south dial, draw the  
 line  $V Z$ , making an angle with the meridian  $Z L$   
 equal to the co-latitude of your place; and pro-  
 ceed in all respects as in the above horizontal  
 dial for the same latitude, reversing the hours as  
 in fig. 4, and making the elevation of the gno-  
 mon equal to the co-latitude.

46. III. To construct a north dial. See fig.  
 2. If the hour lines IV and V, as also VII and  
 VIII on the south dial, fig. 4, plate I. be con-  
 tinued beyond the line  $V l a VI$ , and the triangle  
 $a g h$  turned about the point  $a$ , till  $a h$  fall on  $a$   
 XII produced, it is evident a north dial is thereby  
 had. The hour line for VII in the morning on  
 the south dial, when produced, forms the hour  
 line for V in the morning on the north dial: and  
 the hour line for V in the afternoon, on the  
 south dial, forms the hour line for VII in the  
 evening on the north dial. The manner of  
 placing the characters for the other hours is  
 therefore obvious.

47. IV. To construct an east dial. On the  
 eastern side of the plane of the meridian, draw a  
 line  $A B$ , fig. 3, parallel to the horizon, draw  
 also a line  $A K$ , making with  $A B$  an angle  
 $K A B$  equal to the complement of the latitude  
 of the place for which the dial is made. Take a  
 point  $D$  in  $A K$ , and on that point for a centre  
 describe a circle. Through  $D$  draw  $E C$  per-  
 pendicular to  $A K$ , thus the circle will be divided  
 into four quadrants; divide two of these quad-  
 rants into six equal parts, as in the figure.  
 Draw a straight line  $F E G$  perpendicular to  $E C$ ,  
 the diameter of the circle, and from the centre  $D$   
 through the several divisions, draw the right  
 lines  $D IV$ ,  $D V$ ,  $D VI$ ,  $D VII$ ,  $D VIII$ ,  $D$   
 $IX$ ,  $D X$ ,  $D XI$ . Through  $IV$ ,  $V$ ,  $VI$ ,  $VII$ , &c.;  
 draw lines  $IV$ ,  $IV$ ,  $V$ ,  $V$ , &c. parallel to  $E D C$ .  
 Lastly, in  $D$  erect a stile equal to the radius  
 $D E$ , perpendicular to the plane; or on two  
 little pieces perpendicularly fixed in  $E C$ , and  
 equal to the same  $D E$ , fit an iron rod parallel to

EC, thus will each index at the several hours project a shadow to the respective hour lines IV IV, V V, VI VI, &c. The east dial, it is obvious, can only show the hours till twelve o'clock.

48. V. To construct a west dial. The construction is perfectly the same as that of an east dial, only that its situation is inverted, and the hours are written accordingly. A west dial, it is obvious, can only be illuminated after noon, and therefore, joined with an east dial, shows all the hours of the day.

#### OF UNIVERSAL DIALS.

49. I. The universal dial, invented by Partie, fig. 4, consists of three principal parts; the first whereof is called the horizontal plane A, because in practice it must be parallel to the horizon. In this plane is fixed an upright pin, which enters into the edge of the second part BD, called the meridional plane; which is made of two pieces, the lowest whereof, B, is called the quadrant, because it contains a quarter of a circle, divided into  $90^\circ$ ; and it is only into this part, near B, that the pin enters. The other piece is a semicircle D adjusted to the quadrant, and turning in it by a groove, for raising and depressing the diameter EF of the semicircle, which diameter is called the axis of the instrument. The third piece is a circle, G, divided on both sides into twenty-four equal parts, which are the hours. This circle is put upon the meridional plane, so that the axis EF may be perpendicular to the circle, and the point C be the common centre of the circle, semicircle, and quadrant. The straight edge of the semicircle is chamfered on both sides to a sharp edge, which passes through the centre of the circle. On one side of the chamfered part, the first six months of the year are laid down, according to the sun's declination for their respective days, and on the other side the last six months. And against the days on which the sun enters the signs, there are straight lines drawn upon the semicircle, with the characters of the signs marked upon them. There is a black line drawn along the middle of the upright edge of the quadrant, over which hangs a thread H, with its plummet I, for levelling the instrument. From the 23d of September to the 20th of March, the upper surface of the circle must touch both the centre C of the semicircle, and the line of  $\gamma$  and  $\alpha$ ; and from the 20th of March to the 23d of September, the lower surface of the circle must touch that centre and line.

50. To find the time of day by this dial, set it on a level place in sun-shine, and adjust it by the levelling screws *k* and *l*, until the plumb-line hangs over the black line upon the edge of the quadrant, and parallel to the said edge; move the semicircle in the quadrant, until the line of  $\gamma$  and  $\alpha$  (where the circle touches) comes to the latitude of the place in the quadrant: then turn the whole meridional plane BD, with its circle G, upon the horizontal plane A, until the edge of the shadow of the circle falls on the day of the month in the semicircle; and then the meridional plane will be due north and south; the axis EF will be parallel to the axis

of the world, and will cast a shadow upon the true time of the day among the hours of the circle.

51. When the instrument is thus rectified, the quadrant and semicircle are in the plane of the meridian, and the circle is then in the plane of the equinoctial. Therefore as the sun is above the equinoctial in summer (in northern latitudes) and below it in winter, the axis of the semicircle will cast a shadow on the hour of the day on the upper surface of the circle, from the 23d of March till the 23d of September; and from the 23d of September to the 20th of March, the hour of the day will be determined by the shadow of the semicircle upon the lower surface of the circle. In the former case the shadow of the circle falls upon the day of the month, on the lower part of the diameter of the semicircle, and in the latter case on the upper part.

52. The method of laying down the months and signs upon the semicircle is as follows. Draw the right line ACB, fig. 5, equal to the diameter of the semicircle ADB, and cross it in the middle at right angles with the line EC, equal in length to ADB; then EC will be the radius of the circle FCG, which is the same as that of the semicircle. Upon E, as a centre, describe the circle FCG, on which set off the arcs Ch and Ci, each equal to  $23\frac{1}{2}^\circ$ , and divide them accordingly into that number for the sun's declination. Then laying the edge of a ruler over the centre E, and also over the sun's declination for every fifth day of each month, mark the points on the diameter AB of the semicircle from a to g, which are cut by the ruler; and there place the days of the months accordingly, answering to the sun's declinations. Then setting one foot of the compasses in C, and extending the other to a or g, describe the semicircle abcdefg; which divide into six equal parts, and through the points of division draw right lines parallel to CD, for the beginning of the signs (of which one half are on one side of the semicircle, and the other half on the other), and set the characters of the signs to their proper lines, as in the figure.

53. II. The universal, or astronomical equinoctial ring-dial is an instrument that serves to find out the hour of the day in any latitude. It consists of two flat rings or circles, usually five or four to twelve inches diameter, and of a moderate thickness; the outward ring represents the meridian of the place it is used at, contains two divisions of  $90^\circ$  each, opposite to each other, serving to let a sliding piece and ring (by which the dial is usually suspended) be placed on one side, from the equator to the pole, and on the other side to the S., according to the latitude of the place. The inner ring represents the equator, and turns diametrically within the outer, by means of two pivots inserted in each end of the ring at the hours VI and XII. Across the two circles is screwed to the meridian a thin pierced plate or bridge, with a cursor that slides along the middle of the bridge: the cursor has a small hole for the sun to shine through. The middle of this bridge is conceived as the axis of the world, and its extremities as the poles; on the one side are delineated

five signs of the zodiac, and sometimes the degrees of the sun's declination; on the other side the days of the month about the year. On the other side of the ring A are the divisions of  $90^\circ$ , or a quadrant-latitude. It serves, by the placing of a pin in the hole, to take the sun's shadow, from which the latitude of the place may be found.

In using this dial, place the line in the of the sliding piece, over the degree of the place. Suppose, for example, London; put the line which crosses the cursor C to the day of the month of the sign. Open the instrument so that the two rings be at right angles to each other, and it by the ring, that the axis of the instrument by the middle of the bridge may be parallel to the axis of the earth, viz. the north and the north, and vice versa. Then turn the dial of the bridge towards the sun, so that a passing through the small hole in the middle of the concave surface of the inner hour-circle, the bright spot shows the day in the said concave surface of the dial. The hour XII cannot be shown by this because the outer ring, being then in the middle of the meridian, excludes the sun's rays from entering; nor can this dial show the hour when the sun is in the equinoctial, because his shadow falling parallel to the plane of the inner hour-circle, are excluded by it.

III. Figs. 6, 7, and 8, a universal dial on a cross, as described by Mr. Ferguson. It is placed on a joint C, for elevating it to any angle on the quadrant Co  $90^\circ$ , as it stands on the horizontal board A. The arms of the cross are at right angles to the middle part; the top of it, from a to m, is of equal length to the arms  $ae$  or  $mk$ . See fig. 6. It is rectified by setting the middle line to the latitude of the place on the quadrant, and A level, and the point N. northward by a needle; thus, the plane of the cross will be parallel to the plane of the equator. Then, from 12 o'clock in the morning till VI, the upper part of the arm  $io$  will cast a shadow on the side of the day on the side of the arm  $cm$ ; from VI to IX, the lower edge  $i$  of the arm  $io$  will cast a shadow on the hours on the side  $og$ . From IX to morning to XII at noon, the edge  $ab$  of the part  $an$  will cast a shadow on the hours on the arm  $nef$ ; from XII to III in the afternoon, the edge  $cd$  of the top part will cast a shadow on the hours on the arm  $klm$ ; from III to evening, the edge  $gh$  will cast a shadow on the hours on the part  $pu$ ; and from VI to the shadow of the edge  $ef$  will show the hour on the top part  $an$ . The breadth of each part,  $ef$ , &c., must be so great, as never to be shadowed fall quite without the part or arm in which the hours are marked, when the sun is at the greatest declination from the equator.

To determine the breadth of the sides of the dial which contain the hours, so as to be in proportion to their length; make an angle ABC, fig. 7, of  $23^\circ 30'$ , which is equal to the greatest declination: and suppose the

length of each arm, from the side of the long middle part, and also the length of the top part above the arms, to be equal to Bd. Then as the edges of the shadow, from each of the arms, will be parallel to Bc, making an angle of  $23^\circ 30'$  with the side Bd of the arm, when the sun's declination is  $23^\circ 30'$ ; it is plain, that if the length of the arm be Bd, the least breadth that it can have, to keep the edge Be of the shadow Bc from going off the side of the arm de before it comes to the end of it ed, must be equal to ed or dB. But to keep the shadow within the quarter divisions of the hours, when it comes near the end of the arm, the breadth of it should be still greater, so as to be almost doubled, on account of the distance between the tips of the arms.

57. The hours may be placed on the arms, by laying down the cross  $abcd$ , fig. 8, on a sheet of paper; and with a black lead pencil held close to it drawing its shape and size on the paper. Then take the length  $ae$  in the compasses, and with one foot in the corner a, describe with the other the quadrant  $ef$ . Divide this arc into six equal parts, and through the points of division draw right lines  $ag$ ,  $ah$ , &c., continuing three of them to the arm  $ce$ , which are all that can fall upon it; and they will meet the arm in those points through which the lines that divide the hours from each other are to be drawn right across it. Divide each arm for the three hours contained in it, in the same manner; and set the hours to their proper places, on the sides of the arms, as they are marked in fig. 6. Each of the hour spaces should be divided into four equal parts, for the half hours and quarters, to the quadrant  $ef$ ; and right lines should be drawn through these division-marks in the quadrant, to the arms of the cross, in order to determine the places thereon where the subdivision of the hours must be marked. This kind of universal dial is easily made, and has a pretty uncommon appearance in a garden.

58. IV. The universal mechanical dial, fig. 9, affords, by its equinoctial circle, an easy method of describing a dial on any kind of plane. For example: suppose a dial is required on a horizontal plane. If the plane be immovable, as ABCD, find a meridian line as GF; or, if moveable, assume the meridian at pleasure: then by means of the triangle EKF, whose base is applied on the meridian line, raise the equinoctial dial H till the index GI becomes parallel to the axis of the earth (which is so, if the angle KEF be equal to the elevation of the pole), and the XII o'clock line on the dial hang over the meridian line of the plane or the base of the triangle. If then, in the night, or in a dark place, a lighted candle be successively applied to the axis GI, so as the shadow of the index or style GI fall upon one hour line after another, the same shadow will mark out the several hour lines on the plane ABCD. Noting points, therefore, on the shadow, draw lines through them to G; then an index being fixed on G, according to the angle IGF, its shadow will point out the several hours by the light of the sun. If a dial were required on a vertical plane, having raised the equinoctial circle as directed, push

forward the index GI till the tip thereof, I, touch the plane. If the plane be inclined to the horizon, the elevation of the pole should be found on the same; and the angle of the triangle KEF should be made equal thereto.

59. V. Fig. 1, plate III., represents a universal dial, which shows the hour of the day by a terrestrial globe, and by the shadows of several gnomons, at the same time; together with all the places of the earth which are then enlightened by the sun; and those to which the sun is then rising, or on the meridian or setting. This dial is made of a thick square piece of wood, or hollow metal. The sides are cut into semicircular hollows, in which the hours are placed; the stile of each hollow coming out from the bottom thereof as far as the ends of the hollows project. The corners are cut out into angles, in the insides of which the hours are also marked; and the edge of the end of each side of the angle serves as a stile for casting a shadow on the hours marked on the other side. In the middle of the uppermost side, or plane, there is an equinoctial dial; in the centre of which an upright wire is fixed, for casting a shadow on the hours of that dial, and supporting a small terrestrial globe on the top.

60. The whole dial stands on a pillar, in the middle of a round horizontal board, in which there is a compass and magnetic needle, for placing the meridian stile towards the S. The pillar has a joint with a quadrant upon it, divided into  $90^\circ$ , for setting it to the latitude of any given place. The equator of the globe is divided into twenty-four equal parts, and the hours are laid down upon it at these parts. The time of the day may be known by these hours, when the sun shines upon the globe.

61. To rectify and use this dial, set it on a level table, or on the sole of a window, where the sun shines, placing the meridian stile due S. by means of the needle; which will be, when the needle points as far from the N. fleur-de-lis toward the W. as it declines westward at the place. Then bend the pillar in the joint, till the black line on the pillar comes to the latitude of the place in the quadrant. The machine being thus rectified, the plane of its dial part will be parallel to the equator, the wire or axis that supports the globe will be parallel to the earth's axis, and the N. pole of the globe will point toward the N. pole of the heavens.

62. The same hour will then be shown in several of the hollows, by the ends of the shadows of their respective stiles; the axis of the globe will cast a shadow on the same hour of the day, in the equinoctial dial, in the centre of which it is placed, from the 20th of March to the 23rd of September; and, if the meridian of the place on the globe be set even with the meridian stile, all that part of the globe that the sun shines upon will answer to those places of the real earth which are then enlightened by the sun. The places where the shade is just coming upon the globe, answer to all those places of the earth in which the sun is then setting; as the places where it is going off, and the light coming on, answer to all the places of the earth where the sun is then rising. And lastly, if the hour of VI

be marked on the equator in the meridian of the place (as it is marked on the meridian of London in the figure), the division of the light and shade on the globe will show the time of the day.

63. The northern stile of the dial is hid in the figure by the axis of the globe. The hours in the hollow to which that stile belongs, are also supposed to be hid by the oblique view of the figure: but they are the same as the hours in the front hollow. Those also in the right and left hand semicircular hollows are mostly hid from sight; and so also are all those on the sides next the eye of the four acute angles.

64. The construction of this dial is as follows: on a thick square piece of wood, or metal, draw the lines *ac* and *bd*, fig. 2, as far from each other as you intend for the thickness of the stile *abcd*; and in the same manner, draw the like thickness of the other three stiles, *efgh*, *ikln*, and *mopq*, all standing outright as from the centre. With any convenient opening for the compasses, as *aA*, so as to leave proper strength when *KI* is equal to *aA*, set one foot in *a*, as a centre, and with the other describe the quadrant arc *Ac*. Then, without altering the compasses, set one foot in *b* as a centre, and with the other describe the quadrant *dB*. All the other quadrants in the figure must be described in the same manner, and with the same opening of the compasses, on their centres *efik*, and *no*, and each quadrant divided into six equal parts, for as many hours, as in the figure; each of which parts must be subdivided into four, for the half hours and quarters. At equal distances from each corner, draw the right lines *Ip* and *Kp*, *Lq* and *Mq*, *Nr* and *Or*, *Ps* and *Qs*: to form the four angular hollows *IpK*, *LqM*, *NrO*, and *PsQ*; making the distances between the tips of these hollows, as *IK*, *LM*, *NO*, and *PQ*, each equal to the radius of the quadrants: and leaving sufficient room within the angular points *pqr* and *s*, for the equinoctial in the middle.

65. To divide the inside of these angles for the hour spaces, take the following method:—Set one foot of the compasses in the point *I* as a centre, and open the other to *K*; and with that opening describe the arc *Kt*: then, without altering the compasses, set one foot in *K*, and with the other describe the arc *It*. Divide each of these arcs from *I* and *K* to their intersection at *t*, into four equal parts; and from their centres *I* and *K* through the points of division, draw the right lines *I3*, *I4*, *I5*, *I6*, *I7*: and *K2*, *K1*, *K10*, *K11*; and they will meet the sides *Kp* and *Ip* of the angle *IpK* where the hours thirteen must be placed. And these hour spaces in the arc must be subdivided into four equal parts, for the half hours and quarters. Do the like for the other three angles, and draw the dotted lines and set the hours in the insides where these lines meet them, as in the figure; and the like dotted lines will be parallel to each other in all the quadrants and in all the angles. Mark points for all these hours on the upper side: and cut out all the angular hollows, and the quadrantal corners quite through the places where their four gnomons must stand; and lay down the hours on their insides, and set in their gnomons, which must be as broad as the dial is thick, and if

# DIALLING.

Fig. 7.

Fig. 2.

width and thickness must be large enough to support the shadows of the gnomons from ever falling out of the sides of the hollows, even when the sun's declination is at the greatest. Lastly, as the equinoctial dial in the middle, all the hours of which are equidistant from each other; and the dial will be finished.

66. As the sun goes round, the broad end of the shadow of the stile *abcd* will show the hours in the quadrant *Ac*, from the sun-rise till *I* in the morning; the shadow from the end *M* will show the hours on the side *Lg* from *V* to *I* in the morning; the shadow of the stile *gA* in the quadrant *Dg* in the long days, will show the hours from sun-rise till *VI* in the morning; and the shadow of the end *N* will show the morning hours, on the side *Or*, from *K* to *VII*. Just as the shadow of the northern stile *abcd* goes off the quadrant *Ac*, the shadow of the southern stile *iklm* begins to fall within the quadrant *Fl*, at *VI* in the morning; and as the time, in that quadrant, from *VI* to *I* at noon; and from noon till *VI* in the evening, in the quadrant *mE*. And the shadow of the end *O* shows the time from *XI* in the morning till *III* in the afternoon, on the side *rN*; the shadow of the end *P* shows the time from *III* in the morning till *I* o'clock in the afternoon on the side *Qs*.

67. At noon, when the shadow of the eastern stile *fgA* goes off the quadrant *Ac*, in which it shows the time from *VI* in the morning till noon, as it did in the quadrant *gD*, from sun-rise till *VI* in the morning, the shadow of the eastern stile *nopq* begins to enter the quadrant *p*; and shows the hours thereon from *XII* at noon till *VI* in the evening; and after that till *III* in the quadrant *qG*; and the end *Q* casts shadow on the side *Ps*, from *V* in the evening till *IX* at night, if the sun be not set before that time. The shadow of the end *I* shows the time from the side *Kp* from *III* till *VII* in the afternoon; and the shadow of the stile *abcd* shows the time from *VI* in the evening till the sun sets. The shadow of the upright central wire, that supports the globe at top, shows the time of the day, the middle or equinoctial dial, all the summer half-year, when the sun is on the north side of the equator.

#### DIALLING BY SPHERICAL TRIGONOMETRY.

68. The construction of sun-dials on all planes, however, may be included in one general rule; sufficiently intelligible, if that of a horizontal dial for any given latitude be well understood. For there is no plane, however obliquely situated with respect to any given place, but what is parallel to the horizon of some other place; and therefore, if we can find that other place, by a problem, on the terrestrial globe, or by a trigonometrical calculation, and construct a horizontal dial for it; that dial applied to the place where it is to serve will be a true dial for that place.—Thus, an erect direct south dial in  $51^{\circ} 30'$  N. lat. would be a horizontal dial on the same meridian,  $P$  southward of  $51^{\circ} 30'$  N. lat.: which falls in  $38^{\circ} 30'$  S. lat. But if the upright plane declines from facing the south at the given

place, it would still be a horizontal plane  $90^{\circ}$  from that place, but for a different longitude, which would alter the reckoning of the hours accordingly.

69. To calculate the angles which the hour lines of a horizontal dial make with the meridian or twelve o'clock line, see fig. 3. Let *NESW* represent the horizon of any place, *PSN* the meridian, and *P* the N. pole of the sphere: let *KPH* be any hour circle, for example, the circle which makes with the meridian an angle of  $15^{\circ}$ , then the arch of the horizon intercepted between *N*, the north, and *PH* the hour circle, in the plane of which the sun is at *XI* or *I* o'clock, measures the angle contained by the substile of the dial, and the hour lines corresponding to these hours. In the spherical triangle *PNH*, right angled at *N*, there are given the side *PN*, which is the elevation of the pole above the horizon, and the angle *NPH* which is contained by the meridian and hour circle, to find *NH* the arch of the horizon opposite that angle. By spherical trigonometry, radius is to the sine of *PN* as the tangent of *NPH* to the tangent of *NH* the side required. Hence we have this practical rule. To find the angle which any hour line of a horizontal dial makes with the meridian, or which is the same, to find the angle which the hour lines on any dial make with the substile.—To the logarithmic sine of the latitude of the place for which the dial is made, add the logarithmic tangent of the sun's distance from the meridian, for the hour required, the sum, 1—10, is the logarithmic tangent of the angle required.

70. Example.—To find the angles which the hour lines of *XI* or *I* make with the meridian of a horizontal dial for the latitude of London, which is  $51^{\circ} 30'$ .

To logarithmic sine of $51^{\circ} 30'$	9.89354
Add logarithmic tangent of $15^{\circ}$	9.42805
Sum, rejecting 10, is	9.32159

which is the tangent of  $11^{\circ} 51'$  nearly. In like manner it will be found, that the hour lines of *X* and *II* make each with the meridian an angle of  $24^{\circ} 18'$ , &c. And by computing in this manner, with the sine of the latitude, and the tangents of  $30^{\circ}$ ,  $45^{\circ}$ ,  $60^{\circ}$ , and  $75^{\circ}$ , for the hours of *II*, *III*, *IV*, and *V* in the afternoon; or of *X*, *IX*, *VIII*, and *VII* in the forenoon; you will find their angular distances from *XII* to be  $24^{\circ} 18'$ ,  $38^{\circ} 3'$ ,  $53^{\circ} 35'$ , and  $71^{\circ} 6'$ ; which are all that there is occasion to reckon. And these distances may be set off from *XII* by a line of chords; or rather, by taking 1000 from a scale of equal parts, and setting that extent as a radius from *C* to *XII*, fig. 4, and then, taking 209 of the same parts, which are the natural tangents of  $11^{\circ} 50'$  and setting them from *XII* to *XI* and *I*, on the line *HO*, which is perpendicular to *CXII*: and so for the rest of the hour lines, which in the table of natural tangents, against the above distances, are 432, 782, 1355, and 2920, of such equal parts from *XII*, as the radius *CXII* contains 1000. And, lastly, set off 1257, the natural tangent of  $51^{\circ} 30'$ , for the angle of the

stile's height, which is equal to the latitude of the place.

#### DECLINING DIALS.

71. Let us suppose that an upright plane at London declines  $36^\circ$  westward from facing the south; and that it is required to find a place on the globe to the horizon of which the said plane is parallel; and also the difference of longitude between London and that place.

72. Let NESW be the horizon of London, fig. 5, whose zenith is Z, and P the N. Pole of the sphere; and let Zh be the position of a vertical plane at Z, declining westward from S (the south) by an angle of  $36^\circ$ ; on which plane an erect dial for London at Z is to be described. Make the semi-diameter ZD perpendicular to Zh, and it will cut the horizon in D,  $36^\circ$  west of the south S. Then a plane, in the tangent HD, touching the sphere in D, will be parallel to the plane Zh; and the axis of the sphere will be equally inclined to both these places. Let WQE be the equinoctial, whose elevation above the horizon of Z (London) is  $38^\circ 30'$ ; and PRD be the meridian of the place D, cutting the equinoctial in R. Then it is evident, that the arc RD is the latitude of the place D, where the plane Zh would be horizontal, and the arc RQ is the difference of longitude of the planes Zh and DH.

73. In the spherical triangle WDR, the arc WD is given, for it is the complement of the plane's declination from S the south; which complement is  $54^\circ$ , viz.  $90^\circ - 36^\circ$ : the angle at R, in which the meridian of the place D cuts the equator, is a right angle; and the angle RWD measures the elevation of the equinoctial above the horizon of Z, namely  $38^\circ 30'$ . Say, therefore, as radius is to the co-sine of the plane's declination from the south, so is the co-sine of the latitude of Z to the sine of RD the latitude of D: which is of a different denomination from the latitude of Z, because Z and D are on different sides of the equator.

As radius . . . . .	10.00000
To co-sine $36^\circ 0'$ = RQ . .	9.90796
So co-sine $51^\circ 30'$ = QZ . .	9.79415

To sine  $30^\circ 14' = DR$  9.70211 = the latitude of D, whose horizon is parallel to the vertical plane Zh at Z.

74. To find RQ the difference of longitude of the places D and Z; say, as radius is to the co-sine of RW D  $38^\circ 30'$ , the height of the equinoctial at Z, so is the co-tangent of DW  $36^\circ$  the plane's declination, to the co-tangent of RQ the difference of longitudes. Thus,

To the logarithmic sine of $51^\circ 30'$ . . . . .	9.89354
Add the logarithmic tangent of $54^\circ 0'$ . . . . .	10.13874

Their sum rejecting 10 . . . . . 10.03228  
is the nearest tangent of  $47^\circ 8' = WR$ ; which is the co-tangent of  $42^\circ 52' = RQ$ , the difference of longitude sought. Which difference, being reduced to time, is 2 h. 51 m.

75. And thus having found the latitude and longitude of the place D, to whose horizon the

vertical plane at Z is parallel, we proceed to the construction of a horizontal dial for the place D, whose latitude is  $30^\circ 14'$  south; but computing the time at D by 2 h. 51 m., neglecting a half minute in practice, because D is so far westward in longitude from the meridian of London; and this will be a true vertical dial at London, declining westward  $36^\circ$ .

76. Assume any right line CSI, fig. 4, to be the substile of the dial, and make the angle KCP equal to the latitude of the place,  $30^\circ 14'$ , to the horizon of which the plane of the dial is parallel; then CRP will be the stile, or edge that casts the shadow at the hours of the day, in the dial. This done, draw the contingent line EQ, cutting the substile at right angles in K; and from K make KL perpendicular to the axis CRP. Then KL = KR being made radius, that is, equal to the chord of  $60^\circ$ , or tangent of  $45^\circ$  on a good scale, take  $42^\circ 52'$  (the difference of longitude of the places Z and D) from the tangents, and having set it from K to M, draw CM for the hour line of XII. Take KN, equal to the tangent of an angle less by  $15^\circ$  than KM; that is, the tangent of  $27^\circ 52'$ ; and through the point N draw a line for the hour line of I. The tangent of  $15^\circ$  (which is  $15^\circ$  less than  $27^\circ 52'$ ), set off the same way, will give a point between K and N, through which the hour line of II is to be drawn. The tangent of  $2^\circ 8'$ , the difference between  $45^\circ$  and  $50^\circ 43'$  placed on the other side of CL, will determine the point through which the hour line of III is to be drawn; to which  $2^\circ 8'$ , if the tangent of  $15^\circ$  be added, it will make  $17^\circ 8'$ , set this set off from K towards Q, on the line KL, will give the point for the hour line of IV; and so of the rest. The forenoon hours line is drawn the same way, by the continual addition of the tangents  $15^\circ$ ,  $30^\circ$ ,  $45^\circ$ , &c., to  $47^\circ 8' =$  the tangent KM for the hours of XI, X, IX, &c., as far as necessary; that is, until there be no hours on each side of the substile. The sixth hour, accounted from that hour or part of the hour on which the substile falls, will be drawn in a line perpendicular to the substile, and drawn through the centre C.

77. In all erect dials, CM, the hour line of XII is perpendicular to the horizon of the place for which the dial is to serve; for that line is the intersection of a vertical plane with the plane of the meridian of the place, both which are perpendicular to the plane of the horizon; and the line HO, or Ao, perpendicular to CM, will be a horizontal line on the plane of the dial, and which line the hours may be numbered, the CM being set perpendicular to the horizon, the dial will have its true position.

78. If the plane of the dial had declined by an equal angle towards the east, its description would have differed only in this, that the hour line of XII would have fallen on the other side of the substile CL, and the line HO would have a subcontrary position to what it has in the figure.

79. And these two dials, with the upper points of their stiles turned toward the N. Pole, will serve for other two planes parallel to them; the one declining from the N. toward

and the other from the N. toward the same quantity of angle. The like of all dials in general, whatever be the declination and obliquity of their planes to the horizon.

In the plane of the dial not only declines, but inclines, or inclines. Suppose its declination from fronting the south S be equal to  $d$ , fig. 6, on the horizon; and its re- be equal to the arc  $Dd$  of the vertical circle: then it is plain, that if the quadrant  $PZd$  on the globe cuts the point  $D$  on the horizon, and the reclination is counted from quadrant from  $D$  to  $d$ ; the intersection of the circle  $PRd$ , with the equinoctial circle will determine  $Rd$ , the latitude of the place whose horizon is parallel to the given declination at  $Z$ ; and  $RQ$  will be the difference of the places at  $d$  and  $Z$ . Trigonometry thus:—Let a great circle pass through points,  $W, d, E$ ; and in the triangle  $WdE$  the angle at  $D$ , the sides  $WD$  and  $ED$  are given; and thence the angle  $DWd$  is found, so is the hypotenuse  $Wd$ . Again, since, or the sum, of  $DWd$  and  $DWR$ , is the angle of the equinoctial above the horizon at the angle  $dWR$ ; and the hypotenuse of the triangle  $WRd$  was just now found; the sides  $Rd$  and  $WR$  are found, the angle  $dWR$  being the latitude of the place  $d$ , and the complement of  $RQ$ , the difference of longitude. Thus, if the latitude of the place  $d$  be  $30^\circ$  N. the declination  $SD$  of the plane would be horizontal at  $d$  be  $36^\circ$ , and the altitude be  $15^\circ$ , or equal to the arc  $Dd$ ; latitude of the place  $d$ , that is, the arc  $WD$  be  $15^\circ$ ; and  $RQ$ , the difference of longitude,  $36^\circ$ . From these data, therefore, the dial, fig. 7, be described, as in the example.

There are several things requisite in the dialling; the chief of which shall be in the form of arithmetical rules, simple to those who have learned the elements of geometry. For in practical arts of this kind, the arithmetic should be used as far as it can be, and scales never trusted to, except in the construction, where they are absolutely necessary. Laying down the calculated hour distance from the plane of the dial,

the latitude of the place, the sun's declination, his hour distance from the meridian, to find, first, his altitude, second, the declination. Let  $d$ , fig. 6, be the sun's place, declination; and in the triangle  $PZd$ , the sides  $PZ$ , or the difference of  $dR$ , and the complement of  $RQ$ , being given by the supposition, the complement of the latitude  $PZ$ , and  $dPZ$ , which measures the horary distance from the meridian; we shall (by trigonometry) find the base  $Zd$ , which is the distance from the zenith, or the complement of altitude. And, as  $\sin Zd : \sin Pd :: \sin PZ : dZP$ , or of its supplement  $DZS$ , the distance from the south.

The practical rule may be as follows:—As the sine of the sun's altitude,  $L$  and the sine and co-sine of the latitude,  $D$  and sine and co-sine of the sun's declina-

tion, and  $H$  for the sine of the horary distance from VI. Then the relation of  $H$  to  $A$  will have three varieties.

84. When the declination is towards the elevated pole, and the hour of the day is between XII and VI; it is  $A = LD + H/d$ , and  $H = A - LD$ .

85. When the hour is after VI, it is  $A = LD - H/d$ , and  $H = \frac{LD - A}{1/d}$ .

85.\* When the declination is toward the depressed pole, we have  $A = H/d - LD$ , and  $H = \frac{A + LD}{1/d}$ .

86. These theorems will be found useful and expeditious enough for solving those problems, in geography and dialling, which depend on the relation of the sun's altitude to the hour of the day.

87. *Example I.* Suppose the latitude of the place to be  $51^\circ 30'$  north: the time five hours distant from XII, that is, an hour after VI in the morning, or before VII in the evening; and the sun's declination  $2^\circ$  north. Required the sun's altitude?

Then to  $\log. L = \log. \sin. 51^\circ 30' = 1.89354$   
add  $\log. D = \log. \sin. 20^\circ 0' = 1.53405$

Their sum  $= 1.42759$  gives  $L/D = \logarithm \text{ of } 0.267664$ , in the natural sines.

And, to  $\log. H = \log. \sin. 15^\circ 0' = 1.41300$

add  $\log. 1/d = \log. \sin. 38^\circ 0' = 1.79414$   
add  $\log. d = \log. \sin. 70^\circ 0' = 1.97300$

Their sum  $= 1.18014$  gives  $H/d = \logarithm \text{ of } 0.151408$ , in the natural sines. And these two numbers ( $0.267664$  and  $0.151408$ ) make  $0.419072 = A$ ; which, in the table, is the nearest natural sine of  $25^\circ 47'$ , the sun's altitude sought.

88. In these calculations the radius is considered as unity, and not 10-00000, by which, instead of the index 9, we have -1, which only makes the work a little easier.

89. The same hour distance being assumed on the other side of VI, then  $L/D = H/d$  is  $0.116256$ , the sine of  $6^\circ 40' 30''$ ; which is the sun's altitude at V in the morning, or VII in the evening, when his N. declination is  $2^\circ$ . But when the declination is  $2^\circ$  S. (or towards the depressed pole) the difference  $H/d - LD$  becomes negative; and thereby shows, that an hour before VI in the morning, or past VI in the evening, the sun's centre is  $6^\circ 40' 30''$  below the horizon.

90. *Example II.* From the same data to find the sun's azimuth. If  $H, L$ , and  $D$ , are given, then from  $H$  having found the altitude and its complement  $Zd$ : and the arc  $Pd$  (the distance from the pole) being given; say, As the co-sine of the altitude is to the sine of the distance from the pole, so is the sine of the hour distance from the meridian to the sine of the azimuth distance from the meridian. Let the latitude be  $51^\circ 30'$  N., the declination  $15^\circ 0'$  S., and the time 2 h. 24 m. in the afternoon, when the sun begins to illuminate a vertical wall, and it is required to find the position of the wall. Then, by the fore-

going theorems, the complement of the altitude will be  $81^{\circ} 32' 30''$ , and  $Pd$  the distance from the pole being  $109^{\circ} 5'$ , and the horary distance from the meridian, or the angle  $dPZ$ ,  $36^{\circ}$ .

To log. sin.  $74^{\circ} 51'$        $-1.98464$   
Add log. sin.  $36^{\circ} 0'$        $-1.76922$

And from the sum       $-1.75386$

Take the log. sin.  $81^{\circ} 32\frac{1}{2}'$        $-1.99525$

Remains       $-1.75861 = \log. \sin.$

$35^{\circ}$ , the azimuth distance sought.

91. When the altitude is given, find from thence the hour, and proceed as above. This praxis is of singular use on many occasions; as, 1. In finding the declination of vertical planes more exactly than in the common way, especially if the transits of the sun's centre are observed by applying a ruler with sights, either plain or telescopic, to the wall or plane whose declination is required. 2. In drawing a meridian line, and finding the magnetic variation. 3. In finding the bearings of places in terrestrial surveys; the transits of the sun over any place, or his horizontal distance from it, being observed, together with the altitude and hour; and thence determining small differences of longitude. 4. In observing the variations at sea, &c.

#### OF FINDING THE DECLINATION, INCLINATION, AND RECLINATION OF PLANES.

92. The declination, inclination, and reclination of planes are frequently taken with a sufficient degree of accuracy by an instrument called the declinator or declinatory.

92.<sup>a</sup> The construction of this instrument, as somewhat improved by Mr. Jones, is thus: On a mahogany board is inserted a semicircular arch of ivory or box-wood, divided into two quadrants of  $90^{\circ}$  each, beginning from the middle. On the centre of this arch turns a vertical quadrant, which is divided into  $90^{\circ}$ , beginning from the base; on which is a moveable index, with a small hole for the sun's rays to pass through, and form a bright spot on a certain mark. The lower extremity is pointed, to mark the linear direction of the quadrant when applied to any other plane; as this quadrant takes off occasionally, and a plumb-line hangs at the centre, for taking the inclinations and reclinations of planes. On the plane of the board is inserted a compass of points and degrees, with a magnetical needle turning on a pivot over it. See DECLINATORY.

93. The addition of the moveable quadrant and index considerably extend the utility of the declinator, by rendering it convenient for taking equal altitudes of the sun, the sun's altitude, and bearing, at the same time, &c. To apply this instrument in taking the declination of a wall or plane: Place the back part of it in a horizontal direction to the plane proposed, and observe what degree or point of the compass the N. part of the needle stands over from the north or the south, and it will be the declination of the plane from the north or south accordingly. In this case, allowance must be made for the variation of the needle (if any) at the place; and which,

if not previously known, will render this operation very inaccurate.

94. But the most exact way for taking the declination of a plane, or finding a meridian line, by this instrument, is, in the forenoon, about two or three hours before twelve o'clock, to observe two or three heights or altitudes of the sun; at the same time the respective angular pole distances. Write these down; and in the afternoon watch for the same, or one of the same altitudes, and mark the angular distances or distance on the quadrant; the division or divisions exactly between the two noted angular distances will be the true meridian, and the distance which it may fall from the centre of the divisions, will be the declination of the plane. The reason for observing two or three altitudes in the morning is, that in case there should be clouds in the afternoon, we may have the chance of one corresponding altitude.

#### OF THE RIGHT PLACING OF DIALS

95. The plane on which the dial is to be being duly prepared, and every thing necessary for fixing it, you may find the hour with tolerable exactness by a large equinoctial ring-dial and set your watch to it. And then the dial may be fixed by the watch at your leisure.

96. If you would be more exact, take the sun's altitude by a good quadrant, noting the precise time of observation by a clock or watch. Then compute the time for the altitude observed and set the watch to agree with that time, according to the sun. Hadley's quadrant is most convenient for this purpose: for by it you may take the angle between the sun and his image reflected from a basin of water; the half of which angle, subtracting the refraction, is the altitude required.

97. This is best done in summer; and the nearer the sun is to the prime vertical, the more west azimuth, when the observation is made, is much the better. Or, take two equal altitudes of the sun in the same day; one any time between seven and ten in the morning, the other between two and five in the afternoon; noting the moments of these two observations by a clock or watch; and if the watch shows the observations to be at equal distances from noon, it agrees exactly with the sun: if not, the watch must be corrected to half the difference of the forenoon and afternoon intervals; and then the dial may be set true by the watch.

98. For example, suppose you had taken the sun's altitude when it was twenty minutes past VIII in the morning by the watch; and found, by observing in the afternoon, that the sun had the same altitude ten minutes before IV. this it is plain, that the watch was five minutes too fast for the sun: for five minutes after III is the middle time between VIII h. 20 m. in the morning, and III h. 50 m. in the afternoon; and, therefore, to make the watch agree with the sun, it must be set back five minutes.

99. In many cases, where the situation is suitable, it is very desirable to have a true meridian line for the regulation of clocks and watches; we shall, therefore, here insert Mr. Ferguson's method of constructing one.

round hole, about a quarter of an inch in a thin plate of metal; and fix the top of a south window, in such a place it may recline from the zenith at an angle to the colatitude of your place, as you can guess: for then the plate will run directly at noon on the equinoctial if the sun shine freely through the hole in the room; and hang a plumb-line to the ceiling, at least five or six feet from the wall, in such a place as that the sun's shadow is admitted through the hole, may fall upon the floor when it is noon by the clock; and having marked the said place on the ceiling, take a line.

Adjust a sliding bar to a dovetail piece of wood about eighteen inches long, and fix a hook into the middle of the bar, and the wood to the above-mentioned place on the ceiling parallel to the side of the room in which the window is; the groove and the bar should be towards the floor; then hang the plumb-line from the hook in the bar, the weight or plummet reaching almost to the floor; and the bar will be prepared for further and proper use.

Now find the true solar time by either of the above methods, and thereby regulate your clock, at the moment of the next noon by the clock, when the sun shines, move the sliding bar, until the shadow of the plummet is the image of the sun, made by his shadow admitted through the hole, on the floor, on a white screen placed on the north wall; the plummet at the end of the bar will hang freely in a pail of water placed beneath the floor. — But because this may not be exact for the first time, on account that the plummet will not settle immediately, even in water, it may be farther corrected on the following day by the above method, with the sun and the plummet so brought to a very great exactness. The shadow transmitted through the hole will be a faint image of the sun, even on a white screen; unless the room be so darkened that no light may be allowed to enter but what comes

through the small hole in the plate. And always, for some time before the observation is made, the plummet ought to be immersed in a jar of water, where it may hang freely; by which means the line will soon become steady, which otherwise would be apt to continue swinging.

#### OF THE DOUBLE HORIZONTAL, THE BABYLONIAN AND ITALIAN DIALS.

100. Sometimes a stereographic projection of the hour circles, and the parallels of the sun's declination, is added to the gnomonic projection, on the same horizontal plane; the upright side of the gnomon being sloped into an edge, standing perpendicularly over the centre of the projection: so that the dial, being in its due position, the shadow of that perpendicular edge is a vertical circle passing through the sun, in the stereographic projection. The months being duly marked on this dial, the sun's declination, and the length of the day at any time, are had by inspection; as also his altitude, by means of a scale of tangents. But its chief property is, that it may be placed true, whenever the sun shines, without the help of any other instrument.

101. The Babylonian and Italian dials reckon the hours, not from the meridian as with us, but from the sun's rising and setting. Thus, in Italy, an hour before sun-set is reckoned the twenty-third hour; two hours before sun-set the twenty-second hour; and so of the rest. And the shadow that marks them on the hour-lines, is that of the point of a stile. This occasions a perpetual variation between their dials and clocks, which they must correct from time to time, before it arises to any sensible quantity, by setting their clocks so much faster or slower. And in Italy, they begin their day, and regulate their clocks, not from sun-set, but from about mid-twilight, when the Ave Maria is said; which corrects the difference that would otherwise exist between the clock and the dial. The improvements which have been made in all sorts of instruments and machines for measuring time, have rendered these dials of little account.

If the conferring of a kindness did not bind the person upon whom it was conferred to the returns of gratitude, why, in the universal *dialect* of the world, are kindnesses still called obligations?

South.

The Tuscan language is greatly admired for its elegance, and the meanest inhabitants of Italy speak a *dialect* which the rest of Italy are unable to imitate.

DI'ALECT is an appellation given to the language of a province, in so far as it differs from that of the whole kingdom. The term is particularly used in speaking of the ancient Greeks, whereof there were four dialects, each of which was a perfect language in its kind, though it was not in place in certain countries. In Great Britain, besides the two dialects of English and Welsh, almost every county has a dialect of its own, differing considerably in pronunciation, idiom, and tone, although one and the same language.

DI'ALECTICS, in the literary history of the ancients, that branch of logic which taught the rules and modes of reasoning. See LOGIC. Zeno was the first who discovered the series of principles and conclusions observed in reasoning, and formed an art thereof in the form of a dialogue; which, for this reason, was called dialectica. The dialectica of the ancients was usually divided into several kinds: The first was the eleatica, that of Zeno Eleates, which was threefold; viz. consecutionum, colloquii, and contentiunum. The first consisting of rules for deducing or drawing conclusions. The second, the art of dialogue; which became such universal use in philosophy, that all reasoning was called interrogation: then, syllogism being laid aside, the philosophers used dialogue, and required the respondent to conclude, and argue from the several concessions made. The last part of Zeno's dialectics, *aporiaum*, was contentious, or the art of disputing and contradicting, though some, particularly Laertius, ascribe this part to Protagoras a disciple of Zeno.

The second is the dialectica *megarica*, the author is Euclid, as of Megara. He gave

hod of Zeno and Protagoras; though no things appropriated to him: the impugned the demonstrations of by assumptions, but conclusions; making illations, and proceeding uence to consequence: the second, side all arguments drawn from com- similitude as invalid. He was suc- bululides, from whom the sophistic ming is said to be derived. In his is described as manifold: mentiens, ra, obvelata, arcevalis, cornuta, and SOPHISM.

is the dialectica of Plato, which he a kind of analysis to direct the bu- by dividing, defining, and bringing first truth; where being arrived, it f to explain sensible things, but with turn to the first truth where alone it uch is the idea of Plato's analysis.

h is Aristotle's dialectica: containing b of simple words, delivered in his edicaments; the doctrine of propo- his book De Interpretatione; and several kinds of syllogism, in his alytics, Topics, and Elenchuses.

is the dialectica of the Stoics; which part of philosophy, dividing it into l dialectic; to which some add the whereby things are justly defined; log likewise the canons or criterions The Stoics, before they treat of have two principal places; the one gnification of words, the other about gnified. On occasion of the first, r abundance of things belonging to arian's province: what, and how ; what is a word, diction, speech, occasion of the latter, they consider selves, not as without the mind, but nived in it by means of the senses. y, they first teach, that nil sit in in- ed non prius fuerit in sensu; 'what- e mind came thither by the senses;' t incursione sui, as Plato, who meets aut similitudine, as Cæsar by his proportion, either by enlarging as a diminishing as a pygmy; aut trans- a Cyclops; aut compositione, as a ut contrario, as death; aut privatione, nan.

is Epicurus's dialectica: who had certain canons, the collection whereof monica; and as all questions in phi- either de re or de voce, he gave les for each.

A speaker in a conference; a conference or con-  
versation between two or more persons. To  
hold a conference.

Will you hear the *dialogue* that the two learned  
men have compiled in praise of the owl and cuckoo?  
Shakspeare.

Dost *dialogue* with thy shadow?

Id. Timon.

In easy *dialogues* is Fletcher's praise;  
He moved the mind, but had not power to raise.  
Dryden.

With the stars

And the quick Spirit of the Universe  
He held his *dialogues*; and they did teach  
To him the magic of their mysteries. Byron.

**DIALYSIS**, in grammar, a mark or character, consisting of two points (· ·) placed over two vowels, because otherwise they would make a diphthong, as Mosæic, Phæton, &c.

**DIAMASTIGOSIS**, a festival of Sparta, in honor of Diana Orthia, which received that name απο του μαστιγουν, from whipping, because boys were whipped before the altar of the goddess. These boys, called Bomoniceæ, were originally free-born Spartans, but in the more delicate ages they were of mean birth, and generally of a slavish origin. This operation was performed by an officer in a severe and unfeeling manner; and that no compassion should be raised, the priest stood near the altar with a small light statue of the goddess, which suddenly became heavy and insupportable if the lash of the whip was less rigorous. The parents of the children attended the solemnity, and exhorted them not to show themselves, either by fear or groans, unworthy of Laconian education. These flagellations were so severe, that the blood gushed in profuse torrents, and many expired under the lash of the whip, without uttering a groan, or betraying any marks of fear. Such a death was reckoned very honorable, and the corpse was buried with much solemnity with a garland of flowers on its head. The origin of this festival is unknown. Some suppose that Lycurgus first instituted it to inure the youth of Lacedæmon to bear labor and fatigue, and render them insensible to pain and wounds. Others maintain, that it is a mitigation of an oracle, which ordered that human blood should be shed on Diana's altar; and according to their opinion, Orestes first introduced that barbarous custom, after he had brought the statue of Diana Taurica into Greece. There is another tradition which mentions that Pausanias, as he was offering prayers and sacrifices to the gods, before he engaged with Mardonius, was suddenly attacked by a number of Lydians who disturbed the sacrifice, and were at last repelled with staves and stones, the only weapons with which the Lacedæmonians were provided at that

moment. In commemoration of this, therefore, the whipping of boys was instituted at Sparta, and after that the Lydian procession.

**DIAMETER**, *n. s.* } Gr. διά and μέτρον, a measure. The line which, passing through the centre of a circle, or other curvilinear figure, divides it into equal parts. Diametral and diametrical is describing or relating to a diameter; also, in a figurative sense, directly opposite; or perhaps, to the greatest length opposed, as are the points of a circumference touched by the ends of a diameter. Diametral and diametrically are also synonymous.

The space between the earth and the moon, according to Ptolemy, is seventeen times the diameter of the earth, which makes, in a gross account, about one hundred and twenty thousand miles. *Ruleigh.*

He made an instrument to know  
If the Moon shine full or no.

— Tell what her diameter to an inch is,  
And prove that she's not made of green cheese.

*Hudibras.*

He persuaded the king to consent to what was diametrically against his conscience and his honour, and, in truth, his security. *Clarendon.*

Christian piety is, beyond all other things, diametrically opposed to profaneness and impiety of actions. *Hammond.*

Thus intercepted in its passage, the vapour, which cannot penetrate the stratum diametrically, glides along the lower surface of it, permeating the horizontal interval, which is betwixt the said dense stratum and that which lies underneath it. *Woodward.*

That the longer diameter of an ellipse may be shortened, till it shall differ little from a circle, is indisputably true. *Johnson.*

**DIAMETER**. The line, which passing through the centre of a circle, or other curvilinear figure, divides it into equal parts. The impossibility of expressing the exact proportion of the diameter of a circle to a circumference, by any received way of notation, and the absolute necessity of bringing it as near the truth as possible, has induced some of the most celebrated men in all ages to endeavour to approximate it. The first who attempted it with success was the celebrated Van Cuelen, a Dutchman, who, by the ancient very laborious method, carried it to thirty-six decimal places; these he ordered to be engraved on his tomb-stone, thinking he had set bounds to improvement. However, the indefatigable Abraham Sharp carried it to seventy-five places in decimals; and since that time it has been carried much further.

**DIAMOND**, *n. s.* } Fr. and Dut. *diamant*;  
**DIAMONDED**, *adj.* } Ital. Span. and Port. *diamante*; Tent. *démant*, from Lat. *adamas*, *adaman-tis*, Gr. ἀδάμας, ἀδάμαντος, i. e. a privative, and δαμάω to subdue, because too hard to break or mould into shape. See the article below. A precious stone. Diamonded is, shaped like a diamond.

I see how thine eye would emulate the diamond:  
thou hast the right arch bent of the brow.

*Shakespeare.*

Lop a bough of a tree, and one shall behold the  
thereof (by some secret cause in nature) *Shakespeare.*  
or streaked in the fashion of a lozenge.

Certainly the price and virtue of things consist  
in the quantity: one diamond is more valuable than  
many quarries of stone. *Bp. Hall. Contention.*

The diamond is by mighty monarchs  
Fair as the star that ushers in the morn.

*Blue.*

The lively diamond drinks thy pores  
Collected light, compact.

Shakespeare opens a mine which contains  
diamonds in inexhaustible plenty, though dis-  
incrusted, debased by impurities, and  
with a mass of meaner minerals.

The **DIAMOND** is a genus of siliceous called *adamas gemma* by the Latins, *diamant* by the Germans and Swedes, and *diamant* by the French, and is the hardest of all stones hitherto discovered. See **ADAMAS**. It was thought by the ancients that the diamond became soft and malleable, by steeping it in hot pure blood. Diamonds are found only in the East Indies, and in Brasil in South America. The diamond mines are in **GOLCONDA**, **VENICE**, **BENGAL**, and the island of **BORNEO**. See our articles. In the mines of Golconda are found a great number of stones from ten to forty carats, and upwards; and it was here that the famous diamond of **Aurengzebe**, the great mogul, was found, which before it was cut weighed thirty-two rats. The stones of this mine are not very hard, their water is usually tinged with the quality of the soil: being black where that is marshy, and where it partakes of red; and sometimes red and yellow, where the ground is of these colours. Another defect is a kind of greasiness appearing on the diamond, when cut, which takes off part of its lustre. There are usually not fewer than 60,000 persons, men, women, and children, to work in this mine. When the miners have found a place where they intend to dig, they level another somewhat bigger near it, and enclose a small wall about two feet high, leaving apertures from space to space, to give passage to the water. They dig twelve or fourteen feet deep, and when they find water. Then they cease, and the water thus found serves to wash the earth two or three times, after which it is let out at an aperture reserved for that purpose. This earth being washed and dried, they sift it in a kind of open sieve, as we do corn; then thresh it, and sift it afresh; and lastly, search it well with the hands to find the diamonds. The miners work naked except that they have a thin linen cloth between them. They have also inspectors, to prevent their concealing diamonds; which, however, they frequently do, by swallowing them when not observed.

Diamonds are commonly clear and pellucid, yet some are met with of a rose colour, or passing to green, blue, or black, and some have black specks. Tavernier saw one in the treasury of the mogul, with black specks in it, weighing about fifty-six carats; and he informs us, that yellow and black diamonds are produced in the mines at Carnatica. Mr. Dutens also relates that he saw a black diamond at Vienna in the collection of the prince de Lichtenstein. See our

ve a greenish crust; and of these relates, that they burst into pieces into a proper shape, or in the very ring on the wheel. In confirmation mentions a large diamond worth up- 600 sterling, which burst into nine polishing on the wheel at Venice. emonds are those of a color like pure regular form, and free from stains, , flaws, and cross veins. Diamonds, low, blue, green, or red, in a high ext in esteem; but if they are tinc- ese colors only in a low degree, the ly diminished. There are also dia- rown, and some of a dark hue; the ng the brownest sugar-candy, and ky iron. In the Philosophical Com- t, Dr. Lewis tells us of a black dia- himself had seen. At a distance it raly black, but on closer examina- d in some parts transparent, and in d with foulness, on which the black d. These gems are lamellated, con- y thin plates like talc, but very d, the direction of which must be y lapidaries before they can work y. Such as have their foliated sub- a flat position, are called by the emonds of nature.

water in diamonds means the greatest perfection of their complexion, which that of the purest water. When d short of this perfection, they are the second or third water, &c., till y be properly called a colored one: be an impropriety to speak of an colored diamond, or one that has as a stone of a bad water only.

is so hard, that it can only be cut by itself and its own substance. To hat perfection which augments its dderably, they begin by rubbing se- each other while rough, after having n the ends of two wooden blocks, to be held in the hand, with a mix- and brick dust. It is this powder, off, and received in a little box for that serves to grind and polish the This is done by a mill, which turns oft iron, sprinkled over with dia- mixed with oil of olives. The same pund, and diluted with water and ed in the sawing of diamonds, which with an iron or brass wire as fine as times, in lieu of sawing, they cleave ally if there be any large shivers the Europeans are not usually dar- enough to run the risk of cleaving, taking.

latest diamond ever known belongs of Portugal, and was found in Brasil. tut; and Mr. Magellan informs us, rger, but a piece was broken off by :countryman who chanced to find n, and tried its hardness by the rge hammer upon an anvil. This amond weighs 1680 carats; and s uncut, Mr. Rome de l'Isle says VII.

that it is valued at £224,000,000 sterling, which gives the estimation of 79.36, or about £80 ster- ling for each carat; viz. for the multiplicand of the square of its whole weight. But even in case of any error of the press in this valuation, if we employ the general rule abovementioned, this great gem must be worth, at least, above £3,500,000 sterling. 2. The famous diamond which adorns the imperial sceptre of Russia under the eagle at the top of it, weighs 779 carats, and is worth at least £4,854,728 sterl., although it hardly cost 135,417 guineas. This diamond was one of the eyes of a Malabarian idol, named Sche- ringham. A French grenadier, who had deserted from the Indian service, contrived to become one of the priests of that idol, from which he stole one of its eyes; he then ran away to the English at Trichinapeuty, and thence to Madras. A ship's captain bought it for 20,000 rupees; afterwards a Jew gave £17,000 or £18,000 sterling for it: at last a Greek merchant, named Gregory Suffras, offered it to sale at Amsterdam in 1766; and the late prince Orloff purchased it, as he himself told Mr. Magellan in London, for the empress Ca- tharine II. The figure and size of this diamond may be seen in the British Museum in London: it is not of a regular form. 3. The diamond of the great mogul is cut in rose; weighs 279½ carats, and is worth 380,000 guineas. This diamond has a small flaw underneath near the bottom; and Tavernier, page 399, who examined it, valued the carat at 150 French livres. Before this dia- mond was cut it weighed 793½ carats, according to Rome de l'Isle; but Tavernier, vol. 2, p. 339, says, that it weighed 900 carats before it was cut. If this is the same diamond, its loss by being cut was very extraordinary. 4. Another diamond of the king of Portugal, which weighs 215 carats, is extremely fine, and is worth at least 369,800 guineas. 5—7. The diamond of the emperor of Germany weighs 139½ carats; and is worth at least 109,520 guineas. Tavernier says, that this diamond has a little hue of a citron color; and he valued it at 135 livres tournoises the carat. Robert de Berquen the grandson of Louis, says, that this diamond was cut into two: that the grand Turk had another of the same size; and that there were at Bisnagar two large diamonds, one of 250 and another of 140 carats. 8. The dia- mond of the late king of France, called the Pitt or Regent, weighs 136½ carats: this gem is worth at least 208,333 guineas, although it did not cost above the half of this value. 9. The other dia- mond of the same monarch, called the Sancy, weighs fifty-five carats: it cost 35,000 guineas; and M. Dutens says, that it is worth much above that price.

For the valuation of diamonds of all weights, Mr. Jefferies lays down the following rules.—He first supposes the value when rough to be £2 per carat, at a medium; then to find the value of diamonds of greater weights, multiply the square of their weight by 2, and the product is the value required. *Example.* To find the value of a rough diamond of two carats,  $2 \times 2 = 4$ , the square of the weight; which, multiplied by 2 gives £8, the true value of a rough diamond of two carats. For finding the value of manufac-

tured diamonds, he supposes half their weight to be lost in manufacturing them. To find their value, multiply the square of double their weight by 2, which will give their true value in pounds. Thus to find the value of a wrought diamond weighing two carats; we first find the square of double the weight, viz.  $4 \times 4 = 16$ ; then  $16 \times 2 = 32$ . So that the true value of a wrought diamond of two carats is £32.

The names of *oriental* and *occidental*, given by jewellers to this and all other precious stones, have a different meaning from the obvious sense; the finest and hardest being always called *oriental* whether they be produced in the east or not. Those called *occidental* are of inferior value; but according to Mr. Jefferies, who has written a treatise on the subject, the diamonds of Brasil equal the finest oriental ones. Diamonds are also distinguished according to their figure, by the names of rose diamonds, brilliants, and rough diamonds.

*Brilliant diamonds* are those cut in faces both at top and bottom; and whose table, or principal face at top, is flat. To make a complete square brilliant, if the rough diamond be not round of a square figure, it must be made so; and if the work be perfectly executed, the length of the axis will be equal to the side of the square base of the pyramid. Jewellers then form the table and collet by dividing the block, or length of the axis, into eighteen parts. They take 5-18ths from the upper part, and 1-18th from the lower. This gives a plane at 4-18ths from the girdle for the table; and a smaller plane at 5-18ths distance for the collet, the breadth of which will be 1-5th of the breadth of the table. In this state the stone is said to be a *complete square table diamond*. The brilliant is an improvement on the table diamond, and, according to Mr. Jefferies, was introduced within the last century. To render a brilliant perfect, each corner of the above described table diamond, must be shortened by 1-20th of its original. The corner ribs of the upper sides must be flattened, or run towards the centre of the table 1-6th less than the sides; the lower part, which terminates in the girdle, must be 1-8th of one side of the girdle; and each corner rib of the under sides must be flattened at the top, to answer the above flattening at the girdle, and at the bottom must be 1-4th of each side of the collet. The parts of the small work, which complete the brilliant, or the star, and skill facets, are of a triangular figure. Both of these partake equally of the depth of the upper sides from the table to the girdle; and meet in the middle of each side of the table and girdle, as also at the corners. Thus they produce regular lozenges on the four upper sides and corners of the stone. The triangular facets, on the under sides, joining to the girdle, must be half as deep again as the above facets, to answer to the collet parts. The stone here described is said to be a *well substantiated brilliant*. If the stone is thicker than in the proportion here mentioned, it is said to be an *over-weighted brilliant*. If the thickness is less than in this proportion, it is called a *spread-brilliant*. The beauty of brilliants is diminished by their being either over-weighted or spread. The true proportion of the axis, or depth of the

stone to its side, is as 2 to 3. Brilliants distinguished into square, round, oval, and from the figure of their respective girdles.

*Rose diamonds* are quite flat underneath their upper part cut in divers little faces, triangles, the uppermost of which terminate in a point. The depth of the stone from the point must be half the breadth of the stone of the base of the stone. The diameter of the crown must be 2-5ths of the diameter of the stone. The perpendicular, from the base to the point, must be 3-5ths of the diameter of the stone. The lozenges which appear in all circular rose diamonds, will be equally divided by the perpendicular, which forms the crown; and the upper angles of the lozenge will terminate in the extreme point of the stone, and the lower in the base or girdle.

*Rough diamonds* are the stones, as nature produces them in the mines. They should be selected uniform, of a good shape, transparent, quite white, and free of flaws and shivers, rugged, dirty, flawed, veiny stones, and stones as are not fit for cutting, they use to powder in steel mortar made for that purpose; and pulverised they serve to saw, cut, and polish. Shivers are occasioned in diamonds by this, that the miners, to get them more clear of the vein, which winds between two rocks, break the rocks with huge iron levers, and shakes, and fills the stone with cracks and shivers.

It has been proved that diamonds are liable to being dissipated, not only by the heat of the sun, but also by the heat of a furnace. Boyle says, that he perceived acrid and penetrating exhalations from diamonds exposed to fire. A diamond by exposure to a concave speculum, the diameter of which was forty inches, was reduced to an eighth part of its weight. In the *Giornale de Letterati* there is a relation of experiments made on precious stones, by order of the grand duke of Tuscany, with a burning lens, the diameter of which was two-thirds of a Florentine ell, near the end of which was placed another smaller lens. In these experiments we find, that diamonds were altered by solar heat than most of the other precious stones, although not the least alteration of a commencing fusion was observed. A diamond weighing thirty grains, thus exposed during thirty seconds, lost its color, but retained its transparency, and became of an opaque white; five minutes bubbles appeared on its surface; afterwards it burst into pieces, which were separated; and the small fragment which remained was capable of being crushed into fine powder by the pressure of the blade of a knife. The addition of glass, flints, sulphur, or salt of tartar prevented this dissipation of diamonds, or occasioned any degree of fusion. Other experiments made by order of the grand duke of Tuscany, we find, that diamonds were not dissipated by having been exposed to a violent fire of a furnace during two hours; while rubies by the same heat altered in weight, color, or polish. By exposing diamonds during two hours only to the following alterations produced by fire were observed. First, they lost their

then they were split into thin plates; and, lastly, totally dissipated. By the same fire, emeralds were fused. See *Magasin de Hambourg*, tom. xviii. The action of fire on diamonds was, notwithstanding the above-mentioned experiments, doubted in France, where numerous experiments have been made. M. D'Arcet, found, not only that diamonds included in porcelain crucibles, closed or covered with perforated lids, and exposed to the long and intense heat of a porcelain furnace, were perfectly dissipated; but also, that these stones could, in a few hours, be totally volatilised with a much inferior degree of heat, by exposing them in a coppel, under the muffle of an assay furnace. In this experiment, he observed that the dissipation was gradual, and that it was effected by a kind of exfoliation. The dissipation of diamonds exposed in coppels was confirmed by M. Macquer, who farther observed, that the diamonds were, before the dissipation began, rendered, by the fire, brilliant and shining, as it were, with a phosphoric light. To determine whether the dissipation of diamonds was effected by their reduction into vapor, or by a combustion or other effect of air upon them, Messrs. Lavoisier, Macquer, and Cadet, exposed diamonds to intense heat in an earthen retort, during several hours, but without any other effect than that their polish was destroyed, and about 1-7th of their weight diminished. M. Mitouard put diamonds in a tobacco-pipe filled with powdered charcoal accurately closed with lute. He further secured the diamonds from access of air or flame, by placing the tobacco-pipe in a crucible, to which another crucible was inverted and carefully luted. The diamonds, thus excluded from external air, having been exposed to the intense heat which could be excited in a well constructed furnace, were not thereby altered or diminished.

Lavoisier, in a memoir published in 1772, showed that when the diamond is burnt, carbonic acid gas is obtained, and that there is a striking analogy between it and charcoal. In 1785 Martin Morvan found that the diamond is combustible when dropped into melted nitre; that it burns without leaving any residuum, and in a manner analogous to charcoal. In 1797 Mr. Tennant repeated this experiment with much more precision; and the conclusion he drew from it was, that when a diamond is burnt, the whole of the product is carbonic acid gas; that a given weight of diamond yields just as much carbonic gas as the same weight of charcoal; and that diamond and charcoal are both composed of the very same substance.

Sir Humphry Davy, from the action of potassium on it, and its non-conduction of electricity, suggested in his third Bakerian lecture, that a minute portion of oxygen might exist in it; and in his new experiments on the fluoric compounds he threw out the idea, that it might be the carbonaceous principle, combined with some new, light, and subtle element, of the oxygenous and chlorine class.

This unvalued chemist, during his residence at Florence in March, 1814, made several experiments on the combustion of the diamond and of plumbago, by means of the great lens in

the cabinet of natural history; the same instrument as that employed in the first trials on the action of the solar heat on the diamond, instituted in 1694 by Cosmo III., grand duke of Tuscany. He subsequently made a series of researches on the combustion of different kinds of charcoal at Rome. His mode of investigation was peculiarly elegant, and led to the most decisive results.

From the results of his different experiments, conducted with the most unexceptionable precision, it is demonstrated, that diamond affords no other substance by its combustion than pure carbonic acid gas; and that the process is merely a solution of diamond in oxygen, without any change in the volume of the gas.

DIAMOND, in the glass trade, an instrument used for squaring the large plates or pieces; and, among glaziers, for cutting their glass. These sorts of diamonds (which are small broken pieces of real diamonds), are differently fitted up. To be used for large pieces, as looking-glasses, &c. they are set in an iron ferrule, about two inches long, and a quarter of an inch in diameter, the cavity of the ferrule being filled up with lead, to keep the diamond firm: there is also a handle of box or ebony fitted to the ferrule, for holding it by. An application of the diamond, of great importance in the art of engraving, has been also made within a few years by the late Wilson Lowry, the eminent engraver, and first inventor of the mechanical methods now used in that part of the process called etching. He applied them to the purpose of drawing or ruling lines, which are afterwards to be deepened by aqua-fortis. Formerly steel points, called etching-needles, were used for that purpose, but they soon became blunt by the friction against the copper.

DIAMOND, in heraldry, a term used for expressing the black color in the achievements of peerage. Gullim does not approve of blazoning the coats of peers by precious stones, instead of metals and colors; but the English practice allows it. Morgan says the diamond is an emblem of fortitude.

DIAMONDS, CORNISH, a name given by many people to the crystals found in digging the mines of tin in Cornwall.

DIAMOND HARBOUR, a harbour in the Ganges, or Hoogly River, about thirty-four miles below Calcutta. The Company's ships are generally unloaded here, and take in their homeward-bound cargoes. The place is unhealthy; and owing to the heavy exhalations the sleeping in it is next to certain death. The country on both sides of the river abounds with tigers. The village is poor; but at Fulta, twelve miles up the river, there is a market and a good inn.

DIANA, the goddess of hunting. According to Cicero, there were three of this name: a daughter of Jupiter and Proserpine, who became mother of Cupid—a daughter of Jupiter and Latona—and a daughter of Upris and Glaucus. The second is the most celebrated, and to her the ancients allude. She was early averse to marriage, and obtained leave of her father to live in perpetual celibacy, and to preside over the puns of women. To shun the society of

men she devoted herself to hunting, and was always accompanied by a number of chosen virgins, who, like herself, abjured marriage. She is represented with a quiver, attended with dogs, and sometimes drawn in a chariot by two white stags. Sometimes she appears with wings, holding a lion in one hand and a panther in the other, with a chariot drawn by two heifers, or two horses of different colors. She is tall, her face something manly; her legs are bare, well-shaped, and strong, and her feet covered with a buskin. She received many surnames, particularly from the places where her worship was established, and from the functions over which she presided. She was called Lucina, Ilythia, or Juno Pronuba, when invoked by women in child-bed; and Trivia, when worshipped in the cross-ways, where her statues were generally erected. She was supposed to be the same as the moon, and Proserpine or Hecate; hence she was called Triformis; and some of her statues represented her with three heads,—that of a horse, a dog, and a boar. Her powers and functions under these three characters have been expressed in these lines:—

Terret, lustrat, agit, Proserpina, Luna, Diana,  
Ina, suprema, feras, sceptro, fulgore, sagitta.

She was also called Agrotera, Orthia, Taurica, Delia, Cynthia, Aricia, &c., and supposed to be the same as the Isis of the Egyptians, whose worship was introduced into Greece with that of Osiris. When Typhon waged war against the gods, Diana metamorphosed herself into a cat to avoid his fury. The most famous of her temples was that of Ephesus. See EPHEBUS. She was there represented with a great number of breasts, and other symbols of Cybele, or the earth. Though the patroness of chastity, yet she is said to have descended from her dignity to enjoy the company of Endymion, and to have granted favors to Pan and Orion. The inhabitants of Taurica were particularly attached to the worship of this goddess, and offered on her altar all the strangers that were shipwrecked on their coasts. Her temple in Aricia was always served by a priest who had murdered his predecessor; and the Lacedæmonians yearly offered her human victims till the time of Lycurgus, who changed this barbarous custom for the sacrifice of flagellation. See DIAMASTIGOSIS. The Athenians generally offered her goats; and others a white kid, a boar pig, or an ox. Among plants, the poppy and the dittany were sacred to her. She had oracles in Egypt, Cilicia, and Ephesus.

DIANÆ FANUM, in ancient geography, a promontory of Bithynia; now called Scutari, a citadel, opposite to Constantinople, on the east side of the Bosphorus Thracicus.

DIANDRIA, from δις twice, and ἀνρ a man, the second class in Linnaeus's sexual system, consisting of hermaphrodite plants, which have flowers with two male organs. See BOTANY.

DIANIUM, in ancient geography, a town in Valentia, famous for a temple of Diana, whence the name; now called Denia.

DIANTHERA, in botany. See JUSTICIA.

DIANTHUS, the clove-gilliflower, carnation, pink, sweet-william, &c., a genus of the digyna

order, and decandria class of plants; natural order twenty-second, caryophyllei: cal. cylindrical, and monophyllous, with four scales at the base. There are five petals with narrow heels, the capsule is cylindrical and unilocular. There are many species, but not above four that have much beauty as garden flowers. But each of these furnishes several beautiful varieties: viz.

1. *D. barbatus*, or bearded dianthus, commonly called sweet-william. This rises with many thick leafy shoots, crowning the root in a cluster close to the ground; garnished with spear-shaped evergreen leaves, from half an inch to two inches broad. The stems are upright and firm, branching erect two or three feet high, having all the branches and main stem crowned by numerous flowers in aggregate clusters of different colors and variegations.

2. *D. caryophyllus*, clove-gilliflower, including all the varieties of carnation. It rises with many short trailing shoots from the root, garnished with long, very narrow, evergreen leaves, and amidst them upright slender flower-stalks, from one to three feet high, emitting many side shoots, all of which, as well as the main stalk, are terminated by large solitary flowers, having short oval scales to the calyx, and crested petals. The varieties of this are very numerous, and unlimited in the diversity of flowers.

3. *D. chinensis*, Chinese, or Indian pink, an annual plant, with upright firm flower-stalks, branching erect on every side, a foot or fifteen inches high, having all the branches terminated by solitary flowers of different colors and variegations, appearing from July to November.

4. *D. deltoides*, or common pink, rises with numerous short leafy shoots, crowning the root in a tufted head close to the ground, closely garnished with small narrow leaves, and from the ends of the shoots many erect flower-stalks, from about six to fifteen inches high, terminated by solitary flowers of different colors, single and double, and sometimes firmly variegated. The species is perennial, as all the varieties of a commonly cultivated also are.

DIAPASE, or DIAPASON, n. s. Gr. διαπαση. A chord including all tones. The first is the old word.

The sweet numbers and melodious measure,  
With which I wot the winged words to use,  
And make a tuneful diapase of pleasures,  
Now being let to run at liberty. *Spranger*

It discovereth the true coincidence of sounds, *which* is the return of the same sound. *Blount*

Harsh din

Broke the fair music that all creatures made  
To their great Lord, whose love their motion ceased  
In perfect diapason, whilst they stood  
In first obedience, and their state of good. *Milton*

From harmony, from heavenly harmony,  
This universal frame began;  
From harmony to harmony

Through all the compass of the notes it ran.

The diapason closing full in man. *Shakespeare*  
*Diapason* denotes a chord which includes all tones; it is the same with that we call an eighth, or an octave, because there are but seven tones or notes, and the eighth is the same again with the first. *Morgan*

musical' when all-devouring Time,  
 On his throne of ruins hoar,  
 Winds and tempests sweep his various lyre,  
 In thy diapason, Melancholy. *Byron.*

is among musical instrument makers,  
 scale whereby they adjust the pipes  
 and, and cut the holes of their haut-  
 &c., in due proportion for perform-  
 es, semi-tones, and concords just.

in music, a musical interval by  
 writers on music express the oc-  
 Greeks.

in DIAEX, a kind of compound con-  
 chich there are two sorts: the greater,  
 the proportion of 10:3; and the lesser,  
 16:5.

in DIAPEXTE, a compound conso-  
 triple ratio, as 3-9. This interval,  
 anus Capella, consists of nine tones  
 -tone, nineteen semi-tones, and thirty-  
 . It is a symphony made when the  
 eds from the first to the twelfth sound.

in DIATESSARON, a compound con-  
 ded on the proportion of eight to  
 this interval Martianus Capella allows  
 and a semi-tone, seventeen semitones,  
 four dieses. This is when the voice  
 from its first to its eleventh sound.  
 as would rather call it the eleventh.  
 DESIS, in medicine, a transudation  
 is through the sides of the vessels that  
 in, occasioned by the blood's becoming  
 attenuated, or the pores too open.

NTE, in ancient music, an interval  
 is second of the concords, and with  
 from an octave. This is what in mo-  
 is called a fifth.

DI, n. s. & v. a. Fr. *diapre*; so called from  
 (pres), as Denim from Nismes. Linen  
 in in flowers, and other figures; the  
 lies of figured linen after damask.  
 is verb, to diversify or variegate with  
 to imitate diaper.

y damsel, which her vaunteth most

lilful knitting of soft silken twine;

y weaver, which his work doth boast

per, in damask, or in lince,

in their diverse cunning ever dare

his so curious net-work to compare.

*Spenser.*

he stones her tender foot should wrong,

he strewed with flowers all along,

of like the discoloured mead. *Id.*

attend him with a silver bason

as-water, and bestrowed with flowers;

near the cwer, a third a diaper.

*Shakespeare.*

per upon folds, let your work be broken,  
 as it were, by the half; for reason tells  
 er fold must cover somewhat unseen.

*Pencham on Drawing.*

to cloath our grand dame earth with a  
 diapered with various flowers and che-  
 delightful objects. *Howell's Vocal Forest.*

ANIC, *adj.* } Gr. *διαφανεια*. Trans-  
 parency; pellucidness;  
 MEITY, n. s. } power of transmitting

alleth light a quality inherent or cleaving  
 the body. *Raleigh.*

Air is an element superior, and lighter than water,  
 through whose vast, open, subtle, diaphanick, or  
 transparent body, the light, afterwards created, easily  
 transpired. *Id.*

Because the outward coat of the eye ought to be  
 pellucid, to transmit the light, which, if the eyes  
 should always stand open, would be apt to grow dry and  
 shrink, and loose their diaphancity; therefore are the  
 eyelids so contrived as often to wink, that they so may,  
 as it were, glaze and varnish them over with the  
 moisture they contain. *Ray.*

DIAPHORE'SIS, in medicine, an elimination  
 of the humors in any part of the body through  
 the pores of the skin. See MEDICINE.

DIAPHRAGM, n. s. Gr. *διαφραγμα*. The  
 midriff which divides the upper cavity of the  
 body from the lower. Any division or partition  
 which divides a hollow body.

It consists of a fasciculus of bodies, round, about one  
 sixth of an inch in diameter, hollow, and parted into  
 numerous cells by means of diaphragms, thick set  
 throughout the whole length of the body.

*Woodward on Foetus.*

DIAPHRAGM, or DIAPHRAGMA. See ANA-  
 TOMY. Plato, as Galen informs us, first called  
 this muscle diaphragm, from the verb *διαφραττω*,  
 to separate or be between two.

DIAPHORE'SIS, *διαφορησις*, in rhetoric, a  
 figure expressing the hesitation or uncertainty of  
 the speaker. It is most naturally placed in the  
 exordium of a discourse. We have an example  
 in Homer, where Ulysses, about to relate his  
 sufferings to Alcinous, begins thus:

Τι πρῶτον, τί δ' εἰπεῖν, τί δ' ὑστατον καταλεῖω;

Quid primum, quid deinde, quid postremo alloquar?

DIAPHORETICK, *adj.* Gr. *διαφορητικός*.  
 Sudorific; promoting a diaphoresis or perspira-  
 tion; causing sweat.

A diaphoretick medicine, or a sudorific, is something  
 that will promote sweating. *Watts.*

Diaphoreticks, or promoters of perspiration, help  
 the organs of digestion, because the attenuation of the  
 aliment makes it perspirable. *Arbushnot.*

DIARBECK, DIARBEEK, or DIARBEEKIS,  
 an extensive province of Asiatic Turkey; com-  
 prehending, in its greatest extent, Diarbekir, pro-  
 perly so called, Yerak or Chaldea, and Curdistan,  
 which were the ancient countries of Mesopotamia,  
 Chaldea, and Assyria, with Babylon. See KUN-  
 DISTAN. It is called Diarbeck, and Diarbeker,  
 from the word *dhyar*, a duke or ruler, and *beker*,  
 country. It extends along the banks of the Ti-  
 gris and Euphrates from N. N. W. to south-east,  
 that is, from Mount Taurus, which divides it  
 from Turcomania on the north, to the inmost re-  
 cess of the Persian gulf on the south, about 600  
 miles; and from east to west, that is, from Persia  
 on the east, to Syrin and Arabia Deserta on the  
 west, in some places 200, and in others about  
 300, miles; but in the southern or lower parts not  
 above 150. It extends also from the thirtieth to the  
 thirty-eighth degree of latitude, and lies under part  
 of the fifth and sixth climates, whose longest day  
 is about fourteen hours and a half, and enjoys a  
 good temperature of air, as well as in the greater  
 part of it a rich and fertile soil; although there  
 are some large desert tracts in it. Having a con-

siderable frontier towards Persia, it is well guarded and fortified; but its many ancient cities are at present dwindled into heaps of ruins. Diarbekir, Bagdad, and Mosul, are however considerable places. The rivers Euphrates and Tigris have almost their whole course through this country.

DIARBÉKIR, or DIARBÉCK PROPER, is bounded on the north by Turcomania, on the west by Syria, on the south by part of Arabia Deserta and Yracc Proper, and on the east by Kurdistan. It is the same country that is called Padanaram by Moses, signifying fruitful, which it still is in a very high degree, especially on the north side; where it yields corn, wine, oil, and fruits, in great abundance. Christianity flourished here in an eminent manner, till its purity was sullied about the beginning of the sixth century by the heresy of the Jacobites, whose patriarch resided here at a very recent period. It is now a pachalic or government of Turkey, subdivided into twelve districts. The principal towns are Diarbekir, Mosul, Orsa or Edessa, Nisibis, Gezir, Mardin, Zabin, Amadia, and Carasara; all of little note except Diarbekir and Mosul.

DIARBKIR, DIARBKIK, or CARAHMED, the capital of the above district, is situated in a delightful plain, on the banks and near the head of the Tigris, about 155 miles or fifteen caravan days' journey, north-east of Aleppo. A bridge of ten arches over the river is said to have been built by order of Alexander the Great. It is one of the richest and most mercantile cities in Asiatic Turkey; and was once well fortified, being encompassed with a double wall, the outermost of which was flanked with seventy-two towers; but the whole is now in a very dilapidated state. The streets are narrow, but the houses, being of stone and lofty, look respectable; and it has several stately piazzas or bazars, well stored with all kinds of merchandise, and twelve magnificent mosques, said to have been formerly Christian churches. The Armenian cathedral is a handsome structure, the roof of which is supported by two rows of pillars; and the whole floor covered by carpets. A very handsome fountain in the court in front throws the water to a considerable height. Extensive manufactures are carried on here in iron, copper, silk, wool, and cotton; but its chief article of trade and manufacture is Turkey leather, of which the sale is immense. It has also a manufacture of fine dyed linen and cotton cloths, which are nearly in the same request. There are many large and convenient inns on both sides of the river, for the caravans that go to and from Persia; and the place is much frequented by pilgrims of all nations and religions. The Turkish ladies are said here to enjoy an extraordinary degree of liberty, and are commonly seen on the walks of the city in company with the Christian women, with whom they live in great friendship. The citizens generally are said to be polite, affable, and courteous. A basha resides here, who has very extensive jurisdiction. He has commonly a body of 20,000 horse under him. The adjacent territory is very rich and picturesque; the bread, wine, flesh, and fruits, excellent. The inhabitants, who consist of Turks, Armenians, Kurds,

**DIATHESIS, ASTHENSIC**, is described to be that state of the body, wherein there is 'too little excitement of the whole living system, arising from the debilitating noxious powers, impairing all the functions, disturbing some, giving a false appearance of increasing others, but always debilitating.'

**DIATHESIS, STRENUOUS**, is that state of the body, wherein 'all the functions are first increased; a disturbance or irregularity then takes place in some; others are impaired; but not, as long as this diathesis lasts, by a debilitating operation.'

**DIATONIC**. Of *διὰ τὸν*. The ordinary sort of music which proceeds by different tones,

either in ascending or descending. It contains only the two greater and lesser tones, and the greater semi-tone. *Harris*.

**DIATONIC**, in music, is compounded of two Greek words, viz. the preposition *δια*, signifying a transition from one thing to another, and the substantive *τονος*, importing a given degree of tension and musical note. It is indifferently applied to a scale or gamut, to intervals of a certain kind, or to a species of music, whether in melody or harmony, composed of these intervals. We copy the following scale of the Greek diatonics from Danelly's Musical Dictionary:—

28	Nete hyperbolæon (second space treble clef)	a
27	Paranete hyperbolæon diatonos	g'
26	Paranete hyperbolæon chromatice	g-flat) or f-sharp
25	Paranete hyperbolæon enarmonios	f
24	Trite hyperbolæon	e x) enhar. f-flat
23	Nete diezeugmenon	e
22	Paranete diezeugmenon diatonos	d
21	Paranete diezeugmenon chromatice	d-flat) c-sharp
20	Paranete diezeugmenon enarmonios	c
19	Trite diezeugmenon	b x) enhar. c-flat
18	Paramese (space above bass staff)	b-natural
17	Nete synemmenon (the space below the treble staff)	d
16	Paranete synemmenon diatonos	c
15	Paranete synemmenon chromatice	c-flat (b-natural)
14	Paranete synemmenon enarmonios	b-flat
13	Trite synemmenon	a x) enhar. b-flat
12	Mese	a
11	Lichanos meson diatonos	g
10	Lichanos meson chromatice	g-flat) f-sharp
9	Lichanos meson enarmonios	f
8	Parypate meson	e x) enhar. f-flat
7	Hypate meson	e
6	Lichanos hypaton diatonos	d
5	Lichanos hypaton chromatice	d-flat (c-sharp)
4	Lichanos hypaton enarmonios	c
3	Parypate hypaton	b x) enhar. c-flat
2	Hypate hypaton	b-natural
1	Proslambanomenos (first space bass)	a

**DIAGOPHRAGMIA**, in natural history, a genus of fossils of the order of septaria, whose partitions, or septa, consist of spar with an admixture of crystal. Of this genus there are three species: 1. A red kind, with brownish-yellow partitions; 2. A brownish-yellow kind, with whitish partitions; 3. A bluish-white kind, with straw-colored partitions.

**DIAZ** (John), a martyr to the frantic zeal of his brother against the protestant religion, was born in the beginning of the sixteenth century, at Cuenza in Spain. He studied theology at Paris, and under the celebrated Calvin at Geneva. He was the companion of Bucer at the Ratisbon conference; and, going soon after to Neuburgh, was visited by his brother and murderer Alphonsus Diaz, an advocate of the court of Rome. This zealot, failing in his endeavour to reclaim him to popery, immediately plotted against his life. He pretended to close his visit and take his departure, but secretly returned at break of day to the apartment of Diaz, with a companion, who affected to be the bearer of a letter. Gaining admission on this pretence, while Diaz was reading the paper presented, Alphonsus's comrade

gave him a death-blow on the head with an axe, and fled. This murder took place in March 27th, 1546; and, though the assassins were taken, the emperor Charles V. put a stop to the proceedings against them. The miserable fratricide afterwards hanged himself. An account of his death was composed in Latin, under the title of *Historia vera de Morte J. Diazii*. It produced a great sensation at the time. J. Diaz was the author of *A Summary of the Christian Religion*.

**DIAZEUTIC TONE**. Of *δια* and *ζευγνυμι*. In the ancient Greek music, it disjoined two fourths, one on each side of it; and which, being joined to either, made a fifth. This is, in our music, from A to B.

They allowed to this *diazευτικ* tone, which is our La, Mi, the proportion of nine to eight, as being the unalterable difference of the fifth and fourth. *Harris*.

**DIBBLE**, n. s. & v. a. ) Dut. *dijfèl*, a sharp point, Skinner; from *dabble*, Junius; or a corruption of dog-bill, according to Mr. Thomson. A small spade; a pointed instrument with which are made holes for planting or sowing. The verb is of recent introduction.

Through cunning, with *dibble*, rake, mattock, and spade,  
By line and by level trim garden is made.

*Tusser's Husbandry.*

Wheat is generally *dibbled* in October, on land newly broken up from clover-ley a man with an iron *dibble*, about three feet long, in each hand, walking backward and making two rows of holes in each furrow, slice, or flag; they are made about four inches distant from each other and from one to two inches deep. The *dibbler* is followed by two or three women, boys, or girls, who drop two or three grains into each hole.

*Dixon's Agriculture.*

**DIBDIN** (Charles), a celebrated writer of songs and musical composer, was the son of a silversmith of Southampton, where he was born about the year 1745. He was intended for the church, and received his early education at Winchester school. At the age of fourteen, however, he became a candidate for the situation of organist in a Hampshire village, and, relinquishing all views of entering the church, came at the invitation of an elder brother, a captain in the West India trade, to London. Here he was first engaged in composing ballads, and tuning pianofortes. He made his first appearance as a performer in 1762, at the Richmond theatre, and two years afterwards appeared on the London stage, as Ralph in *The Maid of the Mill*. The chief part of the music to *Lionel and Clarissa*, and the whole of that to the musical entertainment of *The Padlock*, now established his fame as a composer for the drama, which he rapidly increased. The most celebrated of his pieces, perhaps, are *The Deserter*, *The Waterman* (the dialogue of which is also his production), and the *Quaker*, which appeared between 1772 and 1775. Mr. Dibdin never shone as an actor; and, having quarrelled with Garrick and some other proprietors of the London theatres, he quitted the stage altogether, and made a successful attempt to entertain the public by accompanying himself, in his own songs, on the piano-forte. His saloon was near Leicester square, and known by the title of *Sans Souci*. His songs and entertainments produced at this time are said to have exceeded 1200. His sea songs are considered very superior: witness the immense popularity of his *Tom Bowling*, *Poor Jack*, &c. The former is said to have been a tribute of affection to the memory of his brother. Imprudence, however, always kept Dibdin poor; and, though assisted by government and many opulent individuals, he died in indigent circumstances in 1814. An edition of his best songs has been published by Dr. Kitchiner.

**DIBRA**, a town of European Turkey, in Macedonia, near Albania. It was besieged by the Turks in 1442, who conveyed a dead dog into the only spring that supplied the town with water, which compelled the inhabitants to surrender. It is thirty miles north of Akrida.

**DIBSTONE**, *n. s.* A little stone which children throw at another stone.

I have seen little girls exercise whole hours together, and take abundance of pains, to be expert at *dibstones*.

*Locke*

**DICACITY**, *n. s.* Lat. *dicacitas*. Pertness; vauntness.

**DICEARCHUS**, a scholar of Aristotle, who composed a great number of books which were valued highly by Cicero and Atticus. He wrote a work to prove that men suffer more mischief from one another than from all evils beside. Another work he composed, concerning the republic of Lacedæmon, was read every year before the youth in the assembly of the senate. Geography was one of his principal studies, in which science there is a fragment of a treatise of his still extant, and preserved among the *Vetus Geographice Scriptores Minores*.

**DICE**, *n. s. & v. n.* } The plural of die.  
**DICER**, *n. s.* } See **DIE**. To dice is to  
**DICE** NOX. } play with dice, or gamble.  
A *dicer*; a gamester.

In prison! certes nay, but in paradise;

Wel hath Fortune turn'd thee the *dice*

That hath the sight of her, and I the absence.

*Chaucer's Canterbury Tale.*

They make marriage vows

As false as *dicers'* oaths. *Shakespeare. Hamlet.*

I was virtuously given as a gentleman need to be; virtuous enough; swore little; dined not above seven times a week. *Shakespeare Henry IV.*

It is above a hundred to one against any particular throw, that you do not cast any given set of faces of four cubical dice, because there are so many possible combinations of the six faces of four dice. *Bowling.*

I look upon every man as a suicide from the moment he takes the *diebox* desperately in his hand; and all that follows in his career from that fatal time is only sharpening the dagger before he strikes it to his heart. *Cumberland.*

Dice, among gamesters, cubical pieces of bone or ivory, marked with dots on each side of their faces, from one to six. Sharpers have several ways of falsifying dice: by drilling and loading them with quicksilver; by filing and rounding them, &c.

The dice box is a narrow deep corner, channelled within. It answers to what the Romans called *frutillus*; whence, *crepitantes frutilli*: and, in Seneca, *resonante frutillo*. Besides the *frutillus* the Romans, for greater security, had another kind of dice-box called *pyrgus*, *πύργος*, and sometimes *turricula*. It was placed immovable in the middle of the table, being open at both ends, and likewise channelled within; over the top was placed a kind of funnel, into which the dice were cast out upon the *frutillus*; whence descending, they fell through the bottom on the table; by which all practising on them with the fingers was effectually prevented. For want of this contrivance of this kind, our sharpers have opportunities of playing a variety of tricks with the box.

**DICIL**. This word seems corrupted, says Dr. Johnson from *dit* for *do* it.

Rich men sin, and I eat root:

Much ood *dicil* thy good heart, *Apemantus.*

*Shakespeare. Timon.*

**DICHOTOMY**, *n. s.* *Διχοτομία*. Distribution of ideas by pairs.

Some persons have disturbed the order of nature, and abused their readers by an affectation of *dichotomies*, *trichotomies*, *sevens*, *twelves*, &c.

**DICHOTOMY**, a term used by astronomers for that appearance on the moon, when the sun

or shows just half her disk. In this the moon is said to be in a quadrate or to be in her quadrature.

**DICTENS.** A kind of adverbial exclamation, as, as it seems, much the same with the Belg. *dicker*.

I had you this pretty weathercock!

But tell what the *dictens* his name is my husband of. *Shaks. Merry Wives of Windsor*.

A *dictens* does he mean by a trivial sum?

It you found it, Sir?

*Congreve. Old Bachelor*.

**DICKINSON** (Edmund), a celebrated English physician and chemist, born in 1624. He and took his degrees at Merton College, and, in 1655, published there his *Delicizantes, &c.*, a learned piece, in which he attempted to prove, that the Greeks borrowed of the Pythian Apollo, and all that the oracle at Delphi famous, from the raptures, and from the book of Joshua in *Eccl.* He practised physic first at Oxford; moving to London in 1684, and restoring of Arlington from a dangerous illness, promoted to be physician in ordinary to *II.*; and continued in his appointments successor. After the Revolution, being with the stone, he retired from practice, in 1707. He published *Physica Vetus, &c.*, containing a system of philosophy framed on principles collected from the history.

**DICTANUS**, white dittany, or fraxinella, a plant of the monogynia order and decandria plants; natural order twenty-sixth, mulberry CAL. pentaphyllous; the petals are caputulous; the filaments sprinkled with white points, the capsules five, coarcted. Only one species. It has thick, penetrant roots, collected into a head at top, up erect stalks annually two or three, garnished with pinnated alternate of three or four pair of oblong stiff lobes, edged by an odd one; and the stalks crowned with pyramidal loose spikes of flowers, of red, and purple colors. They are very medicinal plants, and succeed in any of the borders. The dittany which grows in Dalmatia, and the Morea, formerly contained an article in the materia medica. The smell and taste somewhat resemble lemon, but have more of an aromatic flavor, and a greater degree of pungency; when they yield a considerable quantity of essential oil.

**DICTATE**, *v. a. & n. s.* *Fr. dicter*; *Ital. dictare*; *n. s.*

**DICTATOR**,

**DICTATORIAL**, *adj.*

**DICTATORSHIP**, *n. s.*

*Fr. dicter*; *Ital. dictare*; *Lat. dictare*; from *dic*, to show; *Gr. dikao*, to show; *Chald. ܕܝܩܐ*, to see;

To declare or prescribe with authority. Intransitive, dictate is the rule or maxim laid down in dictation, the act of dictating; dictator, one who delivers rules or orders; and particular Roman magistrate invested with absolute power in certain exigencies. The other derivatives follow these meanings.

This is the solemnest title they can confer under the principedom, being indeed a kind of dictatorship.

*Wotton.*

Unanimous they all commit the care  
And management of this main enterprise  
To him their great dictator.

*Milton.*

He that was fetched from the plough to be made dictator, had not half his (a clown's) pride and insolence.

*Butler.*

Kind dictators made, when they came home,  
Their vanquished foes free citizens of Rome.

*Waller.*

This is that perpetual dictatorship which is exercised by Lucretius, though often in the wrong.

*Dryden.*

Those right helps of art, which will scarce be found by those who servilely confine themselves to the dictates of others.

*Locke.*

Then let this dictate of my love prevail.

*Pope's Od.*

That riches, honours, and outward splendour, should set up persons for dictators to all the rest of mankind, is a most shameful invasion of the right of our understanding.

*Watts.*

Judgment, like other faculties, is improved by practice, and its advancement is hindered by submission to dictatorial decisions, as the memory grows torpid by the use of a table-book.

*Johnson.*

Thou, who with thy frown

Annihilated senates—Roman, too

With all thy vices, for thou didst lay down

With an atoning smile a more than earthly crown—

The dictatorial wreath,—couldst thou divine

To what would one day dwindle that which made

Thee more than mortal?

*Byron.*

A DICTATOR was first chosen during the Roman wars against the Latins. The consuls being unable to raise forces for the defence of the state, because the plebeians refused to enlist if they were not discharged from all the debts they had contracted with the patricians, the senate found it necessary to elect a new magistrate with absolute and uncontrollable power to take care of the state. The dictator remained in office for six months, after which he was again elected, if the affairs of the state seemed to be desperate; but if tranquillity was re-established, he generally laid down his power before the time was expired. He knew no superior in the republic, and even the laws were subjected to him. He was called dictator, quoniam dictis ejus parebat populus, because the people implicitly obeyed his command. He was named by the consul in the night viva voce, and his election was confirmed by the auguries. As his power was absolute, he could proclaim war, levy forces, conduct them against an enemy, and disband them at pleasure. He punished as he pleased, and from his decision there lay no appeal, at least till later times. He was preceded by twenty-four lictors with the fasces; during his administration, all other officers, except the tribunes of the people, were suspended, and he was the master of the republic. But amidst all this independence, he was not permitted to go beyond the borders of Italy; he was always obliged to march on foot in his expeditions, and he never could ride in difficult and laborious marches, without previously obtaining a formal leave from the people. He was chosen only when the state was in imminent danger from foreign enemies or

intestine seditions. In the time of a pestilence, a dictator was sometimes elected; as also to hold the comitia, or to celebrate the public festivals, or drive a nail in the capitol; by which superstitious ceremony the Romans believed that a plague could be averted, or the progress of an enemy stopped. This office, so respectable and illustrious in the first ages of the republic, became odious by the perpetual usurpations of Sylla and Cæsar; and after the death of the latter, the Roman senate passed a decree which for ever forbade a dictator to exist in Rome. The dictator, as soon as elected, chose a subordinate officer, called his *magister equitum*, master of horse. This officer could do nothing without his express order. This subordination, however, was some time after removed; and during the second Punic war, the master of the horse was invested with a power equal to that of the dictator. A second dictator was also chosen for the election of magistrates at Rome after the battle of Cannæ. The dictatorship was originally confined to the patricians; but the plebeians were afterwards admitted to share it. Titus Lartius Flavius was the first dictator, A.U.C. 253. The institution has been revived in South America, in modern times, in the person of the illustrious Bolivar.

**DICTION**, *n. s.* Fr. *diction*; Lat. *dictio*. Style; language; expression.

There appears in every part of his *diction*, or expression, a kind of noble and bold purity. *Dryden*.

We are refined! and plain manners, plain dress, and plain *diction*, would as little do in life, as acorns, herbage, and the water of the neighbouring spring, would do at table. *Chesterfield*.

**DICTIONARY**, *n. s.* Fr. *dictionnaire*; Span. *diccionario*; Ital. *dittonario*; Lat. *dictionary*, from *dictio*, *dico*, to speak. See **DICTION**. A book containing the words of a language, with their explanations; a lexicon; a nomenclature of words or things.

Some have delivered the polity of spirits, and left an account that they stand in awe of charms, spells, and conjurations; that they are afraid of letters and characters, notes and dashes, which, act together, do signify nothing; and not only in the dictionary of man, but in the subtler vocabulary of Satan.

*Brown's Vulgar Errors.*

Is it such a fault to translate simulacra images? I see what a good thing it is to have a good catholic dictionary. *Stillingfleet*.

An army, or a parliament, is a collection of men; a dictionary, or nomenclature, is a collection of words. *Watts*.

It is not enough that a dictionary delights the critical, unless, at the same time, it instructs the learner. *Johnson. Plan of Dictionary.*

**DICTYNNIA**, in antiquity, feasts celebrated at Lacedæmon and in Crete, in honor of Diana, or of a nymph taken for her, who, having plunged herself into the sea, to escape the passion of Minos, was caught in fishermen's nets, *dictynna*, whence the name.

**DICTYS**, a very ancient Cretan historian, who, serving under Idomeneus in the Trojan war, wrote the history of that expedition. Tzetzes tells us that Homer formed his *Iliad* upon the plan of that history. The Latin history of Dictys, which has come down to us, is spurious.

**DIDACTICAL**, *adj.* Gr. *didaktikos*. Preceptive; giving precepts; thus a didactic poem is a poem that gives rules for some art; as the *Georgics*.

The means used to this purpose are partly *didactical*, and partly *protreptical*; demonstrating the truth of the gospel, and then urging the professors of the truth to be steadfast in the faith, and to beware of infidelity. *Word on Isaiab.*

But what shall I say to Janius, the grave, the solemn, the *didactic*! *Horn. Toss.*

**DIDAPPER**, *n. s.* From *dip*. A bird that dives into the water.

**DIDASCALICK**, *adj.* Greek, *didaskalikos*. Preceptive; didactic; giving precepts in an art.

I found it necessary to form some story, and to give a kind of body to the poem: under what species it may be comprehended, whether *didascalick* or *didactic*, I leave to the judgment of the critics. *Pope*.

**DIDDER**, *v. a.* Teut. *diddern*; Ger. *diden*. To quake with cold; to shiver. 'A proverbial word,' says Skinner.

**DIDELPHIS**, in zoology, the opossum; a genus of quadrupeds belonging to the order of marsupials, the characters of which are these.—They have ten fore-teeth in the upper jaw, and eight in the under one. The dog-teeth are long, and the tongue is somewhat ciliated; and they have a pocket formed by a duplicature of the skin of the belly, in which the dugs are included. We enumerate nineteen species; the chief are—1. *D. brachyura*, the short-tailed opossum of Pennant, of a red color, has naked ears, and a short hairy tail, thick at the base, and gradually lessening to the extremity. The body is from three to five inches and a half long. The fur is very soft and glossy, and there is a beautiful streak along the sides of the head and body. This species inhabits the woods of South America. The female has from nine to twelve young at a birth, which adhere to her teats as soon as born, and she has no pouch. This species agrees with the *Murina*, in the general form of the body. 2. *D. cancrivora*, the crab-eater of Buffon, or the Cayenne opossum, has a long snout; face; ears erect, pointed, and short; the fur woolly, mixed with very coarse hairs, and is from three to four inches long, of a dirty white from the roots to the middle; from thence to the ends, of a dirty brown; sides and belly of a pale yellow, and of a dusky brown; thumb on each foot between the toes of the fore-feet, and thumb of the hind, are nails, very long, taper, naked, and scaly. Length seventeen French inches, and the tail fifteen and a half. The subject described was young. It inhabits Cayenne; is very active in climbing trees, on which it lives the greater day. In marshy places it feeds on crabs, which when it cannot draw out of their holes with its feet, hooks them by means of its long tail. If the crab pinches its tail, the animal utters a loud cry, resembling the human voice, which may be heard afar; but its common voice is a grunt like a young pig. It is well furnished with teeth, and will defend itself stoutly against dogs; brings forth four or five young, which it secures in some hollow tree. The parents of

animals, and say their flesh resembles a hare. They are easily tamed, and will then receive any kind of food. 3. *D. cayopolin*, the Mexican opossum of Buffon and Pennant, is of ash color on the head and upper parts of the body: the belly and legs are whitish: the tail long and pretty thick, varied with brown and yellow; it is hairy near an inch from its origin, the rest naked: the length of the animal from nose to tail, about seven inches and a half; of the tail, more than eleven. It inhabits the mountains of Mexico, and lives in trees, where it brings forth its young: when in any fright, they embrace the parent closely. Her belly has no pouch. The tail is prehensile, and serves instead of a hand. 4. *D. gigantea*, the kangaroo. This animal has a small head, neck, and shoulders; the body increasing in thickness to the tail. The head is oblong, formed like that of a hare, and tapering from the eyes to the nose; the skin of the nose naked black; the upper lip divided. The nostrils are wide and open; the lower jaw is shorter than the upper; and the structure of the mouth small: there are whiskers on both jaws, those on the upper longest; and long hairs above and below the eyes. The eyes are not large; the irides are dusky; the pupils of a bluish black. The ears are erect, strongly ovated, rounded at the ends, and thin, covered with short hairs, four inches long. There are six canine teeth, but six broad cutting teeth in the upper jaw; two long lanceolated teeth in the lower, pointing forward; and four grinding teeth in each jaw, minute from the others. The belly is convex and great. The fore legs are very short, scarcely reaching to the nose, and useless for walking. The hind legs are almost as long as the body, and the thighs are very thick: on the fore feet are five toes, with long claws and strong claws; on the hind feet only three; the middle toe is very long and thick, like that of an ostrich; the two others are placed very distinct from it, and are small; the claws are short, thick, and blunt: the bottom of the second hind part, black, naked, and tuberculated, as the animal rests often on them. The tail is very long, extending as far as the ears; thick at the base, tapering to a point. The scrotum is large and pendulous. The hair on the whole animal is soft, and of an ash color. It rests on the lower parts. It inhabits the eastern side of New Holland, and has as yet been discovered in no other part of the world. Works among the grass, and feeds on vegetables; it goes entirely on its hind legs, making use of the fore feet only for digging, or bringing food to its mouth. The dung is like that of a hare. It is very timid; at the sight of men flies from them by amazing leaps, springing to a height seven or eight feet high, and going progressively from rock to rock. It carries its tail quite at right angles with its body when it is in motion; and when it alights, often looks back. 5. *D. murina*, the murine opossum, has a face and upper parts of the body of a tawny color; the belly of a yellowish white: the tail slender, and covered with minute scales to a very rump: the length of the animal from nose to tail, about six inches and a half; the tail

of the same length; the female wants the false belly of the last; but on the lower part the skin forms on each side a fold, between which the teats are lodged. It inhabits the hot parts of South America; agrees with the others in its food, manners, and the prehensile power of its tail. Count de Buffon, from inspection, says the female has fourteen teats, and brings from ten to fourteen young ones at a time; they affix themselves to the teats as soon as they are born, and remain attached like inanimate things, till they attain growth and vigor to shift a little for themselves. 6. *D. opossum*, the sarigue of Buffon, or Molucca opossum of Pennant, has long, oval, and naked ears; the mouth is very wide; the lower side of the upper jaw, throat, and belly, is of a whitish ash color; the rest of the hair a cinereous brown, tipped with tawny, darkest on the back: the tail is as long as the body; near the base covered with hair; the rest naked; the claws are hooked. On the belly of the female is a pouch, in which the young shelter. Marcgrave found six young within the pouch. It has ten cutting teeth above, and eight below. Over each eye is an oblong white spot. The length of the animal from nose to tail is ten inches; and the tail exceeds the length of the head and body. Its whole figure is of a slender and elegant make. This species is found in great numbers in Aroe and Solor. It is called in the Indies pelandor Aroe, or the Aroe rabbit. They are reckoned very delicate eating, and are very common at the tables of the great, who rear the young in the same places in which they keep their rabbits. It inhabits also Surinam, and the hot parts of America. 7. *D. tridactyla*, Philip's opossum, or the kangaroo rat, is described as similar, both in the general shape of the body and the conformation of the legs, to the kangaroo; but the visage having a strong resemblance to that of the rat, and the color of the whole not ill resembling that animal, it has obtained the name of the kangaroo rat. It is an inhabitant of New Holland; and two of the species were seen alive at the exhibition of animals over Exeter Change in 1790, where one of them brought forth young. This species has two cutting teeth in front of the upper jaw, with three others on each side of them; and at a distance one false grinder, sharp at the edge, and channelled or fluted on the sides; and close to these, two true grinders: in the lower jaw there are two long cutting teeth, formed like those of the squirrel, with three grinders corresponding with those in the upper jaw. 8. *D. volans*, the flying opossum, a beautiful species, and clothed with fur of the most exquisite texture, is an inhabitant of New South Wales. In length, from the tip of the nose to the root of the tail, it is twenty inches; the tail itself is twenty-two inches; at the base, quite light, increasing gradually to black at the end: the ears are large and erect: the coat or fur is of a rich and most delicate texture, appearing on the upper parts of the body at first sight, of a glossy black; but on a nearer inspection, is found to be mixed with gray: the under parts are white, and on each hip is a tan-colored spot, nearly as big as a shilling; at this part the fur is thinnest, but at the

root of the tail it is so rich and close that the hide cannot be felt through it. The fur is also continued to the claws. On each side of the body is a broad flap or membrane (as in the flying squirrels), which is united to both the fore and hind legs. The jaws are furnished with teeth, placed as in some others of this genus: in the upper jaw forwards are four small cutting teeth, then two canine ones, and backwards five grinders; the under jaw has two long large cutting teeth and five grinders, with no intermediate canine ones, the space being quite vacant. The fore legs have five toes on each foot, with a claw on each; the hinder ones four toes, with claws (the three outside ones without any separation), and a thumb without a claw, enabling the animal to use the foot as a hand, as many of the opossum tribe are observed to do.

**DIDEROT** (Denys), a celebrated French writer, born at Langres in 1713. He was educated among the Jesuits, with a view to the church, and received the tonsure; but, disliking the profession, he was placed with a lawyer. This pursuit, however, he also abandoned, and thereby incurred his father's displeasure. He did not devote himself particularly to any one object of study; but his attention was at different times engrossed by geometry, metaphysics, and the belles lettres. In 1745 he published *Principles of Moral Philosophy*, 12mo. which first brought him into public notice as an author. Next year he published a piece, entitled *Pensées Philosophiques*, a work which gained him considerable fame, and was highly applauded by the partisans of the new philosophy, among whom he had now enrolled himself, and to the propagation of which he applied in the most zealous manner. He afterwards gave a second edition of this work, under the title of *Etrennes aux Esprits Forts*, which was eagerly read. About this period, having been concerned in a Medical Dictionary, it gave rise to the idea of the *Dictionnaire Encyclopédique*; and, in conjunction with his friend d'Alembert, the plan of this vast undertaking was formed. Diderot's share in this work was large, for, besides many articles in various departments of science, the whole of the arts and trades were furnished by him. Between the years 1751 and 1767, the first edition of the dictionary was completed; and although Diderot had labored almost twenty years upon it, he received but a small consideration. During this period, however, he composed various other works, particularly *A Letter on the Blind*, for the use of those who see; a work for which the author was confined six months at Vincennes, on account of the free sentiments it contained. About two years after, he published *A Letter on the Deaf and Dumb*, for the use of those who hear and see, 2 vols. 12mo. His next productions were two comedies, in prose, *Le Fils Naturel*, 1757; and *Le Pere de Famille*, 1758, which latter has been thought one of the best sentimental comedies that ever appeared on the French stage. Besides the above-mentioned works, Diderot wrote *A Panegyric on Richardson*; and *An Essay on the Life and Writings of Seneca*, which was published in 1779, and was the last work of his pen. At the conclusion of

the *Encyclopedie*, he was obliged to dispose of his library. The empress of Russia became purchaser; the price which the philosopher received was 50,000 livres; while he was allowed the use of it during his life. Diderot was a member of the *Academy of Sciences* at Berlin. He died suddenly as he rose from bed, July 31st, 1784. His works have been collected and published in two large octavo volumes.

**DIDO**, or **ELISSA**, a daughter of Belus, king of Tyre, who married Sichæus or Sichæus, her uncle, priest of Hercules. Her brother, Pygmalion, who succeeded Belus, murdered Sichæus to get possession of his immense riches. Dido, disconsolate for the loss of her husband, whom she tenderly loved, and by whom she was equally esteemed, set sail in quest of a settlement, with a number of Tyrians, to whom the cruelty of the tyrant had become odious. According to some writers, she threw into the sea the riches of her husband, which Pygmalion greedily desired; and by that artifice compelled those ships to fly with her that had come by order of the tyrant to obtain the riches of Sichæus. But it is more probable that she carried her riches along with her, and by their influence prevailed on the Tyrian seamen to follow her. During her voyage, Dido visited the coast of Cyprus, where she obtained fifty wives for her Tyrian followers. A storm drove her fleet to the African coast, where she bought of the inhabitants as much land as could be sown by a bull's hide cut into thongs. Upon this land she built a citadel, called Byrsa; and the increase of population, and the rising commerce among her subjects, soon obliged her to enlarge her city, and the boundaries of her dominion. Her beauty, as well as the fame of her enterprise, gained her many admirers; and her subjects wished to compel her to marry Iarbas, king of Mauritania, who threatened them with a dreadful war. Dido begged three months to give an answer; and during that time she erected a funeral pile, as if wishing by a voluntary sacrifice to appease the manes of Sichæus, to whom she had promised eternal fidelity. When all was prepared, she stabbed herself on the breast in presence of her people; and by this common action, obtained the name of Dido, 'the mourning woman,' instead of Elissa. According to Virgil and Ovid, the death of Dido was caused by the sudden departure of Æneas, of whom she was deeply enamoured, and whom she could not obtain as a husband. This poetical fiction represents Æneas as living in the age of Dido, and introduces an anachronism of nearly 300 years. Dido left Phœnicia 247 years after the age of Æneas, and about A.C. 953. This chronological error proceeded not from the ignorance of the poets, but from a voluntary fiction. What Virgil describes, in a beautiful episode, the desperate love of Dido, and the submission of Æneas to the will of the gods, he traces the origin of the hatred between the republics of Rome and Carthage, and pretends that it was kindled by a more remote cause than the jealousy and rivalry of two flourishing empires. Dido, after her death, was honored as a deity by her subjects.

**DIDOT** (Ambrose), a celebrated French typographer, was born at Paris in 1730. His

as was a printer and bookseller, and, having received a classical education, he materially improved various branches of his business, and the arts connected with it. The manufacture of paper received his early attention, and he invented many machines and instruments in aid of stereotyping. His edition of the Delphin classics, and various other works, will long distinguish his name. One of his sons became a celebrated type-founder, another shared with him the reputation of being one of the first printers in Europe. His anxiety for accuracy led to have been so great, that at the age of fifty-three, he read five times over each sheet in his son's edition of Montaigne. He died at Paris in 1804.

**DIDUCTION**, *n. s.* Lat. *diductio*. Separation by withdrawing one part from the other.

He ought to shew what kind of strings they are, though strongly fastened to the inside of the bladder, and superficially of the bladder, must draw as easily one as another, in comparison of those that the bladder draw so as to hinder the *diduction* of sides. Boyle.

**DIDUS**, or Dodo, in ornithology, a genus belonging to the order of gallinæ. The bill is directed in the middle by two transverse ridges; each mandible is inflected at the point; the face is bare behind the eyes. Only one species, viz. the ineptus, is mentioned by Linnaeus: three are described by Buffon, viz. —

**D. ineptus**, the drone of Buffon, or hooded dodo, is somewhat bigger than a swan, and nearly six feet in length. The bill is strong, large, hooked at the end; the gape stretches behind the eyes: the color is a very pale blue, except the end of the upper mandible, which is whitish, and a red spot on the bend of it; the lower is blackish; the irides are brown. The general color of the plumage is brown, and soft to the touch; the belly and legs are whitish. The head is large, and seems to be covered with a black hood or cowl. The wings are very short, and of a yellowish ash-color: the tail feathers are curled, stand up on a hump, and incline to yellow. The legs have three toes, three before and one behind; are stout, short, and yellowish; the claws are black. It inhabits the islands of Mauritius and Bourbon in the Indian Ocean.

**D. Nazareus**, the Nazarene dodo is bigger than a swan. The bill is a little bent downwards at the tip: instead of feathers, the whole is covered with a black down; but the wings are feathered, and it has some frizzled ones upon the rump, which serve instead of a tail: the legs are long and weak, and there are three toes on each foot. It was met with in the Isle of France, and related as above by Fr. Cauche; who adds, the female lays only one egg, which is oval, and as big as a penny loaf, and that there were found with it a white stone of the size of a hen's egg; that it makes its nest of leaves and dry herbs, in the forests, on the ground; that there is likewise found a gray stone in the pizzard of the young bird.

**D. solitarius**, the solitaire of Buffon, or solitary dodo, is a large bird, and the male is said to weigh sometimes forty-five pounds. The neck

is of a proportionable length, and the eye black and lively: the head is not crested, and the general color of the plumage is gray and brown mixed: it has scarce any tail, and the bastard wing swells out into a round knob: the wings are too short for flight; and the hind parts are rounded like a horse's rump, being clothed with feathers, which may be termed coverts. The females are covered with sometimes brown, and sometimes light yellow feathers, and appear very beautiful. The feathers on each side of the breast enlarge into two white tufts, somewhat resembling the bosom of a woman. Those of the thighs are rounded at the end like shells; and, according to Leguat, the bird has altogether a noble and elegant gait. It is an inhabitant of the Isle of Rodriguez, where it is not uncommon; but not met with in flocks, scarcely more than two being found together. It makes its nest in by-places, of the leaves of the palm, a foot and a half in thickness; and lays one egg, bigger than that of a goose. The male sits in his turn; and does not suffer any bird to approach within 200 yards of the spot while the hen is sitting, which is seven weeks. They are chased in the winter season, viz. from March to September, being then fat; and the young birds are much esteemed for the table.

**DIDYMUS**, of Alexandria, an ecclesiastical writer of the fourth century; who though he is said to have lost his sight at five years of age, when he had scarcely learned to read, yet applied so earnestly to study, that he was thought worthy to fill the chair in the famous divinity school at Alexandria. He was the author of a great number of works: but all we have now remaining are, a Latin Translation of his book upon the Holy Spirit, in the works of St. Jerome, who was the translator; Short Strictures on the Canonical Epistles; and a book against the Manichees.

**DIDYNA'MIA**; from *dis*, twice, and *δυναμις*, power; the name of the fourteenth class in Linnaeus's sexual method; consisting of plants with hermaphrodite flowers, which have four male organs, two long and two short. See BOTANY.

**DIE**, *v. n.* Goth. *dein*; Sax. *daedian*; Dan. and Swed. *do*; from Gr. *διδω*, to fear, because death is generally an object of fear, says Minsheu, ingeniously. To lose or depart from life; taking *by* before an instrument of death; *of* before a disease, or a positive cause of death; and *for* before a privative; to sink or faint; grow vapid; to vanish; perish; be doomed to hell.

For wher we lyuen, we lyuen to the Lord, and whether we *dien*, we *dien* to the Lord, therefore wher we lyuen or *dien* we ben of the Lord.

Wiclif. Romayne. 14.

His heart *died* within him, and he became as a stone. I Samuel.

Except a corn of wheat fall into the ground, and *die*, it abideth alone; but if it *die*, it bringeth forth much fruit. John.

If I *die* for it, as no less is threatened me, the king my old master must be relieved.

Shakspeare. King Lear

How now, my lord, why do you keep alone  
Of sorriest fancies your companion making,  
Using those thoughts which should indeed have *died*  
With them they think on. Id. Macbeth.

This battle fares like to the morning's war,  
When *dying* clouds contend with growing light. *Id.*

O, thou great power, in whom we move,  
By whom we live, to whom we *die*,  
Behold me through thy beams of love,  
Whilst on this couch of tears I lie. *Wotton.*

So long as God shall live, so long shall the damned  
*die*. *Hakewill on Providence.*

At first she startles, then she stands amazed;  
At last with terror she from thence doth fly,  
And loaths the watery glass wherein she gazed,  
And shuns it still, although for thirst she *die*.

*Davies.*

Oh let me live my own, and *die* so too!  
To live and *die* is all I have to do. *Denham.*

The dira only served to confirm him in his first  
opinion, that it was his destiny to *die* in the ensuing  
combat. *Dryden.*

If any sovereignty, on account of his property,  
had been vested in Adam, which in truth there was  
not, it would have *died* with him. *Locke.*

The young men acknowledged in love-letters, that  
they *died* for Rebecca. *Tatler.*

He in the loaden vineyard *dies* for thirst.

*Addison.*

Hipparchus being passionately fond of his own  
wife, who was enamoured of Bathyllus, leaped and  
*died* of his fall. *Id.*

The smaller stains and blemishes may *die* away and  
disappear, amidst the brightness that surrounds them;  
but a blot of a deeper nature casts a shade on all  
the other beauties, and darkens the whole character.

*Id. Spectator.*

Trembling, hoping, lingering, flying,  
Oh the pain the bliss of *dying*! *Pope.*

Talk not of life or ransom, he replies;  
Patroclus dead, whoever meets me, *dies*;  
In vain a single Trojan sues for grace;  
But least the sons of Priam's hateful race;  
*Die* then, my friend! what boots it to deplore?  
The great, the good Patroclus is no more!  
He, far thy better, was foredoomed to *die*;  
And thou, dost thou, bewail mortality?

*Pope's Homer.*

They often come into the world clear, and with the  
appearance of sound bodies; which, notwithstanding,  
have been infected with disease, and have *died*  
of it, or at least have been very infirm. *Wiseman.*

Thy body *dies*; but thou, *thou* must live for ever,  
and thine eternity will take its tincture from the man-  
ner of thy behaviour, and the habits thou contractest,  
during this thy short co-partnership with flesh and  
blood. *Mason.*

If the man who turnips cries,  
Cry not when his father *dies*,  
'Tis a proof that he had rather  
Have a turnip than his father. *Dr. Johnson.*

'Tis solitude should teach us how to *die*;  
It hath no flatterers; vanity can give  
No hollow aid, alone—man with his God must strive,  
*Byron.*

Like the figures on arras, that gloomily glare,  
Stirred by the breath of the wintry air  
So seen by the *dying* lamp's dim light,  
Lifeless, but life-like, and awful to sight. *Id.*

*Dix, n. s.* Fr. *dé*; Ital. Span. and Portug. *dado*;  
Lat. *tevera* (*dice*), from Gr. *τεσσαρη*, four, because  
four sided. A small cube, marked on its faces  
with numbers from one to six, which gamblers

throw in play. Hence hazard, chance. usu-  
ally any small cube.

Etsoons his cruel hand Sir Gagon said,  
Tempering the passion with advisement  
And mustering might on enemy dismay  
For the' equal *die* of war he well did lay.

*Facris.*

I have set my life upon a cast,  
And I will stand the hazard of the *die*.  
*Shakespeare. Hamlet.*

To put it to the chance and try,  
I' the ballot of a box and *dye*,  
Whether his money be his own,  
And lose it, if he be o'erthrown.

Thine is the adventure, thine the vict'ry  
Well has thy fortune turned the *die* for thee.

He knows which way the lot and the *die* go  
as perfectly as if they were already cast.

Young creatures have learned spelling  
Having them pasted upon little flat tablets.

*Dix, n. s.*, plural *dies*. The stamp  
coinage.

Such variety of *dies* made use of by Wash-  
ing his money, makes the discovery of a  
more difficult.

DIEMEN (Anthony Van), governor  
Dutch East India possessions, was born  
lenberg, of which place his father was  
master. He went out to India in a  
station, but was employed there as agent  
the government; and in 1625 became  
of the supreme council. In 1631 he was  
Holland as commander of the India  
the following year went out again as  
general; and not long after was appointed  
nor general, in which station he greatly  
the Dutch interest and power in the  
1642 he sent Abel Tasman on a voyage  
south, the consequence of which was the  
very of the island near the south coast  
Holland, which Tasman named Van  
Land. He died in 1645.

DIEMEN'S (Van) LAND, an island  
tropical Asia, to the south of New Holland,  
which it is separated by Bass's Strait,  
its north coast in S. lat. 40° 41', and its  
promontory in 43° 38' S. Its length  
170 miles, and breadth about 154.  
It was first seen by the Dutch commander, Tasman,  
who, mistaking it for a part of what  
called the Great South Land, or New  
gave it its present name, in honour of  
governor-general of Batavia, Anthony  
men. But the Dutch did not reach it  
time; Tasman's carpenter only saw  
the surf, 'with the prince's flag, and  
set up as a memorial of their visit, to  
city of the inhabitants of this coast  
own enterprising navigators, Furner  
Hayes, and above all Mr. Bass, the  
of captain Flinders, have far better  
to be called its discoverers. First  
Cook anchored in Adventure Bay, and  
had some communication with the  
subsequently, High and captain Cook  
Adventure and Oyster Bay; and, in 1791,  
tiam Hayes, of the Bombay marine,

he named the Derwent River. But none of these navigators, nor yet the French, under d'Entrecasteaux, who discovered Storm Bay, proposed this to be an island; a fact which Mr. Flinders first announced in the close of 1798, after sailing 600 miles of the coasts in this neighbourhood, in a small decked whale-boat. Together with Captain Flinders, he also first visited Port Dalrymple.

The general appearance of this island is diversified by ranges of moderate hills and broad plains, having a fine soil. The hills, the ridges of which are of a 'form,' according to Mr. Evans, 'irregular and uneven,' are for the greater part wooded; and their summits, are to be seen levels of good pasture-land, thinly interspersed with trees, the growth growing most luxuriantly. These beautiful plains are generally of the extent of 8000 to 10,000 acres; and this description is to be considered as common to the whole of the island. The southern extremity terminates in a promontory, whose shape corresponds with, but the height exceeds, that of the Table Mountain, of the Cape of Good Hope, and to which has been given the same name. The height of Table, behind Hobart Town, is 3964 feet; that of the Cape 3315. The former is covered with snow for seven or eight months in the year. To the eastward of the Tamar is a considerable mountain, named Ben Lomond, whose height has not been ascertained; and another called Man's Peak. There is also a lofty mountain on the north-western part of the island, and a range of hills, called the Asbestos Hills, from the great quantity of that substance found in them. On the south-west part of the island, at the distance of about sixty miles to the north-west of Hobart Town, are the Western Mountains, the height is computed to exceed 3000 feet. A beautiful lake, in the midst of the last-mentioned range, was visited, for the first time, in 1811, by Mr. Beaumont, the provost-marshal of the island. The principal branch of the Derwent is supposed to flow from it, and he estimates it at about fifty miles in circumference, and having its banks moderately clothed with vegetation. About the middle of the island are salt-plains, on which are several small lakes, the waters of which are strongly impregnated with soda, and from which many tons of this article are annually extracted. On all the lakes and rivers are water-fowl in abundance.

The climate is described as exceedingly fine and congenial to Englishmen. 'It is in fact,' says the Quarterly Review, 'England with a finer sky, with less of its winter frosts and of its autumn and spring moisture; all the fruits and vegetables of an English kitchen-garden are, without difficulty, raised here.' During summer the ordinary course of the weather is the alternating land and sea breeze, the former commencing early in the morning, and prevailing till noon, when it is succeeded by the latter, which usually prevails till after sun-set. Occasionally, however, a wind blows from the north or north-west, which, though resembling that of New South Wales, which there raises the thermometer to 70° in the shade, is greatly mitigated in Van Diemen's Land, by passing across Bass's Straits.

The autumn is generally a serene and delightful season, and the weather continues fine and open to the middle or end of May. In June, rain, sleet, and, in elevated situations, snow, set in, with strong southerly gales; but, even in winter, fine weather intervenes, and neither wind nor rains can be said to be periodical. Slight frosts occur at night, but neither ice nor snow remains throughout the day in the valleys and plains. In September the spring rapidly advances, and in October the weather resembles the 'faithless April of an English May.'

Van Diemen's Land has four principal ports, connected with its rivers: Storm Bay, terminating with the Derwent; Port Dalrymple, or the Tamar; Port Macquarie, and Port Davey. The river Derwent, besides its direct outlet into Storm Bay, has a lateral one into Storm Bay Passage, canal d'Entrecasteaux, a strait about thirty miles long; dividing the large island Bruny from the main land, and continuing from two to five miles wide, till it opens to the Southern Ocean, at Tasman's Head. This large inlet presents every where bold shores and deep water, perfectly sheltered from all winds, and forming a noble port. The Derwent, at its entrance, is two miles broad, and takes a northerly course, which varies in breadth from one to two miles, expanding, occasionally, into large basins equally deep and safe for the distance of twenty-five miles, to which point ships of 500 tons burden can navigate with ease. Here the river begins to freshen, and continues hence for the distance of forty miles, narrowing gradually, but affording a safe passage for vessels of fifty tons as far as New Norfolk, where a ridge of rocks forms a rapid, and abruptly terminates the navigation.

Twelve miles up the Derwent, on the western bank, stands Hobart Town, the capital of the island, picturesquely placed under the Table Mountain already named. Down its side trill several rivulets, one of the most considerable of which passes through the town, and discharges itself into Sullivan's Cove. The town is laid out on an extensive and regular plan, and has many handsome brick houses; but the majority of the buildings are of wood and plaster. There are very few that are not white-washed (for lime abounds in the neighbourhood), and glazed; and each has a paved garden. Several respectable public buildings are either completed or in progress; as a large church of brick and stone, a government-house, a county-jail, store and commissariat offices, a barrack for 100 men, and a small hospital, fenced in together; a battery, guard-house, magazine, &c. The farms of settlers extend principally along the banks of the Derwent, from the entrance of the river from Storm Bay Passage; for the shores of Van Diemen's Land have often a rich black mould close to the edge of the cliff. On the Hobart side, the most considerable group of settlements is New Town, about two miles from Hobart Town, and is watered by a fine stream. A little below Hobart Town, on the opposite bank, is the settlement of Clarence Plains.

To the eastward, upon the north and east sides of an extensive salt-water inlet, communi-

eating with what the settlers call Frederik Hendrik's Bay, is the more considerable settlement of Pittwater, the chief granary of the island. It is watered by two streams, and presents to view a vast extent of naturally clear ground. On the road from Hobart Town to Port Dalrymple, there is a plain extending, in one direction, for twenty miles, and clear land is frequent on that side of the island. To the north-west of Pittwater is the Coal River settlement. About twelve miles higher up are several farms; midway, stands Mount Direction, a remarkably picturesque hill. There are several scattered farms in this quarter, and on the east of the Derwent, as far as New Norfolk. Above the falls at this place the Derwent receives many rivulets; and a most beautiful and fertile country lies on its banks. All these settlements form together a county, under the name of Buckinghamshire, comprising about half the island, the other half being called the county of Cornwall.

The chief settlement near Port Dalrymple is Launceston, situated forty miles up the Tamar, at the confluence of two small streams, called the North and South Esk. This town is about 120 miles across the island from Hobart Town. The Tamar, not admitting large vessels more than seven or eight miles, George Town has been recently laid out near the mouth of the river, and governor Macquarie speaks of it being already in a flourishing state.

Port Macquarie and Port Davey are on the western coast. The channel inwards, of the former, is made between an island and the west head of entrance; it is very deep, but not more than thirty yards wide; the basin is navigable, but shoally for about eight miles, after which there is deep water. In its cliffs are veins of coal, and on its shores abundance of useful and valuable timber, particularly a sort of cedar called the Huon pine, much esteemed in the colony and in India, for its peculiar property of repelling insects. Port Davey is more to the southward, and is a spacious port, with an open entrance; but the country is rocky and barren, and the timber difficult of access. Into these two ports fall Gordon's and several other rivers.

The mineralogical productions of this island are iron, copper, slate, alum, limestone, asbestos, and basalt; together with crystal, cornelian, jasper, marble, and various petrifications. The first is most abundant towards Launceston, where entire mountains of this mineral, yielding twenty per cent. of ore, are said to be found. Its botany, and general natural history, resemble those of New South Wales. All kinds of European grain flourish; the harvests have never failed, it is said, for want of rain. Barley and oats produce most abundantly, and the wheat is superior to that which is grown in New South Wales; so greatly, indeed, that the difference of price which it bears in Sydney market will generally pay the expense of transport thither; and the average produce is generally greater, with the exception, perhaps, of the flood-lands on the banks of the Hawkesbury and Nepean. The natural grasses afford abundance of pasturage at all seasons of the year, and supersede the necessity of making provi-

sion for winter provender in the shape of tame or other artificial food; and, notwithstanding the greater severity of the winters, every description of stock attains a larger size here than in the neighbourhood of Port Jackson. The only advantage which the large island seems to enjoy over the rest consists in the fineness of its wool, and the great excellence and variety of its fruits; particularly the grape, which promises to yield as good wine as any that is made in France, Spain, or Portugal. The temperature of Van Diemen's Land is not sufficiently high for the cultivation of the vine; but, by the introduction of the Merino sheep, the wool has been already so much improved, as to leave no doubt it will soon become a valuable article of export to the mother country. Mr. Wentworth supposes, that twenty years hence, this single article will raise the colonists of New South Wales and Van Diemen's Land, to as high a pitch of happiness and prosperity as is enjoyed by any portion of his majesty's subjects in any quarter of the globe; and that they may be enabled to ship, for Great Britain, every year, at least to the value of a million sterling. The exports, at present, consist of cattle, sheep, wool, flour, corned meats, hams, tongues, dried fish, hides, tallow, banilla, leather for tanning leather, seal-skins and oil, walrus, and spars. The markets hitherto opened to the colonists are England, the Cape of Good Hope, Mauritius, and the East Indies. They have also sent considerable supplies of butcher's meat, corn, and potatoes to Port Jackson. — *Quarterly Review*.

The wild animals are, the kangaroo, opossum, wombat, squirrel, kangaroo-cat, &c., and particularly the hyena opossum. Horned cattle, and particularly sheep, thrive excellently well, the colonists generally dropping lambs twice a year. Goats and pigs run wild. Few indigenous plants are found here, but nearly all the European fruits have cultivated with success.

Van Diemen's Land has a lieutenant-governor and judge-advocate of its own, commissioned by his majesty; but it has not obtained the benefit of a separate criminal jurisdiction, so that prisoners for trial, prosecutors and witnesses, are compelled to make the voyage to Port Jackson. Its civil jurisdiction is confined to causes of less value; but the judge of the supreme court of New South Wales has lately made a circuit to the island for the trial of causes of greater value. The colony is peopled by free settlers and convicts from England as well as from New South Wales.

The remaining natives are few in number, considering the extent of country which they hold free, and in that state of extreme wretchedness which probably forbids their increase. There are, at present, hostilely inclined to Europeans, a circumstance ascribed to a fatal quarrel at the first settling, in which several of them were killed by the rash command of a young officer, and the memory of which has been kept alive by occasional encounters in the interior. The keepers of the settlers are often assaulted by them with spears and stones; but a more friendly intercourse has been effected on the Western Coasts.

The following Tables show:—1. The progress of POPULATION in this Colony, from 1818 to 1820 (omitting the military). 2. The IMPORTS and EXPORTS of the capital at the same period.

TABLE I.—ABSTRACT OF THE GENERAL MUSTER BOOKS OF VAN DIEMEN'S LAND, IN OCTOBER 1818 AND 1820.

**DIEPHOLT**, or **DIEPHOLZ**, a county of Westphalia, belonging to Hanover, bounded on the north by the county of Hoya, on the east by Minden, on the south by the bishopric of Osnaburg, and on the west by Munster. It is about twenty-four miles long, and twelve broad; and is full of briers, underwood, and morasses; except along the Dümme Lake. It contains four towns and about 16,000 inhabitants. The people are Lutherans, and subsist chiefly by feeding cattle, which they sell to Holland and the countries bordering on the Rhine, along with coarse woollens and linens. This territory was erected into a country by Maximilian I. In 1585 it passed to the duchy of Zell, and from them to the electorate of Hanover. The inhabitants rear cattle and flax.

**DIEPPE**, a town of Normandy, in the department of the Lower Seine, with a good harbour, formed by the mouth of the river Arques. It has an old castle westward, and two piers. Packet boats pass between this port and Brighton constantly. They are about sixty-six miles distant. The church of St. James is a very fine structure, and there is a tower from which, in fine weather, the coast of England may be seen. The principal trade consists in fish, ivory toys, and laces. It was bombarded, and great part of it burnt by the English, in 1694. Here is a navigation school very well conducted. It contains about 20,000 inhabitants; and lies thirty-four miles north of Rouen, and 100 north-west of Paris.

**DIES MARCHIE** was the day of congress or meeting of the English and Scotch, annually appointed to be held on the marches or borders, in order to adjust all differences between them.

**DIESIS**, in music, is the division of a tone less than a semitone; or an interval consisting of a less or imperfect semitone. Diesis is the smallest and softest change or inflexion of the voice imaginable: it is called a faint, expressed thus (X) by a St. Andrew's cross or saltire.

**DIESPITER**, in antiquity, a name given to Jupiter; and signifying diei pater, father of the day.

**D'IET**, *n. s.* From *dies*, an appointed day, Skinner; from *diet*, an old German word signifying a multitude.—Junius. An assembly of princes or estates. See the article.

An emperor in title without territory, who can ordain nothing of importance but by a *diet*, or assembly of the estates of many free princes, ecclesiastical and temporal.

*Raleigh.*

**D'IET**, *v. a.*, *v. n.* & *n. s.*

**DIETARY**, *adj.*

**D'IETER**, *n. s.*

**D'IETICAL**, *adj.*

**D'IET-DRINK**, *n. s.*

To feed or live by rule; to give food to; as a neuter verb, to feed; eat: diet as a substantive is food, generally, or allowance of food. Dietary is food and dietetic, pertaining to diet.

For his diet, there was a continual *diet* given him by the king.

*Jeremiah.*

She *diet*s him with fasting every day,

The swelling of his wounds to mitigate,

And made him pray both early and late.

*Fairie Queene.*

I'm partly led to *diet* my revenge,  
For that I do suspect the lusty Moor  
Hath leapt into my seat. *Shakespeare. Othello.*

When we've stuffed  
These pipes, and these conveyances of blood,  
With wine and feeding, we have suppler souls,  
Than in our priestlike fasts; therefore I'll watch him  
Till he be *dieted* to my request. *Id. Coriolanus.*

Shew a while like fearful war,  
To *diet* rank minds sick of happiness,  
And purge the obstructions which begin to stop  
Our very veins of life. *Id. Henry VI.*

He sauced our broth as Juno had been sick,  
And he her *dieter*. *Id. Cymbeline.*

I commend rather some *diet* for certain seasons,  
than frequent use of physick; for these *diet*s alter  
body more, and trouble it less. *Bacon.*

He received no other counsel than to refrain from  
cold drink, which was but a dietetical caution, and such  
as culinary prescription might have afforded.

*Browne's Vulgar Errors.*

Time may come, when men  
With angels may participate; and find  
No inconvenient *diet*, nor too light fare. *Milton.*

Henceforth my early care  
Shall tend thee, and the fertile burden ease;  
Till, *dieted* by thee, I grow mature  
In knowledge as the gods, who all things know. *Id.*

No part of *diet*, in any season, is so healthy as  
natural, and so agreeable to the stomach, as good and  
well-ripened fruits. *Temple.*

Nature delights in the most plain and simple *diet*.  
*Adrian.*

We have lived upon expedients, of what our  
country had less occasion; we have *dieted* a human  
body into a consumption, by plying it with physick  
stead of food. *Swift.*

This book of Cheyne's became the subject of con-  
versation, and produced even sects in the dietetics  
philosophy. *Arbuthnot on Alimentis. Pref.*

Milk appears to be a proper *diet* for human bodies,  
where arrimony is to be purged or avoided, because  
where the canals are obstructed, it being void of  
saline quality. *Id.*

As an article of *diet*, salt seems to act simply as  
stimulus, not containing any nourishment, and is the  
only fossil substance which the caprice of mankind  
has yet taken into their stomachs along with  
food. *Dewar.*

**DIET**, in medicine, according to some, com-  
prehends the whole regimen of life, with regard  
to air, meat, drink, sleep, watching, motion, rest,  
the passions, retentions and excretions. Others  
restrict the term to eating and drinking alone.  
See Food. The natural constitution of the body  
of man is such, that it can easily bear some  
changes and irregularities without much injury.  
Had it been otherwise, we should be almost con-  
stantly put out of order by slight causes. This  
advantage arises from those wonderful communi-  
cations of the inward parts, whereby, when one  
part is affected, another comes immediately to  
its relief. Thus, when the body is too full, na-  
ture causes evacuations through some of the ex-  
cels: and for this reason, diseases from absolute  
inanition are generally more dangerous than  
from repletion, unless the latter be excessive,  
because we can more expeditiously diminish and  
increase the juices of the body. Upon the first

ant, though temperance be beneficial to all the ancient physicians advised persons in health, now and then to eat and drink plentifully than usual. But of the two, temperance in drinking is safer than in eating. A man be obliged to fast, he ought to avoid laborious work. From satiety it is not proper to pass directly to sharp hunger, nor from hunger to satiety: neither will it be safe to indulge in rest immediately after excessive labor, nor to fall to work after long idleness. In food, all changes in the way of living should be made by degrees. The softer and milder kinds of aliment are proper for children, and for youth stronger. Old people ought to lessen the quantity of their food, and increase that of their drink: but some allowance is to be made for women, especially in cold climates like ours: in them the appetite is keener, so is the labor better performed. The article ALIMENT presents a regular table of all the ordinary kinds of human food, or diet: in that of DIET more remarks on this subject occur.

**DIET, GENERAL, OF THE GERMAN EMPIRE,** usually held at Ratisbon. It consisted of the emperor, the nine electors, and the ecclesiastical princes; viz. the archbishops, bishops, abbots, and abbesses; the secular princes, being dukes, marquises, counts, viscounts, or barons; and the representatives of the imperial cities. It issued the emperor's summons, but any of the electors might send deputies. Peace and war, levying of general taxes, and the assessment of different states, were among the principal subjects submitted to the deliberation of the diet. It required the consent of the emperor to give their determinations the force of laws. The imperial dignity, though not hereditary, was enjoyed for several ages, without interruption, by the house of Austria. The Confederation of Rhen, during the domination of Buonaparte, completely dissolved this ancient system, and compelled the house of Austria to resign the title and title of emperor of Germany, which it has since resumed.

At the congress of Vienna, however, the constitution of Germany was so far remodelled on the former plan, that a new diet was created to look over the interests of what was now called the Germanic Confederation. By this confederation, although the title of elector ceases, all the states have a vote in the diet according to their respective territories, and the population. The emperor of Austria has no other preponderance

than that which arises from the extent of his dominions within the limits of the confederacy. Two new kingdoms were created in the north, and two in the south. These were Hanover and Saxony, in the former; and Bavaria and Wirtemberg, in the latter.

The great powers of this new confederation are Austria, Prussia, Hanover, Saxony, Bavaria, and Wirtemberg. In the diet, each member of the confederacy has an equal vote. The members, as constituted by the act of congress, are seventeen, composed of the following separate or combined powers:—

1. Austria.
2. Prussia.
3. Bavaria.
4. Saxony, kingdom (not the duchies).
5. Hanover.
6. Wirtemberg.
7. Baden.
8. The electorate of Hesse.
9. The grand duchy of Hesse.
10. Denmark for Holstein and Lauenburg.
11. The Netherlands for Luxemburg.
12. The grand ducal, and the ducal houses of Saxony.
13. Brunswick and Nassau.
14. Mecklenburg, Schwerin and Strelitz.
15. Oldenburg, Anhalt, and Schwartzburg.
16. Hohenzollern, Lichtenstein, Reuss, Schaumburg-Lippe, Lippe, and Waldeck.
17. The free towns of Lubeck, Frankfurt, Bremen, and Hamburg.

This list therefore exhibits the present political division of Germany, and the states included under the same number vote in the diet conjointly. The deliberations of this body embrace all ordinary discussions; but when general laws are to be enacted, or changes made in the *fundamental* rules or principles of the confederation, the diet forms itself into a general assembly, in which each state votes separately. But as it would evidently have been an unequal partition of power to have given each an equal voice in this assembly, the number of votes possessed by the several states are regulated by their territorial extent and importance. For this purpose, the whole of the confederacy is divided into four classes, which, with the population of each state, according to the official returns of 1818, and the number of votes it possesses in the general assembly, are as follow, viz:—

#### FIRST CLASS.

States.	Population.	Votes.
1. Austria (for her possessions within the limits of the confederacy)	9,482,227—	4
2. Prussia (exclusive of her Polish territories)	7,923,439—	4
3. Saxony, kingdom of	1,200,000—	4
4. Bavaria, do.	3,560,000—	4
5. Hanover, do.	1,305,350—	4
6. Wirtemberg, do.	1,395,463—	4

#### SECOND CLASS.

1. Baden, grand duchy of	1,000,000—	3
2. Hesse-Cassel, electorate of	540,000—	3
3. Hesse-Darmstadt, grand duchy of	619,500—	3
4. Holstein and Lauenburg, duchies of	360,000—	3
5. Luxemburg, grand duchy of	214,058—	3

## THIRD CLASS.

States.	Population.	Vote.
1. Brunswick, duchy of . . . . .	209,600—	2
2. Mecklenburg-Schwerin, grand duchy of . . . . .	358,000—	2
3. Nassau, duchy of . . . . .	302,767—	1

## FOURTH CLASS.

1. Saxe-Weimar, grand duchy of . . . . .	201,000—	1
2. Saxe-Gotha, duchy of . . . . .	185,692—	1
3. Saxe-Coburg . . . . .	80,012—	1
4. Saxe-Meinungen . . . . .	54,400—	1
5. Saxe-Illdburghausen . . . . .	27,706—	1
6. Mecklenburg-Strelitz, grand duchy of . . . . .	71,769—	1
7. Oldenburg . . . . .	217,769—	1
8. Anhalt-Dessau, duchy of . . . . .	52,947—	1
9. Anhalt-Bernburg . . . . .	37,046—	1
10. Anhalt-Köthen . . . . .	32,454—	1
11. Schwartzburg-Sondershausen, principality of . . . . .	45,117—	1
12. Schwartzburg-Rudolstadt . . . . .	53,937—	1
13. Hohenzollern-Hechingen . . . . .	14,300—	1
14. Lichtenstein . . . . .	5,546—	1
15. Hohenzollern-Sigmaringen . . . . .	35,360—	1
16. Waldeck, county of . . . . .	51,877—	1
17. Reuss (Elder Branch), principality of . . . . .	22,255—	1
18. Reuss (Younger Branch) . . . . .	52,205—	1
19. Hesse-Homburg . . . . .	20,000—	1
20. Schaumburg-Lippe . . . . .	24,000—	1
21. Lippe-Detmold . . . . .	69,062—	1
22. Lubeck, the free town of . . . . .	40,650—	1
23. Frankfurt . . . . .	47,850—	1
24. Bremen . . . . .	48,500—	1
25. Hamburg . . . . .	129,800—	1

30,091,489—69

This federative body keeps up a military armament, composed in time of peace of 120,000 men, including 96,000 infantry, 18,000 cavalry, and 6000 artillery. In war the contingent is to be increased; the forces being one in every hundred of the population, which, according to the preceding scale, would be 301,000. A reserve of one in every 200 is also to be maintained; which would therefore at present amount to 150,000 men. Of this army

Austria furnishes . . . . .	94,822
Prussia . . . . .	79,234
Bavaria . . . . .	35,600
Wurtemberg . . . . .	23,955
Hanover . . . . .	13,054
Saxony, kingdom of . . . . .	12,000
Haden . . . . .	10,000
The other states . . . . .	32,335
	<hr/>
	301,000
	<hr/>

The pecuniary contributions of the several members of the confederacy have also been voted for five years; after which the proportions are subject to revision. The fortresses that are considered as essential to the defence of the dominions, belong in common to the confederation, and are to be repaired and supported at the general expense. Gernersheim, as commanding the passage of the Rhine, is to be made a place of great strength; as well as Homburg and Ulm. For completing the fortifications of the last of these places, the sum of £800,000 was voted by the diet in 1818. In time of war, a generalis-

simo is to be chosen by the diet, and who is to be accountable to them alone for his conduct.

DIETRICH, or DIETRICK (Christian William Ernest), a modern artist, born at Weimar in 1712. He resided chiefly at Dresden, where he was professor of the Academy of Arts. He succeeded both in history and landscape, and painted above 150 small subjects, which are preserved in the style of Salvator Rosa. Some of these etchings are exceedingly rare.

DIEU ET MON DROIT, Fr. i. e. God and my right. The motto of the arms of England, as assumed by Richard I. to intimate that he would not hold his empire in vassalage of any man. It was afterwards taken up by Edward III. and was continued without interruption to the reign of king William III. who used the motto *maintiendray*, though the former was still seen upon the great seal. After him queen Anne used the motto *Semper eadem*, which had been before used by queen Elizabeth; but ever since queen Anne, *Dieu et mon droit* has been the royal motto.

DIEU ET SON ACTE, in common law, a maxim that the act of God shall hurt no man; so that a house be beat down by a tempest, the owner is not only be free from an action of waste, but also have a right to take the timber to rebuild the house.

DIEU, ISLE DE, an island in the Atlantic, on the coast of France, about seven miles long, and two wide, fifteen miles S.S.W. of Nantes. Long. 15° 17' E. of Ferro, lat. 46° 42' N.

DIEZ (Juan or John Martin), better known as the Empeinado of modern Spanish general warfare, was the son of a peasant of Valencia.

and born in 1775. Having twice served in the army, as a private dragoon, distinguished himself on the invasion of Bonaparte in 1808, when placing himself at the head of a party of four or five of his men, he commenced killing the French by seizing their horses, arms, &c. After being committed by the French army to Martin openly defied and harassed in various directions; and besetting the rear of their convoys, and exceedingly harassing small parties. He and his twelve comrades are said to have slaughtered seven men in three months. He at first neither expected quarter; but when at the head of a party of men, abandoned this mode of warfare, and continued to signalise himself by great exploits. In one affair, being opposed by the commander of an enemy's party, the Emperor received a sword-thrust through his side; when, enraged by the pain, he turned his adversary by the neck, dragged his horse, and fell with him to the ground, placing himself uppermost. The struggle continued, until both were disarmed, when, the Emperor refused to surrender, the Emperor holding him down with one hand, and with the other dashed him to the ground with a stone, and dashed him out. In September, 1809, Martin killed 170 men, mounted, and placed them at the orders of the junta of Guadalupe. He received the rank of a brigadier in the cavalry, but very unwillingly exchanged his dress for uniform.

The Duke of Wellington entered Madrid in 1812, and received his orders to join the army in the neighbourhood of the head of 4850 men. After the Emperor addressed a letter to king Ferdinand, on the 13th, 1815, and evincing considerable powers of mind. It was published in the *Military Exploits of D. Juan*, the Emperor, who first commanded then organised the System of Guerilla in Spain. Yet he could write, it is said, better than his name. On the establishment of the wretched system of government of the Emperor became obnoxious to the powers, and, notwithstanding all his efforts, was seized on a charge of conspiracy and executed at Rueditz, the 19th of 1815.

The name of an instrument in music of the Arabs, serving chiefly to beat time to it, is a hoop, sometimes with pieces of wood fixed to it to make a gurgling, over which a piece of parchment is distended. It is held by the fingers, and is the true tympanum of the Arabs.

**DIFFERENCE**, in Roman antiquity, a ceremony whereby the divorce of their priests was dissolved. The word comes from the Latin *dis*, used in composition for division, and *ferre*, a ceremony with wheat, of far, farreation was properly the dissolving of marriages contracted by consanctification, those of the pontifices or priests. It was performed with a wheaten cake, and will have consanctification and

diffarreation to be the same thing, contrary to the obvious derivation of the words.

**DIFFER**, *v. n.*  
**DIFFERENCE**, *v. a. & n. s.*  
**DIFFERENT**, *adj.*  
**DIFFERENTIAL**,  
**DIFFERENTLY**, *adv.*  
**DIFFERENTLY**, *adv.*

French *differer*;  
 Span. *deferenciar*;  
 Ital. *differire*, Lat. *differre*, from *dis* different, and *ferre*, to scatter. To be distinguished from; to contend; to be at variance. To difference is to make things to differ; a difference, the diversity or contrariety made: hence a dispute; quarrel; and the evidence or ground of distinction, or quarrel. Differential is a scientific term explained below. The two adverbs seem synonymous.

Where the faith of the holy church is one, a difference between customs of the church doth no harm.  
*Hooker.*

You shall see great difference betwixt our Bohemia and your Sicilia.  
*Shakspeare. Winter's Tale.*

Oh the strange difference of man and man!  
 To thee a woman's services are due;  
 My soul usurps my body.  
*Id. King Lear.*

What was the difference?  
 — It was a contention in publick.  
*Id. Cymbeline.*

This nobility, or difference from the vulgar, was not in the beginning given to the succession of blood, but to the succession of virtue.  
*Raleigh.*

A man of judgment shall sometimes hear ignorant men differ, and know well within himself that those which so differ mean one thing, and yet they themselves never agree.  
*Bacon.*

If the pipe be a little wet on the inside, it will make a differing sound from the same pipe dry.  
*Bacon.*

This is notoriously known in some differences of brake or fern.  
*Brown's Vulgar Errors.*

Opinionators naturally differ  
 From other men; as wooden legs are stiffer  
 Than those of pliant joints, to yield and bow,  
 Which way soe'er they are designed to go.  
*Butler.*

Such protuberant and concave parts of a surface may remit the light so differing, as to vary a colour.  
*Boyle.*

Nothing could have fallen out more unluckily than that there should be such differences among them about that which they pretend to be the only means of ending differences.  
*Tillotson.*

Most are apt to seek all the differences of letters in those articulating motions; whereas several combinations of letters are framed by the very same motions of those organs which are commonly observed, and are differenced by other concurrent causes.  
*Holder.*

Thus, born, alike, from virtue first began  
 The difference that distinguished man from man:  
 He claimed no title from descent of blood;  
 But that, which made him noble, made him good.  
*Dryden.*

Though it be useful to discern every variety that is to be found in nature, yet it is not convenient to consider every difference that is in things, and divide them into distinct classes under every such difference.  
*Locke.*

Grass differenceth a civil and well cultivated region from a barren and desolate wilderness.  
*Ruy.*

In things purely speculative, as these are, and no ingredients of our faith, it is free to differ from one another in our opinions and sentiments.  
*Burnet's Theory.*

The world's a wood, in which all lose their way,  
Though by a *different* path each goes astray.  
*Buckingham.*

There are certain measures to be kept, which may  
leave a tendency rather to gain than to irritate those  
who *differ* with you in their sentiments.  
*Addison's Freeholder.*

He may consider how *differently* he is affected by  
the same thought, which presents itself in a great  
writer, from what he is when he finds it delivered by  
an ordinary genius.  
*Id.*

By *different* methods *different* men excel;  
But where is he that can do all things well?  
*Churchill.*

Plutarch, discoursing of the effects of the air on the  
minds of men, observes, that the inhabitants of the  
Piræum possessed very *different* tempers from those  
of the higher town in Athens, which was distant about  
four miles from the former: but I believe no one at-  
tributes the *difference* of manners in Wapping and  
St. James's to a *difference* of air or climate. *Hume.*

The *difference* of natural tempers seems to be  
chiefly owing to the *different* degrees of influence the  
several passions have upon the mind. *Mason.*

The powers of the letters, when they were applied  
to a new language, must have been vague and un-  
settled, and therefore *different* hands would exhibit  
the same sound by *different* combinations.  
*Johnson. Preface to Dictionary.*

*Differential* method, is applied to the doctrine of  
infinitesimals, or infinitely small quantities, called the  
arithmetick of fluxions. It consists in descending  
from whole quantities to their infinitely small *differ-  
ences*, and comparing together these infinitely small  
*differences*, of what kind soever they be: and from  
thence it takes the name of the *differential* calculus, or  
analysis of infinitesimals. *Harris.*

DIFFERENCE, in heraldry, a term given to the  
figures added to coats of arms, serving to distin-  
guish one family from another; and to show how  
distant younger branches are from the elder or  
principal branch.

DIFFERENCE, in logic, an essential attribute  
belonging to some species, and not found in the  
genus; being the idea that defines the species.  
Thus, body and spirit are the two species of sub-  
stance, which, in their ideas include something  
more than is included in the idea of substance.  
In body, for instance, is found impenetrability,  
and extension; in spirit, a power of thinking and  
reasoning; so that the difference of body is im-  
penetrable extension, and the difference of spirit  
is cogitation.

DIFFERENCE, in mathematics, is the remainder,  
when one number or quantity is subtracted from  
another.

DIFFERENTIAL, in the higher geometry, is  
an infinitely small quantity, or a particle of quan-  
tity so small as to be less than any assignable  
one. It is called a differential, or differential  
quantity, because frequently considered as the  
difference of two quantities; and, as such, is the  
foundation of the differential calculus. Sir Isaac  
Newton, and the English, call it a moment, as  
being considered as the momentary increase of  
quantity. See CALCULUS.

DIFFICILE, *adj.* } Fr. *difficile*;  
DIFFICILENESS, *n. s.* } *difficil*; Ital.  
DIFFICULT, *adj.* } *difficile*, *de*,  
DIFFICULTY, *adv.* } and *facilis*,  
DIFFICULTY, *n. s.* } not easy; not

distressing; scrupulous. Difficile and  
are synonymous adjectives; the former  
common in our old writers. The  
substantives are difficulty and diffidence.

It is *difficult* in the eyes of this people.

The cardinal finding the pope *difficil* in  
the dispensation, doth use it as a principal  
concerning the king's merit, that he had  
none of those deniers which had been levied  
in England.

There be that in their nature do not affect  
of others: the lighter sort of malignity turns  
a crossness or frowardness, or aptness to  
*difficultness*, or the like; but the deeper and  
and mere mischief.

The way he came, not having marked,  
Was *difficult*, by human steps untrod.

Latin was not more *difficil*.

Than to a blackbird 'tis to whistle.  
Some write in Hebrew, some in Greek,  
And some, more wise, in Arabic,  
To avoid the critic, and the expence  
Of *difficult*, wit, and sense.

A man, who has always indulged himself  
full enjoyment of his station, will *difficultly*  
sued to think any methods unjust that ob-  
tinue it. *Rogers's*

They mistake *difficulties* for impossibilities;  
nicious mistake certainly; and the more so  
for that men are seldom convinced of their  
convictions do them no good.

Men should consider, that raising *diffi-  
culty* concerning the mysteries in religion, cannot be  
more wise, learned, or virtuous.

It is very *difficult* to praise a man without  
him out of countenance.

If, therefore, we would have the benefit  
our language more generally known among  
we should endeavour to remove all the  
however small, that discourage the learner.  
But I am sorry to observe, that of late years  
*difficulties*, instead of being diminished, are  
augmented.

Some of the cases which occurred about  
are of such a kind, that it is *difficult* to im-  
what casuistry the jury could have been reached  
their verdict. *Sir R.*

Nothing so *difficult* as a beginning  
In poetry, unless perhaps the end;  
For oftentimes when Pegasus seems within  
The race, he sprains a wing, and down he  
Like Lucifer, when hurled from heaven falls.

DIFFIDE, *v. n.* } Fr. *défier*;  
DIFFIDENCE, *n. s.* } *diffido*; *de*,  
DIFFIDENT, *adj.* } and *fide*, com-  
trust. To distrust; have no reliance  
dence, the more common word, is in  
doubt; distrust; whether applied to others.

No man almost thought himself secure  
durst scarce commune or talk one with another  
there was a general *diffidence* every where.  
*Bacon's Lib.*

so confident of my own sufficiency, as not to admit the counsel of others; but yet I diffident of myself, as brutishly to submit to dictation.  
*King Charles.*

You have brought scandal,  
diffidence of God, and doubt  
of hearts, propense enough before  
*Milton's Agonistes.*

Be not diffident  
she deserts thee not, if thou  
her, when most thou need'st her nigh.  
*Milton.*

vidence of its being, or that this is its true  
only on probable proofs, our assent can  
higher than an assurance or diffidence arising  
more or less apparent probability of the proofs.  
*Locke.*

With hope and fear  
woman did the new solution hear:  
man diffides in his own augury,  
doubts the gods.  
*Dryden.*

ality of mankind, either out of laziness,  
of their being able to judge right in points  
very clear, are apt rather to take things  
than to give themselves the trouble to  
whether they be true or no.  
*Buckingham.*

ent always when you doubt your sense;  
th, though sure, with seeming diffidence.  
*Pope.*

its makes the humble heart diffident.  
*Clarissa.*

saks of the Seres, the same people with  
t, as being very shy and diffident in their  
dealing.  
*Arbutnot.*

any of past errors makes me diffident for  
*Hume on the Human Understanding.*

ND, v. a. Lat. *diffindo*. To cleave in  
lit.

SSION, n. s. Lat. *diffusio*. The act  
of splitting.

ATION, n. s. Lat. *diffiare*. The act  
with a blast of wind.

UENCE, or Lat. *diffuio*; *dis*, di-  
versely, and *fluio*, to  
flow; Gr. *βλωω*. To  
flow. The flowing away on all sides,

for congealed by the frigidty of the air,  
acquireth no new form, but rather a con-  
tinuation of its *diffuency*; and admit-  
tence, but condition of fluidity.

*Brown's Vulgar Errors.*

RM, adj. } From Lat. *firmus*. Con-  
mity, n. s. } trary to uniform; having  
different structure; dissimilar; unlike;  
in flower, of which the leaves are un-  
like.

ey murmur against the present disposure  
they desire in them a *difformity* from the  
be, and the idea of that mind that formed  
it.  
*Brown's Vulgar Errors.*

nal refractions of *difform* rays proceed not  
contingent irregularities; such as are veins,  
twisted, or fortuitous position of the pores  
*Newton.*

ANCHISEMENT, n. s. Fr. *franchise*.  
taking away the privileges of a city.

DIFFUSE, v. a. & adj.

DIFFUSE'D, part. adj.

DIFFU'SEDLY, adv.

DIFFU'SEDNESS, n. s.

DIFFU'SION,

DIFFU'SIVE, adj.

DIFFU'SIVELY, adv.

diffuse, as an adjective, therefore, sometimes means  
obscure of meaning; difficult to gather; also ex-  
tended. Diffusion is a state of dispersion; copi-  
ousness; exuberance.

He grows like savages,

To swearing and stern looks, *diffused* attire,  
And every thing that seems unnatural.

*Shakespeare. Henry V.*

Whereas all bodies act either by communication of  
their natures, or by the impressions and signatures of  
their motions, the *diffusion* of species visible seemeth  
to participate more of the former operation, and the  
species audible of the latter. *Bacon's Natural History.*

Wisdom had ordained

Good out of evil to create; instead  
Of spirits malign, a better race to bring  
Into their vacant room, and thence *diffuse*  
His good to worlds, and ages, infinite.  
*Milton.*

A sheet of very well sleeked marble paper did not  
cast distinct colours upon the wall, nor throw its light  
with an equal *diffusion*; but threw its beams, unstained  
and bright, to this and that part of the wall.

*Boyle on Colours.*

A chief renowned in war,  
Whose race shall bear aloft the Latian name,  
And through the conquered world *diffuse* our fame.

*Dryden.*

The stars, no longer overlaid with weight,  
Exert their heads from underneath the mass,  
And upward shoot, and kindle as they pass,  
And with *diffusive* light adorn their heavenly place.

*Id.*

No man is of so general and *diffusive* a lust, as to  
prosecute his amours all the world over.  
*South.*

They are not agreed among themselves where infal-  
libility is seated; whether in the pope alone, or a  
council alone, or in both together, or in the *diffusive*  
body of Christians.

*Tillotson.*

All liquid bodies are *diffusive*; for their parts being  
in motion, have no connexion, but glide and fall off  
any way.

*Burnet's Theory of the Earth.*

The fault that I find with a modern legend is its  
*diffusiveness*; you have sometimes the whole side of a  
medal overrun with it.

*Addison on Medals.*

The wisdom of the ignorant somewhat resembles  
the instinct of animals; it is *diffused*, but in a very  
narrow sphere; but within the circle it acts with  
vigour, uniformity, and success.

*Goldsmith.*

Some glossy-leaved and shining in the sun,

The maple, and the beech of oily nuts

Prolific, and the lime at dewy eve,

*Diffusing* colours.

*Cowper.*

DIG, v. a. & v. n. Saxon, *dic*; Dan. *dyger*;  
Belg. *dyken*; from *diok*, a ditch. To pierce and  
turn over the earth; to cultivate ground; to  
form by digging; to pierce; to obtain any thing  
by this operation. As a neuter verb, to work  
with the spade.

They long for death, but it cometh not; and dig for  
it more than for hid treasures.  
*Job iii. 21.*

If I *digged* up thy forefathers' graves,  
And hung their rotten coffins up in chains,

It would not slake mine ire.

*Shakespeare.*

The walls of your garden, without their furniture,  
Look as ill as those of your house: so that you cannot  
dig up your garden too often. *Temple.*

When we visited mines, we have been told by dig-  
gers, that even when the sky seemed clear, there  
would suddenly arise a steam so thick, that it would  
put out their candles. *Boyle.*

Nor was the ground alone required to hear  
Her annual income to the crooked share;  
But greedy mortals, rummaging her store,  
Digged from her entrails first the precious ore.

*Dryden's Ovid.*

A ravenous vulture in his opened side  
Her crooked beak and cruel talons tried;  
Still for the growing liver digged his breast;  
The growing liver still supplied the feast.

*Id. Æneid.*

The Italians have often dug into lands, described  
in old authors as the places where statues or obelisks  
stood, and seldom failed of success.

*Addison's Travels.*

It is digged out of even the highest mountains, and  
all parts of the earth contingently; as the pyrites.

*Woodward.*

The bushman spade is a pointed stick about three  
feet long, to which there is affixed about the middle  
a stone to increase its power in digging up bulbous  
roots.

*Burchell's Travels.*

DIGAMMA, a letter of the Greek language retained in the Æolic dialects. Dr. Jones observes that such letters were formerly aspirates, as they derived their origin from the strong gutturals, which the Greeks borrowed from the oriental tongues; and hence he traces the origin of the Æolic digamma. It is the tendency of every guttural, says this writer, when become habitual, to soften down in the rapidity of utterance into a mere aspirate. The digamma, he contends, did not belong, as Dr. Bentley and others supposed, to the Æolic dialect only, but to all the dialects of Greece in their more ancient mode of pronunciation; and he observes, in opposition to the opinion of the learned, who say that the digamma at first prevailed, and was afterwards succeeded by the aspirate, that the gutturals at first prevailed, which were softened into mere aspirates, and that these were again changed for a more easy and agreeable letter, which being simply a labial, was diversified by different people into *y*, *w*, *v*, *φ*, *β* or *ψ*.

Dr. Marsh would have it called, the *Pelagic* digamma. 'The connexion,' says he, 'between the Pelasgi and the Æolic dialect has been fully established. Indeed, it might properly be called the Pelagic dialect: for it was used by the Pelasgi, before the name of Æolic existed. The principal migrations of the Pelasgi, both to Italy, and to the islands in the Ægean sea, took place from Thessaly, as we have already seen, during the reign of Deucalion. They carried, therefore, their dialect to Italy, and to the islands in the Ægean sea, before that dialect had acquired the appellation of Æolic. The character, therefore, which distinguishes the Æolic dialect, might properly be called the Pelagic digamma.'—*Floro Pelasgi*, p. 50.

Thus, however, the learned bishop of Salisbury disputes. 'By the Æolians,' the Digamma, as he states, 'was anciently called *Vau*, or *Wau*, the name which is given to the sixth letter in the

Hebrew, Syriac, and Samaritan Alphabets and to the letter corresponding to it in the Arabic and Ethiopic Alphabets. The term Digamma has little or no relation to its power, and may have been given to it after the knowledge of its origin was lost. The Greek grammarians, comparing it with the third letter of their alphabet, called it a double gamma; but it was in fact a double *Vau*. Its new name must have followed its new figure, which was probably given to it to distinguish the consonant power of the letter from the vowel.'—*Letter to the Bishop of Durham*, 1815.

However this may be, Homer has so frequently used it, as to give it with some writers the name of the Homeric digamma. His object was clearly to avoid every hiatus of vowels: but once the introduction of aspirates had insensibly abolished the use of this letter with the transcribers, its existence could only be traced in a few ancient inscriptions. To remove the harshness thus often apparent in this great poet, the commentators interposed the final *v*, or the particles *v'*, *δ'*, *ρ'*, altering, with respect to the case of words sometimes and consequently the sense. 'Numberless passages,' says Dr. Valpy, 'remained in their naked demerity, and exercised the conjectural sagacity of grammarians and commentators. Thus in the opening of the *Iliad*; 'Ἥρην ἐ-  
ροῦς ἐλ' ἰλάρια τεύχε' κύνεσσιν;' aware of the monious effect of the concurrence of the vowels they cut off the former. The quantity of the latter created another difficulty. Some doubt the *λ*, and others asserted that it was lengthened before the liquid. But there were passages, in which even these and similar expedients were inapplicable. A successful effort was made by Dr. Bentley to remove these embarrassments. The restoration of the digamma has at length vindicated the poet, and displayed the harmonious beauties of his original versification.' Dr. Valpy furnishes us with the following Table of words in Homer, which either constantly, or generally admit the digamma in the initial vowel.

Λ		ἴθνος,	ἰλός,

As Life discordant elements arrests,  
Rejects the noxious, and the pure *digests*,  
Combines with Heat the fluctuating mass,  
And gives awhile solidity to gas. *Darwin.*

Oh, the souls of some men  
Thou wouldst *digest* what some call treason, and  
Fools treachery. *Byron.*

**DIGEST, DIGESTUM**, is a collection of the Roman laws, ranked and digested under proper titles by order of the emperor Justinian. That prince gave his chancellor Tribonianus a commission for this purpose: who, in consequence of this, chose sixteen jurisconsulti, or lawyers, to work upon them. These, accordingly, took the best decisions from the 2000 volumes of the ancient jurisconsulti, and reduced them all into one body; which was published A. D. 533, under the name of the Digest. To this the emperor gave the force of a law, by a letter at the head of the work, which serves it as a preface. The Digest makes the first part of the Roman law, and the first part of the corpus or body of the civil law contained in fifty books. It was translated into Greek under the same emperor, and called *Pandecta*. See **PANDECTS**. Cujas says, that Digest is a common name for all books disposed in a good order and economy; and hence Tertullian calls the gospel of St. Luke a digest. Hence also abridgments of the common law are denominated digests of the numerous cases, arguments, readings, pleadings, &c., diversified in the year books and other reports and books of law, reduced under proper heads. The first was that of Stadham, which comes as low as Henry VI.

**DIGESTER**, an instrument invented by Mr. Papin about the beginning of the last century. It is a strong vessel of copper or iron, with a cover adapted to screw on with pieces of felt or paper interposed. A valve with a small aperture is made in the cover, the stopper of which valve may be more or less loaded, either by actual weights, or by pressure from an apparatus on the principle of the steelyard. The purpose of this vessel is to prevent the loss of heat by evaporation. The solvent power of water when heated in this vessel is greatly increased.

**DIGESTION**. For the rationale of this process, see **PHYSIOLOGY**. See also the word **BILE** for an account of part of the changes which aliment undergoes, before it may in one sense be said to be duly digested; and, for an account of the derangements in the process of digestion see the article **MEDICINE**, and the word **STOMACH**; under which last word, the reader will find a detailed account of those modern theories which have recently excited so much attention in respect of stomach derangements and their general influence over the frame. It is under this word, that we propose discussing the merits and demerits of these theories, and engaging in a somewhat comprehensive disquisition on the subject in all its bearings.

**DIGESTIVES**, in medicine, such remedies as strengthen and increase the tone of the stomach, and assist in the digestion of food. To this class belong all stomachics and strengtheners, or corroborants.

**DIGGING**, among miners, is appropriated to the

operation of freeing any kind of ore from stratum in which it lies, where every one of their tools turns to account: in contrast to the openings made in search of ore, called hatches, or essay hatches: and the operation itself, tracing of mines or hatching, a bed of ore is discovered, the beetle-man ore from the fossils around it; and the men throw it from one shamble to another, reaches the mouth of the hatch. In order to save the expense as well as fatigue shovel-men, they raise the ore by a winder and two buckets, one of which the other comes down.

**DIGHT**, *v. a.* Goth. & Swed. *daghihten*. To arrange; dress; embellish. Seems always to signify the past; the passive is *dight*, as *dighted* in Hudibras happens improper.

Every spirit as it is most  
And bath in it the more of heavenly  
So it the fairer body doth procure  
To habit in, and it more fairly *dight*  
With cheerful grace, and amiable

On his head his dreadful hat he  
Which maketh him invisible to sight.

Let my due feet never fail  
To walk the studious cloisters  
And love the high embowed roof  
With antick pillar, massy proof  
And storied windows richly *dight*  
Casting a dim religious light.

Just so the proud insulting  
Arrayed and *dighted* Hudibras.

**DIGIT**, *n. s.* } Lat. *digitus*;  
**DIGITATED**, *adj.* } *δευκτος, δευκτιρος*, because we point out any thing with the finger of the numbers expressed by a single figure, a measure of about three-fourths of an inch, the width of the finger; or the twelfth part of the sun's or moon's diameter. *Digitated* is out.

Not only the numbers seven and nine, derivations abstruse, have been extolled by all or most of other *digits* have been as much applauded.

*Drumme's Vex*

For animals multiform, or such as are, have several divisions in their feet, those that are uniparous; that is, men and

If the inverted tube of mercury be less than a digit high, or somewhat more, the glass will not fall, but remain suspended in the tube, cannot press the subjacent mercury with force as doth the incumbent cylinder of air pressing thence to the top of the atmosphere.

**DIGIT**, in astronomy, is used to denote the quantity of an eclipse. Thus an eclipse is said to be of six digits, when six of them are hid.

**DIGIT**, is also a measure taken from the finger. It is properly three-fourths of an inch, and contains the measure of the corn laid breadthwise.

**DIGITALIS**, fox-glove, a genus of the *osperma* order, and *didynamia* class, natural order twenty-eighth, lundum

cons. campanulated, quinquefid, and  
 caps. ovate and bilocular. There are  
 five of which are hardy, herbaceous,  
 and perennial plants, and the sixth a  
 rubby exotic. The herbaceous species  
 are three feet high, crowned with spikes  
 of iron-colored, or purple flowers. The  
 first rises five or six feet high, having  
 ped. rough leaves, four or five inches  
 half as broad; the branches being all  
 with flowers growing in loose spikes.  
 species are easily raised by seeds. An  
 made of the flowers of purple fox-glove  
 butter, is much commended by some  
 for scrophulous ulcers which run much  
 full of matter. Taken internally this  
 violent purgative and emetic; and is  
 only to be administered to robust con-  
 indeed it often proves even then a  
 An infusion of two drachms of the leaf  
 of water, given in half-ounce doses  
 hours or so, till it begin to purge, is  
 used in dropsy, particularly that of the  
 is said to have produced an evacuation  
 so copious and sudden, in ascites, by  
 urine, that the compression of bandages  
 necessary. The plentiful use of dilu-  
 dered during its operation. But besides  
 in infusion, it has also been employed  
 te. And when taken at bedtime to the  
 one, two, or three grains of the dried  
 often in a short time operates as a very  
 diuretic, without producing any other  
 Even this quantity, however, will  
 excite very severe vomiting, and that  
 ing unexpectedly.

**DIADATION**, *n. s.* Lat. *digladiatio*. A  
 sword; any quarrel or contest.  
 seems purposely to intend the cherishing  
 of *digladiations*, by his own affection of  
 obscurity. *Glanville.*

**GGYHEUR**, a town in the island of  
 out ten miles to the eastward of Candy,  
 d to Battacolo. The district around is  
 and impenetrable, for which reason it  
 royal residence; and when the king was  
 of Candy, and his capital burned by  
 in 1803, he found here a retreat, to  
 European army could penetrate. There  
 villages among the surrounding hills,  
 rice grounds.

**PIL**, in architecture, a kind of imper-  
 ph, console, or the like: with two  
 engravings either circular or angular.  
 the chief town of the department of  
 Alps, France, famous for the baths near  
 on the Bleone, and is a bishop's  
 streets are steep and winding, and the  
 but the cathedral is a respectable  
 there are four other churches. Not  
 town there is an extinct volcano. It  
 out 3500 inhabitants. Thirty miles  
 Apt, and thirty-four south by west of

**FFY** *u. s.* } From Lat. *dignus* (Gr.  
**FICTION**, *n. s.* } *dign*, right) worthy;  
**ED**, *adj.* } and *facio* to make.  
**ARY**, *n. s.* } To advance; promote;  
**Y**, *n. s.* } raise to honor. Digni-

fication and dignity are synonymous substan-  
 tives; and the cognates of the latter. Fr. *dig-  
 nité*; Span. *dignidad*; It. *dignità*. Dignities is  
 used by Browne for the general or chief maxims  
 of a science. Ayliffe says, that among ecclesias-  
 tics, 'we understand by a dignity that promo-  
 tion or preferment to which any jurisdiction is  
 attached.' Dignitary has also a peculiar appli-  
 cation to clergymen, above the rank of a parish-  
 priest; but is likewise used generally.

Angels are not any where spoken so highly of as  
 our Lord and Saviour Jesus Christ, and are not in  
 dignity equal to him. *Hooker.*

Such a day,  
 So fought, so followed, and so fairly won,  
 Came not till now to dignify the times  
 Since Cesar's fortunes! *Shakespeare. Henry IV.*

Not that we think us worthy such a guest,  
 But that your worth will dignify our feast.

*Ben Jonson.*

The sciences concluding from dignities, and prin-  
 ciples known by themselves, receive not satisfaction  
 from probable reasons, much less from bare asseve-  
 rations. *Brown.*

I grant that where a noble and ancient descent and  
 merit meet in any man, it is a double dignification of  
 that person. *Walton's Angler.*

Abbots are stiled dignified clerks, as having some  
 dignity in the church. *Ayliffe's Parergon.*

If there be any dignitaries, whose preferments are  
 perhaps not liable to the accusation of superfluity,  
 they may be persons of superior merit. *Swift.*

Some men have a native dignity, which will pro-  
 cure them more regard by a look, than others can  
 obtain by the most imperious commands. *Clarissa.*

The peaceable lawyers are, in the first place, many  
 of the benchers of the several inns of court, who seem  
 to be the dignitaries of the law, and are endowed  
 with those qualifications of mind that accomplish a  
 man rather for a ruler than a pleader. *Addison.*

No turbot dignify my boards;  
 But gudgeons, flounders, what my Thames affords.

*Pope.*

We all know, that those who loll at their ease in  
 high dignities, whether of the church, or of the state,  
 are commonly averse to all reformation. *Burke.*

Or, turning to the Vatican, go see  
 Laocoon's torture dignifying pain—  
 A father's love and mortal's agony  
 With an immortal's patience blending. *Byron.*

**DIGNITY**, as applied to the titles of noblemen,  
 signifies honor and authority. And dignity may  
 be divided into superior and inferior; as the titles  
 of duke, marquis, earl, baron, &c. are the highest  
 names of dignity; and those of baronet, knight,  
 serjeant at law, &c., the lowest. Nobility only  
 can give so high a name of dignity as to supply  
 the want of a surname in legal proceedings; and  
 as the omission of a name of dignity may be  
 pleaded in abatement of a writ, &c., so it may be  
 where a peer who has more than one name of  
 dignity is not named by the Most Noble. No  
 temporal dignity of any foreign nation can give  
 a man a higher title here than that of Esquire.  
 The first personal dignity after the nobility is a  
 knight of the order of St. George, or of the gar-  
 ter, first instituted by Edward III. A. D. 1344.  
 Next (but not till after certain official dignities,  
 as privy-counsellors, the chancellors of the ex-

chequer and duchy of Lancaster, the chief justice of the king's bench, the master of the rolls, and the other English judges,) follows a knight banneret; who indeed by statutes 5 Richard II. c. 4, and 14 Richard II. c. 11, is ranked next after barons; and his precedence before the younger sons of viscounts was confirmed by order of king James I. But to entitle him to this rank, he must have been created by the king in person, in the field, under the royal banners, in time of open war; else he ranks after baronets, who are the next in order; which title is a dignity of inheritance, created by letters patent, and usually descenderable to the issue male. Next follow the knights of the Bath. The last of these inferior nobility are knights bachelor; the most ancient though the lowest order of knighthood amongst us. See BACHELOR. The above, with those enumerated under the article NOBILITY, Sir Edward Coke says, are all the names of dignity in this kingdom; Esquires and Gentlemen being only names of worship. But before these last the heralds rank all colonels, serjeants at law, and doctors of law, physic, and divinity.

**DIGNOTION**, *n. s.* From Lat. *dignosco*. Distinction; distinguishing mark.

That temperament all *dignotions*, and conjecture of prevalent humours, may be collected from spots in our nails, we are not averse to concede.

*Brown's Vulgar Errors.*

**DIGRESS'**, *v. n.* } Span. and Port *digre-*  
**DIGRESSION**, *n. s.* } *dir*; Ital. *digredire*; Lat.

**DIGRESSIVE**, *adj.* } *digrediri*, *digressus*, from *dis* and *gradus*, *gressus*, to step; to go aside from a road, or design; to wander; to expatiate. Digressive is wandering.

Thy noble shape is but a form of wax,  
Digressing from the valour of a man.

*Shakespeare.*

The *digression* of the sun is not equal; but, near the equinoctial intersections, it is right and greater; near the solstices, more oblique and lesser.

*Brown's Vulgar Errors.*

He, she knew, would intermix  
Grateful *digressions*, and solve high disputes  
With conjugal caresses.

*Milton.*

The good man thought so much of his late conceived commonwealth, that all other matters were but *digressions* to him.

*Sidney.*

In the pursuit of an argument, there is hardly room to *digress* into a particular definition, as often as a man varies the signification of any term. *Locke.*

*Digressions* in a book are like foreign troops in a state, which argue the nation to want a heart and hands of its own; and often either subdue the natives, or drive them into the most unfruitful corners.

*Swift.*

The excellence of this work is not exactness but copiousness. The wild diffusion of the sentiments, and the *digressions* callies of imagination, would have been compressed and restrained by confinement to rhyme.

*Johnson.*

**DIGYNIA**; from *dig*, twice, and *gynē*, a woman; the name of an order in the first thirteen classes, except the ninth, in Linnaeus's sexual method; consisting of plants, which have two female organs.

**DII**, the divinities of the ancient heathens, were very numerous. Every object which caused

terror, inspired gratitude, or bestowed charms, received the tribute of veneration. Man was a superior agent in the stars, the elements, or the trees, and supposed that the waters which communicated fertility to his fields and possessions, were under the influence and direction of an invisible power inclined to favor and to bless mankind. Thus arose a train of divinities and imagination arrayed in different forms and armed with different powers. They were supposed to be endowed with understanding, and susceptible of the same passions which daily afflict the human race; and to be appeased or provoked, like imperfect beings whose fears gave them birth. Their wrath was to be mitigated by sacrifices of incense; and sometimes human victims died, as thus real crimes were committed, to expiate crimes, which superstition alone supposed to exist. The sun, from his powerful influence and animating nature, first claimed the adoration of the civilised inhabitants of the earth. The moon was honored with sacrifices, and addressed in prayers; and after immortality had been generally bestowed on all the heavenly bodies, mankind classed among their deities the brute creation, and the cat and the sow shared equally with Jupiter himself, the father of gods and men, a devout veneration of their votaries. The immense number of deities has been divided into different classes according to the fancy of mythologists. The Romans generally reckoned three classes of the gods. Among the demi-gods, they were said to have merited immortality by the greatness of their exploits and services to mankind, were Vertumnus, Hercules, Jason, Castor and Pollux, whose parents were some of the immortal gods. All the passions and moral virtues were also reckoned powerful deities, and temples were raised to the goddesses of concord, peace, &c. According to Hesiod, there were to us than 30,000 gods that inhabited the earth, and were guardians of men, all subservient to law. To these, succeeding ages added an almost equal number; and indeed they were so numerous that their functions so various, that we find temples erected and sacrifices offered, to unknown gods. All the gods of the ancients were supposed to have once lived upon earth as mere mortals; and even Jupiter himself, the ruler of heaven, was presented by the mythologists as once a human child; and all the particulars, attending the birth and education of Juno, are recorded. In process of time, not only virtuous men, who had been the patrons of learning and the supporters of liberty, but also thieves and pirates, were admitted among the gods, and the Roman senate sometimes granted immortality to the most cruel and worthless of their emperors.

**DIAMBUS**, in Latin poetry, the foot of a verse of four syllables; it is compounded of two iambics, as *sēvēritas*.

**DIJON**, or **DIGON**, an ancient and handsome city of France, a bishop's see, in the department of the Cote d'Or and ex-devant province of Burgundy. It has a university which has long been among the most celebrated and best regulated in France. The public structures, and particularly the churches, are very fine. In front of the ex-devant Place Royale, is the ancient palace of the

grundy; and at the gates of Dijon is a church founded in 1383, in which are the recent tombs of those princes. The church, in the form of a horse-shoe, is the pride of the city. Among the churches I care, that of St. Benigne, the spire to an elevation of 370 feet; the church itself, remarkable for the richness of its architecture, of St. Stephen, now the cathedral of the church of Notre Dame, esteemed the best models of Gothic architecture in France, the old monastic institutions, and the Cistercian abbey, the origin of the order throughout Europe. Here is a church built by Louis XI. The streets are wide, and regular, and the houses in general are commodious; the population, of the suburbs, is 21,600. Here are manufactures of silk, cotton, and wool, the trade in which much improved by the recent canal from this place to St. Jean de la Vierge. The great annual fairs are held here: June 14th, and November 10th, last of each. Dijon is built on an oval plain in a pleasant plain, which produces wine, between two small rivers, forty-fourth-east of Autun, 100 miles north and 175 south-east of Paris; contains a library of theology, philosophy, mathematics, German, history, rhetoric, eloquence, poetry. Here are also a drawing-school, 4000 volumes, a museum of paintings, engravings, and a theatre. The academy was founded in 1725. Among the characters of Dijon, may be mentioned Bossuet, and the poets Boileau and Piron. It has several public buildings, the most frequented are the

**DILATION**, *n. s.* Lat. *dijudicatio*. A delay or protraction.

*Fr.* Goth and Swed. *dike*; Saxon, *dike*; *Fr.* *digue*; from Gr. *ραχος*; Heb. *dyke* or mound. A boundary of lands, or a dike, and often by embankments on a channel for water.

breaks up the flood-gates of so great a city, the art and industry of man is not able to keep up *dykes* and ramparts against it.

*Cowley.*  
The river filled, and with a roaring sound  
The waves float the nether ground.

*Dryden's Virgil.*  
The *dykes*! than whom no slave of mud  
Can blot the silver flood.

*Pope's Dunciad.*  
The *dykes* also a ditch or drain, made for the drainage of waters. The word seems formed from *dyke* to dig; though others derive it from *dyk*, or *dyke*, a dam, sea-bank,

*dyke*, is a work of stone, timber, or mud, to oppose the entrance or passage of waters of the sea, a river, lake, or the ocean.

**DILATE**, *v. a.* Lat. *dilacerare*. To tear; to rend; to

The infant, at the accomplished period, struggling to come forth, *dilacerates* and breaks those parts which restrained him before. *Brounne's Vulgar Errors.*

The greatest sensation of pain is by the obstruction of the small vessels, and *dilaceration* of the nervous fibres. *Arbuthnot.*

**DILANIATE**, *v. a.* Lat. *dilanio*. To tear; to rend in pieces.

Rather than they would *dilaniate* the entrails of their own mother, and expose her thereby to be ravished, they met half way in a gallant kind.

*Howel's Eng. Tears.*

**DILAPIDATE**, *v. n.* Lat. *dilapido*. To dilapidate, *n. s.* To go to ruin; to fall by decay. The incumbent's suffering the chancel, or any other edifices of his ecclesiastical living, to go to ruin or decay, by neglecting to repair the same: it likewise extends to his committing, or suffering to be committed, any wilful waste in or upon the glebe-woods, or any other inheritance of the church. (*Ayliffe's Parergon*.) This word has also been applied generally of late.

'Tis the duty of all church-wardens to prevent the *dilapidations* of the chancel and mansion-house belonging to the rector or vicar. *Ayliffe.*

**DILATE**, *v. a. & v. n.* *Fr.* *dilater*; Span. *dilatar*; Ital. & Lat. *dilatari*, *n. s.* *dilatate*, from *de* and *latere*, *adj.* *latus*; Gr. *πλεονεκτεω*, *n. s.* *broad*, from Heb. *בָּרַח*.

**DILATE**, to set at large. To extend; spread out; enlarge; hence to relate at length or diffusely: as a neuter verb, to widen; speak largely. Dilatation is admitting of extension. Dilatation, the act of extending, or state of being extended.

But ye thereby much greater glory gate,  
Than had ye sorted with a prince's peer;  
For now your light doth more itself dilate,  
And in my darkness greater doth appear.

*Sponser.*

But he would not endure that woful team  
For to dilate at large. *Faerie Queene.*

Do me the favour to dilate at full  
What hath befallen of them, and thee, till now. *Shakspeare.*

Joy causeth a cheerfulness and vigour in the eyes; singing, leaping, dancing, and sometimes tears: all these are the effects of the dilatation, and coming forth of the spirits into the outward parts.

*Bacon's Natural History.*

It may be behoveful for princes, in matters of grace, to transact the same publicly, and by themselves; or their ministers to dilate upon it, and improve their lustre, by any addition or eloquence of speech. *Clarendon.*

Satan alarmed,  
Collecting all his might, dilated stood,  
Like Teneriff, or Atlas, unremoved. *Milton.*

The motions of the tongue, by contraction and dilatation, are so easy and so subtle, that you can hardly conceive or distinguish them aright. *Holder.*

We take notice of the wonderful dilatation or extensiveness of the gullets of serpents: I have taken two adult mice out of the stomach of an adder, whose neck was not bigger than my little finger. *Rap.*

Diffused, it rises in a higher sphere;  
Dilates its drops, and softens into air. *Prior.*

His heart *dilates* and glories in his strength,

Addison.

The second refraction would spread the rays one way as much as the first doth another, and so *dilate* the image in breadth as much as the first doth in length.

Newton.

The windpipe divides itself into a great number of branches called bronchia: these end in small air-bladders, *dilatable* and contractible, capable to be inflated by the admission of air, and to subside at the expulsion of it.

Arbuthnot on Aliments.

The buccinatores, or mowers up of the cheeks, and the *dilators* of the nose, are too strong in choleric people.

Id.

This fluid may possibly be the same with that which, being attracted by and entering into other more solid matter, *dilates* the substance, by separating the constituent particles, and so rendering some solids fluid, and maintaining the fluidity of others.

Franklin.

Here, there, he points his threatening front, to suit His first attack, wide waving to and fro His angry tail; red rolls his eyes, *dilated* glow.

Byron.

DILATATION, in physics, a motion of the parts o. any body, by which it is so expanded as to occupy a greater space. This expansive motion depends upon the elastic power of the body; whence it appears that dilatation is different from rarefaction, this last being produced by the means of heat.

DILATORY PLEAS, in law, are such as are put in merely for delay, and there may be a demurrer to a dilatory plea, or the defendant shall be ordered to plead better, &c. The truth of dilatory pleas is to be made out by affidavit of the fact, by stat. 4 and 5 Anne.

DILATRIS, in botany, a genus of the monogynia order, and triandria class of plants: CAL. none: cor. has six petals, and is shaggy; the stigma simple. Species three; all natives of the Cape.

DILATORY, *adj.* Fr. *dilatoire*; Lat. *dilatatorius*. See DILATE. (For a dilatory person spreads or extends his work.) Slow; delaying; tardy.

These cardinals trifle with me: I abhor This *dilatory* sloth, and tricks of Rome.

Shakespeare. Henry VIII.

An inferior council, after former tedious suits in a higher court, would be but *dilatory*, and so to little purpose.

Hayward.

All promise is poor *dilatory* man, And that through every stage.

Young.

A *dilatory* temper commits innumerable cruelties without design.

Addison's Spectator.

DILECTION, *n. s.* Lat. *dilectio*. The act of loving; kindness.

So free is Christ's *dilectum*, that the grand condition of our felicity is our belief.

Boyle's Seraphic Love.

DILEMMA. Fr. *dilemme*; Lat. *dilemma*; Gr. *διλημμα*, from *δις* and *λημμα*, an assumption, *δι λαμβανω*, to take. An argument or sophism capable, apparently, of two equally correct, but opposite conclusions.

A *dilemma*, that Morton used to raise benevolence, some called his fork, and some his crotch.

Bacon's Henry VII.

Quoth he, in all my past adventures I ne'er was set so on the tenters, Or taken tardy with *dilemma*, That every way I turn does hem me.

Hope, whose weak being ruined is Alike if it succeed, and if it miss; Whom good or ill does equally confound, And both the horns of fate's *dilemma* wound.

A dire *dilemma*; either way I'm spoil; If foes they write, if friends they read, all

DILIGENCE, *n. s.* Fr. *diligent*; Lat. *diligentia*. DILIGENT, *adj.* Port., and Lat. *diligente*; Lat. *diligenter*. DILIGENTLY, *adv.* Lat. *diligenter*.

from *diligere*, to favor (work). Industry; stancy in business; continued application. Hence a name, not seldom unsupplied, to coaches.

Seest thou a man *diligent* in his business, stand before kings.

Prov.

Brethren, give *diligence* to make your election sure.

2 Pet.

Still when she slept he kept both watch and And when she wakt he wayted *diligent*, With humble service to her will prepared.

Spenser. Faerie Queene.

If you inquire not attentively and *diligent* shall never be able to discern a number of motions.

But the power of nature is only the power to any certain purpose the materials which procures, or opportunity supplies.

Now, who would have suspected your first Prim of an indiscretion! Yet such is the of people, that they say her uncle stopped week, just as she was stepping into the York with her dancing master.

DILL, *n. s.* Sax. *dile*; Pers. *dilec*. In the heart, a cordial. It hath a slender, annual root; the leaves are like those of the seeds are oval, plain, streaked, &c. dered.

*Dill* is raised of seed, which is ripe in Aug.

DILLEMBURG, or DILLENBURG, a town of Germany, in Westphalia, and capital of Dillenburg, situated on the Dille. Near furnace for the smelting of copper. The reign of this town was added to the duke of Berg, by the late treaty of confederation between the states of the Rhine. It is 10 miles north-west of Wetzlar. Long. 8° lat. 50° 36' N.

DILLINGEN, a neat town of Haverle, left bank of the Danube, with a university. The bishop of Augsbourg resided formerly, and it is still a bishop's see: contains a chapter and three convents; formerly a county; the princes of very powerful. Near this town Louis XV. was killed at, and wounded in the forehead, by an unknown assassin, July 12th, 1796. P. 3120. It is twenty-three miles north of Augsbourg and twenty-four north-east of

DILLENNIA, in botany, a genus of the gynia order, and polyandria class of CAL. pentaphyllous; the petals five: (

Mysepuous, coalited and full of pulp.  
pit; all Indian plants.

NIUS (John James), an eminent botanist at Darmstadt in Germany, in 1687, had at the university of Gießen. He sent several curious papers to the *Misuriosa*, and, in 1721, accompanied Dr. England, where he spent the rest of his days. Soon after his arrival he published a new edition of Ray's *Synopsis Britannicarum*. He was appointed botanical professor at Oxford, on Dr. foundation, and in 1735 the university conferred on him the degree of M. D. He died in 1747. He published an elaborate work, *Artus Elthamensis*, and also a History

of (Wentworth), earl of Roscommon, a man of celebrity, was the son of James, Viscount Roscommon, by a sister of the earl of

Though born in Ireland (in 1633) he received his education at lord Strafford's seat in England, and finally entered the Protestant church of Caen in Normandy, under the guidance of a Jesuit. After travelling into Italy he returned after the Restoration, to England, where he was made captain of the band of pensioners. He managed his estate by gaming; and, being involved in quarrels, he returned to Ireland, where his property lay. Here, however, he followed the same course as in England, and married with a daughter of the earl of Roscommon. He now appears to have cultivated the study of letters, and to have reformed himself. He promoted other modes of promoting literature, and was for improving and fixing the English language, but the scheme was never accomplished. On the accession of James II. he fled to France, and took up his residence at Rome, where he died of the gout in 1684. Lord Roscommon was not a voluminous writer, his principal work being a poetical Essay on Translated Verse, in which he lays down the rules that govern translations. Other poems of his are translations of Horace's *Art of Poetry*, Virgil's sixth Eclogue, of the *Dies Ire*, in *Pastor Fido*, &c. Dr. Johnson calls him the correct writer of English verse before Pope; and Pope has said of him, addressing him of rather different character,

By Dryden! in all Charles's days,  
When only bosoms unspotted lay.

DILUCIDATE, v. a. } From Lat. *dilucidare*,  
adj. } dare. To make clear,  
DILUTION, n. s. } or plain; to explain;  
obscurity.

to extenuate, but explain and dilucidate, is the custom of the ancients.

Brown's Vulgar Errors.

DILUTE, v. a. & adj. } From Lat. *diluo*,  
n. s. } de and luo, Gr. *λυω*  
(Heb. *כלה*, to waste)  
to wash. To make  
fluid-like; to weaken; make vapid.  
the act of making thin or weak,  
so made.

A large dose of diluted tea, as the wife of a physician, she got to bed. Locke.

If the red and blue colours were more *dihue* and weak, the distance of the images would be less than an inch; and if they were more intense and full, that distance would be greater. Newton.

Water is the only *diluter*, and the best dissolvent of most of the ingredients of our aliment.

Arbutnot on Aliments.

There is no real *diluent* but water: every fluid is *diluent*, as it contains water in it. Id.

Opposite to *dilution* is coagulation, or thickening, which is performed by dissipating the most liquid parts by heat, or by insinuating some substances, which make the parts of the fluid cohere more strongly. Id.

DILUVIAN, adj. From Lat. *diluvium*, de and luo, to wash. Relating to the deluge.

Suppose that this *diluvian* lake should rise to the mountain tops in one place, and not diffuse itself equally into all countries about. Burnet's Theory.

DIM, v. a. & adj. } Goth. *dimma*; Sax. *dim-*  
DIM'ISU, adj. } me; Swed. *dimn*; Welsh  
DIM'ISULY, adv. } dy; Erse *dow*. According  
DIM'ISINESS, n. s. } to Minsheu from *deimos*,  
fear, because the dark occasions fear. To becloud; darken; make less bright, or obscure: as an adjective, somewhat dark; and hence not seeing clearly; dull. Dimish is a diminutive of dim.

When Isaac was old his eyes were *dim* that he could not see. Gen. xxvii. 1.

The state of Mars began his hauberke ring,  
And with that sound he herd a murmuring  
Full low and *dym*, that said, 'Victory!'

Chaucer.

And her fair eyes, like stars that *dimmed* were  
With darksome cloud, now shew their goodly beams.

Spenser.

As where the Almighty's lightning brand does  
light,  
It *dims* the dazed eyen, and daunts the senses  
quite. Id. *Faerie Queene*.

All of us have cause  
To wail the *dimming* of our shining star.  
Shakespeare. *Richard III*.

It hath been observed by the ancients, that much use of Venus doth *dim* the sight; and yet eunuchs which are unable to generate, are nevertheless also *dim* sighted. Bacon.

Thus while he spake, each passion *dimmed* his face,  
Thrice changed. Milton.

Unspeakable! who sittest above these heavens,  
To us invisible, or *dimly* seen,  
In these thy lowest works Id.

In the beginning of our pumping the air, the match appeared well lighted, though it had almost filled the receiver with fumes; but by degrees burnt more and more *dimly*. Boyle's *Spring of the Air*.

The principal figure in a picture is like a king among his courtiers, who *dim* all his attendants. Dryden.

Every one declares against blindness, and yet who almost is not fond of that which *dims* his sight? Locke.

'Tis true, but let it not be known,  
My eyes are somewhat *dimish* grown;  
For nature, always in the right,  
'To your decays adapts my sight. Swift.

For thee I *dim* these eyes, and stuff this head,  
With all such reading as was never read.  
Pope's *Dunciad*.

Add to all these improvements backwards another *modera* fancy, that *grey* printing is more beautiful than black. Hence the English new books are printed in so *dim* a character, as to be read with difficulty by old eyes, unless in a very strong light, and with good glasses.

Franklin.

But when the fading eye grows *dim*,  
And fails each faint and wasted limb,  
And short and frequent pantings show  
The sad disease that lurks below. Bowdler.

I linger yet with Nature, for the night  
Hath been to me a more familiar face  
Than that of man; and in her starry shade  
Of *dim* and solitary loveliness,  
I learned the language of another world. Byron.

**DIMACHÆ**; from *δις* double, and *μαχω*, I fight; in antiquity, a kind of horsemen, first instituted by Alexander. Their armour was lighter than that of the infantry, and at the same time heavier than that used by horsemen, so that they could act as horse or foot as occasion required.

**DIMCHURCH**, or **DINCHURCH**, a village of England, in Kent, situated by the side of a strong dyke, called Dimchurch Wall, between Romney and Hythe, made to prevent the encroachments of the sea, with a road on the top which is mostly wide enough for carriages to pass each other. Here are kept the records of the Romney Marsh; and the court is held here by the lords of the Marsh and the members of the corporation, to regulate all affairs concerning it. It is four miles and a half N. N. E. of New Romney, and four and a half S. S. W. of Hythe.

**DIMENSION**, *n. s.* } Fr. and Span. *dim-*  
**DIMENSIONLESS**, *adj.* } *ension*; Ital. *dimen-*  
**DIMENSIVE**. } *sione*; Lat. *dimensio*;

*de* and *mensio*, from *metior*, Gr. *μετρεω*, to measure. Extent; capacity; solid contents. Dimensionless is used by Milton for without bulk. Dimensive is marking the boundary or dimensions.

Wherefore base

When my *dimensions* are as well compact,  
My mind as generous, and my shape as true,  
As honest Madam's issue? Shakespeare.

All bodies have their measure, and their space  
But who can draw the soul's *dimensive* lines? Davis.

In they passed

*Dimensionless* through heavenly doors. Milton.

My gentleman was measuring my walls, and taking  
the *dimensions* of the room. Swift.

To judge rightly of our own worth, we should retire  
a little from the world, to see its pleasures, and pains  
too, in their proper size and *dimensions*. Sterne.

Thus mingled still with wealth and state,  
Cressus himself can never know;

His true *dimensions* and his weight  
Are far inferior to their show. Watts.

**DIMENSION**, in geometry, is either length, breadth, or thickness; hence a line has one dimension, viz. length; a superficies two, viz. length and breadth; and a body or solid has three, viz. length, breadth, and thickness.

**DIMICATION**, *n. s.* Lat. *dimicatio*. A bottle; the act of fighting; contest.

**DIMIDIATION**, *n. s.* Lat. *dimidiatio*. The act of halving; division into two equal parts.

**DIMIN'ISH**, *v. a. a. & n.* } Fr. *diminuer*  
**DIMIN'ISHINGLY**, *adj.* } Ital. *diminutivo*  
**DIMINU'TION**, *n. s.* } Span. *diminucion*  
**DIMIN'UTIVE**, *n. s. & adj.* } *diminutivo*  
**DIMIN'UTIVELY**, *adv.* } *diminutivamente*  
**DIMIN'UTIVENESS**, *n. s.* } *diminutivitas*

less; to impair; take from in any way; as a neuter verb, to grow less; be impaired. Diminutive, as a substantive, diminutiveness, express littleness. Dim also means, that makes little; any thing

Ye shall not add unto the word which I say, neither shall you *diminish* aught from it.

Deut.

The poor wren,

The most *diminutive* of birds, will fight,  
Her young ones in her nest, against the owl. Shakespeare.

Follow his chariot; monster-like, be dim  
For poor'st *diminutives*, for doits! Shakspeare.

The one is not capable of any *diminution* of station at all by men; the other apt to admit

He afterwards proved a dainty and gay youth, was commonly called, by the *diminutive* name, Peterkin or Perkin. Bacon's Hist.

Make me wise by thy truth, for my own salvation, and I shall not regard the world's *diminution* of me. King.

Impiously they thought

Thee to *diminish*, and from thee withdraw  
The number of thy worshippers.

O thou that with surpassing glory crown'd  
Look'st from thy sole dominion like the God  
Of this new world; at whose sight all the  
Bids their *diminished* heads

Sim, while but Sim, in good repute did  
Was then a knave, but in *diminutive*.

What judgment I had, increases rather  
*diminishes*; and thoughts, such as they are, come  
in so fast upon me, that my only difficulty  
is to reject.

The light of man's understanding is the  
*diminutive*, contracted light, and looks not to  
present.

Finite and infinite seem to be looked  
on as modes of quantity, and to be attributed  
to those things which are capable of increase  
or *diminution*.

I never heard him censure, or so much  
*diminishingly*, of any one that was absent.

The gravitating power of the sun is  
through the vast bodies of the planets  
*diminution*, so as to act upon all their  
very centres, with the same force, and on  
the same laws, as if the part upon which  
is not surrounded with the body of the planets.

They know how weak and awkward many  
little *diminutive* discourses are.

Crete's ample fields *diminish* to our eyes  
Before the Boreal blasts the vessels fly.

Pope.

Security *diminishes* the passions; the  
left to itself, immediately languishes.

Check then the solicitations of the flesh,  
to do nothing that may *diminish* thy native  
dishonour thy high original, or degrade  
nature.

What pleasure have we just discerned  
plough, slow moving, and beside  
tent, that swerved not from the track,  
strain diminished to a boy. Cowper.

**SORY**, *adj.* Lat. *dimissorius*. That  
man is dismissed to another jurisdic-

of another diocese ought neither to ordain  
clerk, without the consent of his own pro-  
and without the letters *dimissory*.

*Ayliffe.*

**RY LETTERS**, *literæ dimissoriae*, in the  
a letter given by a bishop to a candi-  
ly orders, having a title in his diocese,  
some other bishop, and giving leave  
to be ordained by him. When a  
duces letters of ordination or tonsure,  
any other than his own diocesan, he  
same time produce the letters *dimis-*  
by his own bishop, on pain of nullity.  
*dimissory* cannot be given by the chapter,  
le; this being deemed an act of volun-  
tation, which ought to be reserved to  
the.

**Y**, *n. s.* A fine kind of fustian, or cloth

a trowse of fine *dimity*. Wiseman.

**E**, *n. s. & v. n.* } Dint, a hole; din-  
n, *adj.* } tle, a little hole; by  
n, *adv.* } a careless pronun-  
dimple, says Skinner. A small hol-  
ression, often applied to the face.

On each side her

ly dimpled boys like smiling cupids.  
*Shakespeare.*

impled brook, and fountain brim,  
ed nymphs decked with daisies trim  
erry wakes and pastimes keep:  
ath night to do with sleep? Milton.

aves mastered him, and sucked him in,  
eddies dimpled on the main. Dryden.

a smooth surface of the dimply flood  
er-shippared virgin lightly trod.

*Warton's Isis.*

her forehead's fair half round,

sits in open triumph crowned;

the dimple of her chin,

ivate state, by friends is seen. Prior.

s [laugh] is practised to give a grace to  
and is frequently made a bait to entangle  
er. Steele.

How frail is Beauty's bloom!

impled cheek—the sparkling eye—

to seen, before their wonders fly

To decorate a tomb. Robinson.

**ITÆ**; from *ἴτα*, and *μωσαῦ*, to di-  
me given to the Apollinarians, who at  
at Christ only assumed a human body  
ing a reasonable soul: but, being at  
vinced by texts of Scripture, they al-  
he did assume a soul, but without  
ing, the Word supplying that faculty.  
way of separating the understanding  
al they were denominated *Dimertizæ*,  
the.

**UC**, a town of European Turkey, in  
with a Greek archbishop's see. It is  
a mountain surrounded by the river

VII.

Meriza, twelve miles south-west of Adrianople  
Long. 26° 15' E., lat. 41° 35' N.

**DIMSDALE** (Thomas), a celebrated English  
physician, the son of a surgeon at Theydon Gar-  
non in Essex, where he was born in 1712. He  
studied some time at St. Thomas's Hospital,  
London; and, about 1734, commenced practi-  
tioner at Hertford. In 1745 he accompanied the  
army under the duke of Cumberland as assistant  
surgeon, and continued in that capacity till Car-  
liste had surrendered to the royal army, when he  
returned to Hertford. In 1761 he took the de-  
gree of M. D., commenced physician, and became  
celebrated by his successful mode of inoculating  
for the small pox. He published a treatise on it  
in 1767, which was quickly translated, and cir-  
culated all over the continent. His fame as a  
skilful practitioner occasioned his being invited  
to Russia to inoculate the empress Catherine  
and her son, in 1768, for which he was appointed  
counsellor of state and physician to her imperial  
majesty, with an annuity of £500: he was at the  
same time created a baron of the Russian empire,  
and the same title was conferred on his son. At  
Moscow he inoculated also a considerable num-  
ber of the people; but refused the invitation of  
the empress to reside in Russia as her physician,  
and after being admitted, at Sans Souci, to a pri-  
vate audience of Frederic II. king of Prussia, he  
returned to England. In 1780 he was elected  
M. P. for the borough of Hertford; upon which  
he declined his practice, except for the relief  
of the poor. In 1781 he again visited Russia to  
inoculate the late emperor Alexander and his  
brother, in which he experienced the same success  
as before. On his resignation, in 1790, his son  
Nathanael was elected representative of the  
borough of Hertford. Baron Dimsdale died at  
Hertford, after a short illness, in 1800.

**DIN**, *v. a. & n. s.* Sax. *dyn*, from *dynan*, to  
make a noise; Ice *dyna*, to thunder. To sun  
with a noise; stupify; overpower with clamour;  
the noise made.

And all the way he roared as he went,  
That all the forest with astonishment  
Thereof did tremble, and the beasts therein  
Fled fast away from that so dreadful din.

*Hubbard's Tale.*

O, 'twas a *din* to fright a monster's ear;  
To make an earthquake: sure, it was the roar  
Of a whole herd of lions. Shakespeare.

Now night, over heaven  
Inducing darkness, grateful truce imposed,  
And silence on the odious *din* of war. Milton.

Rather live  
To bait thee for his bread, and *din* your ears  
With hungry cries. Onoay.

Some independent ideas, of no alliance to one ano-  
ther, are, by education, custom, and the constant *din* of  
their party, so coupled in their minds, that they always  
appear there together, and they can no more separate  
them in their thoughts than if they were but one idea,  
and they operate as if they were so. Locke.

What shall we do if his majesty puts out a  
proclamation commanding us to take Wood's half-  
pence? This hath been often *dinned* in my ears.

*Swift.*

Nature's eye is melancholy  
O'er the city high and holy:

S

But without there is a *din*  
Should arouse the 'saints within,  
And revive the heroic ashes  
Round which yellow Tiber dashes. *Byron.*

**DINAGEPORE**, a district of Bengal, situated between the twenty-fifth and twenty-sixth degrees of northern latitude. It is bounded on the north and west by Purneah, on the east by Rungpore and Ghoragot, and on the south by Bettooriah. The soil is much diversified, and the general face of the country is divided into small valleys of two or three miles broad. These are watered by rivers, which, in the rainy seasons, inundate the low lands and swell into large lakes fifty or sixty miles long, till the falling of the Ganges permits the water to retire, after which these lowlands are covered with luxuriant pasture, and are capable of producing abundant crops of rice. The soil does not answer for grain, but indigo, tobacco, and hemp are cultivated successfully. It is on the whole, however, one of the poorest districts of Bengal. Three-fourths of the inhabitants are Hindoos.

**DINAGEPORE**, or **Rajjigunge**, the capital of the above district, is situated on an island formed by the Pernabubah, and is the residence of the rajah. It is a considerable place of trade.

**DINAH**; Heb. דִּנָּה, i. e. judgment; the only daughter of the patriarch Jacob. Her misfortune with the prince of Shechem; his honorable proposal of repairing the injury by marriage; and the prevention of the fulfilment of his generous intention by the treachery and barbarity of her bloody brethren, Simeon and Levi, are recorded in Gen. xxxiv. See **LEVI**.

**DINAN**, or **DINANT**, a town of the department of the Cotes du Nord, Brittany, containing manufactures of cotton, linen, and flannel, and about 4200 inhabitants. It is surrounded with walls, and has an old castle, situated on the river Rance, a few miles from the sea. The small harbour is about thirteen miles south of St. Malo.

**DINAPORE**, a town, or rather a military cantonment, belonging to the British, situated on the southern bank of the river Ganges, in the province of Bahar, eleven miles and a half west of the city of Patna, for the defence of which it was constructed, in the year 1767. It consists of two handsome brick squares that will contain 1200 men, and superior barracks for the European officers. 'The officers,' says Mr. Hamilton, 'have more accommodations than in any barracks in England; and the private soldiers of the European regiments are provided with large and well aired apartments. The native soldiers are quartered in small huts, which to them is no hardship. The magazine built by Mr. Hastings has had £15,000 expended on it. In the vicinity is an excellent house in the European style, built by the souldah Ali, nabob of Oude.

**DINDIGUL**, or **DANDIGALA**, a district in the south of India, situated between the tenth and eleventh degrees of north latitude. It is bounded on the north by Combetoor and Kistnagherry, on the east by the Polygar territory and Madura, on the south by Travancor and Madura, and on the west by Travancor, Cochin, and Malabar. The principal rivers are the

Noil and the Amravati; and the chief Dindigul, Balny, and Palapetty. Part of the inhabitants are here in the enjoyment of a piece of land, rent free, and the hereditary of the rest. This district was ceded to the British by Tippoo, in 1792, and, together with the Munapara Pollams, Ramnad, and vagunga, now forms one of the colonies of the Madras presidency. The Dindigul tracts and sequestered pollams have been converted into forty zemindaries.

**DINDIGUL**, the capital of the district of the same name, in southern India; has a situation on a strong rock, in the midst of which is bounded on the west by the range of mountains which separates it from the Malabar, and on the east by a low ridge which runs between it and the district of Madura. This place was taken in 1755 by the British, and by the British army in 1783, but restored to Tippoo at the peace of 1784. Travelling distance from Seringapatam 198 miles, from Madras 275 miles.

**DINDYMA**, or **DINDYMUS**, a mountain ridge, allotted by many to Phrygia. Strabo mentions two mountains of this name in Mysia, near Cyzicus, the other in Galatia near Pessinus, and none in Phrygia. It extends this ridge from the borders of Mysia through Phrygia to Gallogrecia: though, therefore, there were two mountains called Dindymus in particular, both sacred to the mother-gods, and none of them in Phrygia. There might be several hills and eminences, on which this goddess was worshipped, therefore called Dindyma in general.

**DINE**, *v. a. & v. n.* *Fr. diner, to dine.*  
**DINING-ROOM**, *n. s.* *day-meal, from dine.*  
**DIN'NER**, *v. n.* *dayman, a day.*  
**DIN'NER-TIME**, *v. n.* *Day. To give the principal, meal to. To feed; to eat the dinner, dinner, and dinner-time in this country well understood.*

Pernaps some merchant hath invited him,  
And from the mart he's somewhere gone to dine.  
Good sister let us dine, and never fret.

*At dinner-time.*

I pray you have in mind where we must dine.

He would dine with him the next day.

Before dinner and supper, as often as it is convenient, or can be had, let the public pray in church, or some parts of them, be read public family.

The apartments within were very splendid, especially the dining-room; and many other of them were well adorned with mouldings and carvings, some of whose marble clavies were so delicate that they would reflect an object true and distinct at a great distance.

*Fuller. Winesbury.*

Boil this restoring root in generous wine,  
And set beside the door the sickly stock.

Thus, of your heroes and brave legions  
With whom old Homer makes such mention  
The greatest actions I can find,  
Are, that they did their work and dine.

The mint walks forth the man of rhyme,  
 In me just at dinner-time. *Pope.*

In carcases of every kind,  
 A man hath elegantly dined. *Gay.*

**DAL**, *adj.* *Διερρητός*. Whirling  
 ginous.

We have concluded, from spots in the  
 pear and disappear again, that, besides  
 it maketh with its orbs, it hath also a  
 pole, and rolls upon its own poles.

*Brown's Vulgar Errors.*

A figure is most commodious for dinctical  
 solution upon its own axis. *Key.*

Goth. *denga*; Sax. *dengan*; Dutch  
 beat about. To dash violently; to  
 face.

As all ring fancy's knell;  
 A long bell. *Shakespeare.*

And dings, because we will not spend the  
 left, to get him the title of lord Strut.  
*Arbutnot.*

**DINGEN**, a well-built old town of  
 Prussia, situated on the Iser, in the  
 Danube, and containing 2080 in-  
 habitants. It is divided into the upper and  
 lower; the former standing on a steep  
 communicating with the hills by a  
 aqueduct. It is eighteen miles north-  
 west, and forty-eight north-east of

*n. s.* From Sax. *den*, or *din*, a  
 hollow between hills; a dale.

Each lane, and every alley green,  
 A shady dell of this wild wood;  
 A rocky bourn from side to side,  
 Hills and ancient neighbourhood.

*Milton.*

In geography, a sea-port of Ireland,  
 Munster, seated on the north side of  
 formerly a place of great trade, parti-  
 cularly Spain. Several of the houses are  
 of Spanish fashion, with ranges of stone  
 gables. It is a borough, and sent  
 members to the Irish parliament. It is  
 15 miles W.S.W. of Tralee, and 166

**DINGWALL**, an ancient and flourishing  
 town, in the county of Ross, Scotland,  
 king Alexander II., in 1226. Its  
 charter was confirmed and renewed  
 in 1286, and the inhabitants empowered to  
 elect two bailiffs, dean of guild, treas-  
 urer, and counsellors. It joins with Kirk-  
 caldore, Dornoch, and Tain, in sending a  
 member to the British parliament. From  
 the ruins of some old causeways, Dingwall  
 have been anciently much more ex-  
 tended. The ruins of its castle  
 are now, consisting of 'stones so  
 cemented with mortar that it is easier to  
 break the rock than to separate those of  
 the masonry.' It was surrounded with  
 a wall, and a regular glacis remains. The  
 town is much enlarged and improved, and  
 the inland trade is carried on in it  
 10 miles west of Cromarty, and is  
 10 miles.

**DINOCRATES**, a celebrated architect of Ma-  
 cedonia, who rebuilt the temple of Ephesus,  
 when burnt by Erostratus, with much more  
 magnificence than before. Vitruvius informs us,  
 that Dinocrates proposed to Alexander the Great  
 to convert mount Athos into the figure of a man,  
 whose left hand should contain a walled city,  
 and all the rivers of the mount flow into his right,  
 and from thence into the sea! He also conceived  
 a scheme for building the dome of the temple of  
 Arsinoe at Alexandria, of loadstone, that should,  
 by its attraction, uphold her iron image in the  
 centre, suspended in the air.

**DINT**, *v. a. & n. s.* Sax. *dýnt*; Goth. *dunt*, a  
 blow; a stroke. To give a blow that marks or in-  
 dents: the blow given; force.

Much daunted with that dint, her sense was dazed;  
 Yet, kindling rage, herself she gathered round.

*Spenser.*

A gentle knight was pricking on the plaine  
 Ycladd in mighty arms and silver shield,  
 Wherein old dints of deepe wounds did remaine,  
 The cruel marks of many a bloody fiele.

*Spenser. Faerie Queene.*

Leave, leave, fair bride, your solitary bone,  
 No more shall you return to it alone;  
 It nurseth sadness; and your body's print,  
 Like to a grave, the yielding down doth dint.

*Donne.*

Now you weep; and I perceive you feel  
 The dint of pity. *Shakespeare. Julius Caesar.*

Neither vainly hope

To be invulnerable in these bright arms,  
 Though tempered heavenly; for that mortal dint,  
 Save he who reigns above, none can resist.

*Milton.*

Deep-dinted wrinkles on her cheeks she draws;  
 Sunk are her eyes, and toothless are her jaws.

*Dryden's Æneid.*

We are to wrest the whole Spanish monarchy out  
 of the hands of the enemy; and, in order to it, to  
 work our way into the heart of his country by dint of  
 arms. *Addison.*

Past by the rock, all menacing but mute,  
 He stood; and save a light beat of his foot,  
 Which deepened now and then the sandy dint  
 Beneath his heel, his form seemed turned to flint.

*Byron.*

**DINUMERATION**, *n. s.* Lat. *dinumeratio*.  
 The act of numbering out singly.

**DIO**, surnamed Chrysostom, (golden mouth), a  
 celebrated orator and philosopher of Greece, in  
 the first century, born at Prusa, in Bithynia. He  
 attempted to persuade Vespasian to quit the em-  
 pire; and Domitian was so offended at his free-  
 dom of speech that he would have put him to  
 death had he not fled into Thrace. After the  
 death of that tyrant Dio returned to Rome, and  
 acquired the esteem of Trajan, who made him  
 ride with him in his triumphal chariot. There  
 are still extant eighty of Dio's Orations, and  
 some other of his works,—the best edition of  
 which is that of Samuel Raimarus, in 1750,  
 in folio.

**DIOCESS**, *n. s.*

*Dioecesis*, *n. s. & adj.* } Gr. *δία*, and *οικονομία*.  
 following. The circuit of a bishop's jurisdiction:  
 diocesan is the bishop administering therein.

None ought to be admitted by any bishop, but such  
 as have dwelt and remained in his diocesan a con-  
 venient time. *Whitgift.*

One younger man amongst the rest would take upon him to defend that every *diocesan* bishop was pope. I answered him with some scorn.

*Bp. Hall's Hard Measure.*

Although he (the bishop) had not all the *diocess* actually in communion and subjection, yet his charge, his *diocess* was so much. Just as with the Apostles, to whom Christ gave all the world for a *diocess*, yet at first they had but a small congregation. *Bishop Taylor.*

I have heard it has been advised by a *diocesan* to his inferior clergy, that they should read some of the most celebrated sermons printed by others.

*Tatler.*

This realm has two divisions, one into shires or counties, in respect of temporal policy; another into *dioceses*, in respect of jurisdiction ecclesiastical.

*Cowell.*

Oblige him to a longer residence in his *diocess* than is usually practised, that he may do the proper work of a bishop; that he may direct and inspect the flock of Christ; confirm the unstable, reclaim the reprobate, &c.

*Bishop Watson.*

**DIOCESSE** is also used in ancient authors for the province of a metropolitan. *Diocesis* meant, originally, a civil government, composed of divers provinces. The first division of the empire into dioceses is ordinarily ascribed to Constantine, who distributed the whole Roman state into four: viz. those of Italy, Illyria, the east, and Africa. And yet, long before Constantine, Strabo, who wrote under Tiberius, takes notice (lib. xiii. p. 432) that the Romans had divided Asia into dioceses; and complains of the confusion such a division occasioned in geography, Asia being no longer divided by people, but by dioceses, each of which had a tribunal or court, where justice was administered. Constantine, then, was only the institutor of those large dioceses which comprehended several metropolises and governments; the former dioceses only comprehending one jurisdiction, or the country under one judge, as appears from this passage in Strabo, as well as from Cicero himself; lib. iii. epist. ad famil. 9. and lib. xiii. ep. 67. Thus, at first, a province included diverse dioceses; and afterwards a diocese came to comprise divers provinces. In after times the Roman empire became divided into thirteen dioceses or prefectures; though, including Rome and the suburbs, there were fourteen. These fourteen dioceses comprehended 120 provinces; each province had a proconsul, who resided in the capital; and each diocese of the empire had a consul, who resided in the principal city of the district. On this civil constitution the ecclesiastical one was afterwards regulated: each diocese had an ecclesiastical vicar or primate, whose judgment determined all the concerns of the church within his territory. At present diocese is confined to a single province, under a metropolitan, or more commonly to the single jurisdiction of a bishop. Brito affirms diocese to be properly the territory and extent of a baptismal or parochial church; whence the word is used by divers authors to signify a simple parish.

**DIOCLEIA**, Διοκλεια, in antiquity, a solemnity kept in the spring, at Megara, in memory of the Athenian hero, who died in the defence of the youth he loved.

**DIOCLESIANUS** (Gaius Valerius), a celebrated Roman emperor, born of a secure family in Dalmatia, in 245. He was a common soldier, and by merit and courage gradually rose to the office of a general; at the death of Numerian, in 284, was invested with imperial power. In this high station he rewarded the fidelity of Maximian, and shared with him all the subordinate offices of the army, by making him his colleague on the throne. He created two subordinate emperors, Constantius and Galerius, by the title of Augusti, whilst he claimed for himself and his son the superior title of Augustus. Dioclesius has been celebrated for his military virtues, though he was not polished by education; nevertheless, a patron of learning. He was resolute, and active; but his cruelty towards Christians has been deservedly branded with infamy. After he had reigned twenty-two years in the greatest prosperity, he publicly abdicated the crown at Nicomedia, in 305, and retired to a private station at Salona. Maximian, his colleague, was compelled to follow his example, and when he, some time after, endeavoured to rouse the ambition of Dioclesian and persuade him to re-assume the imperial purple, he refused for answer, that Dioclesian took now no pleasure in cultivating his little garden, than he formerly enjoyed in a palace, when his power extended over all the earth. He lived nine years after his abdication in the greatest security and enjoyment at Salona, and died in 314, in the sixty-eighth year of his age. His period is the beginning of the Christian era, and the era of Dioclesian, or of the Martyrs, is long used in theological writings, and followed by the Copts and Abyssinians. He reigned August 29th, A. D. 284.

**DIOTAHEDRIA**, in natural history, a genus of pellucid and crystalliform species, composed of two octangular pyramids, joined at the base, without any intermediate column. Of some have long pyramids, others short and sharp-pointed ones, and others short and pointed ones; the two former species are found in the Hartz, and the last in the Cornwall.

**DIODATI** (John), a Protestant divine, professor of theology at Geneva, who was born at Lucca in 1579, and died at Geneva in 1631. He is distinguished by his translation of the Bible into Italian, with notes, Geneva, 4to. This work is, however, rather a paraphrase than a translation, and the notes, discussions more than critical reflections. He translated the Bible into French, Geneva, 1644; see Father Paul's History of the Councils, translated into French.

**DIODIA**, in botany, a genus of the monandria order, and tetrandria class of plants, in the order, forty-seventh, stellate: corolla monophyllous and funnel-shaped: caps. bilocular circumscissile. Species six, natives of the West Indies and of Mexico.

**DIODON**, the sun-fish, in ichthyology, a genus belonging to the order of brachypterygii. There are three species: viz.

1. *D. trystrix*, or the globe-fish, com-

pe and South Carolina. The form of the is usually oblong; but when alarmed it has the power of inflating the belly to a globular form of great size. This seems designed as a means of defence against fish of prey, as they are less means of laying hold of it, and are terrified by the numerous spines with which that part is armed, and which the animal erects on every part. The mouth is small; sides white, tinged with red; the back, from head to tail, almost straight, or at least very slightly elevated, of a rich deep blue color. It is pectoral, but wants the ventral fins: the dorsal almost even, divided by an angular process in the middle; tail and fins brown. The head and sides are white, shagreened, or wrinkled, beset with innumerable small sharp spines, fixed to the skin by four processes.

*D. mola*, or the short sun-fish, differs from the foregoing, in being much shorter and deeper. The back and the anal fins are higher, and the pectorals are to the gills not semilunar, but oval. The situation of the fins is the same in both. Mounds are taken on the western coasts of England, but in much greater numbers in warmer parts of Europe.

*D. oblongus*, the oblong sun-fish, grows to a great bulk: one examined by Sylvianus was 100 pounds in weight; and Dr. Borlase has another taken at Plymouth in 1734, weighed 300. In form it resembles a bream, the deep fish cut in the middle. The mouth is small, and contains in each jaw two teeth, with sharp edges. The eyes are large; before each is a small semilunar aperture. The pectoral fins are very small, and placed close to the head. The color of the back is dusky, dappled; the belly silvery; between the dorsal and the pectoral fins are certain streaks, fading downwards. The skin is free from scales. When boiled, it has been observed to turn into a glutinous jelly, resembling boiled mackerel when cold, and served the purposes of food on being tried on paper and leather. The name of this fish is uncommonly rank: it is called shell-fish. The sun-fish of the Irish, named *Gmelin*, differs in all respects from the foregoing.

**DIODORUS**, surnamed Siculus, an ancient historian, born at Agrigum, in Sicily. He wrote a history of Egypt, Persia, Syria, Media, Greece, Italy, and Carthage; and it is said that he visited all the places mentioned in his history, which he labored thirty years. He is, however, credulous in some of his narratives; and dwells too long upon fabulous reports and miraculous incidents; while events of the greatest importance to history are treated with brevity, and sometimes passed over in silence. He lived in the age of Caesar and Augustus, and spent much time at Rome to procure information, and to abridge his history. This important work, which he composed in Greek, contained forty volumes, of which there are only fifteen remaining. The best editions are that of Amsterdam, 1745, 8 vols. folio, and Heyne, 10 vols. 8vo. 1793. **ECCEA**, the twenty-second class in Linnaeus's sexual system, consisting of plants which, having no hermaphrodite flowers, produce male

and female flowers on separate roots. These last only ripen the seeds; but require for that purpose the vicinity of a male plant; for the asperity or sprinkling of the male dust. From the seeds of the female flowers, thus impregnated, are raised both male and female plants. The plants in the class *diœcia* are therefore all either male or female, on separate roots; not hermaphrodite, as in the greater number of classes; nor with male and female flowers upon one root, as in the class *monœcia*. See **BOTANY**.

**DIODENES** of Apollonia, in the island of Crete, held a considerable rank among the philosophers who taught in Ionia before Socrates appeared at Athens. He was the scholar and successor of Anaximenes, and in some measure rectified his master's opinion concerning air being the cause of all things. It is said that he was the first who observed that air was capable of condensation and rarefaction. He taught with great reputation at Athens; but was at length banished for the freedom of his opinions. He died about A. A. C. 450.

**DIODENES** the Cynic, an ancient philosopher, the son of a banker of Sinope. Being banished with his father for coining money, he retired to Athens, where he studied philosophy under Antisthenes. Here he added new degrees of austerity to the sect of the Cynics, and never did any philosopher carry contempt for the conveniences of life so far. He lodged in a tub; and had no other property beside his staff, wallet, and wooden bowl, which last he threw away, on seeing a boy drink out of the hollow of his hand. He used to call himself a vagabond, who had neither house nor country; was obliged to beg, was ill clothed, and lived from hand to mouth. Such singularity soon gained him reputation; and Alexander the Great condescended to visit the philosopher in his tub. He asked if there was any thing in which he could oblige him: 'Get out of my sunshine' was the only answer from the philosopher. The conqueror was so struck with the independence of mind thus exhibited, that he declared, 'if he was not Alexander, he would choose to be Diogenes.' In reply to one who asked at what time he ought to dine, Diogenes said, 'If you are a rich man, when you will; if you are poor, when you can.' 'Would you be revenged upon your enemy,' said Diogenes, 'be virtuous, that he may have nothing to say against you.' As Diogenes was going over to the island of Ægina, he was taken by pirates, who carried him into Crete, and there exposed him to sale. He answered the crier, who asked him what he could do, that 'he knew how to command men;' and perceiving Xenaiades, a Corinthian, going by, he said, 'Sell me to that gentleman, for he wants a master.' Xenaiades, struck with the singularity of Diogenes, bought him and carried him to Corinth, appointed him tutor to his children, and soon entrusted him with the management of his house. Diogenes's friends being desirous of redeeming him, 'You are fools,' said he; 'the lions are not the slaves of those who feed them, but they are the servants of the lions.' Some say that Diogenes spent the remainder of his life in Xenaiades's family; but Dio Chrysostom asserts that he passed the winter

at Athens, and the summer at Corinth. He died at Corinth when he was about ninety years old: but authors are not agreed either as to the time or manner of his death. The account of Jerom is, that as he was going to the Olympic games, a fever seized him; upon which he lay down under a tree, and refused the assistance of those who accompanied him. 'Go you to the games,' said he, 'and leave me to contend with my illness. If I conquer, I will follow you: if I am conquered, I shall go to the shades below.' He despatched himself that very night; saying, that 'he did not so properly die, as get rid of his fever.' He had for his disciples Onesicritus, Phocion, Stilpo of Megara, and several other great men. His works are all lost.

DIODEGENES, surnamed Laertius, from Laerta in Cilicia, his birth place, an ancient Greek author, who wrote ten books of the Lives of the Philosophers, still extant. In what age he flourished is not determined. The oldest writers who mention him are Soter of Alexandria, who lived in the time of Constantine the Great, and Hesychius Milesius, who lived under Justinian. Diogenes often mentions Plutarch and Phavorinus; and Menage has fixed the period of his appearance at the time of Severus, or about A. A. C. 200. He divided his Lives into books, and inscribed them to a learned lady of the Platonic school, as he himself intimates in his Life of Plato. There have been several editions of his Lives of the Philosophers; but the best is that printed in 2 vols. 4to., at Amsterdam, 1693.

DIOMEDES, in fabulous history, a tyrant of Thrace, who is said to have fed his horses with the flesh of men. Hercules killed him, and threw him to be eaten by his own carnivorous horses; Hyginus says there were four of them, and that the hero afterwards killed them, along with Abderus, their groom.

DIOMEDES, king of Etolia, the son of Tydeus and Deiphyle, one of the bravest of the Grecian chiefs in the Trojan war. He went with Ulysses to steal the Palladium from the temple of Minerva in Troy; and assisted in murdering Rhesus king of Thrace, and carrying off his horses. At his return from the siege of Troy, he lost his way in the darkness of the night, and landed in Attica, where his companions plundered the country, and lost the Trojan Palladium. During his long absence, his wife Ægiale had prostituted herself to Cometes, one of her servants. This was attributed to the resentment of Venus, whom Diomedes had wounded in a battle before Troy. He resolved to abandon his native country, which was the seat of his disgrace; and the attempts of his wife to take away his life, hastened his departure. He came to that part of Italy which has been called Magna Græcia, where he built a city, which he called Argyrippa, and married the daughter of Daunus, the king of the country. He died there in extreme old age; or, according to a certain tradition, he perished by the hand of his father-in-law. His death was greatly lamented by his companions, who, in the excess of their grief, were changed into birds resembling swans. These birds took flight into a neighbouring island in the Adriatic, and became remarkable for the tameness with which they ap-

proached the Greeks, and for the horror as which they shunned all other nations. They were called the birds of Diomedes. Altars were raised to Diomedes, as to a god, one of which was mentioned at Timavus.

DIOMEDIA, in ornithology, a genus belonging to the order of auseres. The bill is long, the superior mandible is crooked at the point, and the lower one is truncated; the mouth is oval, open, a little prominent, and placed on the sides. There are four species: the principal are—

1. *D. demersa*, has no quill-feathers on its wings; and the feet have four toes, connected together by a membrane. It is the black penguin of Edwards, about the size of a goose, and is found at the Cape of Good Hope. It is an excellent swimmer and diver; but hops and waddles in a strange awkward manner on the land, and, if hurried, stumbles perpetually, and frequently runs for some distance like a quail, making use of the wings till it can rear in an upright posture, crying out at the same time as a goose, but in a much hoarser voice. It is said to clamber some way up the rocks in order to make the nest; in doing which, it has been observed to assist with the bill. The eggs are small in number, white, as large as those of a hen, and reckoned delicious eating, at least are said so at the Cape, where they are brought in great numbers for that purpose. At this place they are often seen kept tame; but in general do not survive the confinement many months.

2. *D. exulans*, has pennated wings, and four toes on each foot. It is the albatross of Edwards; and is about the size of a pelican. The birds are found in the ocean between the Cape and at the Cape of Good Hope. They are often seen in vast flocks in Kamtschatka, and the adjacent islands, about the end of June, when they are called great gulls; but it is only in the bay of Penschinsenski, the whole inner part of Kamtschatka, the Kurile Isles, and the Sea of Okhotsk; for on the eastern coasts of the latter they are scarce, a single straggler only appearing, and then. Their chief motive for frequenting these places seems to be plenty of food, and their arrival is a sure presage of shoals of fish following. At their first coming they are very lean, but grow immensely fat. They are very voracious, and will often swallow a salmon of four or five pounds weight; but as they cannot take the whole of it into their stomach at once, the tail end will often remain out of the end of the bill, and the natives, finding the bird in this manner, easily knock it on the head on the spot. Before the middle of August they migrate elsewhere. They are often taken by a hook baited with fish, not for the sake of their flesh (it being so hard and unsavory) but on account of the intestine, a particular part of which is blown up as a bladder, and serves as a float to buoy up nets in fishing. Of the bones, tobacco-pipes, needles, &c., are made. When caught they defend themselves stoutly with the bill. Their cry is harsh and disagreeable, not unlike the braying of an ass. The breeding places of the albatross, in all in the northern hemisphere, have not yet been pointed out; but we are certain of their breeding in the southern, viz. Patagonia and Falk-

Islands; to this last place they come about the end of September or beginning of October, along with other birds, in great abundance. The eggs are made on the ground with earth, and are round in shape, a foot in height, indented at top. The egg is larger than that of a goose, four inches in length, white, marked with dull spots at the bigger end, and is thought to be good food, though it never growing hard with boiling. When the female is sitting, the male is constantly on the wing, and supplies her with food: during this time they are so tame as to suffer themselves to be shoved off the nest while their eggs are taken from them; but their chief destruction arises from the hawk, which, the moment the female gets off the nest, darts thereon, and carries away with the egg. The albatross itself has its enemy, being greatly persecuted by the hawk on the wing by the dark gray gull, called the booby. This bird attacks it on all sides, but particularly endeavours to get beneath, which is only prevented by the first settling on the water; and indeed they do not frequently fly at a great distance from the surface, except obliged so to do by high winds or other causes. As soon as the hawk is able to remove from the nest, the penitents take possession, and hatch their young in it. It is probable that they pass from one end of the globe to another according to the seasons; being now and then met with by different navigators at various times in intermediate places. Their food is supposed to be chiefly small marine animals, especially of the mollusca; or blubber fish, as well as flying fish.

DION, the son of Hipparchus, a Syracusan, famous for his power and abilities. He was related to Dionysius, and often joined with the philosopher Plato (who at his request had come to reside at the tyrant's court), in advising him to lay aside the supreme power. His great popularity rendered him odious in the eyes of the tyrant, who banished him to Greece. There he collected a numerous force, and resolved to free his country from tyranny. This he easily effected on account of his popularity. He entered the port of Syracuse with only two ships; and in a few days reduced under his power an empire which had already subsisted for fifty years, and which was guarded by 300 ships of war, and above 100,000 troops. The tyrant fled to Corinth, and Dion kept the power in his own hands, fearful of the aspiring ambition of some of the friends of Dionysius: but he was shamefully betrayed and murdered by one of his faithful friends called Callicrates, or Callippus, 36 years before the Christian era.

DION CASSIUS, a native of Nicæa in Bithynia. His father's name was Apronianus. He was raised to the greatest offices of state in the Roman empire by Pertinax, and his three successors. He was naturally fond of study, and he improved himself by unremitting application. He was ten years in collecting materials for a history of Rome, which he published in eighty books, after laborious employment of twelve years in composing it. This valuable history began with the rival of Aeneas in Italy, and was carried down to the reign of Alexander Severus. The first thirty-four books are totally lost; the twenty fol-

lowing, that is from the thirty-fifth to the fifty-fourth, remain entire; the six following are mutilated; and fragments are all that we possess of the last twenty. In the compilation of this extensive history, Dion proposed Thucydides for a model, but he is not perfectly happy in his imitation. His style is pure and elegant, and his narrations are judiciously managed, and his reflections learned; but, upon the whole, he is credulous, and the bigoted slave of partiality, satire, and flattery. He inveighs against the republican principles of Brutus and Cicero, and extols the cause of Cæsar. Seneca is the object of his satire, and he represents him as debauched and licentious in his morals.

DIONEIA, in botany, a genus of sensitive plants lately discovered. It belongs to the order monogynia, in the decandria class. There is but one genus as yet known: viz. *D. muscipula*, or Venus's fly-trap. Every one skilled in natural history knows, that the sensitive plants close their leaves, and bend their joints, upon the least touch (see *Mimosa*); but no design of nature has yet appeared to us from these surprising motions: they soon recover themselves again, and their leaves are expanded as before. But the *dioneia* shows that nature may have some view towards its nourishment, in forming the upper joint of its leaf like a machine to catch food; upon the middle of this lies the bait for the unhappy insect that becomes its prey. Many minute red glands that cover its inner surface, and which discharge a smell of carrion, tempt the poor animal to taste them; and the instant these tender parts are irritated by its feet, the two lobes rise up, grasp it fast, lock the two rows of spines together, and squeeze it to death. And lest the strong efforts for life, in the creature thus taken, should serve to disengage it, three small erect spines are fixed near the middle of each lobe among the glands, that effectually put an end to all its struggles. Nor do the lobes ever open again, while the dead animal continues there. The plant, however, cannot distinguish an animal from a general substance; for, if we introduce a straw or a pin between the lobes, it will grasp it full as fast as if it was an insect. It grows in North America, in about 35° lat. N., in wet shady places, and flowers in July and August. The largest leaves are about three inches long, and an inch and a half across the lobes, the glands of those exposed to the sun are of a beautiful red color; but those in the shade are pale, and inclining to green. The roots are squamous, sending forth but few fibres, and are perennial. The leaves are numerous, inclining to bend downwards, and are placed in a circular order; they are jointed and succulent; the lower joint, which is a kind of stalk, is flat, longish, two edged, and inclining to heart-shaped. In some varieties they are serrated on the edges near the top. The upper joint consists of two lobes; each lobe is of a semi-oval form, with its margins furnished with stiff hairs like eye-brows, which embrace or lock in each other when they close. The upper surfaces of the lobes are covered with small red glands; each of which appears, when highly magnified, like a compressed arbutus-berry. If the fly, enclosed in

these lobes, can be forced out so as not to strain the lobes, they expand again; but if force is used to open them, so strong has nature formed the spring of their fibres, that one of the lobes will generally snap off rather than yield. The stalk is about six inches high, round, smooth, and without leaves; ending in a spike of flowers. The flowers are milk-white, and stand on foot-stalks, at the bottom of which is a little painted bractea or flower leaf. The soil in which it grows, as appears from what comes about the roots of the plants when they are brought over, is a black, light mould, intermixed with white sand, such as is usually found in our moorish heaths. Being a swamp plant, a northern aspect will be properest for it at first, to keep it from the direct rays of the sun; and in winter, till we are acquainted with what cold weather it can endure, it will be necessary to shelter it with a bell glass, such as is used for melons. This should be covered with straw or a mat in hard frosts. By this means several of these plants have been preserved through the winter in a very vigorous state. Its sensitive quality will be found in proportion to the heat of the weather, as well as the vigor of the plant. Our summers are not warm enough to ripen the seed; or possibly we are not yet sufficiently acquainted with the culture of it. To try further experiments on its sensitive powers, some of the plants might be placed in pots of light moorish earth, set in pans of water, in an airy stove in summer; where the heat of such a situation, being like that of its native country, will make it surprisingly active.

**DIONYSIA**, in Grecian antiquity, solemnities in honor of Bacchus, sometimes called by the general name of Orgia; and by the Romans Bacchanalia and Liberalia.

**DIONYSIACA**, in antiquity, a designation given to plays and all manner of sports acted on the stage: because play-houses were dedicated to Dionysius, or Bacchus, one of the deities of sports.

**DIONYSIUS I.** from a private secretary became general and tyrant of Syracuse and all Sicily. He patronised learning and men of letters, and made his court the resort of many of the greatest philosophers of Greece. He was also himself a poet; and having, by bribes, gained the prize for tragedy at Athens, he indulged himself so immoderately at table from excess of joy that he died of the debauch, A. A. C. 386. Some authors, however, say he was poisoned by his physicians.

**DIONYSIUS II.**, his son and successor, was a greater tyrant than his father: his subjects were obliged to fly to the Corinthians for succour; and Timoleon their general having conquered the tyrant, he fled to Athens, where he was obliged to keep a school for subsistence. He died A. A. C. 343.

**DIONYSIUS**, surnamed Halicarnassensis, or the Halicarnassian, a celebrated historian, and one of the most judicious critics of antiquity. He was born at Halicarnassus; and went to Rome after the battle of Actium, where he staid twenty-two years in the reign of Augustus. He there composed in Greek his History of the Roman Antiquities, in twenty books of which the first eleven

only are now remaining. There are also extant several of his critical works. The edition of the works of this author is that of Ford, in 1704, in Greek and Latin, by the same.

**DIONYSIUS**, surnamed Periegetes, a geographer, to whom is attributed a *Periegesis* or Survey of the Earth, in Greek verse. Some suppose that he lived in the time of Augustus, but Scaliger and Saumasius place him in the reign of Severus, or Marcus Aurelius. He has many other works, but his *Periegesis* is the one we have remaining; the best and most correct edition of which is that improved with illustrations by Hill.

**DIONYSIUS**, the Areopagite, was born at Halicarnassus, and was educated at Athens. He went afterwards to Heliopolis in Egypt; where, if we may believe some writers of his life, he saw that extraordinary eclipse which happened at our Saviour's crucifixion, and was urged by some uncommon inspiration to cry out, *Aut Deus Nature patitur, aut deus doluit*: 'Either the God of Nature is afflicted, or condoleth with him who does.' At his return to Athens he was elected into the court of Aretas, whence his title. About A. D. 50 he embraced Christianity (Acts xvii. 34) and some say, was appointed first bishop of Ephesus by St. Paul. He is supposed to have suffered martyrdom; but whether under Domitian, or Adrian, is uncertain. We have no certain account remaining under his name, but what is a great reason to believe spurious.

**DIOOJOCARTA**, a considerable European settlement of the island of Java, situated on a navigable stream. It is the capital of the sultan of Mataram, who has a palace of three miles in circuit, surrounded by a deep ditch with draw-bridges, and defended by 100 pieces of cannon. Within its precincts is a lake, on which stands an ancient mansion, entered by a long and spacious passage under the water. A guard of 300 Amazons, and a number of petty chieftains, are said to be stationed both to a military and domestic life. The place is armed with spears, and are excellent marksmen. This place was taken by a coup de main of the British, in 1812.

**DIOPHANTINE PROBLEMS**, in mathematics, certain questions relating to square numbers, and right-angled triangles, the solution of which was determined by Diophantus.

**DIOPTRIC**, *adj.* } *Gr. διοπτρικός*  
**DIOPTRICAL**, *adj.* } forming a medium  
**DIOPTRICS**, *n. s.* } sight; assisting in the view of distant objects; a branch of the science of optics.

Being excellently well furnished with glasses, he had not been able to see the sun.

View the asperities of the moon through a glass, and venture at the proportion of their shadows. *Morley's Astrid. against*

**DIOPTRICS**; of *δία*, through, and *τρος*, see; sometimes called also *Anaclastic* optics, from the doctrine of refracted vision. A branch of the science of optics. The ancients treated of direct and reflected vision; but of refracted

th. its knowledge was very imperfect. An early treatise on refraction, in nine books, was written by J. Baptista Porta; but Kepler was the first who elucidated this subject in any great degree, having demonstrated the properties of spherical lenses very accurately, in a treatise published in 1611. After Kepler, Galileo introduced the doctrine into his Letters; as also an Examination of the Preface of Johannes Pena upon Euclid's Optics, concerning the use of Optics in astronomy. Des Cartes also wrote a treatise on Dioptries, commonly annexed to his Principles of Philosophy, one of his best works: in which the doctrine of vision is more distinctly explained than by any former writer, and in which is contained the law of refraction, discovered by Snell, though the name of the inventor is suppressed. Here are also laid down the properties of elliptical and hyperbolic lenses, with the practice of grinding glasses. Dr. Barrow has treated on Dioptries in a brief but very elegant manner, in his Optical Lectures, read at Cambridge. There are also Huygens's Dioptries, an excellent work of its kind. Molyneux's Dioptries, a heavy and dull work. Hartsoeker's Essai de Dioptrique, Cherubin's Dioptrique Oculaire, et De Vision Parfaite, David Gregory's Elements of Dioptrics, Traber's Nervus Opticus, and Zahn's Oculis Artificialis Teledioptricus. Dr. Smith's Optics is a complete work of its kind. Wolfius's Dioptries are contained in his Elementa Mathematica Universalis. Harris's Optics, Bouguer's Optics, and the second volume of Huxley's Natural Philosophy, may also be advantageously consulted. The Treatise on Optics, and the Optical Lectures of Newton, contain an account of inestimable experiments and reasonings in this science: and Mr. Dollond's discovery of achromatic glasses, by which colors are obtained in refracting telescopes, has been of great importance to this branch of optics. See Optics.

**DIORTHOSIS**, *n.s.* Gr. *διορθωσις*, of *διορθωω* to make straight. A chirurgical operation, by which crooked or distorted members are restored to their primitive and regular shape.

**DIOSCOREA**, in botany, a genus of the Alexandria order and diœcia class of plants; natural order eleventh, samentaceæ. Male cat. unipartite. cor. none. Female cat. sexpartite: stam. three: caps. trilobular and compressed; and there are two membranaceous seeds. There are fifteen species, of which the only remarkable one is the *D. bulbifera*, or the yam. It has irregular winged stalks, which trail upon the ground, extend far, and frequently put out roots from their joints as they lie upon the ground, by which the plants are multiplied. The roots are eaten by the inhabitants of both the Indies; and, in the West India islands, make the greatest part of the negroes' food. The plant is supposed to have been brought from the East to the West Indies; for it has never been observed to grow wild in any part of America; but, in the island of Ceylon, and on the coast of Malabar, it grows in the woods, and there are in those places many different species. It is propagated by cutting the root in pieces, observing to preserve an eye in each, as in planting pota-

toes. One plant will produce three or four large roots. The skin of these roots is pretty thick, rough, unequal, covered with many stringy fibres or filaments, and of a violet color, approaching to black. The inside is white and of the consistence of red beet. It resembles the potatoe in its mealiness, but is of a closer texture. When raw, the yams are viscous and clammy; when roasted, or boiled, they afford very nourishing food; and are often preferred to bread by the inhabitants of the West Indies, on account of their lightness and facility of digestion. When first dug out of the ground, the roots are placed in the sun to dry; after which, they are either put in sand, dry garrets, or casks; where, if kept from moisture, they may be preserved whole years without being spoiled or diminished in their goodness. The root commonly weighs two or three pounds; though some yams have been found upwards of twenty pounds weight.

**DIOSCORIDES**, a physician of Anazarba, in Cilicia, who lived in the reign of Nero. He was originally a soldier; but afterwards he applied himself to study, and wrote a book upon Medicinal Herbs. See BOTANY.

**DIOSCURI**, in antiquity, a name given to Castor and Pollux, as *κοῦροι*, the children, *Διοσ*, of Jupiter. They are often borne on the medals of the Roman consuls, and generally appear, as in the annexed diagram, on horse-back, armed with spears, and with helmets surmounted with stars.

**DIOSCURIA**, *διοσκουρία*, in antiquity, a festival in honor of Castor and Pollux. It was observed by the Cyreneans, but more especially by the people of Sparta, the birth-place of these heroes. The solemnity was full of mirth, being at a time wherein they shared plentifully of the gifts of Bacchus, and diverted themselves with sports, of which wrestling matches made a part.

**DIOSMA**, African spirea, a genus of the monogynia order and pentandria class of plants: cor. pentapetalous; nectarium crown-shaped, above the germen: caps. five, coalited: seeds hooded. There are nine species, of which the most remarkable are,

1. *D. hirsuta*, with narrow hairy leaves; a very handsome shrub, growing to the height of five or six feet. The stalks are of a fine coral color, the leaves come out alternately on every side of the branches; the flowers are produced in small clusters at the end of the shoots, and are of a white color. They are succeeded by starry seed-vessels, having five corners; in each of which corners is a cell, containing one smooth, shining, oblong, black seed; these seed-vessels abound with a resin which emits a grateful scent, as does also the whole plant.

2. *D. oppositifolia*, with leaves in the form of a cross. It rises to the height of three or four feet; the branches are slender, and produced from the stem very irregularly; the flowers are produced at the ends of the branches, between the leaves; the plants continue long in flower, and make a fine appearance, intermixed with other exotics in the open air.

**DIOS NOMBRE** Dr, a town of Mexico, on the road from the mines of Sombrerete to Durango. It contains 6800 inhabitants.

**DIOSZEGH**, a large market town of Hungary, in the county of Bihar, thirty miles S. S. W. of Zathmar.

**DIOSPOLITES** Nomos, a division of Thebais, or the Higher Egypt, to distinguish it from another of the Lower Egypt, or the Delta; south of the Nomos Thinites, on the west side of the Nile.

**DIOSPYROS**, the Indian date-plum, a genus of the diœcia order and polygamia class of plants; natural order eighteenth, bicornes. **CAT.** hermaphrodite and quadrifid: **cor.** unceolated and quadrifid: **STAM.** eight: **STYL.** quadrifid: **BERRY** octospermous. There are two species, viz.

1. *D. lotus*, which is supposed to be a native of Africa, from whence it was transplanted into several parts of Italy, and also into the south of France. The fruit of this tree is supposed to be the lotus with which Ulysses and his companions were said to have been enchanted, and which made those who eat of it forget their country and relations. In the warm parts of Europe this tree grows to the height of thirty feet.

2. *D. Virginiana*, pinshamin, persimon, or pichumon plum, is a native of America, but particularly of Virginia and Carolina. The seeds of this sort have been frequently imported into Britain, and the trees are common in many nurseries about London. It rises to twelve or fourteen feet; but generally divides into many irregular trunks near the ground, so that it is very rare to see a handsome tree of this sort. Though plenty of fruit is produced on these trees, it never comes to perfection in this country. In America the inhabitants preserve the fruit till it is rotten, as is practised with medlars in England, when they are esteemed very pleasant. Both species are propagated by seeds, and the plants require to be treated tenderly while young; but when they are grown up, they resist the greatest cold of this country.

**DIP.** *v. a.*, *v. n.* & *n. s.* } Goth. *duppen*; Sax.

**DIP-CHICK**, *n. s.* } *dopen*; Dutch *doo-pene*; Teut. *tauffen*; Hindoo *duba*, from Gr. *δύπτω*. To immerse; put into a liquid; wet; and, figuratively, to be deeply involved in any affair, and to engage as a pledge. As a neuter verb to sink; enter; immerge; as a substantive it is applied by miners to the direction of coal-shafts and minerals (see p. 268), and by scientific men to the depression of a part of the horizon, the needle of the compass, &c. Dip-chick the example explains.

Who, dipping all his faults in their affection,  
Work like the spring that turneth wood to stone,  
Convert his gyves to graces. *Shakespeare.*

*Dip-chick* is so named of his diving and littleness. *Farwe.*

And though not mortal, yet a cold shuddering dew  
*Dips* me all o'er, as when the wrath of Jove  
Speaks thunder. *Milton.*

To be baptized, is to be dipped in water; metaphorically, to be plunged in afflictions.

*Poole's Continuations.*

In Richard's time, I doubt, he was a tale to us  
the rebellion of the commons. *Dryden. Peto.*

Be careful still of the main chance, my son,  
Put out the principal in trusty hands,  
Live on the use, and never dip thy lands. *Id. Peto.*

When men are once *dip't*, what with the encroach-  
ments of sense, custom, facility, and chance, dis-  
parting from what they have given themselves up to,  
they go on till they are stifled. *L'Estrange.*

So fishes, rising from the main,

Can soar with moistened wings on high,

The moisture dried, they sink again,

And dip their wings again to fly. *Swift.*

The kindred arts shall in their praise conspire  
One dip the pencil, and one string the lyre. *Pope.*

The vulture dipping in Prometheus' side,  
His bloody beak with his torn liver dyed. *Grævus.*

The persons to be baptised may be dipped in water  
and such an immersion or dipping ought to be ac-  
thrice, according to the canon. *Asylife's Peto.*

Crowd round her baths, and, bending o'er the rim,  
Unclasped their sandals, and their zones untied.

Dip with gay fear the shuddering foot and knee  
And quick retract it to the fringed vest. *Dante.*

In nautical observations it is necessary to take the  
depression or dip of the sea, to correct the apparent  
altitude of an observed object. *Dr. A. Lee.*

**DIPETALOUS.** *adj.*  $\Delta\epsilon\varsigma$  and  $\pi\epsilon\tau\alpha\lambda\omicron\varsigma$   
Having two flower leaves.

**DIPHTHONG**, *n. s.* Fr. *diphthongue*, Ital.  
and Span. *diſtongo*; Lat. *diphthongus*,  $\mu\epsilon\tau\alpha\delta\iota\phi\theta\omicron\gamma\gamma\omicron\varsigma$ , from  $\delta\iota\varsigma$ , double, and  $\phi\theta\omicron\gamma\gamma\omicron\varsigma$ , a sound.

We see how many disputes the simple and com-  
pound nature of vowels created among grammarians,  
and now it has begot the mistake concerning *diphthongs*; all that are properly so are syllables, and not *diphthongs*, as is intended to be signified by this word. *Holder's Elements of Speech.*

Make a *diphthong* of the second eta and iota, instead  
of their being two syllables, and the objection a *pro* *pro*.

**DIPHTHONGS** are distinguished by some au-  
thors into those that regard the eye, and those  
that regard the ear; but a more accurate de-  
scription was long ago made by that eminent gram-  
marian, Mr. Ruddiman, into proper and im-  
proper. A third class, however, seems to exist  
in the English language, which may be called  
neutral. 1. Improper diphthongs, are those  
wherein only one of the vowels is sounded, the  
other being sunk; as *ae* and *æ* in the Latin,  
and *ea*, *ei*, *eo*, *ie*, *ou*, *oe*, *ue*, and *ui*, in the  
English language. The Latins pronounced the  
two vowels in their diphthongs *ae* or *æ*, *eo* or *æ*,  
much as we do; only that the one was heard  
much weaker than the other, though the diphthong  
was made with all the delicacy imaginable. 2.  
Neutral diphthongs are those combinations of  
vowels, wherein either a new sound, different  
from that of both, takes place, or neither of them  
is sounded; for instance, the sound of *ey* in  
people, is quite different from that of *eo* or *ey* sepa-  
rately, or of either of the vowels separate; and the  
apparent diphthong, or diphthong of the eye,  
as others style it, *ue*, in rogue, vague, &c.

together. Among the former of these may be ranked *ee* and *oo*, wherein the sound of the vowels, instead of being like that of *aa*, is changed to that of *u*. The diphthong *oe*, in *shoe*, also belongs to this class, with many others. 3. *Compound diphthongs*, are such as include the sound of both the component vowels, though still syllable; such as *au*, *eu*, and *ei*, in *aid*, *eu*, *ay*, *eu*, *ey*, *oi*, and *ou*, in

**PLATE, n. s.** The inner plate or lamina of a bone.

**PLATE, n. s.** In anatomy, the soft medullary substance, which lies between the plates of the bones of the cranium.

**PLATE, n. s.** Fr. *diplôme*; from Gr. *diplōmē*. See the article following.

He received from Edinburgh and Aberdeen the diploma. Academical honours would be conferred, if they were always bestowed with liberality. *Johnson's Life of Watts.*

It is peculiarly used for an instrument given by colleges, societies, &c., to students or physicians, to exercise their professions, after passing examination, and admitted to a degree.

**DIPLOMATICS**, the science of diplomas, or literary monuments, public documents.

It does not, however, nor can it, extend its researches to antiquity; but is confined to the middle age, and the diplomas of modern times. For though the ancients were accustomed to reduce their laws and treaties into writing, yet they wrote them on tables, or covered them over with brass, copper, stone, or wood, &c. But in the first ages were not traced on marble, have perished by the length of time, and the destructive events, that have taken place. The word *diploma* signifies, properly, an epistle, folded in the middle, and sealed. But, in more modern times, the term is given to all ancient epistles, literary monuments, and public documents, those pieces of writing which the ancients called *syngrapha*, *chirographa*, *codicilli*, &c. In the middle age, and in the diplomas of these writings are called *littere*, *placita*, *chartæ indiculæ*, *sigilla*, and also *panchartæ*, *pantochartæ*, *tractationes*, &c. The originals of these are named *exemplaria*, or *autographa*, *henticæ*, *originalia*, &c.; and the copies, *copiæ*, *particulæ*, &c. Those that have been made of them, are called *chartæ* and *chartæ*. The place where the laws and documents were kept, the *archivum*, *tabularium*, or *secretarium*, were derived from the tables of brass, according to the Greek idiom, *archeion*, or

To understand the nature of these writings, diplomas, and MSS., and to be able to distinguish from the counterfeit, it is necessary to observe, that the paper of the ancients was from Egypt, and was formed of the bark of a tree named *Papyrus*, or *Bibulum*

*Ægyptiacum*, and which were pasted one over the other with the slime of the Nile, and were pressed and polished with a pumice stone. This paper was very scarce; and it was of various qualities, forms, and prices, which they distinguished by the names of *charta hieratica*, *luria*, *augusta*, *amphitheatrica*, *saitica*, *taurica*, *emporetica*, &c. They cut it into square leaves, which they pasted one to the other, in order to make rolls of them; from whence an entire book was called *volumen*, from *volvendo*; and the leaves of which it consisted, *pagina*. Sometimes, also, they pasted the leaves all together by one of their extremities, as is now practised in binding; by this method they formed the back of a book, and these the learned called *codices*. They rolled the volume round a stick, which they named *umbilicus*; and the two ends which came out beyond the paper, *cornua*. The title, written on parchment, in purple characters, was joined to the last sheet, and served it as a cover. They made use of all sorts of strings or ribands, and even sometimes of locks, to close the book; sometimes, also, it was put into a case. It is easy for those, who apply themselves to this study, to distinguish the parchment of the ancients from that of the moderns, as well as their ink and various exterior characters; but that which best distinguishes the original from the counterfeit, is the writing or character itself; which is, in most cases, very distinctly different from one century to another. There are two works which furnish the best lights on this matter, and which may serve as sure guides in judging of what are called ancient diplomas. The one is the celebrated *Treatise on the Diplomatic*, by F. Mabillon; and the other, the first volume of the *Chronicon Gotvicense*. We shall here only add, that all the diplomas are written in Latin, and consequently the letters and characters have a resemblance to each other; but there are certain strokes of the pen which distinguish not only the ages, but also the different nations; as the writings of the Lombards, French, Saxons, &c. The letters in the diplomas are usually longer, and not so strong as those of MSS. There has been also introduced a kind of court hand, of a very disproportionate length, and the letters of which are called, *Exiles litteræ*, *crispæ* ac *protractiores*. The first line of the diploma, the signature of the sovereign, that of the chancellor, notary, &c., are usually written in this character. The signature of the diploma consists either of the sign of the cross, or of a monogram, or cipher, composed of the letters of the names of those who subscribed it. The initial letters of the name, and sometimes also the titles, were placed about this cross. By degrees, the custom changed, and they invented other marks. They sometimes added also the date and epoch of the signature, the feasts of the church, the days of the calendar, &c. The successive corruption of the Latin language, the style, and orthography of each age, as well as their different titles and forms; the abbreviations, accentuations, and punctuation, and the various methods of writing the diphthongs; all these matters united, form so many characters and marks, by which the authenticity of a diploma

is to be known. The seal annexed to a diploma was anciently of white wax, and artfully imprinted on the parchment itself. It was afterwards pendent from the paper, and enclosed in a box or case, which they called *hulla*. There are some also that are stamped on metal, and even on pure gold.

DIPONDIIUS, a coin, of very little value, mentioned by St. Luke, xii. 6. Our translation of the passage is, Are not five sparrows sold for two farthings? In St. Matthew, x. 29, it runs, Are not two sparrows sold for a farthing? The Greek has *assarion* instead of *as*, which some say was worth half an *as*, i. e. four French deniers and one-eighth; and, according to others, two deniers and five-sixteenths. Dipondius seems rather to signify half an *as*.—Calmet. Dr. Arbuthnot, however, says, that this coin was at first *libralis*, or of a pound weight; and, even when diminished, it retained the name of *libella*; so that dipondius denotes two *asses*.

DIPPÉL (John Conrad), a German physician, born at Darmstadt in 1672. He studied theology at Giessen, and afterwards read medical lectures at Strasburgh, but took his doctor's degree at Leyden in 1711. He was much addicted to the study of alchemy, and, among other secrets, pretended to have discovered the philosopher's stone. After rambling from place to place, he at last settled at Hamburgh; but having used some indiscreet freedoms with the administration of Denmark, he was given up to the government of that country, by whom he was sentenced to perpetual imprisonment in the island of Bornholm. He, however, obtained his liberty at the end of seven years; and about the same time was invited to Sweden, to attend the king, who was dangerously ill, but through the influence of the clergy, whom he had ridiculed, he was obliged to leave the kingdom in 1727. He afterwards went to Germany, and in 1733 gave out publicly that he should not die till 1808, but next year he was found dead in his bed. He denied the inspiration of the Scriptures, and wrote a number of wild enthusiastic books, under the name of Christianus Democritus. His works were published in 5 vols. 4to. 1747. We are indebted to him for the discovery of the Prussian blue, and he invented a useful oil, which is called after him.

DIPPING, among miners, signifies the interruption, or breaking off the veins of ore; an accident that gives them a great deal of trouble before they can discover the ore again. A great part of the skill of the miners consists in the understanding of this dipping of the veins. In Cornwall they have this general rule to guide them in this respect: most of their tin-lodes, which run from east to west, constantly dip towards the north. Sometimes they underlie; that is, they slope down towards the north three feet in height perpendicular. This must carefully be observed by the miners, that they may exactly know where to make their air-shafts when occasion requires; yet, in the higher mountains of Dartmoor, there are some considerable loads which run north and south; these always underlie towards the east. Four or five loads may run nearly parallel to each other in the same hill;

and yet, which is rare, they may meet all together in one hatch, as it were a knot, and separate again, and keep their former distances.

THE DIPPING NEEDLE, or ISOTERMIC NEEDLE, is defined, by Dr. Hutton, to be a magnetic needle, so hung, as that, instead of pointing horizontally, and pointing out N. and S. one end dips or inclines to the horizon, and the other points to a certain degree of elevation above it. It is used for observing the quantity of inclination towards the earth assumed by the magnetic needle. The inventor of the dipping needle was Robert Norman, a compass-maker at Ratcliffe, about 1580. This is not only testified by his own account, in his *New Art of Navigation*, but also by Mr. Whiston, Dr. Gilbert, Mr. William Burrowes, Mr. Henry Bood, and other writers of that period. The occasion of the discovery he himself relates, viz. that it being his custom to finish, and hang the needles of his compasses, before he touched them, he accidentally found that, immediately after the touch, the point would dip or decline downwards, passing in a direction under the horizon; so that, to raise the needle again, he was always forced to put a piece of wax on the S. end, as a counterpoise. The constancy of this effect led him at last to observe the precise quantity of the dip, and to measure the greatest angle which the needle would make with the horizon. This, in 1580, he found at London to be  $71^{\circ} 50'$ .

It is not quite certain, however, whether the dip varies, as well as the horizontal direction, at the same place. Mr. Graham made many experiments with the dipping needle in 1770; at that time he found the dip between  $74^{\circ}$  and  $75^{\circ}$ . Mr. Name in 1772, found it somewhat above  $72^{\circ}$ . But, by many observations made since that time at the Royal Society, the medium quantity is  $74^{\circ}$ . The trifling difference between the first observations of Norman, and the last of Mr. Name at the Royal Society, has led some philosophers to the opinion that the dip is unalterable; and yet it may be difficult to account for the great difference between these and Mr. Graham's numbers, considering the well-known accuracy of that ingenious gentleman. Philosophical Transactions, vol. xlv. p. 279; vol. liii. p. 476; vol. lxi. lxx. lxxi. From a comparison of Mr. Gilpin's observations of the dip in August, 1760, when he found it  $70^{\circ} 20'$ , with those of Mr. Cuvendish, in 1775, its annual decrease, on a mean, appears to have been  $4.3'$ ; and its progressive annual decrease, on a mean, in the above-mentioned period of thirty years, to have been  $1^{\circ} 6'$ . It is certain, from many experiments and observations, that the dip is different in different latitudes, and that it increases in going northward. It appears from a table of observations, made with a marine dipping needle of Mr. Name's, on a voyage towards the north pole in 1773, that

in lat.  $60^{\circ} 18'$  the dip was  $75^{\circ} 0'$ ,  
in lat.  $70^{\circ} 45'$  the dip was  $77^{\circ} 52'$ ,  
in lat.  $80^{\circ} 12'$  the dip was  $81^{\circ} 57'$ , and  
in lat.  $80^{\circ} 27'$  the dip was  $83^{\circ} 24'$ .

See Phipps's Voyage, p. 122. See also the observations of Mr. Hutchins, made in Hudson's Bay and Straits, Philosophical Transactions, vol. lxxv. p. 129. Messrs Burrowes, Gilbert, Ridley

ed, &c. endeavoured to apply this discovery to the dip to the finding of the latitude; and the first proposed finding the longitude by it; for want of observations and experiments, he could not conduct his reasoning to any length.

Whiston, being furnished with the farther observations of colonel Windham, Dr. Halley, &c. Pond, Mr. Cunningham, M. Noel, M. de la Roche, and his own, made great improvements in the doctrine and use of the dipping needle, and sought it to more certain rules, and endeavoured to find the longitude by it. For this purpose, he observes: 1. That the true tendency of the N. S. end of every magnetic needle is not to that part of the horizon to which the horizontal needle points, but towards another directly under it in the same vertical, and in different degrees of declivity, in different ages, and at different places.

That the power by which the horizontal needle is governed, and all our navigation usually directed, it is proved, is only one quarter of the power by which the dipping needle is moved; which should render the latter by far the more exact and accurate instrument. 3. That a dipping needle of a foot long will plainly show an alteration of the angle of inclination, in these parts of the world, in one-eighth of a degree, or seven and a half geographical miles; and a needle of four feet, in two or three miles; i. e. supposing these distances taken along, or near a meridian. 4. A dipping needle four feet long, in these parts of the world, will show an equal alteration along a parallel, as another of a foot long will show along a meridian, i. e. that will, with equal exactness, show the longitude, as this the latitude. This depends on the position of the lines of equal dip, in these parts of the world, which, it is found, do lie about  $14^{\circ}$  or  $15^{\circ}$  from the parallels. Hence he argues, that as we can have needles of five, six, seven, eight, or more feet long, which will move with strength sufficient for exact observation; and since microscopes may be applied for viewing the smallest divisions of degrees on the scale of the instrument, it is evident that the longitude at land may thus be found to be less than four miles. And as there have been many observations made at sea with the same instrument by Noel, Feuille, &c., which have determined the dip usually within a degree, sometimes within a half, or one-third of a degree, and this with small needles of five or six, or, at the most, nine inches long; it is inferred that the longitude may be found even at sea, within less than one-eighth of a degree.

The phenomena of the dipping needle are:—That about the equatorial parts of the earth it remains in an horizontal position, but depresses one end as we recede from these; the north end, if we go towards the north, and the south end, if we proceed towards the south pole. The farther north or south that we go, the inclination becomes the greater; but there is no place of the globe hitherto discovered where it points directly downwards, though it is supposed that it would do so in some part of it very near the pole. Its inclination is likewise found to vary very considerably at different times in different places of the earth, and by some changes of situation, in such a manner as must appear at first sight very unac-

countable. Of all those who have attempted the investigation of this obscure subject, none have been more successful than M. Cavallo, who, in his Treatise on Magnetism, has given particular attention to all the phenomena, and accounts for them upon plain and rational principles, in the following manner:—The dip of the magnetical needle, in general, may be understood from the following easy experiment: Lay an oblong magnet horizontally upon a table, and over it suspend another smaller magnet (a sewing needle to which the magnetic virtue has been communicated will answer the purpose), in such a manner as to remain in an horizontal position when not disturbed by another magnet. Now, if this last small magnet or sewing needle, suspended by the middle, be brought just over the middle of the large one, it will turn itself in such a manner that the south pole of the small magnet will point towards the north pole of the large one; and if at an equal distance from both, will remain in an horizontal position. But if we move it nearer to one of the poles than the other, it will be readily understood that the corresponding end of the needle will be attracted by the pole to which it approaches, and of consequence inclined downwards; the contrary end being proportionably elevated. It is likewise evident, that this inclination will be greater or less according to the distance at which the small magnet is placed from the pole of the large one; the attraction of the nearest pole having always the greatest effect upon it. And it is equally plain that, when brought directly over one of the poles of the large magnet, it will turn its own contrary one directly towards it, and thus lie exactly in the axis of the large one. The application of this experiment to the phenomena of the dipping needle is obvious, as nothing more is requisite for solving the whole mystery, than to suppose the earth itself to be the large magnet, and the magnetic needle, or any other magnetic body, the small magnet in the experiments: for admitting that the north pole of the earth possesses a south magnetism, and that the opposite pole is possessed of a north magnetical polarity; it appears, and the theory is confirmed by experiment, that when a magnet is suspended properly in the equatorial parts of the world, it must remain in an horizontal position; but when removed nearer to one of the poles, it must incline one of its extremities, viz. that which is possessed of the contrary magnetic polarity; and that this inclination must increase in proportion as the magnet or magnetic needle recedes from the equator of the earth; and, lastly, when brought exactly upon either of the poles of the earth, it must stand perpendicular to the ground, or in the same direction with the axis of the earth. The only difficulty in this explanation arises from the attributing a south magnetism to the north pole of the earth; but by this our author means only that its magnetism is contrary to that end of the magnetic needle which turns towards it; and in the same sense it must be understood, that the south pole of the earth has a north magnetic polarity. If the extremities of the axis of the earth, or the poles about which it performs its diurnal revolution, coincided with its magnetic poles, or even if the magnetic poles

were always at a certain distance from them, the inclination of the needle would be always the same at equal distances from the equator, and might be very useful for determining the latitudes. But it would seem, that these poles are perpetually shifting their places, since both the inclination and horizontal direction of the needle are continually varying even in the same place: so that its quantity of inclination cannot be exactly calculated. Two general remarks may be made upon this subject. 1. That the inclination of the needle does not alter regularly in going from N. to S. or from S. to N. in any meridian. 2. That its alteration in the same place, and at different times, is but small. Thus, in London, about the year 1576, the dip was  $70^{\circ} 50'$  below the horizon, and in 1775 it stood at  $72^{\circ} 3'$ ; the alteration in nearly 200 years, scarce amounting to three quarters of a degree, which may be attributed to the errors of the instruments; as these were at first exceedingly erroneous, and even yet are far from being perfect.

The general method of constructing dipping needles is, to pass an axis quite through the needle itself, and to let the extremities of the axis rest upon two supports, like the beam of a pair of scales, that the needle may move vertically round; and hence, when placed in the magnetic meridian, it will naturally assume that position which is called the magnetic line, viz. the two ends nearly north and south, and one of them inclined considerably to the horizon. The degrees of this inclination are shown upon a graduated circle; and when the instrument is made use of at land it has a stand, but at sea a ring is necessary to suspend it. When furnished with a stand, it has also a spirit-level; and the stand has three screws, by which the whole is adjusted in such a manner as to let the centre of motion in the needle, and the mark of  $90^{\circ}$  on the lower part of the divided circle, be exactly in the same line perpendicular to the horizon. The greatest imperfections attending this instrument are the balancing of the needle itself, and the difficulty of knowing whether, after being made magnetic, it be properly balanced or not. The inaccuracy here indeed can be but very small, as arising only from dust or moisture. The method recommended by Mr. Cavallo, to obviate these inconveniences, is first to observe the dip of the needle, then to reverse its magnetism by the application of magnets, so that the end of it which before was elevated above the horizon may now be below it; and, lastly, to observe its dip again; for a mean of the two observations will be pretty near the truth, though the needle may not be perfectly balanced. See MAGNETISM, and MAGNETICAL NEEDLE.

In order to determine the law that regulates the inclination or dip of the needle, Biot, in a memoir delivered by himself and Humboldt to the French National Institute, on the Variations of the Terrestrial Magnetism in different Latitudes, supposed in the axis of the magnetic equator, and at equal distances from the centre of the earth, two centres of attractive forces, the one austral and the other boreal, so as to represent the two opposite magnetic poles of the earth: he then calculated the

effect which ought to result from the action of these centres upon any point of the earth's surface, assuming the attractive force in the reciprocal ratio of the squares of the distances; and that his results approximated more and more to the truth in proportion as the distance from the magnetic poles was assumed less, and at last, by supposing those two poles or centres to coincide, or the inclination of the magnetic needle to be produced by an indefinitely small magnet placed in the centre of the earth, the theorem gave the same numbers as had been observed by Humboldt both in Europe and America, as well as what had been observed in Russia, Lapland, and various other parts of both hemispheres: the results of theory are classed with those of observations in a comparative table, which clearly evinces their coincidence. Let  $u$  be the angle included between the radius drawn from the earth's centre to the assumed point on its surface and the magnetic axis,  $\beta$ , the angle comprehended between the line coinciding with the real position of the axis and the said magnetic axis, and  $I$  the inclination of the needle with the horizon of the place, we have

$$I = 90^{\circ} + u - \beta$$

whence  $\beta$  is readily determined; and  $u$  shall have the inclination by means of the following:

$$\tan \beta = \frac{\sin. 2u}{\cos. 2u + \frac{1}{2}}$$

Still it must be observed, that though the formulae, given by Biot, furnished in general results very near the truth; yet when he attempted to represent the inclinations in different latitudes by the supposition of a magnet infinitely small very near the centre of the earth, and perpendicular to the magnetic equator, he did not pause to consider the hypothesis as any thing real, but solely as a mathematical abstraction.

DIPSACUS, teal, in botany, a genus of the monogynia order, and tetrandria class of plants: it is polyphilous, proper above; the receptacle paleaceous. There are four species: the most remarkable is the *D. carthusianus*, which grows wild in many parts of England: it is of singular use in raising the knap and woollen cloth. For this purpose the teal is fixed round the circumference of a large lead wheel, which is made to turn round, and the teal is held against them. In the west of England great quantities of the plant are cultivated for this use. It is propagated by sowing the seed in March, upon a well prepared soil. About one peck of seed is sufficient for an acre, and the plants must have room to grow; otherwise the heads will not be large enough, nor in great quantity. When the plants come up, they must be hoed in the same manner as is practised in turnips, cutting down all the weeds, and leaving the plants to about eight inches distant; and as they advance, and the weeds begin to grow again, they must be hoed a second time, cutting down the plants to a wider distance, so that they may finally stand a foot distant from each other. In the second year they will shoot up heads which must be cut about the beginning of August. They are then to be tied up in bunches, and set in the soil

ther is fair: or, if not, in rooms to dry the common produce is about 160 bunches upon an acre, which are sold for 1s. each. The leaves of the common are dried, and given in powder or infused in a very powerful remedy against flatulencies in the stomach. There is also another somewhat whimsical, use for which is famous among the country people in Flanders. If the heads are opened longitudinally, in November or October, there is generally a small worm in them: one of these only in each head, whence naturalists have the vermis solitarius dipsaci. They collect five, or seven of these, always oblige to make an odd number; and sealing them in oil, give them to be worn as an amulet against the ague. This superstitious remedy is in better repute than the bark, in many parts of Flanders.

carrying their food to the mouth like squirrels.

1. *D. cafer*, or the Cape jerboa, has four toes on the hind feet and five on the paws; the tail is very hairy, and tipped with black. This species inhabits the Cape of Good Hope, and is fourteen inches long; the tail fifteen, the ears three. It is called *aerdmannetje*, or little earth man, and *springen haas*, or leaping hare, by the Dutch at the Cape. It has a grunting voice; is very strong, and leaps twenty or thirty feet at one bound. It burrows with its fore feet; and sleeps sitting on its hind legs, with the knees separated, the head between, and holding its ears with the fore paws over its eyes. It is eaten by the natives; and is caught by pouring water into its hole, which compels it to come out. 2. *D. jaculus*, the common jerboa, or leaping mouse of Linnaeus, has four toes on all the feet, and a claw in place of a thumb or fifth toe on each fore foot. The body is somewhat more than seven inches long, and the hind legs and thighs are longer than the body. The upper parts are of a pale tawny color, and the under parts white: the ears and feet are flesh-colored. The female has eight teats distantly placed. These animals inhabit Egypt, Arabia, Calmuck Tartary, and southern Siberia.

They frequent firm hard ground, and fields covered with grass and herbs, where they form burrows of several yards long in a winding direction, leading to a large chamber about half a yard below the surface; and from this a second passage is dug to within a very little of the surface; by which they can escape when threatened with danger. When at rest, they sit with their hind legs bent under their belly, and keep the fore legs so near the throat as hardly to be perceptible. They eat grain and herbage like the hare. Their dispositions are mild, and yet they can never be perfectly tamed. This animal is roasted and eaten by the Arabs, who call it the lamb of the children of Israel. It has been particularly described by Mr. Bruce in his Abyssinian Travels. 3. *D. sagitta*, the Arabian jerboa, the *mus dædicæ* of the Greeks, and *mus bipes* of the Romans, has three toes on the hind feet, and no thumb or fifth toe on the fore paws. It is only about six inches long, and the tail rather shorter than the body; the soles of the hind feet and bottom of the toes are covered with a very thick coat of hair; the head is more rounded than that of the *jaculus*, and the ears are much longer than the head. It inhabits Arabia, and near the Irish in Siberia, where it frequents the sandy plains. 4. *D. Canadensis*, or Canadian jerboa, is thus described by general Davies:

‘As I conceive there are very few persons, however conversant in natural history, who may have seen or known that there was an animal existing in the coldest parts of Canada of the same genus with the jerboa, hitherto confined to the warmest climates of Africa, I take the liberty of stating the following particulars. With respect to the food, or the mode of feeding, of this animal, I have it not in my power to speak with any degree of certainty, as I could by no means procure any kind of sustenance that could induce it to eat; therefore, when caught, it lived only a day and a half. The first I was so fortunate as to catch, was taken in a large field near the Falls of Montmorency, and, by its having

strayed too far from the skirts of the wood, allowed myself, assisted by three other gentlemen, to surround it, and after an hour's hard chase, to get it unhurt, though not before it was thoroughly fatigued, which might in a great measure accelerate its death. During the time the animal remained in its usual vigor, its agility was incredible for so small a creature. It always took progressive leaps of from three to four, and sometimes of five yards, although seldom above twelve or fourteen inches from the surface of the grass; but I have observed others in shrubby places, and in the woods, among plants, where they chiefly reside, leap considerably higher. When found in such places it is impossible to take them, from their wonderful agility, and their evading all pursuit, by bounding into the thickest part of the covert they can find. With respect to the figure given of it, in its dormant state, I have to observe, that the specimen was found by some workmen, in digging the foundation for a summer-house in a gentleman's garden, about two miles from Quebec, in the end of May, 1787. It was discovered enclosed in a ball of clay, about the size of a cricket-ball, nearly an inch in thickness, perfectly smooth within, and about twenty inches under ground. The man who first discovered it not knowing what it was, struck the ball with his spade, by which means it was broken to pieces, or the ball would have been presented to me. How long it had been under ground it is impossible to say; but, as I could never observe these animals in any part of the country after the beginning of September, I conceive they lay themselves up some time in that month, or beginning of October, when the frost becomes sharp. Nor did I ever see them again before the last week in May or beginning of June. From their being enveloped in balls of clay, without any appearance of food, I conceive they sleep during the winter, and remain for that term without sustenance. As soon as I conveyed this specimen to my house, I deposited it as it was, in a small chip box in some cotton, waiting with great anxiety for its waking, but that not taking place at the season they generally appear, I kept it until they found it begin to smell; I then stuffed it, and preserved it in its torpid position. I am led to believe its not recovering from that state arose from the heat of my room during the time it was in the box, a fire having been constantly burning in the stove, and which in all probability was too great for its respiration.

**DIRÆ**, the general name of the three furies in the Pagan mythology. They were so called as being quasi Deorum ire, the ministers of Divine vengeance in punishing guilty souls after death. They were the daughters of Acheron and Night.

**DIRCA**, in botany, a genus of the monogynia order and octandria class of plants: **cal.** none: **cor.** tubular, with the limb indistinct: **stam.** longer than the tube: **ser.** monospermous. Species one, a Virginian shrub.

**DIRE**, *adj.* } **Lat.** *dirus*. Dreadful;  
**DIREFUL**, } terrible; dismal; extremely  
**DIRENESS**, *n.* } evil.

But yet at last, whereas the *direful* fiend  
She saw untir'd, off shaking vain affright,

She nigher drew, and saw that *direful* fiend  
Then God she prayed, and thank'd his  
knight.

*Direrful* hap betide that hated one  
That makes us wretched by the death of

*Direrful*, familiar to my slaughterous  
Cannot once start me. *Shakespeare.*

Hydras, and gorgons, and chimæras

Or what the cross *dire*-looking planet  
Or hurtful worm with cankered venom

The voice of God himself speaks in the  
men, whether they understand it or no, and  
intimations gives the sinner a foretaste of the  
cup, which he is like to drink more deeply of

Discord! *dire* sister of the slaughtered pain  
Small at her birth, but rising every hour;  
While scarce the skies her horrid head can  
She stalks on earth, and shakes the world

Achilles' wrath, to Greeks the *direful* sign  
Of woes unnumbered, heavenly goddess' *dire*

Ah me! the *dire* effect  
Of loitering here, of death defrauded long  
Of old so gracious, and let that suffice.  
My very master knows me not.  
I've been so long remembered I'm forgot

Unnumbered maladies his joints invade  
Lay siege to life, and press the *dire* blockade  
But unextinguished avarice still remains  
And dreaded losses aggravate his pains.

*Johnson.* Vainly of Human

A brave man knows no malice, but as  
Forgets in peace the injuries of war,  
And gives his *direct* foe a friend's embrace

 the west entrance of the straits of Magellan, in  
 the South Pacific Ocean. Long. 77° 19' W.,  
 lat. 52° 27' S.

DIRECTORS, in commercial polity, are conside-  
 rable proprietors in the stocks of their respective  
 companies, being chosen by plurality of votes  
 from among the body of proprietors. The Dutch  
 East India Company has sixty such directors;  
 that of France, twenty-one; the British East  
 India Company has twenty-four, including the  
 chairman, who may be re-elected for four years  
 successively. These last have salaries of £150  
 a year each, and the chairman £200. They  
 meet at least once a week, and commonly oftener,  
 being summoned as occasion requires. The di-  
 rectors of the Bank of England are twenty-four  
 in number, including the governor and deputy-  
 governor.

DIRECTOR, in surgery, a grooved probe, to  
 direct the edge of the knife or scissors, in open-  
 ing sinuses or fistulæ, that the adjacent vessel,  
 nerves, and tendons, may not be hurt.

The DIRECTORY OF PUBLIC WORSHIP was a  
 celebrated book drawn up by the assembly of  
 divines at Westminster, and established by an  
 ordinance of parliament in 1644, repealing the  
 statutes of Edward VI. and of Elizabeth, for  
 uniformity in the common prayer. The Direc-  
 tory set aside the use of the liturgy, and allowed  
 of no church-music besides that of singing the  
 Psalms. The Directory was so called, in part,  
 because it only points out certain topics of  
 prayer, on which the minister might enlarge.  
 The whole apocrypha was rejected; and both  
 private baptism and lay baptism, with the use of  
 godfathers and godmothers, and the sign of the  
 cross. In the sacrament of the Lord's supper,  
 no mention is made of private communion or  
 administering it to the sick. The altar with rails  
 was changed into a communion table, about  
 which the people might stand or sit; kneeling  
 not being thought so proper a posture. Light-  
 foot, Selden, and others, were for open com-  
 munion, to which the parliament also most  
 inclined, in opposition to those presbyterians  
 who were for granting powers of admission or  
 rejection to the ministers and elders, and to the  
 independents who were for committing them to  
 the whole brotherhood; but it was agreed, that  
 the minister, before the communion, should  
 'warn, in the name of Christ, all such as are  
 ignorant, scandalous, profane, or that live in any  
 sin or offence against their knowledge or con-  
 science, that they presume not to come to that  
 holy table, showing them, that he that eateth and  
 drinketh unworthily, eateth and drinketh judg-  
 ment to himself.' The prohibition of marriage  
 in Lent, and the use of the ring, were laid aside.  
 In the visitation of the sick no mention is made  
 of private confession, or authoritative absolution.

T

No service is appointed for the burial of the dead. All particular vestments for priests or ministers, and all saints'-days, were discarded. It has been remarked, as a considerable omission, that the Directory does not enjoin the reading of the apostles' creed, and the ten commandments. However, these were added to the assembly's confession of faith, which was published a year or two afterwards. This Directory continued in use till the restoration of king Charles II., when, the constitution being restored, the old liturgy took place again; the ordinance for its repeal having never obtained the royal assent. The revolution, thus occasioned in the form of public worship, did not take place for a considerable time over the whole kingdom. In some parts of the country the churchwardens could not procure a Directory; and in others they despised it, and continued the old common prayer book; some would read no form, and others used one of their own. In order to enforce the use of the Directory, the parliament, by an ordinance, dated August 23rd, 1645, called in all common prayer books, and imposed a fine upon those ministers who should read any other form than that contained in the Directory. By the same ordinance, which continued till the Restoration, to preach, write, or print any thing in derogation or depraving of the Directory, subjected the offender, upon indictment, to a discretionary fine, not exceeding £50.

Directory, in a more modern sense, was used as the title of the supreme executive power, according to the new constitution, formed by the French convention after the fall of Robespierre, and presented to the primary assemblies for acceptance in August, 1795. By this constitution the legislative body was composed of what they called a Council of Ancients and a Council of Five Hundred. The whole of this fabric, it is well known, was overturned by the successful ambition of Napoleon: but as it directed the energies of a numerous, if not a great, people for a considerable period, we may here perpetuate its forms. The executive power was entrusted to a Directory of five members, nominated by the legislative body as follows:—1. The Council of Five Hundred formed a list by ballot of three times the number to be nominated, and presented it to the Council of Ancients, which chose out of this list by ballot. 2. The members of the Directory were to be forty years of age at least. 3. After the ninth year of the republic, they were to be chosen only from among those citizens who had been members of the Legislative Body, or the Administration, or General Agents of Execution. 4. Members of the legislative body could not be elected members of the Directory, either during the continuance of their legislative functions, or during the first year after their expiration. 5. The Directory was partially renewed by the annual election of a new member. 6. No incumbent director could be re-elected till after an interval of five years. 7. The ascendant and descendant in the direct line; the brother, uncle, and nephew; connexions by marriage in the same degrees, and cousins in the first degree, could not be members of the Directory at the

same time, nor succeed one another in it, after an interval of five years. 8. In case of death, removal, or resignation of a member of the Directory, his successor was elected within ten days. The Council of Five Hundred was obliged to propose the candidates within the first five days, and the Council of Ancients complete the election within the last five. No new member could only continue in office for a remaining period of the person he succeeded, unless it did not exceed six months, in which case he continued five years and a half in office. Each director was to preside in rotation for three months only. 10. The president signed and kept the seal. 11. The laws and acts of the legislative body were addressed to the Directory, in the person of its president. 12. The Directory could not deliberate and three members were present. 13. A secret was chosen (not one of its members), who countersigned despatches, and drew up declarations, in a register, wherein each member might also enter his opinion, with his name. 14. The Directory could deliberate without aid of the secretary, and one of the directors might record its resolutions in a particular register. 15. The Directory provided for the safety of the public according to the laws, issued proclamations; &c. It disposed of the armed forces, but none of its members could command either while they continued in office, or for two years after. 16. The Directory, upon having any conspiracy against the republic, might seize the supposed authors or accomplices taken, hended, and interrogate them; but were liable under the penalty of arbitrary imprisonment to submit them to an officer of police, within two days, to proceed with them according to law. 17. The Directory nominated the generals, but could not choose them among the relations of its members within the degrees above-mentioned. 18. It superintended the execution of the laws by the series of its nomination. 19. It nominated the general agents of execution, but not of more than five members, and recalled them at pleasure. 20. It determined their number and functions. 21. It nominated all receivers of direct taxes. 22. It well as the superintendants of indirect contributions, and the administration of national domains. 23. It superintended the coinage of money, and nominated the officers charged with it. 24. The Director could go out of the territory of the republic, till two years after he was out of office, but was obliged to certify his place of residence during that interval to the legislative body. 25. The Directory was responsible for the non-execution of laws, and for the abuses which it incurred. 26. Its agents were respectively responsible for the non-execution of the laws and orders of the directory. 27. Its members could be tried by the legislative body for acts of treason, corruption, embezzlement of public money, and all capital crimes as to their official conduct. 28. They were subject to the jurisdiction of the tribunals for ordinary and private offences, but they could not be arrested except in the case of flagrant delictum, or brought to trial without authority of the legislative body.

Every denunciation against the Directory,

members, was addressed to the Council Hundred. If, after deliberation, the Council admitted the denunciation, it declared terms: the denunciation against—for *it*—dated—signed by—is admitted. *It* was then cited, and heard in the interior of the Council of Five Hundred; who whether there was ground for examining *it*. He was then heard by the Council at the bar; and, if he was deemed by the Council proceeded to accusation, followed by suspension, when the account before the High Court of Justice, to proceed to trial without delay. If *it* was acquitted, he resumed his func-

the Legislative Body could not cite the *Dir* any of its members, except in the specified. The accounts and information of the Directory by the *Le* were furnished in writing. On the session of the Legislative Body, the were obliged to present to it an estimate of the state of the finances, pensions, &c., *it* was that had come to its knowledge. *it* the Legislative Body to take a consideration; but could not propose dispositions, except with regard to war. No member of the Directory absent more than five days, nor re- four myriameters, or ten leagues, and residence, without being authorized by the Legislative Body. The members of *it* could only appear in an appointment. They had a constant guard of 120 of 120 cavalry, who attended them in sessions, in which they had always the. Each member was attended out of two guards; and was entitled to the military honors from every post of *it*. The Directory resided in the same with the Legislative Body, at the *ex* republic. The salary of each was value of 50,000 myriagrammes, about *it* of wheat.

**DIRTION**, *n. s.* Lat. *direptio*. The act of *it*.

*Dir*, *n. s.* This is from the Teutonic *dir*, to praise and extol, says Dr. Versteegan, 'whence it is possible, and our *dirge*, was a laudatory song to praise and applaud the dead. Bacon derives it from *dirge*.' A mournful *it* of lamentation.

*Dir*, *n. s.* The jointress of this warlike state *it* were, with a defeated joy, *it* funeral, and with *dirge* in marriage. *it* weighing delight and dole,

*Shakespeare. Hamlet.*  
*it*, the body of Richard, after many in-approaches, the *diriges* and obsequies of a people towards tyrants, was obscurely *it*.

*Bacon.*  
*it* measures of her mourning kept, *it* the *dirge*, and by infection wept.

*Dryden.*  
*it* an sacred earth allow thee room, *it* *dirge* be muttered o'er thy tomb, *it* grave with rising flowers be dress, *it* turf lie lightly on thy breast, *Pope.*

Betrothed beauty bending o'er his bier  
Breathes the loud sob, and sheds the incessant tear;  
Pursues the sad procession, as it moves  
Through winding avenues and waving groves;  
Hears the slow *dirge* amid the echoing aisles,  
And mingles with her sighs discordant smiles.

*Darwin.*

**DIRIBITORES**, among the Romans, officers appointed to distribute tablets to the people at the comitia. See **COMITIA**.

**DIRIGENT**, *adj.* Lat. *dirigens*.

The *dirigent* line in geometry is that along which the line descript is carried in the generation of any figure.

*Harris.*

**DIRK**, *n. s.* Goth. *dorg*; Sax. *dork*; Isl. *turric*. A kind of dagger used in the Highlands of Scotland.

In vain thy hungry mountaineers  
Come forth in all their warlike geers,  
The shield, the pistol, *dirk*, and dagger,  
In which they daily went to swagger.

*Tickell.*

And in the fire his recent rags they scattered,  
And dress'd him, for the present, like a Turk,  
Or Greek—that is, although it not much mattered,  
Omitting turban, slippers, pistols, *dirk*.

*Byron. Don Juan.*

**DIRKE**, *v. a.* To spoil; to ruin. Obsolete.

Thy waste bigness but cumpers the ground,  
And *dirkes* the beauties of my blossoms round.

*Spenser.*

**DIRT**, *n. s.* Dut. *an.* Goth *dyrt*;  
**DIRT'LY**, *adv.* } Islandic, *dirt*. Mud;  
**DIRT'INESS**, *n. s.* } filth; mire; any thing  
**DIRTY**, *v. a. & adj.* } that sticks to the clothes  
or body; any thing mean.

For whom I made all thingis payement and I  
deeme as *dyrt*, that I wyae Crist.

*Wiclif. Filipensis. 3.*

Their fell contention still increased more,  
And more thereby increased furor's myght,  
That he his foe has hurt and wounded sore,  
And him in blood and *dirt* deformed quight.

*Spenser. Faerie Queene.*

Or were it such gold as that wherewithal  
Almighty chimaques from each mineral,  
Having by subtle fire a soul out-pulled,  
Are *dirty* and desperately gulled,

*Dante.*

Thy Dol and Helen of thy noble thoughts  
Is in base durance, and contagious prison,  
Hauled thither by mechanic, *dirty* hands.

*Shakespeare.*

Such employments are the diseases of labour, and  
the rust of time, which it contracts not by lying still,  
but by *dirty* employment. *Taylor's Holy Living.*

Marriages would be made up upon more natural  
motives than mere *dirty* interests, and increase of  
riches without measure or end.

*Temple.*

Numbers engage their lives and labours to heap  
together a little *dirt* that shall bury them in the end.

*Wake.*

Pound an almond, and the clear white colour will  
be altered into a *dirty* one, and the sweet taste into an  
oily one.

*Locke.*

They come at length to grow sots and epicures,  
mean in their discourses, and *dirty* in their practices.

*South.*

Is yellow *dirt* the passion of thy life,  
Look but on Gripeus, or on Gripeus' wife.

*Pope.*

Ill company is like a dog, who *dirts* those men  
whom he loves best.

*Saunders.*

The god of day

A tripod gives, amid the crowded way,  
To raise the *dirty* foot, and ease his toil. *Gay.*

The lords Struts lived generously, and never used  
to *dirty* their fingers with pen, ink, and counters.

*Arbutnot.*

**DIRUPTION**, *n. s.* Lat. *diruptio*. The act  
or state of bursting or breaking.

**DIS**, in mythology, a god of the Gauls, the  
same as Pluto, the god of hell. The ancient  
inhabitants of Gaul supposed themselves de-  
scended from that deity.

**DISA**, in botany, a genus of the diandria  
order and gynandria class of plants. The spatha  
is univalvular; the petals three; the third  
smaller than the rest, bifid, and gibbous, at the  
base. Species four, all Cape plants.

**DISA'BLED**, *v. a.* } Of *dis*, and **ABLE**,  
**DISA'BILITY**, *n. s.* } which see. To deprive  
of force or power; to disqualify; impair; to  
declare deficient. Disability is the want of  
power, aptitude, or legal right to do a thing.

Our consideration of creatures, and attention to  
scriptures, are not in themselves things of like *disa-*  
*bility* to breed or beget faith. *Hooker.*

Many withdrew themselves out of pure faintness,  
and *disability* to attend the conclusion. *Raleigh.*

I have *disabled* mine estate,

By shewing something a more swelling port  
Than my faint means would grant continuance.

*Shakespeare.*

Farewell, Monsieur Traveller; look you lisp, and  
wear strange suits; *disable* all the benefits of your own  
country. *Id.*

The invasion and rebellion did not only *disable*  
this king to be a conqueror, but deprived him both of  
his kingdom and life. *Darics's Ireland.*

I will not *disable* any for proving a scholar, nor yet  
dissemble that I have seen many happily forced  
upon the course to which by nature they seemed  
much indisposed. *Wotton.*

Nor so is overcome

Satan, whose fall from heaven, a deadlier bruise  
*Disabled* not to give thee thy death's wound.

*Milton.*

A Christian's life is a perpetual exercise, a wrest-  
ling and warfare, for which sensual pleasure *disables*  
him, by yielding to that enemy with whom he must  
strive. *Taylor's Holy Living.*

I have known a great fleet *disabled* for two months,  
and thereby lose great occasions by an indisposition  
of the admiral. *Temple.*

Your days I will alarm, I'll haunt your nights,  
And worse than age *disable* your delights. *Dryden.*

He that knows most of himself, knows least of his  
knowledge, and the exercised understanding is con-  
scious of its *disability*. *Glanville.*

The ability of mankind does not lie in the im-  
punity or *disabilities* of brutes. *Locke.*

This disadvantage which the dissenters at present  
lie under, of a *disability* to receive church prefer-  
ments, will be easily remedied by the repeal of the  
test. *Swift.*

A suit is commenced in a temporal court for an  
inheritance; and the defendant pleads, in *disability*,  
that the plaintiff is a bastard. *Ayliffe's Pleading.*

Foiled, bleeding, breathless, furious to the  
Full in the centre stands the bull at bay,  
Mut wounds, and clinging darts, and limbs  
And foes *disabled* in the brutal fray.

**DISABILITY**, in law, is when a man  
is *abled*, or made incapable to inherit any  
take that benefit which otherwise he is  
done. This may happen four ways: 1. By  
act of an ancestor: 2d, of the party: 3d,  
act of God: or, 4th, of the law. 1. By  
by the act of the ancestor is where the  
is attained of high treason, &c., which  
the blood of his children, so that they  
inherit his estate. 2. Disability by  
the party is where a man binds himself  
ligation, that, upon surrender of a lease  
grant a new estate to a lessee; and if  
he grants over the reversion to another  
puts it out of his power to perform it.  
ability by the act of God is where a man  
sanæ memoriæ, whereby he is incapable  
any grant, &c. So that, if he passes  
out of him, it may, after his death,  
void; but it is a maxim in law, 'that  
full age shall never be received to do  
own person.' 4. Disability by the act  
is where a man, by the sole act of the  
out any thing by him done, is render-  
pable of the benefit of the law; as a  
born, &c.

**I ISABUSE**, *v. a.* *Dis* and *Abuse*  
see. To deliver from mistake or delusion.

The imposture and fallacy of our senses  
only as common heads, but even more re-  
curious, who have the advantages of an  
son to *disabuse* you. *Glanville.*

Those teeth fair Lyce must not show  
If she would bite: her lovers, though  
Like birds they stoop at seeming grapes,  
Are *disabused* when first she gapes.

If by simplicity you meant a general order  
that profess angling, I hope to *disabuse* you.  
*Watson.*

Chase of thought and passion, all ends  
Still by himself abused or *disabused*.

**DISACCOMMODATION**, *n. s.*  
accommodation. The state of being  
unprepared.

Devastations have happened in some  
than in others, according to the accom-  
*disaccommodation* of them to such calamities.  
*Hale's Origin of*

**DISACCUSTOM**, *v. a.* *Dis* and *Ac-*  
To destroy the force of habit by dis-  
tary practice.

**DISACKNOWLEDGE**, *v. a.* *Dis-*  
knowledge. Not to acknowledge.

The manner of denying Christ's deity  
hibited, was, by words and oral expressions  
to deny and *disacknowledge* it.

**DISACQUAINTANCE**, *n. s.*  
acquaintance. Disuse of familiarity.

Conscience, by a long neglect of, and  
tance with itself, contracts an inveterate

**DISADVANTAGE**, *v. a. & n. s.*

**DISADVANTAGEABLE**, *adj.*

**DISADVANTAGEOUS**, *adj.*

**DISADVANTAGEOUSLY**, *adv.*

to interest ; diminution of any thing  
state of weak defence.

No fort can be so strong,  
ly breast can armed be so sound,  
ill at last he won with battery long ;  
sures at *disadvantage* found.

*Faerie Queene.*

of a man's estate, he may as well hurt  
ing too sudden, as in letting it run on  
hasty selling is commonly as *disadvan-*  
*ta*rest. *Bacon.*

many things resembled Ovid, and that  
*disadvantage* on the side of the modern author.  
*Dryden.*

de of eyes will narrowly inspect every  
minent man, consider him nicely in all  
in be a little pleased when they have  
in the worst and most *disadvantageous*  
*Addison's Spectator.*

mony will not be of much weight to its  
since they are liable to the common  
condemning what they did not under-  
*Swift.*

ring nod or smile serves to drive you on,  
we display yourselves more *disadvantage-*  
*Government of the Tongue.*

a bodily *disadvantages* must incline him  
obvious cultivation of his talent, without  
fear that he must have languished in  
*Shenstone.*

I am like a man who, having struck on  
and having narrowly escaped shipwreck  
small birth, has yet the temerity to put  
the same leaky weather-beaten vessel,  
tries his ambition so far as to think of  
the globe under these *disadvantageous* cir-  
*Hume on Human Nature.*

**VENTUROUS** *adj.* Dis and adven-  
happy ; unprosperous.

Now he hath left you here,  
the record of his rueful loss,  
of my doleful *disadvantageous* death.

*Faerie Queene.*

**ECT**, *v. a.* } Dis and affect.  
*ECT*, *part. adj.* } To fill with discon-  
*ECT*, *adv.* } tent ; to discontent ;  
*ECTNESS*, *n. s.* } to make less faithful  
*ECT*, *n.* } or zealous.

attempted to *disaffect* and discontent his  
army. *Clarendon.*

laws, princes must have regard to the  
mons, to the affections and *disaffecti*  
; and must not introduce a law with  
and displeasure.

*Taylor's Rule of Holy Living.*

civil worship to the emperor's statua,  
from then was to give, they were pro-  
as *disaffected* to the emperor.

*Stillingfleet.*

took its original merely from the *dis-*  
part, and not from the peccancy of  
*Wicam.*

**RMANCE**, *n. s.* Dis and affirm.  
negation.

of reasoning which reduceth the oppo-  
to something that is apparently absurd.  
ation in *disaffirmance* of any thing that  
*Hale.*

To **DISAFFOR'EST**, *v. a.* Dis and forest.  
To throw open to common purposes ; to reduce  
from the privileges of a forest.

The commissioners of the treasury moved the king  
to *disafforest* some forests of his, explaining them-  
selves of such forests as lay out of the way, not near  
any of the king's houses. *Bacon.*

How happy's he, which hath due place assigned  
To his beasts ; and *disafforested* his mind ! *Donne.*

**DISAGREE**, *v. n.*

**DISAGREE'ABLE**, *adj.*

**DISAGREE'ABLY**, *adv.*

**DISAGREE'ABLENESS**, *n. s.*

**DISAGREE'MENT**.

Dis and agree. } To differ ; to be  
in opposition : dis-  
agreeable is, un-  
suitable ; displea-  
sing. Disagreement, dissimilitude ; diversity  
of sentiment ; quarrel.

They seemed one to cross another, as touching their  
several opinions about the necessity of sacraments,  
whereas in truth their *disagreement* is not great.

*Hooker.*

It containeth many improprieties, *disagreeing* almost  
in all things from the true and proper description.

*Browne.*

Why both the bands in worship *disagree*,  
And some adore the flower, and some the tree.

*Dryden.*

A father will hug and embrace his beloved son, for  
all the dirt and foulness of his cloaths ; the dearness  
of the person easily apologising for the *disagreeable-*  
ness of the habit. *South.*

The mind clearly and infallibly perceives all distinct  
ideas to *disagree* ; that is, the one not to be the other.  
*Locke.*

To make the sense of esteem or disgrace sink the  
deeper, and be of the more weight, either agreeable  
or *disagreeable* things should constantly accompany  
these different states. *Id.*

Strange it is, that they reject the plainest sense of  
scripture, because it seems to *disagree* with what they  
call reason. *Atterbury.*

Some demon, an enemy to the Greeks, had forced  
her to a conduct *disagreeable* to her sincerity.

*Browne.*

Do you not sometimes find dull *disagreeable* ideas  
annexed to certain places, seasons, or employments,  
which give you a secret aversion to them ? *Mason.*

**DISALLOW**, *v. a. & n. s.*

**DISALLOW'ABLE**, *adj.*

**DISALLOW'ANCE**, *n. s.*

Dis and allow. } To deny in res-  
pect to authority,  
legality, or propriety ; to refuse permission. Dis-  
allowance is prohibition.

God doth in converts, being married, allow con-  
tinuance with infidels, and yet *disallow* that the faith-  
ful, when they are free, should enter into bonds of  
wedlock with such. *Hooker.*

Neutrality is always a thing dangerous, and *disal-*  
lowable. *Raleigh.*

When, said she,

Were those first councils *disallowed* by me ?

Or where did I at a sure tradition strike,

Provided still it were apostolic ?

*Dryden's Hind and Panther.*

And accepts of a thing suitable for him to receive,  
and for us to give, where he does not declare his refusal  
and *disallowance* of it. *South.*

It was known that the most eminent of those who  
professed his own principles, publicly *disallowed* his  
proceedings. *Swift.*

**DISANCHOR**, *v. a.* From *dis* and anchor.  
To drive a ship from its anchor.

**DISANIMATE**, *v. a.* } *Dis* and *animate*.  
**DISANIMATION**, *n. s.* } To deprive of life;  
 to discourage; deject.

The presence of a king engenders love amongst his subjects and his loyal friends, as it *disanimates* his enemies.

*Shakespeare. Henry VI.*

They cannot in reason retain that apprehension after death, as being affections which depend on life, and depart upon *disanimation*.

*Brown's Vulgar Errors.*

To call the pearly drops from Pity's eye,  
 Or stay Despair's *disanimating* sigh,  
 Whether, O friend of art! the gem you mould  
 Rich with new taste, with ancient virtue bold.

*Darwin.*

**DISANNUL**, *v. a.* } *Dis* and *annul*. This  
**DISANNUL'LING**, *n. s.* } word, as Dr. Johnson  
 observes, is formed, contrarily to analogy and by  
 the needless use of the negative particle. It  
 ought therefore to be rejected, as ungrammatical  
 and barbarous. To *annul*; to deprive of au-  
 thority; to vacate; to make void.

The covenant that was confirmed before of God in Christ, the law which was four hundred and thirty years after, cannot *disannul*, that it should make the promise of none effect.

*Gal. iii. 17.*

The Jews ordinances for us to resume, were to check our Lord himself, which hath *disannulled* them.

*Hooker,*

That gave him power of *disannulling* of laws, and disposing of men's fortunes and estates, and the like points of absolute power, being in themselves harsh and odious.

*Bacon.*

Wilt thou my judgments *disannul*? Defame  
 My equal rule, to clear thyself of blame?

*Sandys.*

**DISAPPEAR**, *v. n.* *Fr. disparoitre*. To be lost to view; to vanish out of sight; to fly; to go away.

She *disappeared*, and left me dark! I waked  
 To find her, or for ever to deplore.

*Milton.*

When the night and winter *disappear*,  
 The purple morning rising with the year  
 Salutes the spring.

*Dryden.*

If at your coming princes *disappear*,  
 Comets! come every day—and stay a year.

*Dr. Johnson's Poems.*

**DISAPPOINT**, *v. a.* } Old *Fr. des-*  
**DISAPPOINTMENT**, *n. s.* } *pointer*. To defeat  
 expectation; to delude; cheat; deprive; taking  
 of before the thing lost by disappointment.

Our comfortable expectations in earthly things do not seldom *disappoint* us.

*Bp. Hall. Contemplations.*

The superior Being can defeat all his designs, and *disappoint* all his hopes.

*Tillotson.*

If we are *disappointed*, we are still no worse than the rest of our fellow mortals; and if we succeed in our expectations, are eternally happy.

*Burnet.*

How many *disappointments* have, in their consequences, saved a man from ruin!

*Spectator.*

Whilst the champion, with redoubled might,  
 Strikes home the javelin, his retiring foe  
 Shrinks from the wound, and *disappoints* the blow.

*Addison.*

There's nothing like surprising the rogues! How  
 will they be *disappointed*, when they hear that thou  
 hast prevented their revenge!

*Arbuthnot's Hist. of John Bull.*

**DISAPPOINTMENT ISLANDS**, a cluster of islands in the South Pacific Ocean, discovered by commodore Byron in 1765, who gave them the name from the shores affording no anchorage for his ships. This obliged him to quit them without landing, or procuring any refreshment for his crew. The inhabitants appeared on the beach armed with spears full sixteen feet long, as they every where discovered hostile intentions. These islands abound with cocoa trees, and turtles are plentiful on the coast. Long 140° W. lat. from 14° 5' to 14° S.

**DISAPPOINTMENT ISLAND** is also a name given by captain Wilson in 1797 to an island in the South Sea, one of the Duff's group, in E. long 167°, and S. lat. 9° 57'. See *Duff*.

**DISAPPROVE**, *v. a.* } *Fr. desapprouver*.  
**DISAPPROBATION**, *n. s.* } To dislike; to censure; expressive of dislike.

I reasoned much, alas! but more I loved;  
 Sent and recalled, ordained, and *disapproved*.

*Pope.*

Without good breeding truth is *disapproved*.  
 That only makes superior sense beloved.  
 He was obliged to publish his letters, to escape the *disapprobation* of the publishing of others.

**DISARM**, *v. a.* *Fr. desarmer*. To *disarm* or divest of arms; to deprive of arms.

An order was made by both houses, for *disarming* all the papists in England.

*Clarendon.*

I am still the same,  
 By different ways still moving to one fame;  
 And by *disarming* you I now do more  
 To save the town, than arming you before.

*Dryden.*

Then, where Nemea's howling forests were,  
 He drives the lion to his dusky cave;  
 Seized by the throat the growling beast he tames,  
 And tears his gaping jaws with sinewy arms.

*Darwin.*

**DISARMING**, in law, the prohibiting people to wear arms. It is an offence by the common law of England for persons to go or ride armed with dangerous and uncommon weapons; but gentlemen may wear common armour, according to their quality. It is also ordained by statute, that no persons shall come before the king's justices with force of arms, on pain of imprisonment, &c. We have noticed the introduction of the celebrated disarming act of Scotland into the Highlands, under the article *CLAN*.

**DISARRAY**, *v. a. & n. s.* *Dis* and *array*.  
 To undress any one; to divest of clothes, or dress; disorder.

So, as she bad, the witch they *disarrayed*.

*Faust's Quest.*

He returned towards the river, to prevent any danger as the *disarray*, occasioned by the narrowness of the bridge, might cast upon them.

*Hopkins.*

*Disarray* and shameful rout ensue,  
 And force is added to the fainting crew.

*Dryden's Poems.*

Phrase that time hath flung away,  
 Uncouth words in *disarray*,  
 Tricked in antique ruff and bonnet,  
 Ode, and elegy, and sonnet.

*Dr. Johnson's Poems.*

**DU'ITY**, *n. s.* Absence of care or

as kept him back; as very well knowing  
try little absence or *disassiduity*, he should  
take cold at his back. *Wotton.*

**DR**, *v. a. & n. s.* } Fr. and Span. *desas-*  
tre; Ital. *desastro*;  
tre, *adj.* } from Lat. *dis*, ad-

versu, the stars, under adverse stars.  
grief, calamity: disastrous is, unfor-  
tuning disaster.

with trains of fire, dews of blood fall;  
did the sun; and the moist star,  
influence Neptune's empire stands,  
lost to doomsday with eclipse.

*Shakespeare.*  
his holes where eyes should be, which  
are the cheeks. *Id.*

The moon,  
pale, disastrous twilight sheds  
on nations. *Milton.*

bed of mine, said she, which never  
adist accuse me of one defiled thought,  
now receive that *disastered* changeling?  
*Sidney.*

after his return from this very expedi-  
tious calamities befel his family, that  
of his children himself. *South.*

black omens threat the brightest fair,  
served a watchful spirit's care;  
water, or by force or slight;  
where, the fates have wrapt in night.

*Pope.*  
In his own fields, the swain  
stands. *Thomson.*

**W**, *v. a.* } *Dis* and *avow*. To *dis-*  
AL, *n. s.* } own; to deny knowledge  
MENT. } of; to deny concurrence  
or with any person: denial.

aged now, and weary too,  
delight and worlds contentious toyle,  
of knighthood he did *disown*.

*Spenser. Faerie Queene.*  
acts below his rank, doth but *disown*  
someth to be conscious of his own want  
doth but teach others to envy him

*Bacon.*  
of the Tridentine history, his holiness  
you to any *disownment* thereof.

*Wotton.*  
does his conquest *disown*,  
too little what they found too much.

*Dryden.*  
winded by the ceremony of taking an  
is a part of that obedience which we  
in gospel, expressly to *disown* all evasions  
servations whatsoever.

*Addison's Freeholder.*  
*disownment* of fear often proceeds from  
*Clarendon.*

**AUTHORIZE**, *v. a.* *Dis* and *autho-*  
rize of credit or authority.

on of such particular instances as these,  
to *disauthorize* a note grounded upon  
tion of nature. *Wotton.*

**D**, *v. a. & v. n.* Old Fr. *desbander*.  
from military service; to retire; be  
roke up.

me upon the point of *disbanding*, and  
men come ashore.

*Bacon. War with Spain.*

The ranged powers

*Disband*, and wandering each his several way  
Pursues. *Milton.*

The common soldiers, and inferior officers, should  
be fully paid upon their *disbanding*. *Clarendon.*

Pythagoras bids us in our station stand,  
Till God, our general, shall us *disband*. *Denham.*

I am content to lead a private life;  
*Disband* my army to secure the state.

*Dryden's Aurungzebe.*

Were it not for some small remainders of piety and  
virtue which are yet left scattered among mankind,  
human society would in a short space *disband* and run  
into confusion, and the earth would grow wild and  
become a forest. *Tillotson.*

Bid him *disband* his legions. *Addison's Cato.*

Some imagine that a quantity of water, sufficient  
to make such a deluge, was created upon that occa-  
sion; and, when the business was done, all *disbanded*  
again, and annihilated. *Woodward.*

**DISBARK**, *v. a.* Fr. *debarquer*. To land  
from a ship; to put on shore.

Together sailed they, fraught with all the things  
To service done by land that might belong,  
And, when occasion served, *disbarked* them.

*Fairfax*

The ship we moor on these obscure abodes;  
*Disbark* the sheep an offering to the gods.

*Pope's Odyssey.*

**DISBELIEVE**, *v. a.* } From *dis* and *be-*  
**DISBELIEV'ER**, *n. s.* } lieve. Not to credit;  
one who refuses belief; one who denies any po-  
sition to be true.

The thinking it impossible his sins should be for-  
given, though he should be truly penitent, is a sin,  
but rather of infidelity than despair, it being the *dis-*  
believing of an eternal truth of God's.

*Hammond's Practical Catechism.*

Our belief or *disbelief* of a thing does not alter the  
nature of the thing. *Tillotson.*

Such who profess to *disbelieve* a future state, are not  
always equally satisfied with their own reasonings.

*Atterbury.*

An humble soul is frightened into sentiments, be-  
cause a man of great name pronounces heresy upon  
the contrary sentiments, and casts the *disbeliever* out  
of the church. *Watts.*

**DISBENCH**, *v. a.* *Dis* and *bench*. To drive  
from a seat.

Sir, I hope

My words *disbenced* you not?

—No, Sir; yet oft,

When blows have made me stay, I fled from words.

*Shakespeare.*

**DISBRANCH**, *v. a.* *Dis* and *branch*. To  
separate, or break off, as a branch from a tree.

She that herself will sliver and *disbranch*  
From her maternal sap, perforce must wither,  
And come to deadly use. *Shakespeare. King Lear.*

Such as are newly planted need not be *disbranched*  
till the sap begins to stir, that so the wound may be  
healed without a scar. *Evelyn's Kalendar.*

**DISBUD**, *v. a.* With gardeners. To take  
away the branches or sprigs newly put forth,  
that are ill placed.

**DISBURDEN**, *v. a.* *Dis* and *burden*. To  
ease of a burden; to unload.

The river, with ten branches or streams, *disburdens*  
himself within the Persian Sea.

*Poacham on Drawing.*

We shall *disburden* the piece of those hard shadowings, which are always ungraceful.

*Dryden's Discrepancy.*

They removed either by casualty and tempest, or by intention and design, either out of lucre of gold, or for the *disburdening* of the countries surcharged with multitudes of inhabitants.

*Hale's Origin of Mankind.*

*Disburdened* Heaven rejoiced. *Milton.*

Lucia, *disburden* all thy cares on me,  
And let me share thy most retired distress.

*Addison's Cato.*

To *DISBURSE*, *v. a.* Fr. *debourser*; *dis* and *burse*. To spend or lay out money.

The queen's treasure, in so great occasions of *disbursements*, is not always so ready, nor so plentiful, as it can spare so great a sum together.

*Spenser's Ireland.*

Nor would we deign him burial for his men,

Till he *disbursed* ten thousand dollars. *Shakespeare.*

As Alexander received great sums, he was no less generous and liberal in *disbursing* of them.

*Arbuthnot on Coins.*

**DISC**, in antiquity, a quoit made of stone, iron, or copper, five or six fingers broad, and above a foot long, somewhat of an oval figure. It was nurlled like a bowl to a vast distance, by the help of a leathern thong, tied round the thrower's hand and put through a hole in the middle. According to Ovid, Met. 10, Apollo laid down his divinity, and abandoned the charge of his oracle at Delphi, to go to Sparta to play at the *discus*, where he mortally wounded his favorite Hyacinthus. Pausanias gives the invention of the game to Perseus, the son of Jupiter and Danae, who had the misfortune to kill his maternal grandfather Acrisius with his *disc*.

The game of *discus* was in practice at the time of the Trojan war. The myrmidons of Achilles practised it, during their leader's inaction, on the sea-shore, while burning with ire against Agamemnon. Homer also records it as among the gymnastic sports given at the funeral obsequies of Patroclus, with an iron *discus*.

*Disc*, in astronomy, the face of the sun and moon, as they appear to us on the earth; or the face of the earth as it appears to a spectator in the moon.

*Disc*, in optics, the wideness of the aperture of a telescopic glass, whether plain, convex, concave, or of any other form.

**DISCALCEATED**, *adj.* Lat. *discalceatus*.

**DISCALCEATION**, *n. s.* Stripped of shoes: the act of pulling off the shoes.

The custom of *discalceation*, or putting off their shoes at meals, is conceived to have been done, as by that means keeping their beds clean.

*Browne's Vulgar Errors.*

**DISCANDY**, *v. n.* From *dis* and *candy*.  
To dissolve; to melt.

The hearts

That spanieled me at heels, to whom I gave

Their wishes, do *discandy*, melt their sweets

On blossoming Cæsar. *Shakespeare.*

**DISCARD**, *v. a.* *Dis* and *card*. To throw out of the hand such cards as are useless: hence to dismiss or eject from service or employment.

Their captains, if they list, *discard* whom they please, and send away such as will perhaps willingly be rid of that dangerous and hard service.

*Spenser's State of Ireland.*

These men being certainly jewels to a considering what wonders they were able to do, yet were *discarded* by that unworthy prize worthy the holding.

And laughter where it reigns *discards* and dissipates respect.

Should we own that we have a very idea of substance, would it not be less us with *discarding* substance out of the world?

Justice *discards* party, friendship, kindness always therefore represented as blind.

*Addison's*

**DISCARDNATE**, *adj.* *Dis* and *card* flesh; Ital. *scarnuto*. Stripped of flesh.

'Tis better to own a judgment, though curta suppleter of coherent notions; than like a sepulchre, furnished with a load of *discarnate* bones.

To **DISCASE**, *v. a.* *Dis* and *case* to undress.

Fetch me the hat and rapier in haste  
I will *discase* me, and myself present  
*Shakespeare.*

**DISCERN**, *v. a. & v. n.*

**DISCERN'ER**, *n. s.*

**DISCERN'IBLE**, *adj.*

**DISCERN'IBLENESS**,

**DISCERN'IBLY**,

**DISCERN'ING**, *part. adj.*

**DISCERN'INGLY**, *adv.*

**DISCERN'MENT**.

*Fr. discerner; and discernir; Ital. discernere; Lat. discernere; to judge; to discern; to discover; to distinguish; judge: as a neuter verb to mention. Discerning is knowing; discerning. The meaning of the other derivatives plain.*

And behold among the simple ones, among the youths a young man void of *discerning*.

You shall be ruled and led

By some discretion, that *discerns* you

Better than you yourself. *Shakespeare.*

Does any here know me? This is not I

Does Lear walk thus, speak thus? Wherefore eyes?

Either his motion weakens, or his *discerning* Are lethargied.

'Twas said they saw but one; and now  
Durst wag his tongue in censure. *Id.*

They follow virtue for reward to-morrow

To-morrow vice, if she give better gain

We are so good, or bad, just as a piece

For nothing else *discerns* the virtue

It *discerneth* of forces, frauds, crimes, stellionate, and the inchnations towards evil, not actually perpetrated.

Consider what doctrines are infused amongst Christians, most apt to obstruct the christian life.

He was a great observer and *discerning* of nature and humours, and was very discerning, where he found it useful.

All this is easily *discernible* by the courses of the understanding.

To *discern* such buds as are fit to produce from such as will display themselves but no difficult matter.

What doth better become wisdom than to discern  
at a worthy the loving? *Sidney.*

The custom of arguing on any side, even against  
persuasions, dims the understanding, and makes  
degrees lose the faculty of discerning between  
truth and falsehood. *Locke.*

These two errors Ovid has most discerningly  
condemned. *Garth.*

It is indeed a sin of so gross, so formidable a bulk,  
that there needs no help of optics to render it dis-  
cernible, and therefore I need not farther expatiate on  
*Governance of the Tongue.*

A reader that wants discernment, loves and admires  
characters and actions of men in a wrong place.  
*Frederick.*

Safe in his power, whose eyes discern afar  
The secret ambush of a specious prayer;  
Implore his aid, in his decisions rest,  
Secure, whatever he gives, he gives the best.  
*Johnson. Vanity of Human Wishes.*

DISCERN, *v. a.* } Lat. *discerno*. To  
DISCERNIBLE, *adj.* } tear in pieces; to break;  
to destroy by separation of its parts.

What is most dense, and least porous, will be  
most coherent and least discernible.

*Glanville's Scaprio.*  
Matter is moveable, this immovable; matter dis-  
cernible, this indiscernible. *Mure.*

DISCHARGE, *v. a., v. n., & n. s.* } *Dis* and  
DISCHARGE, *n. s.* } charge, or  
*Fr. discharge.* To disburden, throw off, deliver  
from a load, a debt, crime, or obligation; hence  
to perform duty, as well as to dismiss from office,  
from employ; to emit. As a neuter verb, to ex-  
plode. As a substantive, discharge is emission,  
explosion; matter emitted; disruption: dis-  
mission, or release, from duty or punishment.  
Performance of duty.

There is no discharge in that war, neither shall  
courage deliver those that are given to it.

*Eccles. viii. 8.*  
They wanted not reasons to be discharged of all  
charges, who are confessed to have no great fault, even  
they their very word and testimony, in whose eyes no  
fault of ours hath ever hitherto been esteemed to be  
small. *Hooker.*

Infected minds  
To their deaf pillows will discharge their secrets.  
*Shakespeare. Macbeth.*

If he had  
The present money to discharge the Jew,  
He would not take it. *Id. Merchant of Venice.*

Trial would also be made in herbs poisonous and  
purgative, whose ill quality perhaps may be discharged,  
or attenuated, by setting stronger poisons or purga-  
tives by them. *Bacon.*

The cloud, if it were oily or fatty, would not dis-  
charge. *Bacon's Natural History.*

The galleys also did oftentimes, out of their prows,  
discharge their great pieces against the city.  
*Kneller's History.*

A grateful mind  
By owing owes not, but still pays; at once  
Indebted and discharged. *Milton.*

He warns  
Us, haply too secure of our discharge  
From penalty, because from death released  
Some days. *Id.*

To stifle the bombilation of gunpowder, a way is  
promised by Porta, by borax and butter, which he says

will make it so go off, as scarcely to be heard by the  
discharger. *Broicne.*

They are imprudent enough to discharge themselves  
of this blunder, by laying the contradiction at Virgil's  
door. *Dryden.*

Had I a hundred tongues, a wit so large  
As could their hundred offices discharge.

*Dryden's Fables.*

The text expresses the sound estate of the con-  
science, not barely by its not accusing, but by its not  
condemning us; which word imports properly an  
acquittance or discharge of a man upon some prece-  
dent accusation, and a full trial and cognizance of his  
cause. *South.*

If one man's fault could discharge another man of  
his duty, there would be no place left for the common  
offices of society. *L'Estrange.*

When foreign trade imports more than our com-  
modities will pay for, we contract debts beyond sea; and  
those are paid with money, when they will not take  
our goods to discharge them. *Locke.*

As the heat of all springs is owing to subterraneous  
fire, so wherever there are any extraordinary discharges  
of this fire, there also are the neighbouring springs  
hotter than ordinary. *Woodward.*

The man who builds, and wants wherewith to pay,  
Provides a house from which to run away.

In Britain what is many a lordly seat  
But a discharge in full for an estate? *Young.*

We discharged a pistol, and had the sound returned  
upon us fifty-six times, though the air was foggy.

*Addison on Italy.*

Soon may kind heaven a sure relief provide;  
Soon may your sire discharge the vengeance due,  
And all your wrongs the proud oppressors rue.

*Pope's Odysey.*  
The matter being suppured, I opened an inflamed  
tubercle in the great angle of the left eye, and dis-  
charged a well concocted matter. *Winman's Surgery.*

The hæmorrhage being stopped, the next occurrence  
is a thin serous discharge. *Sharp's Surgery.*

DISCINCT, *adj.* Lat. *discinctus*. Ungirded;  
loosely dressed.

DISCIND, *v. a.* Lat. *discindo*. To divide;  
to cut in pieces.

We found several concretions so soft, that we could  
easily discind them betwixt our fingers. *Boyle.*

DISCIPLE, *v. a. & n. s.* } *Fr. disciple*;  
DISCIPLESHIP. } *Span. and Port.*

*discipulo*; Lat. *discipulus*, from *disciplina*. One  
who submits himself to discipline as a scholar.  
See DISCIPLINE. Discipleship is the state of  
being a disciple.

So that the disciples were named at Antioche cris-  
ten men. *Wicklif. Dedes. 11.*

She, bitter panacee! with an iron whip  
Woe wont him to discipline every day. *Spenser.*

He did look far  
Into the service of the time, and was  
Disciple of the bravest. *Shakespeare*

That to which justification is promised, is the giving  
up of the whole soul intirely unto Christ, undertaking  
discipleship upon Christ's terms.

*Hammond's Pract. Catech.*

He rebuked disciples who would call for fire from  
heaven upon whole cities, for the neglect of a few.

*King Charles.*

A young disciple should behave himself as well, as  
to gain the affection and the ear of his instructor

*Watts.*

For, as Christians, we are the *disciples*, the followers, and the servants of Christ, redeemed by him.

Mason.

Yea, a *disciple*, that would make the Founder Of your belief renounce it, could he see Such proselytes.

Byron.

DISCIPLE, in a more restrained sense, is the designation applied to those who were the immediate followers and attendants on Christ's person, of whom there were seventy or seventy-one. The terms *disciple* and *apostle* are often used synonymously in the gospel history; but sometimes the apostles are distinguished from disciples, as persons selected out of the number of disciples, to be the principal ministers of his religion: of these there were only twelve. The Latins kept the festival of the seventy or seventy-two disciples on July 15th, and the Greeks on January 4th.

DISCIPLINE, *v. o. & n. s.*

DISCIPLINABLE, *adj.*

DISCIPLINABILITY, *n. s.*

DISCIPLINARIAN, *n. s. & adj.*

DISCIPLINARY.

*discipula*, from *disco*, to learn, because discipline is necessary to teaching. To educate, instruct, with power to punish; to advance by instruction. As a substantive discipline is, instruction; rule; any thing taught; system of government; mortification; punishment. *Disciplinable* is, docile; capable of discipline. *Disciplinarian*, relating to, and as a substantive one zealous for, discipline. *Disciplinary*, pertaining to discipline.

If any virtue, if any preising of *discipline*, thank ye these things, that also ye have learned.

Wiclif. *Filipensis* 4.

He had charge my *discipline* to frame,

And tutors nouriture to oversee.

Spenser.

As we are to believe for ever the articles of evangelical doctrine, so the precepts of *discipline*, we are, in like sort, bound for ever to observe.

Hooker.

The cold of the northern parts is that which, without aid of *discipline*, doth make the bodies hardest, and the courage warmest.

Bacon.

This opens all your victories in Scotland, Your *discipline* in war, wisdom in peace.

Shakespeare.

The law appeared imperfect, and but given

With purpose to resign them in full time

Up to a better covenant, *disciplined*

From shadowy types to truth, from flesh to spirit.

Milton.

These are the studies wherein our noble and gentle youth ought to bestow their time in a *disciplinary* way.

Id.

The love of God makes a man chaste without the laborious arts of fasting and exterior *discipline*; he reaches at glory without any other arms but those of love.

Taylor.

Art may be said to overcome and advance nature in these mechanical *disciplines*, which, in this respect, are much to be preferred.

Wilkins.

We find in animals, especially some of them, as fowls, dogs, apes, horses, and elephants, not only preception, phantasy, and memory, common to most, if not all animals, but something of sagacity, providence, and *disciplinableness*.

Hale.

Let crooked steel invade

The lawless troops which *discipline* disclaim,

And their superfluous growth with rigour tame.

Dryden.

What eagerness in *disciplinarians* when the love of God and our neighbours, unquestionables, are neglected?

Hick.

The most perfect, who have their passions best *disciplined*, are yet obliged to be constantly guarded.

They look to us, as we should judge of a well-disciplined soldiers at a distance.

Derham's Astro-Id.

They were with care prepared and *disciplined* confirmation, which they could not arrive at were found, upon examination, to have made ancient progress in the knowledge of *discipline*.

Addison on the Christian.

They draw those that dissent into dissent state, as puritans, or *disciplinarians*.

Sanders. P.

Those canons in behalf of marriage were *disciplinary*, grounded on prudential motives.

By.

It is by the assistance of the eye, and the ear, which are called the senses of *discipline*, minds are furnished with various parts of knowledge.

The passions may be humoured till they out-master, as a horse may be pampered by the better of his rider; but early *discipline* prevents mutiny, and keep the helm in the last resort.

Cowley.

In colleges and halls in ancient days, When learning, virtue, piety, and truth, Were precious and inculcated with care, There dwelt a sage called *Discipline*.

DISCIPLINE, ECCLESIASTICAL, consisting in putting those laws in execution by which the church is governed, and inflicting the enjoined by them against the several offenders. The primitive church never failed to exercise discipline upon any but those who were within her pale in the largest sense of their own profession: and even these she never pretended to exercise discipline so far as to cancel or disannul baptism: all that she pretended to was, to deprive them of the benefits of external communion as public prayer, receiving the eucharist, and other acts of divine worship. The *disciplinary* was confined to the admonitory party, and to the lesser and greater excommunication. As to the objects of ecclesiastical discipline, they were all such delinquents in great and scandalous crimes after baptism, *discipline*, in a more peculiar sense, is understood of bodily punishments inflicted on a reprobate of the Romish church who has been found guilty; or even for that which the reprobate voluntarily undergo or inflict on themselves of mortification.

DISCIPLINE, THE BOOK OF, in the church of Scotland, is a common-law drawn up by the assembly of ministers for the reformation and uniformity to be in the discipline and policy of the church; this book the government of the church is set aside, kirk sessions are established, observation of fast days and saints' days is demanded, and other regulations for the government of the church are determined. This book is approved by the privy council, and is the First Book of Discipline.

**DIS**, *v. a.* } *Dis* and *claim*. To  
*RETRACT*, *n. s.* } *disown*; to deny any  
 thing; to retract any union with; to ab-  
 disclaimer is both one that disclaims,  
 renounces, and a legal or other plea  
 to express denial or refusal.

My rascal! nature *disclaims* all share in  
 I made thee. *Shakespeare. King Lear.*  
 the gods to witness their offence;  
 the war, asserts his innocence.

*Dryden's Æneid.*

Lord, on all occasions, *disclaiming* all  
 a temporal kingdom. *Rogers.*

among those who profess themselves  
*disclaim* all concern for their souls, *disown*  
 or renounce the expectations, of the  
*Id.*

**DISSE**, *v. a.* } *Lat. discludo, dis* and  
*ER*, *n. s.* } *close*. To uncover; to  
*PRO*, } produce to open view.  
*LOS*, *n. s.* } *Disclusion* is *emission*.

be a reconciliation, except for upbraiding,  
*disclusing* of secrets, or a treacherous  
 man these things every friend will depart.

*Ecclesi.*

ring of cold is a thing very worthy the  
 each for the use and *disclosure* of causes.

*Burton.*

proportioned wonders can *disclose*,  
 fancy and his judgment shows. *Waller.*

is a ridiculous thing it were, that the con-  
 of the earth should be broken by sud-  
 den eruptions; and *disclosures* of light, to  
 in of the lantern-maker. *Mare.*

land and ocean various forms *disclose*.

*Dryden.*

If I *disclose* my passion,  
 friendship's as an end; If I conceal it,  
 I will call me false. *Addison's Cato.*  
 the youths with light umbrellas shade,  
 busy hands the panting maid;  
 her locks, *disclosing*, as they break,  
 hair and averted cheek. *Darwin.*  
 I. Ah! why  
 keep apart, and walk alone,  
 strong emotions stamp your brow,  
 flag their full import, yet  
 hush?

*Disclose* too much!—of what?

to *disclose*. *Byron.*

**DISCOLOR**, *v. a.* } *Lat. decoloro*. To  
*DEPRIVE*, *n. s.* } change from the natu-  
 ral tint. The change produced, or art  
 is *discoloration*.

a kind of *discoloured* say  
 had was, ypaynted full of eyes.

*Spenser. Faerie Queene.*

 heavy, with jaundice in her eyes,  
 lay all some viewed. *Dryden.*

least some beloved notion, or some dar-  
 ing prevail over your mind as to *discolour*  
*Watts.*

tion of the humours from a sound state  
 physicians call by a general name of a  
 spots and *discolorations* of the skin are  
*Arbutnot.*

**DISCOMFIT**, *v. n. & n. s.* } *Fr. desconfire*;  
*DISCONFITURE*, *n. s.* } *Ital. sconfiggere*,  
 from *Lat. disconfigere*. To defeat; to conquer;  
 overpower; subdue.

Joshua *disconfites* Amalek and his people with  
 the edge of the sword. *Exodus.*

The pillows dide hir besinesse; and cure,  
 After the bataille and *disconfiture*.

*Chaucer. Cant. Tales.*

For in this world there is no creature  
 Walking, alas! in more *disconfiture*  
 Than I, ne that more sorrowe doth endure.

*Donne.*

Fight against that monstrous rebel, Cade,  
 Whom, since, I heard to be *disconfited*.

*Shakespeare.*

Fly you must: incurable *disconfit*

Reigns in the hearts of all our present party. *Id.*

Dagon must stoop, and shall ere long receive

Such a *disconfit*, as shall quite despoil him  
 Of all these boasted trophies. *Milton's Agonistes.*

While my gallant countrymen are employed in pur-  
 suing rebels half *disconfited* through the consciousness  
 of their guilt, I shall improve those victories to the  
 good of my fellow subjects. *Addison.*

**DISCOMFORT**, *v. a. & n. s.* } *Dis* and *com-*  
*DISCOMFORTABLE*, *adj.* } *fort*. To grieve;  
 sadden; deject: as a substantive, uneasiness;  
 sorrow; melancholy.

Therefore whanne ye seen the abomynacionn of  
*discomfort*, that is seid of Danyel the profete ston-  
 dyng in the hooly place, he that redith understonde  
 he. *Wiclif. Matt. 24.*

This himself did foresee, and therefore armed his  
 church, to the end they might sustain it without *dis-*  
*comfort*. *Hooker.*

*Discomfort* guides my tongue,

And bids me speak of nothing but despair.

*Shakespeare.*

*Discomfortable* cousin, knowest thou not

That when the searching eye of Heaven is hid  
 Behind the globe, it lights the lower world? *Id.*

It is no *discomfort* for a man to flee, when his con-  
 science pursues him not.

*Bp. Hall. Contemplations.*

What! did that help poor Dorus, whose eyes could  
 carry unto him no other news but *discomfortable*?

*Sidney.*

In solitude there is not only *discomfort*, but weak-  
 ness also. *South.*

**DISCOMMEND**, *v. a.*

*DISCOMMENDABLE*, *adj.*

*DISCOMMENDABLENESS*, *n. s.*

*DISCOMMENDATION*, *n. s.*

*DISCOMMENDER*.

Dis and com-  
 mend. To  
 blame; to cen-  
 sure: *discom-*  
*mendable* is  
 blameable; deserving censure: *discommendation*,  
 censure: *discommender*, he who expresses or  
 bestows it.

Absolutely we cannot *discommend*, we cannot abso-  
 lutely approve, either willingness to live, or forward-  
 ness to die. *Hooker.*

Now you will all be wits: and he, I pray,  
 And you, that *discommend* it, mend the play.

*Denham.*

Neither do I *discommend* the lofty style in tragedy,  
 which is naturally pompous and magnificent.

*Dryden.*

Pezillanimiti is, according to Aristotle's morality  
 a vice very *discommendable*. *Ayliffe's Perseus.*

Tully assigns three motions, whereby, without any *discommendation*, a man might be drawn to become an accuser of others. *Id.*

**DISCOMMODE**, *v. a.* } *Fr. dis and com-*  
**DISCOMMODIOUS**, *adj.* } *mude.* To put to  
**DISCOMMODITY**, *n. s.* } inconvenience; to  
molest; to incommode. The adjective and substantive follow this meaning.

So many thousand soldiers, unfit for any labour, or other trade, must either seek service and employment abroad, which may be dangerous; or else employ themselves here at home, which may be *discommodious*.

*Spenser's State of Ireland.*

We speak now of usury, how the *discommodities* of it may be best avoided, and the commodities retained: or how, in the balance of commodities and *discommodities*, the qualities of usury are to be reconciled.

*Bacon.*

It is better that a ship should be preserved with some *discommodity* to the sailors, than that, the sailors being in health, the ship should perish. *Hayward.*

**DISCOMPOSE**, *v. a.* } *Fr. décomposer.*  
**DISCOMPOSURE**, *n. s.* } To disorder; to un-  
settle: hence to offend; vex; irritate. *Dis-*  
*composure* is the effect thus produced.

Though he was a dark prince, and infinitely suspicious, he never put down or *discomposed* a counsellor or near servant. *Bacon.*

He threw himself upon his bed, lamenting with much passion, and with abundance of tears; and continued in this melancholick *discomposure* of mind many days. *Clarendon.*

No more, dear mother: ill in death it shows,  
Your peace of mind by rage to *discompose*. *Dryden.*

Men who possess all the advantages of life, are in a state where there are many accidents to disorder and *discompose*, but few to please them. *Swift.*

**DISCONCERT**, *v. a.* *Dis* and concert. To unsettle; *discompose*; disturb a scheme.

You need not provoke their spirits by outrages: a careless gesture, a word, or a look, is enough to *disconcert* them. *Collier.*

**DISCONFORMITY**, *n. s.* *Dis* and conformity. Want of agreement; inconsistency.

Lies arise from error and mistake, or malice and forgery; they consist in the disagreement and *disconformity* betwixt the speech and the conception of the mind, or the conceptions of the mind and the things themselves, or the speech and the things.

*Hakewill on Providence.*

**DISCONGRUITY**, *n. s.* *Dis* and congruity. Disagreement; inconsistency.

There is want of capacity in the thing, to sustain such a duration, from the intrinsical *discongruity* of the one to the other.

*Hale's Origin of Mankind.*

**DISCONSOLATE**, *adj.* } *Dis* and console.  
**DISCONSOLATELY**, *adv.* } Void of comfort;  
**DISCONSOLATENESS**, *n. s.* } hopeless; sorrow-  
ful; melancholy.

See Cassius all *disconsolate*,  
With Pindarus his bondman on this hill.

*Shakespeare.*

In his [God's] absence, there is nothing but *disconsolation*, and despair. *Bp. Hall.*

If patiently thy bidding they obey,  
Dismiss them not *disconsolate*. *Milton.*

The ladies and the knights, no shelter nigh.

Were dropping wet, *disconsolate* and wan,  
And through their thin array received the rain. *Dryden.*

The moon reflects the sunbeams to us, and illuminating the air, takes away in some measure the *disconsolate* darkness of our winter nights. *Id.*

I am first affrighted and confounded with the lone solitude in which I am placed by my philosophy, and fancy myself some strange uncouth creature, not being able to unite and mingle in society, thus expelled all human commerce, and left utterly undon and *disconsolate*.

*Hume. On the Human Understanding.*

**DISCONTENT**, *n. s. & adj.* } *Dis* and con-  
**DISCONTENT'ED**, *part. adj.* } TEST, verb  
**DISCONTENT'EDLY**, *adv.* } see. I am  
**DISCONTENT'EDNESS**, *n. s.* } ness; dis-  
**DISCONTENT'MENT**. } faction; con-

one's present state. *Discontentment* is a word, expressing the same meaning.

These are the vices that fill them with grief to *contentment*, as though the bottom of that famous geon wherein they live, were more noisome than the geon. *Hume.*

I see your brows full of *discontent*,  
Your hearts of sorrows, and your eyes of tears. *Shakespeare.*

The politick and artificial nourishing and sustaining of hopes, and carrying men from hope to hope, is one of the best antidotes against the pain of *discontentment*. *Bacon.*

The misery which is supposed to follow poverty arises, not from want, but from peevishness and *content*. *Bacon.*

Pride is ever *discontented*, and still seeks and of boasting in her own works.

*Bp. Hall. Contemplation.*

The rest were seized with silent *discontent*,  
And a deaf murmur through the squadrons went. *Dryden.*

These are, beyond comparison, the two greatest evils in this world; a diseased body, and a *contented* mind. *Talbot.*

A beautiful bust of Alexander the Great, raised his face to heaven with a noble air of grief, or *contentedness*, in his looks. *Adrian's Travels.*

As a man inebriated only by vapours, soon returns in the open air; a nation *discontented* to custom, without any adequate cause, will return to its former allegiance, when a little pause has cooled its rebellion. *Johnson.*

**DISCONTINUE**, *v. a. & v. n.* } *Dis* and  
**DISCONTINUIT**, *n. s.* } continue

To leave off; to cease; break off; interrupt: is a neuter verb, to lose cohesion, or any established right.

Thyself shall *discontinue* from thine heritage that I give thee, and I will cause thee to serve those enemies. *Jer.*

Twenty pany lies I'll tell,  
That men shall swear I have *discontinued* school  
Above a twelvemonth. *Shakespeare.*

Examine thy customs of diet, sleep, exercise, apparel, and the like; and try, in any thou shalt judge hurtful, to *discontinue* it by little and little; but so, as if thou find any inconvenience by the change, that come back to it again. *Bacon.*

There is that property, in all letters, of appearing to be conjoined in syllables and words, through the visible motions of the organs from one stop or space to another, that they modify and discriminate the voice, without appearing to *discontinue* it.

*Holder's Elements of Speech.*

der whether our approaches to him  
refreshing, and if we are uneasy under  
nimance of our conversation with him.

Atterbury.

science is to be referred; if by a com-  
pdone with the rule there be a con-  
follows the sentence of approbation; if  
it, the sentence of condemnation.

Hale's Origin of Mankind.

of a musical instrument being struck  
ing two noises that arrive at the ear at  
as to sense, yield a sound differing  
them, and as it were compounded of  
th, that if they be discordantly tuned,  
f them struck apart would yield a pleas-

ing sound, yet being struck together they make a  
harsh and troublesome noise.

Boyle on Colours.

Discord, like that of music's various parts,  
Discord that makes the harmony of hearts;  
Discord that only this dispute shall bring,  
Who best shall love the duke and serve the king.

Dryden.

All nature is but art unknown to thee;  
All chance, direction which thou canst not see;  
All discord, harmony not understood;  
All partial evil, universal good.

Pope.

Discord, in music, every sound which, joined  
with another, forms an assemblage disagreeable  
to the ear; or, rather, every interval whose ex-  
tremes do not coalesce. Now, as there are no  
other concords, or consonances, except those  
which form amongst themselves, and with their  
fundamental sound, perfect chords, it follows that  
every other interval must be a real dissonance or  
discord: even the third and sixth were reckoned  
such among the ancients, who excluded them  
from the number of consonant chords. The term  
dissonance, which is synonymous with discord  
both in a literal and metaphorical sense, signifies  
disagreement or disunion. In reality, that which  
renders dissonances grating is, that the sounds  
which form them, far from uniting in the ear,  
seem to repel each other, and are heard each by  
itself as two distinct sounds though produced at  
the same time. This repulsion or violent oscilla-  
tion of sounds is heard more or less as the  
vibrations which produce it are more or less fre-  
quently coincident. When two vocal strings are  
gradually tuned, till they approach a consonant  
interval, the pulsations become slower as the  
chord grows more just, till at last they are  
scarcely heard, if heard at all; whence it appears  
certain that the pleasure, produced in us by har-  
mony, results from the more or less exact and  
frequent coincidence of vibrations; though the  
reason why this coincidence should give pleasure,  
more than any other modification or combination  
of sounds, appears to us inscrutable. The agree-  
able effects of dissonance, in harmony, are no  
objection to this theory: since it is allowed that  
the sensations excited by discord are not in them-  
selves immediately and necessarily pleasing, but  
only please by auricular deception. The ear is  
surprised with the shock it receives; and, in  
proportion as it is harsh and grating, we feel the  
pleasure of returning harmony enhanced, and the  
disappointment of being artfully and insensibly  
extricated more agreeable. The name of disso-  
nance is given sometimes to the interval, and  
sometimes to each of the sounds which form it.  
But, though two sounds equally form a disso-  
nance between themselves, the name is most fre-  
quently given to that sound in particular which  
is most extraneous to the chord. The number  
of possible dissonances is indefinite; but as in  
music we exclude all intervals which are not  
found in the system received, the number of dis-  
sonances is reduced to a very few: besides, in  
practice, we can only select from those few such  
as are agreeable to the species, and the mode, in  
which we compose; and from this last number  
we must exclude such as cannot be used consis-  
tently with the rules prescribed. But what are  
these rules? Have they any foundation in nature

or are they merely arbitrary? This is what Rousseau has endeavoured to investigate and to deduce, with more ingenuity than success, from principles purely mechanical.

DISCOVER, *v. a.* } Fr. *découvrir*; *dis*  
DISCOVERABLE, *adj.* } and cover. To see or  
DISCOVERER, *n. s.* } explore; to show;  
DISCOVERY. } disclose; bring to  
light; make plain or visible.

He discovereth deep things out of darkness, and bringeth out to light the shadow of death.

*Job xii. 22.*

When we had discovered Cyprus, we left it on the left hand.

*Acts.*

Let that man with better sense advise,  
That of the world least part to us is read;  
And daily how through hardy enterprize  
Many great regions are discovered.

*Spenser. Faerie Queene.*

The utter wauls of it yet stond. The kepe is exceeding fair and strong; and in the waulles be certain strong towers. The lodgings that were within the area of the castello be discovered and fawl to ruine.

*Leland.*

Here stand my lords, and send discoverers forth,  
To know the numbers of our enemies. *Shakespeare.*  
What, must I hold a candle to my shame?  
They in themselves, good sooth, are too, too light.  
Why 'tis an office of discovery, love,  
And I should be obscured. *Id. Merchant of Venice.*

Some high climbing hill,

Which to his eye discovers unaware  
The goodly prospect of some foreign land,  
First seen, or some renowned metropolis  
With glistering spires and battlements adorned.

*Milton.*

Man with strength and free will armed  
Complete, to have discovered and repulsed  
Whatever wiles of foe or seeming friend. *Id.*  
They were deceived by Satan, and that not in an invisible situation, but in an open and discoverable apparition, that is, in the form of a serpent.

*Broune's Vulgar Errors.*

If more be found out, they will not recompense the discoverer's pains, but will be fitter to be cast out.

*Holden.*

The cover of the coach was made with such joints, that as they might, to avoid the weather, pull it up close, so they might put each end down, and remain as discovered and open-sighted as on horseback.

*Sidney.*

Of all who since have used the open sea,  
Than the bold English none more fame have won;  
Beyond the year, and out of heaven's high way,  
They make discoveries where they see no sun.

*Dryden.*

Things that appeared amiable by the light of this world, appear of a different odious hue in the clear discoveries of the next.

*South.*

An old maiden gentlewoman in the greatest discoverer of judgments; she can tell you what sin it was that set such a man's house on fire.

*Addison's Spectator.*

It is concluded by astronomers, that the atmosphere of the moon hath no clouds nor rains, but a perpetual and uniform serenity; because nothing discoverable in the lunar surface is ever covered and absconded by the interposition of any clouds or mists.

*Bentley.*

Places receive appellations, according to the language of the discoverer, from observations made upon the people.

*Broune.*

Revelation may assert two things to be joined, whose connection or agreement is not discoverable by reason.

*Watts.*

DISCOUNSEL, *v. a.* *Dis* and *counsel*.  
dissuade; to give contrary advice. *O.*

But him that palmer from that vanity  
With temperate advice discommedled. *Spenser.*

DISCOUNT, *v. a. & n. s.* From *dis* and *count*. To count back; to pay back again. Interest so counted after a principal given.

My father's, mother's, brother's death I justify  
My prayers and penance shall discount for thee.  
And beg of heaven to charge the bill on me.

*Deputy.*

The farmers, spitefully combined,  
Force him to take his tithes in kind;  
And Parvisol discounts arrears  
By bills for taxes and repairs. *South.*

His whole intention was, to buy a certain quantity of copper money from Wood, at a large discount, to sell them as well as he could.

DISCOUNT, in commerce, a term among traders, merchants, and bankers. It is used by the former on occasion of their buying commodities on the usual time of credit, with a condition that the seller shall allow the buyer a certain discount at the rate of so much per cent. per annum for the time for which the credit is generally given upon condition that the buyer pays ready money for such commodities, instead of taking them on credit. Traders and merchants also frequently taking promissory notes for moneys due, present to them or order at a certain time, and sometimes having occasion for money before the time elapsed, procure these notes to be discounted by bankers before the time of payment. Bills of exchange are also discounted by bankers, and this consists one article of the profits of banking. See BANK.

DISCOURTENANCE, *v. a. & n. s.* From *dis* and *encourage*. DISCOURTENANCER, *n. s.* [n. s. & v.] *Discourtenance*. To discourage by cold treatment: to who discourages.

Rumours of scandal and murmurs against the king and his government, taxed him for a great taxer of people, and discourtenance of his nobility.

*Beaumont.*

He thought a little discourtenance upon those persons would suppress that spirit.

*Chamberlain.*

He came, and with him Eve, more loth, did too  
To offend; discourtenanced both, and discomposed.

*Milton.*

The truly upright judge will always condemn right, and discourtenance wrong.

*Atterbury.*

In expectation of the hour of judgment, he presently bears all the difficulties of duty, and the discourtenance he meets with from a wicked and perjured world.

*Romney.*

Present time and future may be considered as equals; and he who solicits the one, must expect to be discourtenanced by the other. *St. Jushtus Reginald.*

DISCOURAGE, *v. a.* } Fr. *décourager*.  
DISCOURAGER, *n. s.* } *Dis* and *encourage*.  
DISCOURAGEMENT. } To deprecate; to deprive of confidence; to daunt; to deter; taking from discouragement is the cause of depression; a fear.

Wherefore discourage ye the heart of the children of Israel from going over into the land?

*Nathan.*

I might neither encourage the rebels' insurrection nor discourage the protestants' loyalty and patriotism.

*King Charles.*

your beauty and your health, unless  
in yourself, or *discourage* them to stay  
lag them ill.

Temple.

would have them learn, the great and  
new is, that they are called to them.

Locke.

with great zeal *discourages* too unrecep-  
tion.

Rogers.

ed at schools and colleges are full of  
virtue, and *discouragement* from vice.

Swift.

years, as they are generally *discour-  
age*, are like old trees, which, being past  
lives, will suffer no young plants to  
them.

Pope.

y of the prophecies, great as it is in  
not such as should *discourage* the  
from the study of them, nor such as  
under the neglect of it.

Bp. Horsley.

SE', v. a., v. n. & } Span. and  
E', n. s. } Fr. *discourir* ;  
NE, adj. } It. *discorrere* ;

E, dis and *curro*, to wander about ;  
discourse the mind travels from ob-  
To treat of by speech or writing ;  
is a neuter verb, to talk ; relate ;  
mon.

that original weakness in the instru-  
which the understanding part is not  
aid by *discourse* to work, the very con-  
cess is a bridle to stay us.

Hosier.

made us with such large *discourse*,  
and after, gave us not  
and godlike reason  
passed.

Shakespeare.

with us into the abbey here,  
is at large *discourse* all our fortunes.

Id.

tract of every thing  
good *discourser* lose some life,  
his self was tongue to.

Id.

tiser than himself, more by an hour's  
by a day's meditation.

Bacon.

as that quick *discouraging* power.

Davies.

persons, if thou desire to please,  
persons, useful, new, or witty ;  
comes by labour, wit by ease,  
new in court, news in the city.

Herbert.

The soul

perives, and reason is her being,

is, or intuitive ; *discourse*

years, the latter is most ours.

Milton.

and critical *discourers*, who look be-  
as extensive of things, will not be angry  
explorations.

Brown.

his mind which connects propositions,  
conclusions from them, the schools call  
we shall not miscall it, if we name it

Glanville.

blags *discouraging* as he passed,  
it bends.

Dryden.

here is about ideas, which, he says,  
and seen in God.

Locke.

maxims we are *discouraging* of are not  
men, ideas, and a great part of man-  
It.

Flowers of rhetoric in sermons and serious  
courses are like the blue and red flowers in en,  
pleasing to those who come only for amusement, but  
prejudicial to him who would reap profit from it.

Pr.

When a man's capacity does not enable him to  
ertain or animate the company, it is the best he can  
do to render himself inoffensive, and to keep his tech  
clean ; but the person who has talents for *discour-  
age*, and a passionate desire to enliven conversation, out  
to have many improprieties excused, which in o  
other were unpardonable.

Shenston.

DISCOURTEOUS, *adj.* Dis and courteous  
Uncivil ; uncomplaisant ; defective in good  
manners.

DISCOURTESY, *n. s.* } Dis and courtes  
DISCOURTEOUS, *adj.* } Incivility ; rule-  
ness ; act of disrespect.

Be calm in arguing ; for fierceness makes

Error a fault, and truth discourtesy.

Herb.

As if cheerfulness had been tediousness, and good  
entertainment had been turned to *discourtesy*, he would  
ever get himself alone.

Sidne.

He made me visits, maundering as if I had de  
him a *discourtesy*.

Wuema.

He resolved to unhorse the first *discourteous* knight  
he should meet.

Motteux's Don Quixote.

DISCOUS, *adj.* From Lat. *discus*. Broo ;  
flat ; wide. Used by botanists to denote the  
middle, plain, and flat part of some flowers, such  
as the flos solis, &c.

DISCREDIT, *v. a. & n. s.* Fr. *décrédite*.  
To deprive of credibility ; to make not trust-  
worthy to disgrace ; distrust : as a substantive, reproach ;  
disgrace ; lower degree of infamy ; imputation of  
fault ; ignominy.

He, like a privileged spy, whom nothing can  
*Discredit*, libels now 'gainst each great man.

Donne.

You had left unseen a wonderful piece of work  
which not to have been blest withal, would have dis-  
credited you.

Shakespeare.

Had I been the finder out of this secret, it would  
not have relished among my other *discredits*.

Shakespeare.

Idlers will ever live like rogues, and not fall to  
work, but be lazy, and then certify over their country  
to the *discredit* of a plantation.

Bacon.

He is commended that makes a saving voyage, and  
least *discredits* his travels, who returns the same man  
he went.

Wotton.

'Tis the duty of every Christian to be concerned for  
the reputation or *discredit* his life may bring on his  
profession.

Rogers.

Alas, the small *discredit* of a bribe

Scarcely hurts the lawyer, but undoes the scribe.

Pope.

Reflect how glorious it would be to appear in coun-  
tenance of *discredited* duty, and by example of piety  
revive the declining spirit of religion.

Id.

DISCREET, *adj.*

DISCREETLY, *adv.*

DISCREETNESS, *n. s.*

DISCRETION,

DISCRETIONARY, *adj.*

Prudent ; wary ; cau-  
tious ; sober ; modest. Discretion and discreetness  
are synonymous substantives. Discretionary  
means unlimited, except by discretion.

But now parfournme ghe in dede, that as the discre-  
cion of wille is redi so he it also of parfournmyng of  
that that ghe han.

Wiclif. in Cor. 8

The greatest parts without *discretion*, as observed by an elegant writer, may be fatal to their owner.

*Hume.*

onest, *discreet*, quiet, and godly learned men, will not be withdrawn by you.

*Whitgift.*

othing then was further thought upon for the management of governing; but all permitted unto their wisdom as *discretion* which were to rule.

*Hooker.*

Less fearful than *discreet*,  
You love the fundamental part of state,  
More than you doubt the charge of 't. *Shakespeare.*  
It is not good that children should know any wickedness: old folks have *discretion*, and know the world.

*Id.*

*Discretion* is the victor of the war,  
With lenity, and our directions followed  
With cheerfulness, a prosperous end must crown  
our works well undertaken.

*Mansinger.*

'nets lose half the praise they should have got,  
Cold it be known what they *discreetly* blot.

*Waller.*

The labour of obedience, loyalty, and subjection, is no more but for a man honestly and *discreetly* to sit still.

*South.*

The major being a person of consummate experience, as invested with a *discretionary* power.

*Tatler.*

It is the *discreet* man, not the witty, nor the learned, nor the brave, who guides the conversation, and gives measures to society.

*Addison's Spectator.*

There is no talent so useful towards rising in the world, or which puts men more out of the reach of fortune, than *discretion*, a species of lower prudence.

*Swift.*

The dullest brain, if gently stirred,  
Perhaps may waken to a humming bird;  
The most recluse, *discreetly* opened, find  
Congenial object in the cockle kind.

*Pope's Dunciad.*

A deacon may have a dispensation for entering into orders before he is twenty-three years of age; and it is a *discretionary* in the bishop to admit him to that order at what time he thinks fit.

*Ayliffe's Parergon.*

Dear youth, by fortune favored, but by love,  
Alas! not favoured less, be still as now  
*Discreet.*

*Thomson.*

To Jeffrey go, be silent and *discreet*,  
His pay is just ten sterling pounds per sheet:  
Fear not to lie, 'twill seem a lucky hit,  
Shrink not from blasphemy, 'twill pass for wit.

*Byron.*

**DISCREPANCE**, *n. s.* } *Lat. discrepantia.*  
**DISCREP'ANT**, *adj.* } Difference; contrariety; disagreement.

Diversity of education, and *discrepancy* of those principles wherewith men are at first imbued, and wherein all our after reasonings are founded.

*Lord Digby to K. Digby.*

**DISCRETE**, *v. a. & adj.* } *Lat. discretus.*  
**DISCRE'TIVE**, *adj.* } To separate; to discontinue; distinct; disjointed. For *discrete*, see the instance.

As for its diaphaneity, it enjoyeth that most eminently; as having its earthly and calinous parts so exactly resolved, that its body is left imporous, and not *discreted* by atomical terminations.

*Browne.*

*Discrete* quantity, or different individuals, are measured by number without any breaking continuity; that is, in things that have continuity, as continued quantity and motion.

*Hale's Origin of Mankind.*

*Discretion* propositions are such as seem and seemingly opposite, judgments are made, variety or distinction is noted by the parties though, yet, &c. as, travellers may change of mate, but not their temper; Job was patient, his grief was great.

**DISCRETE, or DISJUNCT, PROPORTION**, in which the ratio between two or more numbers is the same, and yet the proportion not continued, as the ratio between 3 : 4 same as that between 8 : 16, and these numbers are proportional; but it is *discretely* or *disjunctly*, for 3 is not to 6 as that is, the proportion is broken off between 4 and 3, and is not continued as in the *ing* continual proportionals:—

3 : 6 :: 12 : 24.

**DISCRIMINATE**, *v. a. & adj.*

**DISCRIMINABLE**, *adj.*

**DISCRIMINATELY**, *adv.*

**DISCRIMINATENESS**, *n. s.*

**DISCRIMINATION**,

**DISCRIMINATIVE**, *adj.*

**DISCRIMINOUS**.

tinguished by tokens; select; separate; adjective, distinguished by marks. *Discriminable* is distinguishable. *Discriminous* is a late word for critical, hazardous.

Oysters and cockles and muscles, which have no *discriminate* sex.

Take heed of abetting any factions, or any publick *discriminations* in matters of religion.

There are three sorts of it differing in each other, and *discriminated* by the native peculiar names.

*Discriminative* Providence knew before and course of all things.

*Morr's Antidote against*

There may be ways of *discriminating* the by acuteness and gravity, the several degrees and falling from one tone or note to another.

Any kind of spitting of blood imports a *minus* state, unless it happens upon the vein opened by a plethory.

There is a reverence to be shewed them, count of their *discrimination* from other preparation for sacred uses.

The right hand is *discriminated* from the natural, necessary, and never to be confusion.

The only standing test and *discrimination* of the *risticks* of any metal or mineral, must be in the constituent matter of it.

By that prudent *discrimination* made by offenders of different degrees, he obliges he has distinguished as objects of mercy.

**DISCROWN**, *v. a.* From *dis* and *crown*, to deprive of a crown.

Through storm and darkness yawning ground,

The gulf is thick with phantoms, but the Seems royal still, though with her head pale, but lovely, with maternal grief She clasps a babe, to whom her breast yet

**BITORY**, *adj.* Lat. *discubitorius*. Fitting posture of leaning.

When they retired to bed, and refreshed with a repast; and so that custom, by depicting their cubicular beds into *discubitory*.

*Brown's Vulgar Errors.*

**DISCUMBENCY**, *n. s.* Lat. *discumbens*. The lying at meat, after the ancient manner. *Discumbency*.

The Greeks and Romans used the custom of *discumbency*, which was upon their left side; for so it was free and ready for all service.

*Brown's Vulgar Errors.*

**DISCUMBER**, *v. a.* *Dis* and *cumber*. To free from any troublesome weight; to disengage from impeding.

He was *discumbered* of the clinging vest, the sacred cincture round his breast,

*Pope.*

**DISCOVER**, *v. a.* Fr. *decouvrir*. To discover;

Will, if please you, it *discure*, assay  
How you of that ill.

*Faerie Queene.*

**DISCURSIVE**, *adj.* } Fr. *discursif*; from  
**DISCURSIVELY**, *adv.* } Lat. *discurro*. Moving  
**DISCURSIVELY**, *adv.* } here and there; ro-  
gatory; as a corruption of *discursive*.  
g by gradation from premises to con-  
clusions; and thus *discursory* is argumenta-

tion helps sleep; as the blowing of the wind, stirring of water: they move a gentle attention, whatever moveth attention, without too much, stilling the natural and *discursive* motion.

*Bacon.*

The sanctity of soul and body, of more efficacy receiving of divine truths, than the greatness to *discursive* demonstration.

*More's Divine Dialogues.*

It hath been much dispute touching the knowledges, whether they have a kind of *discursive* which some call reason.

*Hale's Origin of Mankind.*

It is a principle within, whereby we think, and we think; whereby we do *discursively*, and ratiocination, deduce one thing from another.

*Id.*

**DISCUS**, *n. s.* Lat. A quoit; a heavy piece of iron in the ancient sports. See *Disc*.

Elatreus' strong arm the *discus* flies,  
And with unmatched force along the skies.

*Pope.*

**DISCUT**, *v. a.* } Fr. *discuter*; Span. and  
**DISCUT**, *n. s.* } Port. *discutir*; Ital. and  
**DISCUT**, *adj.* } Lat. *discutere*, *dis* and *qua-*  
**DISCUT**, *n. s.* } *tu*, to shake down or at-  
tenuating. To examine, or clear by dis-  
cussing; to ventilate; to clear up; to disperse  
humors of the body.

They were used to *discuss* the beginnings of  
reason.

*Wotton.*

It is the threefold effect of Jupiter's trident,  
*discuss*, and terebrate.

*Brown's Vulgar Errors.*

It cannot be found without some labour and  
of the mind, and the thoughts dwelling a  
while time upon the survey and *discussum* of  
similar.

*South.*

Or. VII.

His usage was to commit the *discussing* of causes  
privately to certain persons learned in the laws.

*Ayliffe's Puerion.*

If by the liberty of the press, we understand merely  
the liberty of *discussing* the propriety of public mea-  
sures and political opinions, let us have as much of  
it as you please.

*Franklin.*

**DISCUTIENT**, *n. s.* Lat. *discutiens*. A medicine that has power to repel or drive back the  
matter of tumors in the blood. It sometimes  
means the same as *carminative*.

The swellings arising from these require to be  
treated, in their beginning, with moderate repellents  
and *discutients*.

*Wise man.*

*DISCUTIENTS*, in surgery, are such external  
remedies as, by their subtilty, dissolve or  
disperse a stagnating or coagulated fluid in any  
part of the body.

**DISDAIN**, *v. a.*, *v. n.* & *n. s.* } Fr. *dédaigner*;  
**DISDAINFUL**, *adj.* } Sp. *desdignar*;  
**DISDAINFULLY**, *adv.* } Lat. *dedignari*;  
**DISDAINFULNESS**, *n. s.* } (de privative,  
and *dignor*.) To esteem unworthy. As an ac-  
tive verb it signifies to scorn: as a substantive,  
contempt; scorn; indignation united with con-  
tempt. *Disdainfulness* is synonymous with  
*disdain*.

Children being haughty, through *disdain* and want  
of nurture, do stain the nobility of their kindred.

*Ecclesi.*

A proud *disdainfulness* of other men.

*Ascham.*

His angry steeds did chide his foaming bit,  
As much *disdayning* to the curb to yield:  
Full jolly knight he seemed and faire did sit,  
As one for knightly giuts and fierce encounters fitt.

*Spenser. Faerie Queene.*

There will come a time when three words, uttered  
with charity and meekness, shall receive a far more  
blessed reward, than three thousand volumes, written  
with *disdainful* sharpness of wit.

*Hosier.*

The queen is obstinate,

Stubborn to justice, apt to accuse it,

*Disdainful* to be tried by 't.

*Shakespeare.*

Either greet him not,

Or else *disdainfully*, which shall shake him more.

*Id.*

Can I forget, when they in prison placing her,  
With swelling heart, in spite and due *disdainfulness*,  
She lay for dead, till I helped with unlacing her.

*Sidney.*

The *disdainful* soul came rushing through the  
wound.

*Dryden.*

It is not to insult and domineer, to look *disdain-  
fully*, and revile imperiously, that procures esteem  
from any one.

*South.*

Tell him, Cato

*Disdains* a life which he has power to offer.

*Addison.*

But against you, ye Greeks, ye coward train,  
Gods! how my soul is moved with just *disdain*!

*Pope's Odyssey.*

But no one ever heard her speak or shrink,

Although her paroxysm drew towards its close:

Hers was a phrensy which *disdained* to rave,

Even when they smote her, in the hope to save.

*Byron.*

U

**DISDIACLASTIC CRYSTAL**, in natural history, a name given by Bartholine and some others to the pellucid fossil substance, more usually called, from the place whence it was first brought, Iceland crystal; though properly it is no crystal at all, but a fine pellucid spar, called by Dr. Hill from its shape parallelepipedum.

**DISEASE** *v. a. & n. s.* } *Dis* and *ease*. To  
**DISAIDNESS**, *n. s.* } afflict with illness;  
 to torment with pain or sorrow; to make morbid;  
 infect; as a substantive, the malady, sickness,  
 &c., endured.

In the world ghe schuler haue *disece*, but triste ghe,  
 I haue overcome the world. *Wiclif. Jon xvi.*

And *Asa*, in the thirty and ninth year of his reign,  
 was *diseased* in his feet, and his *disease* was exceeding  
 great; and in his *disease* he sought not to the Lord,  
 but to the physicians. *Chron.*

Full of *diseases* was his carcase blew,  
 And a dry dropsie through his flesh did flow,  
 Which by misdiet daily greater grew.

*Spenser. Faerie Queene.*

We are all *diseased*,  
 And with our surfeiting and wanton hours  
 Have brought ourselves into a burning fever.

*Shakespeare.*

Food improperly taken, not only produces original  
*diseases*, but affords those that are already engendered  
 both matter and sustenance; so that, let the father of  
*disease* be what it may, intemperance is certainly its  
 mother. *Burton.*

A lazar-house it seemed, wherein were laid  
 Numbers of all *diseased*, all maladies  
 Of ghastly spasin, or racking torture. *Milton.*

Authority is a *disease* and cure,  
 Which men can neither want nor well endure.

*Butler.*

We cannot be too jealous, we cannot suspect our-  
 selves too much to labour under the *disease* of pride,  
 which cleaves the closer to us by our belief or confi-  
 dence that we are quite without it. *Clarendon.*

Though great light be insufferable to our eyes, yet  
 the highest degree of darkness does not at all *disease*  
 them. *Locke.*

This is a restoration to some former state; not that  
 state of indigency and *diseasedness*. *Burnet's Theory.*

Then wasteful forth  
 Walks the dire power of pestilent *disease*.

*Thomson's Summer.*

But he was phrenzied,—wherefore, who may know?  
 Since cause might be which skill could never find;  
 But he was phrenzied by *disease* or woe,  
 To that worst pitch of all, which wears a reasoning  
 show. *Byron.*

**DISEASE** has been variously defined by physi-  
 cians, almost every founder of a new system  
 having given a definition of disease, differing  
 in some respects from his predecessors. See  
**MEDICINE** and **NOSOLOGY**. Of all animals, man  
 is subject to the most diseases; and of men, the  
 studious and speculative are most exposed to  
 them. Other animals have their diseases; but  
 they are in small number, because they live  
 more according to nature: nor are plants with-  
 out them; though their known maladies are few.  
 The ancient Hebrews, who were versed in the  
 study of natural philosophy, and not much ac-  
 customed to recur to physical causes, and con-

sult physicians, when they were sick, to  
 their diseases generally to evil spirits, or  
 cautioners of divine vengeance.

**DISEASES OF DOGS.** See **DOG** and  
**PHOBIA**.

**DISEASES OF HORSES.** SEE **FARRIERY**.

**DISEDGED**, *adj.* *Dis* and *edge*.  
 obtunded; dulled.

I grieve myself

To think, when thou shalt be *disedged* by  
 Whom now thou timest on, how thy woe  
 Will then be pang'd by me.

*Shakespeare. Cy.*

**DISEMBARK**, *v. a. & v. n.* *Dis* and  
*bark*. To carry to land; to go on land.

I must unto the road, to *dismark*  
 Some necessities.

*Shakespeare. Two Gentlemen of*

There *dismarking* on the green road  
 We land our cattle, and the spoil divide.

*Pope's U.*

**DISEMBITTER**, *v. a.* *Dis* and  
 To sweeten; to free from bitterness;  
 from acrimony: an unusual word.

Encourage such innocent amusements as  
 embitter the minds of men, and make them  
 rejoice in the same agreeable satisfactions.

*Addison's Free*

**DISEMBODIED**, *adj.* *Dis* and  
 Divested of the body; discharged from  
 service.

*Dismembodied* spirits are generally creatures  
 of imagination, and of old wondering wit.

**DISEMBOGUE**, *v. a. & v. n.* (Old Fr.  
*boucher*.—*Skinner*. To pour out as the  
 a river; to vent: to gain vent; flow.

*Rivers*

In ample oceans *disembogued*, or lost.

*Dryden.*

By eminences placed up and down the  
 rivers make innumerable turnings and windings  
 at last *disembogue* in several mouths into the sea.

Rolling down, the steep *Timavus* races,  
 And through nine channels *disembogues* his waves.

**DISEMBOSOMED**, *part. adj.* *Dis*  
 bosom. Taken from the bosom.

He —

Who, *disembosomed* from the Father, bows  
 The heaven of heavens to him the distant

**DISEMBOWELLED**, *part. adj.*  
 embowel. Taken from out the bowels.  
 So her *disembowelled* web

Arachne in a hall or kitchen spreads.

Obvious to vagrant flies.

**DISEMBROIL**, *v. a.* *Fr. debrouiller*  
 disentangle; to free from perplexity;  
 from confusion.

Then earth from air, and sea from  
 driven.

And grosser air sunk from etherial heaven;  
 Thus *disembroiled*, they take their proper place.

The system of his politics is *disembroiled*  
 cleared of all those incoherences and  
 matters that are woven into this untidy piece.

*Addison's Whig*

**DISENABLE**, *v. a.* *Dis* and  
 deprive of power; to disable; to  
 weakness; to weaken.

has overtaken me; and want, a more in-  
evil, through the change of the times, has  
maded me. *Dryden.*

**ENCHANT** v. a. *Dis* and *enchant*. To  
the force of an enchantment; to deliver  
power of charms or spells.

loop thy *disenchanted* wing to truth.

*Denham.*

it your own brain *disenchant* you. *Sidney.*

to thy work; a noble stroke or two

the charms, and *disenchants* the grove.

*Dryden.*

**ENCUMBER**, v. a. } *Dis* and *encum-*  
**ENCUMBRANCE**, n. s. } ber. To discharge  
umbrances; free from impediment or  
in; disburden.

ht had *disencumbered* heaven.

*Milton.*

need the actual intution, the particular  
application of the whole soul, to *disencumber*  
free, to scour off its rust, and remove those  
which would otherwise clog and check tho  
its operations. *Sprat.*

The *disencumbered* soul  
nd left behind the clouds and starry pole.

*Dryden.*

look like the amusements of the soul, when  
cumbered of her machine; her sports and  
e, when she has laid her charge asleep.

*Spectator.*

ire many who make a figure below what  
me or merit entitles them to, out of mere  
al an elegant desire of ease and *disencum-*

*Id.*

arch of St. Justina, designed by Palladio,  
e handsome, luminous, *disencumbered* build-  
inside, that I have ever seen.

*Addison on Italy.*

**ENGAGE**, v. a. & v. v. } *Dis* and *en-*

**ENGAGE**, part. adj. } gage.

**ENGAGEMENT**, n. s. } To re-

ceive from duty  
or obligation;  
law from duty, obligation, or engage-  
Hence *disengagement*, and *disengaged*-  
applied to any state of freedom or va-

our mind's eyes are *disengaged* and free,

rer, farther, and distinctly see. *Denham.*

thers, being very light, would float up and  
ed white, before they could wholly *disengage*  
s and descend. *Burnet's Theory.*

free gives us notice, by sensible declinations,  
by *disengage* from the world by degrees.

*Collier on Thought.*

next paragraph, I found my author pretty  
aged from quotations. *Asterbury.*

consideration that should *disengage* our fond-  
worldly things, is, that they are uncertain  
modation; fading, transient, and corruptible  
store. *Rogers.*

ry hard for the mind to *disengage* itself from  
in which it has been long employed.

*Addison.*

at use of light to vegetation would appear  
theory to be by *disengaging* vital air from  
which they perspire, and thence to facilitate  
with their blood exposed beneath the thin  
their leaves. *Darwin.*

A man purposes his schemes of life in a state of  
abstraction and *disengagement*, exempt from the en-  
ticements of hope, the solicitations of affection, the  
importunities of appetite, or the depressions of fear.

*Johns n.*

**DISENTANGLE**, v. a. *Dis* and *entangle*.  
To unfold or loosen the parts of a thing; to free  
from impediment or perplexity; separate; dis-  
tinguish

Though in concretions particles so entangle one  
another, that they cannot in a short time clear them-  
selves, yet they do incessantly strive to *disentangle*  
themselves, and get away. *Boyle.*

Till they could find some expedient to explicate and  
*disentangle* themselves out of this labyrinth, they made  
no advance towards supplying their armies.

*Clarendon.*

The welfare of their souls requires a better judg-  
men' than their own, either to guide them in their  
duty, or to *disentangle* them from a temptation.

*South.*

Neither can God himself be otherwise understood by  
us than as a mind free and *disentangled* from all cor-  
poral mixtures. *Sittingfleet.*

Wherever I turned my view, there was perplexity  
to be *disentangled*, and confusion to be regulated.

*Johnson. Preface to Dictionary.*

**DISENTER**, v. a. *Dis* and *Fr. enterrer*. To  
unbury; to take out of the grave.

Though the blindness of some fanatics have  
savaged on the bodies of the dead, and have been  
so injurious unto worms as to *disenter* the bodies of  
the deceased, yet had they therein no design upon the  
soul. *Broune's Vulgar Errors.*

**DISENTHRAL**, v. a. *Dis* and *enthrall*. To  
set free; to restore to liberty; to rescue from  
slavery.

If religion were false, bad men would set the ut-  
most force of their reason on work to discover that  
falsity, and thereby *disenthrall* themselves. *South.*

But God my soul shall *disenthrall*;

For I upon his name will call.

*Bandsy.*

**DISENTHRONE**, v. a. *Dis* and *enthrone*.  
To depose from sovereignty; to dethrone.

Either to *disenthrone* the King of heaven

We war, if war be best; or to regain

Our own right lost.

*Milton.*

**DISENTRANCE**, v. a. *Dis* and *entrance*.  
To awaken from a trance, or deep sleep.

Ralpho, by this time *disentranced*,

Upon his bum himself advanced.

*Hudibras.*

**DIESPULSE**, v. a. *Dis* and *espouse*. To  
separate after faith plighted.

Such was the rage

Of Turnus, for Lavinia *disespoused*.

*Milton.*

**DIESTEEM**, v. a. & n. s. } From *dis* and  
**DIESTIMATION**, n. s. } esteem. To dis-  
regard, or regard slightly: slight regard.

But if this sacred gift you *diesteem*,

Then cruel plagues shall fall on Priam's state.

*Denham.*

When any one, by miscarriage, falls into *dis-  
esteem*, he will fall under neglect and contempt.

*Licke.*

I would not be thought to *diesteem* or dissuade the  
study of nature.

*Id.*

Should Mars see't,

That horrid hurrier of men, or she that betters him,  
Minerva, never so incensed, they could not *diesteem*.

*Chapman.*

**DISFAVOR**, *v. a. & n. s.* *Dis* and favor. To discountenance; withhold, or withdraw kindness: discountenance; slight regard; unfavorable circumstance; an unfavored state.

It was verily thought, that had it not been for four great *disfavorers* of that voyage, the enterprize had succeeded. *Bacon.*

While free from sacrilege, he was at peace, as it were, with God and man; but after his sacrilege he was in *disfavour* with both. *Spreman.*

Might not those of higher rank, and nearer access to her majesty, receive her own commands, and be countenanced or *disfavoured* according as they obey? *Suiff.*

**DISFIGURE**, *v. a.* } *Dis* and figure. To  
**DISFIGURATION**, *n. s.* } deform; to change any  
**DISFIGUREMENT**. } thing to a worse form;  
to mangle.

You are but as a form in wax  
By him imprinted, and within his power  
To leave the figure, or *disfigure* it. *Shakespeare.*

Abject is their punishment,  
*Disfiguring* not God's likeness, but their own,  
Or, if his likeness, by themselves defaced. *Milton.*

A nose flatter, or a mouth wider, could have consisted, as well as the rest of his figure, with such a soul and such parts as made him, *disfigured* as he was, capable to be a dignitary in the church. *Locke.*

That understanding, in which, though little is written, yet nothing is blotted; that which is not *disfigured* by ill impressions, is a subject most capable of the best. *Sprat.*

Nor would his slaughtered army now have lain,  
On Afric's sands, *disfigured* with their wounds,  
To gorge the wolves and vultures of Numidia. *Addison's Cato.*

The *disfigurement* that travel or sickness has bestowed upon him, is not thought great by the lady of the isle. *Suckling.*

Our foot half sunk in hillocks green and soft,  
Raised by the mole, the miner of the soil.  
He, not unlike the great ones of mankind,  
*Disfigures* earth. *Cowper.*

**DISFOREST**, *v. a.* *Dis* and forest. To reduce land from the privileges of a forest to the state of common land.

**DISFRANCHISE**, *v. a.* } *Dis* and fran-  
**DISFRANCHISEMENT**, *n. s.* } chise. To deprive  
of privileges or immunities.

**DISFURNISH**, *v. a.* *Dis* and furnish. To deprive; to unfurnish; to strip.

My riches are these poor habiliments,  
Of which if you should here *disfurnish* me,  
You take the sum and substance that I have. *Shakespeare.*

He durst not *disfurnish* that country either of so great a commander, or of the wonted garrisons. *Knolles's History.*

**DISGARNISH**, *v. a.* *Dis* and garnish. To strip of ornaments; to take guns from a fortress.  
**DISGLO'RIFY**, *v. a.* *Dis* and glorify. To deprive of glory; treat with indignity.

So Dagon shall be magnified, and God,  
Besides whom is no god, compared with idols,  
*Disglorified*, blasphemed, and had in scorn. *Milton.*

**DISGORGE**, *v. a.* *Fr. dégorger*, from *gorge* the throat. To discharge by the mouth; vomit pour out violently.

So, so, thou common dog, didst thou *disgorge*  
Thy glutton bosom of the royal Richard?  
And now thou wouldst eat thy dead vomit. *Shakespeare.*

The deep-drawing barks do there *disgorge*  
Their warlike freightage. *Shakespeare.*

They move along the banks  
Of four infernal rivers that *disgorge*  
Into the burning lake their baleful streams. *Milton.*

Countries much annoyed with earthquakes and volcanoes; and these are constantly all in *disgrace* whenever any earthquake happens; they *disgorge* that fire which was the cause of the disaster. *Darwin.*

From the distant shore they loudly laugh,  
To see his heaving breast *disgorge* the briny dragon. *Dryden.*

**DISGRACE**, *v. a. & n. s.* } *Fr. disgracer*  
**DISGRACE**, } To bring  
**DISGRACEFUL**, *adj.* } reproach or dishonor upon,  
**DISGRACEFULLY**, *adv.* } bring to dishonor or disfavor  
**DISGRACEFULNESS**, }  
**DISGRACIOUS**, }  
graceful is, shameful; dishonorable: *disgraceful* displeasing.

We may not so in any one special kind admit that we *disgrace* her in any other; but let all ways be according unto their place and degree. *Milton.*

Like a dull actor, now  
I have forgot my part, and I am out  
Even to a full *disgrace*. *Shakespeare.*

I do suspect I have done some offence,  
That seems *disgracious* in the city's eye. *Id.*  
The senate have cast you forth  
*Disgracefully*, to be the common tale  
Of the whole city. *Ben Jonson's Catiline.*

Masters must correct their servants with gentleness, prudence, and mercy; not with upbraiding and *disgraceful* language, but with such only as may *reprove* and reprove the fault, and amend the person. *Taylor's Rule of Living Help.*

And he whose affluence disdained a place,  
Bribed by a title, makes it a *disgrace*. *Brown.*

To such bondage he was for so many courses led by her, whose *disgraces* to him were graced by the excellence. *Sedley.*

And is it not a foul *disgrace*,  
To lose the boltsprit of thy face? *Raymond.*

Men's passions will carry them far in misapprehending an opinion which they have a mind to *disgrace*. *Brown.*

I have given good advice to those infants and grocers of the sex and calling. *Swift.*

To retire behind their chariots, was a little *disgraceful* then, as it is now to alight from one's horse in a battle. *Pope.*

Grant me, kind heaven, to find some happier place,  
Where honesty and sense are no *disgrace*. *Dr. Johnson's Poems.*

**DISGUISE**, *v. a. & n. s.* } *Fr. déguiser*  
**DISGUISED**, *n. s.* } *dis* and *guise*. To  
**DISGUISEMENT**. } conceal by an  
usual guise, or dress: the dress worn in *disguise* disguiser, he who wears it.

How might we disguise him?

I know not: there is no woman's gown big  
enough to hide him. *Shaksp. Merry Wives of Windsor.*  
We've burnt our cheeks; and mine own  
guise

as it speaks: the wild disguise hath almost  
lost it. *Id. Antony and Cleopatra.*

It's a great disguiser. *Shakspere.*

Argus thought best to dismask his beard,  
him, that he was going covertly to take a  
view of the forwardness of his majesty's fleet:  
and somewhat handsomely heal the disguisement.

*Wotton.*  
And he came; but those his children dear  
but soon discerned through his disguise.

*Milton.*  
That disguisement I should find opportunity to  
sell to the owner of my heart. *Sidney.*

I in Arcite cannot Arcite find,  
And may search in vain with all their eyes,  
Nor penetrate through this disguise.

*Dryden's Fables.*  
He is grown more disengaged from his intent  
in his own affairs, which is quite the reverse to  
what you are a very dexterous disguiser.

*Swift.*  
I just left the right worshipful, and his myr-  
about a sneaker of five gallons; the whole  
of it was pretty well disguised before I gave  
it up. *Spectator.*

Generally act in a disguise themselves, and  
mistake all outward show and appearances  
they lay in others. *Addison.*

He guilty joys, distaste, surmises,  
And false tears, deceits, disguises. *Pope.*

He covers ourselves to us; pierces into the in-  
ner of the mind; strips off every disguise;  
and the inward part; makes a strict scrutiny  
of soul and spirit. *Mason.*

Is it thus Demetrius meets his friend,  
The mean disguise of Turkish robes?

*Johnson. Irene.*  
Her is naturally open; and it ought, as  
it were without disguise to a man whom I wish no  
more upon as an antagonist, but a friend.

*Ep. Watson.*  
DISGUST, *v. a. & n. s.* } Fr. *dégouter*; Lat. *déguſt*.  
DISGUSTFUL, *adj.* } *déguſt*. To raise aver-  
sion to the stomach: hence, to cause distaste, or  
repugnance. Disgustful is nauseous.

There is no rule of good; since, when we fol-  
low, merely, we are disgusted, and change  
heart to another; condemning that at one  
time, and at another we earnestly approve.

*Shufesbury.*  
The fear of doing is of more consequence than  
time, and upon that depends the satisfac-  
tion wherewith it is received. *Locke.*

He was disgusted at marriage, he would never  
show it to his friend. *Atterbury.*

He disgusts me from having to do with answer-  
ing that they have no conscience. *Swift.*

He wished the most disgusting task that ever I  
did. *Id.*

Enlarged souls are disgusted with the wonders  
the microscope has discovered. *Watts.*

He dark disgust and hatred, winding wiles,  
deceit, and ruffian violence. *Thomson.*

Flattery, strained allusions, and disgusting  
easily attained by those who choose to  
Goldsmith.

DISH, *n. s. & v. a.* } Saxon, *disch*; Goth.  
DISH-CLOUT, *n. s.* } *disk*; Erse. *dysc*; Wel.  
DISHING, *part. adj.* } *dyſgel*; Teut. *tisch*, from  
DISH-WASHER. } Gr. *diskos*; Lat. *discus*, (à

*discus*, to hurl) a round plate of iron, or other metal,  
hurled in the games. See *Discus*. A broad  
vessel used for setting food on a table, or to con-  
tain liquids: hence the food contained in a dish,  
and a measure of quantity; and, as a verb, to  
place in a dish, or dishes; to serve up. Dish-  
clout, the useful cloth for cleaning dishes. Dish-  
ing, of a hollow, dish-like shape. Dish-washer,  
the name of a bird; mergus.

And eke before warnid of hir modir aside give  
thou to me beere the head of Jon Baptist in a dische.  
*Wiclif. Matt. 14.*

The earth's face is but a table; there are set  
Plants, cattle, men, dishes, for death to eat.

*Dunne.*  
Let 's kill him boldly, but not wrathfully;  
Let 's carve him as a dish fit for the gods,  
Not hew him as a carcass fit for hounds.

*Shakspere.*  
For conspiracy,

I know not how it tastes, though it be dished  
For me to try. *Id.*

A dish-clout of Jaquenetta's he wears next his  
heart for a favor. *Id.*

They measure black-tin by the dish, which containeth  
a gallon. *Curlew.*

Who would rob a hermit of his weeds,  
His few books, or his beads, or maple dish;  
Or do his grey hairs any violence? *Milton.*  
Many people would, with reason, prefer the gripping  
of an hungry belly, to those dishes which are a feast  
to others. *Locke.*

A ladle for our silver dish,  
Is what I want, is what I wish. *Prim.*

Send them up to their masters with a dish-clout  
pinned at their tails. *Swift's Directions to the Cook.*

For the form of the wheels, some make them more  
dishing, as they call it, than others; that is, more con-  
cave, by setting off the spokes and felloes more out-  
wards. *Mortimer.*

'Tis not the meat, but 'tis the appetite,  
Makes eating a delight;  
And if I like one dish  
More than another, that a pheasant is. *Suckling.*

The same care and toil that raises a dish of peas at  
Christmas, would give bread to a whole family dur-  
ing six months. *Hume.*

Suppose the ancient luxury of a dish of peacocks'  
brains were to be revived, how many carcasses would  
be left to the poor at a cheap rate! and as to the rout  
that is made about people who are ruined by extrava-  
gance, it is no matter to the nation than some individ-  
uals suffer. *Johnson.*

DISHABILLE', *n. s. & adj.* Fr. *deshabillé*.  
Undress; loose, or negligently dressed.

Queens are not to be too negligently dressed or  
dishabille. *Dryden's Dufrenoy.*

A woman, who would preserve a lover's respect to  
her person, will be careful of her appearance before  
him when in dishabille. *Clarissa.*

DISHABIT, *v. a.* To throw out of place;  
to drive from their habitation.

But for our approach those sleeping stones  
By the compulsion of their ordinance,

By this time from their fixed beds of time  
Had been *disabused*, and wide havoc made.  
*Shakespeare. King Lear.*

**DISHARMONY**, *n. s.* *Dis* and harmony.  
Contrariety to harmony.

**DISHEARTEN**, *v. a.* *Dis* and hearten. To discourage; to deject; to terrify; to depress.

To *dishearten* with fearful sentences, as though salvation could hardly be hoped for, is not so consonant with Christian charity.  
*Hooker.*

He not *disheartened* then, nor cloud those looks  
That wout be more cheerful and serene.  
*Milton.*

Yet neither thus *disheartened* nor dismayed,  
The time prepared I waited.  
*Id.*

Shortly, some harsh and displeasing answer *disheartened* me, that I resolved to embrace the first opportunity of my remove.

*Bp. Hall's Account of himself.*

It is a consideration that might *dishearten* those who are engaged against the common adversaries, that they promise themselves as much from the folly of enemies, as from the power of their friends.  
*Sallust's fleet.*

Men cannot say, that the greatness of an evil and danger is an encouragement to men to run upon it; and that the greatness of any good and happiness ought in reason to *dishearten* men from the pursuit of it.  
*Tillotson.*

A true christian fervour is more than the allures of our potent friends, or even the fears of our *disheartened* enemies.  
*Atterbury.*

**DISHERTT**, *v. a.* } See **DISINHERIT**.  
**DISHERTSON**, *n. s.* }

**DISHEVEL**, *v. a.* *Fr. decheveler.* To spread the hair disorderly; to throw the hair of a woman negligently about her head.

A gentle lady all alone,  
With garments rent and hair *dishevelled*,  
Wringing her hands, and making piteous moan.  
*Spenser.*

A troop of Trojans mixed with these appear,  
And mourning matrons with *dishevelled* hair.  
*Dryden's Æneid.*

You this morn beheld his ardent eyes,  
Saw his arm locked in her *dishevelled* hair. *Smith.*  
Headlong he rushes through the affrighted air  
With limbs distorted, and *disheveled* hair,  
Whirls round and round, the flying crowd alarms,  
And death receives him in his sable arms!—  
*Darwin.*

Had you touched a hair  
Of those *dishevelled* locks, I would have thinned  
Your ranks more than the enemy.  
*Byron.*

**DISHONEST**, *adj.* } *Dis* and honest.  
**DISHONESTLY**, *adv.* } Void of probity: void of faith; faithless; wicked; fraudulent.

A wise laughter shall bring an inheritance to her husband; but she that liveth *dishonestly* is her father's heaviness.  
*Ecc. xxi. 4.*

Mrs. Ford, the honest woman, the modest wife, the virtuous creature, that hath the jealous fool to her husband! I suspect without cause, mistress, do I!—Heaven be my witness you do, if you suspect me in any *dishonesty*.  
*Shakespeare.*

I protest he had the claim of me,  
Tho' most *dishonestly* he doth deny it. *Id.*

*Dishonest* with lopped arms the youth appears,  
Spoiled of his nose, and shortened of his ears.  
*Dryden.*

He lays it down as a principle, that right and wrong, honest and *dishonest*, are defined only by law, as not by nature.  
*Locke.*

Justice then was neither blind to discern, nor lame to execute. It was not subject to be imposed upon by a deluded fancy, nor yet to be bribed by a glutton's appetite, for an utile or jucundum to turn the scale to a false or *dishonest* sentence.  
*Locke.*

Their fortune depends upon their credit, and a man of open public *dishonesty* must be to their disadvantage.  
*Locke.*

She saw her sons with purple death expire,  
Her sacred domes involved in rolling fire;  
A dreadful series of intestine wars,  
Inglorious triumphs, and *dishonour* scars.  
*Pope.*

**DISHONOR**, *v. a. & n. s.* } *Dis* and ho-  
**DISHONORER**. } nor. To de-  
grace; to bring shame upon; to blast with re-  
famy: a dishonorer is he who treats another with indignity.

He that is honoured in poverty, how much more a riches! and he that is *dishonourable* in riches, how much more in poverty!  
*Reclus. l. 31.*

Let not my jealousies be your *dishonour*,  
But mine own safeties.  
*Shakespeare. Macbeth.*

It is no vicious blot, murder, or foulness,  
No unchaste action, or *dishonoured* step,  
That hath deprived me of your grace and love.  
*Id.*

Preaching how meritorious with the gods  
It would be, to ransome an irreligious  
*Dishonourer* of Dagon.  
*Milton.*

Take him for your husband and your lord;  
'Tis no *dishonour* to confer your grace  
On one descended from a royal race.  
*Dryden's Fables.*

He was pleased to own Lazarus even in the *honours* of the grave, and vouchsafed him, in that despicable condition, the glorious title of his friend.  
*Boyle's Seraphical Love.*

To pay for, personate, and keep in a man's hands a greater estate than he really has, is of all crimes the most unpardonable vanity, and must in the end reduce the man who is guilty of it to *dishonour*.  
*Locke.*

It is a mighty shame and *dishonour* to employ excellent faculties and abundance of wit, to humiliate and to please men in their vices and follies.  
*Sir. R. Blackmore.*

But what is most *dishonourable* of all is, for a man at once to discover a great genius and an unimproved mind.  
*Milton.*

Done. Would'st thou repeat them?  
Would'st thou repeat them—thou, a Favourite,  
Harp on the deep *dishonour* of our house,  
*Dishonoured* in its chief—that chief the prince  
Of Venice, great of cities! To the sentence.  
*Byron.*

**DISHORN**, *v. a.* *Dis* and horn. To strip of horns.

We'll *dishorn* the spirit,  
And mock him home to Windsor.  
*Shakespeare.*

**DISHUMOR**, *n. s.* *Dis* and humor. Peevishness; ill humor; uneasy state of mind.

Speaking impatiently to servants, or any thing that betrays intemperance or *dishumour*, are also criminal.  
*Spenser.*

**IMPROVEMENT, n. s.** *Dis* and *im-*. Reduction from a better to a worse or contrary to melioration; the contrary increment.

al issue of the matter would be, an utter *disimprovement* of the earth. *Norris.*

at see how this kingdom is at any height of rent, while four parts in five of the plantations thirty years past, have been real *disimprovement*. *Swift.*

**INCARCERATE, v. a.** *Dis* and *in-*. To set at liberty; to free from prison.

menical bodies being now coagulated, and so flaming atoms, require dry and warm air, on earth for to *disincarcerate* the same venene. *Harvey.*

**INCLINE, v. a.** } *Dis* and *incline*.  
**ELINATION, n. s.** } To produce dislike to; disaffected; to alienate affection from affection or alienation.

more careful to keep up the fears and apprehensions the people of dangers and designs, and to them from any reverence or affection to the whom they begun every day more implacably and consequently to disoblige. *Clarendon.*

ointment gave him a *disinclination* to the fair whom he does not express all the respect possible. *Arbuthnot and Pope.*

are those duties which we read or hear of word of God, to which we find ourselves inclined? This, in all likelihood, will help us some of our peculiar sins of omission. *Mason.*

**INGENUITY, n. s.** From *disingenuous*. Is of artifice; unfairness.

tract a habit of ill-nature and *disingenuity* to their affairs, and the temper of those upon whom they are to work. *Clarendon.*

**INGENUOUS, adj.** } *Dis* and *ingenu-*  
**INGENUOUSLY, adv.** } ous. Unfair; mean-  
**INGENUOUSNESS, n. s.** } ly artful; subtle; etial.

*disingenuous* to accuse our age of those who all our powers engage in same studies, the same course to hold, and take our reason for new arts too old. *Denham.*

a *disingenuous* way of proceeding, to oppose a of charity concerning their church, to a self reason concerning the nature of actions. *Stillingfleet.*

cannot be any thing so *disingenuous* and misanthropic, as not to yield to reason, and the conviction of clear arguments. *Locke.*

to press them with the unreasonableness, the unreasonableness of embracing a profession to which their hearts have an inward reluctance. *Government of the Tongue.*

**INHERIT, v. a.** } All from *dis* and *in-*  
**INHERITANCE, n. s.** } herit. To cut off he-  
**INHERIT, v. a.** } reditary succession or  
**INHERIT, n. s.** } inheritance. The last  
as are only the older mode of spelling.

is to restore to their rightful heritage such English words as have been long time out of use. *Spenser.*

If he stood upon his own title of the house of Lancaster, inherent in his person, he knew it was a title condemned by parliament, and generally prejudged in the common opinion of the realm, that it tended directly to the *disinheritance* of the line of York.

*Bacon's Henry VII.*

The chief minister of the revenue was obliged to prevent, and even oppose, such *disinheritance*. *Clarendon.*

In respect of the effects and evil consequences, the adultery of the woman is worse, as bringing bastardy into a family, and *disinhering* or great injuries to the lawful children. *Taylor.*

Is it then just with us to *disinherit* the unborn nephews for the father's fault? *Davies.*

Unmuffled, ye faint stars; and thou, fair moon, stoop thy pale visage through an amber cloud, And *disinherit* chaos that reigns here In double night of darkness, and of slander. *Milton.*

Of how fair a portion Adam *disinherited* his whole posterity by one single prevarication! *South.*

Woe how the Dryads and the woodland train, *Disinherited*, ran howling o'er the plain. *Dryden's Fables.*

**DISINTER', v. a.** From *dis* and *inter*. To unbury; to take as out of the grave.

The philosopher, the saint, or the hero, the wise, the good, or the great man, very often lie hid and concealed in a plebeian, which a proper education might have *disinterred*. *Addison.*

**DISINTERESTED, adj.** *Dis* and *Fr. intéressé*. Written *disinterested* generally, and more properly. Without regard to private advantage; not biased by particular views; impartial.

Not that tradition's parts are useless here, When general, old, *disinterested*, and clear. *Dryden.*

**DISINTERESSMENT, n. s.** *Dis* and *Fr. interestement*. Disregard to private advantage; *disinterest*; *disinterestedness*. This word is merely a Gallicism.

He has managed some of the charges of the kingdom with known ability, and laid them down with entire *disinterestedness*. *Prior's Postscript.*

**DISINTEREST, n. s.** } *Dis* and *interest*.  
**DISINTERESTED, adj.** } What is contrary to  
**DISINTERESTEDLY, adv.** } one's interest, desire,  
**DISINTERESTEDNESS, n. s.** } or prosperity; that which any one is concerned to prevent: indifference to one's own advantage.

These expressions of selfishness and *disinterestedness* have been used in a very loose and indeterminate manner. *Browne.*

They judge it the great *disinterest* to Rome. *Glanville.*

As *disinterested* as you appear to the world, no man is more in the power of that prevailing favourite passion than yourself. *Swift.*

It is usual with persons who mount the stage for the cure or information of the crowd about them, to make solemn professions of their being wholly *disinterested* in the pains they take in public good. *Steele.*

**DISINTITLED, part. adj.** *Dis* and *intituled* Not entitled.

Yet J. S. and his little convention of four or five brothers of the tradition have clearly *disintituled* themselves to any use of these (the Scriptures, &c.) *Bp. Taylor.*

**DISINTRICATE**, *v. a.* *Dis* and intricate.  
To disentangle.

**DISJOIN**, *v. a.* *Fr. disjoindre; dis* and join.  
To separate; to part from each other; to dis-  
unite; to sunder.

Never shall my harp thy praise  
Forget, nor from thy father's praise *disjoin*.

*Milton.*

Lest different degree  
*Disjoin* us, and I then too late renounce  
Deity for thee, when fate will not permit. *Id.*

Happier for me, that all our hours assigned  
Together we had lived; even not in death *disjoined*.  
*Dryden.*

Never let us lay down our arms against France, till  
we have utterly *disjoined* her from the Spanish  
monarchy. *Addison.*

**DISJOINT**, *v. a., v. n., & part.* *Dis* and  
joint. To put out of joint. As a neuter verb,  
to fall in pieces.

Young Fontinbras,  
Holding a weak supposal of our worth,  
Thinks by our late dear brother's death  
Our state to be *disjoint* and out of frame.  
*Shakespeare. Hamlet.*

The constancy of your wit was not wont to bring  
forth such *disjointed* speeches. *Sidney.*

Be all their ligaments at once unbound,  
And their *disjointed* bones to powder ground.

*Sandys.*

Yet what could swords or poison, racks or flames,  
Bat mangle and *disjoint* the brittle frame?  
More fatal Henry's words: they murdered Emma's  
fame. *Prior.*

I asked a gentleman the other day that is famous  
for a good carver (at which acquisition he is out of  
countenance, imagining it may detract from some of  
his more essential qualifications) to help me to some-  
thing that was near him; but he excused himself, and  
blushing told me, of all things he could never carve  
in his life; though it can be proved upon him that he  
cuts up, *disjointed*, and uncases, with incomparable dex-  
terity. *Spectator.*

Rotation must disperse in air  
All things which on the rapid orb appear;  
And if no power that motion should controul,  
It must *disjoint* and dissipate the whole. *Blackburn.*

Mouldering arches, and *disjointed* columns. *Irene.*

Rocks reared on rocks in huge *disjointed* piles  
Form the tall turrets, and the lengthened aisles;  
Broad ponderous piers sustain the roof, and wide  
Branch the vast rainbow ribs from side to side.  
*Darwin.*

**DISJUDICATION**, *n. s.* *Lat. dijudicatio.*  
Judgment; determination: perhaps only mis-  
taken for *dijudication*.

The disposition of the organ is of great importance  
in the *disjudications* we make of colours.

*Boyle on Colours.*

**DISJUNCT**, *adj.* } *Lat. disjunctus.* Dis-  
**DISJUNCTION**, *n. s.* } joined; separate: dis-  
**DISJUNCTIVE**, *adj.* } union; incapable of  
union.

You may

Enjoy your mistress now, from whom you see  
There's no *disjunction* to be made, but by  
Your ruin. *Shakespeare. Winter's Tale.*

There is a great analogy between the body natural  
and politic, in which the ecclesiastical or spiritual

part justly supplies the part of the soul, and  
lent separation of this from the other, does not  
infer death and dissolution, as the *disjunction*  
body and the soul in the natural.

Such principles, whose atoms are of the  
fine nature, as not to be united in a sufficient  
to make a visible mass.

A *disjunctive* proposition, in logic, is when  
are opposed to one another by *disjunction*.  
The truth of *disjunctives* depends on the nature  
immediate opposition of the parts. *Wentworth.*

There are such words as *disjunctive* con-  
junctions.

What he observes of the numbers *disjoin*  
apart, reason suggests to be applicable to  
body united. *Causae of the Decays.*

**DISK**, *n. s.* *Lat. discus.* A quoin. To  
the sun, or any planet, as it appears to

The disk of Phœbus, when he climbs  
Appears at first but as a blood-shot eye.

The crystal of the eye, which in a fish is  
any land animal is a *disk* or bowl; being he  
for the clearer sight of the object.

It is to be considered, that the rays,  
equally refrangible, do fall upon a circle as  
the sun's *disk*.

In areas varied with mosaic art,  
Some whirl the *disk*, and some the javelin.

*Mercury's disk*

Can scarce be caught by philosophic eye,  
Lost in the near effulgence.

Where finds philosophy her eagle eye  
With which she gazes at yon burning *disk*?  
Undazzled, and detects and counts his

**DISKIND'NESS**, *n. s.* *Dis* and  
Want of kindness or benevolence; im-  
pugnity.

This discourse is so far from doing any  
to the cause, that it does it a real service.

**DISLIKE**, *v. a. & n. s.* } *Dis* and  
**DISLIKEFUL**, *adj.* } disapprov-  
gation without affection; to regard with  
disgust.

He then them took, and tempering god  
Their contrary *dislikes* with loved means,  
Did place them all in order, and compe-  
To keep themselves within their sundry  
Together linked with adamant chains.

I think it best, by an union of man-  
formity of minds, to bring them to be one;  
to put away the *dislikeful* conceit of the  
other.

What most he should *dislike*, seems  
him;

What like, offensive *Shakespeare.*

Your *dislike*, to whom I would be ph-  
Do cloud my joys with danger and with

God's grace, that principle of his new  
him continual *dislike* to sin.

*Hammond's Practice.*

True love to the person cannot long  
*dislike* of the religion. *By. Hall's Com.*

This said Alecto, and a murmur rose  
That shewed *dislike* among the Christians.

Whoever *dislikes* the digressions, or  
of them, may throw them away.

ould have been as silent as thought, as  
emphy. It would have rested in in-  
acit dislikes. South.

man is not angry if you dislike another;  
those faults which are in his own char-  
acter not only your dislike of another,  
Addum.

point, which whoever can touch, will  
pleasing a majority, so great that the  
is forced to fall in with the herd.

Swift.

EN, v. a. Dis and liken. To make  
equal.

Muffle your face,  
e you; and, as you can, *dislike*  
of your own seeming.

Shakespeare. *Winter's Tale*.

NESS, n. s. Dis and likeness.  
; not resemblance, unlikeness.

is not designed to represent any thing  
never be capable of a wrong represen-  
tation of the true apprehension of  
is *dislikeness* to it; and such, excepting  
pieces, are all our own complex ideas.

Locke.

Y, v. a. Dis and limb. To dilate  
limb from limb.

Y, v. a. Dis and limn. To unpaint;  
of a picture.

is now a horse, even with a thought  
me, and makes it indistinct  
water.

Shakespeare. *Antony and Cleopatra*.

ATE, v. a. Lat. *dis* and *locus*. To  
ion, n. s. } put out of the proper  
ition.

Were't my fitness  
the hands obey my boiling blood,  
apt enough to dilute and tear  
and bones. Shakespeare. *King Lear*.  
of rocks, often leaning or prostrate,  
had some dislocation from their natu-  
rality.

Burnet.

is away either within or without the  
as it is forcibly pulled to it, and the  
tion, or a strain. Green's *Museum*.

time the strata on all sides of the globe  
d, and their situation varied, being  
in places, and depressed in others.

Woodward.

broke not dislocated any bones; but  
a contusion below the hip, as crippled  
Cuyper. *Private Correspondence*.

DE, v. a. & n. Dis and lodge. To  
a place, to go away.

The ladies have prevailed,  
he are dislodged, and Marcus gone.

Shakespeare.

might brought on the dark hour,  
sleep, and silence, he resolved  
glorious to dislodge.

Milton.

was lost, behold a new defeat,  
judging from another seat.

Dezden's *Journal*.

h which are resident in the depths live  
and are never dislodged or removed by  
upon the shores, which the lito-  
ne

DISLOYAL, adj. } Fr. *desloyal*, *dis* and  
DISLOYALLY, adv. } loyal. Not true to alle-  
DISLOYALTY, n. s. } giance; faithless; false  
to a sovereign; disobedient.

When that tumultuous rage and fearfull deene  
Of northerne rebels ye did pacify,  
And their *disloyal* powere defaced clone,  
The record of enduring memory. Spenser. *Sonnets*.

The lady is *disloyal*.

— *Disloyal*! The word is too good to paint out  
her wickedness. Shakespeare.

There shall appear such seeming truths of Hero's  
*disloyalty*, that jealousy shall be called assurance.

Id.

Let the truth of that religion I profess be repre-  
sented to judgment, not in the disguises of levity  
schism, heresy, novelty, and *disloyalty*.

King Charles.

Foul distrust and breach

*Disloyal*; on the part of man, revolt  
And disobedience.

Milton.

*Disloyal* town!

Speak, didst not thou

Forsake thy faith, and break thy nuptial vow?

Dryden.

DISMAL, adj. } Lat. *dies malus*, an evil  
DISMALLY, adv. } day. Sorrowful; dire;  
DISMAINESS, n. s. } horrid; melancholy; un-  
comfortable; unhappy; dark.

Thethane of Cawder 'gan a *dismal* conflict.

Shakespeare.

He hears

On all sides from innumerable tongues

A *dismal* universal hiss.

Milton.

Nor yet in horrid shade or *dismal* den,

Nor nocent yet; but on the grassy herb

Fearless, unfear'd, he slept.

Id.

The *dismal* situation waste and wild,

A dungeon horrible!

Id.

Such a variety of *dismal* accidents must have broken  
the spirits of any man.

Clarendon.

On the one hand set the most glittering temptations  
to discord, and on the other view the *dismal* effects of  
it.

Deacy of Piety.

Dreadful gleams,

*Dismal* screams.

Pope.

DISMAL, GREAT, or DISMAL SWAMP, a large  
swamp, or bog, extending from north to south  
nearly thirty miles, and from east to west, at a  
medium, about ten miles, partly in Virginia and  
partly in North Carolina. No less than five na-  
vigable rivers, besides creeks, rise out of it; two  
of which run into Virginia, viz. the south branch  
of Elizabeth, and the south branch of Nansmond  
river, and three into North Carolina, namely,  
North River, North West River, and Perquimons.  
All these hide their heads, properly speaking, in  
the Dismal, there being no signs of them above  
ground. There must, for this reason, be plenti-  
ful subterraneous stores of water here, or else the  
soil is so replete with this element, poured down  
from the high lands that surround it, that it can  
abundantly afford these supplies. This is, per-  
haps, most probable, as the ground of the swamp  
is a mere quagmire, trembling under the feet of  
those who walk upon it, and every footstep  
being instantly filled with water. The skirts of  
the swamp, towards the east, are overgrown  
with reeds, ten or twelve feet high, interspersed  
with strong bamboo briars. Among these grow

here and there a cypress or white cedar, commonly mistaken for the juniper. Towards the south end of it is a large tract of reeds, which, being constantly green and waving in the wind, is called the Green Sea. In many parts, especially on the borders, grows an ever-green shrub, very plentifully, called the gall-bush. It bears a berry which dies a black color like the gall of an oak, whence its name. Near the middle of this swamp the trees grow much thicker, both cypress and cedar, and, being always green and loaded with very large tops, are much exposed to the wind and easily blown down. Neither beast, bird, insect, nor reptile, approach the heart of this horrible desert; perhaps deterred by the everlasting shade, occasioned by the thick shrubs and bushes, which the sun can never penetrate to warm the earth: nor indeed, on account of the noisome exhalations, do any birds fly over it. These noxious vapors infect the air all around. On the west border is a pine swamp, above a mile in breadth, great part of which is covered with water, knee-deep; the bottom, however, is firm, and the pines grow very tall. With all these disadvantages Dismal Swamp is, in many places, pleasing to the eye, though disagreeable to the other senses. It was judged impassable, till the line, dividing Virginia from North Carolina, was carried through it, in lat. 36° 28' N., in 1728, by order of king George II. Although this was undertaken in a very dry season, the men who were employed were ten whole days before they could accomplish their work. In the middle is a lake about seven miles long, called Drummond's Pond, whose waters run south into Pasquotank River, which falls into Albemarle Sound; and on the north into Elizabeth and Nansemond Rivers, which fall into James River. A navigable canal has, with immense labor, been cut through this swamp, connecting the waters of the Pasquotank, which fall into Albemarle Sound, and those of the Elizabeth, which is connected by means of James River with Chesapeake Bay. As the Dismal Swamp lies so near Norfolk, where there is a constant demand for shingles, staves, &c., for exportation; and as the best of these articles are made from the trees growing upon the swamp, it is on this account a valuable property. It chiefly belongs to two companies, the Virginia Company, who possess 100,000 acres of it, and the North Carolina Company, who possess 40,000.

**DISMANTLE**, *v. a.* *Dis* and *mantle*. To deprive of a dress; to strip; to denude.

This is most strange!

That she, who even but now was your best object,  
Dearest and best, should in this trice of time  
Commit a thing so monstrous, to *dismantle*  
So many folds of favour. *Shakespeare. King Lear.*

It is not sufficient to possess our own fort, without the *dismantling* and demolishing of our enemies.

*Hutchins.*

His eyeballs, rooted out, are thrown to ground;  
His nose *dismantled* in his mouth is found;  
His jaws, cheeks, front, one undistinguished wound.

*Dryden.*

He that makes his prince despised and undervalued, and beats him out of his subjects' hearts, may easily

strip him of his other garrisons, having already possessed him of his strongest, by *dismantling* his honour, and seizing his reputation.

Sees dancing slaves insult his martial plain  
Parts with chill stream the dim religious lawn  
Time-mouldered bastion, and *dismantled* town.

*By.*

**DISMA'SK**, *v. a.* *Dis* and *mask*. To of a mask; to uncover from concealment.

Fair ladies masked are roses in the bud,  
Or angels veiled in clouds; are roses blurs,  
*Dismasked*, their damask sweet commixture shews.

*Shaks.*

The marquis thought best to *dismask* his heart,  
told him that he was going covertly.

*W.*

**DISMAY**, *v. a. & n. s.* } *Sp. dramayor*

**DISMAY'EDNESS**, *n. s.* } *Sp. dismay*

*W.*

after Sebastian, a Spanish etymologist, says  
cifully enough, 'from the month of May,  
that month the flowers of the field have  
heads and fade away:' to discourage;  
self-possession; terribly.

He will not fail thee; fear not, neither let

Nought could she say,

But sudden catching hold, did her *dismay*  
With quaking hands, and other signs of  
*Spencer. Faerie Queene.*

Their mighty strokes their habergeons *dismay*

Enemies would not be so troublesome to the  
tern coasts, nor that country itself would be  
*dismayed* with alarms as they have of late.

*Raleigh's*

All sate mute,

Pondering the danger with deep thoughts; in  
In others countenance read his own *dismay*.

The valiantest feels inward *dismay* when  
the fearfulest is ashamed fully to shew it.

Nothing can make him remiss in the present  
duty; no prospect of interest can allure him  
of danger *dismay* him.

*As.*

**DISNE**, *n. s.* *Fr.* A tenth; the tenth  
tythe.

Since the first sword was drawn about thee  
Every tithe soul 'mongst many thousand souls  
Hath been as dear as Helen.

*Shakespeare. Troilus and C.*

The pope began to exercise his new right  
compliance with king Edward, in granting  
years *disme* from the clergy.

*Ayliffe's Po.*

**DISMEMBER**, *v. a.* *Dis* and *member*.  
To divide member from member; to dilate  
cut in pieces.

Him booteth not resist, nor encourage call,  
His bleeding heart is in the venger's hand,  
Who straight him rent in thousand parts  
And quite *dismembered* hath.

*Spenser. Faerie Queene.*

I am with both, each army hath a band  
And in their rage, I having hold of both,  
They whirl saunder and *dismember* us.

*Shaks.*

A state can never arrive to its period in  
deplorable crisis, than when some prince  
like a vulture, to devour or *dismember* its  
people.

Fowls obscene *dismembered* him remain,  
And dogs had turn him on the naked plain.

*Pope's*

to contemplate only the fragments or  
once dispersed in short unconnected dis-  
sever survey an entire body of truth, but  
view it as deformed and *dismembered*.

Watts.

*Dis*, v. a. } Lat. *dimissus*. To send  
away; despatch.

*Dismissed* the assembly. Acts, xix. 41.

We commit thee thither,  
thy army be *dismissed* from him.

Shakespeare. Henry IV.

Let not stay here longer; your *dismissal*  
from Caesar. Id. Ant. and Cleop.

Thou degrad'st them, or remit'st  
to, which were a fair *dismissal*;  
thou lower than thou dost exalt them  
Milton's Agonistes.

Our young Lulus be no more,  
Our navy from your friendly shore.

Dryden's Virgil.

As soon as may be, all angry and wrathful  
Heaven will but canker and corrode the  
dispose it to the worst temper in the  
Mason.

your cheeks, fond youths! *dismiss* the

the harp, the soft guitar be mute:  
of passion in contempt I hold:—  
substantial proof of love—in gold.

Sheridan.

ON OF A BILL, in chancery. If the  
is not attend on the day fixed for the  
bill is *dismissed* with costs. It may  
passed for want of prosecution, which  
ture of a nonsuit at law, if he suffers  
to elapse without moving forwards in

RTGAGE, v. a. *Dis* and mortgage.  
from mortgage.

aged the crown demesnes, and left be-  
of gold. Howell's Vocal Forest.

UNT, v. a. & v. n. Fr. *demonter*. To  
a horse, or from an elevation: to  
a horse; to descend.

The champion stout  
mounted from his courser brave,  
warlike awhile his needless spurs he gave.

Spenser. Faerie Queene.

on this flying steed unreined, as once  
when, though from a lower clime,  
west, on the Alesan field I fall. Milton.

of artillery, planted against that tower,  
Christian cannoners *dismounted* with shot  
ter, and many of the gunners slain.

Knolles.

came within sight of that prodigious  
mount, he ordered all his cavalry to *dis-*  
mount upon their knees a blessing.

Addison's Freeholder.

TURALIZE, v. a. *Dis* and natural-  
ize; to make alien; to deprive of  
of birth.

TURED, adj. *Dis* and nature. Un-  
natural natural tenderness; devoid of  
emotion. Unusual.

If she must *teem*,

her child of spleen, that it may live,  
a thwart *dismounted* torment to her.

Shakespeare. King Lear.

DISNEY (John), an English divine and ma-  
gistrate, born at Lincoln, in 1677. He received  
the early part of his education at the grammar  
school in his native city, after which, his father  
being a dissenter, he was sent to an academy of  
that persuasion. From this he removed to the  
Middle Temple, where he studied the law,  
though he never followed it as a profession; but  
when he retired to his paternal estate, he distin-  
guished himself greatly as an active magistrate,  
particularly in the laudable but unpopular mea-  
sures he took for the suppression of vice and im-  
morality, for which he repeatedly received the  
thanks of the judges on the circuits. When  
about forty-two years of age he took orders in  
the church, and was presented to the vicarage of  
Croft, and the rectory of Kirby-Super-Baine,  
in Lincolnshire. In 1722 he was preferred to  
the living of St. Mary, in Nottingham, where he  
died in 1730. He published, 1. Two Essays  
upon the Execution of the Laws against Immo-  
rality and Profaneness, 8vo. 2. Primitive Sacre,  
the Reflections of a devout Solitude, 8vo. 3.  
Flora, prefixed to a Translation of Rapin's  
Poem on Gardens. 4. Remarks upon a Ser-  
mon preached by Dr. Sacheverell. 5. A View  
of ancient Laws against Immorality and Profane-  
ness.

DISOBEY, v. a.

DISOBE'DIENCE, n. s.

DISOBE'DIENT, adj.

DISOBE'DIENTLY, adv. } *Dis* and obey. To  
break commands, or  
transgress prohibi-  
tions; move out of  
order, or cease to follow a previous impulse.

The man of God was *disobedient* unto the word of  
the Lord. 1 Kings xiii. 26.

The offence is holy that she hath committed;  
And this deceit loses the name of craft,  
Of *disobedience*, or undutious title.

Shakespeare.

*Disobedient* children, if preserved from the gallows,  
are reserved for the rack, to be tortured by their own  
posterity. One complaining, that never father had  
so undutiful a child as he had; Yes, said his sonne,  
with less grace than truth, my grandfather had.

Fuller.

Of man's first *disobedience*, and the fruit  
Of that forbidden tree, sing heavenly muse.

Milton.

Murder, adultery, or *disobedience* to parents, have  
a general notion antecedently to laws. Stillingfleet.

She absolutely bade him, and he durst not know  
how to *disobey*. Sidney.

He's loth to *disobey* the god's command,  
Not willing to forsake this pleasant land.

Denham.

This *disobedience* of the moon will prove  
The sun's bright orb does not the planets move.

Blackmore.

This *disobedience* of the fibres of age to their usual  
stimuli, has generally been ascribed to repetition or  
habit, as those who live near a large clock, or a mill,  
or a waterfall, soon cease to attend to the perpetual  
noise of it in the day, and sleep during the night un-  
disturbed.

Darwin.

DISOBLIGE, v. a.

DISOBLIGING, part. adj.

DISOBLIGINGLY, adv.

DISOBLIGINGNESS, n. s.

DISOBLIGATION.

low this sense.

} *Dis* and oblige.  
To offend; dis-  
gust; give slight  
offence to. All  
the derivatives fol-

Astley had been removed from that charge, and was thereby so much *disobliged*, that he quitted the king's party. *Clarendon.*

There can be no malice, and consequently no crime or *disobligation*. *L'Estrange.*

Those, though in highest place, who slight and *disoblige* their friends, shall infallibly come to know the value of them, by having none when they shall most need them. *South.*

If a woman suffers her lover to see she is loth to *disoblige* him, let her beware of an encroacher. *Clarissa.*

My plan has given offence to some gentlemen, whom it would not be very safe to *disoblige*. *Addison's Guardian.*

We love and esteem our clergy, and are apt to lay some weight upon their opinion, and would not willingly *disoblige* them. *Swift concerning the Sacramental Test.*

Peremptoriness can best no form of understanding: it renders wise men *disobliging* and troublesome, and fools ridiculous and contemptible. *Government of the Tongue.*

**DISORBED**, *adj.* *Dis* and *orb*. Thrown out of the proper orbit.

Fly like chidden Mercury from Jove,  
Or like a star *disorbed*.

*Shakespeare. Troilus and Cressida.*

**DISORDER**, *v. a. & n. s.* } *Fr. desordre.*  
**DISORDERED**, *adj.* } *Dis* and *order*. To  
**DISORDEREDNESS**, *n. s.* } disturb; throw  
**DISORDERLY**, *adv.* } out of arrange-  
ment; ruffle; discompose.

We behaved not ourselves *disorderly* among you. *2 Thess.*

By that *disorderedness* of the soldiers, a great advantage was offered unto the enemy. *Knolles.*

Here do you keep a hundred knights and squires Men so *disordered*, so debauched and bold,  
That this our court, infected with their manners,  
Shews like a riotous inn. *Shakespeare. King Lear.*

Naked savages fighting *disorderly* with stones, by appointment of their commanders, may truly and absolutely be said to war. *Raleigh.*

He is one that seldom takes care for old age, because ill diet and *disorder*, together with a consumption, or some worse disease, taken up in his full career, have onely chalked out his catastrophe but to a colic. *Micrologia, 1629.*

Eve,  
Not so repulsed, with tears that ceased not flowing,  
And tresses all *disordered*, at his feet  
Fell humble. *Milton.*

Those obsolete laws of Henry I. were but *disorderly*, confused, and general things; rather cases and shells of administration than institutions. *Hale.*

Let him be stript, and *disordered*; I would fain see him walk in purpo, that the world may behold the inside of a friar. *Dryden's Span. Friar.*

Pleasure and pain are only different constitutions of the mind, sometimes occasioned by *disorder* in the body, or sometimes by thoughts in the mind. *Locke.*

A *disorderly* multitude contending with the body of the legislature, is like a man in a fit under the conduct of one in the fulness of his health and strength. *Addison.*

From vulgar bounds with brave *disorder* part,  
And snatch a grace beyond the reach of art. *Pope.*

The incursions of the Goths, and other barbarous nations, *disordered* the affairs of the Roman empire. *Artusque.*

Many a brave fellow, who has put his courage to fight in the field, has been in the utmost disorder in making a speech before a body of his friends at home. *Hume.*

**DISORDINATE**, *adj.* } *Dis* and *ordinatus*  
**DISORDINATELY**, *adv.* } Not living by rules of virtue; inordinate.

These not *disordinate*, yet causeless evils  
The punishment of dissolute days. *Milton. Agamemnon.*

**DISORIENTATED**, *adj.* *Dis* and *orientatus*. Turned from the east; turned from the proper direction; thrown out of the proper place.

Andrew Marvel uses the word *disorientated* instead of *disorientated*: 'Geneva had *disorientated* our geographer.' *Dr. A. L.*

**DISOWN**, *v. a.* *Dis* and *own*. To deny; not to allow; renounce.

Then they, who brother's better claim *disown*,  
Expel their parents, and usurp the throne. *Dryden's Saul.*

When an author has publicly *disowned* a spurious piece, they have disputed his name with him. *Roll.*

**DISORGANIZE**, *v. a.* } *Fr. desorganiser*  
**DISORGANIZATION**, *n. s.* } *dis* and *organum*  
To derange a system in its parts; subvert a system or order. A modern word altogether.

These *disorganizing* principles spread rapidly, and had not the contagion been interrupted by the war with France, the consequences would have been more serious to England. *Deane.*

**DISPAND**, *v. a.* } *Lat. dispendo*. To  
**DISPANSION**, *n. s.* } play; spread abroad; to act of displaying or spreading.

**DISPARAGE**, *v. a.* } *Ital. disparaggiare*  
**DISPARAGER**, *n. s.* } from *Lat. dispar, v. a.*  
**DISPARAGEMENT**. } fit, and *agere, v. a.*

Minshew. To match or compare for the worse; to depreciate by comparison; to treat contemptuously.

Gentle knight,  
That doth against the dead his hand uprear,  
His honour stains with rancour and despoil,  
And great *disparagement* makes to his former right. *Spenser.*

Yet doe not sdeigne to let thy name be writ  
In this base poem, for thee far unhitt,  
Nought is thy worth *disparaged* thereby. *Id. Sonnet.*

She was much affectionate to her own nation, which did stir great envy in the lords of the opposite side, who counted her blood a *disparagement* to be mingled with the king's. *Racine.*

In a commonwealth, much *disparagement* is occasioned, when able spirits, attracted by a familiar are inflamed with faction. *Hume.*

It is no *disparagement* for greater persons to reject treaties of peace. *Sp. Hall's Contemporary.*

Ahaz, his sottish conqueror, he drew  
God's altar to *disparage* and displace,  
For one of Syrian mode. *Milton's Paradise Lost.*

They will defy  
That which they love most tenderly;

Quarrel with minced pies, and *disparage*  
Their best and dearest friend, plum-porridge. *Bulwer.*

*disparagement* to philosophy, that it cannot  
Glanville.

ed and nice subject for a man to speak of  
grates his own heart to say any thing of  
it, and the reader's ears to hear any thing  
of him. Cowley.

carefully do require Mopsa to do great a  
thing, as to wed her father's servant.

Sidney.

was never intended for the stage; nor,  
*disparagement* to the author, could have suc-  
ceeded. Dryden.

a weak, diminutive light, compared to re-  
flect it ought to be no *disparagement* to a star  
than a sun. South.

you eat easily, naturally, and gracefully  
without any of those forbidding appearances  
thence *disparage* the actions of men sin-  
cerely. Atterbury.

RATES, *n. s.* } From Lat. *disparata*.  
THINGS, *n. s.* } Things so unlike that  
they be compared with each other; ine-

quity and the rest of Job's familiars, the  
unity was but in years. Hooker.

ing unequals, what society  
can, what harmony or true delight?  
must be mutual, in proportion due  
and received; but in *disparity*,  
the intense, the other still remiss,  
well suit with either, but soon prove  
unlike. Milton.

as great a *disparity* between the practical  
and understanding, then and now, as there  
is empire and advice, counsel and command.  
South.

not to associate and join themselves to-  
gether, same office, under a *disparity* of condi-  
tion. Agliff's Parergon.

DISPARK, *v. a.* Dis and park. To throw  
out.

large; to release from enclosure.

have fed upon my signior's,  
my parks, and felled my forest woods.  
Shakespeare.

They were supposed  
to be wits to be enclosed;  
free mase threw down the pale,  
at once *dispark* them all. Waller.

DISPART, *v. a.* Dis and part. Fr. *depar-*  
*tion*. To divide in two; to sepa-  
rate; to burst; to rive.

is the doubt, and difficult to deem,  
all three kinds of love together meet,  
*dispart* the heart with power extreme,  
nor shall weigh the balance down. Spenser.

The rest to several places  
sent, and between spun out the air. Milton.

Britain mourned their doubtful way,  
and both, when neither would obey. Prior.

The pilgrim oft,  
at night, mid his oration hears  
the voice of Time, *disparting* towers,  
all precipitate down-dashed,  
around, loud thunderin' to the moon.  
Dryden.

DISPART, in gunnery, is the mark set upon  
the muzzle ring of a piece of ordnance, so that a  
sight-line, taken upon the top of the base ring  
against the touch-hole, by the mark set on or  
near the muzzle, may be parallel to the axis of  
the concave cylinder. The common way of  
doing this is, to take the two diameters of the  
base-ring, and of the place where the *dispart* is  
to stand, and divide the difference between them  
into two equal parts, one of which will be the  
length of the *dispart*, which is set on the gun  
with wax or pitch, or fastened there with a  
piece of twine or marline. By means of an in-  
strument it may be done with great nicety.

DISPASSION, *n. s.* } From *dis* and *pas-*  
DISPASSIONATE, *adj.* } sion. Freedom from  
DISPASSIONATED, *adj.* } mental perturbation;  
exemption from passion.

Wise and *dispassionate* men thought he had been  
proceeded with very justly. Clarendon.

What is called by the Stoicks apathy, or *dispassion*,  
is called by the Scepticks indisturbance, by the Mol-  
inists quietism, by common men peace of conscience.  
Temple.

You have, as all *dispassionate* men may judge,  
fulfilled the poet's definition of madness. Dr. Maine.

DISPEL, *v. a.* Lat. *dispello*. To drive by  
scattering; to dissipate.

If the night

Have gathered aught of evil, or concealed,  
Disperse it, as now light *dispels* the dark. Milton.

When the spirit brings light unto our minds, it *dis-*  
*pels* darkness; we see it, as we do that of the sun at  
noon, and need not the twilight of reason to shew it.  
Locke.

DISPENCE, *n. s.* Fr. *dispen*. Expense;  
cost; charge; profusion.

It was a vault ybuilt for great *dispen*.  
With many ranges reared along the wall.  
And one great chimney, whose long funnel thence  
The smoke forth threw. Faerie Queene.

DISPEND, *v. a.* Lat. *dispendo*. To spend;  
to consume; to expend.

Of their commodities they were now scarce able to  
*dispend* the third part. Spenser's State of Ireland.

DISPENSE, *v. a.* & *n. s.* } Fr. *dispenser*;  
DISPENSARY, *n. s.* } Span. *dispensar*;  
DISPENSATION, } Ital and Lat. *dis-*  
DISPENSATOR, } *pensare*, from *dis*,  
DISPENSATORY. } diversely, and

*pendo*, to weigh out money. To deal out; dis-  
tribute by rule or measure. hence to excuse, or  
suspend compliance with a rule; and to set free  
from obligation. A *dispensary* is, strictly, a  
place where medicines are weighed or dealt out; a  
*dispensatory* a book prescribing them; *dispensa-*  
tion, a rule of dealing between God and man;  
distribution: hence, permission to do what may  
have been forbidden.

So a man gosse us as mynistris of Crist, and *dis-*  
*penders* of the mynistris of God. Now it is sought  
among the *dispensers* that a man be founden true. Wiclif. i. Cor. 4.

One loving house  
For many years of sorrow can *dispense*.  
Spenser. Faerie Queene.

Hast thou not sworn allegiance unto me?  
Canst thou *dispen* with heaven for such an oath?  
*Shakspeare.*

How few kingdoms are there, wherein, by *dispensing* with oaths, absolving subjects from allegiance, and cursing, or threatening to curse, as long as their curses were regarded, the popes have not wrought innumerable mischiefs.  
*Raleigh.*

As her majesty hath made them *dispensators* of her favour towards her people, so it becometh them to show themselves equal distributors of the same. *Bacon.*

The description of the ointment is found in the chymical *dispensatory*. *Id. Natural History.*

God delights in the ministries of his own choice, and the methods of grace, in the economy of heaven, and the *dispensations* of eternal happiness.

*Taylor's Worthy Communicant.*  
Royal bounties

Are great and gracious, while they are *dispensed*  
With moderation. *Mussenger.*

Those now that were *dispensed*  
The burden of many ages, on me light  
At once by my foreknowledge. *Milton.*

Then reliques, beads,  
Indulgences, *dispenses*, pardons, bulls,  
The sport of winds. *Id.*  
At length the muses stand restored again,  
While you *dispen*se the laws, and guide the state.  
*Dryden.*

To thee the loved *dispensary* I resign. *Garth.*  
Neither are God's methods or intentions different  
in his *dispensations* to each private man. *Rogers.*

Do thou, my soul, the destined period wait,  
When God shall solve the dark decrees of fate;  
His now unequal *dispensations* clear,  
And make all wise and beautiful appear. *Tickell.*

Our materia medica is large enough; and, to look into the *dispensatories*, one would think no disease incurable. *Baker.*

A *dispensation* was obtained to enable Dr. Barrow to marry. *Ward.*

I could not *dispen*se with myself from making a voyage to Caprea. *Addison on Italy.*

Those to whom Christ has committed the *dispensation* of his gospel. *Decay of Piety.*

This perpetual circulation is constantly promoted by a *dispensation* of water promiscuously and indifferently to all parts of the earth.

*Woodward's Natural History.*

Those who stand before earthly princes, who are the *dispensers* of their favours, and conveyors of their will to others, challenge high honours. *Atterbury.*

His peculiar doctrines are not like any thing of human contrivance. 'Never man spake like this man.' One of the first names given to that *dispensation* of things which he came to introduce, was 'the kingdom,' or the reign, 'of heaven.' *Beattie.*

DISPENSARY, a kind of charitable institution, of late years very prevalent in Britain. They are designated the General Dispensary, the Universal Dispensary, the Dispensary of particular counties or districts, &c. They are supported by voluntary subscriptions, having each one or more physicians and surgeons, whose business is to attend at stated times, to prescribe for the poor; and, if necessary, to visit them at their own habitations. It is in this latter respect, that the patients of a dispensary differ from those called out-patients at an hospital. The poor are supplied gratis with medicine, and

many of these institutions also afford assistance to lying-in women. Formerly there were three dispensaries established in London for selling medicines to the poor at a discount under the direction of the College of Physicians. In China the medicines are not dispensed gratis, but money is given to the poor to buy them. The Chinese have a store, or warehouse, high, erected in the public square of the cities: on this stone are engrained the names of all sorts of medicines, with the price, and when the poor stand in need of medicine from physic, they go to the treasury, and receive the price each medicine is rated at.

DISPENSATIONS are most generally understood by the pope, who claims the office of dispensing, and has extended it to every thing, without any exception. His power to grant a dispensation for any thing contrary to the divine law of nature, has, however, been deemed more moderate of the Romanists, than his power to what is contrary to positive things relating to facts, marriages, &c.; and who limit his power to these things. The archbishop of Canterbury has a power, by statute, of dispensing with the cause wherein dispensations were granted by the see of Rome, as in the case of a king as his subjects; and, during the vacancy of the archbishop's see, the guardian of the see may grant dispensations. Every one of common right has the power of dispensing with benefices, and of dispensing in contracts, &c. A dispensation of the king is prohibited, lawful to be done by the king, though a thing evil in itself will not be a dispensation. And where the king has an immediate interest in an act of dispensation, the king cannot dispense with it; if the suit be the king's own, only for the sake of a penal law that is not to be dispensed with by a third person. There is a dispensation notwithstanding, which is where a statute strains some prerogative incident to the king, as the right of pardoning, or of giving the service of the subjects for the public, &c., each of which are inseparable from the king, and these clauses non obstante, such statute is dispensed with.

DISPEOPLE, v. a. } Dis and  
DISPEOPLE, n. s. } depopulate  
of people: he who depopulates, or

The Irish, banished into the mountains, they lived only upon white meats, so depopulated and weakened, came to plains.

Conflagrations and great droughts, depopulate, but destroy.

His heart exalts him in the  
Already done, to have depopulated been

Nor drain I ponds the golden eys  
Nor trouble for pikes, depopulated of the

Kings, furious and avenged  
Who claimed the skies, depopulated all  
The lonely lords of empty wilds and

DISPERGE, v. a. Lat. *dispergere*  
to scatter.

*E*, v. a. } *Fr. disperser*, from Lat.

 and fled each other. *Byron.*

OF INFLAMMATION, in medicine  
 is the removing the inflammation,  
 the inflamed part to its natural

ERSION OF MANKIND, in the early  
 world, was occasioned by the con-  
 quies, and took place in consequence  
 row of Babel at the birth of Peleg ;  
 derived his name. It appears by  
 even of his ancestors, Gen. xi. 10—  
 happened in the 101st. year after the  
 ling to the Hebrew chronology, and  
 than computation in the 401st. How-  
 difficulties have been suggested by  
 concerning the true era of this event.  
 Graham and others, to reconcile the  
 Egyptian chronologies, maintain a  
 of mankind before the birth of Peleg.  
 to find numbers sufficient for the  
 of columns in the space of 101 years,  
 the Hebrew computation, fix the  
 wards the end of Peleg's life, thus  
 computation of the Jews. Petavius  
 33d year after the flood ; Cumberland  
 and Fisher, though he generally refers  
 of Peleg's birth, in one place assigns  
 the flood for this event. Mr. Shuck-  
 the dispersion to have been gradual,  
 commenced with the separation of

some companies at the birth of Peleg, and to have  
 been completed thirty-one years after. Accord-  
 ing to the calculation of Petavius, the number of  
 inhabitants on the earth at the birth of Peleg  
 amounted to 32,768. Cumberland makes them  
 30,000. Mr. Mede states them at 7,000 men,  
 besides women and children : and Mr. Whiston,  
 who supposes that mankind now double them-  
 selves in 400 years, and that they doubled them-  
 selves, between the deluge and the time of David,  
 in sixty years at a medium, when their lives  
 were six or seven times as long as they have been  
 since, by his computation, produces about 2,389 ;  
 a number much too inconsiderable for the pur-  
 poses of separating and forming distinct nations.  
 This difficulty induced Mr. Whiston to reject the  
 Hebrew, and to adopt the Samaritan chronology,  
 as many others have done ; which, by allowing  
 an interval of 401 years between the flood and the  
 birth of Peleg, furnishes, by the last mentioned  
 mode of computation, more than 240,000 per-  
 sons. As to the manner of the dispersion of the  
 posterity of Noah from the plain of Shinar, the  
 sacred historian informs us that they were divided  
 in their lands, every one according to his tongue,  
 according to his family, and according to his  
 nation. Gen. x. 5. 20. 31 : and thus, as Mr.  
 Mede observes, they were ranged according to  
 their nations, and every nation by its families ;  
 so that each nation had a separate lot, and each  
 family in every nation. The following abstract  
 will serve to give a general idea of their respec-  
 tive settlements :—Japhet, Noah's eldest son, had  
 seven sons, viz. Gomer, whose descendants in-  
 habited those parts of Asia which lie upon the  
 Aegean Sea and Hellespont northward, contain-  
 ing Phrygia, Pontus, Bithynia, and a great part  
 of Galatia. The Galatians, according to Jose-  
 phus, were called Gomeri ; and the Cimmeri,  
 according to Herodotus, occupied this tract of  
 country : and from these Gomerians, Cimmeri,  
 or Celts, Mr. Camden derives our ancient Brit-  
 tons, who still retain the name Cymro, Cymru,  
 or Cumbri. See BRITAIN. Magog, the second  
 son of Japhet, was probably the father of the  
 Scythians on the east and north-east of the Euxine  
 Sea. Madai planted Media, though Mr. Mede  
 assigns Macedonia to his share. Javan was the  
 father of the Grecians about Ionia, whose country  
 lies along the Mediterranean Sea ; the radi-  
 cals of Javan and Ionia being the same, *ἰων*. To  
 Tubal and Meshech belonged Cappadocia and the  
 country which lies on the borders of the Euxine  
 Sea ; and from them, migrating over the Cauca-  
 sus, it is supposed the Russians and Muscovites  
 are descended. And Tiras occupied Thracia. The  
 sons of Shem were five ; Elam, whose country lay  
 between the Medes and Mesopotamians, and was  
 called by the Gentile writers Elymais ; and Jo-  
 sephus calls the Elamites the founders of the Per-  
 sians ; Ashur, who was driven out of Shinar by  
 Nimrod, afterwards settled in Assyria, and there  
 built Nineveh and other cities ; Arphaxad, who  
 gave name to the country which Ptolemy calls  
 Arapactis, a province of Assyria, though  
 Josephus makes him the father of the Chaldees,  
 Lud, who inhabited and gave name to the coun-  
 try of Lydia about the river Meander, remark-  
 able for its windings, in Asia Minor ; and Aram,

the father of the Syrians. Ham, the youngest son of Noah, had four sons, viz. Cush, whose posterity spread into the several parts of Arabia, over the borders of the land of Edom, into Arabia Felix, up to Midian and Egypt; Mizraim, the father of them who inhabited Egypt and other parts of Africa; Phut, to whom Bochart assigns the remaining part of Africa, from the lake Tritonides to the Atlantic Ocean, called Lybia; and Canaan, to whom belonged the land of Canaan, whence the Phœnicians derived their origin. Dr. Bryant has advanced a new hypothesis on this subject, and supported it with his usual acuteness and learning. He maintains that the dispersion, as well as the confusion of tongues, was local, and limited to the inhabitants of the province of Babel; that the separation and distribution recorded to have taken place in the days of Peleg, Gen. x. 25, 31, 32, which was the result of Divine appointment, occasioned a general migration; and that all the families among the sons of men were concerned in it. The house of Shem, from which the Messiah was to spring, was particularly regarded in this distribution; the portion of his children was near the place of separation; they in general had Asia to their lot, as Japhet had Europe, and Ham the large continent of Africa. But the sons of Cush would not submit to the divine dispensation; they went off under the conduct of Nimrod, and seem to have been for a long time in a roving state. They, however, at last arrived at the plains of Shinar; and having ejected Ashur and his sons, seized his dominions, and laid there the foundation of a great monarchy. But afterwards, fearing lest they should be divided and scattered abroad, they built the tower of Babel as a land mark to which they might repair; and probably to answer the purposes of an idolatrous temple, or high altar, dedicated to the host of heaven. Here they were punished with the judgment of confounded speech through a failure in labial utterance, and with the dispersion recorded in Gen. x. 8, 9: in consequence of which they were scattered abroad from this city and tower, without any certain place of destination.

'Various, however,' as Dr. Kippis remarks, 'have been the opinions concerning the confusion of tongues at Babel. Some have thought that the change produced by it was of so total a nature, as to oblige men to speak in languages fundamentally different. But this is not probable, as, in that case, the whole set of their ideas, and the very organs of their speech, must have been altered. Neither is this hypothesis agreeable to experience, since most of the languages we are acquainted with have a certain degree of affinity. They either appear to be materially related, as sister languages, or show that they were originally derived from the same source.'

'Other persons therefore, with greater reason, suppose that the change was only partial, and brought about in a gradual manner. Dr. Gr. Sharpe is of opinion, that the confounding of the speech, or lip, does not relate to language, properly so called, but to a confusion of design, counsels, and purposes; so that the builders of Babel could not agree together, to carry on the undertaking they had begun.'

This last writer fairly enough observes—'The number of people at Babel before the dispersion is not known, and of the miraculous diversity of languages there is not one word in the Bible. In Psalm lv. 9, David says, 'Destroy, O Lord, and divide their tongues, for I have seen violence and strife in the city;' where he certainly does not mean that God would make them speak in languages: for to divide their tongues is to divide their counsels, and to scatter discussion and animosity, not new-made words, amongst them. However, in Genesis xi. their language is not even said to be divided; but God says, 'Let us go down and confound their language, that they may not understand one another's speech. So the Lord scattered them abroad from thence upon the face of all the earth, and they left off to build the city. Therefore is the name of it called Babel (or confusion), because the Lord did there confound the language of all the earth.'

He thus concludes—'It is said that they (the whole earth) were together in the plain of Shinar, and that the language of all the earth was there confounded. No person is exempted. However, it is not presumed that Noah assented to the building, much less that he assisted in the work, or that he was ignorant that they were to be dispersed, and the world perished by their dispersion, or that he did not oppose by raising an edifice to prevent their dispersion, which, from the natural increase of men and cattle, must in time have happened without miracle. But it is apprehended, that there could be no occasion for a lofty fortress to defend the whole earth; for what enemies had the whole earth, against whom it was necessary to build a high tower? There is a like difficulty in assigning any reason for making themselves a name or renown; for who were to esteem the men of name or of renown? Or what was to be their name when where they to be famous, before there were any human inhabitants but themselves.'

The Cushites seem afterwards to have passed into Egypt or the land of Mizraim in its infancy, and seized the whole country, and held it for many ages in subjection: they extended themselves likewise to the Indies and Ganges, and sent forth into China and Japan. From thence the province of Cushan or Goshen in Egypt probably derived its name. Here they also obtained the appellation of 'royal shepherds;' and when they were by force driven out of the country after having been in possession of it for more than 280 years, the land which they had been permitted to quit was given to the Israelites, who were also denominated shepherds, but should not be confounded with the former or the antecedent inhabitants of Goshen. See Egypt.

DISPERSION, POINT or, in dioptrics, the part from which refracted rays begin to diverge, where their refraction renders them divergent.

DISPRESSED, *v. a.* To dis and press. To dispirit; to depress, to discourage, to depress; to intimidate; to exhaust.

Certain it is, that the poor man appeared so depressed, that he spoke but few words after he came upon the scaffold.

The providence of God strikes not in vain down.

but dashes, and even *dispirits*, all their endeavours, and makes their designs heartless and ineffectual.

*South.*

Steady to my principles, and not *dispirited* with my afflictions, I have overcome all difficulties.

*Dryden.*

Amidst all the honours that are paid him, he feels nothing in himself but a poor, weak, *dispirited* mortal, submitting to the laws of corruption.

*Rogers.*

He has *dispirited* himself by a debauch, and drank away his good humour.

*Collier.*

I cannot bring myself to believe that the King was under the first projector or the principal actor in the sorry farce of neglecting a man whom they could not dis honour, of distressing a man whom they could not *dispirit*, which has been playing at Court for near twenty-six years.

*Bp. Watson.*

**DISPITEOUS**, *adj.* *Dis* and *pitious*. Un-  
relenting.

The Knight of the Red Cross, when him he spide,  
Spurring shots with rage *dispiteous*,  
Gan laurely couch his spear.

*Spenser. Faerie Queene.*

**DISPLA'CE**, *v. a.* *Dis* and *place*. To put  
out of place, state, office, or trust.

You have *displaced* the mirth, broke the good  
meeting,

With most admired disorder.

*Shakespeare.*

One then may be *displaced*, and one may reign;  
And want of merit render birthright vain.

*Dryden.*

A religion, established by God himself, should not  
be *displaced* by any thing, under a demonstration of  
that divine power that first introduced it.

*South.*

Whose arch or pillar meets me in the face,  
Thus or Trajan's? No—'tis that of Time:  
Triumph, arch, pillar, all be doth *displace*  
Scaffolding; and apostolic statues climb  
To crush the imperial urn, whose ashes slept sublime.

*Byron.*

**DISPLA'CENCY**, *n. s.* *Lat. displicentia*  
Incongruity; any thing displeasing.

The *displacencies* that he receives, by the conse-  
quences of his excess, far outweigh all that is grate-  
ful in it.

*Decay of Piety.*

**DISPLANT'**, *v. a.* } *Dis* and *plant*. To  
**DISPLANT'ATION**, *n. s.* } remove a plant; hence  
to drive a people from their place of residence.

All those countries, which, lying near unto any  
mountains, or Irish deserts, had been planted with  
English, were shortly *displanted* and lost.

*Spenser.*

I may justly account new plantations to be the  
children of former kingdoms: I like a plantation in  
a pure soil, that is, where people are not *displanted*.

*Bacon.*

The Ednites were garrisoned to resist the Assy-  
rians, whose *displantation* Senacherib vaunted of.

*Ruleigh.*

**DISPLAY'**, *v. a. & n. s.* *Fr. deployer*, from  
*Lat. du* (privative) and *plere*, to fold. To un-  
fold; to exhibit, spread open to view.

His glistering armor made  
A little gloomy light, much like a shade,  
By which he saw the ugly monster plains,  
Halfe like a serpent horribly *displode*.

*Spenser. Faerie Queene.*

You speak not like yourself, who ever yet  
Have stood to charity, and *displayed* the effects  
Of disposition gentle.

*Shakespeare.*

Our ennobled understandings take the wings of the  
morning to visit the world above us, and have a glo-

VOL. VII.

rious *display* of the highest form of created excellen-  
cies.

*Glanville.*

Thou heaven's alternate beauty can'st *display*,  
The blush of morning, and the milky way.

*Dryden.*

The works of nature, and the words of revelation,  
*display* truth to mankind in characters so visible, that  
those who are not quite blind, may read.

*Locke.*

It is a noble and great thing to cover the blemishes,  
and to excuse the failings of a friend; to draw a  
curtain before his stains, and to *display* his perfec-  
tions.

*South.*

He carves, *displays*, and cuts up to a wonder.

*Spectator.*

So the gay lady, with expensive care,  
Borrow the pride of land, of sea and air;  
Purs, pearls, and plumes, the glittering thing *displays*,  
Dazzles our eyes, and easy hearts betrays.

*Gay.*

The storm the dark Lycæan groves *displayed*,  
And first to light exposed the sacred shade.

*Pope's Statius.*

**DISPLEA'SANCE**, *n. s.* } *Dis* and *please*.

**DISPLEA'SE**, *v. a. & n. s.* } To offend; make

**DISPLEA'SING**, *n. s.* } angry or sad:

**DISPLEA'SINGNESS**, *n. s.* } as a neuter verb,

**DISPLEA'SURE**, *v. a. & n. s.* } to disgust; make

averse. Displeasingness is the quality of giving  
offence; displeasure the offence given.

God was *displeased* with this thing.

*1 Chron. xxi. 7.*

Cordell said, she loved him as beloved:  
Whose simple answer, wanting colours fair  
To paint it forth, him to *displeasance* moved.

*Faerie Queene.*

True repentance may be wrought in the hearts of  
such as fear God, and yet incur his *displeasure*, the  
deserved effect whereof is eternal death.

*Hooker.*

He should beware that he did not provoke Soly-  
man's heavy *displeasure* against him.

*Knolles.*

Oh our *displeasures*, to ourselves unjust,  
Destroy our friends, and after weep their dust.

*Shakespeare.*

When the way of pleasuring or *displeasuring* lieth  
by the favourite, it is impossible any other should be  
over great.

*Bacon.*

Undoubtedly he will relent, and turn  
From his *displeasure*.

*Milton.*

What to one is a most grateful odour, to another is  
noxious and *displeasant*; and it were a misery to some  
to lie stretched on a bed of roses.

*Glan. Scepais.*

It is a mistake to think that men cannot change  
their *displeasingness* or indifference, that is in actions,  
into pleasure and desire, if they will do but what is in  
their power.

*Locke.*

On me alone thy just *displeasure* lay;  
But take thy judgments from this mourning land.

*Dryden.*

Nothing is in itself so pernicious to communities of  
earned men, as the *displeasures* of their prince.

*Addison's Freshwater.*

**DISPLODE'**, *v. a.* } *Lat. displodo*. To *dis-*  
**DISPLOSION**, *n. s.* } perse with a loud noise;  
to vent with violence: a sudden bursting forth.

Stood ranked of seraphim another row,  
In posture to *displode* their second tire  
Of thunde

*Milton.*

**DISPORT'**, *v. n. & n. s.* *Dis* and *sport*. To  
play; sport: pastime; diversion; amusement.

She list not hear, but her *disports* pursued;  
And ever bade him stay, till time the tide renewed.

*Spenser.*

X

He often, but attended with weak guard,  
Comes hunting this way to dispose himself.

*Shakespeare.*

His *disports* were ingenuous and manlike, whereby  
he always learned somewhat.

*Hayward on Edward VI.*

Fresh gales and gentle airs  
Whispered it to the woods, and from their wings  
Flung rose, dung odours, from the spiky shrub  
*Disporting!*

*Milton.*

Loose to the winds their airy garments flew;  
The glittering textures of the filmy dew  
Dipt in the richest tincture of the skies,  
Where light *disports* in ever mingling dyes.

*Pope.*

DISPOSE, *v. a., v. n., & n. s.*

DISPOSER, *n. s.*

DISPOSITION,

DISPOSITIVE, *adj.*

DISPOSITIVELY, *adv.*

DISPOSURE, *n. s.*

*posui*, to place, à Gr. *pono*, to labour. To employ; place; order; give an impulse; taking to: to make fit; taking for; to transfer, put away, conduct: as a neuter verb, to make terms or a bargain: as a substantive, it signifies power; right or management; taking at or to; distributive: dispositive is distributive. The other substantives follow the verb, dispose, in their meaning.

The tabernacle of witnessyng was with our fadris  
in desert as god *disposide* to hem and spak to moises,  
that he schulde make it aftir the fourme that he saigh.

*Wiclif. Dedis. vii.*

The lot is cast into the lap; but the whole disposing  
thereof is of the Lord.

*Proverbs.*

These when the knights beheld, they gan *dispose*  
Themselves to court, and each a damsel chose.

*Spenser.*

But if thee list unto the court to throng,

And there to haunt after the hoped prey.

Then must thou thee *dispose* another way.

*Hubbard's Tale.*

Touching musical harmony, whether by instrument  
or voice, it being of high and low, in due proportion-  
able *disposition*, such notwithstanding is the force  
thereof, and so very pleasing effects it hath, in that  
very part of man which is most divine, that some have  
been thereby induced to think, that the soul itself by  
nature is, or hath in it, harmony.

*Hooker.*

As she is mine, I may *dispose* of her:

Which shall be either to this gentleman,

Or to her death.

*Shakespeare.*

When she saw you did suspect

She had *disposed* with Caesar, and that your rage

Would not be purged, she sent word she was dead.

*Id.*

I have suffered more for their sakes, more than the  
villanous inconstancy of man's *disposition* is able to  
bear.

*Id.*

He carries on the stream of his *dispos*

Without observance or respect of any.

In wit peculiar. *Id. Troilus and Cressida.*

I crave fit *disposition* for my wife.

Due reference of place and exhibition,

As levels with her breeding. *Id. Othello.*

Suspicious *dispos* kings to tyranny, husbands to  
jealousy, and wise men to irresolution and melancholy.

*Ramus.*

They must receive instructions how to *dispose* of  
themselves when they come, which must be in the  
nature of laws unto them.

*Id. to Villiers.*

They remained in a kind of warlike *dispos*, a  
perhaps little better.

*Watson.*

Whilst they murmur against the present *dispos* of  
things, they do tacitly desire in them a *dispos*  
from the primitive rule, and the idea of that *dispos*  
that formed all things best.

*Brounne's Vulgar Errors.*

That axiom in philosophy, that the generation of  
one thing is the corruption of another, although it is  
substantially true, concerning the form and *dispos*, is  
also *dispositively* verified in the efficient or producer.

*Id.*

How sweetly doth God *dispos* of all second causes  
that, while they do their own will, they do his!

*Bp. Hall. Contemplations.*

Tax not divine *dispos*; wisest men

Have erred, and by bad women been deluded.

*Milton.*

All is best, though oft we doubt

What the' unsearchable *dispos*

Of highest wisdom brings about,

And ever best found in the close.

*Milton. Agamemnon.*

He knew the seat of Paradise;

And, as he was *dispos*, could prove it

Below the moon, or else above it. *Hudibras.*

The memory of what they had suffered, by *dispos*  
without it, easily *dispos*ed them to do this.

*Chlorinda.*

I think myself obliged, whatever my private apprehensions  
may be of the success, to do my duty, and  
leave events to their *dispos*.

*Bep.*

Would I had been *dispos*ed of thy stars.

Thou shouldst have had thy wish, and died to win  
thyself.

Of all your goodness leaves to our *dispos*,

Our liberty's the only gift we chuse.

*Id. Indian Emper.*

Under this head of invention is placed the *dispos*  
of the work, to put all things in a beautiful order and  
harmony, that the whole may be of a piece.

*Id. Dufrenoy. Preface.*

In his *dispos*ure is the orb of earth.

The throne of kings, and all of human birth

*Scudg.*

This may *dispos* me, perhaps, for the reception of  
truth; but helps me not to it.

*Locke.*

We shall get more true and real knowledge by one  
rule, than by taking up principles, and thereby putting  
our minds into the *dispos*als of others.

*Id.*

*Disposition* is when the power and ability of doing  
any thing is forward, and ready upon every occasion  
to break into action.

*Id.*

All the reason of mankind cannot suggest any  
solid ground of satisfaction, but in making that God  
our friend, who is the absolute *dispos*er of all things.

*South.*

Although the frequency of prayer and fasting may  
be of no efficacy to *dispos* God to be more gracious,  
yet it is of great use to *dispos* us to be more *dispos* of  
his grace.

*Simonds.*

They require more water than can be found, and  
more than can be *dispos*ed of, if it was found.

*Bacon.*

Of what you gathered, as most your own, you  
have *dispos*ed much in works of public utility.

*Spence.*

Thus, whilst she did her various powers *dispos*,  
The world was free from tyrants, wars, and woes.

*Pratt.*

I have *dispos*ed of her to a man of business, who  
will let her see, that to be well dressed, is good

humour, and cheerful in her family, are the arts and sciences of female life. *Tatler.*

If mere moralists find themselves disposed to pride, lust, intemperance, or avarice, they do not think their morality concerned to check them. *Swift.*

I take myself to be as well informed as most men in the dispositions of each people towards the other. *Id.*

Refrangibility of the rays of light is their disposition to be refracted, or turned out of their way, in passing out of one transparent body or medium into another. *Newton.*

Are not the blessings both of this world and the next in his disposal? *Atterbury.*

The love we bear to our friends is generally caused by our finding the same disposition in them which we find in ourselves. *Pope.*

Bleeding is to be used or omitted according to the symptoms which affect the brain; it relieves in any inflammatory disposition of the coat of the nerve. *Arbuthnot on Diet.*

There is a sort of masonry in poetry, wherein the joint represents the joints of a building, which must in every line and course to have their disposition marked. *Shenstone.*

Under his fatherly rebukes then let us be ever humble and submissive. Such now is the true filial disposition. *Mason.*

DISPOSSESS, *v. a.* Dis and possess. To put out of possession; to deprive; to disseize.

The children went to Gilead, and took it, and dispossessed the Amorites which was in it. *Numbers xxvii. 39.*

The blow from saddle forced him to fly;  
Ere might it needs down to his manly breast  
Have cleft his head in twain, and life thence dispossat.  
*Spenser. Faerie Queene.*

I will chuse  
Mine heir from forth the beggars of the world,  
And dispossess her all. *Shakspeare. Timon.*

Let us sit upon the ground, and tell  
How some have been deposed, some slain in war,  
Some haunted by the ghosts they dispossessed.  
*Id. Richard II.*

In thee I hope; thy succours I invoke,  
To win the crown whence I am dispossessed;  
For like renown awaiteth on the stroke,  
To cast the haughty down, or raise the oppressed.  
*Fairfax.*

They arrogate dominion undeserved  
Over their brethren, and quite dispossess  
Concord and law of nature from the earth.  
*Milton.*

This inaccessible high strength, the seat  
Of Deity supreme, was dispossessed,  
He trusted to have cried. *Id.*

No power shall dispossess  
My thoughts of that expected happiness. *Denham.*

O fairest of all creatures, last and best  
Of what heaven made, how art thou dispossessed  
Of all thy native glories! *Dryden. State of Innocence.*

Nothing can create more trouble to a man than to endeavour to dispossess him of this conceit. *Tillotson.*

It will be found a work of no small difficulty to dispossess and throw out a vice from that heart, where long possession begins to plead prescription. *South.*

DISPRAISE, *v. a., & n. s.* Dis and praise.  
DISPRAIS'ER, *n. s.* To blame; cen-  
DISPRAISE'ABLE, *adj.* sure; dishonor:  
DISPRAIS'INGLY, *adv.* one who blames  
another: dispraisable is, unworthy of commenda-  
tion.

In praising Antony, I've dispraised Cæsar. *Shakspeare*

If I can do it  
By aught that I can speak in his dispraise,  
She shall not long continue love to him. *Id.*  
Michael Cassio<sup>1</sup>

That came a wooing with you: many a time,  
When I have spoke of you dispraisingly,  
Hath ta'en your part. *Id. Othello.*

Nothing is here for tears, nothing to wail  
Or knock the breasts; no weakness; no contempt,  
Dispraise, or blame. *Milton's Agonistes.*

I need not raise  
Trophies to thee from other men's dispraise. *Denham*

Looks fright not men: the general has seen Moors  
With as bad faces; no dispraise to Bertran's. *Dryden.*

The critics, while they like my wares, may dis-  
praise my writing. *Spectator.*

My faults will not be hid, and can be no dispraise  
to me that they will not; the clearness of one's mind  
is never better proved than in discovering its own  
faults. *Pope.*

DISPREAD, *v. a.* Dis and spread. To  
DISPREAD'ER, spread different ways.  
in this word, and a few others, says Johnson  
truly, *dis* has the same force as in Latin com-  
position, and means different ways.

As morning sun her beams dispreaden clear,  
And in her face fair truth and mercy doth appear  
*Spenser.*

Over him art, striving to compare  
With nature, did an arbour green dispread,  
Framed of wanton ivy, flowing fair,  
Through which the fragrant eglantine did spread  
His pricking arms, entrail'd with roses red. *Id.*

Above, below, around, with art dispread,  
The sure enclosure folds the genial bed.  
*Pope's Odyssey.*

DISPROFIT, *n. s.* Dis and profit. Loss;  
damage; detriment.

DISPROOF, *n. s.* Dis and proof. Confu-  
tation; conviction of error or falsehood.

His remark contains the grounds of his doctrine,  
and offers at somewhat towards the disproof of mine.  
*Atterbury.*

I need not offer any thing farther in support of  
one, or in disproof of the other. *Rogers.*

DISPROPERTY, *v. a.* Dis and property.  
To dispossess of any property.

DISPROPORTION, *v. a. & n. s.* Dis and  
DISPROPORTIONABLE, *adj.* proportion.  
DISPROPORTIONABLENESS, *n. s.* To  
DISPROPORTIONABLY, *adv.* apportion. To  
DISPROPORTIONATE, *adj.* or join un-  
DISPROPORTIONATELY, *adv.* fitly, or  
DISPROPORTIONATE, *adj.* without  
DISPROPORTIONATELY, *adv.* symmetry;  
DISPROPORTIONATENESS, *n. s.* disproportion.

tionable is unsuitable in the parts, or in compa-  
rison: disproportional and disproportionate  
seem to express the same idea, and the adverbs  
follow these adjectives in their meaning.

There sits deformity to mock my body,  
To shape my legs of an unequal size,  
To *disproportion* me in every part. *Shakespeare.*

Had the obliquity been greater, the earth had not  
been able to endure the *disproportionable* differences  
of season. *Browne.*

Musick craveth your acquaintance: many are of  
such *disproportioned* spirits, that they avoid her com-  
pany. *Peacham.*

We on earth, with undiscording voice,  
May rightly answer that melodious noise;  
As once we did, till *disproportioned* sin  
Jarred against nature's chime. *Milton.*

Perhaps, from greatness, state and pride,  
Thou surprised, she may fall:  
Sleep does *disproportion* hide,  
And, death resembling, equals all. *Waller.*

For their strength,  
The *disproportion* is so great, we cannot but  
Expect a fatal consequence. *Denham's Sophy.*

We have no reason to think much to sacrifice to  
God our dearest interests in this world, if we consider  
how *disproportionably* great the reward of our suf-  
ferings shall be in another. *Tillotson.*

We are apt to set too great a value on temporal  
blessings, and have too low and *disproportionable* es-  
teem of spiritual. *Smalridge.*

None of our members are crooked or distorted, or  
*disproportionate* to the rest, either in excess or defect.  
*Ray.*

It is plain that men have agreed to a *dispropor-  
tionate* and unequal possession of the earth. *Locke.*

Distance and men's fears have so enlarged the  
truth, and so *disproportioned* every thing, that we have  
made the little troop of discontents a gallant army,  
and already measured by the evening shadow. *Suchling.*

There is no wine of so strong a body as to bear  
such a *disproportionable* quantity of water as sixty.  
*Broom.*

That we are designed for a more exalted happiness  
than can be derived from the things of this life, we  
may infer from their vast *disproportion* to the desires  
and capacities of our soul. *Rogers.*

DISPROVE, *v. a.* } Dis and prove. To  
DISPROVER, *n. s.* } confute; to convict of  
error or falsehood. A disprove, as well as ex-  
pressing this sense, seems corruptly used by  
Wotton for disapprover.

This exposition they plainly *disprove*, and shew by  
manifest reason, that of David the words of David  
could not possibly be meant. *Hooker.*

This Westmoreland maintains,  
And Warwick shall *disprove* it. *Shakespeare.*

The single example that our annals have yielded  
of two extremes, within so short time, by most of the  
same commanders and *disprovers*, would require no  
slight memorial. *Wotton.*

It is easier to affirm than to *disprove*. *Holzer.*

The traitor's odious name  
I first return, and then *disprove* thy claim.  
*Dryden's Fables.*

That false supposition I advanced in order to *dis-  
prove* it, and by that means to prove the truth of my  
doctrine. *Atterbury.*

The cit—a common-council-man by place  
Ten thousand mighty nothings in his face,  
By situation as by nature great,  
With nice precision parcels out the state;

Proves and *disproves*, affirms and then denies  
Objects himself, and to himself replies. *Churchil.*

DISPUNISHABLE, *adj.* Dis and punish-  
able. Without penal restraint.

No leases of any part of the said lands shall be  
made, other than leases for years not exceeding  
thirty-one in possession, and not in reversion or re-  
mainder, and not *dispunishable* of waste. *Swift's Last Will.*

DISPURGE', *v. a.* Dis and purge; *disburs*  
used expletively. To cleanse or purge.

Thou, then, that hast *dispurged* our score,  
And dying wert the death of death,  
Be now, whilst on thy name we call,  
Our life, our strength, our joy, our all' *Waller.*

DISPURSE, *v. a.* Dis and purse. To per-  
to disburse. 'It is not certain that the following  
passage should not be written disburse,' says  
Johnson.

Many a pound of my own proper store,  
Because I would not tax the needy commons,  
Have I *dispursed* to the garrisons,  
And never asked for restitution. *Shakespeare. Henry VI.*

DISPUTE', *v. a., v. n. & n. s.* } *Fe* *dis*  
DISPUT'ABLE, *adj.* } *ter*; *Spas*  
DISPUTANT, *n. s. & adj.* } *and* *Pena*  
DISPUTATION, } *disputa*  
DISPUTATIOUS, *adj.* } *tion* *and* *dis*  
DISPUTATIVE, *adj.* } *disputa*  
DISPUTELESS, *adj.* } *tion* *and* *dis*  
DISPUTER, *n. s.* } *disputa*  
from *dis* (diversely) and *pulo*, to think. To con-  
tend for; discuss: as a neuter verb, to *debate*,  
argue; controvert: as a noun, contest; contro-  
versy; quarrel. Disputable means both *able*  
to be contested, and fond of disputation. Dis-  
putations and disputative have a similar sense  
to this last. Disputer and disputant are synony-  
mous; and disputeless means incontestable.

Things were *disputed* before they came to be *deci-*  
determined: men afterwards were not to *dispute* any  
longer, but to obey. *Huter.*

*Dispute* it like a man.

— I shall do so;

But I must also feel it as a man. *Shakespeare. Mark.*

Now was I called to public *disputations* often, with  
no ill success. *Bp. Hall's Account of himself.*

Thou there wast found  
Among the gravest rabbies, *disputations*  
On points and questions fitting *Moses'* chair. *Milton.*

Well do I find, by the wise knitting together of  
your answer, that any *disputation* I can use is as much  
too weak as I unworthy. *Sidney.*

So *dispute* the peer.

As if you fought before Cydaria's eyes.

The question being about a fact, it is begging to  
bring as a proof an hypothesis which is the very thing  
in dispute. *Locke.*

Notwithstanding these learned *disputations*, it was  
the unscholastic statesman that the world reverenced  
peace, defence and liberties. *Locke.*

If they are not in themselves *disputable*, why are  
they so much *disputed*? *Locke.*

are vehement *disputers* against the heathen  
*Stillingsfleet.*

Twist can pretend no obligation of conscience,  
should *dispute* against religion. *Tillotson.*

opponents put me in mind of the skuttle fish,  
as he is unable to extricate himself, blackens  
water about him till he becomes invisible.

*Spectator.*

He must be of a very *disputatious* temper, that  
to state controversies with any of the fair sex.

*Addison.*

Every point is determined to be a law, it re-  
sults by every subject. *Swift.*

Earth is now placed so conveniently, that plants  
and flourish in it, and animals live; this is  
fact, and beyond all *dispute*. *Bentley.*

St Paul and Barnabas *dispute* with vehemence  
every little point of conveniency? *Atterbury.*

Conclusions have generally obtained, and have  
been acknowledged even by *disputers* themselves, till  
now they had stifled their convictions.

*Rogers.*

Is this practice might not so easily be per-  
suaded to raise a cavilling *disputative*, and sceptical  
in the minds of youth.

*Watts's Improvement of the Mind.*

Nothing displays a genius (I mean a quick-  
ness) more than a *dispute*; as two diamonds  
spark, contribute to each other's lustre. But,  
the odds is much against the man of taste,  
and acuteness. *Shenstone.*

The capacity of sitting in parliament, after all  
debates for voting, for the army, for the navy,  
for civil officers, are conceded, it  
is de lana caprina, in my poor opinion, at  
the part of those who oppose it. *Burke.*

Heathens! But no, twas nothing, or the last.  
His life *disputes* with death. *Byron.*

QUALIFY, *v. a.* } Dis and qualify.  
QUALIFICATION, *n. s.* } To make unfit; to  
be by a natural or legal impediment.

Persons as shall confer benefices on unworthy  
qualified persons, after a notice or correction  
shall fail for that turn be deprived of the power of  
giving unto such benefices. *Ayliffe's Parergon.*

There is no employment for which piety *disqualifies*.

*Swift.*

Common illness utterly *disqualifies* me for all  
debate; I mean my deafness. *Id.*

The Church of England is the only body of Christians  
*disqualifies* those, who are employed to preach  
law, from sharing in the civil power, farther  
benefactors. *Id. on the Sacramental Test.*

Recorded as a sufficient *disqualification* of a  
man, speaking of her husband, she said, God  
knows. *Spectator.*

Power of a member of parliament is uncertain  
power; and if power rather than splendour and  
to the object, I should think that any of the  
clerks in office, (to say nothing of their super-  
iors) of whom are *disqualified* by law for seats  
in parliament, possess far more power than nine-tenths  
members of the House of Commons. *Burke.*

QUANTITY, *v. a.* Dis and quantity.  
to diminish. Not used.

Be entreated

to *disquantity* your train;  
the remainders, that shall still depend,  
such men as may desert your age. *Shakespeare.*

DISQUIET, *v. a., n. s., & adj.*

DISQUIETER, *n. s.*

DISQUIETLY, *adv.*

DISQUIETNESS, *n. s.*

DISQUIETUDE.

fret. The substantives are synonymous.

Why art thou so vexed, O my soul? and why art  
thou so *disquieted* within me. *Psalms.*

All otherwise, said he, I riches rede,  
And deem them root of all *disquietness*.

*Faerie Queene.*

Arius won to himself both followers and great de-  
fenders; whereupon much *disquietness* ensued.

*Hooker.*

I pray you, husband, be not so *disquiet*;  
The meat was well if you were so content.

*Shakespeare.*

Treachery, and all ruinous disorders, follow us *dis-*  
quietly to our graves. *Id. King Lear.*

If we give way to our passions, we do but gratify  
ourselves for the present, in order to our future *dis-*  
quiet. *Tillotson.*

Thou happy creature, art secure  
From all the torments we endure;  
Despair, ambition, jealousy,  
Lost friends, nor love, *disquiets* thee.

*Roscommon.*

Contentment produces, in some measure, all those  
effects which the alchymist usually ascribes to what he  
calls the philosopher's stone; and if it does not bring  
riches, it does the same thing by banishing the desire  
of them. If it cannot remove the *disquietudes* arising  
from a man's mind, body, or fortune, it makes him  
easy under them. *Addison.*

I had rather live in Ireland than under the fre-  
quent *disquiets* of hearing you are out of order.

*Swift.*

He rested *disquietly* that night; but in the morning  
I found him calm. *Wicman.*

DISQUISITION, *n. s.* Lat. *disquisition*  
Examination; disputative enquiry.

God hath reserved many things to his own re-  
velation, whose determinations we cannot hope from flesh;  
but with reverence must suspend unto that great  
day, whose justice shall either condemn our curiosity,  
or resolve our *disquisitions*. *Brown.*

The royal society had a good effect, as it turned  
many of the greatest geniuses of that age to the *dis-*  
quisitions of natural knowledge. *Addison's Spectator.*

'Tis indeed the proper place for this *disquisition*  
concerning the antediluvian earth.

*Woodward's Natural History.*

The nature of animal diet may be discovered by  
taste, and other sensible qualities, and some general  
rules, without particular *disquisition* upon every kind.

*Arbuthnot.*

I am apprehensive that I shall not be able to find  
leisure for making all the *disquisitions* and experiments  
which would be desirable on this subject. [Swimming.]  
I must, therefore, content myself with a few remarks.

*Franklin.*

DISRANK, *n. a.* Dis and rank. To de-  
grade from his rank

DISREGARD, *v. a. & n. s.*

DISREGARDFUL, *adj.*

DISREGARDFULLY, *adv.* } Dis and re-  
gard. To treat  
with slight no-  
tice or neglect; contempt.

Since we are to do good to the poor, to strangers, to  
enemies, those whom nature is too apt to make us

despise, *disregard*, or hate, then undoubtedly we are to do good to all. *Sprat.*

Those fests which God hath *disregarded* hitherto, he may regard for the time to come. *Smalridge.*

Studious of good, man *disregarded* fame,  
And useful knowledge was his eldest aim.

*Blackmore.*

**DISRELISH**, *v. a. & n. s.* *Dis* and *relish*.  
To make, or feel a distaste: bad taste; nauseous-

Often they assayed,  
Hunger and thirst constraining; drugged as oft  
With hatefullest *disrelish*, writhed their jaws  
With soot and cinders filled. *Milton.*

Fruits of taste to please  
True appetite, and not *disrelish* thirst  
Of nectarous draughts between, from milky stream.

*Id.*

Bread or tobacco may be neglected, where they are shewn not to be useful to health, because of an indifferency or *disrelish* to them. *Locke.*

The same anxiety and solicitude that embittered the pursuit, *disrelishes* the fruition itself. *Rogers.*

The world is become too busy for me: every body is so concerned for the publick, that all private enjoyments are lost, or *disrelished*. *Pope.*

**DISREPUTE**, *n. s.* } *Dis* and *reputation*.  
**DISREPUTATION**, *n. s.* } Disgrace; dishonor;  
want of reputation.

I will tell you what was the course in the happy days of queen Elizabeth, whom it is no *disreputation* to follow. *Bacon.*

The king fearing lest that the bad success might discourage his people, and bring *disreputation* to himself, forbade any report to be made. *Haywood.*

Gluttony is not of so great *disreputation* amongst men as drunkenness. *Taylor's Holy Living.*

How studiously did they cast a slur upon the king's person, and bring his governing principles under a *disrepute*. *South.*

**DISRESPECT**, *n. s.* } *Dis* and *respect*.  
**DISRESPECTFUL**, *adj.* } Incivility; want of  
**DISRESPECTFULLY**, *adv.* } reverence; irreverence; rudeness.

Any *disrespect* to acts of state, or to the persons of statesmen, was in no time more penal. *Clarendon.*

Aristotle writ a methodical discourse concerning these arts, chusing a certain benefit before the hazard that might accrue from the vain *disrespects* of ignorant persons. *Wilkins.*

What is more usual to warriors than impatience of bearing the least affront or *disrespect*? *Pope.*

We cannot believe our posterity will think so *disrespectfully* of their great grandmothers, as that they made themselves monstrous to appear amiable. *Addison's Spectator.*

**DISROBE**, *v. a.* *Dis* and *robe*. To undress; to uncover; to strip.

The holy saints of their rich vestments  
He did *disrobe*, when all men careless slept,  
And spoiled the priests of their habilitments.

*Spenser. Faerie Queene.*

Kill the villain straight,  
*Disrobe* him of the matchless monument,  
Thy father's triumph o'er the savages.

*Shakspeare. King John.*

These two great peers were *disrobed* of their glory, the one by judgment, the other by violence. *Wotton.*

Who will be prevailed with to *disrobe* himself at once of all his old opinions, and pretences to know-

ledge and learning, and turn himself out stark naked in quest afresh of new notions? *Locke.*

When the trees are all bare, not a leaf to be seen,  
And the meadows their beauty have lost,  
When Nature's *disrobed* of her mantle of green,  
And the streams are fast bound with the frost.

*Bysshe.*

**DISRUPTION**, *n. s.* *Lat. disruptio.* The act of breaking asunder: the breach made.

This secures them from *disruption*, which they would be in danger of, upon a sudden stretch or distortion. *Ray.*

The agent which effected this *disruption*, and location of the strata, was seated within the core. *Woodward.*

If raging winds invade the atmosphere,  
Their force its curious texture cannot tear,  
Nor make *disruption* in the threads of air.

*Blackmore.*

**DISSATISFY**, *v. a.* } *Dis* and *satisfy*.  
**DISSATISFACTION**, *n. s.* } To displease, or  
**DISSATISFACTORY**, *adj.* } content; a  
**DISSATISFACTORINESS**, *n. s.* } please: *dissat-*  
faction is the state of being dissatisfied: *dissat-*  
factory, and dissatisfactoriness, express matter  
to give satisfaction.

He that changes his condition, out of impatience and *dissatisfaction*, when he has tried a new one, wishes for his old again. *L'Estrange.*

I still retain some of my notions, after your ship's having appeared *dissatisfied* with them. *Locke.*

The ambitious man has little happiness, but is subject to much uneasiness and *dissatisfaction*. *Addison's Spectator.*

In vain we try to remedy the defects of our occupation, by varying the object: the same *dissatisfaction* pursues us through the circle of created goods. *Rogers.*

The advantages of life will not hold out to the length of desire; and, since they are not big enough to satisfy, they should not be big enough to disappoint. *Catlin.*

If we see a universal spirit of distrust and *dissatisfaction*, a rapid decay of trade, dissensions in all parts of the empire, we may pronounce, without hesitation, that the government of that country is weak, *dissatisfied*, and corrupt. *Johnson.*

**DISSECT**, *v. a.* } *Fr. disséquer*: Lat. *dis-*  
**DISSECTION**, *n. s.* } *secare*, from *dis* and *secare*.  
**DISSECTOR**, *n. s.* } to carve or cut. To divide  
an animal body into its parts: applied also figuratively.

Let no man say, the world itself being dead,  
'Tis labour lost to have discovered

The world's infirmities, since there is none  
Alive to study this *disssection*. *Dennis.*

She cut her up; but, upon the *disssection*, levelled  
just like other hens. *L'Estrange.*

No mask, no trick, no favour, no reserve;  
*Dissect* your mind, examine every nerve.

*Reverend.*

Critics to plays for the same end reason,  
That surgeons wait on trials in a court:  
For innocence condemned they've no respect,  
Provided they've a body to *disssect*. *Conner.*

Such strict enquiries into nature so true and perfect a *disssection* of human kind, is the mark of extraordinary diligence. *Locke.*

Following life in creatures we dissect,  
We lose it in the moment we detect. Pope.

With strict propriety their care's confined  
To weigh out words, while passion halts behind :  
To syllable-dissectors they appeal,  
Allow their accent, cadence,—fools may feel.  
Churchill.

I shall enter upon the dissection of a coquet's heart,  
and communicate that curious piece of anatomy.

Addison.

**DISSEISE', v. a.** From Fr. *dessaisir*, i. e. action; *de saisir* an action concerning seizing. To dispossess; deprive of legal right. See the following articles on DISSEISIN and DISSEISON.

He so dissembled of his gripping gross,  
The knight his thrilant spear again assayed,  
In his brass-plated body to emboss.

Faerie Queene.

If a prince should give a man, besides his ancient patrimony which his family had been dissembled of, an additional estate, never before in the possession of his ancestors, he could not be said to re-establish lineal succession. Locke.

**DISSEISIN**, in law, an unlawful dispossessing a man of his land, tenement, or other immovable and incorporeal right. It is a species of injury by ouster, or a privation of the freehold, consisting in a wrongful putting out of him that is seised of the freehold. It differs from abatement and intrusion, which denote a wrongful entry where the possession was vacant, by its being an attack upon him who is in actual possession, and turning him out of it. The former were an ouster from a freehold in law, this is an ouster from a freehold in deed. Disseisin may be effected either in corporeal inheritances, or incorporeal. Disseisin of things corporeal, as of houses, lands, &c., must be by entry and actual dispossession of the freehold (Co. Litt. § 181); as if a man enters either by force or fraud into the house of another, and turns, or at least keeps, him or his servants out of possession. Disseisin of incorporeal hereditaments cannot be an actual dispossession; for the subject itself is neither capable of actual bodily possession, nor dispossession; but it depends on their respective natures and various kinds; being, in general, nothing more than a disturbance of the owner in the means of coming at, or enjoying them. With regard to freehold rent in particular, our ancient law-books (Finch. L. 165, 166 Litt. § 237, &c.) mention five methods of working a disseisin thereof:—1. By enclosure; where the tenant so encloseth the house or land, that the lord cannot come to distress thereon, or demand it. 2. By forestaller, or lying in wait; when the tenant besetteth the way with force and arms, or by menaces of bodily hurt, affrights the lessor from coming. 3. By rescous; that is, either by violently retaking a distress taken, or by preventing the lord, with force and arms, from taking any at all. 4. By replevin; when the tenant replevies the distress at such time when his rent is really due. 5. By distress; which is, when the rent being lawfully demanded, is not paid. All, or any of these circumstances amount to a disseisin of rent; that is, they wrongfully put the owner out of the only possession, of which the subject matter is capa-

ble, namely, the receipt of it. But all these disseisins of hereditaments incorporeal, are only so at the election and choice of the party injured; if, for the sake of more easily trying the right he is pleased to suppose himself disseised. (Litt. § 588, 589.) Otherwise, as there can be no actual dispossession, he cannot be compulsively disseised of any incorporeal hereditament. Thus also, even in corporeal hereditaments, a man may frequently suppose himself to be disseised, when he is not so in fact, for the sake of entitling himself to the more easy and commodious remedy of an assise of novel disseisin, instead of being driven to the more tedious process of a writ of entry. (4 Burr. 110.)

The true injury of compulsive disseisin seems to be that of dispossessing the tenant, and substituting one's self to be the tenant of the land in his stead; in order to which, in the times of pure feudal tenure, the consent or connivance of the lord, who, upon every descent or alienation, personally gave, and who, therefore, alone could change the seisin or investiture, seems to have been considered as necessary. But when, in process of time, the feudal form of alienations was off, and the lord was no longer the instrument of giving actual seisin, it is probable that the lord's acceptance of rent or service, from him who had dispossessed another, might constitute a complete disseisin. Afterwards, no regard was had to the lord's concurrence, but the dispossessor himself was considered as the sole disseisor; and this wrong was then allowed to be remedied by entry only, without any form of law, or against the disseisor himself; but required a legal process against his heir or alienee. And when the remedy by assise was introduced, under Henry II., to redress such disseisins as had been committed within a few years next preceding, the facility of that remedy induced others, who were wrongfully kept out of the freehold, to feign, or allow themselves to be disseised, merely for the sake of the remedy. Blackst. Comm. book iii. ch. 10.

If a feme sole be seised of lands in fee, and is disseised, and then taketh husband; in this case the husband and wife, as in right of the wife, have right to enter, and yet the dying seised of the disseisor shall take away the entry of his wife after the death of the husband. (Co. Litt. 246.) If a person disseises me, and, during the disseisin, he or his servants cut down the timber growing upon the land, and afterwards I re-enter into the land, I shall have action of trespass against him; for the law, as to the disseisor and his servants, supposes the freehold to have been always in me: but if the disseisor be disseised by another, or if he makes a feoffment, gift in tail, lease for life or years, I shall not have an action against the second disseisor, or against those who come in by title: for all the meane profits shall be recovered against the disseisor himself. (11 Rep. 52. Keilw. 1.)

By Magna Charta, 9 Henry III., c. 29, no man is to be disseised, or put out of his freehold, but by lawful judgment of his peers, or by the law of the land; and by stat. 32 Henry VIII. c. 33, the dying seised of any disseisor of, or in any lands, &c., having no right therein, shall not

be a descent in law, to take away an entry of a person having lawful title of entry, except the disseisor hath had peaceable possession five years, without entry or claim by the person having lawful title.

According to some writers, disseisin is of three sorts, viz. simple disseisin, committed by day, without force and arms: and disseisin by force, and fresh disseisin. Assises are called writs of disseisin, which lie against disseisors in any case: whereof some are termed little writs of disseisin, as being vicontial, that is, suable before the sheriff in the county court, because determinable by him without assise.

DISSEISOR is he who disseiseth, or puts another out of his land: as the disseisee is he who is put out. If a disseisor, after he has expelled the right owner, gains peaceable possession of the lands five years without claim, and continues in possession, so as to die seised, and the land descends to his heirs, they will have a right to the possession till the owner recovers at law; and the owner shall lose his estate for ever, if he doth not prosecute his suit within the time limited by the statute of limitations.

And if a disseisor levy a fine of the land whereof he is disseised unto a stranger, the disseisor shall keep the land for ever; for the disseisor against his own fine cannot claim, and the donee cannot enter, and the right which the disseisor had, being extinct by the fine, the disseisor shall take advantage of it. (2 Rep. 56.) But this is to be understood, where no use is declared of the fine by the disseisee; when it shall enure to the use of the disseisor, &c. (1 Lev. 128.) A disseisor in assise, where damages are recovered against him, shall recover as much as he hath paid in rents chargeable on the lands before the disseisin. (Jenk. Cent. 189.) But if the disseisor or his feoffee sows corn on the land, the disseisee may take it before or after severance. (Dyer 31. 173. 11 Rep. 46.) Where a man hath a house in fee, &c., and locks it, and then departs; if another person comes to his house, and takes the key of the door, and says that he claims the house to himself in fee, without any entry into the house, this is a disseisin of the house. (2 Danv. Abr. 624.) If the feoffor enters on the land of the feoffee, and makes a lease for years, &c., it is a disseisin; though the intent of the parties to the feoffment was, that the feoffee should make a lease to the feoffor for life. (2 Rep. 59.) If lessee for years is ousted by his lessor, this is said to be no disseisin. (Cro. Jac. 678.) A man who enters on another's land, claiming a lease for years, who hath not such lease, is a disseisor; though if a man enters into the house of another by his sufferance, without claiming any thing, it will not be a disseisin. (9 Henry VI., 21, 31. 2 Danv. 625.) If a person enters on lands by virtue of a grant or lease, that is, void in law, he is a disseisor. (2 Danv. 630.) As the king in judgment of law can do no wrong, he cannot be a disseisor. (1 Ed. V. 8.) A disseisor is to be fined and imprisoned; and the disseisee restored to the land, &c., by stat. 20, Henry III. c. 3. Where a disseisor is disseised, it is called disseisin upon disseisin.

DISSEMBLE, *v. a. & v. n.*

DISSEMBLER, *n. s.*

DISSEMBLING, *n. s.*

DISSEMBLINGLY, *adv.*

*dissemblare*, from *dis* privative, and *simulare* to feign that not to be which is sheu.

Ye *dissembled* in your hearts when ye said the Lord your God, saying, Pray for us

*Jeremiah*

Your son Lucenio

Doth love my daughter, and she loveth

Or both *dissemble* deeply their affection

*Shakespeare*

I that am curtailed of this fair proportion

Cheated of feature by *dissembling* nature

Deformed, unfinished.

*Id. Richard III.*

Such an one, whose virtue forbiddeth to base and a *dissembler*, shall evermore hang in wheel.

The French king, in the business of peace, greater *dissembler* of the two.

*Bacon, Henry IV.*

She answered, that her soul was God-reouching her faith, as she could not change would not *dissemble* it.

Man is to man all kind of beasts; a false roaring lion, a thieving fox, a robbing *dissembling* crocodile, a treacherous decay, and a vicious vulture.

Thy function too will varnish o'er our

And sanctify *dissembling*.

*Roscoe's Ambitious Step*

If the show of any thing be good for an am sure sincerity is better; for why does *dissemble*, or seem to be that which he is, because he thinks it good to have such a quality pretends to?

In vain on the *dissembled* mother's tongue

Had cunning art and sly persuasion hung

And real care in vain, and native love,

In the true parents panting breast had stung

Men will trust no farther than they judge for sincerity fit to be trusted: a discovered can achieve nothing great and considerable.

It is true indeed that we should not *dissemble* flatter in company; but a man may be very strictly consistent with truth and sincerity, in silent silence where he cannot concur, and assent where he can.

They are the happiest, who *dissemble*

Their weariness; and they the most polite

Who squander time and treasure with a

Though at their own destruction.

be the reason of this general dissent  
of the resurrection, seeing that al-  
did believe the immortality of the  
*Bentley's Sermons.*

Of the comprehensiveness of  
designating, in strict language, all  
opinion from the Established  
of our readers can be altogether ig-  
Justice Blackstone considers a

cognate legal term, non-conformists, as embrac-  
ing all who absent themselves from the public  
worship of the Church, whether, 1. Through total  
irreligion, they attend the service of no other  
persuasion; or, 2. Through a mistaken zeal,  
'weakness of intellect,' or 'perverseness and  
acerbity of temper, which,' he adds, 'is often  
the case, they unite in worship with other  
communities, 'herding with a party.' This latter  
class of dissenters is divisible again, according to  
the same learned authority, into 'the papists,'  
who divide from the national church, 'upon ma-  
terial though erroneous reasons,' and the Pro-  
testant Dissenters, many of whom divide from it  
'upon matters of indifference; or, in other words,  
upon no reason at all.'

These terms in fact, then, though constantly  
used to describe large bodies of religionists, are  
neither of them, religious terms: they simply  
express the political relation of a heterogeneous  
multitude of their fellow-subjects to the estab-  
lished church; a multitude including the wide  
extremes of the devout catholic and the avowed  
unbeliever; the Paineite and the Southcotte;  
the ultra-Calvinist and the rational Unitarian.  
They are terms too, which, unlike the vast ma-  
jority of those in our Lexicon, we trust, will be  
found to vary in their meaning according to that  
particular part or subdivision of our common,  
happy country in which these observations may  
meet the eye of our readers. In England, for  
instance, his majesty's good and acute subjects  
of the kirk of Scotland, in common with the  
other Presbyterians, are dissenters; in Scotland,  
the Episcopalian of the ever-loyal church of  
England is a dissenter; in Canada, the Protes-  
tant of whatever denomination; all of them in  
their respective situations, in the places 'afore-  
said,' and for reasons by them deemed 'mate-  
rial' or 'no reason at all,' dividing from the estab-  
lished church.

We can only, therefore, in this place affix to  
so vague a term its more common and popular  
meaning. Connected necessarily with no religion,  
as we, after Mr. Justice Blackstone, contend, it  
has still too much of the savour of piety about  
it to be affiliated by the unbeliever; on the other  
hand it has too little of antiquity and dignity to  
be acknowledged by the consistent Catholic; to  
the Protestant dissenters, therefore, whatever the  
sages of the law may determine, and whatever  
may be its unhappy or discreditable associations,  
it seems, at last to belong: they are THE DIS-  
SENTERS of common parlance; and we propose,  
therefore, to offer to our readers in this paper,  
1st, Some account of their existing legal situa-  
tion and rights; 2dly. Of the principles com-  
mon to this body as separatists from the establish-  
ment; and, 3dly. Of their political history.

1. Of the legal situation of Dissenters.—The  
basis of the existing law of England, on the sub-  
ject of separatists, is still to be found in the sta-  
tutes of 1 Eliz. c. 2. §. 14.; 23 Eliz. c. 1.; and  
29 Eliz. c. 6. The first of these enacts, that every  
person, not having reasonable excuse, shall resort  
to his parish church or chapel, or upon reason-  
able let thereof to some usual place where com-  
mon prayer shall be used, on every Sunday and  
holiday, on pain of punishment by the censures

of the church, or of forfeiting, for every offence, 12*d*. The second, that every person above the age of sixteen, who shall not repair to some church or chapel, or usual place of common prayer, shall forfeit for every month £20; and if he shall forbear for twelve months, he shall be bound to the good behaviour till he conform. The third, that every offender in not repairing to church, having been once convicted, shall, without any other indictment or conviction, pay half yearly into the exchequer £20 for every month afterwards till he conform; which if he shall omit to do, the king may seize all his goods, and two parts of his lands. And by 3 Jac. I. c. 4, §. 11, the king may refuse the £20 a month, and take two parts of the land at his option.

By the 3 Jac. I. c. 5, no recusant, not repairing to church, being convicted thereof, shall enjoy any public office; or shall practise law or physic, or be executor, administrator, or guardian. And by the 35 El. c. 1, if any person refusing to repair to church, shall be present at any assembly, meeting, or conventicle, under pretence of any exercise of religion, he shall be imprisoned till he conform; and if he shall not conform in three months, he shall abjure the realm, which if he shall refuse to do, or after abjuration shall not go, or shall return without license, he shall be guilty of felony, without benefit of clergy. And whether he shall abjure or not, he shall forfeit his goods and his lands during life.

These severe injunctions and penalties are suspended, but not repealed, by the celebrated Toleration Act, 1 W. & M. st. 1. c. 18, 'for exempting their majesty's protestant subjects, dissenting from the church of England, from the penalties of certain laws;' which is confirmed by stat. 10 An. c. 2, and declares that neither the laws above-mentioned, nor any other penal laws made against popish recusants (except the corporation and test acts), shall extend to any dissenters, other than papists, and such as deny the Trinity: provided, 1. That they take the oaths of allegiance and supremacy (or make a similar affirmation, being Quakers—see stat. 8 Geo. I. c. 6); and subscribe the declaration against popery. 2. That they repair to some congregation certified to, and registered in, the court of the bishop or archdeacon, or at the county sessions. 3. That the doors of such meeting-house shall be unlocked, unbarred, and unbolted; in default of which the persons meeting there are still liable to all the penalties of the former acts.

The offence of non-conformity is therefore not to be considered as legally abrogated, although it 'ceases to exist,' as Blackstone says, 'with regard to protestant dissenters, during their compliance with the condition imposed by the act of toleration: and, under these conditions, all persons, who will approve themselves no papists or oppugners of the Trinity, are left at full liberty to act as their consciences shall direct them in the matter of religious worship. And if any person shall wilfully, maliciously, or contemptuously disturb any congregation, assembled in any church or permitted meeting-house, or shall misuse any preacher or teacher there, he shall (by virtue of the same statute), be bound over to the sessions of the peace, and forfeit £20. But by statute 5 Geo. I. c. 4, no mayor or principal

magistrate must appear at any dissenting assembly with the ensigns of his office, on pain of liability to hold that or any other office, the judges judging it a matter of propriety, that a new worship set up in opposition to the ~~times~~ when allowed to be exercised in peace, should be exercised also with decency, gratitude, and humility. Neither doth the act of toleration tend to enervate those clauses of the statutes 13 and 14 Car. II. c. 4, and 17 Car. II. which prohibit (upon pain of fine and imprisonment), all persons from teaching school, and they be licensed by the ordinary, and submit a declaration of conformity to the liturgy of a church, and reverently frequent divine service established by the laws of the kingdom.'

Since the time of Blackstone, by stat. 13 Geo. III. c. 160, so much of 1 W. & M. st. 1. c. 18, which excepts persons denying the Trinity, from the benefit of that act, and so much of stat. 13 Geo. III. c. 32, as imposes penalties on persons denying the Trinity, are repealed. 57 Geo. III. c. 70, also repeals the like provisions of the act 6 Geo. I. c. 5.

So far, therefore, has our statute-book been cleared of all that directly or practically imposed penal restrictions on Protestant dissenters in the exercise of their religion. But important barriers are still placed around them in regard to what they consider as their civil rights. By statute 13 Car. 2, st. 2, c. 1, usually called the Corporation Act, disqualifies for offices near to the government of any city or corporation such as have not, within a twelvemonth after their election, received the sacrament of the Lord's Supper, according to the rites of the church of England (enjoining also the oath of allegiance and supremacy); and the 25 Car. II. c. 2, commonly called the Test Act, disqualifies officers civil and military, to take the oath, or make the declaration against transubstantiation six months after their admission, and also at the same time to receive the sacrament of the Lord's Supper, according to the usage of the church of England. If, without taking this sacramental qualification within the time prescribed by the act, a person continues to occupy a civil office, or to hold a military commission, and is lawfully convicted, then he is disabled, from thenceforth, for ever, from bringing any action in course of law, from prosecuting any suit in any court of equity, from being guardian of a child, or executor or administrator of any person, as well as from receiving any legacy. Such is the legal situation of the dissenting laity.

Dissenting teachers in order to be exempted from the penalties of the statutes 13 and 14 Car. II. c. 1; 15 Car. II. c. 6, must subscribe the articles of religion mentioned in stat. 13 Car. II. c. 12 (which only concern the confession of the true Christian faith, and the doctrine of the sacraments); with an express exception of those relating to the government and powers of the church, and to infant baptism; or, if they are able to subscribe the same, are to make and subscribe the declaration prescribed by stat. 13 Geo. III. c. 44, professing themselves to be Christians and Protestants, and that they believe the Scripture to contain the revealed will of God, and to be the rule of doctrine and practice.

places at the sessions where any  
 visiting minister shall live, are  
 to order and administer the said last-  
 mentioned to such minister, upon  
 his oath to make and subscribe the  
 following to keep a register; for the  
 which he shall pay 6d. to the offi-  
 cer, and no more; and 6d. for a  
 certificate signed by such officer.

an. c. 2, § 9. Any preacher or congregation of dissenting protestantized according to the act of be allowed to officiate in any though the same be not in the he was so qualified; provided meeting hath been duly certified: and such teacher or preacher id, produce a certificate of his fied himself, under the hand of peace where he was qualified; before any justice of such county he shall so officiate, make and declaration, and take such oaths required.

V. & M. c. 18. § 11., and 19  
l. § 1. Every such teacher and  
a minister, preacher, or teacher  
on, having taken the oaths, and  
foreand, shall from thenceforth  
its serving on any jury, or from  
appointed to bear the office of  
overseer of the poor, or any  
ward office, or other office, in  
any shire, city, town, parish,  
centake, and by 42 Geo. III., c.  
6. III. c. 10. from serving in

in any place occupied by him.  
ing in any place without consent  
liable to a penalty of £30.

Every person who shall teach  
efficiate in, or shall resort to an  
assembly for religious worship of  
the place of meeting shall be  
according to the provisions of this  
act or acts relating to the certifi-  
cation of places of religious wor-  
ship from all such pains and

penalties under any act or acts relating to religious worship, as any person who shall have taken the oaths and made the declaration prescribed by or mentioned in the 1 W. & M. or any act amending the said act, is by law exempt. And by § 6, it is provided, that no person shall be required by any justice to go to any greater distance than five miles from his own home, or from the place where he shall be residing at the time of such requisition, for the purpose of taking such oaths as aforesaid.

§ 7. Any of his majesty's protestant subjects may appear before any one justice, and produce to such justice a printed or written copy of the said oaths and declaration, and require such justice to administer such oaths, and to tender such declaration to be made, taken, and subscribed by such person; and thereupon such justice shall administer such oaths, and tender such declaration to the person requiring to take and make and subscribe the same; and such person shall take and make and subscribe such oaths and declaration in the presence of such justice accordingly; and such justice shall attest the same to be sworn before him, and shall transmit or deliver the same to the clerk of the peace for the county, &c., for which he shall act as such justice, before or at the next general or quarter sessions of the peace for such county, &c. And for the making and signing of which certificate, where the said oaths and declaration are taken and made on the requisition of the party taking and making the same, such justice shall be entitled to demand and have a fee of 2s. 6d. and no more; and such certificate shall be conclusive evidence that the party named therein has made and taken the oaths and subscribed the declaration in manner required by this act.

Dissenters chosen to any parochial, or ward offices, and scrupling to take the oaths, may execute the office by deputy, who shall comply with the law in this behalf. Stat. 1 W. & M. st. 1, c. 19.—But it appears that they are not subject to fine on refusing to serve corporation offices. For where a freeman of London was elected one of the sheriffs, but refused to take the office on account of his being a dissenter, and, as such, not having received the sacrament according to the rites of the Church of England, within a year before his election, an action was brought in the Sheriff's Court, for the penalty incurred by such refusal and a judgment recovered; which judgment was affirmed in a writ of error brought in the court of Hastings. But the defendant having obtained a commission of errors, the judges' delegates reversed both judgments; and, on a writ of error in parliament, this judgment of reversal was affirmed; the judges being (except one) of opinion that the defendant was at liberty to object to the validity of his election, on the ground of his own non-conformity.

And thus the reader has before him a summary view of the existing legal situation and rights of the Protestant Dissenting body.

2. Of the principles common to this body as separatists from the establishment, we know of no general authentic summary: but dissenters at large are very familiar with those arguments for

the liberty of conscience, the right of private judgment, and final obedience to God alone in religion, which they consider as involving the right and duty of the course they adopt. They are also not without respectable publications on the subject, by learned individuals of their body. It will be sufficient to mention those of Doddridge, Watts, Dr. John Taylor, Neal, Delaune, Palmer, and Towgood, all of whom have produced able defences of the dissenting system.

The celebrated Richard Baxter declared, what is true, perhaps, of a majority of the existing dissenters, that the Non-conformists of his day agreed with the doctrines of the thirty-nine articles, and differed only from the church in the form of government. He says, that the Independents, as well as Presbyterians, offered to subscribe to the articles, except as to prelacy and ceremony. 'We are one,' he adds, 'with the church of England in all the necessary points of faith and Christian practice.'

Yet these men departed from the church of England, at the expense of all their earthly comforts; and some of them braving persecution, 'even to death,' laid the foundation of the existing dissent, by denying the authority of any body of fallible men to 'decree rites and ceremonies' in the church. They contended, as do the modern dissenters, that what was left indifferent by the only lawgiver of his church, should not be made important and peremptorily enjoined upon his followers. They revolted, particularly, at subscribing to the principle of 'a power in the church to decree rites and ceremonies, and to have authority in matters of faith,' as so indefinite and extensive, that under the shadow of it, all the enormous usurpations and superstitious of the church of Rome might be and have been included. If the church of England, it is moreover said, claims and exercises this power, and obliges all its ministers to subscribe to articles of faith, which it hath authoritatively decreed, and to use in religious worship ceremonies and rites, which it hath authoritatively enjoined; hath not the church of France, or the church of Spain, the same authority and power? It cannot be an exclusive privilege of any one church. And if it be allowed that the church of Rome has this prerogative, such a claim would overthrow the Reformation and the foundations of the church of England itself. They say, with a modern divine of the church of England, 'Whenever useless rites and ceremonies are imposed, corruptions are passed into a law, and the terms of communion are such as are not authorised by the law of Christ, then it becomes a duty to dissent, and they are the separatists who compel others to divide, not they who deplore the necessity of so doing.'

But dissenters have further enquired, who are the persons that are, in point of fact, invested with this authority and power? In other words, who are the church? This power to order the manner of God's worship, and to settle articles of faith, is not lodged in the bishops and clergy, who are usually denominated our spiritual pastors and guides, but entirely in the king and parliament of these realms, under whose direction and control the clergy are to act. Accord-

ingly, the dissenters allege, that the church of England is a parliamentary church; not properly an ally, but a mere creature of the civil government, depending entirely upon its power and authority of parliament for its existence and frame. The qualifications of its ministers, the power to officiate, the manner in which they are to administer the sacraments, are all limited and prescribed by authority of parliament: an authority, which at first made, can alter, and new make it; can abolish, or add to, articles or rites, according to its pleasure, although the whole body of bishops and clergy ever so much dislike or ever so earnestly press against it. Therefore, while some dissenters justify their dissent from the establishment, because, for example, they think that some ceremonies imposed, or the various orders of ministers, or the received subjects of baptism, or the mode of administering baptism and the Last supper, or the state of her discipline, are incompatible with the scriptural pattern; others go farther, and attempt to prove, that every direct violation of some of the strongest precepts of the great Head of the church.

These quote the words of Jesus Christ, 'My kingdom is not of this world,' as virtually bidding all such attempted alliances between church and state, as every ecclesiastical establishment involves. They say that such a union debases Christianity into an engine of state, secularises its ministers and institutions, inspires concealed distrust of the apostolic weapons of faith, prayer, and 'the words of truth and sobriety,' and is, in its influence on the conduct of the dominant party towards those who dissent from them, essentially persecuting.

In confirmation of this view of the subject they adduce the existing state of the law in regard to dissenters. They argue that every man has a right to the common privileges of society in which he lives; and among his common privileges is a legal capacity for serving his sovereign and country; a right, so important that the forfeiture of it is made the punishment of some of the greatest crimes. No man does not forfeit that capacity of serving his sovereign and country, which is his natural right, as well as the honor and emoluments that may happen to be connected with it, by owning that he ought to be deprived of them; and dissenters that are not thus incurred, are unjustly punished, implying both disgrace and privation. Persecution, without the previous proof of guilt, cannot be denied to be an injury; and injuries sustained on account of religion, are undoubtedly persecutions.

The dissenters, therefore, contend, that subjection to higher powers, and obedience to magistrates, which the Scriptures command Christians, relates only to civil, not to religious matters; and that so far is Christ from enjoining, that it actually forbids obedience to civil governors in things of a religious nature. It commands us to 'call no man upon earth our father or master,' Matthew xxiii. 8, 9, and to have knowledge no authority or jurisdiction of us in matters of religion, but to remember that

only to our master and lawgiver, even  
; and that all Christians are brethren,  
New xx. 25

cannot follow out the dissenting system  
its numerous separate lines of divergence  
the established church. Under the parti-  
names of each of their well-known deno-  
tions will these be fully discussed. But  
pious and excellent men, we may add,  
divided from the church of England, on  
out of her laxity in discipline; others from  
evident disagreement, as they allege, between  
doctrines of the desk, or liturgy, and those  
pulpit; and while the major part of dis-  
as we have stated, profess agreement with  
doctrinal articles, a respectable minority  
object to several of them. The entire  
of Wesleyan Methodism, a species of  
dissent, has grown out of the first of  
complaints against the church. We do  
not ourselves called upon to add more as to  
general principles of this body. See ME-  
TISTS.

Their history, dissenters, of course, contend,  
ences with the persecutions of that early  
of our religion with whose affairs the book  
of Acts of the Apostles is occupied: but, in  
country, they consider themselves the succes-  
of the Wickliffites and Lollardites of the  
fourteenth century. Of John Wickliff Mr. Gil-  
says, 'The authority claimed by the church he  
iously opposed. It was a scandal, he would  
to the Christian church, that any of its mem-  
should set up their own authority against  
of their Saviour. The great argument of  
day (which was indeed a subtle one) for the  
unity of the church, was this. Many persons,  
as Mathew, Mark, Luke, and John, wrote  
gls; but the church rejected them all,  
keeping these four: and this it did by its own  
authority. It might, by the same autho-  
have rejected those four gospels, and have  
used others. It follows, therefore, that the  
unity of the church is above that of any gos-  
—To this Wickliff replied, that the evidence  
of the received gospels was so strong, and that  
the rejected ones so weak, that the church  
did not have done otherwise than it did, without  
violence to reason. But the best argument,  
and, if it were proper to avow it, for sup-  
porting the authority of the church, was the  
unity of it to support the tyranny of the pope.  
It was what made it worth defending at the  
cost of truth. In another place, speaking on  
same subject, he says, that the pope would  
submit his actions to the same criterion, by  
which Christ was contented to have his actions  
judged. If I do not, says Christ, the works of my  
Father which is in heaven, believe me not. But  
pope's authority, it seems, must be acknow-  
ledged, though he manifestly does the works of  
the devil. Thus, says he, Christians are in greater  
bondage than the Jews under the old law: and  
liberty, by which Christ hath made us free,  
is the wickedness of designing men, changed  
the most absolute spiritual bondage. The  
same, he, I hope, will come, when men will  
be enough to shake from their necks the  
yoke of human ordinances; and disdain

submission to any ecclesiastical injunctions, but  
such as are plainly authorised by the word of  
God.'

Early in the Reformation, a respectable party  
of the church of England contended for a more  
complete departure from the popish models of  
church government and discipline. Bishop Hoo-  
per, perhaps, led the way to the practical se-  
cession that afterwards took place, by refusing to  
be consecrated in the Roman pontificals. This  
was in the reign of Edward VI. On the perse-  
cutions that arose under queen Mary, a conside-  
rable number of the British exiles settled at  
Frankfort, and agreed to conduct their worship,  
without answering aloud after the minister, and  
without using the liturgy and surplice; to begin  
the public service with a general confession of  
sins, then to sing a psalm, after which the minister  
prayed for the divine assistance, and next pro-  
ceeded to the sermon; after sermon, to use a ge-  
neral prayer for all estates, and particularly for  
England, at the end of which were subjoined the  
Lord's prayer, and a rehearsal of the articles of  
belief; then the people were to sing another  
psalm, and the minister to dismiss them with a  
blessing. Such was the order which they had  
unanimously adopted; and, having chosen a  
minister and deacons, they invited their dispersed  
brethren to join with them. In the year 1556 Dr.  
Cox joined them, with several of his friends; who  
interrupted the public service by answering aloud  
after the minister, and read the whole litany, in  
violation of the agreement upon which the con-  
gregation was formed. They out-numbered the  
first settlers, and, obtaining leave of the magis-  
trates for the free use of king Edward's service-  
book, performed divine worship according to the  
rites that had been authorised by that prince. The  
original party, upon this, left the city of Frank-  
fort, and removed to Basil and Geneva. Here  
commenced the distinction of Puritans and Con-  
formists, by which the two parties were ever  
afterwards known, the former being called  
Conformists, on account of their compliance with  
the ecclesiastical laws of Edward VI., and the  
latter, Nonconformists and Puritans, from their  
insisting upon a form of worship of a purer kind,  
as they alleged.

On the accession of queen Elizabeth, the schism  
became more important. Dr. Cox was appointed  
bishop of Ely; and the standard of orthodoxy,  
according to this divine, and the majority of the  
bishops, was 'the queen's supremacy and the laws  
of the land;' whilst the Puritans contended for  
'the decrees of provincial and national synods,'  
allowed and enforced by the civil magistrate;  
for neither party, it must be allowed, was for  
admitting full liberty of conscience, and freedom  
of religious profession.

Ministers were now obliged to comply with an  
act for the uniformity of common prayer and ser-  
vice in the church and administration of the  
sacraments; to subscribe a declaration of faith,  
issued by order of the archbishops and bishops,  
for the unity of doctrine; to take the oath of su-  
premacacy to the queen, &c. The question about  
habits was revived; and in 1566 these and se-  
veral other ceremonies, imposed by law, com-  
pelled the puritans to an open separation. In

the following year they published other objections against the hierarchy and various ceremonies, for the use of which, they contended, there was no foundation in Scripture or antiquity. The leaders of this separation were chiefly benefited persons of the diocese of London; who first assembled, with such of their flocks as chose to follow them, in woods and private houses, subjecting themselves to a variety of legal penalties and frequent imprisonment. The adherence of the puritans to Calvinistic principles seems, in no small degree, to have urged the established clergy at this time to adopt the intricate distinctions of Arminius on the subject of grace, free-will, &c. But several episcopal divines remained attached to the puritan system in the reign of James I.; and all these abettors of Calvinism, whether episcopal or presbyterian, were called doctrinal puritans. At length, according to Fuller (Church Hist. book ix. p. 97, book x. p. 100), the name was extended to stigmatise all those who undevoured in their devotions to accompany the minister with a pure heart, or who were remarkably holy in their conversation.

Queen Elizabeth and James I. treated these early dissenters with that rigor which induced many of them to emigrate to the colonies. In the year 1629 they founded Massachusetts's Bay. The colony of Connecticut was formed by emigrants of the same class in 1636, and that of New Haven by those who, in 1637, fled from the persecution of Laud, and the oppressions of the star-chamber and high commission courts. The puritans were afterwards not allowed to transport themselves to New England; we have seen, in the article CROMWELL, how singularly the future lord protector was then prevented expatriating himself; and many of them removed, with their families, to the Low Countries.

On the restoration of Charles II., in the year 1660, the name of Puritans, says bishop Burnet, was changed into that of Protestant Nonconformists, who were subdivided into Presbyterians, Independents, Anabaptists, and Quakers. At this time a second Act of Uniformity was passed, by which all who refused to observe the rites, and subscribe the doctrines, of the church of England, were entirely excluded from power. From this period until the reign of king William III. the Nonconformists were in a very precarious situation, sometimes involved in calamity and trouble, and at other times enjoying intervals of tranquillity, according to the varying temper of the court and ministry. But in the year 1689 the memorable bill for the toleration of all Protestant dissenters from the church of England, except impugnors of the Trinity, passed in parliament almost without opposition, and delivered those who could comply with the conditions it imposed from the penal laws to which they had been so long subjected.

Fluctuations have taken place in the political treatment of dissenters since this period, and in the close of the reign of queen Anne the act of Occasional Conformity, which was pushed forward by the high-church party, threatened the extinction of their new liberties. But the accession of the present illustrious House of Brunswick to the throne of these realms has confirmed and

enlarged them; and each of the successors has renewed and redeemed to keep the toleration act inviolate. The parties interested are still hopeful of the abolition of all excluding statutes, on the religion, they wait with patience the revocation of the government and country period of awarding their rights.

**DISSENTIENT**; a word literally signify dissent or disagree, prefixed to protests, to the reasons of dissent, given in by peers, in the upper House of Parliament entered on the journals of the house.

**DISSE, v. a.** } Fr. *dissiper*; Span. and  
Portug. *dissipar*; Ital.  
**DISSE, v. a.** } and Lat. *dissipare*, from

*dis* and *sepi, sepi*, a venomous serpent, because  
whatever is bitten thereby, putrifies.—Minsheu  
To disperse; scatter; destroy: dissipation is the  
act or habit of dispersing or wasting: applied  
figuratively also to the mind, and particularly the  
attention. Dissipable is an obsolete adjective  
for, easily dispersed, or liable to dispersion.

The heat of those plants is very dissipable, which  
under the earth is contained and held in; but when  
it cometh to the air it exaleth.

*Bacon's Natural History.*

Abraham was contemporary with Paley, in whose  
time the famous dissipation of mankind, and distinc-  
tion of languages, happened.

*Hale's Origin of Mankind.*

It is covered with skin and hair, to quench and  
dissipate the force of any stroke, and retard the edge  
of any weapon. *Rag.*

Gold is a wonderful clearer of the understanding;  
it dissipates every doubt and scruple in an instant.

*Addison.*

I have begun two or three letters to you by snatches,  
and been prevented from finishing them by a thousand  
avocations and dissipations. *Swift.*

The parts of plants are very tender, as consisting  
of corpuscles which are extremely small and light,  
and therefore the more easily dissipable.

*Woodward's Natural History.*

The circling mountains eddy in,

From the bare wild, the dissipated storm.

*Thomson.*

This slavery to his passions produced a life irregular  
and dissipated. *Johnson. Savage's Life.*

DISSIPATION, in physics, an insensible loss or  
consumption of the minute parts of the body; or  
that flux whereby they fly off and are lost.

DISSIPATION, CIRCLE OF, in optics, that cir-  
cular space upon the retina, which is taken up  
by one of the extreme rays issuing from an  
object. When the distance of an object from  
the eye is too small or too great for perfect or  
distinct vision, the rays of each pencil, issuing  
from the object, cannot be united at a point on  
the retina; consequently, the rays of each pencil  
will occupy a circular space upon the retina,  
which circle is called the circle of dissipation,  
because the rays of a pencil, instead of being col-  
lected into a central point, are dissipated all  
over this circle.

DISSIDENTS, a denomination applied in  
Poland to those of the Lutheran, Calvinistic,  
and Greek professions. The kings of Poland  
engaged by the pacta conventa to tolerate them  
in the free exercise of their religion, but they had  
often reason to complain of the violation of these  
promises. See POLAND.

DISSOCIATE, v. a. Lat. *dissocio.* To se-  
parate; disunite; part.

In the dissociating action, even of the gentlest fire,  
upon a concrete, there perhaps vanish some active and  
fugitive particles, whose presence was requisite to  
contain the concrete under such a determinate form.

*Boyle.*

DISSOLUBLE, adj. } Lat. *dissolubilis.* Ca-  
pable of separation;  
DISSOLUBILITY, n. s. } having one part separable from another. Dissol-  
ubility is lialeness to dissolution.

Nodules, reposed in cliffs amongst the earth, being  
hard and not so dissoluble, are left behind.

*Woodward's Natural History.*

Bodies seem to have an intrinsic principle of alteration, or corruption, from the *dissolubility* of their parts, and the coalition of several particles endued with contrary and destructive qualities each to other.

*Hale's Origin of Mankind.*

DISSOLVE, *v. a. & n.*

DISSOLV'ENT, *n. s. & adj.*

DISSOLV'ER,

DISSOLV'ABLE, *adj.*

*Lat. dissolvere, from dis, asunder, and solvere, to loose.*

To unite the parts of a thing by moisture or by heat; to melt; liquefy: hence, figuratively, to destroy a union, compact, or delusion, as well as to dissipate obscurity or doubt. Dissolvent is having the power of dissolving: dissolver is synonymous with it as a substantive: dissolvable is, liable to liquefy or disperse by dissolution.

I have a desire to be dissolved and to be with Christ, it is mych more bettre. *Wiclif. Filipensis l.*

And I have heard of thee, that thou canst make interpretations and dissolve doubts. *Dan. v. 16.*

If there be more, more woeful, hold it in;

For I am almost ready to dissolve,

Hearing of this. *Shakespeare. King Lear.*

She and I, long since contracted,

Are now so sure that nothing can dissolve us. *Id.*

By the king's authority alone, and by his writs, parliament's are assembled; and by him alone they are prorogued and dissolved, but each house may adjourn itself. *Bacon to Villiers.*

Down fell the duke, his joints dissolved asunder, Blind with the light, and stricken dead with wonder. *Fairfax.*

Witness these ancient empires of the earth

In height of all their flowing wealth dissolved. *Milton.*

Angels dissolved in hallelujahs lie. *Dryden.*

The commons live, by no divisions rent;

But the great monarch's death dissolves the government. *Id.*

In man and viviparous quadrupeds, the food, moistened with the spittle, is first chewed, then swallowed into the stomach, where, being mingled with dissolved juices, it is concocted, macerated, and reduced into a chyle. *Ray.*

As wax dissolves, as ice begins to run

And trickle into drops before the sun,

So melts the youth, and languishes away. *Addison's Ovid.*

Such things as are not dissolvable by the moisture of the tongue, act not upon the taste. *Newton.*

Spittle is a great dissolvent, and there is a great quantity of it in the stomach, being swallowed constantly. *Arbuthnot.*

Fire, and the more subtle dissolvent, putrefaction, by dividing the particles of substances, turn them black. *Id.*

The snow dissolved, no more is seen,

The fields and wood, behold! are green. *Johnson.*

Despotic love dissolves the bestial war. *Darwin.*

DISSOLUTE, *adj.*

DISSOLUTELY, *adv.*

DISSOLUTENESS, *n. s.*

DISSOLUTION.

*Fr. dissolu; Italian,*

*Span. and Port. disso-*

*luto; Lat. dissolutus,*

*from dis and solvere,*

*solutus, to loose.* Unrestrained by law or morals; debauched; luxurious. Dissolution is more generally applied in the literal sense, and to death. Dissoluteness, to behaviour or manners; yet both occur in the latter sense; and dissolution is used by lord Bacon for the substance formed by dissolving a body.

A giant huge and old  
Who him disarmed, *dissolute*,  
Unaware surprised. *Full.*

He determined to make a present *dissolute* world.

Such stand in narrow

And beat our watch, and rob our peace  
While he, young, wanton, and *dissolute*  
Takes on the point of honour to repeat  
So dissolute a crew. *Shakespeare.*

I am as subject to heat as butter, a continual dissolution and thaw. *Id. Merry Wives.*

The life of man is always either in the ripeness and perfection, or declining towards rottenness and dissolution. *Rail.*

Weigh iron and aqua-fortis covering solve the iron in the aqua-fortis, and *dissolution*.

Neither doth God say, I was the God of Isaac, Jacob, but I am. The patriarchs after so many years of dissolution. *Ep. Hall's Com.*

Yet, I deny not, but dissolve men, horsemen, which open a gate on the way by the virtue of their office, open hearts and shut themselves out.

A longing after sensual pleasures is the spirit of a man, and makes it less wandering, unsuited for noble or spiritual.

We expected

Immediate dissolution, which we

Was meant by death that day. *Milton.*

They cooled in *dissolution*

Thenceforth shall practise how to be

Worldly, or dissolute, on what their

Shall leave them to enjoy.

If we look into the common manners we have reason to wonder, in the great manners which the world complains of, footsteps at all left of virtue.

Is a man content of wealth and let him read of those strange miseries of the great monarchies and govern

The true spirit of religion banishes levity of behaviour, all vicious and but, in exchange, fills the mind with serenity. *Addison.*

That mind is dissolute and ungoverned must be hurried out of itself by loud sensual pleasure, or else be wholly inactive.

Would they have mankind lay out provisions by agriculture or commerce, by the dissolution of the world may be moment?

In the next place, Sir, I am clear in union, reciting and ratifying one Scotchish act of parliament, has not rendered whatsoever in our church impossible, *dissolution* of the union between the two

A dissolution of all bonds even

The curbs invented for the male

Of headstrong youth were broken

DISSOLUTION, in physics, a general reduction of concrete bodies to their parts, without regard either to utility; though in the usual acceptation among authors, it is restrained to

lies into a state of fluidity; which is  
ly expressed by solution. See CHE-

**DISANCE**, *n. s.* } *Fr. dissonance; Ital.*  
*dissonanza; Lat. disson-*  
*ant, adj. dissonantia; Lat. dis-*  
*sonans, diversely, and sonans, sonantis,*  
Harshness, or jargon of sounds; dis-  
dissonant is inharmonious; and  
congruous; disagreeing; followed by  
correctly by *to*.

gh he nought fonde yet would he lie  
want er fro armonie,  
would fro melodic;  
he would, and foule faile,  
trumpis of Cornewaile.

*Chaucer. Romance of the Rose.*

Still govern thou my song,  
far off the barbarous dissonance  
as and his revellers. *Milton.*

he more dissonant from reason and nature,  
man, naturally inclined to clemency,  
himself unkind and inhuman.

*Hakewill on Providence.*

less properly.

hacence reports any thing dissonant to  
area no more than the falsehood reported

the strain, and dissonant, to sing

raptures of the savage kind. *Thomson.*

**DISADE** *v. a.* } *Fr. dissuader;*  
*Span. desuadir;*  
*Lat. dissuadere:*  
*dis, opposite, and*  
persuade. To deter; divert from, by  
dissuader is he who endeavours to do  
dissuasion the act or means of doing it.

to submit to Caesar, promising  
he would tribute, from the which  
dissuaded by our wicked queen.

*Shakespeare. Cymbeline.*

iffident of thee do I dissuade  
ance from my sight.

*Milton's Paradise Lost.*

meant by *dissuading*; it is making a man  
his opinion, and unfixing of the mind.

*Bp. Taylor.*

st to preserve yo- self from relapse by  
dome from love, as its votaries call invect-  
it.

to deny this wish, which thou hast made;  
I can't deny, would fain dissuade.

*Addison's Ovid.*

to powerful dissuasive from suspicion, jea-  
langer, than the story of one friend mur-  
der in a duel.

*Bp. Horne.*

**DISSOLUBLE**, *n. s.* *Δισσελλαβος.* A word

ables.

is tied, in modern poetry, to observe any  
in the feet of his verse, but that they be  
whether spondee, trochee, or iambique,  
on.

appears) seems to have been the very ori-  
English tragical harmony; that is, the  
blank verse, diversified often by *dissyllable*,  
able terminations.

*Dennis.*

**DISSTAFF**, *n. s.* Sax. *dastaff*, from *diege*,  
and *staff*, 'because females while  
it to the thigh'—*Minshew*. The  
which the flax is drawn off in spinning:  
emblem of the sex.

*L. VII.*

Weave thou to end this web which I begin;  
I will the *distaff* hold, come thou and spin.

*Peirfax.*  
In some proud Boreas never ruled fleet,  
Who Neptune's web on danger's *distaff* spins,  
With greater power than she did make them wend  
Each way, as she that age's praise did bend.

*Sidney.*  
See my royal master murdered,  
His crown usurped, a *distaff* in the throne.

*Dryden.*  
In my civil government some say the crossier, some  
say the *distaff*, was too busy.

*Hensel's England's Tears.*  
I can no more pardon a fair one for endeavouring  
to wield the club of Hercules, than I could him for at-  
tempting to twirl her *distaff*.

*Goldsmith.*  
**DISTAIN**, *v. a.* *Dis* and *stain*. To stain;  
to tinge with an adventitious color; hence to blot  
or obliterate.

For certainly all these mows out suffice  
To' apperin with my ladie in no wise,  
For as the sunne woll the fire distain,  
So passith all my ladie coverain.

*Chaucer. Legend of Women.*

He understood,  
That lady, whom I had to me assigned,  
Had both distained her honourable blood,  
And eke the faith which she to me did bind.

*Facrie Queens*  
The worthiness of praise *distains* his worth,  
If he that's praised himself bring the praise forth.

*Shakespeare.*  
Nor ceased his arrows, till the shady plain  
Seven mighty bodies with their blood *distain*.

*Dryden's Virgil.*  
Place on their heads that crown distained with gore,  
Which those dire hands from my slain father tore.

*Pope.*  
**DISTASTE**, *n. s.* } *Dis* and *taste*. *Dis-*  
*DISTASTE'FUL*, *adj.* } *relish; aversion of the*  
palate; disgust: the verb being derived from  
the noun, and both often applied figuratively.

Dangerous conceits are in their nature poisons,  
Which at the first are scarce found to *distaste*.  
But, with a little act upon the blood,  
Burn like the mines of sulphur.

*Shakespeare. Othello.*

After *distasteful* looks,  
With certain half-caps, and cold moving nods,  
They froze me into silence. *Id. Timon.*

The king having tasted of the envy of the people, for  
his imprisonment of Edward Plantagenet, was doubt-  
ful to heap up any more *distastes* of that kind by the  
imprisonment of De la Pole also.

*Racon's Henry VII.*

It is in the general behalf of society that I speak, at  
least the more judicious part of it, which seems much  
*distasted* with the immodest and obscene writing of  
many in plays.

*Ben Jonson.*  
The ground might be the *distasteful* averseness of  
the Christian from the Jew.

*Brown.*  
On the part of heaven,  
Now alienated, distance and *distaste*,  
Anger, and just rebuke.

*Milton's Paradise Lost.*  
None but a fool *distasteful* truth will tell;  
So it be new and please, 'tis full as well.

*Dryden.*  
*Distasteful* humours, and whatever else may render  
the conversation of men grievous and uneasy to one  
another, are forbidden in the New Testament.

*Tillotson.*  
Y

I am unwilling to believe that he doth it with a design to play tricks, and fly-blow my words to make others *distaste* them.  
*Stillmufflet.*

With stern *distaste* avowed,  
To their own districts drive the sutor crowd.

*Pope's Odyssey.*

DISTANCE, *v. a. & n. s.* } Fr. *distance* ;  
DISTANT, *adj.* } Span. *distancia* ;

Ital. *distanza* ; Lat. *distantiā*, from *dis*, asunder, and *stans*, *stantis*, standing. The extent of space between two standing bodies. The verb seems here derived from the noun. Distant is, remote in place, time, or nature; and in any degree: hence, not obvious; not intelligible.

We come to see fight; to see thy pass, thy stock,  
thy reverse, thy distance.

*Shakespeare. Merry Wives of Windsor.*

Banquo was your enemy,  
So is he mine; and in such bloody distance,  
That every minute of his being thrusts  
Against my nearest of life. *Shakespeare. Macbeth.*

A good merchant never demands out of distance of the price he intends to take. If not always within the touch, yet within the reach of what he means to sell for.  
*Fuller.*

This heaven which we behold  
Distant so high. *Milton.*

On the part of heaven,  
Now alienated, distance and distaste,  
Anger, and just rebuke, and judgment given. *Id.*

This was the horse that ran the whole field out of distance, and won the race. *L'Estrange.*

We have as much assurance of these things, as things future and at a distance are capable of.  
*Tillotson.*

That which gives a relieve to a bowl, is the quick light, or white, which appears to be on the side nearest to us, and the black by consequence distances the object.  
*Dryden's DuRancay.*

I hope your modesty  
Will know what distance to the crown is due.

*Dryden.*

Distance is space considered barely in length between any two beings, without considering any thing else between them.  
*Locke.*

It was one of the first distinctions of a well-bred man to express every thing obscene in modest terms and distant phrases.  
*Addison's Spectator.*

Cæsar is still disposed to give us terms,  
And waits at distance till he hears from Cato.

*Addison.*

If a man makes me keep my distance, the comfort is, he keeps his at the same time.  
*Swift.*

These dwell at such convenient distance,  
That each may give his friend assistance. *Prior.*

I help my preface by a precept, to tell that there is ten years distance between one and the other. *Id.*

Each daring lover, with adventurous pace,  
Pursued his wishes in the dangerous race;  
Like the swift hind the bounding damsel flies,  
Strains to the goal; the distanced lover dies. *Gay.*  
'Tis by respect and distances that authority is upheld.  
*Atterbury.*

The wondrous rock the Parian marble shone,  
And seemed to distant sight of solid stone. *Pope.*

The senses will discover things near us with sufficient exactness, and things distant also, so far as they relate to our necessary use. *Watts's Logic.*

The worse living authors fare now, the better they will succeed with posterity; for the critics love the

sport too well to hunt any but those who are good chase; and authors are the only distance, which are magnified by distance, and diminished by approach.

Be silent! How the soldiers' rough strains  
Softened by distance to a hymn-like cadence,  
Listen!

DISTEMPER, *v. a. & n. s.* } Du  
DISTEMPERATE, *adj.* } per. T  
DISTEMPERATURE, *n. s.* } order; I

disturb; render disaffected; to temper anew. As a substantive, it expresses disproportion; or disease of any kind; the same use among painters as the Distemperate is, immoderate; and distemture, habitual or extreme disorder; violent.

Tell how the world fell into this dam,  
And how so great distemperature did gain

Thy earliness doth me shame  
Thou art uproused by some distemperance

There is a sickness,  
Which puts some of us in distemper, but  
I cannot name the disease, and it is one  
Of you that yet are well. *Id. Winter.*

Young son, it argues a distempered head  
So soon to bid good-morrow to thy bed.  
*Id. Romeo and Juliet.*

Aquinas objecteth the distemperate heat, as supposeth to be in all places directly under the sun.  
*Raleigh's History.*

The true temper of empire is a thing hard to keep; for both temper and distemper are of contraries.

I was not forgetful of those sparks, when men's distempers formerly studied to kindle a ment.

He distempered himself one night with hard study. *Boyle's History.*

Distempered zeal, sedition, cankered hate  
No more shall vex the church and tear the state

They heighten distempers to diseases

Sin is the fruitful parent of distempers, and on occasion good physicians.

They were consumed by the discommode country, and the distemperature of the air.

When I behold a fashionable table with all its magnificence, I fancy that I see dropsies, fevers and lethargies, with many other distempers, lying in ambuscade among the guests.

A night of fretful passions may consume  
All that thou hast of beauty's gentle bloom  
And one distempered hour of sordid fear  
Print on thy brow the wrinkles of a year

DISTEMPER, in painting, a term used in painting up of colors with something besides oil. If the colors are prepared with water, the kind of painting is called limning; if with oil, it is called painting in oil, and simply oil. If the colors are mixed with size, white, or any such proper glutinous or unctuous matter, and not with oil, then they say it is distemper. See COLOUR.

DISTEND, *v. a.* } Fr.  
DISTENT, *n. s. & past. part.* } Lat.  
DISTENTION, *n. s.* } from *distendere*, to stretch. To stretch beyond

Some others were new driven and distent  
In great ingots and in wedges square,  
Some in round plates withouten monument.

Spenser.

Those arches are the gracefuller, which, keeping  
nearly the same height, shall yet be distended one  
yestern part longer, which addition of *distent* will  
infer much to their beauty, and detract but little  
from their strength.

Wotton.

Thus all day long the full distended clouds  
Indulge their genial stores.

Thomson.

Wind and *distention* of the bowels are signs of a  
bad digestion in the intestines; for in dead animals,  
there is no digestion at all, the *distention* is in  
the greatest extremity.

Arbuthnot.

**DISTICH**, *n. s.* Fr. *distique*; Ital. Span.  
and Port. *disticho*; Lat. *distichon*; Gr. *διστιχον*, a  
couplet of two verses, i. e. two two, and *διστιχον* a  
line, from *τις* to step, because ancient verses  
were measured by the steps. A couplet; a couplet  
of lines; an epigram consisting only of two  
verses.

The French compare anagrams, by themselves, to  
anagrams, but when they are cast into a *distich*, or epi-  
gram, to gems encased in enamelled gold.

Cumden's Remains.

The bard, whose *distich* all commend,  
In power, a servant; out of power, a friend.

Pope.

**DISTICHIASIS**, in surgery, a disease of the  
eyelids, when under the ordinary eye-lashes  
there grows another extraordinary row of hair,  
which frequently eradicates the former, and  
tearing the membrane of the eye, excites pain,  
and brings on a defluxion. It is cured by pull-  
ing out the second row of hairs with nippers,  
and cauterising the pores out of which they  
grew.

**DISTILL** *v. a. & v. n.*

**DISTILLATION**, *n. s.*

**DISTILLATORY**, *adj.*

**DISTILLER**, *n. s.*

**DISTILLERY**, *n. s. & adj.*

**DISTILMENT**.

To let fall in, or  
to drop, to drops; to extract spirit in drops by a  
distillar process; to diffuse. As a neuter verb,  
to drop, or fall in drops; to flow gently; to use  
still. Distillation is the art of distilling;  
distillatory, belonging to that art. Distiller, one  
who practises it; and distillery, the place of dis-  
tilling; or, as an adjective, belonging to such a  
place. Distilment is used by Shakspeare for that  
which is produced by distillation.

They pour down rain, according to the vapour there-  
of, which the clouds do drop and distil upon man  
instantly.

Job.

Have I not been

Thy pupil long; Hast thou not learned me how  
To make perfumes, distil, preserve? Shakspeare.

There hangs a vapourous drop, profound;  
I'll catch it ere it comes to ground;  
And that, distilled by magic slights,  
Shall raise up artful sprites. Id.

'Tis not my secure hour thy uncle stole,  
And in the porches of mine ears did pour  
The leperous distilment. Id.

The Euphrates distilleth out of the mountains of  
Armenia, and falleth into the gulph of Persia.

Raleigh's History.

Now, gentlemen, I go

To turn an actor, and a humourist,  
Where, ere I do resume my present person,  
We hope to make the circles of your eyes  
Flow with distilled laughter. Ben Jonson.

Besides those grosser elements of bodies, salt, sul-  
phur, and mercury, ingredients of a more subtle nature,  
extremely little, and not visible, may escape at the  
junctures of the distillatory vessels.

Boyle.

The dew, which on the tender grass,

The evening had distilled,

To pure rose-water turned was,

The shades with sweets that filled.

Dayton.

From his fair head

Perfumes distil their sweets.

Prior.

Water by frequent distillations changes into fixed  
earth.

Newton.

Swords by the lightning's subtle force distilled,  
And the cold sheath with running metal filled.

Addison.

When you set about composing, it may be necessary  
for your ease and better distillation of wit, to put on  
your worst clothes, and the worse the better.

Swift. Advice to a young Poet.

In vain kind seasons swelled the teeming grain;  
Soft showers distilled, and suns grew warm in vain.

Pope.

The Arabians invented distillation; and thus, by ob-  
taining the spirit of fermented liquors in a less diluted  
state, added to its destructive quality.

Darwin.

By act of parliament, distillers are not at liberty to  
draw off any low wines before they have charged  
their wash-stills with wash or wort.

Hry's Gauger.

We shall only here remark, that when a wash-back,  
or other distillery utensil, cannot be accurately mea-  
sured by any other mode, recourse must be had to the  
method of equidistant ordinates.

Id.

**DISTILLATION** is the art of separating the vo-  
latile and spirituous from the fixed and watery parts  
of fermented liquors.

When a fluid which has undergone the vinous  
fermentation is exposed to the action of heat,  
the vapor which arises from it is, when collected  
and condensed by the reduction of its tempera-  
ture, again converted into a fluid; but the fluid  
thus obtained is found to have different proper-  
ties to that from which it was derived, and it re-  
ceives the name of spirit. This spirit consists of  
water, and a peculiar fluid called alcohol. Al-  
cohol, in combination with more or less water,  
and flavored by the aroma of the different sub-  
stances from which it is obtained, forms brandy,  
rum, geneva, and all the various descriptions of  
spirit known in commerce. The art of the dis-  
tiller consists in selecting the most convenient  
mode of heating the fermented fluid, and of con-  
densing the vapor it affords, while he prevents  
the intermixture with his products of whatever  
would injure their flavor. To accomplish these  
purposes, although they are apparently simple, it  
is found that great care and skill are required.

The distillations performed by the chemist,  
with the retort, the alembic, the lamp-furnace,  
the pneumatological and Woulfe's apparatus,  
for obtaining gaseous and volatile products in  
general, are essentially the same as the distilla-  
tions conducted for the commercial purpose of  
obtaining spirit; but the scale is different, the  
chemist having his whole apparatus so completely

under his eye that he can adjust the heat and other circumstances with much nicety. In using, for example, when he has vapor to condense, the lamp-furnace, a wet sponge placed on the beak of the retort will suffice: but the commercial distiller requires, for the purpose of condensation, a large convoluted tube, passing through an immense body of water, which must be constantly renewed: the difference of scale, therefore, requires more than a mere enlargement of the apparatus, and there has in fact been found ample scope for improvements in the art.

The quantity and excellence of the spirit produced by the French, in consequence of the alterations they have made in the old method of distilling (the most improved form of which, by Saintmare, we shall presently describe), have decisively shown the value of the new plans, which may be adopted without the disadvantage of increasing the first cost or complexity of the apparatus. They consist in the application of Woulfe's apparatus to this purpose. Wine being put into the boiler, and into all the intermediate receivers between the boiler and the worm, the tube from the boiler plunges into the wine of the first receiver, to which it communicates sufficient heat to raise its contents in vapor: this vapor has the same effect on the wine of the next receiver; and after the continuation of the process through as many receivers as may be thought proper, the whole of the vapor finally extricated is condensed in the usual way by passing through a worm. By this truly ingenious apparatus, spirit of various degrees of concentration may be obtained at one operation, according as the product of the first, the second, or any other receiver is taken; the consumption of fuel is extremely small, the product excellent, as well as greater in quantity than by any other means; and by using water instead of wine, in the boiler, the possibility of an empyreumatic taste is prevented.

In distilling from grain an oil is apt to come over, which injures the taste of the spirits; it is usual to keep it back by adding a little sulphuric acid to the wash.

The comparative salubrity of the spirit or geneva made in Holland is notorious, and it has been supposed that nothing like it can be produced in this country; but it appears to be entirely the result of the care they take in their processes. They use the most perfect grain, and use it only when perfectly malted, aware that a fourth part more spirit is obtained from such grain than from that of which the germination has been checked too soon, or suffered to continue too long. The best Hollands is prepared from wheat, which is the fittest grain for this use, and is more productive than barley; but rye yields about one-third more spirit than wheat, and is more extensively used in Holland. The fermentation is continued about three days: the first distillation is extremely slow, and the observation of this point is essential; the second distillation or rectification is done with juniper berries. The most rigid cleanliness is observed, and the vessels are cleansed with lime-water instead of soap, which would give the liquor a unious taste. They use the rye grown on a calcareous soil, and never, if they can avoid it, that of fat clayey

ground: 1 is Prussian rye they employ. Also malt added to rye improves the flavor, but not the quantity of the spirit.

The substances from which spirit is obtained are usually barley, wheat, oats, rye, sugar, or molasses. In countries where the grape ripens in the open air, wine is distilled for this purpose, and the superiority of the brandies of France, to spirit afforded by good wines containing the true aroma of all products capable of yielding spirits. When grain is used it is malted according to the usual process, like barley for brewing; and the fermentation is conducted in the same manner. After fermentation, the fluid intended to be distilled is called wash, and it is ready for the still.

A still consists of a boiler, which contains the wash; and a tube, in passing through which the vapors are condensed: the tube is convoluted in order that it may have a great length in a moderate compass, and it is thence called the worm. The boiler formerly used was a cylinder of the height of which was in general one-half greater than its diameter; but the French, who have always been foremost in the improvements of this art has received, have introduced a more superior form. The height of the boiler has been considerably diminished, its width augmented, and instead of being cylindrical it widens gradually to within about three or four inches of the top; there the sides are curved into a bowl and become narrower: hence its form is very similar to that of a common tea-kettle: the bottom *cd*, as is shewn in plate DISTILLATION, is of the same diameter as the bottom *ab*. To the boiler is fitted a conical head, in the interior of which round the lower edge, is a channel, destined to receive the liquid condensed against the sides, and which, instead of returning to the boiler, is conveyed into the worm. In the old construction the head communicated with the worm by an inclined tube of a very small diameter. Now the tube in this situation, at its base is as wide as the head, and diminishes in diameter as it approaches the worm, into which it opens. Another important difference, between the improved boiler and the old one, consists in the shape of the bottom: the old ones were flat; this is concave. By this means the heat received is more equal at every point directly exposed to the fire, and, as the bottom is convex within, the steam from the wash falls round its edge, when, by its resting on the brick-work and not receiving the direct heat, it is not liable, from being heated, to give an empyreumatic taste to the spirit. Ten inches of the circumference of the bottom rest on brick-work. The boiler is filled by the aperture *o*.

In the old construction of the furnace the heat was applied only to the bottom of the boiler, and a further loss was sustained by placing, as is still common in furnaces generally, the grate of the grate under the centre of the boiler, instead of reflecting that the stream of air towards the chimney always carries the heat and flame in an oblique direction towards the end of the boiler. At present the end of the grate next the boiler is not placed further back than the middle of the boiler, and the heated air is conducted round the

boiler before it passes off, by which the whole mass of fluid in the boiler is heated at once, and the heat may be maintained with great regularity, while a much less quantity of fuel will suffice. The brick-work surrounding the boiler reaches as high as the circle *kk*.

The worm is generally made of tin or pewter, and is the same as that in common use, except that at the commencement *l*, where it is connected with the beak of the head of the boiler, it is wider than they were formerly made, and tapers gradually towards the discharging extremity *m*. The reason of this is evident, because vapor, only partly condensed, requires more room than where the whole is fluid. The refrigerator, or vessel *AB*, is kept constantly filled with cold water; this is effected by a tube *n*, which descends and opens nearly at the bottom of it, and brings a supply of cold water from a greater elevation; while another tube, *r*, conveys the hot water with equal rapidity from the top. By this means the condensation is so complete, that the spirit discharged at *m* exhales little or no odor. As it is often not possible to have the water from a greater elevation than the refrigerator, without raising it by mechanical means, the following plan, by Alexander Johnston, is highly entitled to attention, as in it the syphon is applied to the worm-tube as a refrigerator; and water is conveyed in any quantity to a worm-tub of the largest dimensions, if perfectly air-tight; it is represented at in the same plate *A*, is the feed pipe of cold water. *B*, the hot water, or waste pipe, the end of which must be about two feet below the feed pipe, to make it act with full effect.

When the work is commenced, the cocks must be shut, and the tub filled through a hole at the top, and of course, both pipes: and when full, the hole at the top is to be stopped, and the cocks opened together; the water will then commence running, and continue as long as the supply holds good, as it acts in every respect on the principle of a syphon. By this means pumps, bone-mills, and other machinery, are rendered unnecessary for that purpose. The application of this improvement is simple, and executed at a very little expense. The saving for the city of Dublin alone, is calculated at upwards of 100 *horns* per annum.

With respect to the usual mode in which distillation is conducted in the great public distilleries, the most interesting account that has been communicated to the public, is that contained in the deposition of James Forbes, of Dublin, who was for many years concerned in a large distillery. It is from the Appendix to the Fifth Report of the Commissioners of Enquiry into the Fees, &c., received in the public offices of Ireland; which report was printed by order of the house of commons.

The corn is first ground, then mashed with water, and the worts, after being cooled, are set for fermentation, to promote which, a quantity of tart is added to them, and they become wash; the wash is then passed through the still, and makes singlings, and these, being again passed through the still, produce spirits; the latter part of this running, being weak, is called feints. When singlings are put into the still, a small

quantity of soap is added, to prevent the still from running foul; a desert spoonful of vitriol well mixed with oil is put into a puncheon of spirits, to make them show a bead when reduced with water: this is only done with spirits intended for home consumption, and no vitriol is used in any other part of the process. In this distillery, the former practice was to use about one-fourth part of malt, and the remainder a mixture of ground oats and barley, and oatmeal; latterly the custom has been to use only as much as would prevent the kieve (mash-vat) from setting. He had found that malt alone produced a greater quantity of spirits, than the mixture of malt and raw corn of the same quality with that of which the malt had been made. He generally put from fifty to fifty-four gallons of water to every barrel of corn of twelve stone (14 lb. to the stone). Each brewing was divided into three mashings, nearly equal: the produce of the two first was put into the fermenting backs; and the produce of the last, which was small worts, was put into the copper for the purpose of being heated, and used as water to the next day's brewing, when as much water was added as would make, with the small worts of the brewing, fifty-four gallons to each barrel of the corn. The kieves were so tabulated, that he always knew the quantity of worts which would come off at each mashing. Their strength he ascertained by Saunders's saccharometer, and at the above proportions he obtained, from a mixture of the two first worts, an increase of gravity from twenty pounds to twenty-two pounds per barrel, of thirty-six gallons, above water-proof, at a temperature of about 88°. The small worts gained at the same temperature about six pounds. The grain, after the last worts were off, retained nearly the same bulk as when put into the kieve; the whole of the grain was put in at the first mashing; he never knew any grain to be added to the second mashing. The worts of the first and second mashing were run through the mash-kieve into the under-back, in which state they were usually found to correspond with the computation made in the mash-kieve and under-back, in the latter of which a correct gauge might be taken of them. He usually commenced brewing at six o'clock in the morning. The first worts were run off into the under-backs, and required from an hour to an hour and a half to be forced up into the cooler; the second worts came off at the end of two hours from the discharge of the first, and required about the same time to pass into the cooler. The small worts were generally let off late at night; and being then, or early on the following morning, put into the copper to be used for the next brewing, were seldom shown on the coolers. He thinks that any decrease of the worts by evaporation whilst on the coolers, must have been very inconsiderable; and that a correct gauge of the worts may be taken in the coolers as well as in the underbacks. The quantity of wash in the backs was found to be nearly correspondent with that of the strong waters which had been on the kieve and in the cooler. The fermentation of the worts was produced by means of yeast, and was in general so contrived as to be apparently kept

up for the full time allowed by law (six days): he has, however, usually had his wash ready for the still in twenty-four hours from the time in which it was set. Backs are renewed in two ways; either by additions made to them from other backs in the distillery, each supplying a certain portion of wash to the back which is next before it in the order of fermentation, while the newest and least fermented wash is replenished by worts, or, when the fermentation is down, by an entire substitution of worts. He has ordinarily, in the course of work, charged a 500 gallon still with wash, and run it off in twenty to twenty-three minutes: he has seen a 1000 gallon still charged and worked off in twenty-eight or thirty minutes. He understands that it is now the practice of some distillers, to heat the wash nearly to the state of boiling before the still is charged with it; by which means he believes the process to be accelerated by three or four minutes. He has seen a 1000 gallon still charged with singlings, and worked off in from forty to fifty minutes, and thinks a 500 gallon still requires nearly an equal time. Feints from pot-ale (the name given to completely fermented wash) usually are run off in from six to seven minutes; making allowance for every delay, about six charges of spirits may be run off from a still of 500 gallons' contents, each charge estimated at 150 gallons. The feints were always put back into the pot-ale receiver; twenty gallons of feints is the usual quantity run from a 500 gallon still charged with singlings; he thinks there is more spirit extracted from feints than from pot-ale; there was no delay between one charge of pot-ale and another, or between one of singlings and another; the still could be cleansed in less than a minute; it very rarely occurred that the ordinary accidents which happened to the still delayed the work to any considerable degree. The still is never charged with wash beyond about seven-eighths of the still, nor with singlings beyond about four-fifths, exclusive of the head. The estimated produce (according to which the duty may be charged) is one gallon of singlings from three gallons of wash, and one gallon of spirits from three gallons of singlings, but it is very frequently somewhat more. Previous to the regulation (of Excise) which took place in June, 1806, from a still of 340 gallons, which is charged with 2075 gallons of spirits weekly, he has frequently drawn 530 gallons in one week, and thinks 500 gallons to be a fair average. He usually made spirits about fourteen per cent. above proof, by Saunders's hydrometer. Spirits exported by him from twelve to fourteen per cent. above proof by Saunders' and Hyatt's hydrometer, were charged in London at from twenty-four to twenty-six gallons per cent. Before he sent them to the custom-house, he either reduced them with water, or drew them at that strength from the still. To every six gallons of strong spirits, one gallon of water was added in the distillery, which reduced them to the strength usual for exportation. The reduced spirits are permitted to the king's warehouses, and the distiller given a credit for a decrease of stock equal to the quantity so permitted; by these means he has one gallon of private

spirits to dispose of for every gallon of spirits mixed with the spirits exported; besides this, the distiller draws back the allowance given in lieu of the malt-duty on every gallon of spirits added: when he warehoused spirits with the intention of afterwards using them for home consumption, he left them at their full strength.

The absence of improvement in the process of distillation, as well as in the apparatus for refining it, in this country, may be chiefly traced to the shackles which have proceeded from the regulations of excise, adopted and enforced for the protection of the revenue. Whether those regulations may have been indispensably required to that end, is, perhaps, very questionable; but it is quite certain that they have had the effect of restraining those extensive improvements in the branch of science and business, which have been almost universally accomplished, where the inventive genius of our countrymen has had free scope in the application of its powers to practical results. This is especially visible on a comparison of the means employed in France for the improvement of this branch. With an unlimited supply of the grape, a material certainly calculated to afford one of the finest spirits, they are enabled, almost at will, to effect such improvements in its quality as result from changes in the process, and the adoption of superior apparatus since, although in some respects under excise and revenue regulations, they are not enforced in a manner calculated to prejudice the exercise of talent, whether mechanically or chemically applied to the art.

In the English language, too, there scarcely exists a treatise of any value on this subject, and that which has been published is little more than translations from works in the French language. There the scientific investigations of men as Lavoisier, Chaptal, Gay Lussac, Berthollet, Thenard, have laid a sure foundation for the most practical illustrations of Macquer, Dubrunfaut, Dubuisson, and others of less note, who have sent forth to the world the result of their labours.

With names as high on the list of sciences as our countrymen Davy, Woollaston, Berzelius, Henry, Thomson, Ure, and Black, and one of the most important departments of the art of distillation, up to the point of fermentation, is well understood, and as extensively practiced in France, the paucity of information on the subject generally, in this country, is not a little surprising. The French distillers have brought to notice several stills of curious construction, which have had for their object the saving of time and fuel, and the production of a spirit of superior strength and good quality. In some of these perpetual distillation has been aimed at, but it can be said with success. Indeed, it is difficult to conceive that the elements to be converted, and the practice necessary for their conversion, can be so nicely combined and adjusted as to be about such a result, without a most elaborate and expensive series of machinery and vessels; and in themselves, not easy of management, leading to the risk of considerable loss, and some of those inconveniences and irregularities to which all complicated apparatus are subject.

A still has lately been brought forward, which

is stated to be coming into extensive use, and to comprise all the advantages of perpetual distillation without its disadvantages; uniting moderate cost, the employment alike of a single vessel and a single operation, and the most perfect facility of management, with great economy of time, fuel, and other items of expense; and, which must be a primary object with all distillers, with the production of a fine and potent spirit. It has been introduced by two French gentlemen, M. Alégre, and M. Saintmarc; and is patented in this country in the name of the latter.

On a view of the plans and descriptions of this apparatus, there seems little reason to doubt its powers and advantages, as described; and, assuming the truth of the facts stated with regard to those powers as proved in practice, the invention is entitled to great praise; and must effect an extensive revolution in distillation, both in this country and in its colonies.

The plate of DISTILLATION presents a series of figures, exhibiting the construction and practical operation of this interesting combination of chemical and mechanical power.

Fig. 1 represents a sectional view of the still, with its furnace, and an elevation or outside view of the refrigerator, or worm tub. Figs. 2, 3, and 4, are plans of three portions of the still. Fig. 5 is a perspective view of one of the double tubes or pipes. Fig. 6 is an elevation of its front exterior, and fig. 7 is an elevation of its back exterior.

FIGURE I.

A. THE FIRE-PLACE OR FURNACE, above which the still is placed.

B. SEVEN COPPERS OR BOILERS, surmounting each other, constituting the apparatus or still, in the form of a column or cylinder, and numbered 1 to 7; the different coppers or compartments being joined together by flanges and bolts.

C. (Vide fig. 6 and 7), OPENINGS OR MANHOLES, which are closed by screw boxes, or otherwise, calculated, when the still is of large diameter, to admit a person into the several coppers, No. 1 to 7, for the purpose of cleaning or repairing them; or, when on a smaller scale, intended to admit a person's arm for the same object.

D. AN EXTERIOR VESSEL, or INTERMEDIATE WASH CHARGER, surrounding the upper compartment of the still; and calculated to contain a quantity of wash equal to the proper charge of one copper.

E. SUPPLY PIPE communicating from the general wash charger, or vessel containing the liquid to be distilled, to the exterior vessel D; and furnished with a cock for the purpose of turning the wash into that vessel.

F. A PLUG OR VALVE fixed in the head of a pipe extending from the bottom of the vessel D into the lower part of the copper, 7; which plug or valve is raised by the aid of

G. A LEVER AND FULCRUM for the purpose of discharging the wash contained in the vessel D into the copper 7; from whence, as it reaches the upper end of the pipes H, it flows down from copper to copper, until it reaches No. 2; a quantity being displaced from the surface of the liquor in each copper equal to that which is thrown in from the copper next above.

H. FIVE PIPES, communicating from the copper, fig. 7 to fig. 6, and so on in succession, from vessel to vessel, down to fig. 2, extending from the level of the wash in one copper, marked by dotted lines to nearly the bottom of the copper below, in order to displace the warmest liquor, as shown in the description of G.

I. (Vide figs. 6 and 7), SIX PIPES FURNISHED WITH COCKS, communicating respectively from one copper to that next below, by which all the wash in the several coppers, from fig. 7 downwards, may be conveyed into the lower coppers, and finally drawn off from the lowest vessel.

K. (Vide figs. 6 and 7), SMALL TRIAL COCKS IN COPPERS 1 and 2, which, on being turned, indicate when those coppers are charged to the proper height, as denoted by the dotted lines on the same level as these cocks. They serve also as valves to admit air when the liquor is drawn off. A similar cock is likewise placed in copper, fig. 3, for the purpose last mentioned.

L. (Vide fig. 6), A SMALL PROOF COCK, placed vertically near the roof of the copper, No. 1, which, on being turned, determines by the application of a lighted taper or candle, whether or not there remains any portion of alcohol in this copper or boiler.

M. A DISCHARGE PIPE AND COCK to carry off the spent wash from the copper, fig. 1, when the spirit has distilled from it. This cock discharges down to about one inch above the crown, or highest part of the copper; and, in consequence, it is not necessary to damp the fire when it is opened.

N. A SECOND DISCHARGE PIPE AND COCK in the lowest part of the bottom, which carries off the whole contents of the copper; and, when opened, will generally require the fire to be damped, to prevent burning the bottom.

O. TEN DOUBLE TUBES OR PIPES, of which five are fixed on the roof of copper 1, and five on that of 2. These pipes are closed at the top, and have openings in the upper part of the inner, communicating with the outer one. The vapor produced from the wash in copper 1, passes through the five double tubes on the roof of that copper into the copper 2, by rising up the inner tubes, passing therefrom through the openings at the upper part thereof, and descending down the outer tubes, discharging itself into the liquid in copper No. 2, where it becomes condensed. In like manner the vapor produced in the last mentioned copper passes up the double tubes on the roof thereof, into the copper fig. 3. (For a better description of these double tubes, vide the perspective view of one of them in fig. 5; and for the plan of the coppers containing them, vide fig. 4, and their respective explanations given below).

P. FIVE SEMISPHERICAL VESSELS OR DOMES (in French, CALOTTES), constructed upon, and tightly jointed to, the centres of the roofs of the several coppers, No. 3 to 7, both inclusive. These domes, except the highest, are surrounded with wash; but have internal communication only with each other, by means of pipes fixed on their centres, which pass into the pipes Q, next described.

Q. FIVE DOUBLE TUBES OR PIPES (of the same

kind as those marked O.), which are tightly fixed on the centres of the roofs of the coppers Nos. 3 to 7, and stand within the domes last described. The vapor described above (O) to have reached the copper No. 3, becomes condensed in the wash contained therein. The vapor generated in this copper passes through the double tube Q into the dome which encloses it, and so in succession, through the several tubes and domes above, until it reaches the dome on the roof of the copper No. 7, where it finally passes off into

R. A LARGE PIPE, which conveys it to

S. A WORM TUB, or REFRIGERATOR (of which an elevation or outside view only is given in the drawing), through

T. A WORM contained therein; and runs it off as alcohol, at the bottom thereof into

U. A SPIRIT RECEIVER. (For the plan of the coppers containing the domes P, and double tubes Q, above described, as well as the reversed double tubes V, and the safety pipes W, both hereafter described, vide fig. 4, and the explanations of it given below).

V. FIVE REVERSED OR DESCENDING DOUBLE TUBES or PIPES (constructed on the same principle as those already described, but of smaller diameter), which are suspended, reversed, from the roofs of the several coppers from No. 7, down to No. 3, both inclusive. Of these reversed tubes the four uppermost pass through the domes P, to which they are tightly fixed; and they serve to return to the lower domes in succession, the phlegms, or such results of the vapor, in a liquid form, as may have been condensed in its passage upwards through these several domes. These phlegms, or condensed liquids, are partially redistilled in their progress; and the remainder pass through the fifth, or lowest, of these reversed tubes, into the copper No. 3, where they become mixed with the wash contained therein, and are again distilled with it.

W. FOUR SAFETY PIPES, fixed in the roofs of the several coppers, Nos. 4, 5, 6, and 7, which are intended to carry off such vapor as may rise from the wash in those coppers, and terminate in

X. A PIPE, which passes on to the worm-tub or refrigerator S, and by a separate worm

Y. of two or three coils only, runs off the small portion of spirit it produces into the spirit-receiver U.

Z. A PIPE communicating between coppers No. 1 and 2, having its upper end carried about four inches above the level of the liquor in copper No. 2, in order to admit of the increase of its volume by the condensation of the vapor which passes into it from the copper No. 1 by the tubes O. It also serves to return from copper No. 2 to the lower part of No. 1 whatever liquor may pass up the tubes O, by any sudden or excessive action of the fire

FIGURE II.

a. A PIPE AND COCK for the supply of cold water into the copper No. 8, for the purpose of additional condensation when the spirit is required of high proof.

b. A WASTE PIPE, fixed near the top of the uppermost copper No. 8, to carry off the heated

water from the surface, in proportion as the pipe a furnishes cold water.

c. A PIPE AND COCK placed in the bottom of the copper No. 8, for the purpose of entirely drawing off, at pleasure, the water which may have been employed for additional condensation.

d. A PIPE AND COCK by which a stream of water may be thrown into the vessel D, and thence conveyed, by the valve or plug F, and pipes I or H, into the lowest vessels, either to be used as an occasional condensing power, or for the purpose of washing the still.

e. A PIPE AND COCK, by which a stream of clear water may be thrown into the uppermost of the domes P, and thence descend through the other domes below, in order to cleanse them from impurities.

which makes a half revolution of the still, and is generally made of cast iron.

In this figure the various water pipes, de- scribed in fig. No. 2, are not shown; as they could only be represented in a very indistinct way. For the same reason the discharge pipes M and N are not repeated; and the chimney is omitted, which would have given the figure an additional appearance of confusion; and is not necessary to make it intelligible. The foregoing explanations have the advantage of being per- fectly clear and intelligible, a quality not com- mon to descriptions of a mechanical nature; which are usually more adapted to the compre- hension of scientific, than to the understanding of ordinary readers. Although in the descrip- tion of the different parts of the apparatus, the separate uses of each are well defined, the ge- neral effect of the whole combination is left un- explained. It may therefore be necessary to give an idea of the principles on which the advan- tages to be derived from it are founded.

The eight coppers, placed one upon the other, of which the seven lowest are intended to hold the wash, and the upper one to receive water,— distil in the following manner:—

The first three, of which the second and third alone are intersected by the double pipes, distil almost at the same time. The lowest, only, being submitted to the immediate action of the fire, is, consequently, the first whose wash enters into a boiling state. The vapor penetrates into the second, passing through the wash which is contained in it, by means of the above mentioned pipes, and is there condensed, yielding up its caloric to that liquid, which is thereby quickly brought into a boiling state; the vapor which proceeds from the wash in the second boiler passes into the third, producing the same effects as in the preceding. The new vapor, necessa- rily stronger than the first, rises and passes into the fourth, where it is received under a semi- spherical dome (or calotte), which prevents it from communicating directly with the cold wash contained in that copper.

On arriving in this dome it is easily conceived that the most watery portion of the vapor is there condensed, giving up its caloric, which contributes to heat the wash that surrounds the dome. The most spirituous part, which passes into the dome of the fifth copper, experiences the same effect on coming in contact with a cold body. The same operation takes place from one dome to another up to the last. As the vapor which rises is exposed to a cold temperature it is condensed, ceding its caloric; and it is after a succession of sufficient condensations, that the spirit is divested of all weak and watery particles, which, thus liquefied, return from one dome to another, being partially re-distilled in their pro- gress, according to their degree of gravity, until the least spirituous reaches the third copper, there to undergo a new distillation. It has been observed that the upper copper is reserved to contain cold water; it is by this means, and by renewing this water, keeping it in a higher or lower temperature, according to circumstances, that the distiller can obtain the spirit at the strength he desires.

To explain by what physical law the watery vapor is forced to return from dome to dome to the third copper, and is there found totally separated from the alcohol, which arrives at the worm pure and free from any empyreuma, we shall call to mind what all chemists and distillers are, doubtless, aware of. It is known that water cannot boil under a heat of  $212^{\circ}$  of Fahrenheit; while alcohol boils at about  $173^{\circ}$ . It is evident, therefore, that whenever the watery and alcoholic vapors rise, and are successively received in one or more atmospheres of from  $174^{\circ}$  to  $190^{\circ}$  or  $200^{\circ}$ , the watery vapor becomes separated from the alcoholic, and is condensed; and the last, only, passes out, and is received at the desired strength; care being taken to regulate properly the temperature of the water contained in the uppermost copper, which is traversed by the strongest and most alcoholic vapor before it passes into the worm.

It may be affirmed that the advantages of this apparatus are the greatest that have, as yet, been obtained. There is a great economy in fuel, as well from the small surface exposed to the action of the fire, and productive employment of every portion of the caloric, as by the simplicity and rapidity of the operation. To the saving of fuel we shall shortly advert more particularly. It will be perceived that a large portion of the spirit is distilled by vapor; and it is, consequently, much purer than that obtained by the ordinary apparatus. It is to the immediate contact with the fire of the material to be distilled, that distillers owe the greater portion of those injurious flavors and qualities with which spirits are frequently impregnated. Those bad flavors are acquired chiefly by the length of time that the wash remains exposed on the bottom of the still; for during the period requisite to bring it up from the cold state to that of ebullition, at which distillation commences, deposits of the heavier particles contained in the wash are made on the bottom, which, being rather absorbents than conductors, prevent that constant and uniform transmission of caloric which is essential to good and pure distillation. It is in the earlier stages of the application of fire that this effect is mainly produced; for, as the wash approaches a state of ebullition, the struggles, to reach the surface, of those parts of the wash which are impregnated with caloric, and consequently decreased in gravity, and which, in the first instance, are sluggish in their motion, gradually bring the mass into a state of ebullition, which counteracts the tendency to burn, or otherwise acquire injurious flavor. Once arrived at the boiling point, the risk of this evil is almost entirely removed. But as, on the common principle of distillation, the still is every time charged with cold wash, so every distillation is equally exposed to the recurrence of the evil.

It is one of the peculiar merits of M. Saint-marc's still to have effectually provided against this disadvantage. In his apparatus, only the first charge of the lowest copper is entirely distilled by the direct action of the fire. The aqueous and alcoholic vapors, which rise together, on arriving in the second copper, become mixed with the wash contained in it and are re-distilled

before they pass into the third copper. This distillation takes place in that copper before it passes under the correcting influence of the ascending vessels. Thus he effects one distillation by fire, which is immediately succeeded by two vapor distillations; and, subsequently, by two purifying processes, which divest the spirit of its impurities; and it comes over, at one operation, of the strength of thirty-five per cent. proof, according to Sikes's hydrometer, as is the Excise and English distillers; which is equivalent to bubble seventeen or eighteen times of the West India Planter, and the specific gravity of chemists to  $820$  or  $825$ , the strength at which M. Saint-marc brings out his spirit by a still of eight compartments, which is to thirty-five or forty per cent. over proof, being the highest degree generally required for purposes of commerce. But, by the use of two or three more coppers or compartments in his still, he would succeed in obtaining, in one operation, the pure alcohol of the chemists of a gravity of  $820$  or  $825$ .

It has been observed, that only the first charge of the lowest copper is entirely distilled by the direct action of the fire; and that is to a small portion of a distillation, however perfect, which is exposed to the injury of burning. By making the first charge of the lowest copper water, instead of wash, even this small portion may be totally avoided; since the wash, when heated, comes down invariably into the second copper in a boiling state; and during the short time that it remains there, being kept in a constant state of ebullition, it is not subject to the disadvantage of burning.

We speak of the shortness of the time during which the wash remains in the lowest copper. As soon as the whole of the spirit has been drawn from the lowest copper, which is proved by the application of a light to the small cock L, fig. 6, already described, the wash is discharged from that copper and the cock L communicating from copper No. 2 to No. 1 is immediately opened, which discharges the contents of No. 2 into No. 1, without interrupting the distillation. In order to draw the wash drawn from copper No. 2, the valve in the vessel D is discharged, by means of the valve or plug F by means of the lever fulcrum G, which displaces the same down the pipes H, until the copper No. 2 is replenished. A fresh charge of wash is then drawn by the pipe E into the vessel D, ready for the next supply.

It is easy to conceive, that, when the first charge of the lowest copper has furnished all the alcohol it contains, the wash of the second is chiefly distilled, and therefore, when brought down into the first copper, in a state of perfect ebullition, and so far advanced in the process, it remains for a short time in contact with the fire, but it only does not acquire any bad taste or empyreuma, when its perfect distillation is completed within fifteen or twenty minutes; the strength of the liquor being no more than ten or twelve per cent. The process may thus be carried on to infinity, or so long as wash is furnished to the still. The supply displaced from the still

the second copper has been already stated to be partly distilled; and the quantities contained in copper with the domes have acquired a considerable degree of heat; graduated from a below the boiling point in copper No. 4, to 160° or 170° in copper No. 7. In using the calorific brought by the vapor through domes, which is continually renewed, the in the fourth and succeeding coppers becomes the agent which contributes to divest the alcohol of the watery parts that rise with it.

Among the advantages of this apparatus, the continual and regular supply of wash, the gradually advancing heat which it acquires in the manner just described, are calculated to prevent the occurrence of those accidents which arise in distilleries, chiefly from the management of the workmen employed: we mean by explosion or collapsion. When a large quantity of liquid, of a turbid and heavy nature, collected in a body, and subjected to the action of a powerful fire, it happens, not unfrequently, that, before it arrives at the boiling point, it forms a strong head, which fills the upper part of the still, and passes down the worm; and, on some occasions, causes an explosion of the still. The same would follow the want of a proper outlet for the vapor. But the accident which more frequently occurs is collapsion. When a charge is worked off in the common still, it has frequently happened, that whilst it remains filled with vapor, a new charge of cold wash is thrown into distillation, or of water for cleansing, without the precaution of opening the man-hole, or other aperture in the breast of the still, to let out the air. A sudden condensation follows the union of the cold liquor; and, a vacuum being formed, the still immediately collapses.

Against both these accidents, M. Saintmarc's apparatus affords complete protection. If the wash forms a head, which is only likely to happen in the first charge of the lowest copper, (and may be prevented by using water for the first charge, as before stated), it can never penetrate beyond the second copper; and is immediately returned by the pipe Z into the lower vessel again. The pipes O and Q are ample for the free passage of vapor which has filled up them; and the safety-pipes W equally so the coppers on which they stand, against the possibility of injury from the generation of steam upon the surface of the wash in those vessels.

Against the risk of collapsion the same security is to exist. The liquor brought down into the lowest copper being always at the boiling point, and that in the vessels above graduated to that point, the descent from vessel to vessel is accomplished without any material change in the temperature, which is acting upon the vapor within the domes; and, consequently, but, in any important degree, changing the rate of condensation which is going forward. In this observation, in its strict sense, must be added the copper, No. 7; where a supply of steam being introduced from the vessel D, of a pressure considerably lower than that already existing in the copper, an additional condensing

power is acting in that copper for a few minutes; and the product in spirit, during that period, will be somewhat diminished in quantity, but of higher strength. One of the effects of discharging the wash from the vessel D into the bottom of the copper No. 7 is that, to a certain extent, an equalisation of temperature takes place, by the admixture of the two bodies, in the act of displacing, by the pipe H, a quantity equal to that admitted from above. The more immediate object of fixing the vessel D round the uppermost compartment of the still, rather than as a detached vessel, is also to encrease the temperature of its contents, by contact, during the period occupied in working off a charge below, with a body at a much higher degree than the wash which it contains. By the union of these two advantages, the diminution of temperature in copper No. 7, only produces a slight effect, as already observed; and nothing like a vacuum is, or can be, formed in consequence; which is further provided against by the connexion of the dome in copper No. 7, with those both below and above: and, through the latter, with the large pipe leading to the worm-tub. We have been thus particular in detailing these parts of the case, as it is of high importance in distilleries to be independent both of ignorance and carelessness on these points.

The first impression on our minds, on a view of the drawing of the still, was that it was complex in its nature and construction, and must be difficult to manage. It requires, however, but little attention to discover that such is not the case. On the contrary, it is entirely self-acting as to all its interior arrangements, and so simple and unerring in its principle and operation, that any person, whether previously conversant with distillation or not, will be quite competent to its management, with a few days' practice; a point of great importance, where the indifference or ignorance of the parties employed to work the stills (as is the case, particularly in the West-Indies), renders all complexity unadvisable. The mere stirring of a fire, and the turning of two or three cocks, is the utmost extent of attention required to conduct its operations.

The construction of the still has been already spoken of, in the description of its various parts; and care seems to have been taken, in this respect, to meet all reasonable emergencies. The diameter of the still being small, in proportion to its powers, as compared with the common stills in use; and each compartment being separately manufactured, and finally put together by flanges and bolts, M. Saintmarc generally makes a spare lower compartment, precisely adapted to the higher part, which goes with the still; and especially to the West Indies. It does not appear that this still will be of less duration than any other in use, or require more repairs than the most simple ones. On the contrary, the lowest copper is the only one which is submitted to any severe action; and if, either by lapse of time or constant use, or by any accident, to which carelessness equally exposes stills of all sorts, the bottom should be injured, a period of two or three days would suffice for taking away the lower compartment,

fixing the spare new one, and replacing the still in its position ready for work, as sound and perfect as when quite new. This must be of great importance to a West India planter, who, if the same thing were to happen with a common still, at the beginning of a crop, would, in all probability, be deprived of the means of working during the whole season; as the consequence of such an accident to a common still is, generally, the necessity for a new one; so difficult and expensive is the repair. In like manner the principle of the construction of this still affords easy access to any copper or compartment, in the event of a little repair being necessary. But it would appear to be little liable to derangement in its upper compartments; the only action there being an equable and quiet transmission of vapor upwards, and of wash downwards; neither of them calculated to injure the interior works.

A question suggested itself to us, as to the power of introducing into the lower compartment of M. Saintmarc's still, the machinery employed in most malt distilleries, for disturbing the heavier ingredients in the wash, which may settle on the bottom. We have already shown that such a case may be prevented here; but, supposing our view of the non-liability of the wash to be burnt should be erroneous, there does not appear any difficulty in introducing the chains, or other proper machinery, for that purpose. In the common still it is fixed vertically, through the upper part of the still, and worked through a stuffing box. In this it would also be required to be worked through a stuffing box, but horizontally, through the side of the lowest copper, by the aid of a pair of bevil wheels in the interior.

A series of experiments and calculations have been made for the purpose of demonstrating the powers of M. Saintmarc's still, and proving the allegations with regard to its saving of fuel, water, and many other points of economy, advanced in its favor. These experiments and statements are of a sufficiently interesting character to induce us to add them to the preceding observations, as they are calculated to carry conviction to the mind, from the plain and simple manner in which they are advanced. They are made in a way likely to attract notice; the powers of the patent still being placed in juxtaposition or contrast, with those of the common still. As far as our means extend of judging of the correctness of the statement with regard to the powers of the old still, we should be inclined to think them not unfairly put. The data on which some of them rest are admitted by chemists, having been proved by the experiments of some of the ablest men in that branch of science, both in this country and in France. The deductions, therefore, are easy on those parts of the case. With regard to many points, such as cost and number of apparatus and vessels, space required, savings, and other considerations of a commercial nature, and some other points, they are not susceptible of check by any but practical persons.

It is of course, well known, that the ordinary process of distillation consists of three operations, and is usually performed in two stills of different dimensions; the larger one called a wash

still, being that in which the first operation takes place, of distilling the wash, the vapor proceeding from which, being of a weak nature, the product is an imperfect body, of about half the strength of proof spirit, and technically called low wine. This product is then conveyed to the smaller still called the low wine still, where it is subjected to a second distillation from which results a spirit. A portion, however, of this latter product is separated from the remainder, it being of a weak and impure character; it is denominated feints by the precise laws and by the distillers, and is admitted to a third distillation per se, or is mixed with the wash of the next distillation; but, however, generally separately distilled. These constitute three distinct operations. In M. Saintmarc's still, all this is effected at one operation; the weaker vapor, which constitutes the low wine of the first, and the feints of the second distillation, on the old plan, being strengthened and purified by the subsequent process, in which it is subjected in the higher part of the still; and all the weak part of the vapor, which is passed into the worm, and there condensed, would be in the state of low wines or feints, but condensed within the still, long before it reaches the summit, and returned into the lowest copper. This is the basis of one of the important features of the still. On the old plan, the vapor generated by the first distillation is passed off immediately to the refrigerator or worm-tub, and there condensed; the vapor of the second distillation, the result of a new application of fuel, is again sent to the worm-tub and there condensed; and a third distillation, by the aid of a third fire, is again treated in the same way. M. Saintmarc makes the first application of fuel to his still, to effect all these objects. The vapor of the first copper heats the second; that of the second heats the third; that, again, passes through the several upper compartments, distributing a portion of its caloric to the wash in each of them, thus preparing them for distillation, in which process the vapor has the benefit of those condensing portions, which each body of wash contains, for the operation, by liquefaction, of its aqueous or watery from its alcoholic or stronger, portions.

The advantages here described are demonstrated by experiments, showing the actual power of a still on this principle, as compared with those of the two stills in use on the old plan, of equal powers of production; in which are stated the relative areas or superficies of each exposed to the action of the fire; the generation of vapor on both plans; and the quantity of water employed in condensing that vapor.

A still on M. Saintmarc's principle, containing 560 imperial gallons of wash, in seven compartments of eighty gallons each, estimated to work off thirty charges of one copper, amounting to 2400 gallons, will produce (supposing the wash to be attenuated sixty degrees, and, consequently, capable of yielding twelve per cent. of proof spirit on the wash), 213 gallons of spirit at thirty degrees per cent. over proof, equal to 288 gallons at 100 in a day of twelve hours. A common still of the total contents of about 1700 imperial gallons will contain a charge of 1200 gallons of wash, of

off twice in twelve hours; distilling 2400 of the same gravity as above, into 960 of low wine; and a low wine still containing a charge of 480 gallons, will produce, at per cent. on the wash, the same quantity, gallons of proof spirit.

A diameter of seven feet, and an area of about  $38\frac{1}{2}$  feet  
and a low wine still of 480 gallons, will have a diameter of five feet, and an area of  $19\frac{1}{2}$

Taking a total superficial area in the two stills of . . . . . 58 feet

The diameter of a still to contain a charge of 560 gallons on the patent principle  
will be about fifty inches, and its area . . . . .  $13\frac{1}{2}$  feet

less than one fourth of the superficial area, to the action of the fire, as compared with stills on the old plan.

Consequences of these diminished proportions—

1.—That the construction of the furnace of patent still, does not cost above one-third, fourth, that of the two furnaces on the old plan.

2.—That the consumption of fuel is reduced to the areas of the respective stills, and with the quantities of liquid raised vapor, and the economy of caloric, or heat, operation, resulting from their different modes of construction.

Of low wines . . . . .	960 gallons
Of spirit, (at proof) . . . . .	288
Of feints, (one fourth) . . . . .	72
Making . . . . .	1320 gallons $\times$ 1500 = 1,980,000

The gallons of vapor passed through the refrigerator on the old plan.—On the patent principle is produced:—

Of spirit, (35 over proof) . . . . . 213 gallons  $\times$  1500 = 319,500

The gallons of vapor passed through the refrigerator on that principle; or less than one-third that produced by the principle now in use.

Pursuing this enquiry to the consumption of fuel, which is necessarily proportioned to the quantity of vapor condensed, it is assumed, the vapor necessary to produce one gallon of liquid will raise to the boiling point, condensation, five gallons of water—and 30° of Fahrenheit as the mean temperature of, it will be found that 1500 gallons of

vapor, equivalent to one gallon of liquid, will communicate to five gallons of water, caloric to the extent of 162°; but as the temperature of water, for the purpose of condensation, will be in a great measure ineffectual, when raised above 104°, it follows, that the absorption of caloric, by the water, to bring it to that point, is only 54°, or one-third of 162°—and, therefore, three times five gallons, or fifteen gallons of water, will be necessary to condense the vapor, which will produce one gallon of liquid.

Thus, on the old plan, (as shown before) . . . . .  $1320 \times 15 = 19,800$

And on the patent plan, (as shown before) . . . . .  $213 \times 15 = 3195$

To which must be added, for the water consumed in the uppermost copper of the still . . . . . 600

Making a total quantity of . . . . . 3795

Two sums of 19,800 and 3,795 are the five numbers of gallons of water employed to raise the vapor, on the two principles; the same proportion for any increased or diminished consumption, arising either from employing the water at a lower or higher temperature from the repeated use of the standing of the warm-tub, in consequence of its being cool when not worked.

A variety of estimates are given, exhibiting the diminished size and cost of the necessary buildings, and the decrease, in number and expense, of the various descriptions of vessels, pumps, pipes, &c., employed in one, as compared with the other, system. These, though essential to the distiller, are not necessary parts of our view of the question.

Another statement is given of the powers of

a still on M. Saintmarc's principle, which, were it not, as is stated, demonstrable in practice, would exceed belief.

A still of eight feet six inches diameter, containing 350 gallons of wash in each of the seven lower compartments, or a total charge of 2450 gallons, will run off in the day of twenty-four hours, at least 30,000 imperial gallons of wash, and produce between 3000 and 4000 gallons of spirit; a quantity unprecedented in the annals of distillation.

The results of some experiments are given, which were made in the presence of the officers of the board of excise in May 1826, by which, at one operation, some spirit was produced as high as fifty-eight per cent. over proof, and the mean strength of the whole day's distillation was forty-three per cent. over proof. The produce in quantity exceeded by ten per cent. what was required by the excise, according to the attenuation of the wash. A surplus to this extent, however, cannot be calculated upon; but it is manifest, that the evaporation and loss consequent upon one single distillation, is small as compared with that which results from three distillations, and two pumpings, or other removals from vessel to vessel, as hitherto practised. By experiments on this head made with the same wash, on the two modes of distillation, the result has shown a surplus product, in favor of M. Saintmarc's plan, varying, according to the delicacy of management, from three to six per cent.

M. Saintmarc and M. Alégre, have also introduced into practice in distillation, some changes in the previous process of fermentation, which effect an improvement in the quality of the wash, and give an increase in the quantity of spirit. See article FERMENTATION.

They have likewise constructed an apparatus, secured by patent, for improving the rectification of raw or feint spirits, by which a greater degree of purity is attained than by the common rectifying still; and the fine flavors necessary for making compounds are employed more beneficially and delicately than by the existing process. For a description of this still, see article RECTIFICATION.

We have devoted a large space to the examination of this question. But the apparatus and process united, present too interesting a subject of enquiry and investigation, as compared with the existing systems, to admit of its being slightly passed over.

We shall conclude with a few observations of the proprietors of the patent, addressed alike to the interest of the British distiller and the West India planter. They say, when speaking of the advantages the still offers:—'These advantages consist, shortly, in the comparatively low price of the still—the trifling expense of erecting the furnace—the small consumption of fuel and water—the diminished number, dimensions, and cost of the necessary vats, pumps, pipes, &c., connected with the still—the limited space required for its erection—the saving of time in the process of distillation resulting from its use—its uniform applicability to every liquid that has undergone, or is susceptible of, vinous fermentation (as well as to numerous other branches of chemical

science), and, especially, in the production of one operation from the wash, of a spirit coming in strength and purity all those which hitherto been obtained in this country by a single process. To these important considerations, which are alike applicable to the kingdom and the colonies, may be added, especially so to the latter, the no less important points of the production of rum over a proof than the average of what is now obtained in many of them; and the extensive saving in puncheons, freight, and charges, when compared with that concentrated state.'

'It is unnecessary to go into details of the saving in puncheons, freight and charges, when it is shipped at a high proof. It is a matter of much importance, and too easily estimated by a planter, to require figures in confirmation of the statement. But the actual saving in these items, however considerable, is one part of the advantage. The spirit thus obtained, and its greater purity, bears a value in the market much above that determined by the relative degree of strength, as compared with rum of the standard. And as this improvement in strength and quality is effected, not at an augmentation, but at a considerable diminution of expense, it is unquestionable, that, when employed in the purposes of barter, according to the practice of the colonies, at a reduced strength, that obtained from the high strength at which it is brought by this apparatus, may be made consistently a preservation of its purity; and its value as an article of barter, thus enhanced in a considerable degree.'

They conclude—

'It must be recollected that this is not a new apparatus the principle of which is unknown. In some years a still of the same kind—less perfect it is true, but still embodying the main principle of this, has been used in France, by the chemist there (who is also one of the proprietors of the present patent), with the most entire success. This has, therefore, the great advantage of having been corrected, in its construction, whatever defects were found in the original invention, from which no new invention is entirely exempt, and the corrections being founded on eighteen years' experience in France. And the opinion is warranted, that the apparatus constituting the basis of this patent, and of the present mode of distillation, in its principle, the most sound and scientific, and the most sure and perfect in its operation, and any that has been adapted to the art of distillation in this country.'

The practical uses of distillation in chemistry are too numerous to be mentioned. The volatile part of any substance is separated from that which is fixed, as in the distillation of turpentine, in which the essential oil rises and the residue is left behind; the more evaporable is separated from the less evaporable, as in the preparation of rectification of ardent spirit; liquids are freed from foreign or accidental impurities, as in the distillation of common water: volatile substances are united in an easy and commodious mode, as in preparing the odoriferous distilled waters of aromatic vegetables: bodies are decomposed and analysed, new compounds are formed, and

ledge is gained of the native and chemical series of natural substances.

Common distillation of aromatic vegetables is a simple process, but gives room for some nicety of management, particularly in the regulation of heat and the quantity of water, which can be learned by experience. As an example, for peppermint water may be given, and is made: put a pound and a half of dry peppermint in a still, cover it with water, put on the lid, luting the joints with wet bladder or red paper; bring the liquor to boil quickly, keep it just boiling till about a gallon of steam has run over. The residue in the still is thrown away as useless. The water that runs over first is somewhat turbid, owing to the presence of essential oil that it contains, and in consequence is by much the strongest. By rest it becomes clear, and a fine pellicle of oil rises to the top.

The following circumstances are chiefly observed in common distillation:—The substance which the distillation is made in some requires previous treatment, in others none. Petals of flowers, such as roses and jasmine, may be used immediately, or only after the general drying. The aromatic herbaceous vegetables, as peppermint, may be used indiscriminately wet or dry, observing, that as the plant is much watery when fresh than when dry, more water may be added in the distillation of the latter of the former. Hard woods should be cut or bruised, and, as they are less easily percolated by the water, they should be macerated without heat for from one or two days to as many weeks, before distillation.

The quantity of water to be used varies much according to circumstances. It should be always such as during the whole process to cover all the part of the still which is immediately above the fire, otherwise the vegetable matter will be burnt, and give a very disagreeable burnt taste to the liquor, or empyreuma, to the distilled liquor. On the other hand, too much water makes the distilled liquor unnecessarily dilute. In general, herbaceous vegetables require about thrice their weight of water; and when dry, five or six times. The steam should never be more than about three-quarters full, or even less when succulent vegetables are used, to prevent boiling over. The management of the fire is of some consequence, to prevent boiling over and empyreuma on the one hand, and on the other to give heat enough for the action of the aromatic principle. Where a water bath is used (which, however, is tedious, and seldom if ever necessary), all danger of excess of heat is avoided, but it is often requisite to increase the heat of the bath by adding salt to the water. When, in distilling without a bath, much heat is used, there is danger either of running off the capital, not without risk to the distiller, when the liquor boils with extreme violence (which is particularly likely to occur if the still is too full of bulky herbaceous vegetables, that rise in the capital and partly choke the opening into the worm-pipe), or else the steam boils over into the worm-pipe, and mixes the action of the vegetable with the distilled liquor. This is soon perceived by the condensed

liquor coming out at the bottom of the worm, not in a clear uniform streamlet, but by gushes and starts, with a gurgling noise, and fouled or colored. When this accident happens, the fire should be entirely slackened, the capital taken off, the liquor already come over returned into the still, and the distillation begun again with more care. When the stream of distilled water flows evenly, and the boiling liquor is heard to simmer moderately in the boiler, the operator will know that the process is going on properly.

The quantity of aromatic water to be obtained from a given weight of any vegetable cannot be laid down with accuracy, so as to obtain a liquor of uniform strength, as (independently of any difference in conducting the operation) the season of the year, the length of drying, and other causes, will materially affect the intensity of aroma in the vegetable. The taste, therefore, is a better criterion to judge when to stop the process, as the liquor will run nearly tasteless long before the water has all boiled away. Some advantage is gained by mixing all the distilled liquor together, as the first portion has generally rather more essential oil than it can retain, and the last portion has less.

The laws which relate to the management of a distillery are numerous and important; we subjoin a brief abstract. By 43 Geo. III. c. 69, every distiller or maker of low wines or spirits for sale, or exportation, within England, shall take out a licence, which shall be charged with the yearly sum of £10; and every rectifier of spirits within England, shall pay for such licence a duty of £5; and such licence shall be renewed annually before the end of the year, on pain of forfeiting, if a common distiller, £200; if a molass distiller or rectifier, £30. (24 Geo. III. c. 41.) No person shall be deemed a rectifier or compounder who shall not have an entered still capable of containing, exclusive of the head, 120 gallons, which shall have suitable tubs and worms, and be used for rectifying British spirits for sale, (26 Geo. III. c. 73. By 19 Geo. III. c. 50,) every such distiller shall cause to be put up in large characters, over the outward door of every place used for making or keeping of British-made spirits, the words *Distiller, Rectifier, or Compounder of Spirituous Liquors*, on pain of £100; and if any person shall buy any such spirits of any person not having such words over his door, he shall forfeit £50. By 21 Geo. III. c. 55, if any distiller or dealer shall buy any British-made spirits (except, as in the former case, at the public sales of condemned spirits by the commissioners of excise) he shall forfeit £500. By 19 Geo. III. c. 50, no person shall be permitted to make entry of any work-house or place, or of any still or utensil for making, distilling, or of keeping low wines or spirits, unless he shall occupy a tenement of £10 a year, assessed in his own name, and paying the parish-rates; and by 21 Geo. III. c. 55, in order to prevent private distillations, every person who shall make or distill any low wines or spirits, whether for sale or not for sale, shall be deemed a common distiller for sale, and shall enter his still and vessels at the next office of excise; and every person making or keeping any wash fit for dis-

tillation, and having in his custody any still, shall be deemed a common distiller for sale, and be liable to the several duties, and subject to the survey of the officers. No common distiller or maker of low wines, spirits, or strong waters, for sale, shall set up any tun, cask, wash-back, copper, still, or other vessel, for making or keeping any worts, wash, low wines, spirits, or strong waters; nor alter, nor enlarge the same, nor have any of them private or concealed, or any private warehouse, cellar, &c., for making or keeping any of the said liquors, without first giving notice at the next office of excise, on pain of £20; and he in whose occupation any of the same shall be, shall forfeit £50; 8 and 9 Wil. c. 19. And by 24 Geo. II. c. 40, every distiller shall, ten days before he distils or makes any spirituous liquors, enter every vessel, &c., at the next office of excise, on pain of £50 for every still or vessel used and not entered. And every distiller shall, four days before he begins to brew any grain, &c., make entry at the next excise office, of all coppers, vessels, &c., inserting in such entry the day on which he intends to begin, and the use to which such vessel is to be applied, which shall not be altered on pain of forfeiting £100, with the liquor, which may be seized by any officer of excise, 26 Geo. III. c. 73. And by 21 Geo. III. c. 55, no person shall make use of any vessel, room, &c., for making wash for the distillation of low wines and spirits, without giving a notice at the next office of excise, on pain of £50 for every vessel, room, &c., used without notice. Nor shall any person withdraw his entry whilst any duty is depending, or any vessels are standing, except by changing it on the day of its being withdrawn, (23 Geo. III. c. 70.; 26 Geo. III. c. 73.) No person is allowed to have any still or number of stills, which singly or together contain less than 100 gallons, under the penalty of £100 for every still; and the wash-still shall contain at least 400 gallons, exclusive of the head, under the same penalty. 2 Geo. III. c. 5; and 14 Geo. III. c. 73.

Distillers are to show to the officer every still or other vessel entered; and the vessels are to be marked by the gauger; and defacing the mark, or rubbing out, incurs a penalty of £20. 26 Geo. II. c. 40.

Distillers who use private pipes, &c., for conveyance of distilled liquors, forfeit £100. (10 and 11 Wil. c. 4.) They shall also make holes in the breast of the still for taking gauges and samples, and provide locks on the still-heads, the holes, discharge-cocks, and furnace-door, under a penalty of £50, and of £200 for breaking or wilfully damaging such lock or fastening, after it has been secured by the officer. 12 Geo. III. c. 46; 14 Geo. III. c. 73.

The distiller shall provide proper ladders for the officer to examine each still, and assist in setting them up, on pain of £200. 23 Geo. III. c. 70.

Distillers are required to give notice to the officer of excise before they receive any wine, cyder, &c., or any kind of fermented wash, on pain of £50, and also before they charge or open the still, expressing and describing the number and marks of the wash-batches used and they are prohibited

from charging the still with any other, under a penalty of £100. 24 Geo. II. c. 40; 12 Geo. III. c. 46; 14 Geo. III. c. 73.

Distillers, in preparing grist for wash, do so more in the proportion of one quarter of wheat to two quarters of any other grain, forfeit 24 Geo. II. c. 9.

If any corn distiller, or maker of low wines, spirits from corn or grain, shall make use of molasses, coarse sugar, honey, or any extraction or extract of sugar, in brewing or preparing his wash for distillation, or receive such materials into his custody, exceeding 10 lbs. in weight, he shall forfeit £100; and officers may take any of the wash in any vessel, paying for the same the rate of 1s. 6d. a gallon; and if the distiller shall obstruct him, he shall forfeit £100. 24 Geo. III. c. 70.

Officers are to attend at the still-houses and give due notice, to see that the wash-stills are properly filled, and when they are fully charged to be secured and secure them. And if any person damages any still-head, &c., after they have been secured, and before they are opened by the officer of excise, or shall wilfully damage any lock or fastening, he shall forfeit £200. 12 Geo. III. c. 73.

Removing or concealing wash, &c., from the possession of any distiller, incurs a forfeiture of the same; and such distiller, and the person employed to remove, or who shall receive the same, shall severally forfeit 10s. for every gallon of wash, and no wort, wash, &c., shall be put into a still or removed from the back or vessel in which it was fermented, till the same has been put in the penalty of £200 and double duty.

The officer shall every three months, as required, take an account of the stock of distillers and rectifiers, and, if any unfurnishing shall be found, the same shall be forfeited, and may be seized; and the person in whose possession such excess shall be found shall forfeit £50. Rectifiers are to mark the strength and quality of mixed spirits on the outside of the cask, and in default thereof, or if untruly marked, the cask shall be forfeited, and also the cask, and may be seized; and the rectifier shall forfeit £50. 24 Geo. III. c. 73.

By 27 Geo. III. c. 31, made perpetual by 3 Geo. III. c. 97, it was enacted, that no person should be deemed and taken to be of the same quality as indicated by Clarke's hydrometer; but, by 3 Geo. III. c. 97, the lords of the treasury discontinued the use of this hydrometer, and any other to be used in lieu of it. All spirits of the third extraction, or which have been twice distilled from low wines, and not communicated to them, shall be deemed 'British brandy'; if no flavor has been communicated to them, the same shall be deemed 'unified British spirits.' If of the second extraction, or once distilled from low wines, the same shall be deemed 'raw British spirits.' And as to spirits distilled with juniper berries, anise seeds, or other seeds, or ingredients used in the compounding of spirits, and deemed 'British compounds.' And as to spirits of a greater strength than one to two hydrometer proof shall be deemed 'spirit wine.' Officers shall take an account of

bers and compounders every three years, and if any increase of quantity, limitations, be found, the quantity shall be forfeited, and may be seized; and shall forfeit £50.

British spirits or compounds are sent in strength than one in five under proof, the same shall be forfeited, and £50 in the whole; and the same with the casks and vessels containing.

Geo. III. c. 37. The distiller shall entry of all wash by him used for low wines and spirits within each year, of £10; and within a week after the duties, on pain of double duty.

Geo. III. c. 50. All permits for removing spirits shall correspond with the request delivered with such spirits to the officer, on forfeiture of the same to such value as the price, including the duties: or may be admitted to prove that the spirits were delivered without a lawful permit. No person shall be allowed to avail himself of the privilege of importation unless complaint is made within 14 days after the delivery of the spirits. Geo. III. c. 73.

Distilled liquors, or such as sell the quantity than two gallons, must take care for which they are to pay annually according to the rent of the premises occupied; if the rent of such retailer exceeds, £5. 2s.; at £20, and upwards, £5. 18s.; at £25, and upwards, £5. 18s.; at £30, and upwards, £7. 2s. This licence is to be renewed annually, on the application of the holder, and is to be granted only to those persons, victualling-houses, inns, coffee-houses; who, within the limits of the city of London, pay £10 a year for the licence, and in places where the rate is not rated £12 a year; and who, in the rest of the kingdom, pay to church and parish a sum to be licensed to sell ale in the place they dwell.

Geo. II. c. 8, retailers of spirituous liquors, were subject to a penalty by 24 Geo. II. c. 40, all liquors sold by such persons, or within 12 months after conviction, were forfeited.

And by 13 Geo. III. c. 56; Geo. III. c. 38, such retailers are to be subject to mitigation so as not to exceed £5.

Every person who imports more than two gallons shall enter his name, &c., and his spirituous liquors, for every place, and 40s. for every gallon; and also the liquors and duties. Geo. II. c. 23; 30 Geo. III. c. 38. By Geo. III. c. 69, every importer or dealer in spirits, shall cause to be painted on the front of the house, shop, or cellar, the name of the person, the words *Importer of, or Dealer in, Spirituous Liquors*, on pain of £50. Any person buying of a person who has no name over the door of his shop, or cellar, shall forfeit £100. Any person who hath not his name over the door of his shop, or cellar, shall forfeit £50. No spi-

rituous liquors shall be brought into a place of sale without previous notice to the officer of excise, and leaving with him a certificate, expressing that all the duties are paid, the quantity and quality, the name of the seller, &c., on pain of forfeiting £20, and also the liquor and casks. 9 Geo. II. c. 23. Retailers shall not increase the quantity of their liquors, on pain of 40s. a gallon; and the liquors so mixed with water, or any other liquors, shall be seized and forfeited. 9 Geo. II. c. 23. By 21 Geo. III. c. 55, the stock increased shall be forfeited, a quantity equal to the increased quantity shall be seized by the officer, and the person offending shall forfeit £20. The officer may at all times, by day or night, enter into warehouses, shops, or other places, to take an account of the quantity and quality; and if any retailer hinder the officer he shall forfeit £50. 9 Geo. II. c. 23. No licensed retailer shall have any share in a distillery or rectifying house, or be concerned in such trade, on pain of £200. 26 Geo. III. c. 73.

Hawkers of spirituous liquors in the streets, &c., are liable to a forfeiture of £10. 9 Geo. II. c. 23. 11 Geo. II. c. 26. Persons giving away spirituous liquors, or paying wages in them, shall be deemed retailers. 9 Geo. II. c. 23. Keepers of gaols, workhouses, &c., selling spirituous liquors, or knowingly suffering them to be sold, except such as are prescribed by a physician, surgeon, or apothecary, forfeit for the first offence £100, and for the second their office. Persons bringing any such liquors into any place of that kind may be apprehended, and on conviction committed to the house of correction, or prison, for any time not exceeding three months, unless they immediately pay a fine, not exceeding £20, nor less than £10. Debts for spirituous liquors cannot be recovered, unless they have been contracted, or the liquors delivered at one time to the value of 20s. or upwards; and distillers knowingly selling or delivering distilled liquors to unlicensed retailers, forfeit £10, and treble their value; and the retailer, convicting the distiller, is entitled to a share of the penalty, and is himself indemnified. Persons riotously rescuing offenders, or assaulting informers, and their aiders or abettors, are guilty of felony, and liable to seven years' transportation. 24 Geo. II. c. 40. If any person shall obstruct any officer in the execution of his duty, in relation to this act, he shall forfeit £200. 23 Geo. III. c. 91. No liquor exceeding one gallon shall be removed without a permit. 6 Geo. I. c. 21. British spirits made from corn are allowed on exportation as merchandise, a bounty or drawback of £3. 12s. per ton. 5 Geo. III. c. 5; 27 Geo. III. c. 13. And by 6 Geo. II. c. 17. for spirits drawn from British corn, a drawback was to be allowed at the port of shipping, of £4. 18s. per ton, in full of all drawbacks: and by 23 Geo. II. c. 9, there was to be an additional drawback of £24. 10s. a ton, on all British-made spirits exported; provided that they are not exported in casks containing less than 100 gallons, and in vessels of less burden than 100 tons, except to Africa and Newfoundland, whither they may be exported in any vessels not less than seventy tons. 6 Geo. III. c. 46. The 43 Geo. III. c. 69, which con-

solidates the duties, &c., of excise, continues all advances, bounties, and drawbacks, which are particularly directed to be made by any act or acts of parliament in force, on or immediately before the 5th of July, 1803, except so far as such allowances may be varied or repealed by the same act. By 39 and 40 Geo. III. c. 73, spirits distilled in England for exportation to Scotland, are exempted from the excise duties in England. And by 43 Geo. III. c. 69, for every gallon, English wine measure, of spirits, not exceeding in strength that of one to ten over hydrometer proof, and so in proportion for any higher degree of strength, made in England and thence imported into Scotland, payment is to be made by the importer before landing, of 4s.; and by c. 81, an additional duty of 2s. for every such gallon manufactured in Scotland and brought from thence into England, 5s. 0½d.; and by c. 81, an additional duty of 2s. 5d. For every gallon of such spirits of greater strength than one to ten over hydrometer proof, and not exceeding £3 per cent. over and above one to ten over hydrometer proof, 7s. 5½d. and a surcharge. And all duties and drawbacks under these acts shall be proportionate to the actual quantity. No spirits shall be sent from Scotland to England, or from England to Scotland, by land, or in vessels of less than seventy tons burden, or in casks containing less than 100 gallons, on forfeiture of the same, together with casks or package. And if any distiller, rectifier, compounder, or dealer in spirits, or servant belonging to any such person, shall obstruct an officer in the execution of this act, he shall forfeit £200. Vide laws relating to distillation under GENEVA, WHISKEY, BRANDY, and RUM. See also HYDROMETER.

**DISTINCT**, *adj.* } Fr. *distinct*; Italian,  
**DISTINC'TION**, *n. s.* } Portug. and Span. *distinto*;  
**DISTINCTIVE**, *adj.* } Lat. *distinctus*,  
**DISTINCTIVELY**, *adv.* } from *distinguo*, *dis*, and  
**DISTINCTLY**, *adv.* } Gr. *εἰς*, to mark or  
**DISTINCTNESS**, *n. s.* } prick for distinction:  
 marked out in any way; different in kind, degree, or number; separate: distinction is the act or art of discerning a difference, as well as the thing that notes it; and the honor or difference of state resulting. Distinctive is that which marks a difference, or having power to do so: distinctively and distinctly, clearly without confusion of differences. Distinctness, more intense or accurate distinction.

For the things that ben withouten the soule ghieth vnich, eithir pipe, eithir harpe, but the ghyuen *distinction* of sowyngeis hou schal it be knowun that is sungun eithir that that is trumpid?

Wiclif. 1 Cor. 13.

The mixture of those things by speech, which by nature are divided, is the mother of all error: to take away therefore that error, which confusion breedeth, *distinction* is requisite.

**DISTRAIN**, or **DISTREIN**, in law, is to attach, or seize on one's goods, for the satisfaction of a debt. It is the mode of levying a *distress*. See the following article.

**DISTRESS**, v. a. & n. s. } Fr. *détresse*; It.

**DISTRESSFUL**, adj. } *distressa*; from

Lat. *districio*, *distringo*; to press hard; hence, *distress*, because a person in *distress* is pressed by his affairs. To seize by law; to harass; crush by affliction; make unhappy.

We are troubled on every side, yet not *distracted*. Bible. 1 Cor. i. 1.

O flesh they ben, and o flesh, as I gear, Hath but on herte in wele and in *distract*.

Chaucer. *Can. Ten*.

He would first demand his debt; and, if he was not paid, he would straight go and take a *distress* of goods and cattle, where he could find them, to the value.

Bacon.

There can I sit alone, unseen of any, And to the nightingale's complaining notes Tune my *distresses*, and record my woes.

Shakespeare.

I often did beguile her of her tears, When I did speak of some *distressful* strokes That my youth suffered.

Id. *Titus*.

They were not ashamed—to come to me for mementos and monthly payments for that *distress* they had taken; and took *distresses* from me upon most just denial.

Rp. Hall's *Hard Names*.

Quoth she, some say the soul's secure Against *distress* and forfeiture.

Hobbes.

People in affliction or *distress* cannot be keen to generous minds.

Coram.

The ewes still folded, with distended teats, Unmilked, lay bleating in *distressful* cries.

Pope's *Odyssey*.

And such is the fate of hapless lexicographers, to not only darkness, but light, impedes and clouds it; things may be not only too little, but too well known, to be happily illustrated.

Johnson. *Preface to Dictionary*.

Ah! then and there was hurrying to antics, And gathering tears, and tremblings of distress, And cheeks all pale, which but an hour ago Blushed at the praise of their own levelness.

Byron.

**DISTRESS**, **DISTRICTIO**, is the taking of a personal chattel out of the possession of the wrongdoer, into the custody of the party injured, to procure a satisfaction for the wrong committed. The term *distress* is also, in our law, applied to the thing taken by this process, as well as to the process itself. The most common injury for which a *distress* may be taken is of non-payment of rents. See **RENT**.

It is held as a universal principle, that a *distress* may be taken for any kind of rent, and the detaining of which beyond the day of payment is an injury to him that is entitled to receive it. Likewise, for neglecting to do what the lord's court, or other certain person has a right to do, (Co. Litt. 46,) the lord may *distrain* of common right. Also, for amercements in a court, a *distress* may be had of common right; not for amercements in a court-baron, without special prescription to warrant it. (Broom's *Maxims*.) Another injury for which *distresses* may be taken is where a man finds beasts of a stranger straying in his grounds, damage-ferasant, doing him hurt or damage, by treading down grass, or the like; in which case the owner of the soil may *distrain* them till satisfaction be made him for the injury sustained. Lastly, for some duties and penalties inflicted by special act of parliament, as for assessments made by commissioners of sewers, stat. 7 Ann. c. 10, or for relief of the poor, stat. 43 Eliz. c. 2, a *distress* and sale is given; with regard to

may be observed, that such distresses are analogous to the ancient distress at common law, as being replevable and the like (4 C. 589); but more resembling the common process of execution, by seizing and selling goods of the debtor under a writ of *Fieri fac.*, which see.

By stat. 36 Geo. 3, c. 88, § 16, 17, tenants in Ireland having paid rent to their immediate lord, if distrained by the superior landlord, recover damages against their immediate lord, and retain them out of the future going rent. By this act, as amended by 58 Geo. 3, c. 39, the powers of distress on corn, &c., being (given in England by stat. 11 Geo. II.) are extended to Ireland; and other provisions are made for the recovery of tenements absconding, overholding, and defaulting tenants.

With respect to the things which may be distrained, or taken in distress, it may be laid down as a general rule, that all chattels personal are liable to be distrained, unless particularly protected or exempted. Instead, therefore, of mentioning the things that are distrainable, it will be easier to recount the things which are not distrainable, on the reason of their particular exemptions. (Litt. 47.) Every thing which is distrained is presumed to be the property of the wrong-doer: it follows, therefore, that such things, in which a man can have an absolute and valuable property, as dogs, cats, rabbits, and all animals *feræ nature*, cannot be distrained. But if deer, which are of a tame nature, are kept in a private enclosure for the purpose of sale or profit, this circumstance reduces them to a kind of stock or merchandise, that they may be distrained for rent. However, whatever is in the personal use or occupation of any man is, for the time, privileged and protected from any distress; as an axe with which a man is cutting wood, or a horse which a man is riding him. But horses drawing a cart, and also the cart, may be distrained for arrears, if a man be not upon the cart (1 C. 36): and it hath been said, that if a horse, upon which a man be riding him, be taken damaged, or trespassing in another's ground, he may be distrained and led away to the pound. (1 Sid. 440.) However, the authorities on this point being collected together in Hargr. Litt. 47, the clear result of them is, that a distress is illegal. Again, valuable things in the way of trade shall not be liable to distress; as a horse standing in a smith's shop to be shod, or a common inn; or cloth at a tailor's house; or sent to a mill or market. All these are protected or privileged for the benefit of trade; and are supposed in common presumption not to belong to the owner of the house, but to his tenants. But, generally speaking, whatever goods and chattels the landlord finds upon the premises, whether they, in fact, belong to the tenant or a stranger, are distrainable by him for rent; for otherwise a door would be open to infinite frauds upon the landlord; and the stranger has no remedy by action on the case against the tenant, if by the tenant's default the chattels are distrained, so that he cannot render them when called upon. With regard to a stranger's beasts

which are found on the tenant's land, the following distinctions are taken. If they are put in by the consent of the owner of the beasts, they are distrainable immediately afterwards for rent arrears by the landlord. (Cro. Eliz. 549.) So also if the stranger's cattle break the fences, and commit a trespass by coming on the land, they are distrainable immediately by the lessor for his tenant's rent, as a punishment to the owner of the beasts for the wrong committed through his negligence. (Co. Litt. 47.) But if the lands were not sufficiently fenced so as to keep out cattle, the landlord cannot, generally, distrain them, till they have been levant and couchant on the land; that is, have been long enough there to have lain down and rose up to feed; which, in general, is held to be one night at least; and then the law presumes, that the owner may have notice whither his cattle have strayed, and it is his own neglect not to have taken them away. There are also other things privileged by the ancient common law; as a man's tools and utensils of his trade, the axe of a carpenter, the books of a scholar, and the like; which are said to be privileged for the sake of the public, because the taking of them away would disable the owner from serving the commonwealth in his station. So, beasts of the plough, *averia caruce*, and sheep, are privileged from distresses at common law (stat. 51 Hen. III. c. 4.): while dead goods, or other sort of beasts, which Bracton calls *catalla otiosa*, may be distrained. But, as beasts of the plough may be taken in execution for debt, so they may be for distresses by statute, which partake of the nature of executions. (4 Burr. 589.) And, perhaps, the true reason, why these and the tools of a man's trade were privileged at the common law, was, because the distress was then merely intended to compel the payment of the rent, and not as a satisfaction for the non-payment; and, therefore, to deprive the party of the instruments and means of paying it, would counteract the very end of the distress (4 Burr. 588.) Moreover, nothing shall be distrained for rent, which may not be rendered again in as good a plight as when it was distrained; for which reason milk, fruit, and the like, cannot be distrained; a distress at common law being only in the nature of a pledge or security, to be restored in the same plight when the debt is paid. So, anciently, sheaves or stacks of corn could not be distrained; because some damage must needs accrue in their removal; but a cart loaded with corn might; as that could be safely restored. But now by statute 2 W. & M. c. 5, corn in sheaves or cocks, or loose in the straw, or hay in barns or ricks, or otherwise, may be distrained, as well as other chattels. Lastly, things fixed to the freehold may not be distrained, as caldrons, windows, doors, and chimney pieces; for they savour of the realty. For this reason also corn growing could not be distrained; till the statute of 11 Geo. II. c. 19, empowered landlords to distrain corn, hops, grass, or other products of the earth, and to cut and gather them when ripe. The goods of a carrier are privileged, and cannot be distrained for rent, though the waggon containing them is put into the barn of a house, or on the road. (1 Salk. 249.) But the goods of

a third person, found on the premises, may be distrained by the collector of the house and window tax, for arrears under 43 Geo. III. c. 161, though the goods are only borrowed and the person in arrear has other goods of his own on the premises sufficient to satisfy the arrears. 1 Mail. and Sel. Rep. 601.

ii. We enquire next *how* distresses may be taken, disposed of, or avoided. The law of distresses, says Blackstone, is greatly altered in late years. Formerly they were regarded as a mere pledge or security for payment of rent or other duties, or satisfaction for damage done. And so the law continues with regard to distresses of beasts taken damage-feasant, and for other causes, not altered by act of parliament; over which the distrainer has no other power than to retain them till satisfaction is made. But distresses for rent-arrears being found by the legislature to be the shortest and most effectual method of compelling the payment of such rent, many beneficial laws for this purpose have been made in the last century; which have much altered the common law, as laid down by our ancient writers. In discussing this part of the subject, it will be supposed that the distress is made for rent; and the differences between such distress, and that taken for other causes, will be specified. All distresses must be made by day, unless in the case of damage-feasant; an exception being made in this case, lest the beasts should escape before they are taken. (Co. Litt. 142.) When a person intends to make a distress, he must, by himself or his bailiff, enter on the demised premises; formerly during the continuance of the lease, but now (stat. 8 Ann. c. 14.) if the tenant holds over, the landlord may distrain within six months after the determination of the lease; provided his own title or interest, as well as the tenant's possession, continue at the time of the distress. If the lessor does not find sufficient distress on the premises, formerly he could not resort any where else; and therefore, knavish tenants made a practice to convey away their goods and stock, fraudulently, from the house or lands demised, in order to cheat their landlords. But now (stat. 8 Ann. c. 14. 11 Geo. II. c. 19), the landlord may distrain any goods of his tenant, carried clandestinely off the premises, wherever he finds them within thirty days after, unless they have been bona fide sold for a valuable consideration; and all persons privy to, or assisting in such fraudulent conveyance, forfeit double the value to the landlord. The landlord may also distrain the beasts of his tenant, feeding upon any commons or wastes, appendant or appurtenant to the demised premises. The landlord might not formerly break open a house, to make a distress, for that is a breach of the peace. But when he was in the house, it was held, that he might break open an inner door (Co. Litt. 16. Comberb. 17); and now (stat. 11 Geo. II. c. 19) he may, by the assistance of the peace officers of the parish, break open, in the day-time, any place whither the goods have been fraudulently removed, and locked up to prevent a distress; oath being first made, in case it be a dwelling-house, of a reasonable ground to suspect that such goods are concealed in it. Where a man is en-

titled to distrain for an entire duty, he may distrain for the whole at once; and may do so part at one time, and part at another. (Cro. Jac. 1532.) But if he distrains for the whole, and there is not sufficient on the premises, or he happens to mistake in the value of the things distrained, and so takes an insufficient distress, he may take a second distress to complete his remedy. (Cro. Eliz. 13. stat. 17; Car. II. 4 Burr 590.) Distresses must be proportionate to the thing distrained for. By the statute of Marlbridge, 52 Hen. III. c. 4, if any man takes a great or unreasonable distress, for rent-arrears, he shall be heavily amerced for the same. Ord. Inst. 107.) the landlord distrains two oxen twelve-pence rent; the taking of both is a reasonable distress; but if there were no distress near the value to be found, he might reasonably have distrained one of them; but for want of fealty, or suit and service, as also for parson's wages, it is said that no distress can be excessive. (Bro. Abr. tit. Aassise. 291; Prentiss 98.) For as these distresses cannot be sold by the owner, upon making satisfaction, may have his chattels again. The remedy for excessive distresses is by a special action on the statute of Marlbridge; for an action of trespass is not maintainable upon this account, it being so at the common law.

iii. When the distress is taken, the subject of consideration is the disposal of it, for which purpose the things distrained must be first placed by the distrainer in some pound, as if impounded by the taker. But in this case, whether they may be rescued by the owner, or whether the distress was taken without cause, or against law: as if no rent be due; if they were taken upon the highway, or the like; in these cases the tenant may lawfully make rescue. (Co. Litt. 160, 161.) But if they be once impounded, even though taken without any cause, the owner may not break the pound and take them out; they are then in custody of the law. (Co. Litt. 161.) When impounded, the goods were formerly in the nature of a pledge or security to compel performance of satisfaction; and upon this point it has been held (Cro. Jac. 148) that the owner is not at liberty to work or use a distrained beast. And thus the law still continues with regard to beasts taken damage-feasant, and demands of suit or services; which must remain impounded till the owner makes satisfaction; or until the right of distraining by repleying the same. This kind of distress, though it puts the owner to inconvenience, and is therefore a punishment to him, yet, if he continues obstinate and will give no satisfaction or payment, it is no remedy to the distrainer. But for a debt due to the crown, unless paid within forty days, the law was always saleable at common law. (Bro. tit. Distress. 71.) And for an attachment of court-leet, the lord may also sell the distress. (Rep. 41); partly because, being the king's of record, its process partakes of the royal prerogative (Bro. ubi. supra. 12 Mod. 336); but principally, because it is in the nature of an execution to levy a legal debt. And so in the several tute-distresses already mentioned, which are in the nature of executions; the power of

ally given, to effectuate and complete it. And in like manner, by several Statutes (2 W. & M. c. 5., 8 Ann. c. 11. c. 28, 11 Geo. II. c. 19), in all distress for rent, if the tenant or owner in five days after the distress is taken, of the cause thereof given to him, same with sufficient security, the distress the sheriff or constable, shall cause to be appraised by two sworn appraisers, same towards satisfaction of the rent; rendering the overplus, if any, to himself. And, by these means, a full satisfaction may now be had for rent by the mere act of the party himself, and the remedy given at common law consequent thereon, which is added by Parliament. If any distress and sale made, for rent in arrear and due, when by due, the owner shall recover double full costs. 2 W. Sess. 1 c. 5. If of a distress was formerly reckoned proceeding, on account of the many that attended it: for if any irregularity attended, it vitiated the whole, and made the trespassers ab initio (1 Vent. 37). By the statute 11 Geo. II. c. 19, it is that for any unlawful act done, the act is not be unlawful, or the parties trespassers; but that the party grieved shall have an action for the real damage sustained; in that, if tender of amends is made an action is brought. *Blackst. Comm.*

**PERSONAL**, is made by distraining moveable goods, and seizing the profits of lands and tenements, from the teste, or writ, for the defendant's contempt in failing to an action brought against him is summoned, or attached; and the goods turned by the sheriffs, are forfeited to the exchequer.

**REAL**, is made on immoveable goods, from an attachment in this, that taken by any common person, without assent of his own fee; except it be for the cattle, or other things are taken off the ground, on purpose to

has been termed either finite or infinite. **Finite**, is that which is limited by law, the number of times it shall be allowed to bring the party to a trial of the distress **infinite**, is that which is without being made till the person applied farther applied to jurors that do not upon a certificate of assise, the process facias, habere corpora, and distress is also divided into grand distress and small: of these the former extends to lands and chattels that the party has in his own right. A person, of common right, for rents and all manner of services; rent is reserved on a gift in tail, for years, &c., though there be no distress in the grant or lease, so as that reversion: but on a feoffment made in fee may not be taken, unless it be expressed in the deed.

**DISTRIBUTE**, *v. a.*

**DISTRIB'UTER**, *n. s.*

**DISTRIBU'TION**, *adj.*

**DISTRIB'UTIVE**, *adj.*

**DISTRIS'UTIVELY**, *adv.*

Fr. *distribuer*; Ital. *distribuire*; Span. *distribuir*; Lat. *distribuer*; *dis*, diversely, and *tribuo*, to bestow. To divide among several; to deal forth; dispense. Distributer is, he who deals out; and distribution, the act of distributing; hence charity. Distributive, that which assigns the due portions of things. Distributively, proportionally; singly; particularly.

She did distribute her goods to all them that were nearest of kindred. *Judith xvi. 24.*

The king sent over a great store of gentlemen and warlike people, amongst whom he distributed the land. *Spenser.*

Although we cannot be free from all sin collectively, in such sort that no part thereof shall be found inherent in us; yet, distributively at the least, all great and grievous actual offences, as they offer themselves one by one, both may and ought to be by all means avoided. *Hooker.*

The spoil got on the Antiaties

Was not distributed. *Shakespeare. Coriolanus.*

Of great riches there is no real use, except it be in the distribution. *Bacon's Essays.*

If Justice will take all, and nothing give,

Justice methinks is not distributive. *Dryden.*

Observe the distributive justice of the authors, which is constantly applied to the punishment of virtue, and the reward of vice, directly opposite to the rules of their best critics. *Swift.*

There were judges and distributors of justice appointed for the several parts of his dominions. *Addison on Italy.*

Let us govern our charitable distributions by this pattern of nature, and maintain a mutual circulation of benefits and returns. *Atterbury.*

As an integral whole is distinguished into its several parts by division, so the word distribution is most properly used, when we distinguish a universal whole into its several kinds of species. *Watts.*

There remains yet to be considered the distribution of words into their proper classes, or that part of lexicography which is strictly critical. *Johnson.*

The Latin language, long the vehicle used in distributing knowledge among the different nations of Europe, is daily more and more neglected. *Franklin.*

**DISTRIBUTION**, in printing, the taking a form asunder, separating the types, and disposing them in the cases again, each in its proper cell. See **PRINTING**.

**DISTRICT**, *n. s.* Fr. *district*; Ital. *distretto*; Span. *districto*; Lat. *districtus*, from *distringo*, to bind, as with limits. The limit, or circuit, of a given authority: hence, a region, country, or portion of a country.

His governors, who formed themselves upon the example of their grand monarch, practised all the arts of despotick government in their respective districts. *Addison.*

With stern distate avowed,

To their own districts drive the sutor crowd. *Pope.*

Those districts which between the tropicks lie,  
The scorching beams, directly darted, fry. *Blackmore.*

**DISTRINGAS**, in English law, a writ directed to the sheriff, or other officer, commanding him

to distrain for a debt to the king; or for his appearance at a certain day. There is a *distringas* against peers, and persons entitled to privilege of parliament, under statute 10 Geo. III., cap. 50; by which the effects, in law called issues, levied may be sold to pay the plaintiff's cost, and it has been held that this statute extends to all writs of *distringas*. In detinue, after judgment, the plaintiff may have a *distringas* to compel the defendant to deliver the goods by repeated distresses of his chattels. See *DISTRESS*, *EXECUTION*, and *PARDONMENT*.

*DISTRINGAS JURATORES*, a writ directed to a sheriff, whereby he is commanded to distrain upon a jury to appear and to return issues on their lands, &c. for non-appearance. Where an issue in fact is joined to be tried by a jury, which is retained by the sheriff in a pannel upon a *venire facias* for that purpose; there goes forth a writ of *distringas juratores*, for the sheriff to have their bodies in court, &c. at the return of the writ. This writ ought to be delivered to the sheriff in such time, that he may warn the jury to appear four days before the writ is returnable, if the jurors live within forty miles of the place of trial; and eight days if they live farther off. There may be an alias, or pluries *distringas jur*, where the jury doth not appear. See *JURY*, and *TRIAL*.

*DISTRUST*, *v. a. & n. s.* } *Dis* and *trust*.  
*DISTRUSTFUL*, *adj.* } To regard with  
*DISTRUSTFULLY*, *adv.* } diffidence or sus-  
*DISTRUSTFULNESS*. } picion; not to  
 trust.

He sheweth himself unto such as do not distrust him.  
*Wisdom.*

To me reproach  
 Rather belongs, distrust, and all dispraise.

*Milton.*

Common swearing, if it have any serious meaning at all, argues in man a perpetual distrust of his own reputation, and is an acknowledgment that he thinks his bare word not to be worthy of credit.

*Tillotson.*

You doubt not me; nor have I spent my blood,  
 To have my faith no better understood:  
 Your soul's above the baseness of distrust;  
 Nothing but love could make you so unjust.

*Dryden.*

Generals often harbour distrustful thoughts in their breasts.

*Boyle.*

How frequently is the honesty and integrity of a man disposed of, by a smile or a sbrug;—how many good and generous actions have been sunk into oblivion by a distrustful look, or stamp with the imputation of proceeding from bad motives, by a mysterious and seasonable whisper.

*Steele.*

*DISTURB*, *v. a. & n. s.* } Span. *disturbar*;  
*DISTURBANCE*, *n. s.* } Ital. and Lat. *dis-*  
*DISTURBER*, } *turbare*, from *dis-*  
*DISTURBED*, *part. adj.* } *expletive*, and *tur-*  
 bo to disorder, a *turba* a crowd. To perplex;  
 disquiet; confound; interrupt; turn off attention,  
 or aim. Milton uses disturb as a substantive for  
 confusion or tumult, or synonymous with dis-  
 turbance.

And thei seyngs him walkinge on the see weren  
*disturbid* and seiden that it is a fantum.

*Wiclif. Matt. 14.*

He stands in the sight both of God and  
 justly blameable, as a needless disturber of  
 God's church, and an author of dissension.

Where love reigns, disturbing jealousy  
 Doth call himself affliction's ventricle;  
 Gives false alarms, suggesteth mutiny,  
 And in a peaceful hour doth cry, *kill!*

*Shakspeare.*

Instant without disturb they took arms  
 And onward move embattled.

This mischief had not then befall  
 And more that shall befall: unnumbered  
 Disturbances on earth through female rage.

He that has his own troubles, and the  
 his neighbours, to disturb him, has work enough  
 to do.

*Collier.*

His youth with wants and hardships met,  
 Plots and rebellions must disturb his age.

Ye great disturbers, who in endless toils  
 In blood and horror, seek unnatural joys:  
 For what is all this bustle, but to shun  
 Those thoughts with which you dare not live.

*Gray.*

They can survey a variety of complements  
 without fatigue or disturbance.

Thrice round the grave Circea prints her  
 And rhymes the numbers which disturb the

Merit new employments daily,  
Ditcher, ditcher, gardeners, bailly.

Swift.

Employed my time, besides *ditching*, in  
Travels.

Id.

*Ditches* swell, the meadows swim.

Thomson.

More pleasure in bearing a man attempt-  
ing, than in seeing a man trying to  
Swim, and tumbling into it.

Johnson.

Up again! for every warrior  
Slain, another climbs the barrier.  
Thicker grows the strife; thy *ditches*  
Europe's mingling gore enriches.

Byron.

**DITCH**, in fortification, called also the foss and moat, is a trench dug round the rampart, or wall of a fortified place, between the scarp and counterscarp. Ditches are either dry or wet, that is, having water in them; both of which have their particular advantages. The earth dug out of the ditch serves to raise the rampart. The ditch in front should be of such breadth as that tall trees may not reach over it, being from twelve to twenty-four fathoms wide, and seven or eight feet deep. But the most general rule is, perhaps, that the dimensions of the ditch be such as that the earth dug out may be sufficient to build the rampart of a proper magnitude.
